ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD
Title 13, Chapter 4

Amend: R13-4-101, R13-4-103, R13-4-104, R13-4-105, R13-4-106, R13-4-107, R13-4-108, R13-4-109, R13-4-109.01, R13-4-110, R13-4-111, R13-4-114, R13-4-116, R13-4-201, R13-4-202, R13-4-203, R13-4-204, R13-4-205, R13-4-206, R13-4-208

GOVERNOR'S REGULATORY REVIEW COUNCIL

ATTORNEY MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: March 4, 2025

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: February 11, 2025

SUBJECT: **ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD**
Title 13, Chapter 4

Amend: R13-4-101, R13-4-103, R13-4-104, R13-4-105, R13-4-106, R13-4-107, R13-4-108, R13-4-109, R13-4-109.01, R13-4-110, R13-4-111, R13-4-114, R13-4-116, R13-4-201, R13-4-202, R13-4-203, R13-4-204, R13-4-205, R13-4-206, R13-4-208

Summary:

This regular rulemaking from the Arizona Peace Officer Standards and Training Board (Board) seeks to amend twenty (20) rules in Title 13, Chapter 4, Articles 1 and 2 regarding the certification, training, and minimum requirements for peace officers and correctional officers. For Article 1, the Board indicates the proposed amendments will clarify definitions, increase employment opportunities, increase efficiency, and enhance training and safety of peace officer recruits. Specifically, the Board proposes the following changes to the rules in Article 1:

- Clarifies the difference between inactive certification and lapsed certification;
- Deletes the definition of illegal because the word is used in the rules consistent with its ordinary dictionary meaning;
- Clarifies that the comprehensive examination is no longer a final examination;
- Indicates all forms of marijuana are treated the same when evaluating an individual's use;
- Indicates all forms of dangerous drugs and narcotics are treated the same when evaluating an individual's use;

- Indicates all forms of steroids are treated the same when evaluating an individual's use;
- Reduces from two years to six months the look-back period for pre-employment marijuana use;
- Reduces from 10 years to five years the look-back period for matters considered juvenile indiscretion;
- Requires an individual seeking appointment to provide a copy of the individual's driver license;
- Increases the number of years for which information regarding previous employers, schools, and residences must be provided;
- Deletes the requirement that a pre-appointment medical examination be provided by a Board-trained physician;
- Deletes the requirement that a signed copy of the Code of Ethics be maintained in each individual's record;
- Adds an immersive training requirement to the full-authority peace officer basic training course;
- Clarifies that a peace officer whose certification status is not active may serve as a specialist instructor;
- Requires a student to make up all missed hours of training before graduating from the Board-approved full-authority peace officer basic training course;
- Requires the Board to conduct an on-site inspection to determine whether a basic training course is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use; and
- Adds active assailant response to the topics required in the Board-approved full-authority peace officer basic training course.

For Article 2 related to Correctional Officers, the Board is proposing the following amendments:

- Corrects the name of the Department;
- Deletes the juvenile indiscretion determination for admission to the academy;
- Deletes the requirement that an academy applicant provide personal references;
- Deletes reporting requirement;
- Deletes the requirement that specialized training for instructors be approved by the Board; and
- Deletes the requirement that lesson plans be annually reviewed.

1. <u>Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?</u>

The Board cites both general and specific statutory authority for these rules.

2. <u>Do the rules establish a new fee or contain a fee increase?</u>

This rulemaking does not establish a new fee or contain a fee increase.

3. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

The Board indicates it did not review any study relevant to this rulemaking.

4. Summary of the agency's economic impact analysis:

The Board believes the rulemaking will have minimal but important economic benefits, including enhancing public safety. The Board indicates deletion of burdensome administrative requirements is anticipated to have positive economic benefits, especially for physicians performing pre-appointment examinations and potential recruits. The Board states new requirements for students and academies, such as requiring a student to make up all missed hours of training and the incorporation of active assailant response and immersive training, will increase costs but address important public safety issues. Several amendments will increase employment opportunities for individuals who want to be peace officers.

5. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

The Board believes the rules are neither intrusive nor costly. The Board states they are the minimum possible to foster public trust and confidence by establishing and maintaining standards of integrity, competence, and professionalism for Arizona peace officers and correctional officers.

6. What are the economic impacts on stakeholders?

Individuals seeking to participate in the Board-prescribed full-authority basic training course or training as a state correctional officer, law enforcement agencies seeking to employ peace officers, academies providing the Board-prescribed full-authority basic training course, and the Board and Department are persons directly affected by, bearing the costs of, and benefitting from this rulemaking.

The amended requirements will reduce the need for law enforcement agencies to petition the Board for approval of a waiver from the current provisions with respect to the look-back period regarding juvenile indiscretion and use of marijuana. Academies, as a result of this rulemaking, must include training regarding active assailant response and integrate demonstration of skill development through the use of scenarios; this will increase the time required to complete the Board-prescribed full-authority basic training course. The Board will have reduced costs from no longer having to train physicians to provide pre-appointment medical examinations. The Board will incur the cost of conducting on-site inspections to determine whether a basic training course is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use. Both the Board and Department benefit and will have reduced costs from deleting multiple unnecessary administrative requirements regarding the Department.

7. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

The Board indicates there were no changes between the Notice of Proposed Rulemaking published in the Administrative Register on October 18, 2024 and the Notice of Final Rulemaking now before the Council for consideration.

8. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

The Board indicates it received one written comment from Amy E. Lake, a Supervisor—Physician Practice (Case Management Team) with Banner Occupational Health. Ms. Lake expressed concern about the repeal of the requirement that pre-certification physical examinations be provided by a Board-trained physician. The Board responded that it believes requiring the Board to train physicians and to limit the opportunity to provide pre-certification physical examinations only to those trained by the Board is unnecessarily burdensome and inconsistent with the Board's responsibility to prescribe minimum qualifications for officers that relate to physical, mental, and moral fitness. Additionally, the Board states the rules contain a standard for the pre-certification physical examination. R13-4-107(B)(2)(b) indicates the physical examination is to be consistent with the standard of care for occupational medical examinations and R13-4-116(E)(1)(h) indicates that physical conditioning is a police proficiency skill taught as part of the basic training course.

A copy of the written comment is included in the final materials for the Council's reference.

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

Pursuant to A.R.S. § 41-1037(A), if an agency proposes an amendment to an existing rule that requires the issuance of a regulatory permit, license, or agency authorization, the agency shall use a general permit, as defined by A.R.S. § 41-1001(12), if the facilities, activities or practices in the class are substantially similar in nature unless certain exceptions apply.

A.R.S. § 41-1001(12) defines "general permit" to mean "a regulatory permit, license or agency authorization that is for facilities, activities or practices in a class that are substantially similar in nature and that is issued or granted by an agency to a qualified applicant to conduct identified operations or activities if the applicant meets the applicable requirements of the general permit, that requires less information than an individual or traditional permit, license or authorization and that does not require a public hearing."

The Board states certification of an individual as a peace officer or correctional officer is not a general permit as defined under A.R.S. § 41-1001. The Board indicates, under A.R.S. § 41-1822(A) and (B), the Board is required to prescribe reasonable minimum qualifications for peace officers and correctional officers. The Board established those qualifications at

R13-4-105, R13-4-109, and R13-4-202 and certifies only individuals who meet the prescribed qualifications. As such, the Board indicates the rules comply with A.R.S. § 41-1037(A)(3) in that "[t]he issuance of a general permit is not technically feasible or would not meet the applicable statutory requirements." Council staff believes the Department is in compliance with A.R.S. § 41-1037.

10. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

The Department indicates there is no corresponding federal law directly applicable to the subject of these rules.

11. Conclusion

This regular rulemaking from the Board seeks to amend twenty (20) rules in Title 13, Chapter 4, Articles 1 and 2 regarding the certification, training, and minimum requirements for peace officers and correctional officers. The Board indicates the proposed amendments will clarify definitions, increase employment opportunities, increase efficiency, and enhance training and safety of peace officer recruits.

Pursuant to A.R.S. § 41-1823, a rule establishing a minimum qualification for law enforcement officers does not go into effect until six months after being filed with the Secretary of State.

Council staff recommends approval of this rulemaking.

Arizona Peace Officer Standards and Training Board

2643 East University Drive Phoenix, Arizona 85034-6914 Phone (602) 223-2514

December 30, 2024

Ms. Jessica Klein, Chair
The Governor's Regulatory Review Council
100 North 15th Avenue, Ste. 305
Phoenix, AZ 85007

Re: A.A.C. Title 13. Public Safety
Chapter 4. Arizona Peace Officer Standards and Training Board

Dear Ms. Klein:

The attached final rule package is submitted for review and approval by the Council. The following information is provided for Council's use in reviewing the rule package:

A. Close of record date: The rulemaking record was closed on November 21, 2024, following a period for public comment and an oral proceeding. This rule package is being submitted within the 120 days provided by A.R.S. § 41-1024(B).

B. Relation of the rulemaking to a five-year-review report: The rulemaking does not relate to a 5YRR.

C. New fee: The rulemaking does not establish a new fee.

D. Fee increase: The rulemaking does not increase an existing fee.

E. Immediate effective date: An immediate effective date not requested.

F. Certification regarding studies: I certify the preamble accurately discloses the Board did not review or rely on any studies in its evaluation of or justification for the rules in this rulemaking.

G. Certification that the preparer of the EIS notified the JLBC of the number of new full-time employees necessary to implement and enforce the rule: I certify none of the rules in this rulemaking will require a state agency to employ a new full-time employee. No notification was provided to JLBC.

H. List of documents enclosed:
   1. Cover letter signed by the Executive Director;
   2. Notice of Final Rulemaking including the preamble, table of contents, and rule text;
   3. Economic, Small Business, and Consumer Impact Statement;
   4. Public comment.

Sincerely,

Matt Giordano
Executive Director

NOTICE OF FINAL RULEMAKING
TITLE 13. PUBLIC SAFETY
CHAPTER 4. ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD

PREAMBLE

1. Permission to proceed with this final rulemaking was granted under A.R.S. § 41-1039(B) by the governor on:

(Date) (Editor's Note: Include a copy of the written approval from the governor.)

2. Article, Part, or Section Affected (as applicable)	**Rulemaking Action**
R13-4-101	Amend
R13-4-103	Amend
R13-4-104	Amend
R13-4-105	Amend
R13-4-106	Amend
R13-4-107	Amend
R13-4-108	Amend
R13-4-109	Amend
R13-4-109.01	Amend
R13-4-110	Amend
R13-4-111	Amend
R13-4-114	Amend
R13-4-116	Amend
R13-4-201	Amend
R13-4-202	Amend
R13-4-203	Amend
R13-4-204	Amend
R13-4-205	Amend
R13-4-206	Amend
R13-4-208	Amend

3. Citations to the agency's statutory rulemaking authority to include the authorizing statute (general) and the implementing statute (specific):

Authorizing statute: A.R.S. § 41-1822(A)

Implementing statute: A.R.S. § 41-1822(A)(3) and (4), (B), and (D)

4. The effective date of the rule:

Under A.R.S. § 41-1823, R13-4-103, R13-4-105, R13-4-107, R13-4-110, and R13-4-111 will be effective six months after the rule package is filed with the Office of the Secretary of State.

Under A.R.S. § 41-1032(A), the remaining Sections will be effective 60 days after the rule package is filed with the Office of the Secretary of State.

a. If the agency selected a date earlier than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the earlier date and state the reason the agency selected the earlier effective date as provided in A.R.S. § 41-1032(A)(1) through (5):

Not applicable

b. If the agency selected a date later than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the later date and state the reason the agency selected the later effective date as provided in A.R.S. § 41-1032(B):

Under A.R.S. § 41-1823, R13-4-103, R13-4-105, R13-4-107, R13-4-110, and R13-4-111 will be effective XXX, which is six months after filing with the Office of the Secretary of State.

5. Citations to all related notices published in the *Register* as specified in R1-1-409(A) that pertain to the current record of the final rule:

Notice of Rulemaking Docket Opening: 30 A.A.R. 3068, Issue Date: October 18, 2024, Issue Number: 42, File number: R24-198

Notice of Proposed Rulemaking: 30 A.A.R. 3037, Issue Date: October 18, 2024, Issue Number: 42 File number: R24-196

6. The agency's contact person who can answer questions about the rulemaking:

Name: Michael Giammarino
Title: Program Administrator

Address: 2643 E. University Drive, Phoenix, AZ 85034
Telephone: (602) 774-9302
Email: mikeg@azpost.gov
Website: azpost.gov

7. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, to include an explanation about the rulemaking:

In Article 1 of this rulemaking, the Board clarifies definitions, increases employment opportunities, increases efficiency, and enhances training and safety of peace officer recruits. Specifically:

- Clarifies the difference between inactive certification and lapsed certification;
- Deletes the definition of illegal because the word is used in the rules consistent with its ordinary dictionary meaning;
- Clarifies that the comprehensive examination is no longer a final examination;
- Indicates all forms of marijuana are treated the same when evaluating an individual's use;
- Indicates all forms of dangerous drugs and narcotics are treated the same when evaluating an individual's use;
- Indicates all forms of steroids are treated the same when evaluating an individual's use;
- Reduces from two years to six months the look-back period for pre-employment marijuana use;
- Reduces from 10 years to five years the look-back period for matters considered juvenile indiscretion;
- Requires an individual seeking appointment to provide a copy of the individual's driver license;
- Increases the number of years for which information regarding previous employers, schools, and residences must be provided;
- Deletes the requirement that a pre-appointment medical examination be provided by a Board-trained physician;
- Deletes the requirement that a signed copy of the Code of Ethics be maintained in each individual's record;
- Adds an immersive training requirement to the full-authority peace officer basic training course;
- Clarifies that a peace officer whose certification status is not active may serve as a specialist instructor;
- Requires a student to make up all missed hours of training before graduating from the Board-approved full-authority peace officer basic training course;
- Requires the Board to conduct an on-site inspection to determine whether a basic training course is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use; and
- Adds active assailant response to the topics required in the Board-approved full-authority peace officer basic training course.

In Article 2 of this rulemaking, the Board:

- Corrects the name of the Department;
- Deletes the juvenile indiscretion determination for admission to the academy;
- Deletes the requirement that an academy applicant provide personal references;
- Deletes reporting requirement;
- Deletes the requirement that specialized training for instructors be approved by the Board; and
- Deletes the requirement that lesson plans be annually reviewed.

8. A reference to any study relevant to the rule that the agency reviewed and either relied on or did not rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

Not applicable

9. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state:

Not applicable

10. A summary of the economic, small business, and consumer impact:

The Board believes the rulemaking will have minimal but important economic benefits, including enhancing public safety. Several amendments, including reducing the look-back period for potentially disqualifying behavior and clarifying the way in which disqualifying drugs are to be handled, will increase employment opportunities for those who want to be a peace officer.

Administering sections of the comprehensive examination throughout the full-authority peace officer basic training course may increase the rate of success for recruits to pass and, if a recruit is not going to be able to pass, the determination may be made sooner, providing a benefit to both the recruit and the academy.

Deleting the requirement that a pre-appointment medical examination be provided by a Board-trained physician streamlines the process for a potential recruit to obtain a medical examination and provides opportunities for all physicians to provide a pre-appointment examination. Other burdensome, administrative requirements, especially in Article 2, are deleted.

Requiring a student to makeup all missed hours of training before graduating from the Board-approved full-authority peace officer basic training course may increase the time required for a student to complete the course but protects public safety.

Adding active assailant response to the topics required in the Board-approved full-authority peace officer basic training course may add a cost for academies but addresses an important public safety issue.

11. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

Not applicable

12. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

The Board received a written comment from Amy E. Lake, a Supervisor—Physician Practice (Case Management Team) with Banner Occupational Health. Ms. Lake expressed concern about the repeal of the requirement that pre-certification physical examinations be provided by a Board-trained physician. The Board appreciates Ms. Lake's comment but believes requiring the Board to train physicians and to limit the opportunity to provide pre-certification physical examinations only to those trained by the Board is unnecessarily burdensome and inconsistent with the Board's responsibility to prescribe minimum qualifications for officers that relate to physical, mental, and moral fitness. Additionally, the rules contain a standard for the pre-certification physical examination. R13-4-107(B)(2)(b) indicates the physical examination is to be consistent with the standard of care for occupational medical examinations. And R13-4-116(E)(1)(h) clearly indicates that physical conditioning is a police proficiency skill taught as part of the basic training course.

13. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

A.R.S. § 41-1823 requires that a rule establishing a minimum qualification for law enforcement officers not go into effect until six months after being filed with the Secretary of State. In this rulemaking, this provision applies to R13-4-103, R13-4-105, R13-4-107, R13-4-110, and R13-4-111.

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

Certification of an individual as a peace officer or correctional officer is not a general permit as defined under A.R.S. § 41-1001. Under A.R.S. § 41-1822(A) and (B), the Board is required to prescribe reasonable minimum qualifications for peace officers and correctional officers. The Board established those qualifications at R13-4-105, R13-4-109, and R13-4-202 and certifies only individuals who meet the prescribed qualifications. The rules comply with A.R.S. § 41-1037(A)(3).

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

No federal law is directly applicable to the subject of these rules. There are many federal laws that apply to law enforcement agencies and the work done by peace officers. These include general laws such as OSHA, EEOC, and ADA, federal laws regarding crimes, and federal case law regarding law enforcement. The training provided to peace officers is consistent with federal law.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

Not applicable

14. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

Not applicable

15. Whether the rule was previously made, amended or repealed as an emergency rule. If so, cite the notice published in the *Register* as specified in R1-1-409(A). Also, the agency shall state where the text was changed between the emergency and the final rulemaking packages:

Not applicable

16. The full text of the rules follows:

ARTICLE 1. GENERAL PROVISIONS

R13-4-101. Definitions

In this Article, unless the context otherwise requires:

"Academy" means an entity that conducts the Board-prescribed basic training courses for full-authority or specialty peace officers.

"Adderall," as used in R13-4-105, means a combination drug containing salts of amphetamine that acts as a central nervous system stimulant. The combination may include amphetamine, methamphetamine, methylphenidate, dextroamphetamine, levoamphetamine, or other stimulants.

"Agency" means a law enforcement entity empowered by the state of Arizona.

"Appointment" means the selection by an agency of an individual to be a peace officer or peace officer ~~trainee~~ recruit that the agency believes meets the minimum qualifications for appointment specified in R13-4-105.

"Approved training program" means a course of instruction that meets Board-prescribed course requirements.

"Board" means the Arizona Peace Officer Standards and Training Board.

~~"Board-trained physician" means an occupational medicine specialist or a physician who has attended a Board course on peace officer job functions.~~

"Cancellation" means the annulment of certified status without prejudice to reapply for certification.

"Certified" means approved by the Board as being in compliance with A.R.S. Title 41, Chapter 12, Article 8 and this Chapter.

~~"CFE"~~ "CE" means the Board-approved Comprehensive ~~Final~~ Examination that measures mastery of the knowledge and skills taught in the ~~Board-approved~~ Board-approved full-authority peace officer basic training course.

"Denial" means the refusal of the Board to grant certified status. The Board's denial may be temporary with an opportunity to reapply for certified status or permanent.

"Dangerous drug or narcotic" means a substance identified in A.R.S. § 13-3401 as being a dangerous drug or narcotic drug.

"Full-authority peace officer" means a peace officer whose authority to enforce the laws of this state is not limited by this Chapter.

~~"Illegal" means in violation of federal or state statute, rule, or regulation.~~

"Inactive certification" means a certified peace officer has been terminated and as a result, the peace officer's certified status becomes inactive rather than lapsing. An individual with an inactive certification shall not function as a peace officer or be assigned the duties of a peace officer.

~~"Lapse"~~ "Lapsed certification" means the expiration of certified status.

"Open enrollee" means an individual who is admitted to an academy but is not appointed by an agency.

"Peace officer" has the meaning in A.R.S. § 1-215.

"Peace officer ~~trainee~~ recruit" means an individual recruited and appointed by an agency to attend an academy.

"Physician" means an individual licensed to practice allopathic or osteopathic medicine in this or another state.

"Polygraph" means an instrument that is used to render a diagnostic opinion as to the honesty of an individual and records continuously, visually, permanently, and simultaneously, changes in cardiovascular, respiratory, and electro dermal patterns as minimum instrumentation standards.

"Resolve-in-the-future or RF" means a designation assigned by the Board regarding alleged misconduct of an inactive peace officer and requires an agency to resolve the alleged misconduct before the agency may appoint the peace officer.

~~"Restriction"~~ "Restricted certification" means the Board's limitation on duties allowed to be performed by a certified peace officer.

"Revocation" means the permanent withdrawal of certified status.

"Scenario" means immersive training in which a peace officer recruit demonstrates response skills by applying knowledge and solving problems in a simulated environment.

"Service ammunition" means munitions that perform equivalently in all respects when fired during training or qualification to those carried on duty by a peace officer.

"Service handgun" means the specific handgun or equivalent that a peace officer carries for use on duty.

"Specialty peace officer" means a peace officer whose authority is limited to enforcing specific sections of the Arizona Revised Statutes or *Arizona Administrative Code*, as specified by the appointing agency's statutory powers and duties.

"Success criteria" means a numerical statement that establishes the performance needed for an individual to demonstrate competency in a knowledge, task, or ability required by this Chapter.

"Suspension" means the temporary withdrawal of certified status.

"Termination" means the end of employment or service with an agency as a peace officer through removal, discharge, resignation, retirement, or otherwise.

"Vendor" means an entity other than the Board or an agency that makes training available to peace officers.

R13-4-103. Certification of Peace Officers

A. Certified status mandatory. An individual who is not certified by the Board or whose certified status is inactive shall not function as a peace officer or be assigned the duties of a peace officer by an agency, except as provided in subsection (B).

B. Sheriffs who are elected are exempt from the requirement of certified status.

C. An individual shall satisfy the minimum qualifications and training requirements to receive certified status.

D. Peace officer categories. The categories for which certified status may be granted are:
1. Full-authority peace officer, and
2. Specialty peace officer.

E. Application for certification. An individual who seeks to be certified as a peace officer shall make application as follows:
1. Submit to an agency an application that contains all documents required by R13-4-105, R13-4-106(A) and (B), and R13-4-107;
2. Obtain an appointment from the agency; and
3. Obtain either a certificate of graduation from a Board-prescribed full-authority Peace Officer Basic Training Course or a certificate of successful completion of the waiver of training process prescribed by R13-4-110(D).

F. An open enrollee shall obtain an appointment from an agency within one year after graduating from a Board-prescribed full-authority Peace Officer Basic Training Course.

1. If more than one year but less than three years elapse after graduation from a Board-prescribed full-authority Peace Officer Basic Training Course before an open enrollee obtains an appointment from an agency, the open enrollee shall again take the ~~CFE~~ CE required under R13-4-110 and satisfactorily perform the practical demonstrations of proficiency in physical conditioning, vehicle operations, pursuit operations, and firearms, including firearms qualifications, as required under R13-4-116(E)(1).
2. If more than three years elapse after graduation from a Board-prescribed full-authority Peace Officer Basic Training Course, an open enrollee ~~shall again graduate from~~ may pursue certification only by repeating the Board-prescribed full-authority Peace Officer Basic Training Course ~~before obtaining an appointment from an agency~~.

G. Establishing or enforcing qualifications, standards, or training requirements. The Board may waive in whole or in part any provision of this Article upon a finding that the best interests of the law enforcement profession are served and the public welfare and safety is not jeopardized by the waiver. The Board may place restrictions or requirements on a peace officer as a condition of certified status.

H. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

R13-4-104. Peace Officer Category Restrictions

A. Specialty peace officer. A specialty peace officer has only the authority specified in R13-4-101.

B. Peace officer category change. A certified peace officer may be appointed to another peace officer category within the same agency without the background investigation and medical examination required in R13-4-105, R13-4-106, and R13-4-107 when these requirements were previously satisfied for appointment if:

1. No more than 30 days have elapsed since the peace officer's termination, and
2. The change is to a category for which the officer is qualified under R13-4-110(A).

C. Reinstatement by an agency following termination by the agency for misconduct and physical separation from the agency for more than 30 days. Before reinstating a peace officer who was terminated for misconduct and physically separated from service for more than 30 days, the agency shall conduct the following background investigation and submit the results to the Board. The agency shall conduct the background investigation even if the peace officer's official date of reinstatement is within the 30 days of physical separation from the agency:

1. A personal history statement as described in R13-4-106(A);
2. A background interview regarding the time physically separated from the agency;
3. A polygraph examination as described in R13-4-106(C)(8) regarding the time physically separated from the agency and including:
   a. Were you involved in any criminal activity while physically separated from the agency;
   b. Did you have an encounter with law enforcement while physically separated from the agency;
   c. Was there a change in your medical condition while physically separated from the agency;
   d. Questions to update the information required under R13-4-105(A)(6) and (A)(9) through (15) and R13-4-106(C)(2) and (C)(4); and
   e. Is all the information you provided true, complete, and accurate.

D. Inactive ~~status~~ certification. ~~Certified status~~ The certification of a peace officer becomes inactive upon termination.

E. Lapse of ~~certified status~~ certification. The ~~certified status~~ certification of a peace officer lapses after three consecutive years ~~on~~ of inactive ~~status~~ certification.

F. Reinstatement from inactive ~~status~~ certification. A peace officer whose ~~certified status~~ certification is inactive and has not lapsed may have certification reinstated if the requirements of R13-4-105 are met for the new appointment, and if appointed:

1. In the same peace officer category, or;
2. As a specialty peace officer from inactive ~~status~~ certification as a full-authority peace officer.

G. Active ~~status~~ certification as a specialty peace officer does not prevent lapse of ~~certified status~~ active certification as a full-authority peace officer.

R13-4-105. Minimum Qualifications

A. Except as provided in subsection (C) or (D), an individual shall meet the following minimum qualifications before being appointed to or attending an academy:

1. Be a United States citizen;
2. Be at least 21 years of age. An individual may attend an academy if the individual will be 21 years of age before graduating;
3. Meet one of the following education standards:

a. Have a diploma from a high school recognized by the department of education of the jurisdiction from which the diploma is issued,
b. Have successfully completed a General Education Development (G.E.D.) examination,
c. Have a homeschool diploma or certificate of completion that is recognized as the equivalent of a high school diploma by the jurisdiction from which the homeschool diploma or certificate is issued,
d. Have a diploma, certificate of completion, or transcripts issued by a private school in Arizona that includes the individual's name and a signed affirmation of the school administrator that the individual received the equivalent of a high school education, or
e. Have a degree from an institution of higher education accredited by an agency recognized by the U.S. Department of Education;

4. Undergo a complete background investigation that meets the standards of R13-4-106. An individual shall not begin an academy until the agency has completed the background investigation requirements at R13-4-106(C)(1), (C)(2), and (C)(4) through (9). However, an individual may begin an academy before the results of the fingerprint query referenced in R13-4-106(C)(3) are returned. The academy shall not graduate the individual and the Board shall not reimburse the academy for the individual's training expenses until a qualifying background investigation report, as specified in R13-4-106(C)~~(9)~~(10), is completed;
5. Undergo a medical examination that meets the standards of R13-4-107 within one year before appointment. An agency may make a conditional offer of appointment before the medical examination. If the medical examination is conducted more than 180 days before appointment, the individual shall submit a written statement indicating ~~that~~ the individual's medical condition has not changed since the examination;
6. Not have been convicted of a felony or any offense that would be a felony if committed in Arizona;
7. Not have been dishonorably discharged from the United States Armed Forces;
8. Not have been previously denied certified status, have certified status revoked, ~~or~~ have current certified status suspended, or have voluntarily surrendered certified status in lieu of possible disciplinary action in this or any other state if the reason for denial, revocation, suspension, or possible disciplinary action was or would be a violation of R13-4-109(A) if committed in Arizona;
9. Not have illegally~~, as defined in R13-4-101,~~ possessed, produced, cultivated, or transported marijuana for sale or sold marijuana;
10. Not have illegally~~, as defined in R13-4-101,~~ possessed or used marijuana for any purpose within the past ~~two years~~ six months;
11. Not have illegally sold, produced, cultivated, or transported for sale a dangerous drug or narcotic;
12. Not have illegally used a dangerous drug or narcotic, other than marijuana, for any purpose within the past seven years;
13. Not have a pattern of abuse of prescription medication;
14. Undergo a polygraph examination that meets the requirements of R13-4-106, unless prohibited by law;
15. Not have been convicted of or adjudged to have violated traffic regulations governing the movement of vehicles with a frequency within the past three years that indicates a disrespect for traffic laws or a disregard for the safety of others on the highway;
16. Read the code of ethics in subsection (E) and affirm by signature the individual understands and agrees to abide by the code.

B. To determine whether an individual's possession or use of marijuana, or a dangerous drug or narcotic disqualifies the individual from being appointed or attending an academy, the Board shall use the following standards:

1. Marijuana.
   a. All forms of marijuana~~, including THC extracts, cannabis, hashish, marijuana extracts, and marijuana edibles, and all forms of use~~ will be treated the same;
   b. The individual has not illegally possessed or used marijuana within the ~~two years~~ six months before appointment as a peace officer; and
   c. The individual has never illegally possessed or used marijuana as a peace officer;
2. Dangerous drugs, ~~hallucinogens,~~ narcotics, and prescription drugs containing an active ingredient that is a narcotic or dangerous drug.
   a. The individual has not illegally possessed or used any of these substances:
      i. Within the seven years before appointment as a peace officer;
      ii. More than a total of five times for all substances combined;
      iii. More than one time for all substances combined since turning 21 years of age; and
      iv. As a peace officer;
   b. Dangerous drugs. All dangerous drugs~~, including methamphetamine, amphetamine, speed, spice, and bath salts~~ will be treated the same;

~~c. Hallucinogens. All hallucinogens, including peyote, mushrooms, ecstasy, lysergic acid diethylamide (LSD), ketamine, mescaline, and phencyclidine (PCP) will be treated the same;~~

~~d.~~c. Narcotics. All narcotics~~, including cocaine, heroin, and opioids~~ will be treated the same; and

~~e.~~d. Prescription medications. All prescription medications containing an active ingredient that is a narcotic or dangerous drug will be treated the same. Possession or use for recreational purposes of a prescription medication containing an active ingredient that is a narcotic or dangerous drug is disqualifying under subsection (B)(2);

3. Steroids.
   a. All steroids~~, including anabolic androgenic steroids and corticosteroids~~ will be treated the same;
   b. The individual has not illegally possessed or used a steroid within the three years before appointment as a peace officer; and
   c. The individual has never illegally possessed or used a steroid as a peace officer;
4. Adderall.
   a. All uses of Adderall, except as prescribed by a physician, will be treated the same;
   b. The individual has not possessed or used Adderall, except as prescribed by a physician, within the three years before appointment as a peace officer, and
   c. The individual has never possessed or used Adderall, except as prescribed by a physician, as a peace officer; and
5. Over-the counter products containing cannabidiol (CBD). The Board does not consider possession or use of over-the-counter products containing CBD, as allowed under federal and state law, as disqualifying an individual from appointment as a peace officer.

C. An agency head who wishes to appoint an individual whose illegal possession or use of marijuana or a dangerous drug or narcotic is determined to be disqualifying under this Section may petition the Board for a determination that, given the unique circumstances of the individual's possession or use, the use should not be disqualifying. The petition shall:

1. Specify the type of drugs illegally possessed or used, the number of uses, the age at the time of each possession or use, the method by which the information regarding illegal possession or use of drugs came to the agency's attention, and any attempt by the agency head to verify the accuracy of the information; and
2. State the factors the agency head wishes the Board to consider in making its determination. These factors may include:
   a. The duration of possession or use,
   b. The motivation for possession or use,
   c. The time elapsed since the last possession or use,
   d. How the drug was obtained,
   e. How the drug was ingested,
   f. Why the individual stopped possessing or using the drug, and
   g. Any other factor the agency head believes is relevant to the Board's determination.

D. An agency head who wishes to appoint an individual whose conduct is grounds to deny certification under R13-4-109 may petition the Board for a determination that the otherwise disqualifying conduct constitutes juvenile indiscretion. The petition shall:

1. Specify the nature of the conduct, the number of times the conduct occurred, the method by which information regarding the conduct came to the agency's attention, and any attempt by the agency head to verify the accuracy of the information; and
2. Include sufficient information for the Board to determine that all of the following are true:
   a. The conduct occurred when the individual was younger than age 18;
   b. The conduct occurred more than ~~10~~ five years before application for appointment;
   c. The individual has consistently exhibited responsible, law-abiding behavior between the time of the conduct and application for appointment;
   d. There is reason to believe ~~that~~ the individual's immaturity at the time of the conduct contributed substantially to the conduct;
   e. There is evidence ~~that~~ the individual's maturity at the time of application makes reoccurrence of the conduct unlikely; and
   f. The conduct was not so egregious that public trust in the law enforcement profession would be jeopardized if the individual is certified.
3. If the Board finds that the information submitted is sufficient for the Board to determine ~~that~~ the factors listed in subsection (D)(2) are true, the Board shall determine ~~that~~ the conduct constituted juvenile indiscretion and grant appointment.

E. Code of Ethics. Because the people of the state of Arizona confer upon all peace officers the authority and responsibility to safeguard lives and property within constitutional parameters, a peace officer shall commit to the following Code of Ethics and shall affirm the peace officer's commitment by signing the Code.

"I will exercise self-restraint and be constantly mindful of the welfare of others. I will be exemplary in obeying the laws of the land and loyal to the state of Arizona and my agency and its objectives and regulations. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept secure unless revelation is necessary in the performance of my duty.

I will never take selfish advantage of my position and will not allow my personal feelings, animosities, or friendships to influence my actions or decisions. I will exercise the authority of my office to the best of my ability, with courtesy and vigilance, and without favor, malice, ill will, or compromise. I am a servant of the people and I recognize my position as a symbol of public faith. I accept it as a public trust to be held so long as I am true to the law and serve the people of Arizona."

F. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

R13-4-106. Background Investigation Requirements

A. Personal history statement. An individual who seeks to be appointed shall complete and submit to the appointing agency a personal history statement on a form prescribed by the Board before the start of a background investigation. The Board shall use the answers to questions contained in the personal history statement to determine whether the individual is eligible for certified status as a peace officer. The Board shall ensure ~~that~~ the questions concern whether the individual meets the minimum requirements for appointment, has engaged in conduct or a pattern of conduct that would jeopardize the public trust in the law enforcement profession, and is of good moral character.

B. Investigative requirements for the applicant. To assist with the background investigation, an individual who seeks to be appointed shall provide the following:

1. Proof of United States citizenship. A copy of a birth certificate, United States passport, or United States naturalization papers is acceptable proof.
2. Copy of a current, valid driver's license.
~~2.~~3. Proof of education. A copy of a diploma, certificate, or transcript is acceptable proof.
~~3.~~4. Record of any military discharge. A copy of the Military Service Record (DD Form 214#4 or NGB Form 22), which documents the character of service, separation code, and reentry code, is acceptable proof.
~~4.~~5. Personal references. The names and addresses of at least three people who can provide information as personal references.
~~5.~~6. Previous employers or schools attended. The names and addresses of all employers and schools attended within the previous ~~five~~ 10 years.
~~6.~~7. Residence history. The complete address for every location at which the individual has lived in the last ~~five~~ 10 years.

C. Investigative requirements for the agency. A complete background investigation includes the following inquiries and a review of the returns to determine that the individual seeking appointment meets the requirements of R13-4-105, and that the individual's personal history statement is accurate and truthful. For each individual seeking to be appointed, the appointing agency shall:

1. Query all the law enforcement agency records in jurisdictions listed in subsections ~~(B)(5) and (6)~~ (B)(6) and (7);
2. Query the motor vehicle division driving record from any state listed in subsections ~~(B)(5) and (6)~~ (B)(6) and (7);
3. Complete and submit a Fingerprint Card Inventory Sheet to the Federal Bureau of Investigation and Arizona Department of Public Safety for query;
4. Query the National Crime Information Center/Interstate Identification Index (NCIC/III), and the Arizona Criminal Information Center/Arizona Computerized Criminal History (ACIC/ACCH), or the equivalent for each state listed in subsections ~~(B)(5) and (6)~~ (B)(6) and (7);
5. Contact all personal references and employers listed in subsections ~~(B)(4) and (5)~~ (B)(6) and (7) and document the answers to inquiries concerning whether the individual meets the standards of this Section;
6. Query the Board regarding the individual's certification status, reports of alleged misconduct by the individual, and whether the individual has a Board case with an RF designation;
7. Query all Arizona law enforcement agencies where the individual was appointed or applied for appointment as a peace officer regarding records maintained under R13-4-108(C);
8. Administer a polygraph examination, unless prohibited by law. The results shall include a detailed report of the pre-test interview and any post-test interview and shall cover responses to all questions that concern:
    a. Minimum standards for appointment as required by R13-4-105,
    b. Truthfulness on the personal history statement,
    c. Commission of any crimes; and
    d. Any Board case with an RF designation;
9. If any of the information under subsections (C)(1) through (8) is more than a year old, the agency shall administer another polygraph examination and query the individual regarding any changes in the information previously received

under subsections (C)(1) through (8); and

10. If the results of the background investigation show that the individual meets minimum qualifications for appointment, has not engaged in conduct or a pattern of conduct that would jeopardize public trust in the law enforcement profession, and is of good moral character, complete a report that attests to those findings. If the agency is unable to obtain all information required under subsections (C)(1) through (9), include in the report a description of the missing information and efforts made to obtain it.

R13-4-107. Medical Requirements

A. Medical, physical, and mental eligibility for certification.

1. An agency may appoint an individual if the individual meets the minimum qualifications in R13-4-105 and is able to perform all the essential functions of the job of peace officer effectively, with or without reasonable accommodation, without creating a reasonable probability of substantial harm to the individual or others.
2. If an agency wishes to appoint an individual who is unable to perform all the essential functions of the job of peace officer effectively, the agency may seek a restricted certification for the individual. The Board shall determine whether placing restrictions or requirements on the individual as a condition of certification will enable the individual to perform the essential functions authorized within the restriction without creating a reasonable probability of harm to the individual or others.

B. Medical examination process.

1. Medical history. An individual applying to be appointed shall provide to the examining~~, board-trained,~~ physician a written statement of the individual's medical history that includes past and present diseases, illnesses, symptoms, conditions, injuries, functionality, surgeries, procedures, immunizations, medications, and psychological information.
2. Medical examination.
   ~~a. The examining, board-trained, physician shall not delegate any part of the medical examination process to another person;~~
   ~~b.~~a. The examining~~, board-trained,~~ physician shall review the medical history statement and take an additional verbal history from the applicant;
   ~~c.~~b. The examining~~, board-trained,~~ physician shall conduct a physical examination consistent with the standard of care for occupational medical examinations;
   ~~d.~~c. The examining~~, board-trained,~~ physician shall order tests, obtain medical records, and require specialist or functional examinations and evaluations that the examining physician deems necessary to determine the applicant's ability to perform all the essential functions of the job of peace officer;
   ~~e.~~d. The examining~~, board-trained,~~ physician shall make a report to the agency and provide a:
      i. Summary of the examination;
      ii. Description of any significant medical findings;
      iii. Description of any limitation to the ability to perform the essential functions of the job of a peace officer; and
      iv. Medical opinion about the applicant's ability to perform the essential functions of the job of peace officer, with or without reasonable accommodations; and
   ~~f.~~e. The examining~~, board-trained,~~ physician shall consult with the agency, upon request, about the report and the efficacy of any accommodations the agency deems reasonable.

C. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

R13-4-108. Agency Records and Reports

A. Agency reports. On forms prescribed by the Board, an agency shall submit:

1. A report by the agency head attesting ~~that~~ the requirements of R13-4-105 are met for each individual appointed. The report shall be submitted to the Board before an individual attends an academy or performs the duties of a peace officer.
2. A ~~report of the~~ termination report ~~of~~ regarding a peace officer~~. The report~~ shall be submitted to the Board within 15 days of the termination and include:
   a. The nature of the termination and effective date; and
   b. A ~~detailed~~ description of any termination for cause~~; and~~.
   ~~c.~~3. ~~A~~ If an agency determines the termination of a peace officer is for cause, the agency shall submit to the Board a detailed description of~~,~~ and supporting documentation for~~, any~~ the cause ~~existing for suspension or revocation of certified status~~.

B. Agency records. An agency shall make its records available on request by the Board or staff. The agency shall maintain the following for each individual for whom certification is sought:

1. An application file that contains all of the information required in R13-4-103(E) and R13-4-106(C) for each individual appointed for certification as a peace officer;

2. A copy of reports submitted under subsection (A);
~~3. A signed copy of the affirmation to the Code of Ethics required under R13-4-105;~~
~~4.~~3. A written report of the results of a completed or partially completed background investigation and all written documentation obtained or recorded under R13-4-106, including information obtained regarding a Board case with an RF designation;
~~5.~~4. A completed medical report required under R13-4-107; and
~~6.~~5. A record of all ~~continuing training, proficiency training, and firearms qualifications conducted~~ requirements under R13-4-111.

C. Record retention. An agency shall maintain the records required by this Section as follows:
1. For applicants investigated under R13-4-106 who are not appointed: three years;
2. For applicants who are appointed: five years from the date of termination, except records retained under subsection ~~(B)(6)~~ (B)(5) shall be retained for three years ~~following completion of training~~; and
3. Reports of a polygraph examination given under R13-4-106~~(C)(6)~~(C)(8) shall be maintained in accordance with state law.

D. An agency shall make the records maintained under subsection (C) available, on request, to another agency completing a background investigation under R13-4-106(C).

R13-4-109. Denial, Revocation, Suspension, or Cancellation of Peace Officer Certified Status

A. Causes for denial, suspension, or revocation. The Board may deny certified status or suspend or revoke the certified status of a peace officer for:
1. Failing to satisfy a minimum qualification for appointment listed in R13-4-105;
2. Willfully providing false information in connection with obtaining or reactivating certified status;
3. Having a medical, physical, or mental disability that substantially limits the individual's ability to perform the duties of a peace officer effectively, or that may create a reasonable probability of substantial harm to the individual or others, for which a reasonable accommodation cannot be made;
4. Violating a restriction or requirement for certified status imposed under R13-4-109.01, R13-4-103 (G), or R13-4-104;
5. Engaging in behavior that would be disqualifying under R13-4-105(B);
6. Using or being under the influence of spirituous liquor on duty without authorization;
7. Committing a felony~~, an~~ offense, an act that would be a felony if committed in this state, or an offense involving dishonesty, unlawful sexual conduct, or physical violence;
8. Committing malfeasance, misfeasance, or nonfeasance in office;
9. Performing the duties or exercising the authority of a peace officer without having active certified status;
10. Making a false or misleading statement, written or oral, to the Board or its representative;
11. Failing to furnish information in a timely manner to the Board or its representative on request; or
12. Engaging in any conduct or pattern of conduct that tends to disrupt, diminish, or otherwise jeopardize public trust in the law enforcement profession.

B. Cause for cancellation. The Board shall cancel the certified status of a peace officer if the Board determines ~~that~~ the individual was not qualified when certified status was granted, and revocation is not warranted under subsection (A).

C. Cause for mandatory revocation. Upon the receipt of a certified copy of a judgment of a felony conviction of a peace officer, the Board shall revoke certified status of the peace officer.

D. Action by the Board. Upon receipt of information that cause exists to deny certification, or to cancel, suspend, or revoke the certified status of a peace officer, the Board shall determine whether to initiate action regarding the retention of certified status. The Board may conduct additional inquiries or investigations to obtain sufficient information to make a fair determination.

E. Notice of action. The Board shall notify the affected individual of Board action to initiate proceedings regarding certified status for a cause listed under subsection (A) or (B). The notice shall be served as required by A.R.S. § 41-1092.04 and specify the cause for the action. Within 30 days after receiving the notice, the individual named in the notice shall advise the Board or its staff in writing whether a hearing is requested. Failure to file a written request for hearing at the Board offices within 30 days after receiving the notice constitutes a waiver of the right to a hearing.

F. Effect of agency action. Action by an agency or a decision resulting from an appeal of that action does not preclude action by the Board to deny, cancel, suspend, or revoke the certified status of a peace officer.

R13-4-109.01. Restriction of Certified Peace Officer Status: Training or Qualification Deficiencies

A. Restricted status. The Board shall restrict certified status if a peace officer fails to satisfy the requirements of R13-4-111.
1. The Board shall consider reports of training or qualification deficiencies at a regularly scheduled public meeting and provide a peace officer alleged to have a training or qualification deficiency the opportunity to be heard without referral

to an independent hearing officer. At the public meeting, the Board shall determine only whether the peace officer has successfully completed the required training or qualification and can produce documentation to verify it.

2. The Board shall leave a restriction in effect until the training or qualification requirement is met and the peace officer files written verification of the training or qualification with the Board.
3. The Board shall provide notice of restriction or reinstatement following a restriction under this Section by regular mail to the peace officer at the employing agency address. The Board shall provide a copy of the restriction or reinstatement notice by regular mail to the agency head.

B. Firearms qualification. If a peace officer fails to satisfy R13-4-111~~(C)~~(B), the peace officer shall not carry or use a firearm on duty.

C. ~~Continuing and proficiency~~ Annual training. If a peace officer fails to satisfy R13-4-111(A) or (B), the peace officer shall not engage in enforcement duties, carry a firearm, wear or display a badge, wear a uniform, make arrests, perform patrol functions, or operate a marked police vehicle.

R13-4-110. Basic Training Requirements

A. Required training for certified status. The Board shall not certify and an individual shall not perform the duties of a peace officer until the individual successfully completes basic training as follows:

1. Comprehensive examination. To be certified as a full-authority peace officer, an individual shall complete the ~~Board approved~~ Board-approved full-authority peace officer basic training course, specified in R13-4-116, at an academy and pass all sections of the ~~CFE~~ CE.
   a. The Board shall ensure all sections of the ~~CFE~~ CE ~~is~~ are administered in a secure manner.
   b. The Board shall ensure all sections of the CE are administered at appropriate intervals throughout the full-authority peace officer basic training course. The Board shall ensure ~~that~~ the last section of the ~~CFE~~ CE is administered during the final two weeks of the full-authority peace officer basic training course.
   c. An individual passes the ~~CFE~~ CE by achieving a score of at least 70 percent on each ~~of the three blocks~~ section of the ~~CFE~~ CE when each ~~block~~ section is scored separately.
   d. An individual who fails ~~one or more blocks~~ a section of the ~~CFE~~ CE may retake the failed ~~block~~ section ~~one time before the individual is scheduled to graduate from the academy~~ within seven days of the original examination date if the individual remains appointed by the original appointing agency or enrolled in the academy.
   ~~e. An individual who fails a retake of a block of the CFE, as described in subsection (A)(1)(d), may retake the failed block once more within 60 days from the original testing date if the individual remains appointed by the original appointing agency or enrolled in the academy.~~
   ~~f.~~e. An individual who fails a ~~second~~ retake of a ~~block~~ section of the ~~CFE~~ CE, as described in subsection ~~(A)(1)(c)~~ (A)(1)(d), may pursue certification only by repeating the ~~Board approved~~ Board-approved full-authority peace officer basic training course.
   ~~g. An agency head is not required to continue to appoint an individual during the 60 days permitted for a second retake of a failed block of the CFE, as described in subsection (A)(1)(e).~~
2. Scenarios. To be certified as a full-authority peace officer, an individual shall complete the Board-approved full-authority peace officer basic training course, specified in R13-4-116, at an academy and demonstrate skills by passing a series of scenarios.
   a. The Board shall ensure each scored scenario is marked as either pass or fail.
   b. An individual who fails a scenario may immediately take a remedial scenario involving the same skill.
   c. An individual who fails a remedial scenario may pursue certification only by repeating the Board-approved full-authority peace officer basic training course.

~~2.~~3. To be certified as a specialty peace officer, an individual shall complete a Board-prescribed specialty peace officer basic training course or the ~~Board approved~~ Board-approved full-authority peace officer basic training course, specified in R13-4-116, at an academy and pass ~~blocks~~ all sections of the ~~CFE~~ CE prescribed under subsection (A)(1) that are relevant to the duties of a specialty peace officer.

B. Exceptions. The training requirement in subsection (A) is waived when an agency uses an individual during a~~:~~

~~1. Riot, insurrection, disaster, or other event that exhausts the peace officer resources of the agency and the individual is attending an academy; or~~

~~2.~~ ~~Field~~ field training program that is a component of a basic training program at an academy, and the individual is under the direct supervision and control of a certified peace officer.

C. Firearms training required. Unless otherwise specified in this Section, a peace officer shall complete the firearms qualification courses required in R13-4-116(E) before the peace officer carries a firearm in the course of duty.

D. Waiver of required training.

1. An agency, on behalf of an individual, may apply to the Board for a waiver of required training if:
   a. The individual's certified status is lapsed;

b. The individual has functioned in the capacity of a peace officer in another state, graduated from a Peace Officer Standards and Training Academy, and worked for at least one year as a peace officer; or
c. The individual graduated from a federal law enforcement academy, ~~and~~ worked for at least one year as a law enforcement officer, and meets the requirement under subsection (D)(2)(e)(i).

2. The Board shall review the application and grant a waiver of required training if the Board determines that the best interests of the law enforcement profession are served, the public welfare and safety are not jeopardized, and:
a. The appointing agency submits to the Board written verification of the individual's previous experience and training on a form prescribed by the Board;
b. The individual meets the minimum qualifications listed in R13-4-105;
c. The individual complies with the requirements of R13-4-103(E)(1);
d. The appointing agency complies with the requirements of R13-4-106(C);
e. The individual successfully completes an examination measuring the individual's comprehension of the ~~Board approved~~ Board-approved full-authority peace officer basic training course as follows:
i. If the individual has experience as a certified peace officer ~~in another state or~~ for a federal law enforcement agency, ~~and~~ submits to the Board basic training and in-service training records that the Board determines demonstrate substantial comparability to Arizona's ~~Board approved~~ Board-approved full-authority peace officer basic training course, ~~the individual shall pass~~ and passes all ~~blocks~~ sections of the ~~CFE~~ CE; and
ii. If the individual's certification is lapsed, the individual shall pass all ~~blocks~~ sections of the ~~CFE~~ CE; and
iii. ~~The~~ Applicable provisions in ~~subsections (A)(1)(a), (c), and (e) through (g)~~ subsection (A)(1) apply to this subsection; and
f. In addition to the examination required under subsection (D)~~(5)~~(2)(e), the individual demonstrates proficiency in the areas of physical conditioning, vehicle operations, pursuit operations, and firearms, including firearms qualifications, as required under R13-4-116(E)~~(1)~~.

E. Required inspections. Before an agency provides the Board-approved full-authority peace officer basic training course, Board staff shall conduct an onsite inspection to ensure the agency is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use. Following the inspection, Board staff shall provide the agency with an inspection report identifying any deficiencies and necessary corrective action.

~~E.~~**F.** This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

R13-4-111. Certification Retention Requirements

A. ~~Training~~ Annual training required.
1. A full-authority or specialty peace officer shall complete 12 hours of training each year beginning January 1 following the date the officer is certified.
2. Training course standards for peace officers. The provider of a training course for peace officers shall ensure ~~that~~:
a. The course curriculum consists of instruction on topics related to law enforcement operations and peace officer functions and skills;
b. An attendance verification certificate, which includes a statement that the provider believes the course meets the requirements of this Section, is given to each attendee for audit purposes;
c. If the training provider is an agency, an attendance roster and lesson plan or other information sufficient to determine compliance with this Section is made available upon request by the Board for Board audit; and
d. If an agency wishes to host a vendor-provided training course:
i. Both the agency and vendor shall comply with the provisions of subsection (A)(2); and
ii. The agency shall provide the statement described under subsection (A)(2)(b).
3. Required records. A peace officer shall provide to the appointing agency a copy of all documents provided to the peace officer under subsection (A)(2)(b). The appointing agency shall maintain the documents and make them available, upon request by the Board, for Board audit.
4. The Board may reject a training course if the Board finds the course content does not serve the best interest of the law enforcement profession or jeopardizes public welfare and safety.

B. ~~Firearms~~ Annual firearms qualification required. In addition to the training required under subsection (A), a peace officer authorized to carry a firearm shall qualify to continue to be authorized to carry a firearm each year beginning January 1 following certification by completing a Board-prescribed firearms qualification course, using a service handgun, ~~and~~ service, frangible, or practice ammunition, and a Board-prescribed target identification and judgment course.
1. Firearms qualification course standards.
a. A firearms qualification course is a course:
i. Prescribed under R13-4-116(E)(1), or
ii. Determined by the Board to measure firearms competency at least as accurately as courses prescribed under R13-4-116(E)(1).

b. The provider of a firearms qualification course shall ensure ~~that~~ the course includes:
   i. A timed accuracy component;
   ii. A type and style of target that is equal to, or more difficult than, targets used in a course prescribed under R13-4-116(E)(1); and
   iii. A success criterion that is equal to, or more difficult than, criteria used in a course prescribed under R13-4-116(E)(1).

2. Firearms target identification and judgment course standards.
   a. A firearms target identification and judgment course is a course:
      i. Prescribed under R13-4-116(E)(1), or
      ii. Determined by the Board to measure target identification and judgment competency at least as accurately as courses prescribed under R13-4-116(E)(1).
   b. The provider of a firearms target identification and judgment course shall ensure ~~that~~ the course includes:
      i. A timed accuracy component;
      ii. A type and style of target discrimination test that is equal to, or more difficult than, those used in a course prescribed under R13-4-116(E)(1); and
      iii. A success criterion that is equal to, or more difficult than, criteria used in a course prescribed under R13-4-116(E)(1).
3. The provider of a firearms qualification or firearms target identification and judgment course shall ensure ~~that~~ the course is taught by a firearms instructor who meets the requirements of R13-4-114(A)(2)(c).

C. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

R13-4-114. Minimum Course Requirements

A. Instructors. An academy administrator shall ensure ~~that~~ only an instructor who meets the requirements of this Section ~~facilitates~~ instructs a Board-prescribed course.
1. Instructor classifications.
   a. General instructor. An individual qualified to teach topics not requiring a proficiency instructor under subsection (A)(1)(c).
   b. Specialist instructor. An individual, other than an active Arizona peace officer, qualified to teach a topic in which the instructor has special expertise but who does not qualify for general instructor status.
   c. Proficiency instructor. An individual qualified to teach a topic area listed in R13-4-116(E)(1)(h).
2. Instructor qualification standards.
   a. A general instructor shall meet the following requirements:
      i. Have two years' experience as a certified peace officer;
      ii. Maintain instructional competency; and
      iii. Successfully complete a Board-sponsored instructor training course or an instructor training course that contains all of the performance objectives and demonstrations of the Board-sponsored instructor course.
   b. A specialist instructor shall meet the requirements of subsections (A)(2)(b)(i) and (A)(2)(b)(ii) and either subsection (A)(2)(b)(iii) or (A)(2)(b)(iv):
      i. Be nominated by the administrator of an academy authorized to provide a peace officer basic training course;
      ii. Maintain instructional competency;
      iii. Possess a professional license or certification other than ~~a~~ an active peace officer certification that relates to the topics to be taught; and
      iv. Provide documentation to the academy administrator for forwarding to the Board that demonstrates the expertise and ability to enhance peace officer training in a special field.
   c. A proficiency instructor shall meet the requirements of subsections (A)(2)(c)(i) and (A)(2)(c)(ii) and either subsection (A)(2)(c)(iii) or (A)(2)(c)(iv):
      i. Meet the requirements for general instructor;
      ii. Maintain instructional competency;
      iii. Successfully complete a proficiency instructor course in a topic area listed in R13-4-116(E)(1)(h) that includes a competency assessment to instruct in that area within the full-authority peace officer basic training course listed in R13-4-116(E); and
      iv. Complete a form prescribed by the Board that documents advanced training and experience in the topic area including a competency assessment to instruct in that area within the full-authority peace officer basic training course listed in R13-4-116(E).
   d. A proficiency instructor shall meet the requirements of subsection (A)(2)(c) separately for each topic area listed in R13-4-116(E)(1)(h) for which the proficiency instructor seeks qualification.
3. Instructional competency. An academy administrator shall immediately notify the Board in writing of any instructor:

a. Who jeopardizes the safety of students or the public,
b. Whose instruction violates acceptable training standards,
c. Who is grossly deficient in performance as an instructor, or
d. Who is a proficiency instructor and fails to complete satisfactorily the competency assessment to instruct in the instructor's topic area within the full-authority peace officer basic training course.

4. If the Board determines ~~that~~ an instructor fails to comply with the provisions of this Section, has an instructional deficiency, or fails to maintain proficiency, any course ~~facilitated~~ instructed by the instructor does not meet the requirements of this Section.

B. Curriculum standards. An academy administrator or agency head shall ensure ~~that~~ the curriculum for a Board-prescribed course meets the following standards:

1. Curriculum.
   a. Curriculum development employs valid, job-based performance objectives and learning activities, and promotes student, officer, and public safety, as determined by a scientifically conducted validation study of the knowledge, skills, abilities, and aptitudes needed by the affected category of Arizona peace officer.
   b. The curriculum meets or exceeds the requirements of subsection (B)(2), unless otherwise provided in this Section.
2. Curriculum format standard. The curriculum consists of the following:
   a. A general statement of instructional intent that summarizes the desired learning outcome, is broad in scope, and includes long-term or far-reaching learning goals;
   b. Lesson plans containing:
      i. Course title,
      ii. Hours of instruction,
      iii. Materials and aids to be used,
      iv. Instructional strategy,
      v. Topic areas in outline form,
      vi. Performance objectives or learning activities,
      vii. Success criteria, and
      viii. Reference material;
   c. Performance objectives consisting of at least the following components:
      i. The student, which is an individual or group that performs a behavior as the result of instruction;
      ii. The behavior, which is an observable demonstration by the student at the end of instruction that shows that the objective is achieved and allows evaluation of the student's capabilities to perform the behavior; and
      iii. The conditions, which is a description of the important conditions of instruction or evaluation under which the student performs the behavior. Unless specified otherwise within the lesson plan, instruction and evaluation will be in written or oral form; and
   d. Learning activities. A student is not required to demonstrate mastery of learning activities as a condition for successfully completing the training. Learning activities are subject areas for which performance objectives are not appropriate because either:
      i. Reliable and meaningful assessment of mastery of the material would be extremely difficult or impossible, or
      ii. Mastery of the material is not likely to bear a direct relationship to the ability to perform entry-level peace officer job duties~~; and~~.
   ~~e. The following decimal numbering system to provide a logical means of organization:~~
      ~~i. Functional area (1.0, 2.0, 3.0),~~
      ~~ii. Topic area (1.1.0, 1.2.0, 1.3.0), and~~
      ~~iii. Performance objective or learning activity (1.1.1, 1.1.2, 1.1.3).~~

C. The Board shall maintain and provide upon request a copy of curricula that meet the standards of this Section.

R13-4-116. Academy Requirements

A. Unless otherwise provided in this Article, only the basic training provided by an academy that the Board determines meets the standards prescribed in this Section may be used to qualify for certified peace officer status.

B. The academy administrator shall ensure ~~that~~ the academy has the following:

1. A classroom with adequate heating, cooling, ventilation, lighting, and space;
2. Chairs with tables or arms for writing;
3. Visual aid devices for classroom presentation;
4. Equipment in good condition for specialized instruction;
5. A safe driving ~~range~~ track for conducting the ~~defensive~~ vehicle and pursuit ~~driving~~ operations course;
6. A ~~firing~~ firearm range with adequate backstop to ensure the safety of all individuals on or near the range; and

7. A safe location for practical exercises including assessing physical conditioning, defensive tactics, and high-risk vehicle stops.

C. Administrative requirements. The academy administrator shall ensure ~~that~~ the academy:

1. Establishes and maintains written policies, procedures, and rules concerning:
   a. Operation of the academy,
   b. Entrance requirements,
   c. Student and instructor conduct, and
   d. Administering examinations;
2. Admits only individuals who meet the requirements of R13-4-105, as electronically or otherwise attested to the Board by the appointing agency or, in the case of an open enrollee, by the academy administrator, ~~on form A1 or A4, as applicable, which is submitted to the Board~~ on or before the first day of training;
3. Administers to each student at the beginning of each academy session a written examination ~~prescribed by the Board~~ measuring competency in reading and writing English;
4. Schedules sufficient time for the ~~CFE~~ CE to be administered as required by R13-4-110(A); and
5. Uses only instructors who are qualified under R13-4-114(A).

D. Academic requirements. The academy administrator shall ensure ~~that~~ the academy:

1. Establishes a curriculum with performance objectives and learning activities that meet the requirements of subsection (E) and R13-4-114(B);
2. Requires instructors to use lesson plans that cover the course content and list the performance objectives to be achieved and learning activities to be used;
3. Administers written, oral, or practical demonstration examinations that measure the attainment of the performance objectives;
4. Reviews examination results with each student and ensures ~~that~~ the student is shown any necessary corrections and signs and dates an acknowledgment that the student participated in the review;
5. Requires a student to ~~complete~~ successfully complete oral or written examinations that cover all topics ~~in all functional areas~~ of the Board-approved full-authority peace officer basic training course before graduating.
   a. Successful completion of an examination is a score of 70 percent or greater;
   b. For a student who scores less than 70 percent, the academy shall:
      i. Provide remedial training, and
      ii. Re-examine the student in the area of deficiency; and
   c. The academy shall allow a student to retake each examination only once;
6. Requires a student to qualify with firearms as described in ~~R13-4-116(E)~~ subsection (E);
7. Ensures ~~that~~ a student meets the success criteria for police proficiency skills under subsection (E)(1);
8. Provides remedial training for a student who misses a class from the Board-approved full-authority peace officer basic training course before allowing the student to graduate; and
9. Refuses to graduate a student who ~~is absent more than 32 hours~~ has missed and failed to make-up any classes from the ~~Board approved~~ Board-approved full-authority peace officer basic training course ~~or 16 hours from the specialty peace officer basic training course~~.

E. Basic course requirements. The academy administrator shall ensure ~~that~~ the academy uses curricula that meet the requirements of R13-4-114 for the following basic courses of instruction.

1. The ~~Board-approved~~ Board-approved full-authority peace officer basic training course shall include all of the following topics ~~listed in each of the following functional areas~~:
   a. ~~Functional Area I –~~ Introduction to Law Enforcement.
      i. Criminal justice systems,
      ii. History of law enforcement,
      iii. Law enforcement services,
      iv. Supervision and management,
      v. Ethics and professionalism, and
      vi. Stress management.
   b. ~~Functional Area II –~~ Law and Legal Matters.
      i. Introduction to criminal law;
      ii. Laws of arrest;
      iii. Search and seizure;
      iv. Rules of evidence;
      v. Summonses, subpoenas, and warrants;
      vi. Civil process;
      vii. Administration of criminal justice;

viii. Juvenile law and procedures;
ix. Courtroom demeanor;
x. Constitutional law;
xi. Substantive criminal law, A.R.S. Titles 4, 13, and 36; and
xii. Liability issues.

c. ~~Functional Area III -~~ Patrol Procedures.
i. Patrol and observation ~~(part 1),~~
~~ii. Patrol and observation (part 2),~~
~~iii.~~ ii. Domestic violence,
~~iv.~~ iii. Behavioral health crisis response,
~~v.~~ iv. Crimes in progress,
~~vi.~~ v. Crowd control formations and tactics,
~~vii.~~ vi. Bomb threats and disaster training,
~~viii.~~ vii. Intoxication cases,
~~ix.~~ viii. Communication and police information systems,
~~x.~~ ix. Hazardous materials,
~~xi.~~ x. Bias-motivated crimes,
~~xii.~~ xi. Fires, and
~~xiii.~~ xii. Civil Disputes.

d. ~~Functional Area IV -~~ Traffic Control.
i. Impaired driver cases;
ii. Traffic citations;
iii. Traffic collision investigation;
iv. Traffic collision (practical);
v. Traffic direction; and
vi. Substantive Traffic Law, A.R.S. Title 28.

e. ~~Functional Area V -~~ Crime Scene Management.
i. Preliminary investigation and crime scene management,
ii. Crime scene investigation (practical),
iii. Physical evidence procedures,
iv. Interviewing and questioning,
v. Fingerprinting,
vi. Sex crimes investigations,
vii. Death investigations including sudden infant death syndrome,
viii. Organized crime activity,
ix. Investigation of specific crimes, and
x. Narcotics and dangerous drugs.

f. ~~Functional Area VI -~~ Community and Police Relations.
i. Cultural awareness,
ii. Victimology,
iii. Interpersonal communications,
iv. Crime prevention, and
v. Police and the community.

g. ~~Functional Area VII -~~ Records and Reports. Report writing.

h. ~~Functional Area VIII -~~ Police Proficiency Skills.
i. First aid,
ii. Less lethal operations (including certification),
iii. Firearms training (including firearms qualification),
iv. Physical conditioning,
v. High-risk stops,
vi. Arrest and control tactics,
vii. Vehicle ~~operations,~~ and pursuit operations,
viii. ~~Pursuit operations~~ Active assailant response.

i. ~~Functional Area IX -~~ Orientation and Introduction.
i. Examinations and reviews,
ii. Counseling, and
iii. Non-Board specified courses.

2. The specialty peace officer basic training course shall include all of the topics necessary from the ~~Board approved~~ Board-approved full-authority peace officer basic training course for the curriculum to meet the requirements of R13-4-114(B).
3. Administrative functions such as orientation, introductions, examinations and reviews, and counseling are exempt from the requirements of R13-4-114(B).

F. Records required. The academy administrator shall ensure ~~that~~ the following records are maintained and made available for inspection by the Board or staff. The academy administrator shall provide to the Board copies of records upon request.
1. A record of all students attending the academy;
2. A manual containing the policies, procedures, and rules of the academy;
3. A document signed by each student indicating ~~that~~ the student received and read a copy of the academy policies, procedures, and rules;
4. A copy of all lesson plans used by instructors;
5. An annually signed and dated acknowledgment that the academy administrator reviewed and approved each lesson plan used at the academy;
6. A copy of all examinations, answer sheets or records of performance, and examination review acknowledgments;
7. An attendance roster for all classes or other record that identifies absent students;
8. A record of classes missed by each student and the remedial training received;
9. A record of disciplinary actions for all students; and
10. A file for each student containing the student's performance history.

G. Reports required. The academy administrator shall submit to the Board:
1. At least 10 working days before the start of each academy session, a complete schedule of classes containing the name of the instructor for each class and the training location;
2. No more than five working days after the start of each academy session, on a form prescribed by the Board, a roster indicating whether a student is an open enrollee or appointed and if appointed, identifying the appointing agency, and the full name and Social Security number of each student;
3. No more than five working days after dismissing a student from the academy, notification of the dismissal and the reason;
4. No later than the tenth day of each month, a report containing:
   a. A summary of training activities and progress of the academy class to date;
   b. Unusual occurrences, accidents, or liability issues; and
   c. Other problems or matters of interest noted in the course of the academy, if not included under subsection (G)(4)(b);
5. No more than 10 working days after the end of each academy session, a complete schedule of classes containing the name of the instructor for each class and the training location;
6. No more than 10 working days after the end of each academy session, on a form prescribed by the Board, a roster indicating whether a student is an open enrollee or appointed and if appointed, identifying the appointing agency, and the full name and Social Security number of each student successfully completing the training.

H. Required inspections. Before an academy provides training to individuals seeking certification for any category of peace officer, the Board staff shall conduct an onsite inspection of the academy to determine compliance with this Section and R13-4-114. Board staff shall conduct additional inspections as often as the Board deems necessary.
1. Within 30 days after the inspection, the Board staff shall provide to the academy administrator an inspection report that lists any deficiencies identified and remedial actions the academy is required to take to comply with the standards of this Section and R13-4-114.
2. Within 30 days after receipt of the inspection report, the academy administrator shall submit to the Board a response that indicates the progress made to complete the remedial actions necessary to correct the deficiencies described in the inspection report. The academy administrator shall submit to the Board additional responses every 30 days until all remedial action is complete.
3. Within 30 days after receipt of notice that all remedial action is complete, Board staff shall conduct another inspection.
4. Following each inspection, Board staff shall present an inspection report to the Board describing the academy's compliance in meeting the standards of this Section and R13-4-114.

I. If an academy does not conduct a peace officer basic training course for 12 consecutive months, the academy shall not provide training until Board staff conducts another inspection as required by subsection (H). Otherwise, an academy may continue to provide training unless the Board determines ~~that~~ the academy is not in compliance with the standards of this Section or R13-4-114.

J. If the Board finds ~~that~~ an academy fails to comply with the provisions of this Section or R13-4-114, the academy shall not provide training to individuals seeking to be certified as peace officers.

K. An academy administrator shall ensure ~~that~~ an open enrollee is admitted only after the academy administrator complies with every requirement of an agency or agency head imposed by R13-4-105, R13-4-106, R13-4-107, and R13-4-108 except for R13-4-106(C)(4).

ARTICLE 2. CORRECTIONAL OFFICERS

R13-4-201. Definitions

The definitions in A.R.S. § 41-1661 apply to this Article. Additionally, unless the context otherwise requires:

"Academy" means the Correctional Officer Training Academy (COTA) of the Arizona Department of Corrections, Rehabilitation and Reentry in Tucson, Arizona, or a satellite location authorized by the Director.

"Appointment" means the selection of an individual as a correctional officer.

"Applicant" means an individual who applies to be a correctional officer.

"Cadet" means an individual who is attending the academy and, upon graduation, will become a state correctional officer.

"Dangerous drug or narcotic" is defined in R13-4-101.

"Department" means the Arizona Department of Corrections, Rehabilitation and Reentry.

"State correctional officer" means an individual employed by the Department in the correctional officer series.

R13-4-202. Uniform Minimum Standards

A. To be admitted to the academy for training as a state correctional officer, an individual shall:

1. Be a citizen of the United States or eligible to work in the United States;
2. Be at least 18 years of age by the date of graduation from the academy;
3. Be a high school graduate or have successfully completed a General Education Development (G.E.D.) examination or equivalent as specified in R13-4-203(C)(3);
4. Have a valid Arizona driver's license ~~(Class 2 or higher)~~ by the date of graduation from the academy;
5. Undergo a complete background investigation that meets the standards of R13-4-203;
6. Undergo a physical examination (within 12 months before appointment) as prescribed by the Director by a licensed physician designated by the Director;
7. Not have been dishonorably discharged from the United States Armed Forces;
8. Not have used a dangerous drug or narcotic, as defined at A.R.S. § 13-3401, within the past five years;
9. Not have a pattern of abuse of prescription medication; and
10. Not have committed a felony or a misdemeanor of a nature that the ~~Board~~ Director determines has a reasonable relationship to the functions of the position, in accordance with A.R.S. § 13-904(E).

~~**B.** If the Director wishes to appoint an individual whose conduct is grounds to deny certification under R13-4-109, the Director may petition the Board for a determination that the otherwise disqualifying conduct constitutes juvenile indiscretion by complying with R13-4-105(D).~~

~~**C.**~~**B.** Code of Ethics. To enhance the quality of performance and the conduct and the behavior of correctional officers, an individual appointed to be a correctional officer shall commit to the following Code of Ethics and shall affirm the commitment by signing the Code:

"I shall maintain high standards of honesty, integrity, and impartiality, free from any personal considerations, favoritism, or partisan demands. I shall be courteous, considerate, and prompt when dealing with the public, realizing that I serve the public. I shall maintain mutual respect and professional cooperation in my relationships with other staff members.

I shall be firm, fair, and consistent in the performance of my duties. I shall treat others with dignity, respect, and compassion, and provide humane custody and care, void of all retribution, harassment, or abuse. I shall uphold the Constitutions of the United States and the state of Arizona, and all federal and state laws. Whether on or off duty, in uniform or not, I shall conduct myself in a manner that will not bring discredit or embarrassment to my agency or the state of Arizona.

I shall report without reservation any corrupt or unethical behavior that could affect either inmates, employees, or the integrity of my agency. I shall not use my official position for personal gain. I shall maintain confidentiality of information that has been entrusted to me and designated as such.

I shall not permit myself to be placed under any kind of personal obligation that could lead any person to expect official favors. I shall not accept or solicit from anyone, either directly or indirectly, anything of economic value such as a gift, gratuity, favor, entertainment, or loan, that is or may appear to be, designed to influence my official conduct. I will not discriminate against any inmate, employee, or any member of the public on the basis of race, gender, creed, or national

origin. I will not sexually harass or condone sexual harassment of any person. I shall maintain the highest standards of personal hygiene, grooming, and neatness while on duty or otherwise representing the state of Arizona."

R13-4-203. Background Investigation

A. The Department shall conduct a background investigation before an applicant is admitted to the academy. The Department shall review the personal history statement submitted under subsection (B) and the results of the background investigation required in subsection (C) to determine whether the individual meets the requirements of R13-4-202 and the individual's personal history statement is accurate and truthful.

B. Personal history. An applicant shall complete and submit to the ~~employing agency a~~ Department, the personal history statement ~~on a form~~ prescribed by the ~~Board~~ Department. The applicant shall complete the personal history statement before the start of the background investigation and ensure ~~that~~ the personal history statement provides the information necessary for the Department to conduct the investigation described in subsection (C).

C. Investigative requirements. Before admitting an applicant to the academy, the Department shall collect, verify, and retain documents establishing that the applicant meets the standards specified in this Article. At a minimum, this documentation shall include:

1. Proof of the applicant's age and United States citizenship or eligibility to work in the United States. A copy of any of the following regarding the applicant is acceptable proof:
   a. Birth certificate,
   b. United States passport,
   c. Certification of United States Naturalization,
   d. Certificate of Nationality, or
   e. Immigration Form I-151 or I-1551.
2. Proof of the applicant's valid driver's license. A copy of the applicant's driver's license and written verification of the applicant's driving record from the applicable state's Department of Transportation, Motor Vehicle Division, is required proof.
3. Proof ~~that~~ the applicant is a high school graduate or its equivalent. The following are acceptable proof:
   a. A copy of a diploma from a high school recognized by the department of education of the jurisdiction in which the diploma is issued;
   b. A copy of a certificate showing successful completion of the General Education Development (G.E.D.) test; or
   c. In the absence of proof of high school graduation or successful completion of the G.E.D. test,
      i. A copy of a degree or transcript from an accredited college or university showing successful completion of high school or high school equivalency;
      ii. A United States Military Service Record DD Form 214~~-#4~~ with the Education block indicating high school completion,
      iii. A copy of a diploma, certificate of completion, or transcripts issued by a private school in Arizona that includes the individual's name and a signed affirmation of the school administrator that the individual named received the equivalent of a high school education; or
      iv. Other evidence of high school education equivalency submitted to the Board for consideration.
4. Record of any military discharge. A copy of the Military Service Record (DD Form 214~~-#4~~ or NGB Form 22), which documents the character of service, separation code, and reentry code, is acceptable proof.
5. Results of a psychological fitness assessment approved by the Director and conducted by a psychologist or psychiatrist designated by the Department.

~~6. Personal references: The names and addresses of at least three individuals who can provide information regarding the applicant.~~

~~7.~~6. Previous employers or schools attended. The names and addresses of all employers of and schools attended by the applicant for the past five years.

~~8.~~7. Residence history. The complete address for every location at which the applicant has lived in the last five years.

~~9.~~8. Law enforcement agency records. The Department shall request and review law enforcement agency records in jurisdictions where the applicant has lived, worked, or attended school in the past five years. The Department shall document the information obtained.

~~10.~~9. Criminal history query. The Department shall query the National Crime Information Center/Interstate Identification Index (NCIC/III), and the Arizona Criminal Information Center/Arizona Computerized Criminal History (ACIC/ACCH), or the equivalent for each state where the applicant has lived, worked, or attended school in the past five years and review the criminal history record for any arrest or conviction to determine compliance with R13-4-202.

~~11.~~10. Fingerprint card. The Department shall obtain from an applicant and submit a fingerprint card for processing by the Arizona Department of Public Safety and the Federal Bureau of Investigation.

a. The Department shall process a fingerprint card for an applicant entering the academy, except as provided in subsections ~~(C)(9)(b) and (c)~~ (C)(10)(b) and (c). The Department shall process a fingerprint card for an applicant even if the applicant has a processed applicant fingerprint card from a previous employer.
b. If the fingerprint card is not fully processed when the applicant is ready to enter the academy, the Department may allow the applicant to attend the academy if:
   i. A computerized criminal history check has been made and the results are on file with the Department, and
   ii. The applicant meets all other requirements of this Section and R13-4-202.
c. If the Department has not received a fully processed fingerprint card within 15 weeks of the date of admission to the academy, the individual does not meet the requirements of this Section and may be terminated from the academy. The Department may extend the deadline for receipt of a processed fingerprint card an additional 15 weeks. An individual terminated from the academy under this subsection may be re-employed under R13-4-208 when a fully processed fingerprint card is received.

R13-4-204. Records ~~and Reports~~

~~**A.** Reports. The Department shall submit to the Board a report by the Director attesting that each individual completing the academy meets the requirements of R13-4-202.~~

~~**B.**~~**A.** ~~Records.~~ The Department shall make ~~Department~~ records available upon request to ~~the Board upon request of~~ the Board or its staff. The Department shall keep the records in a central location. The Department shall maintain:

~~1. A copy of reports submitted under subsection (A);~~
~~2.~~1. All written documentation obtained or recorded under R13-4-202 and R13-4-203; and
~~3.~~2. A record of all advanced training, specialized training, continuing education, and firearms qualification conducted under R13-4-206.

~~**C.**~~**B.** ~~Record retention.~~ The Department shall maintain the records required by this Section as follows:

1. For applicants investigated under R13-4-203 who are not appointed: two years; and
2. For applicants who are appointed: five years from the date of termination, except records retained under subsection ~~(B)(3)~~ (A)(2), shall be retained for three years.

R13-4-205. Basic Training Requirements

A. ~~Required training for state correctional officers.~~ Before appointment as a state correctional officer, an individual shall complete a Board-approved basic correctional officer training program. This program shall meet or exceed the requirements of this Section.

~~**B.** Curricula or training material approval time frames.~~

~~1. For the purposes of A.R.S. § 41-1073, the Board establishes the following time frames for curricula or training material that require Board approval under this Section and R13-4-206.~~
   ~~a. Administrative completeness time frame: 60 days.~~
   ~~b. Substantive review time frame: 60 days.~~
   ~~c. Overall time frame: 120 days.~~
~~2. The administrative completeness review time frame begins on the date the Board receives the documents required by this Section or R13-4-206.~~
   ~~a. Within 60 days, the Board shall review the documents and issue to the Department a statement of administrative completeness or a notice of administrative deficiencies that lists each item required by this Section that is missing.~~
   ~~b. If the Board issues a notice of administrative deficiency, the Department shall submit the missing documents and information within 90 days of the notice. The administrative completeness time frame is suspended from the date of the deficiency notice until the date the Board receives the missing documents and information.~~
   ~~c. If the Department fails to provide the missing documents within the 90 days provided, the Board shall deny the approval.~~
   ~~d. When the file is administratively complete, the Board shall provide written notice of administrative completeness to the Department.~~
~~3. The substantive review time frame begins on the date the Board issues the notice of administrative completeness.~~
   ~~a. During the substantive review time frame, the Board may make one comprehensive written request for additional information.~~
   ~~b. The Department shall submit to the Board the additional information identified in the request for additional information within 60 days. The time frame for the Board to finish the substantive review of the application is suspended from the date of the request for additional information until the Board receives the additional information.~~
   ~~c. The Board shall deny the approval if the additional information is not supplied within the 60 days provided.~~
   ~~d. When the substantive review is complete, the Board shall grant or deny approval.~~

~~C.~~**B.** Basic course specifications.

1. The Department shall develop the curriculum for the basic correctional officer training program.
   a. The curriculum shall include courses in the following functional areas.
      i. Functional Area I - Ethics and Professionalism;
      ii. Functional Area II - Inmate Management;
      iii. Functional Area III - Legal Issues;
      iv. Functional Area IV - Communication Skills;
      v. Functional Area V - Officer Safety, including firearms;
      vi. Functional Area VI - Applied Skills;
      vii. Functional Area VII - Security, Custody, and Control;
      viii. Functional Area VIII - Conflict and Crisis Management; and
      ix. Functional Area IX - Medical Emergencies, and Physical and Mental Health.
   b. The curriculum shall also contain administrative time for orientation, counseling, testing, and remedial training.
2. The Department shall ensure ~~that~~ curriculum submitted to the Board for approval contains lesson plans that include:
   a. Course title,
   b. Hours of instruction,
   c. Materials and aids to be used,
   d. Instructional strategy,
   e. Topic areas in outline form,
   f. Success criteria, and
   g. The performance objectives or learning activities to be achieved.
3. After initial approval by the Board, the Director or the Director's designee shall~~:~~ submit changes to a lesson plan to the Board for approval.
   ~~a. Annually review each lesson plan submitted to and approved by the Board under subsection (C)(2); and~~
   ~~b. If an approved lesson plan has been changed, submit the changed lesson plan to the Board for approval; or~~
   ~~c. If an approved lesson plan has not been changed, sign and date an acknowledgment of approval for each lesson plan.~~
4. The Department shall ensure ~~that~~ the following three components are specified for each performance objective:
   a. The learner, which is an individual or group that performs a behavior as the result of instruction;
   b. The behavior, which is an observable demonstration by the learner at the end of instruction that shows ~~that~~ the objective is achieved and allows evaluation of the learner's capabilities relative to the behavior;
   c. The conditions, which is a description of the important conditions of instruction or evaluation under which the learner will perform the stated behavior. Unless specified otherwise, the instruction and evaluation shall be in written or oral form.
5. The Department shall ensure ~~that~~ instructors of basic correctional officer training courses meet proficiency requirements developed by the Department ~~and approved by the Board~~. The Department shall ensure ~~that~~ proficiency requirements for instructors include education, experience, or a combination of both. The Department shall ~~affirm to the Board that~~ ensure each instructor has the necessary qualifications before the instructor delivers any instruction. In addition to these requirements, instructors of courses dealing with the proficiency skills of defensive tactics, physical conditioning, firearms, and medical emergencies shall complete specialized training developed by the Department ~~and approved by the Board~~. Instructors shall use lesson plans described in subsection ~~(C)(2)~~ (B)(2).

~~D.~~**C.** Academic requirements.

1. A cadet shall be given a combination of written, oral, or practical demonstration examinations capable of measuring the cadet's attainment of the performance objectives in each approved lesson plan.
2. Academy staff shall review examination results and academic progress with each cadet weekly. Academy staff shall ensure ~~that~~ each cadet is informed of correct responses.
3. A cadet shall complete all examinations before graduating from the academy. To successfully complete a written or oral examination, a cadet shall score at least 70 percent.
   a. If a cadet receives a score of less than 70 percent, the academy shall provide the cadet with remedial training in areas of deficiency.
   b. The academy shall not offer a cadet more than one re-examination per lesson plan.
4. A cadet shall qualify with firearms as specified in subsection ~~(C)~~ (B). ~~Firearms qualification shall include:~~
   ~~a. 50-shot daytime or nighttime qualification course with service handgun. The minimum passing score is 210 points out of a possible 250 points;~~
   ~~b. Seven-shot qualification course with service shotgun; and~~
   ~~c. Target identification and discrimination course.~~

5. A cadet shall meet success criteria described in the Board-approved curriculum for the proficiency skills of self-defense, physical conditioning, and medical emergencies, as approved under ~~R13-4-205(C)~~ subsection (B).
6. The academy shall provide a cadet who does not attend a lesson with remedial training before graduation.
7. The academy shall not graduate a cadet who attends less than 90 percent of the total hours of basic training.

~~E.~~**D.** Exceptions. A cadet shall not function as a state correctional officer except:

1. As ~~a~~ part of an exercise within the approved basic training program, if the cadet is under the direct supervision and control of a state correctional officer; or
2. At the discretion of the Director, for the duration of an emergency situation including, but not limited to, riots, insurrections, and natural disasters. A cadet shall not carry a firearm in the course of duty unless the cadet has successfully met the requirement of ~~R13-4-205(D)(4)~~ subsection (C)(4).

~~F.~~**E.** Waiver of required training. The Board shall grant a complete or partial waiver of the required basic training, at the request of the Director, upon a finding by the Board that the best interests of the corrections profession are served and the public welfare and safety is not jeopardized by the waiver if an applicant:

1. Successfully completes a basic corrections officer training course comparable to or exceeding, in hours of instruction and subject matter, the Board-approved basic correctional officer training course and has a minimum of one year of experience as a correctional officer. The applicant shall include verification of previous experience and training with the application for waiver;
2. Meets the minimum qualifications specified in R13-4-202; and
3. Successfully completes a comprehensive examination measuring comprehension of the Board-approved basic correctional officer training course. The comprehensive examination shall be prepared by the Department, approved by the ~~Board~~ Director, and include a written test and practical demonstrations of proficiency in firearms, physical conditioning, and defensive tactics.

R13-4-206. Field Training and Continuing Training Including Firearms Qualification

A. Field training requirement. Before graduating from the academy or within two months after graduation, a cadet or state correctional officer shall participate in and successfully complete a ~~Board-approved~~ Department approved field training program.

B. Continuing training requirement.

1. A state correctional officer shall receive eight hours of ~~Board-approved~~ Board-approved continuing training each calendar year beginning January 1 following the date the officer ~~received certified status~~ graduated from the academy.
2. In addition to the training required under subsection (B)(1), a state correctional officer authorized to carry a firearm shall qualify each calendar year after appointment beginning January 1 following the date the officer ~~received certified status~~ graduated from the academy. The firearms qualification training shall meet the standards specified under subsection (F) and shall not be used to satisfy the requirements of ~~R13-4-206~~ subsection (C).

C. Continuing training requirements may be fulfilled by:

1. Advanced training programs, or
2. Specialized training programs.

D. Advanced training programs. The Department shall develop, design, implement, maintain, evaluate, and revise advanced training programs that include courses enhancing a correctional officer's knowledge, skills, or abilities for the job that the correctional officer performs. The courses within an advanced training program shall include advanced or remedial training in any topic listed in R13-4-205~~(C)~~(B).

E. Specialized training programs. The Department shall develop, design, implement, maintain, evaluate, and revise specialized training programs that address a particular need of the Department and target a select group of officers. The courses within a specialized training program shall include topics different from those in the basic corrections training program or any advanced training programs.

F. Firearms qualification required. A correctional officer authorized to carry a firearm shall qualify to continue to be authorized to carry a firearm each calendar year beginning the year following ~~the receipt of certified status~~ graduation from the academy by completing a Board-prescribed firearms qualification course using a service handgun, service shotgun, and service ammunition, and a Board-prescribed target identification and judgment course. All courses shall be presented by a firearms instructor who meets the requirements under R13-4-205(B)(5).

~~1. Firearms qualification course standards.~~

~~a. A firearms qualification course is:~~

~~i. A course prescribed under R13-4-205(C); or~~

~~ii. A course determined by the Board to measure firearms competency at least as accurately as the course prescribed under R13-4-205(C).~~

~~b. All firearms qualification courses shall include:~~

~~i. A timed accuracy component;~~

~~ii. A type and style of target that is equal to, or more difficult than, the targets used under R13-4-205(C); and~~

~~iii. Success criteria that are equal to, or more difficult than, the success criteria used under R13-4-205(C).~~

~~2. Firearms target identification and judgment course standards.~~

~~a. A firearms target identification and judgment course is:~~

~~i. A course prescribed under R13-4-205(C); or~~

~~ii. A course determined by the Board to measure target identification and judgment competency at least as accurately as those prescribed under R13-4-205(C).~~

~~b. All firearms target identification and judgment courses shall include:~~

~~i. A timed accuracy component;~~

~~ii. A type and style of target discrimination that is equal to, or more difficult than, those used under R13-4-205(C); and~~

~~iii. Success criteria that are equal to, or more difficult than, those used under R13-4-205(C),~~

~~3. All courses shall be presented by a firearms instructor who meets the requirements under R13-4-205(C)(5).~~

R13-4-208. Re-employment of State Correctional Officers

A. A state correctional officer who terminates employment may be re-employed by the Department within two years from the date of termination if the former state correctional officer meets the requirements of R13-4-202 and R13-4-203 at the time of re-employment.

B. A state correctional officer who terminates employment may be re-employed by the Department if re-employment is sought more than two years but less than three years from the original date of termination, if the former state correctional officer meets the requirements of R13-4-202 and R13-4-203 at the time of re-employment and completes the waiver provisions of R13-4-205~~(F)~~(E).

C. A former state correctional officer who seeks re-employment more than three years from the date of termination shall meet all the requirements of this Article at the time of re-employment.

ECONOMIC, SMALL BUSINESS, AND CONSUMER IMPACT STATEMENT[1]

TITLE 13. PUBLIC SAFETY

CHAPTER 4. ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD

1. Identification of the rulemaking:

As required under A.R.S. § 41-1039(A), authorization to proceed with this rulemaking was provided by the Governor's office on August 29, 2024. Approval to submit this rulemaking to GRRC, as required under A.R.S. § 41-1039(B), was provided on December 26, 2024.

In Article 1 of this rulemaking, the Board:

- Clarifies the difference between inactive certification and lapsed certification;
- Deletes the definition of illegal because the word is used in the rules consistent with its ordinary dictionary meaning;
- Clarifies that the comprehensive examination is no longer a final examination;
- Indicates all forms of marijuana are treated the same when evaluating an individual's use;
- Indicates all forms of dangerous drugs and narcotics are treated the same when evaluating an individual's use;
- Indicates all forms of steroids are treated the same when evaluating an individual's use;
- Reduces from two years to six months the look-back period for pre-employment marijuana use;
- Reduces from 10 years to five years the look-back period for matters considered juvenile indiscretion;
- Requires an individual seeking appointment to provide a copy of the individual's driver license;
- Increases the number of years for which information regarding previous employers, schools, and residences must be provided;
- Deletes the requirement that a pre-appointment medical examination be provided by a Board-trained physician;
- Deletes the requirement that a signed copy of the Code of Ethics be maintained in each individual's record;
- Adds an immersive training requirement to the full-authority peace officer basic training course;

[1] If adequate data are not reasonably available, the agency shall explain the limitations of the data, the methods used in an attempt to obtain the data, and characterize the probable impacts in qualitative terms. (A.R.S. § 41-1055(C)).

- Clarifies that a peace officer whose certification status is not active may serve as a specialist instructor;
- Requires a student to make up all missed hours of training before graduating from the Board-approved full-authority peace officer basic training course;
- Requires the Board to conduct an on-site inspection to determine whether a basic training course is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use; and
- Adds active assailant response to the topics required in the Board-approved full-authority peace officer basic training course.

In Article 2 of this rulemaking, the Board:

- Corrects the name of the Department;
- Deletes the juvenile indiscretion determination for admission to the academy;
- Deletes the requirement that an academy applicant provide personal references;
- Deletes reporting requirement;
- Deletes the requirement that specialized training for instructors be approved by the Board; and
- Deletes the requirement that lesson plans be annually reviewed.

a. <u>The conduct and its frequency of occurrence that the rule is designed to change:</u>

The rulemaking enhances public safety and increases employment opportunities for those who want to be a peace officer by eliminating unnecessary and burdensome administrative requirements. Public safety is increased by requiring students in the full-authority peace officer basic training course to makeup all missed hours of training and adding both active assailant response and immersive training to the full-authority peace officer basic training course. Employment opportunities are increased by reducing the look-back period for both potentially disqualifying behavior and instances of juvenile indiscretion and by clarifying the way in which disqualifying drugs are to be handled

b. <u>The harm resulting from the conduct the rule is designed to change and the likelihood it will continue to occur if the rule is not changed:</u>

Until the rulemaking is completed, the important benefits of the rulemaking, including clarified definitions, increased employment opportunities, increased efficiency, and enhanced training and safety of peace office recruits, will not occur.

c. The estimated change in frequency of the targeted conduct expected from the rule change:

When the numerous changes included in this rulemaking are completed, the Board believes important economic benefits will result and public safety will be enhanced.

2. A brief summary of the information included in the economic, small business, and consumer impact statement:

The Board believes the rulemaking will have minimal but important economic benefits, including enhancing public safety. Several amendments, including reducing the look-back period for potentially disqualifying behavior and clarifying the way in which disqualifying drugs are to be handled, will increase employment opportunities for those who want to be a peace officer.

Administering sections of the comprehensive examination throughout the full-authority peace officer basic training course may increase the rate of success for recruits and, if a recruit is not going to be able to pass the comprehensive examination, the determination may be made sooner, providing a benefit to both the recruit and the academy.

Deleting the requirement that a pre-appointment medical examination be provided by a Board-trained physician streamlines the process for a potential recruit to obtain a medical examination and provides opportunities for all physicians to provide a pre-appointment examination. It also relieves the Board from having to train physicians to provide pre-appointment medical examinations. Other burdensome, administrative requirements, especially in Article 2, are deleted.

Requiring a student to makeup all missed hours of training before graduating from the Board-approved full-authority peace officer basic training course may increase the time required for a student to complete the course but protects public safety.

Adding active assailant response and immersive training to the Board-approved full-authority peace officer basic training course adds a cost for academies but addresses important public safety issues.

3. The person to contact to submit or request additional data on the information included in the economic, small business, and consumer impact statement:

Name: Michael Giammarino

Title: Program Administrator

Address: 2643 E. University Drive, Phoenix, AZ 85034

Telephone: (602) 774-9302

Email: mikeg@azpost.gov

Website: azpost.gov

4. Persons who will be directly affected by, bear the costs of, or directly benefit from the rulemaking:

Individuals seeking to participate in the Board-prescribed full-authority basic training course or training as a state correctional officer, law enforcement agencies seeking to employ peace officers, academies providing the Board-prescribed full-authority basic training course, and the Board and Department are persons directly affected by, bearing the costs of, and benefitting from this rulemaking. There are currently 158 law enforcement agencies, 14,914 peace officers, and 4,809 correctional officers in Arizona. There are 17 peace officer training academies and one training academy for correctional officers.

During the last fiscal year, 1,229 individuals participated in the Board-prescribed full-authority basic training course at an academy. The Board believes no one was affected by the reduced look-back period regarding juvenile indiscretion and the reduced look-back period regarding pre-employment use of marijuana not being in place because law enforcement agencies were able to petition the Board for approval of a waiver from the current provisions. The amended requirements will reduce the need for waiver petitions. Of those who started but did not complete the full-authority basic training course, 12 did so because they were unable to pass a section of comprehensive examination. Other reasons for not completing the Board-prescribed full-authority basic training course included dismissal for rule violation, physical injury, and deciding law enforcement was not a desired career.

During the last fiscal year, 1,212 individuals participated in training as a state correctional officer. The Department does not track the reason for candidate disqualification but historically, there have been few cases in which juvenile indiscretion was a factor in disqualification.

The Board-prescribed full-authority basic training course has a minimum 678.5 hour requirement. Most academies have expanded the training time to add a variety of non-Board

curriculum topics. As a result of this rulemaking, academies must include training regarding active assailant response and integrate demonstration of skill development through use of scenarios. Both of these will increase the time required to complete the Board-prescribed full-authority basic training course. It is estimated that adding training regarding active assailant response and integrating demonstration of skill development through use of scenarios will require an additional 15.5 hours of training. In January 2024, Directors of by all 17 academies asked that this training be added. Board training staff meets quarterly with the Academy Directors and none has expressed concern regarding the additional training hours. The rulemaking also clarifies an existing practice that the Board-prescribed full-authority basic training course include an assessment of peace officer physical conditioning, vehicle and pursuit operations, and firearms use.

The Board incurred the cost of completing this rulemaking and will incur the cost of implementing and enforcing the changes. The Board benefits and will have reduced costs from no longer having to train physicians to provide pre-appointment medical examinations. The Board will incur the cost of conducting on-site inspections to determine whether a basic training course is equipped to assess peace officer physical conditioning, vehicle and pursuit operations, and firearms use. Both the Board and Department benefit and will have reduced costs from deleting multiple unnecessary administrative requirements regarding the Department.

5. Cost-benefit analysis:
    a. Costs and benefits to state agencies directly affected by the rulemaking including the number of new full-time employees at the implementing agency required to implement and enforce the proposed rule:

        The Board and Department are state agencies directly affected by the rulemaking. Their impacts are discussed in item 4. The Board will not need additional full-time employees to implement or enforce the rule changes. The Board currently has 31 full-time employees, one part-time employee, and two attorneys assigned from the Office of the Arizona Attorney General.
    b. Costs and benefits to political subdivisions directly affected by the rulemaking:

Political subdivisions are directly affected by the rulemaking. This includes the political subdivisions[2] that operate training academies and those that appoint certified peace officers. Their benefits and costs are described in item 4.

d. Costs and benefits to businesses directly affected by the rulemaking:

No businesses are directly affected by the rulemaking.

6. Impact on private and public employment:

The rulemaking has no direct effect on private or public employment. However, the Board believes the rulemaking may expand the pool of individuals qualified to pursue training as a peace officer.

7. Impact on small businesses[3]:

a. Identification of the small business subject to the rulemaking:

No small businesses, as defined at A.R.S. § 41-1001, are subject to this rulemaking.

b. Administrative and other costs required for compliance with the rulemaking:

- Agencies are required to ensure individuals appointed to an academy are qualified;
- Agencies are required to maintain and submit specified records and reports;
- Academies are required to ensure the basic training course provided meets the standards specified;
- Academies are required to meet the academic, administrative, and physical space standards specified;
- Academies are required to submit reports and participate in inspections;
- An individual is required to satisfy minimum qualification and training requirements to be certified as a peace officer. This includes meeting medical, physical, and mental requirements;
- An individual seeking appointment to an academy is required to undergo a background investigation;
- A certified peace officer is required to participate in annual training including firearms training;
- An individual seeking employment as a correctional officer is required to meet specified minimum standards including a background investigation and to complete a basic training course.

c. Description of methods that may be used to reduce the impact on small businesses:

[2] A.R.S. § 41-1822(A)(4) provides that only this state and political subdivisions of this state may conduct basic peace officer training.

[3] Small business has the meaning specified in A.R.S. § 41-1001(23).

The rulemaking does not impact small businesses.

8. Cost and benefit to private persons and consumers who are directly affected by the rulemaking:

   The rulemaking does not directly affect private persons and consumers.

9. Probable effects on state revenues:

   The rulemaking has not effect on state revenues.

10. Less intrusive or less costly alternative methods considered:

    The Board believes the rules are neither intrusive nor costly. They are the minimum possible to foster public trust and confidence by establishing and maintaining standards of integrity, competence, and professionalism for Arizona peace officers and correctional officers.

to me

Hi Mike,

I apologize I will not be able to attend the meeting in person.

I would want to be sure this communication/concern from 2023 was shared in the Open Meeting scheduled for tomorrow 11-21-24 to those discussing the rule change in regards to the medical requirements under Rule 13-4-107 on page 12 of the document. :
On Fri, Jul 28, 2023 at 12:51 AM Lake, Amy E <Amy.Lake@bannerhealth.com> wrote:
Thank you for your quick response and for taking my call as well. As discussed, if AZ POST eliminated the need for physicians conducting AZPOST medical exams for peace officers to be **AZPOST board-trained** and/or did not require any sort of guidelines be followed that are supported by AZPOST when conducting these exams, I would not feel right if I did not vocalize some concerns. As I shared, in regards to your proposal to change to no longer have physicians needing to be **board-trained,** it would be worth discussing still requiring examining physicians conduct exams based on the guidelines in the “Medical Screening Manual for Arizona Law Enforcement personnel” and possibly in addition, physicians still being registered through AZPOST to be able to conduct them. As you know, peace officers are a safety sensitive position that require certain abilities & fitness to perform their duties safely for themselves, those around them and the public they serve. As you stated, there is no one currently sitting on the board that is medical and it makes it very difficult to field questions and concerns from a medical aspect in regards to a candidate that can create various liability issues for the board currently. Where the thought is that medical decisions may not sit in the hands of those currently sitting on the board, that is one thing, however the need to maintain integrity of the program & necessity of the current guidelines when conducting these exams should not be overlooked and should be provided continued support. The manual is roughly 270 pages which supplies necessary guidelines and research that supports the guidelines that assist physicians in making the best determinations when conducting these exams along with consistency amongst those conducting them. Similar standards/guidelines have been established and provided for fire fighter recruits, DOT/CDL drivers, numerous federal agency positions and a long list of other safety

sensitive roles. It would be unfortunate if our future officers safety and those they serve were possibly put at risk due to a lack of support, resources, or understanding. I have had the pleasure of working with all parties involved for more than 20 years and am passionate about the health and safety of those we serve. It is imperative to maintain standards, requirements, & guidelines for our first responders and those that conduct their medical exams. I appreciate your understanding and the attention you have provided in this matter and am grateful that you will be passing on the concerns to those that will be reviewing the changes that are being proposed.

I would also ask that this be shared as well:

The change to the medical requirements under Rule 13-4-107 on page 12 of the document should provide additional clarification:

Can you confirm that the deletion of terminology **"Board Trained"** Physician will allow any physician to now conduct the medical examination for peace officers? Also, does the new term "physician" restrict that to only those that are an MD or DO, or would this encompass PAs and NPs (Physician Assistant or Nurse Practitioner) as well? Since the past **board training** for physicians held them to conduct their exams following the guidelines in the "Medical Screening Manual for Arizona Law Enforcement" personnel, will there be terminology added to the rule to be sure that physicians conducting peace officer medical exams continue to conduct exams based on those guidelines to ensure consistency, thoroughness and fairness under the new ruling for those being evaluated and those conducting the exam? We want to be sure this is not being overlooked under the new ruling since the guidelines were taught as part of the board training in the past.

I truly appreciate your time and attention and please let me know if you need anything else.

Thank you and Have a Great Day!

ADMINISTRATIVE RULES DIVISION

TITLE 13. PUBLIC SAFETY

CHAPTER 4. ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD

The table of contents on page one contains links to the referenced page numbers in this Chapter.
Refer to the notes at the end of a Section to learn about the history of a rule as it was published in the *Arizona Administrative Register*.

This Chapter contains rules that were filed to be codified in the *Arizona Administrative Code* between the dates of October 1, 2022 through December 31, 2022

Questions about these rules? Contact:

Department: AZPOST
Address: 2643 E. University Dr.
Phoenix, AZ 85034
Website: www.azpost.gov
Name: Michael Giammarino, Program Administrator
Telephone: (602) 223-2514
Email: mikeg@azpost.gov

The release of this Chapter in Supp. 22-4 replaces Supp. 22-2, 1-20 pages.

Please note that the Chapter you are about to replace may have rules still in effect after the publication date of this supplement. Therefore, all superseded material should be retained in a separate binder and archived for future reference.

PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), Administrative Rules Division, accepts state agency rule notice and other legal filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the *Administrative Code*. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director
ADMINISTRATIVE RULES DIVISION

RULES

The definition for a rule is provided for under A.R.S. § 41-1001. *"'Rule' means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency."*

THE ADMINISTRATIVE CODE

The *Arizona Administrative Code* is where the official rules of the state of Arizona are published. The *Code* is the official codification of rules that govern state agencies, boards, and commissions.

The *Code* is separated by subject into Titles. Titles are divided into Chapters. A Chapter includes state agency rules. Rules in Chapters are divided into Articles, then Sections. The "R" stands for "rule" with a sequential numbering and lettering outline separated into subsections.

Rules are codified quarterly in the *Code*. Supplement release dates are printed on the footers of each Chapter.

First Quarter: January 1 - March 31
Second Quarter: April 1 - June 30
Third Quarter: July 1 - September 30
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2022 is cited as Supp. 22-1. Supplements are traditionally released three to four weeks after the end of the quarter because filings are accepted until the last day of the quarter.

Please note: The Office publishes by Chapter, not by individual rule Section. Therefore there might be only a few Sections codified in each Chapter released in a supplement. This is why the Office lists only updated codified Sections on the previous page.

RULE HISTORY

Refer to the HISTORICAL NOTE at the end of each Section for the effective date of a rule. The note also includes the *Register* volume and page number in which the notice was published (A.A.R.) and beginning in supplement 21-4, the date the notice was published in the *Register*.

AUTHENTICATION OF PDF CODE CHAPTERS

The Office began to authenticate Chapters of the *Code* in Supp. 18-1 to comply with A.R.S. §§ 41-1012(B) and A.R.S. § 41-5505.

A certification verifies the authenticity of each *Code* Chapter posted as it is released by the Office of the Secretary of State. The authenticated pdf of the *Code* includes an integrity mark with a certificate ID. Users should check the validity of the signature, especially if the pdf has been downloaded. If the digital signature is invalid it means the document's content has been compromised.

HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the *Arizona Administrative Register* for recent updates to rule Sections.

ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature's website, www.azleg.gov. An agency's authority note to make rules is often included at the beginning of a Chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

SESSION LAW REFERENCES

Arizona Session Law references in a Chapter can be found at the Secretary of State's website, www.azsos.gov under Services-> Legislative Filings.

EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt from the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, Chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency's exemption is written in law by the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the *Register* online at www.azsos.gov/rules, click on the *Administrative Register* link.

Editor's notes at the beginning of a Chapter provide information about rulemaking Sections made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

PERSONAL USE/COMMERCIAL USE

This Chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1, R1-1-113.

Rhonda Paschal, rules managing editor, assisted with the editing of this Chapter.

TITLE 13. PUBLIC SAFETY

CHAPTER 4. ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD

Authority: A.R.S. § 41-1822(A) et seq.

Supp. 22-4

The Arizona Law Enforcement Officer Advisory Council's name was changed by Laws 1994, Ch. 324, § 1, effective July 17, 1994. All references to the Council were changed to reflect the new Board. (Supp. 94-3).

CHAPTER TABLE OF CONTENTS

ARTICLE 1. GENERAL PROVISIONS

New Article 1 consisting of Sections R13-4-101 through R13-4-118 adopted effective March 23, 1989.

Former Article 1 consisting of Sections R13-4-01 through R13-4-08 repealed effective March 23, 1989.

ARTICLE 2. CORRECTIONAL OFFICERS

Article 2, consisting of Sections R13-4-201 through R13-4-208, adopted effective December 16, 1992, filed June 16, 1992 (Supp. 92-2).

TITLE 13. PUBLIC SAFETY

CHAPTER 4. ARIZONA PEACE OFFICER STANDARDS AND TRAINING BOARD

ARTICLE 1. GENERAL PROVISIONS

R13-4-101. Definitions

In this Article, unless the context otherwise requires:

"Academy" means an entity that conducts the Board-prescribed basic training courses for full-authority or specialty peace officers.

"Adderall," as used in R13-4-105, means a combination drug containing salts of amphetamine that acts as a central nervous system stimulant. The combination may include amphetamine, methamphetamine, methylphenidate, dextroamphetamine, levoamphetamine, or other stimulants.

"Agency" means a law enforcement entity empowered by the state of Arizona.

"Appointment" means the selection by an agency of an individual to be a peace officer or peace officer trainee.

"Approved training program" means a course of instruction that meets Board-prescribed course requirements.

"Board" means the Arizona Peace Officer Standards and Training Board.

"Board-trained physician" means an occupational medicine specialist or a physician who has attended a Board course on peace officer job functions.

"Cancellation" means the annulment of certified status without prejudice to reapply for certification.

"Certified" means approved by the Board as being in compliance with A.R.S. Title 41, Chapter 12, Article 8 and this Chapter.

"CFE" means the Board-approved Comprehensive Final Examination that measures mastery of the knowledge and skills taught in the Board approved full-authority peace officer basic training course.

"Denial" means the refusal of the Board to grant certified status. The Board's denial may be temporary with an opportunity to reapply for certified status or permanent.

"Dangerous drug or narcotic" means a substance identified in A.R.S. § 13-3401 as being a dangerous drug or narcotic drug.

"Full-authority peace officer" means a peace officer whose authority to enforce the laws of this state is not limited by this Chapter.

"Illegal" means in violation of federal or state statute, rule, or regulation.

"Lapse" means the expiration of certified status.

"Open enrollee" means an individual who is admitted to an academy but is not appointed by an agency.

"Peace officer" has the meaning in A.R.S. § 1-215.

"Peace officer trainee" means an individual recruited and appointed by an agency to attend an academy.

"Physician" means an individual licensed to practice allopathic or osteopathic medicine in this or another state.

"Resolve-in-the-future or RF" means a designation assigned by the Board regarding alleged misconduct of an inactive peace officer and requires an agency to resolve the alleged misconduct before the agency may appoint the peace officer.

"Restriction" means the Board's limitation on duties allowed to be performed by a certified peace officer.

"Revocation" means the permanent withdrawal of certified status.

"Service ammunition" means munitions that perform equivalently in all respects when fired during training or qualification to those carried on duty by a peace officer.

"Service handgun" means the specific handgun or equivalent that a peace officer carries for use on duty.

"Specialty peace officer" means a peace officer whose authority is limited to enforcing specific sections of the Arizona Revised Statutes or *Arizona Administrative Code*, as specified by the appointing agency's statutory powers and duties.

"Success criteria" means a numerical statement that establishes the performance needed for an individual to demonstrate competency in a knowledge, task, or ability required by this Chapter.

"Suspension" means the temporary withdrawal of certified status.

"Termination" means the end of employment or service with an agency as a peace officer through removal, discharge, resignation, retirement, or otherwise.

"Vendor" means an entity other than the Board or an agency that makes training available to peace officers.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). Amended effective August 6, 1991 (Supp. 91-3). References to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective March 11, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), with an immediate effective date of May 4, 2022 (Supp. 22-2).

R13-4-102. Internal Organization and Control of the Board

A. Scheduled meetings. The Chair, in consultation with the Board, shall set regular meeting dates of the Board.

B. Special meetings. Except in the case of an emergency meeting declared by the Governor or the Chair, the Chair shall give at least five days' written notice of a special meeting to each member of the Board.

C. Subcommittees. The Chair may appoint subcommittees to inquire into any matter of Board interest. Each subcommittee shall report its findings, conclusions, and recommendations to the Board, in a manner directed by the Chair.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

R13-4-103. Certification of Peace Officers

A. Certified status mandatory. An individual who is not certified by the Board or whose certified status is inactive shall not function as a peace officer or be assigned the duties of a peace officer by an agency, except as provided in subsection (B).

B. Sheriffs who are elected are exempt from the requirement of certified status.

C. An individual shall satisfy the minimum qualifications and training requirements to receive certified status.

D. Peace officer categories. The categories for which certified status may be granted are:
1. Full-authority peace officer, and
2. Specialty peace officer.

E. Application for certification. An individual who seeks to be certified as a peace officer shall make application as follows:
1. Submit to an agency an application that contains all documents required by R13-4-105, R13-4-106(A) and (B), and R13-4-107;
2. Obtain an appointment from the agency; and
3. Obtain either a certificate of graduation from a Board-prescribed Peace Officer Basic Course or a certificate of successful completion of the waiver of training process prescribed by R13-4-110(D).

F. An open enrollee shall obtain an appointment from an agency within one year after graduating from a Board-prescribed Peace Officer Basic Course.
1. If more than one year but less than three years elapse after graduation from a Board-prescribed Peace Officer Basic Course before an open enrollee obtains an appointment from an agency, the open enrollee shall again take the CFE required under R13-4-110 and satisfactorily perform the practical demonstrations of proficiency in physical conditioning, vehicle operations, pursuit operations, and firearms, including firearms qualifications, as required under R13-4-116(E)(1).
2. If more than three years elapse after graduation from a Board-prescribed Peace Officer Basic Course, an open enrollee shall again graduate from the Board-prescribed Peace Officer Basic Course before obtaining an appointment from an agency.

G. Establishing or enforcing qualifications, standards, or training requirements. The Board may waive in whole or in part any provision of this Article upon a finding that the best interests of the law enforcement profession are served and the public welfare and safety is not jeopardized by the waiver. The Board may place restrictions or requirements on a peace officer as a condition of certified status.

H. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, filed in the Office of the Secretary of State on February 8, 2016; effective six months after the date filed in accordance with A.R.S. § 1823 (Supp. 16-1). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed May 4, 2022, effective date November 4, 2022 (Supp. 22-2).

R13-4-104. Peace Officer Category Restrictions

A. Specialty peace officer. A specialty peace officer has only the authority specified in R13-4-101.

B. Peace officer category change. A certified peace officer may be appointed to another peace officer category within the same agency without the background investigation and medical examination required in R13-4-105, R13-4-106, and R13-4-107 when these requirements were previously satisfied for appointment if:
1. No more than 30 days have elapsed since the peace officer's termination, and
2. The change is to a category for which the officer is qualified under R13-4-110(A).

C. Reinstatement by an agency following termination by the agency for misconduct and physical separation from the agency for more than 30 days. Before reinstating a peace officer who was terminated for misconduct and physically separated from service for more than 30 days, the agency shall conduct the following background investigation and submit the results to the Board. The agency shall conduct the background investigation even if the peace officer's official date of reinstatement is within the 30 days of physical separation from the agency:
1. A personal history statement as described in R13-4-106(A);
2. A background interview regarding the time physically separated from the agency;
3. A polygraph examination as described in R13-4-106(C)(8) regarding the time physically separated from the agency and including:
   a. Were you involved in any criminal activity while physically separated from the agency;
   b. Did you have an encounter with law enforcement while physically separated from the agency;
   c. Was there a change in your medical condition while physically separated from the agency;
   d. Questions to update the information required under R13-4-105(A)(6) and (A)(9) through (15) and R13-4-106(C)(2) and (C)(4); and
   e. Is all the information you provided true, complete, and accurate.

D. Inactive status. Certified status of a peace officer becomes inactive upon termination.

E. Lapse of certified status. The certified status of a peace officer lapses after three consecutive years on inactive status.

F. Reinstatement from inactive status. A peace officer whose certified status is inactive and has not lapsed may have certification reinstated if the requirements of R13-4-105 are met for the new appointment, and if appointed:
1. In the same peace officer category, or;
2. As a specialty peace officer from inactive status as a full-authority peace officer.

G. Active status as a specialty peace officer does not prevent lapse of certified status as a full-authority peace officer.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). Amended effective August 6, 1991 (Supp. 91-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4). Amended by final

rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-105. Minimum Qualifications

A. Except as provided in subsection (C) or (D), an individual shall meet the following minimum qualifications before being appointed to or attending an academy:

1. Be a United States citizen;
2. Be at least 21 years of age. An individual may attend an academy if the individual will be 21 years of age before graduating;
3. Meet one of the following education standards:
   a. Have a diploma from a high school recognized by the department of education of the jurisdiction from which the diploma is issued,
   b. Have successfully completed a General Education Development (G.E.D.) examination,
   c. Have a homeschool diploma or certificate of completion that is recognized as the equivalent of a high school diploma by the jurisdiction from which the homeschool diploma or certificate is issued,
   d. Have a diploma, certificate of completion, or transcripts issued by a private school in Arizona that includes the individual's name and a signed affirmation of the school administrator that the individual received the equivalent of a high school education, or
   e. Have a degree from an institution of higher education accredited by an agency recognized by the U.S. Department of Education;
4. Undergo a complete background investigation that meets the standards of R13-4-106. An individual shall not begin an academy until the agency has completed the background investigation requirements at R13-4-106(C)(1), (C)(2), and (C)(4) through (9). However, an individual may begin an academy before the results of the fingerprint query referenced in R13-4-106(C)(3) are returned. The academy shall not graduate the individual and the Board shall not reimburse the academy for the individual's training expenses until a qualifying background investigation report, as specified in R13-4-106(C)(9), is completed;
5. Undergo a medical examination that meets the standards of R13-4-107 within one year before appointment. An agency may make a conditional offer of appointment before the medical examination. If the medical examination is conducted more than 180 days before appointment, the individual shall submit a written statement indicating that the individual's medical condition has not changed since the examination;
6. Not have been convicted of a felony or any offense that would be a felony if committed in Arizona;
7. Not have been dishonorably discharged from the United States Armed Forces;
8. Not have been previously denied certified status, have certified status revoked, or have current certified status suspended, or have voluntarily surrendered certified status in lieu of possible disciplinary action in this or any other state if the reason for denial, revocation, suspension, or possible disciplinary action was or would be a violation of R13-4-109(A) if committed in Arizona;
9. Not have illegally, as defined in R13-4-101, possessed, produced, cultivated, or transported marijuana for sale or sold marijuana;
10. Not have illegally, as defined in R13-4-101, possessed or used marijuana for any purpose within the past two years;
11. Not have illegally sold, produced, cultivated, or transported for sale a dangerous drug or narcotic;
12. Not have illegally used a dangerous drug or narcotic, other than marijuana, for any purpose within the past seven years;
13. Not have a pattern of abuse of prescription medication;
14. Undergo a polygraph examination that meets the requirements of R13-4-106, unless prohibited by law;
15. Not have been convicted of or adjudged to have violated traffic regulations governing the movement of vehicles with a frequency within the past three years that indicates a disrespect for traffic laws or a disregard for the safety of others on the highway;
16. Read the code of ethics in subsection (E) and affirm by signature the individual understands and agrees to abide by the code.

B. To determine whether an individual's possession or use of marijuana, or a dangerous drug or narcotic disqualifies the individual from being appointed or attending an academy, the Board shall use the following standards:

1. Marijuana.
   a. All forms of marijuana, including THC extracts, cannabis, hashish, marijuana extracts, and marijuana edibles, and all forms of use will be treated the same;
   b. The individual has not illegally possessed or used marijuana within the two years before appointment as a peace officer; and
   c. The individual has never illegally possessed or used marijuana as a peace officer;
2. Dangerous drugs, hallucinogens, narcotics, and prescription drugs containing an active ingredient that is a narcotic or dangerous drug.
   a. The individual has not illegally possessed or used any of these substances:
      i. Within the seven years before appointment as a peace officer;
      ii. More than a total of five times for all substances combined;
      iii. More than one time for all substances combined since turning 21 years of age; and
      iv. As a peace officer;
   b. Dangerous drugs. All dangerous drugs, including methamphetamine, amphetamine, speed, spice, and bath salts will be treated the same;
   c. Hallucinogens. All hallucinogens, including peyote, mushrooms, ecstasy, lysergic acid diethylamide (LSD), ketamine, mescaline, and phencyclidine (PCP) will be treated the same;
   d. Narcotics. All narcotics, including cocaine, heroin, and opioids will be treated the same; and
   e. Prescription medications. All prescription medications containing an active ingredient that is a narcotic or dangerous drug will be treated the same. Possession or use for recreational purposes of a prescription medication containing an active ingredient that is a narcotic or dangerous drug is disqualifying under subsection (B)(2);
3. Steroids.
   a. All steroids, including anabolic-androgenic steroids and corticosteroids will be treated the same;

b. The individual has not illegally possessed or used a steroid within the three years before appointment as a peace officer; and
c. The individual has never illegally possessed or used a steroid as a peace officer;

4. Adderall.
a. All uses of Adderall, except as prescribed by a physician, will be treated the same;
b. The individual has not possessed or used Adderall, except as prescribed by a physician, within the three years before appointment as a peace officer, and
c. The individual has never possessed or used Adderall, except as prescribed by a physician, as a peace officer; and

5. Over-the counter products containing cannabidiol (CBD). The Board does not consider possession or use of over-the-counter products containing CBD, as allowed under federal and state law, as disqualifying an individual from appointment as a peace officer.

C. An agency head who wishes to appoint an individual whose illegal possession or use of marijuana or a dangerous drug or narcotic is determined to be disqualifying under this Section may petition the Board for a determination that, given the unique circumstances of the individual's possession or use, the use should not be disqualifying. The petition shall:

1. Specify the type of drugs illegally possessed or used, the number of uses, the age at the time of each possession or use, the method by which the information regarding illegal possession or use of drugs came to the agency's attention, and any attempt by the agency head to verify the accuracy of the information; and
2. State the factors the agency head wishes the Board to consider in making its determination. These factors may include:
a. The duration of possession or use,
b. The motivation for possession or use,
c. The time elapsed since the last possession or use,
d. How the drug was obtained,
e. How the drug was ingested,
f. Why the individual stopped possessing or using the drug, and
g. Any other factor the agency head believes is relevant to the Board's determination.

D. An agency head who wishes to appoint an individual whose conduct is grounds to deny certification under R13-4-109 may petition the Board for a determination that the otherwise disqualifying conduct constitutes juvenile indiscretion. The petition shall:

1. Specify the nature of the conduct, the number of times the conduct occurred, the method by which information regarding the conduct came to the agency's attention, and any attempt by the agency head to verify the accuracy of the information; and
2. Include sufficient information for the Board to determine that all of the following are true:
a. The conduct occurred when the individual was younger than age 18;
b. The conduct occurred more than 10 years before application for appointment;
c. The individual has consistently exhibited responsible, law-abiding behavior between the time of the conduct and application for appointment;
d. There is reason to believe that the individual's immaturity at the time of the conduct contributed substantially to the conduct;
e. There is evidence that the individual's maturity at the time of application makes reoccurrence of the conduct unlikely; and
f. The conduct was not so egregious that public trust in the law enforcement profession would be jeopardized if the individual is certified.

3. If the Board finds that the information submitted is sufficient for the Board to determine that the factors listed in subsection (D)(2) are true, the Board shall determine that the conduct constituted juvenile indiscretion and grant appointment.

E. Code of Ethics. Because the people of the state of Arizona confer upon all peace officers the authority and responsibility to safeguard lives and property within constitutional parameters, a peace officer shall commit to the following Code of Ethics and shall affirm the peace officer's commitment by signing the Code.

"I will exercise self-restraint and be constantly mindful of the welfare of others. I will be exemplary in obeying the laws of the land and loyal to the state of Arizona and my agency and its objectives and regulations. Whatever I see or hear of a confidential nature or that is confided to me in my official capacity will be kept secure unless revelation is necessary in the performance of my duty.

I will never take selfish advantage of my position and will not allow my personal feelings, animosities, or friendships to influence my actions or decisions. I will exercise the authority of my office to the best of my ability, with courtesy and vigilance, and without favor, malice, ill will, or compromise. I am a servant of the people and I recognize my position as a symbol of public faith. I accept it as a public trust to be held so long as I am true to the law and serve the people of Arizona."

F. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). Amended effective August 6, 1991 (Supp. 91-3). Amended effective January 13, 1993; filed July 13, 1992 (Supp. 92-3). References to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective July 10, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, filed in the Office of the Secretary of State on February 8, 2016; effective six months after the date filed in accordance with A.R.S. § 1823 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed October 7, 2020, effective date April 7, 2021 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed May 4, 2022, effective date November 4, 2022 (Supp. 22-2).

R13-4-106. Background Investigation Requirements

A. Personal history statement. An individual who seeks to be appointed shall complete and submit to the appointing agency

a personal history statement on a form prescribed by the Board before the start of a background investigation. The Board shall use the answers to questions contained in the personal history statement to determine whether the individual is eligible for certified status as a peace officer. The Board shall ensure that the questions concern whether the individual meets the minimum requirements for appointment, has engaged in conduct or a pattern of conduct that would jeopardize the public trust in the law enforcement profession, and is of good moral character.

B. Investigative requirements for the applicant. To assist with the background investigation, an individual who seeks to be appointed shall provide the following:

1. Proof of United States citizenship. A copy of a birth certificate, United States passport, or United States naturalization papers is acceptable proof.
2. Proof of education. A copy of a diploma, certificate, or transcript is acceptable proof.
3. Record of any military discharge. A copy of the Military Service Record (DD Form 214 or NGB Form 22), which documents the character of service, separation code, and reentry code, is acceptable proof.
4. Personal references. The names and addresses of at least three people who can provide information as personal references.
5. Previous employers or schools attended. The names and addresses of all employers and schools attended within the previous five years.
6. Residence history. The complete address for every location at which the individual has lived in the last five years.

C. Investigative requirements for the agency. A complete background investigation includes the following inquiries and a review of the returns to determine that the individual seeking appointment meets the requirements of R13-4-105, and that the individual's personal history statement is accurate and truthful. For each individual seeking to be appointed, the appointing agency shall:

1. Query all the law enforcement agency records in jurisdictions listed in subsections (B)(5) and (6);
2. Query the motor vehicle division driving record from any state listed in subsections (B)(5) and (6);
3. Complete and submit a Fingerprint Card Inventory Sheet to the Federal Bureau of Investigation and Arizona Department of Public Safety for query;
4. Query the National Crime Information Center/Interstate Identification Index (NCIC/III), and the Arizona Criminal Information Center/Arizona Computerized Criminal History (ACIC/ACCH), or the equivalent for each state listed in subsections (B)(5) and (6);
5. Contact all personal references and employers listed in subsections (B)(4) and (5) and document the answers to inquiries concerning whether the individual meets the standards of this Section;
6. Query the Board regarding the individual's certification status, reports of alleged misconduct by the individual, and whether the individual has a Board case with an RF designation;
7. Query all Arizona law enforcement agencies where the individual was appointed or applied for appointment as a peace officer regarding records maintained under R13-4-108(C);
8. Administer a polygraph examination, unless prohibited by law. The results shall include a detailed report of the pre-test interview and any post-test interview and shall cover responses to all questions that concern:
   a. Minimum standards for appointment as required by R13-4-105,
   b. Truthfulness on the personal history statement,
   c. Commission of any crimes; and
   d. Any Board case with an RF designation;
9. If any of the information under subsections (C)(1) through (8) is more than a year old, the agency shall administer another polygraph examination and query the individual regarding any changes in the information previously received under subsections (C)(1) through (8); and
10. If the results of the background investigation show that the individual meets minimum qualifications for appointment, has not engaged in conduct or a pattern of conduct that would jeopardize public trust in the law enforcement profession, and is of good moral character, complete a report that attests to those findings. If the agency is unable to obtain all information required under subsections (C)(1) through (9), include in the report a description of the missing information and efforts made to obtain it.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). Amended effective January 13, 1993; filed July 13, 1992 (Supp. 92-3). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-107. Medical Requirements

A. Medical, physical, and mental eligibility for certification.

1. An agency may appoint an individual if the individual meets the minimum qualifications in R13-4-105 and is able to perform all the essential functions of the job of peace officer effectively, with or without reasonable accommodation, without creating a reasonable probability of substantial harm to the individual or others.
2. If an agency wishes to appoint an individual who is unable to perform all the essential functions of the job of peace officer effectively, the agency may seek a restricted certification for the individual. The Board shall determine whether placing restrictions or requirements on the individual as a condition of certification will enable the individual to perform the essential functions authorized within the restriction without creating a reasonable probability of harm to the individual or others.

B. Medical examination process.

1. Medical history. An individual applying to be appointed shall provide to the examining, board-trained, physician a written statement of the individual's medical history that includes past and present diseases, illnesses, symptoms, conditions, injuries, functionality, surgeries, procedures, immunizations, medications, and psychological information.
2. Medical examination.
   a. The examining, board-trained, physician shall not delegate any part of the medical examination process to another person;

b. The examining, board-trained, physician shall review the medical history statement and take an additional verbal history from the applicant;
c. The examining, board-trained, physician shall conduct a physical examination consistent with the standard of care for occupational medical examinations;
d. The examining, board-trained, physician shall order tests, obtain medical records, and require specialist or functional examinations and evaluations that the examining physician deems necessary to determine the applicant's ability to perform all the essential functions of the job of peace officer;
e. The examining, board-trained, physician shall make a report to the agency and provide a:
i. Summary of the examination;
ii. Description of any significant medical findings;
iii. Description of any limitation to the ability to perform the essential functions of the job of a peace officer; and
iv. Medical opinion about the applicant's ability to perform the essential functions of the job of peace officer, with or without reasonable accommodations; and
f. The examining, board-trained, physician shall consult with the agency, upon request, about the report and the efficacy of any accommodations the agency deems reasonable.

C. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, filed in the Office of the Secretary of State on February 8, 2016; effective six months after the date filed in accordance with A.R.S. § 1823 (Supp. 16-1).

R13-4-108. Agency Records and Reports

A. Agency reports. On forms prescribed by the Board, an agency shall submit:
1. A report by the agency head attesting that the requirements of R13-4-105 are met for each individual appointed. The report shall be submitted to the Board before an individual attends an academy or performs the duties of a peace officer.
2. A report of the termination of a peace officer. The report shall be submitted to the Board within 15 days of the termination and include:
a. The nature of the termination and effective date;
b. A detailed description of any termination for cause; and
c. A detailed description of, and supporting documentation for, any cause existing for suspension or revocation of certified status.

B. Agency records. An agency shall make its records available on request by the Board or staff. The agency shall maintain the following for each individual for whom certification is sought:
1. An application file that contains all of the information required in R13-4-103(E) and R13-4-106(C) for each individual appointed for certification as a peace officer;
2. A copy of reports submitted under subsection (A);
3. A signed copy of the affirmation to the Code of Ethics required under R13-4-105;
4. A written report of the results of a completed or partially completed background investigation and all written documentation obtained or recorded under R13-4-106, including information obtained regarding a Board case with an RF designation;
5. A completed medical report required under R13-4-107; and
6. A record of all continuing training, proficiency training, and firearms qualifications conducted under R13-4-111.

C. Record retention. An agency shall maintain the records required by this Section as follows:
1. For applicants investigated under R13-4-106 who are not appointed: three years;
2. For applicants who are appointed: five years from the date of termination, except records retained under subsection (B)(6) shall be retained for three years following completion of training; and
3. Reports of a polygraph examination given under R13-4-106(C)(6) shall be maintained in accordance with state law.

D. An agency shall make the records maintained under subsection (C) available, on request, to another agency completing a background investigation under R13-4-106(C).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4).

R13-4-109. Denial, Revocation, Suspension, or Cancellation of Peace Officer Certified Status

A. Causes for denial, suspension, or revocation. The Board may deny certified status or suspend or revoke the certified status of a peace officer for:
1. Failing to satisfy a minimum qualification for appointment listed in R13-4-105;
2. Willfully providing false information in connection with obtaining or reactivating certified status;
3. Having a medical, physical, or mental disability that substantially limits the individual's ability to perform the duties of a peace officer effectively, or that may create a reasonable probability of substantial harm to the individual or others, for which a reasonable accommodation cannot be made;
4. Violating a restriction or requirement for certified status imposed under R13-4-109.01, R13-4-103 (G), or R13-4-104;
5. Engaging in behavior that would be disqualifying under R13-4-105(B);
6. Using or being under the influence of spirituous liquor on duty without authorization;
7. Committing a felony, an offense that would be a felony if committed in this state, or an offense involving dishonesty, unlawful sexual conduct, or physical violence;
8. Committing malfeasance, misfeasance, or nonfeasance in office;
9. Performing the duties or exercising the authority of a peace officer without having active certified status;

10. Making a false or misleading statement, written or oral, to the Board or its representative;
11. Failing to furnish information in a timely manner to the Board or its representative on request; or
12. Engaging in any conduct or pattern of conduct that tends to disrupt, diminish, or otherwise jeopardize public trust in the law enforcement profession.

B. Cause for cancellation. The Board shall cancel the certified status of a peace officer if the Board determines that the individual was not qualified when certified status was granted, and revocation is not warranted under subsection (A).

C. Cause for mandatory revocation. Upon the receipt of a certified copy of a judgment of a felony conviction of a peace officer, the Board shall revoke certified status of the peace officer.

D. Action by the Board. Upon receipt of information that cause exists to deny certification, or to cancel, suspend, or revoke the certified status of a peace officer, the Board shall determine whether to initiate action regarding the retention of certified status. The Board may conduct additional inquiries or investigations to obtain sufficient information to make a fair determination.

E. Notice of action. The Board shall notify the affected individual of Board action to initiate proceedings regarding certified status for a cause listed under subsection (A) or (B). The notice shall be served as required by A.R.S. § 41-1092.04 and specify the cause for the action. Within 30 days after receiving the notice, the individual named in the notice shall advise the Board or its staff in writing whether a hearing is requested. Failure to file a written request for hearing at the Board offices within 30 days after receiving the notice constitutes a waiver of the right to a hearing.

F. Effect of agency action. Action by an agency or a decision resulting from an appeal of that action does not preclude action by the Board to deny, cancel, suspend, or revoke the certified status of a peace officer.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4).

R13-4-109.01. Restriction of Certified Peace Officer Status: Training or Qualification Deficiencies

A. Restricted status. The Board shall restrict certified status if a peace officer fails to satisfy the requirements of R13-4-111.
1. The Board shall consider reports of training or qualification deficiencies at a regularly scheduled public meeting and provide a peace officer alleged to have a training or qualification deficiency the opportunity to be heard without referral to an independent hearing officer. At the public meeting, the Board shall determine only whether the peace officer has successfully completed the required training or qualification and can produce documentation to verify it.
2. The Board shall leave a restriction in effect until the training or qualification requirement is met and the peace officer files written verification of the training or qualification with the Board.
3. The Board shall provide notice of restriction or reinstatement following a restriction under this Section by regular mail to the peace officer at the employing agency address. The Board shall provide a copy of the restriction or reinstatement notice by regular mail to the agency head.

B. Firearms qualification. If a peace officer fails to satisfy R13-4-111(C), the peace officer shall not carry or use a firearm on duty.

C. Continuing and proficiency training. If a peace officer fails to satisfy R13-4-111(A) or (B), the peace officer shall not engage in enforcement duties, carry a firearm, wear or display a badge, wear a uniform, make arrests, perform patrol functions, or operate a marked police vehicle.

Historical Note

New Section made by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

R13-4-110. Basic Training Requirements

A. Required training for certified status. The Board shall not certify and an individual shall not perform the duties of a peace officer until the individual successfully completes basic training as follows:
1. To be certified as a full-authority peace officer, an individual shall complete the Board approved full-authority peace officer basic training course, specified in R13-4-116, at an academy and pass the CFE.
   a. The Board shall ensure the CFE is administered in a secure manner.
   b. The Board shall ensure that the CFE is administered during the final two weeks of the full-authority peace officer basic training course.
   c. An individual passes the CFE by achieving a score of at least 70 percent on each of the three blocks of the CFE when each block is scored separately.
   d. An individual who fails one or more blocks of the CFE may retake the failed block one time before the individual is scheduled to graduate from the academy.
   e. An individual who fails a retake of a block of the CFE, as described in subsection (A)(1)(d), may retake the failed block once more within 60 days from the original testing date if the individual remains appointed by the original appointing agency or enrolled in the academy.
   f. An individual who fails a second retake of a block of the CFE, as described in subsection (A)(1)(e), may pursue certification only by repeating the Board approved full-authority peace officer basic training course.
   g. An agency head is not required to continue to appoint an individual during the 60 days permitted for a second retake of a failed block of the CFE, as described in subsection (A)(1)(e).
2. To be certified as a specialty peace officer, an individual shall complete a Board-prescribed specialty peace officer basic training course or the Board approved full-authority peace officer basic training course, specified in R13-4-116, at an academy and pass blocks of the CFE prescribed under subsection (A)(1) that are relevant to the duties of a specialty peace officer.

B. Exceptions. The training requirement in subsection (A) is waived when an agency uses an individual during a:
1. Riot, insurrection, disaster, or other event that exhausts the peace officer resources of the agency and the individual is attending an academy; or

2. Field training program that is a component of a basic training program at an academy, and the individual is under the direct supervision and control of a certified peace officer.

C. Firearms training required. Unless otherwise specified in this Section, a peace officer shall complete the firearms qualification courses required in R13-4-116(E) before the peace officer carries a firearm in the course of duty.

D. Waiver of required training.

1. An agency, on behalf of an individual, may apply to the Board for a waiver of required training if:
   a. The individual's certified status is lapsed;
   b. The individual has functioned in the capacity of a peace officer in another state, graduated from a Peace Officer Standards and Training Academy, and worked for at least one year as a peace officer; or
   c. The individual graduated from a federal law enforcement academy and worked for at least one year as a law enforcement officer.
2. The Board shall review the application and grant a waiver of required training if the Board determines that the best interests of the law enforcement profession are served, the public welfare and safety are not jeopardized, and:
   a. The appointing agency submits to the Board written verification of the individual's previous experience and training on a form prescribed by the Board;
   b. The individual meets the minimum qualifications listed in R13-4-105;
   c. The individual complies with the requirements of R13-4-103(E)(1);
   d. The appointing agency complies with the requirements of R13-4-106(C);
   e. The individual successfully completes an examination measuring the individual's comprehension of the Board approved full-authority peace officer basic training course as follows:
      i. If the individual has experience as a certified peace officer in another state or for a federal law enforcement agency and submits to the Board basic training and in-service training records that the Board determines demonstrate substantial comparability to Arizona's Board approved full-authority peace officer basic training course, the individual shall pass all blocks of the CFE; and
      ii. If the individual's certification is lapsed, the individual shall pass all blocks of the CFE; and
      iii. The provisions in subsections (A)(1)(a), (c), and (e) through (g) apply to this subsection; and
   f. In addition to the examination required under subsection (D)(5), the individual demonstrates proficiency in the areas of physical conditioning, vehicle operations, pursuit operations, and firearms, including firearms qualifications, as required under R13-4-116(E)(1).

E. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective July 10, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, filed in the Office of the Secretary of State on February 8, 2016; effective six months after the date filed in accordance with A.R.S. § 1823 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed October 7, 2020, effective date April 7, 2021 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed May 4, 2022, effective date November 4, 2022 (Supp. 22-2).

R13-4-111. Certification Retention Requirements

A. Training required.

1. A full-authority or specialty peace officer shall complete 12 hours of training each year beginning January 1 following the date the officer is certified.
2. Training course standards for peace officers. The provider of a training course for peace officers shall ensure that:
   a. The course curriculum consists of instruction on topics related to law enforcement operations and peace officer functions and skills;
   b. An attendance verification certificate, which includes a statement that the provider believes the course meets the requirements of this Section, is given to each attendee for audit purposes;
   c. If the training provider is an agency, an attendance roster and lesson plan or other information sufficient to determine compliance with this Section is made available upon request by the Board for Board audit; and
   d. If an agency wishes to host a vendor-provided training course:
      i. Both the agency and vendor shall comply with the provisions of subsection (A)(2); and
      ii. The agency shall provide the statement described under subsection (A)(2)(b).
3. Required records. A peace officer shall provide to the appointing agency a copy of all documents provided to the peace officer under subsection (A)(2)(b). The appointing agency shall maintain the documents and make them available, upon request by the Board, for Board audit.

B. Firearms qualification required. In addition to the training required under subsection (A), a peace officer authorized to carry a firearm shall qualify to continue to be authorized to carry a firearm each year beginning January 1 following certification by completing a Board-prescribed firearms qualification course, using a service handgun and service ammunition, and a Board-prescribed target identification and judgment course.

1. Firearms qualification course standards.
   a. A firearms qualification course is a course:
      i. Prescribed under R13-4-116(E)(1), or
      ii. Determined by the Board to measure firearms competency at least as accurately as courses prescribed under R13-4-116(E)(1).
   b. The provider of a firearms qualification course shall ensure that the course includes:
      i. A timed accuracy component;

ii. A type and style of target that is equal to, or more difficult than, targets used in a course prescribed under R13-4-116(E)(1); and
iii. A success criterion that is equal to, or more difficult than, criteria used in a course prescribed under R13-4-116(E)(1).

2. Firearms target identification and judgment course standards.
a. A firearms target identification and judgment course is a course:
i. Prescribed under R13-4-116(E)(1), or
ii. Determined by the Board to measure target identification and judgment competency at least as accurately as courses prescribed under R13-4-116(E)(1).
b. The provider of a firearms target identification and judgment course shall ensure that the course includes:
i. A timed accuracy component;
ii. A type and style of target discrimination test that is equal to, or more difficult than, those used in a course prescribed under R13-4-116(E)(1); and
iii. A success criterion that is equal to, or more difficult than, criteria used in a course prescribed under R13-4-116(E)(1).

3. The provider of a firearms qualification or firearms target identification and judgment course shall ensure that the course is taught by a firearms instructor who meets the requirements of R13-4-114(A)(2)(c).

C. This Section is effective six months after filing with the Secretary of State as required by A.R.S. § 41-1823(A).

Historical Note
Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Section repealed; new Section made by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective July 10, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, filed in the Office of the Secretary of State on February 8, 2016; effective six months after the date filed in accordance with A.R.S. § 1823 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed October 7, 2020, effective date April 7, 2021 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 3431 (October 28, 2022), effective six months after filing with the Secretary of State as required under A.R.S. § 41-1823(A); filed October 5, 2022, effective December 6, 2022 (Supp. 22-4).

R13-4-112. Time Frames

A. For the purposes of A.R.S. § 41-1073, the Board establishes the following time frames for peace officer certification:
1. Administrative completeness review time frame: 90 days.
2. Substantive review time frame: 180 days.
3. Overall time frame: 270 days.

B. The administrative completeness review time frame begins on the date the Board receives the report required by R13-4-108(A)(1) from an appointing agency.
1. Within 90 days, the Board shall review the report and issue to the appointing agency a notice of administrative completeness or a notice of administrative deficiency that lists each document or item of information establishing compliance with R13-4-105 that is missing.
2. If the Board issues a notice of administrative deficiency, the appointing agency shall make the missing documents and information available to the Board within 90 days of the date of the notice. The administrative completeness review time frame is suspended from the date of the deficiency notice until the date the missing documents and information are made available to the Board.
3. If the appointing agency fails to make available all missing documents and information within the 90 days provided, the Board shall close the applicant's file. An applicant whose file is closed and who wants to be certified shall apply again under R13-4-103.
4. When the file is administratively complete, the Board shall provide written notice of administrative completeness to the appointing agency.

C. The substantive review time frame begins on the date the Board issues the notice of administrative completeness.
1. During the substantive review time frame, the Board may make one comprehensive written request for additional information.
2. The appointing agency shall make available to the Board the additional information identified in the request for additional information within 60 days. The time frame for the Board to finish the substantive review of the application is suspended from the date of the request for additional information until the additional information is made available to the Board.
3. If the appointing agency fails to make available the additional information requested within the 60 days provided, the Board shall close the applicant's file. An applicant whose file is closed and who wants to be certified shall apply again under R13-4-103.
4. When the substantive review is complete, the Board shall grant or deny certification.

Historical Note
Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Adopted effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Section repealed; new Section made by final rulemaking at 8 A.A.R. 3201, effective January 11, 2003 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective March 11, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

R13-4-113. Repealed

Historical Note
Adopted effective March 23, 1989 (Supp. 89-1). Amended effective August 6, 1991 (Supp. 91-3). Reference to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Section repealed by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3).

R13-4-114. Minimum Course Requirements

A. Instructors. An academy administrator shall ensure that only an instructor who meets the requirements of this Section facilitates a Board-prescribed course.

1. Instructor classifications.
   a. General instructor. An individual qualified to teach topics not requiring a proficiency instructor under subsection (A)(1)(c).
   b. Specialist instructor. An individual, other than an Arizona peace officer, qualified to teach a topic in which the instructor has special expertise but who does not qualify for general instructor status.
   c. Proficiency instructor. An individual qualified to teach a topic area listed in R13-4-116(E)(1)(h).
2. Instructor qualification standards.
   a. A general instructor shall meet the following requirements:
      i. Have two years' experience as a certified peace officer;
      ii. Maintain instructional competency; and
      iii. Successfully complete a Board-sponsored instructor training course or an instructor training course that contains all of the performance objectives and demonstrations of the Board-sponsored instructor course.
   b. A specialist instructor shall meet the requirements of subsections (A)(2)(b)(i) and (A)(2)(b)(ii) and either subsection (A)(2)(b)(iii) or (A)(2)(b)(iv):
      i. Be nominated by the administrator of an academy authorized to provide a peace officer basic training course;
      ii. Maintain instructional competency;
      iii. Possess a professional license or certification other than a peace officer certification that relates to the topics to be taught; and
      iv. Provide documentation to the academy administrator for forwarding to the Board that demonstrates the expertise and ability to enhance peace officer training in a special field.
   c. A proficiency instructor shall meet the requirements of subsections (A)(2)(c)(i) and (A)(2)(c)(ii) and either subsection (A)(2)(c)(iii) or (A)(2)(c)(iv):
      i. Meet the requirements for general instructor;
      ii. Maintain instructional competency;
      iii. Successfully complete a proficiency instructor course in a topic area listed in R13-4-116(E)(1)(h) that includes a competency assessment to instruct in that area within the full-authority peace officer basic training course listed in R13-4-116(E); and
      iv. Complete a form prescribed by the Board that documents advanced training and experience in the topic area including a competency assessment to instruct in that area within the full-authority peace officer basic training course listed in R13-4-116(E).
   d. A proficiency instructor shall meet the requirements of subsection (A)(2)(c) separately for each topic area listed in R13-4-116(E)(1)(h) for which the proficiency instructor seeks qualification.
3. Instructional competency. An academy administrator shall immediately notify the Board in writing of any instructor:
   a. Who jeopardizes the safety of students or the public,
   b. Whose instruction violates acceptable training standards,
   c. Who is grossly deficient in performance as an instructor, or
   d. Who is a proficiency instructor and fails to complete satisfactorily the competency assessment to instruct in the instructor's topic area within the full-authority peace officer basic training course.
4. If the Board determines that an instructor fails to comply with the provisions of this Section, has an instructional deficiency, or fails to maintain proficiency, any course facilitated by the instructor does not meet the requirements of this Section.

B. Curriculum standards. An academy administrator or agency head shall ensure that the curriculum for a Board-prescribed course meets the following standards:
1. Curriculum.
   a. Curriculum development employs valid, job-based performance objectives and learning activities, and promotes student, officer, and public safety, as determined by a scientifically conducted validation study of the knowledge, skills, abilities, and aptitudes needed by the affected category of Arizona peace officer.
   b. The curriculum meets or exceeds the requirements of subsection (B)(2), unless otherwise provided in this Section.
2. Curriculum format standard. The curriculum consists of the following:
   a. A general statement of instructional intent that summarizes the desired learning outcome, is broad in scope, and includes long-term or far-reaching learning goals;
   b. Lesson plans containing:
      i. Course title,
      ii. Hours of instruction,
      iii. Materials and aids to be used,
      iv. Instructional strategy,
      v. Topic areas in outline form,
      vi. Performance objectives or learning activities,
      vii. Success criteria, and
      viii. Reference material;
   c. Performance objectives consisting of at least the following components:
      i. The student, which is an individual or group that performs a behavior as the result of instruction;
      ii. The behavior, which is an observable demonstration by the student at the end of instruction that shows that the objective is achieved and allows evaluation of the student's capabilities to perform the behavior; and
      iii. The conditions, which is a description of the important conditions of instruction or evaluation under which the student performs the behavior. Unless specified otherwise within the lesson plan, instruction and evaluation will be in written or oral form;
   d. Learning activities. A student is not required to demonstrate mastery of learning activities as a condition for successfully completing the training. Learning activities are subject areas for which performance objectives are not appropriate because either:
      i. Reliable and meaningful assessment of mastery of the material would be extremely difficult or impossible, or

ii. Mastery of the material is not likely to bear a direct relationship to the ability to perform entry-level peace officer job duties; and

e. The following decimal numbering system to provide a logical means of organization:
i. Functional area (1.0, 2.0, 3.0),
ii. Topic area (1.1.0, 1.2.0, 1.3.0), and
iii. Performance objective or learning activity (1.1.1, 1.1.2, 1.1.3).

C. The Board shall maintain and provide upon request a copy of curricula that meet the standards of this Section.

Amended by final rulemaking at 12 A.A.R. 331, effective March 11, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 3431 (October 28, 2022), effective December 4, 2022 (Supp. 22-4).

R13-4-115. Repealed

Historical Note
Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Section repealed by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3).

R13-4-116. Academy Requirements

A. Unless otherwise provided in this Article, only the basic training provided by an academy that the Board determines meets the standards prescribed in this Section may be used to qualify for certified peace officer status.

B. The academy administrator shall ensure that the academy has the following:
1. A classroom with adequate heating, cooling, ventilation, lighting, and space;
2. Chairs with tables or arms for writing;
3. Visual aid devices for classroom presentation;
4. Equipment in good condition for specialized instruction;
5. A safe driving range for conducting the defensive and pursuit driving course;
6. A firing range with adequate backstop to ensure the safety of all individuals on or near the range; and
7. A safe location for practical exercises.

C. Administrative requirements. The academy administrator shall ensure that the academy:
1. Establishes and maintains written policies, procedures, and rules concerning:
a. Operation of the academy,
b. Entrance requirements,
c. Student and instructor conduct, and
d. Administering examinations;
2. Admits only individuals who meet the requirements of R13-4-105, as attested to by the appointing agency or, in the case of an open enrollee, by the academy administrator, on form A1 or A4, as applicable, which is submitted to the Board on or before the first day of training;
3. Administers to each student at the beginning of each academy session a written examination prescribed by the Board measuring competency in reading and writing English;
4. Schedules sufficient time for the CFE to be administered as required by R13-4-110(A); and
5. Uses only instructors who are qualified under R13-4-114(A).

D. Academic requirements. The academy administrator shall ensure that the academy:
1. Establishes a curriculum with performance objectives and learning activities that meet the requirements of subsection (E) and R13-4-114(B);
2. Requires instructors to use lesson plans that cover the course content and list the performance objectives to be achieved and learning activities to be used;
3. Administers written, oral, or practical demonstration examinations that measure the attainment of the performance objectives;
4. Reviews examination results with each student and ensures that the student is shown any necessary corrections and signs and dates an acknowledgment that the student participated in the review;
5. Requires a student to complete successfully oral or written examinations that cover all topics in all functional areas before graduating.
a. Successful completion of an examination is a score of 70 percent or greater;
b. For a student who scores less than 70 percent, the academy shall:
i. Provide remedial training, and
ii. Re-examine the student in the area of deficiency; and
c. The academy shall allow a student to retake each examination only once;
6. Requires a student to qualify with firearms as described in R13-4-116(E);
7. Ensures that a student meets the success criteria for police proficiency skills under subsection (E)(1);
8. Provides remedial training for a student who misses a class before allowing the student to graduate; and
9. Refuses to graduate a student who is absent more than 32 hours from the Board approved full-authority peace officer basic training course or 16 hours from the specialty peace officer basic training course.

E. Basic course requirements. The academy administrator shall ensure that the academy uses curricula that meet the requirements of R13-4-114 for the following basic courses of instruction.
1. The Board approved full-authority peace officer basic training course shall include all of the topics listed in each of the following functional areas:
a. Functional Area I - Introduction to Law Enforcement.
i. Criminal justice systems,
ii. History of law enforcement,
iii. Law enforcement services,
iv. Supervision and management,
v. Ethics and professionalism, and
vi. Stress management.
b. Functional Area II - Law and Legal Matters.
i. Introduction to criminal law;
ii. Laws of arrest;
iii. Search and seizure;

iv. Rules of evidence;
v. Summonses, subpoenas, and warrants;
vi. Civil process;
vii. Administration of criminal justice;
viii. Juvenile law and procedures;
ix. Courtroom demeanor;
x. Constitutional law;
xi. Substantive criminal law, A.R.S. Titles 4, 13, and 36; and
xii. Liability issues.

c. Functional Area III - Patrol Procedures.
i. Patrol and observation (part 1),
ii. Patrol and observation (part 2),
iii. Domestic violence,
iv. Behavioral health crisis response,
v. Crimes in progress,
vi. Crowd control formations and tactics,
vii. Bomb threats and disaster training,
viii. Intoxication cases,
ix. Communication and police information systems,
x. Hazardous materials,
xi. Bias-motivated crimes,
xii. Fires, and
xiii. Civil Disputes.

d. Functional Area IV - Traffic Control.
i. Impaired driver cases;
ii. Traffic citations;
iii. Traffic collision investigation;
iv. Traffic collision (practical);
v. Traffic direction; and
vi. Substantive Traffic Law, A.R.S. Title 28.

e. Functional Area V - Crime Scene Management.
i. Preliminary investigation and crime scene management,
ii. Crime scene investigation (practical),
iii. Physical evidence procedures,
iv. Interviewing and questioning,
v. Fingerprinting,
vi. Sex crimes investigations,
vii. Death investigations including sudden infant death syndrome,
viii. Organized crime activity,
ix. Investigation of specific crimes, and
x. Narcotics and dangerous drugs.

f. Functional Area VI - Community and Police Relations.
i. Cultural awareness,
ii. Victimology,
iii. Interpersonal communications,
iv. Crime prevention, and
v. Police and the community.

g. Functional Area VII - Records and Reports. Report writing.

h. Functional Area VIII - Police Proficiency Skills.
i. First aid,
ii. Less lethal operations (including certification),
iii. Firearms training (including firearms qualification),
iv. Physical conditioning,
v. High-risk stops,
vi. Arrest and control tactics,
vii. Vehicle operations, and
viii. Pursuit operations.

i. Functional Area IX - Orientation and Introduction.
i. Examinations and reviews,
ii. Counseling, and
iii. Non-Board specified courses.

2. The specialty peace officer basic training course shall include all of the topics necessary from the Board approved full-authority peace officer basic training course for the curriculum to meet the requirements of R13-4-114(B).
3. Administrative functions such as orientation, introductions, examinations and reviews, and counseling are exempt from the requirements of R13-4-114(B).

F. Records required. The academy administrator shall ensure that the following records are maintained and made available for inspection by the Board or staff. The academy administrator shall provide to the Board copies of records upon request.
1. A record of all students attending the academy;
2. A manual containing the policies, procedures, and rules of the academy;
3. A document signed by each student indicating that the student received and read a copy of the academy policies, procedures, and rules;
4. A copy of all lesson plans used by instructors;
5. An annually signed and dated acknowledgment that the academy administrator reviewed and approved each lesson plan used at the academy;
6. A copy of all examinations, answer sheets or records of performance, and examination review acknowledgments;
7. An attendance roster for all classes or other record that identifies absent students;
8. A record of classes missed by each student and the remedial training received;
9. A record of disciplinary actions for all students; and
10. A file for each student containing the student's performance history.

G. Reports required. The academy administrator shall submit to the Board:
1. At least 10 working days before the start of each academy session, a complete schedule of classes containing the name of the instructor for each class and the training location;
2. No more than five working days after the start of each academy session, on a form prescribed by the Board, a roster indicating whether a student is an open enrollee or appointed and if appointed, identifying the appointing agency, and the full name and Social Security number of each student;
3. No more than five working days after dismissing a student from the academy, notification of the dismissal and the reason;
4. No later than the tenth day of each month, a report containing:
a. A summary of training activities and progress of the academy class to date;
b. Unusual occurrences, accidents, or liability issues; and
c. Other problems or matters of interest noted in the course of the academy, if not included under subsection (G)(4)(b);
5. No more than 10 working days after the end of each academy session, a complete schedule of classes containing the name of the instructor for each class and the training location;

6. No more than 10 working days after the end of each academy session, on a form prescribed by the Board, a roster indicating whether a student is an open enrollee or appointed and if appointed, identifying the appointing agency, and the full name and Social Security number of each student successfully completing the training.

H. Required inspections. Before an academy provides training to individuals seeking certification for any category of peace officer, the Board staff shall conduct an onsite inspection of the academy to determine compliance with this Section and R13-4-114. Board staff shall conduct additional inspections as often as the Board deems necessary.

1. Within 30 days after the inspection, the Board staff shall provide to the academy administrator an inspection report that lists any deficiencies identified and remedial actions the academy is required to take to comply with the standards of this Section and R13-4-114.
2. Within 30 days after receipt of the inspection report, the academy administrator shall submit to the Board a response that indicates the progress made to complete the remedial actions necessary to correct the deficiencies described in the inspection report. The academy administrator shall submit to the Board additional responses every 30 days until all remedial action is complete.
3. Within 30 days after receipt of notice that all remedial action is complete, Board staff shall conduct another inspection.
4. Following each inspection, Board staff shall present an inspection report to the Board describing the academy's compliance in meeting the standards of this Section and R13-4-114.

I. If an academy does not conduct a peace officer basic training course for 12 consecutive months, the academy shall not provide training until Board staff conducts another inspection as required by subsection (H). Otherwise, an academy may continue to provide training unless the Board determines that the academy is not in compliance with the standards of this Section or R13-4-114.

J. If the Board finds that an academy fails to comply with the provisions of this Section or R13-4-114, the academy shall not provide training to individuals seeking to be certified as peace officers.

K. An academy administrator shall ensure that an open enrollee is admitted only after the academy administrator complies with every requirement of an agency or agency head imposed by R13-4-105, R13-4-106, R13-4-107, and R13-4-108 except for R13-4-106(C)(4).

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended effective October 20, 1995; filed with the Secretary of State April 20, 1995 (Supp. 95-2). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking at 12 A.A.R. 331, effective March 11, 2006 (Supp. 06-1). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 26 A.A.R. 2745, effective December 6, 2020 (Supp. 20-4). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-117. Training Expense Reimbursements

A. Approval of training courses. The Board shall approve or deny training courses for training expense reimbursement based on compliance with this Section and R13-4-111, and availability of funds.

B. Application for reimbursement. Before the beginning of a training program described in R13-4-111, an agency planning to participate in the training and apply for reimbursement, shall notify the Board on prescribed forms.

C. Claim for reimbursement. When an individual completes a training course, the appointing agency may submit a claim for reimbursement on a form prescribed by the Board. The agency shall submit the claim within 60 days after the training is completed.

D. Allowable reimbursements. The Board shall allow the following reimbursements subject to the limits on the amount of reimbursement as determined by the Board under subsection (E):

1. The state-approved rate for lodging while a peace officer attended a training course,
2. Tuition for a training course on a pro-rata basis for the actual hours of training attended, and
3. Other expenses incurred by a peace officer.

E. Limitations on reimbursements. The following limitations apply to applications for reimbursement involving training courses.

1. The Board shall not reimburse an agency if the peace officer has previously completed the same training course within three years;
2. The Board shall not reimburse an agency for a peace officer who fails to complete a training course except upon request of the appointing agency. The agency shall present the reasons for the non-completion to the Board with the request for reimbursement; and
3. The Board shall not reimburse an agency for the cost of insurance, medical, pension, uniform, clothing, equipment, or other benefits or expenses of a peace officer while attending a training course.

F. Academy reimbursement. The Board may reimburse an academy for the actual costs of materials, books, ammunition, registration fees and tuition, necessary for completion of a basic course up to the limits set by the Board. To receive reimbursement, an academy shall furnish paid receipts or invoices or other information as required by the Board to verify costs incurred. The Board shall not reimburse an academy for costs incurred for registration fees, tuition, books, materials, or ammunition for a peace officer, if the Board has made these reimbursements for the peace officer's previous attendance at an academy.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-118. Hearings; Rehearings

A. If a respondent makes a request for hearing under R13-4-109(E), the hearing shall be held in accordance with A.R.S. Title 41, Chapter 6, Article 10.

B. If a respondent fails to comply with the requirements under R13-4-109(E) within 30 days of the notice of action sent under R13-4-109(E), the Board may consider the case based on the information available.

C. If a respondent requests a hearing, but fails to appear at the hearing, the Board or administrative law judge may vacate the hearing. If a hearing is vacated, the Board may deem the acts and violations charged in the notice of action admitted, and impose any of the sanctions provided by A.R.S. § 41-1822 (D)(1).

D. The Board shall render a decision in writing. The Board shall serve notice of the decision on each party as required by A.R.S. § 41-1092.04.

E. Except as provided in subsection (I), a party is required to file a motion for rehearing or review of a Board decision to exhaust the party's administrative remedies.

F. A party may file a motion for rehearing or review of a decision with the Board not later than 30 days after service of the Board's decision, specifying the particular grounds for the motion.

G. The Board may grant a rehearing or review of a decision for any of the following reasons materially affecting the moving party's rights:

1. Irregularity in the administrative proceedings, or any abuse of discretion that deprived the moving party of a fair hearing;
2. Misconduct of the Board, the administrative law judge, or the prevailing party;
3. Mistake or surprise that could not have been prevented by ordinary prudence;
4. Newly discovered material evidence that could not with reasonable diligence have been discovered and produced at the hearing;
5. Error in the admission or rejection of evidence or other errors of law occurring at the hearing; or
6. The decision was not justified by the evidence or the decision was contrary to law.

H. The Board may affirm or modify the decision or grant a rehearing to any or all of the parties, on part or all of the issues, for any of the reasons in subsection (G). An order granting a rehearing shall specify the particular issues in the rehearing and the rehearing shall concern only the matters specified.

I. If the Board makes a specific finding that a particular decision needs to be effective immediately to preserve the public peace, health, or safety and that a review or rehearing of the decision is impracticable, unnecessary, or contrary to the public interest, the Board shall issue the decision as a final decision without an opportunity for rehearing or review.

Historical Note

Adopted effective March 23, 1989 (Supp. 89-1). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

ARTICLE 2. CORRECTIONAL OFFICERS

R13-4-201. Definitions

The definitions in A.R.S. § 41-1661 apply to this Article. Additionally, unless the context otherwise requires:

"Academy" means the Correctional Officer Training Academy (COTA) of the Arizona Department of Corrections in Tucson, Arizona, or a satellite location authorized by the Director.

"Appointment" means the selection of an individual as a correctional officer.

"Applicant" means an individual who applies to be a correctional officer.

"Cadet" means an individual who is attending the academy and, upon graduation, will become a state correctional officer.

"Dangerous drug or narcotic" is defined in R13-4-101.

"Department" means the Arizona Department of Corrections.

"State correctional officer" means an individual employed by the Department in the correctional officer series.

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). Reference to "Council" changed to "Board" and definitions relabeled accordingly (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-202. Uniform Minimum Standards

A. To be admitted to the academy for training as a state correctional officer, an individual shall:

1. Be a citizen of the United States or eligible to work in the United States;
2. Be at least 18 years of age by the date of graduation from the academy;
3. Be a high school graduate or have successfully completed a General Education Development (G.E.D.) examination or equivalent as specified in R13-4-203(C)(3);
4. Have a valid Arizona driver's license (Class 2 or higher) by the date of graduation from the academy;
5. Undergo a complete background investigation that meets the standards of R13-4-203;
6. Undergo a physical examination (within 12 months before appointment) as prescribed by the Director by a licensed physician designated by the Director;
7. Not have been dishonorably discharged from the United States Armed Forces;
8. Not have used a dangerous drug or narcotic, as defined at A.R.S. § 13-3401, within the past five years;
9. Not have a pattern of abuse of prescription medication; and
10. Not have committed a felony or a misdemeanor of a nature that the Board determines has a reasonable relationship to the functions of the position, in accordance with A.R.S. § 13-904(E).

B. If the Director wishes to appoint an individual whose conduct is grounds to deny certification under R13-4-109, the Director may petition the Board for a determination that the otherwise disqualifying conduct constitutes juvenile indiscretion by complying with R13-4-105(D).

C. Code of Ethics. To enhance the quality of performance and the conduct and the behavior of correctional officers, an individual appointed to be a correctional officer shall commit to the following Code of Ethics and shall affirm the commitment by signing the Code:

"I shall maintain high standards of honesty, integrity, and impartiality, free from any personal considerations, favoritism, or partisan demands. I shall be courteous, considerate, and prompt when dealing with the public, realizing that I serve the public. I shall maintain mutual respect and professional cooperation in my relationships with other staff members.

I shall be firm, fair, and consistent in the performance of my duties. I shall treat others with dignity, respect, and compassion, and provide humane custody and care, void of all retribution, harassment, or abuse. I shall uphold the Constitutions of the United States and the state of Arizona, and all federal and state laws. Whether on or off duty, in uniform or not, I shall conduct myself in a manner that will not bring discredit or embarrassment to my agency or the state of Arizona.

I shall report without reservation any corrupt or unethical behavior that could affect either inmates, employees, or the integrity of my agency. I shall not use my official position for personal gain. I shall maintain confidentiality of information that has been entrusted to me and designated as such.

I shall not permit myself to be placed under any kind of personal obligation that could lead any person to expect official favors. I shall not accept or solicit from anyone, either directly or indirectly, anything of economic value such as a gift, gratuity, favor, entertainment, or loan, that is or may appear to be, designed to influence my official conduct. I will not discriminate against any inmate, employee, or any member of the public on the basis of race, gender, creed, or national origin. I will not sexually harass or condone sexual harassment of any person. I shall maintain the highest standards of personal hygiene, grooming, and neatness while on duty or otherwise representing the state of Arizona."

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). Reference to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by exempt rulemaking, under Laws 2019, Chapter 93, at 25 A.A.R. 1267, with an immediate effective date of April 24, 2019 (Supp. 19-2). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-203. Background Investigation

A. The Department shall conduct a background investigation before an applicant is admitted to the academy. The Department shall review the personal history statement submitted under subsection (B) and the results of the background investigation required in subsection (C) to determine whether the individual meets the requirements of R13-4-202 and the individual's personal history statement is accurate and truthful.

B. Personal history. An applicant shall complete and submit to the employing agency a personal history statement on a form prescribed by the Board. The applicant shall complete the personal history statement before the start of the background investigation and ensure that the personal history statement provides the information necessary for the Department to conduct the investigation described in subsection (C).

C. Investigative requirements. Before admitting an applicant to the academy, the Department shall collect, verify, and retain documents establishing that the applicant meets the standards specified in this Article. At a minimum, this documentation shall include:

1. Proof of the applicant's age and United States citizenship or eligibility to work in the United States. A copy of any of the following regarding the applicant is acceptable proof:
   a. Birth certificate,
   b. United States passport,
   c. Certification of United States Naturalization,
   d. Certificate of Nationality, or
   e. Immigration Form I-151 or I-1551.
2. Proof of the applicant's valid driver's license. A copy of the applicant's driver's license and written verification of the applicant's driving record from the applicable state's Department of Transportation, Motor Vehicle Division, is required proof.
3. Proof that the applicant is a high school graduate or its equivalent. The following are acceptable proof:
   a. A copy of a diploma from a high school recognized by the department of education of the jurisdiction in which the diploma is issued;
   b. A copy of a certificate showing successful completion of the General Education Development (G.E.D.) test; or
   c. In the absence of proof of high school graduation or successful completion of the G.E.D. test,
      i. A copy of a degree or transcript from an accredited college or university showing successful completion of high school or high school equivalency;
      ii. A United States Military Service Record DD Form 214-#4 with the Education block indicating high school completion,
      iii. A copy of a diploma, certificate of completion, or transcripts issued by a private school in Arizona that includes the individual's name and a signed affirmation of the school administrator that the individual named received the equivalent of a high school education; or
      iv. Other evidence of high school education equivalency submitted to the Board for consideration.
4. Record of any military discharge. A copy of the Military Service Record (DD Form 214-#4 or NGB Form 22), which documents the character of service, separation code, and reentry code, is acceptable proof.
5. Results of a psychological fitness assessment approved by the Director and conducted by a psychologist or psychiatrist designated by the Department.
6. Personal references: The names and addresses of at least three individuals who can provide information regarding the applicant.
7. Previous employers or schools attended. The names and addresses of all employers of and schools attended by the applicant for the past five years.
8. Residence history. The complete address for every location at which the applicant has lived in the last five years.
9. Law enforcement agency records. The Department shall request and review law enforcement agency records in jurisdictions where the applicant has lived, worked, or attended school in the past five years. The Department shall document the information obtained.
10. Criminal history query. The Department shall query the National Crime Information Center/Interstate Identification Index (NCIC/III), and the Arizona Criminal Information Center/Arizona Computerized Criminal History (ACIC/ACCH), or the equivalent for each state where the applicant has lived, worked, or attended school in the past five years and review the criminal history record for any

arrest or conviction to determine compliance with R13-4-202.

11. Fingerprint card. The Department shall obtain from an applicant and submit a fingerprint card for processing by the Arizona Department of Public Safety and the Federal Bureau of Investigation.
    a. The Department shall process a fingerprint card for an applicant entering the academy, except as provided in subsections (C)(9)(b) and (c). The Department shall process a fingerprint card for an applicant even if the applicant has a processed applicant fingerprint card from a previous employer.
    b. If the fingerprint card is not fully processed when the applicant is ready to enter the academy, the Department may allow the applicant to attend the academy if:
        i. A computerized criminal history check has been made and the results are on file with the Department, and
        ii. The applicant meets all other requirements of this Section and R13-4-202.
    c. If the Department has not received a fully processed fingerprint card within 15 weeks of the date of admission to the academy, the individual does not meet the requirements of this Section and may be terminated from the academy. The Department may extend the deadline for receipt of a processed fingerprint card an additional 15 weeks. An individual terminated from the academy under this subsection may be re-employed under R13-4-208 when a fully processed fingerprint card is received.

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). Reference to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1). Amended by final rulemaking at 28 A.A.R. 1044 (May 20, 2022), effective July 3, 2022 (Supp. 22-2).

R13-4-204. Records and Reports

A. Reports. The Department shall submit to the Board a report by the Director attesting that each individual completing the academy meets the requirements of R13-4-202.

B. Records. The Department shall make Department records available to the Board upon request of the Board or its staff. The Department shall keep the records in a central location. The Department shall maintain:
1. A copy of reports submitted under subsection (A);
2. All written documentation obtained or recorded under R13-4-202 and R13-4-203; and
3. A record of all advanced training, specialized training, continuing education, and firearms qualification conducted under R13-4-206.

C. Record retention. The Department shall maintain the records required by this Section as follows:
1. For applicants investigated under R13-4-203 who are not appointed: two years; and
2. For applicants who are appointed: five years from the date of termination, except records retained under subsection (B)(3), shall be retained for three years.

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

R13-4-205. Basic Training Requirements

A. Required training for state correctional officers. Before appointment as a state correctional officer, an individual shall complete a Board-approved basic correctional officer training program. This program shall meet or exceed the requirements of this Section.

B. Curricula or training material approval time frames.
1. For the purposes of A.R.S. § 41-1073, the Board establishes the following time frames for curricula or training material that require Board approval under this Section and R13-4-206.
    a. Administrative completeness time frame: 60 days.
    b. Substantive review time frame: 60 days.
    c. Overall time frame: 120 days.
2. The administrative completeness review time frame begins on the date the Board receives the documents required by this Section or R13-4-206.
    a. Within 60 days, the Board shall review the documents and issue to the Department a statement of administrative completeness or a notice of administrative deficiencies that lists each item required by this Section that is missing.
    b. If the Board issues a notice of administrative deficiency, the Department shall submit the missing documents and information within 90 days of the notice. The administrative completeness time frame is suspended from the date of the deficiency notice until the date the Board receives the missing documents and information.
    c. If the Department fails to provide the missing documents within the 90 days provided, the Board shall deny the approval.
    d. When the file is administratively complete, the Board shall provide written notice of administrative completeness to the Department.
3. The substantive review time frame begins on the date the Board issues the notice of administrative completeness.
    a. During the substantive review time frame, the Board may make one comprehensive written request for additional information.
    b. The Department shall submit to the Board the additional information identified in the request for additional information within 60 days. The time frame for the Board to finish the substantive review of the application is suspended from the date of the request for additional information until the Board receives the additional information.
    c. The Board shall deny the approval if the additional information is not supplied within the 60 days provided.
    d. When the substantive review is complete, the Board shall grant or deny approval.

C. Basic course specifications.
1. The Department shall develop the curriculum for the basic correctional officer training program.
    a. The curriculum shall include courses in the following functional areas.

i. Functional Area I - Ethics and Professionalism;
ii. Functional Area II - Inmate Management;
iii. Functional Area III - Legal Issues;
iv. Functional Area IV - Communication Skills;
v. Functional Area V - Officer Safety, including firearms;
vi. Functional Area VI - Applied Skills;
vii. Functional Area VII - Security, Custody, and Control;
viii. Functional Area VIII - Conflict and Crisis Management; and
ix. Functional Area IX - Medical Emergencies, and Physical and Mental Health.

b. The curriculum shall also contain administrative time for orientation, counseling, testing, and remedial training.

2. The Department shall ensure that curriculum submitted to the Board for approval contains lesson plans that include:
a. Course title,
b. Hours of instruction,
c. Materials and aids to be used,
d. Instructional strategy,
e. Topic areas in outline form,
f. Success criteria, and
g. The performance objectives or learning activities to be achieved.

3. After initial approval by the Board, the Director or the Director's designee shall:
a. Annually review each lesson plan submitted to and approved by the Board under subsection (C)(2); and
b. If an approved lesson plan has been changed, submit the changed lesson plan to the Board for approval; or
c. If an approved lesson plan has not been changed, sign and date an acknowledgment of approval for each lesson plan.

4. The Department shall ensure that the following three components are specified for each performance objective:
a. The learner, which is an individual or group that performs a behavior as the result of instruction;
b. The behavior, which is an observable demonstration by the learner at the end of instruction that shows that the objective is achieved and allows evaluation of the learner's capabilities relative to the behavior;
c. The conditions, which is a description of the important conditions of instruction or evaluation under which the learner will perform the stated behavior. Unless specified otherwise, the instruction and evaluation shall be in written or oral form.

5. The Department shall ensure that instructors of basic correctional officer training courses meet proficiency requirements developed by the Department and approved by the Board. The Department shall ensure that proficiency requirements for instructors include education, experience, or a combination of both. The Department shall affirm to the Board that each instructor has the necessary qualifications before the instructor delivers any instruction. In addition to these requirements, instructors of courses dealing with the proficiency skills of defensive tactics, physical conditioning, firearms, and medical emergencies shall complete specialized training developed by the Department and approved by the Board. Instructors shall use lesson plans described in subsection (C)(2).

D. Academic requirements.

1. A cadet shall be given a combination of written, oral, or practical demonstration examinations capable of measuring the cadet's attainment of the performance objectives in each approved lesson plan.
2. Academy staff shall review examination results and academic progress with each cadet weekly. Academy staff shall ensure that each cadet is informed of correct responses.
3. A cadet shall complete all examinations before graduating from the academy. To successfully complete a written or oral examination, a cadet shall score at least 70 percent.
a. If a cadet receives a score of less than 70 percent, the academy shall provide the cadet with remedial training in areas of deficiency.
b. The academy shall not offer a cadet more than one re-examination per lesson plan.
4. A cadet shall qualify with firearms as specified in subsection (C). Firearms qualification shall include:
a. 50-shot daytime or nighttime qualification course with service handgun. The minimum passing score is 210 points out of a possible 250 points;
b. Seven-shot qualification course with service shotgun; and
c. Target identification and discrimination course.
5. A cadet shall meet success criteria described in the Board-approved curriculum for the proficiency skills of self-defense, physical conditioning, and medical emergencies, as approved under R13-4-205(C).
6. The academy shall provide a cadet who does not attend a lesson with remedial training before graduation.
7. The academy shall not graduate a cadet who attends less than 90 percent of the total hours of basic training.

E. Exceptions. A cadet shall not function as a state correctional officer except:
1. As a part of an exercise within the approved basic training program, if the cadet is under the direct supervision and control of a state correctional officer; or
2. At the discretion of the Director, for the duration of an emergency situation including, but not limited to, riots, insurrections, and natural disasters. A cadet shall not carry a firearm in the course of duty unless the cadet has successfully met the requirement of R13-4-205(D)(4).

F. Waiver of required training. The Board shall grant a complete or partial waiver of the required basic training, at the request of the Director, upon a finding by the Board that the best interests of the corrections profession are served and the public welfare and safety is not jeopardized by the waiver if an applicant:
1. Successfully completes a basic corrections officer training course comparable to or exceeding, in hours of instruction and subject matter, the Board-approved basic correctional officer training course and has a minimum of one year of experience as a correctional officer. The applicant shall include verification of previous experience and training with the application for waiver;
2. Meets the minimum qualifications specified in R13-4-202; and
3. Successfully completes a comprehensive examination measuring comprehension of the basic correctional officer training course. The comprehensive examination shall be prepared by the Department, approved by the Board, and include a written test and practical demonstrations of

proficiency in firearms, physical conditioning, and defensive tactics.

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). References to "Council" changed to "Board" (Supp. 94-3). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

R13-4-206. Field Training and Continuing Training Including Firearms Qualification

A. Field training requirement. Before graduating from the academy or within two months after graduation, a cadet or state correctional officer shall participate in and successfully complete a Board-approved field training program.

B. Continuing training requirement.
1. A state correctional officer shall receive eight hours of Board-approved continuing training each calendar year beginning January 1 following the date the officer received certified status.
2. In addition to the training required under subsection (B)(1), a state correctional officer authorized to carry a firearm shall qualify each calendar year after appointment beginning January 1 following the date the officer received certified status. The firearms qualification training shall meet the standards specified under subsection (F) and shall not be used to satisfy the requirements of R13-4-206 (C).

C. Continuing training requirements may be fulfilled by:
1. Advanced training programs, or
2. Specialized training programs.

D. Advanced training programs. The Department shall develop, design, implement, maintain, evaluate, and revise advanced training programs that include courses enhancing a correctional officer's knowledge, skills, or abilities for the job that the correctional officer performs. The courses within an advanced training program shall include advanced or remedial training in any topic listed in R13-4-205(C).

E. Specialized training programs. The Department shall develop, design, implement, maintain, evaluate, and revise specialized training programs that address a particular need of the Department and target a select group of officers. The courses within a specialized training program shall include topics different from those in the basic corrections training program or any advanced training programs.

F. Firearms qualification required. A correctional officer authorized to carry a firearm shall qualify to continue to be authorized to carry a firearm each calendar year beginning the year following the receipt of certified status by completing a Board-prescribed firearms qualification course using a service handgun, service shotgun, and service ammunition, and a Board-prescribed target identification and judgment course.
1. Firearms qualification course standards.
   a. A firearms qualification course is:
      i. A course prescribed under R13-4-205(C); or
      ii. A course determined by the Board to measure firearms competency at least as accurately as the course prescribed under R13-4-205(C).
   b. All firearms qualification courses shall include:
      i. A timed accuracy component;
      ii. A type and style of target that is equal to, or more difficult than, the targets used under R13-4-205(C); and
      iii. Success criteria that are equal to, or more difficult than, the success criteria used under R13-4-205(C).
2. Firearms target identification and judgment course standards.
   a. A firearms target identification and judgment course is:
      i. A course prescribed under R13-4-205(C); or
      ii. A course determined by the Board to measure target identification and judgment competency at least as accurately as those prescribed under R13-4-205(C).
   b. All firearms target identification and judgment courses shall include:
      i. A timed accuracy component;
      ii. A type and style of target discrimination that is equal to, or more difficult than, those used under R13-4-205(C); and
      iii. Success criteria that are equal to, or more difficult than, those used under R13-4-205(C),
3. All courses shall be presented by a firearms instructor who meets the requirements under R13-4-205(C)(5).

R13-4-207. Repealed

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). References to "Council" changed to "Board" (Supp. 94-3). Section repealed by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3).

R13-4-208. Re-employment of State Correctional Officers

A. A state correctional officer who terminates employment may be re-employed by the Department within two years from the date of termination if the former state correctional officer meets the requirements of R13-4-202 and R13-4-203 at the time of re-employment.

B. A state correctional officer who terminates employment may be re-employed by the Department if re-employment is sought more than two years but less than three years from the original date of termination, if the former state correctional officer meets the requirements of R13-4-202 and R13-4-203 at the time of re-employment and completes the waiver provisions of R13-4-205(F).

C. A former state correctional officer who seeks re-employment more than three years from the date of termination shall meet all the requirements of this Article at the time of re-employment.

Historical Note

Adopted effective December 16, 1992, filed June 16, 1992 (Supp. 82-2). Amended by final rulemaking at 8 A.A.R. 3201, effective July 11, 2002 (Supp. 02-3). Amended by final rulemaking a 22 A.A.R. 555, effective April 8, 2016 (Supp. 16-1).

As of March 11, 2024

41-1821. Arizona peace officer standards and training board; membership; appointment; term; vacancies; meetings; compensation; acceptance of grants

A. The Arizona peace officer standards and training board is established and consists of thirteen members appointed by the governor. The membership shall include:

1. Two sheriffs, one of whom is appointed from a county having a population of two hundred thousand or more persons and the remaining sheriff who is appointed from a county having a population of less than two hundred thousand persons.

2. Two chiefs of police, one of whom is appointed from a city or federally recognized Native American tribe having a population of sixty thousand or more persons and the remaining chief who is appointed from a city or federally recognized Native American tribe having a population of less than sixty thousand persons.

3. A college faculty member in public administration or a related field.

4. The attorney general.

5. The director of the department of public safety.

6. The director of the state department of corrections.

7. One member who is employed in administering county or municipal correctional facilities.

8. Two certified law enforcement officers who have knowledge of and experience in representing peace officers in disciplinary cases, neither of whom serves in a supervisory capacity and both of whom must be from different law enforcement agencies. One of the appointed officers must be from a county with a population of less than five hundred thousand persons.

9. Two public members.

B. Before appointment by the governor, a prospective member of the board shall submit a full set of fingerprints to the governor for the purpose of obtaining a state and federal criminal records check pursuant to section 41-1750 and Public Law 92-544. The department of public safety may exchange this fingerprint data with the federal bureau of investigation.

C. The governor shall appoint a chairman from among the members at its first meeting and every year thereafter, except that an ex officio member shall not be appointed chairman. The governor shall not appoint more than one member from the same law enforcement agency. No board member who was qualified when appointed becomes disqualified unless the member ceases to hold the office that qualified the member for appointment.

D. Meetings shall be held at least quarterly or on the call of the chairman or by the written request of five members of the board or by the governor. A vacancy on the board shall occur when a member except an ex officio member is absent without the permission of the chairman from three consecutive meetings. The governor may remove a member except an ex officio member for cause.

E. The term of each regular member is three years unless a member vacates the public office that qualified the member for this appointment.

F. The board members are not eligible to receive per diem but are eligible to receive reimbursement for travel expenses pursuant to title 38, chapter 4, article 2.

G. On behalf of the board, the executive director may seek and accept contributions, grants, gifts, donations, services or other financial assistance from any individual, association, corporation or other organization having an interest in police training, and from the United States of America and any of its agencies or instrumentalities, corporate or otherwise. Only the executive director of the board may seek monies pursuant to this subsection. Such monies shall be deposited in the fund created by section 41-1825.

H. Membership on the board shall not constitute the holding of an office, and members of the board shall not be required to take and file oaths of office before serving on the board. No member of the board shall be disqualified from holding any public office or employment nor shall such member forfeit any such office or employment by reason of such member's appointment, notwithstanding the provisions of any general, special or local law, ordinance or city charter.

41-1822. Powers and duties of board; definition

A. With respect to peace officer training and certification, the board shall:

1. Establish rules for the government and conduct of the board, including meeting times and places and matters to be placed on the agenda of each meeting.

2. Make recommendations, consistent with this article, to the governor, the speaker of the house of representatives and the president of the senate on all matters relating to law enforcement and public safety.

3. Prescribe reasonable minimum qualifications for officers to be appointed to enforce the laws of this state and the political subdivisions of this state and certify officers in compliance with these qualifications. Notwithstanding any other law, the qualifications shall require United States citizenship, shall relate to physical, mental and moral fitness and shall govern the recruitment, appointment and retention of all agents, peace officers and police officers of every political subdivision of this state. The board shall constantly review the qualifications established by this section and may amend the qualifications at any time, subject to the requirements of section 41-1823.

4. Prescribe minimum courses of training and minimum standards for training facilities for law enforcement officers. Only this state and political subdivisions of this state may conduct basic peace officer training. Basic peace officer academies may admit individuals who are not peace officer cadets only if a cadet meets the minimum qualifications established by paragraph 3 of this subsection. Training shall include:

(a) Courses in responding to and reporting all criminal offenses that are motivated by race, color, religion, national origin, sexual orientation, gender or disability.

(b) Training certified by the director of the department of health services with assistance from a representative of the board on the nature of unexplained infant death and the handling of cases involving the unexplained death of an infant.

(c) Medical information on unexplained infant death for first responders, including awareness and sensitivity in dealing with families and child care providers, and the importance of forensically competent death scene investigations.

(d) Information on the protocol of investigation in cases of an unexplained infant death, including the importance of a consistent policy of thorough death scene investigation.

(e) The use of the infant death investigation checklist pursuant to section 36-3506.

(f) If an unexplained infant death occurs, the value of timely communication between the medical examiner's office, the department of health services and appropriate social service agencies that address the issue of infant death and bereavement, to achieve a better understanding of these deaths and to connect families to various community and public health support systems to enhance recovery from grief.

5. Recommend curricula for advanced courses and seminars in law enforcement and intelligence training in universities, colleges and community colleges, in conjunction with the governing body of the educational institution.

6. Make inquiries to determine whether this state or political subdivisions of this state are adhering to the standards for recruitment, appointment, retention and training established pursuant to this article. The failure of this state or any political subdivision to adhere to the standards shall be reported at the next regularly scheduled meeting of the board for action deemed appropriate by that body.

7. Employ an executive director and other staff as are necessary to fulfill the powers and duties of the board in accordance with the requirements of the law enforcement merit system council.

B. With respect to state department of corrections correctional officers, the board shall:

1. Approve a basic training curriculum of at least two hundred forty hours.

2. Establish uniform minimum standards. These standards shall include high school graduation or the equivalent and a physical examination as prescribed by the director of the state department of corrections.

3. Establish uniform standards for background investigations, including criminal histories under section 41-1750, of all applicants before enrolling in the academy. The board may adopt special procedures for extended screening and investigations in extraordinary cases to ensure suitability and adaptability to a career as a correctional officer.

4. Issue a certificate of completion to any state department of corrections correctional officer who satisfactorily complies with the minimum standards and completes the basic training program. The board may issue a certificate of completion to a state department of corrections correctional officer who has received comparable training in another state if the board determines that the training was at least equivalent to that provided by the academy and if the person complies with the minimum standards.

5. Establish continuing training requirements and approve curricula.

C. With respect to peace officer misconduct, the board may:

1. Receive complaints of peace officer misconduct from any person, request law enforcement agencies to conduct investigations and conduct independent investigations into whether an officer is in compliance with the qualifications established pursuant to subsection A, paragraph 3 of this section.

2. Receive a complaint of peace officer misconduct from the president or chief executive officer of a board recognized law enforcement association that represents the interests of certified law enforcement officers if the association believes that a law enforcement agency refused to investigate or made findings that are contradictory to prima facie evidence of a violation of the qualifications established pursuant to subsection A, paragraph 3 of this section. If the board finds that the law enforcement agency refused to investigate or made findings that contradicted prima facie evidence of a violation of the qualifications

established pursuant to subsection A, paragraph 3 of this section, the board shall conduct an independent investigation to determine whether the officer is in compliance with the qualifications established pursuant to subsection A, paragraph 3 of this section and provide a letter of the findings based on the investigation conducted by the board to the president or chief executive officer of the board recognized law enforcement association who made the complaint.

D. The board may:

1. Deny, suspend, revoke or cancel the certification of an officer who is not in compliance with the qualifications established pursuant to subsection A, paragraph 3 of this section.

2. Provide training and related services to assist state, tribal and local law enforcement agencies to better serve the public, including training for emergency alert notification systems.

3. Enter into contracts to carry out its powers and duties.

E. This section does not create a cause of action or a right to bring an action, including an action based on discrimination due to sexual orientation.

F. For the purposes of this section, "sexual orientation" means consensual homosexuality or heterosexuality.

41-1823. Adoption of minimum qualifications; certification required

A. No minimum qualifications for law enforcement officers adopted pursuant to this article shall be effective until six months after they have been filed with the secretary of state pursuant to section 41-1031.

B. Except for agency heads duly elected as required by the constitution and persons given the authority of a peace officer pursuant to section 8-205, 11-572, 12-253, 13-916 or 22-131, no person may exercise the authority or perform the duties of a peace officer unless he is certified by the board pursuant to section 41-1822, subsection A, paragraph 3.

41-1824. Training expenditures

In exercising its powers and duties, the board shall endeavor to minimize costs of administration, including utilization of training facilities already in existence and available, so that the greatest possible proportion of the funds available to it shall be expended for the purposes of providing training for local law enforcement officers.

41-1825. Peace officers' training fund

A. A special fund designated as the peace officers' training fund is established. All monies deposited in the fund are continuously appropriated to the department of public safety for the benefit of the board. The monies shall be used exclusively for the costs of training peace officers, including Indian tribe police officers who are training to be qualified pursuant to section 13-3874 and full authority peace officers who are appointed by the director of the state department of corrections and the director of the department of juvenile corrections, for grants to state agencies, counties, cities and towns of this state for peace officer training and for expenses for the operation of the board. No peace officers' training fund monies may be spent for training correctional officers of the state department of corrections.

B. All amounts to be paid or advanced from the fund shall be on warrants drawn by the department of administration on presentation of a proper claim or voucher that is approved and signed by the executive director.

C. The executive director shall lawfully disburse monies as approved by the board.

D. The board may use and the department of public safety shall provide to the board administrative support services. The board shall reimburse the department for expenses incurred for administrative support services. This subsection does not require the department to provide administrative support services that are different in kind from those that were provided on January 1, 2000. For the purposes of this subsection, "administrative support services" includes all services relating to business office, finance and procurement, information management and technology, fleet, human resources, supply, telecommunications, facilities, security and clerical and administrative assistance personnel.

41-1826. Arizona law enforcement training academy; former property; title transfer

A. Notwithstanding any law to the contrary and for the benefit of the board, the department of public safety shall transfer to the state department of corrections the title to the property that was formerly known as the Arizona law enforcement training academy and that is operated as the correctional officer training academy in Tucson.

B. If at any time after title is transferred the state department of corrections leases or sells the property, the proceeds from the lease or sale shall be deposited, pursuant to sections 35-146 and 35-147, as follows:

1. 53.66 per cent of the proceeds or 53.66 per cent of the fair market value, whichever is greater, in the peace officers' training fund established by section 41-1825.

2. 46.34 per cent of the proceeds or 46.34 per cent of the fair market value, whichever is greater, in the state general fund.

41-1827. Application for grants

Any state agency, county, city or town which desires to receive a grant pursuant to section 41-1825 shall make application to the board for such aid. The application shall contain such information as the board may request.

41-1828. Allocation of monies

A. On the recommendation of the board, the executive director shall allocate and the state treasurer shall pay from the peace officers' training fund to each county, city or town of this state that has applied and qualified for a grant pursuant to this chapter a sum that will reimburse the political subdivision in an amount not to exceed one-half of the salary paid to each peace officer while participating in training. The cost of the training and living and travel expenses up to the maximum as prescribed by title 38, chapter 4, article 2 that are incurred by state, county, city or town officers while participating in training may be paid to the appropriate state agency or political subdivision.

B. If the monies in the peace officers' training fund budgeted by the board for such salary reimbursement are insufficient to allocate such amount to each participating county, city or town, the amount that is allocated to each shall be reduced proportionately. The board may refuse to allocate monies to any state agency, county, city or town that has not, throughout the period covered by the allocation, adhered to the recruitment and training standards established by the board as applicable to personnel recruited or trained by the state agency, county, city or town during the allocation period.

41-1828.01. Required law enforcement agency reporting

A. A law enforcement agency may report to the board any peace officer misconduct in violation of the rules for retention established pursuant to section 41-1822, subsection A, paragraph 3 at any time and shall report this misconduct on the peace officer's termination, resignation or separation from the agency.

B. On request of a law enforcement agency conducting a background investigation of an applicant for the position of a peace officer, another law enforcement agency employing, previously employing or having conducted a complete or partial background investigation on the applicant shall advise the requesting agency of any known misconduct in violation of the rules for retention established pursuant to section 41-1822, subsection A, paragraph 3.

C. Civil liability may not be imposed on either a law enforcement agency or the board for providing information specified in subsections A and B of this section if there exists a good faith belief that the information is accurate.

41-1828.02. Certified peace officers; hiring reimbursement; definition

A. A law enforcement agency in this state or a city, town, county or political subdivision of this state that employs a peace officer and that pays the costs of the peace officer's certification and training under section 41-1822 may seek reimbursement for the costs of the law enforcement officer's certification and training from a hiring law enforcement agency. The hiring law enforcement agency shall reimburse all of the costs related to the peace officer's certification and training, including travel, housing and salary during the training, as follows:

1. One hundred percent of all costs, if the certified peace officer leaves the original law enforcement agency within twelve months after employment.

2. Seventy-five percent of all costs, if the certified peace officer leaves the original law enforcement agency after twelve months and not more than twenty-four months after employment.

3. Fifty percent of all costs, if the certified peace officer leaves the original law enforcement agency after twenty-four months and not more than thirty-six months after employment.

B. The original law enforcement agency may waive reimbursement for a certified peace officer who voluntarily leaves employment and who is subsequently employed by the hiring law enforcement agency for any reason. Employee hardship and extenuating family circumstances shall be considered presumptive reasons for reimbursement waivers.

C. The hiring law enforcement agency may not require a certified peace officer to assume responsibility for repaying the peace officer's certification costs or any other related costs in an effort to be reimbursed pursuant to this section.

D. When making employment decisions, a hiring law enforcement agency may not consider whether the hiring law enforcement agency will be required to make reimbursement for certification and training costs pursuant to this section if a particular applicant is employed.

E. The original law enforcement agency shall submit an itemized statement to the certified peace officer's hiring law enforcement agency for payment and may enforce collection of any obligation through civil remedies and procedures.

F. A law enforcement agency shall include an explanation of the hiring reimbursement requirements prescribed by this section in the employment documentation provided to a certified peace officer during the law enforcement agency's hiring process.

G. This section does not apply to an employee who leaves the original law enforcement agency and is not employed as a certified peace officer for one year or more and is subsequently hired by a hiring law enforcement agency.

H. For the purposes of this section, "hiring law enforcement agency" means a law enforcement agency in this state or a city, town, county or political subdivision of this state that does both of the following:

1. Subsequently hires a certified peace officer after the certified peace officer voluntarily leaves the employment of the law enforcement agency that paid the peace officer's costs of certification.

2. Hired the officer as a certified peace officer.

41-1661. Definitions

In this article, unless the context otherwise requires:

1. "Academy" means the correctional officer training academy.

2. "Board" means the Arizona peace officer standards and training board.

3. "Correctional officer" means a person, other than an elected official, who is employed by this state or a county, city or town and who is responsible for the supervision, protection, care, custody or control of inmates in a state, county or municipal correctional institution, including counselors but excluding secretarial, clerical and professionally trained personnel.

4. "Director" means the director of the state department of corrections.

5. "Employing agency" means this state or the county or municipal agency which employs correctional officers.

41-1662. General training powers and duties of the director; fund

A. The director shall:

1. Operate a correctional officer training academy.

2. Establish and maintain a correctional officer training program at the academy.

B. The director may:

1. Employ personnel and faculty as may be necessary to perform the academy's functions and operate the academy.

2. Enter into contracts, including intergovernmental agreements under title 11, chapter 7, article 3, as may be necessary to administer this article. Counties, cities and towns may contract for training their correctional officers at the academy.

3. Adopt administrative rules for implementing this article and for the academy's internal management and control.

4. Solicit, accept, spend and account for gifts and grants. A separate, permanent training fund is established. The director shall administer the fund. Monies received as gifts or grants shall be deposited in the fund. Monies received as gifts or grants are subject to section 35-149.

D-2.

GOVERNOR'S REGULATORY REVIEW COUNCIL

ATTORNEY MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: March 4, 2025

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: February 18, 2025

SUBJECT: **DEPARTMENT OF ENVIRONMENTAL QUALITY**
Title 18, Chapter 9

Amend: R18-9-B201, R18-9-A701, R18-9-B702, Article 8

Repeal: Part E, R18-9-E701

New Section: R18-9-A801, R18-9-A802, R18-9-A803, R18-9-B804, R18-9-B805, R18-9-B806, R18-9-B807, R18-9-B808, R18-9-B809, R18-9-B810, R18-9-B811, R18-9-C81, R18-9-C813, R18-9-C814, R18-9-C815, R18-9-C816, R18-9-C817, R18-9-C818, R18-9-D819, R18-9-D820, R18-9-D821, R18-9-D822, R18-9-D823, R18-9-E824, R18-9-E825, R18-9-E826, R18-9-E827, R18-9-E828, R18-9-E829, R18-9-E830, R18-9-E831, R18-9-F832, R18-9-F833, R18-9-F834, R18-9-F835, R18-9-F836, R18-9-F837

Summary:

This regular rulemaking from the Department of Environmental Quality (Department) seeks to repeal Part E of Title 18, Chapter 9, Article 7, which contains one (1) rule R18-9-E701. The Department additionally seeks to amend three (3) rules in Article 7 and to add thirty-seven (37) rules to an amended Title 18, Chapter 9, Article 8. These amendments, additions, and repeals all relate to the Department's new Advance Water Purification (AWP) program.

The Department was required to create this program and accompanying rules as a result of the passage of HB2681 in 2022, which created the authorizing statute found at A.R.S. § 49-211. The legislature authorized the Department to create the AWP program to help with Arizona's water needs, and to ensure the program maintains the highest standards for both the health of Arizonans and the environment. The legislature specifically required the Department to create a program that allows wastewater to be treated for it to be safe for drinking use. The Department has indicated California, Colorado, and Texas as states that have recently enacted similar programs.

The Department intends on repealing R18-9-E701 because it covered the advanced water treatment facilities that the Department considers a predecessor to the APW program. Only one facility was permitted under this predecessor program and the facility did not distribute water for drinking. The Department has indicated that they have worked closely with this permit holder to transition to the AWP program.

The amendments to R18-9-B201 will be adding "A person may only create and maintain a connection between sewage treatment facilities, advanced water treatment facilities, and a potable water supply under an Advanced Water Purification permit issued pursuant to Article 8 of this Chapter."

The amendment to R18-9-A701 will remove references to the repealed R18-9-E701.

The amendment to R18-9-B702 will clarify that providing water for human consumption from a reclaimed water source is prohibited except as permitted under the new Article 8 of this chapter.

The new rules are broken into six parts with a brief overview of each below.

- Part A covers general provisions related to the AWP program including definitions used for the program and the applicability of the Safe Drinking Water Act
- Part B contains what the Department indicates is the foundational requirements of the program. The rules in Part B include laying out the requirements to obtain AWP operator certification. This establishes examination requirements, experience requirements, staffing requirements, the necessary requirements for operation of facilities, and what is required to maintain certification.
- Part C contains requirements for the permit application process. This includes requirements for chemical and pathogen monitoring of the initial source water, pilot studies, and the actual permit and demonstration permit application requirements and process.
- Part D contains the final set of requirements and conditions for permitting, including required public participation in the process. Part D also contains details concerning the renewal, suspension, or termination of a permit or demonstration permit.

- Part E contains the requirements for any substance (constituent) found in water, including the monitoring process, the recording process, and the reporting process of these substances.
- Part F contains the requirements for design mandates concerning chemical and pathogen control including response times in case of a system failure, potential vulnerabilities in the system, Total Organic Carbon management, and corrosion control.

The Department seeks to incorporate by reference multiple materials in R18-9-A802. The Department meets the requirements for incorporation under A.R.S. §41-1028.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

The Department cites both general and specific statutory authority for these rules.

2. Do the rules establish a new fee or contain a fee increase?

This rulemaking does not establish a new fee or contain a fee increase. However, the AWP program does require fees and those are covered in the rulemaking for Title 18, Chapter 14.

3. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

The Department indicates it reviewed hundreds of studies as part of the preliminary process for drafting these rules. These reviews were conducted as part of the TAG team that consisted of Department staff, academics, utilities, municipalities, regulators, consultants, and scientists. The ultimate conclusions and scope of the review of these studies can be found in the Department's Roadmap at https://static.azdeq.gov/wqd/awp/roadmap.pdf. This report was completed at the end of June 2023, since then the Department has relied upon 6 additional studies which are found in item 8 of the preamble of the NFRM (pg 19-22). The Department has indicated that all studies have been made available to the public and stakeholders, and can be provided directly upon request. Council staff believes the Department to be in compliance with A.R.S. § 41-1052(D)(8).

4. Summary of the agency's economic impact analysis:

This rulemaking is being conducted to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211. The full scope of stakeholders who may incur direct impacts from this rulemaking include the Department, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment.

Impacts to the Department include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program; however, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees. The WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. Customers of WPAs that have adopted AWP are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. The general public is impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

5. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

Because AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs, the Department has determined that potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are less intrusive or less costly alternative methods that would be preferable. The AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design.

6. What are the economic impacts on stakeholders?

To determine the economic impact on the stakeholders identified in the economic impact summary, the Department adopted the following convention: minimal impact to mean $10,000 or less; moderate impact to mean $10,001-$1,000,000; substantial impact to mean $1,000,001 or more; and significant impact to mean that the cost/burden could not be calculated, but the Department expects it to be significant.

A high-level overview of the economic impact on stakeholders is given in the following table:

Description of Affected Group	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona	Increased agency responsibilities for administration,	Minimal	

Department of Environmental Quality (ADEQ)	oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.		
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).	Minimal	
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

7. <u>Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?</u>

The Department indicates that there were numerous changes between the proposed rules and the rules now before the council. The changes can be found on pgs 46 to 57 of the preamble in the NFRM. The Department indicated most of these changes are a result of stakeholder input. Due to the technical nature of the rules, the Department clarified certain

changes with Council staff to verify that the changes were not substantive and were merely clarifying what was already present in the proposed rule language. After reviewing the proposed rules and the current NFRM, and having discussions with the Department, Council staff believes that the changes were not substantively different. The reasoning is that while these changes do impact the requirements found in certain rules, the subject matter and main issue of the rule did not change. Additionally, the stakeholders were made aware of these changes and the discussion behind these changes. and the ultimate effects of the rule did not change. Thus, Council staff believes the Department is in compliance with A.R.S. § 41-1025.

8. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

The Department indicates it received 86 comments as part of this rulemaking. The full comments are attached as part of the materials and found on pg 57-109 in the NFRM. Council staff believes that the department adequately addressed the comments in accordance with A.R.S. § 41-1052(D)(7).

Prior to receiving stakeholder input on the NFRM, the Department began an initial engagement of stakeholders through a Technical Advisory Group (TAG) from October 2022 through June 2023. This team consisted of Department staff, academics, utilities, municipalities, regulators, consultants, and scientists. This group met 114 times, conducted 6 stakeholder meetings, and conducted 15 other types of public engagement events, including surveys of stakeholders. The Department has indicated consistent communication with the entities that are interested in implementing an AWP program in the future. The Department completed an informal 30 day comment period in July 2024 and completed a stakeholder meeting on August 1, 2024. The Department published these comments and responses to the Department website.

For the 86 comments the Department received during the formal comment period, 14 came from the general public, 10 were from interest groups, the remaining 62 came from either utilities or local governments. The Department did update several rules for additional clarification as a result of the comments.

The general public concerns were related to cost and the safety measures in place to prevent the public from being exposed to harmful contaminants. Council staff believes the Department adequately addressed these concerns in their responses by providing details on how an AWP facility measures chemicals and where the allowable amounts come from. For the cost element, the Department explained that the AWP program is voluntary and is funded by fees from those who opt into the program.

The interest groups, local governments, and utilities that commented on the rules had a variety of comments on the rules. Comments varied between under or over regulation, and environmental concerns. Most concerns were not frequent among the commenters, with the exception of multiple comments concerning Tier 2 chemicals and agencies requesting further guidance to avoid extra costs in tracking certain chemicals. Council staff believes that the Department provided sufficient explanations on why Tier 2 chemicals are not as well defined

because unlike Tier 1 and Tier 3, there are substantially more potential chemicals and those are more likely to vary based on the facility type.

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

Pursuant to A.R.S. § 41-1037(A), if an agency proposes an amendment to an existing rule that requires the issuance of a regulatory permit, license, or agency authorization, the agency shall use a general permit, as defined by A.R.S. § 41-1001(12), if the facilities, activities or practices in the class are substantially similar in nature unless certain exceptions apply.

A.R.S. § 41-1001(12) defines "general permit" to mean "a regulatory permit, license or agency authorization that is for facilities, activities or practices in a class that are substantially similar in nature and that is issued or granted by an agency to a qualified applicant to conduct identified operations or activities if the applicant meets the applicable requirements of the general permit, that requires less information than an individual or traditional permit, license or authorization and that does not require a public hearing."

This specific rulemaking does create new individual permits. The Department is authorized to issue permits per A.R.S. § 49-211(B). AWP is an optional program that requires utilities/municipalities to apply for permits. The requirements permits vary based on the circumstances of the applicant and as such cannot be issued as a general permit under A.R.S. § 41-1037(A)(3). Council staff believes the Department is in compliance with A.R.S. §47-1037.

10. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

Pursuant to A.R.S. § 41-1052(D)(9), "[t]he council shall not approve the rule unless…[t]he rule is not more stringent than a corresponding federal law unless there is statutory authority to exceed the requirements of that federal law."

The Department indicates, while the Safe Drinking Water Act (SDWA) (40 USC § 300f et seq.) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated wastewater" (see R18-9-A801) as a source, which is the subject of this final rule. The Department states, SDWA only contemplates surface and ground water as sources for public water systems. The Department indicates some AWP facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP Program. These differences are explained to applicants and participants in the AWP program as found in proposed R18-9-A803.

11. Conclusion

This regular rulemaking from the Department of Environmental Quality (Department) seeks to repeal Part E of Article 7, which contains one (1) rule R18-9-E701. The Department

additionally seeks to amend three (3) rules in Article 7 and to add thirty-seven (37) rules to an amended Article 8. The Department indicates that these rules will accomplish the legislature requirement to create and administer a program that treats wastewater for potable reuse. This program, while required to be created by statute, is voluntary for entities/municipalities to participate in.

The Department is seeking an immediate effective date pursuant to A.R.S. § 41-1032(A)(2) to "avoid a violation of...state law, if the need for an immediate effective date is not created due to the agency's delay or inaction." The Department was required to complete a rulemaking by December 31, 2024 per A.R.S. § 49-211. The Department indicates that while that date has passed, the goal of the immediate effective date is to prevent the length of time without having this program in place to a minimum. The Department has indicated they have worked diligently in the time frame and have worked extensively with stakeholders to create this program. The Department states that while they could not meet the statutory deadline it was a result of ensuring this new regulatory program was as least burdensome as possible while protecting the health of Arizonans. Council staff believes the Department has provided sufficient documentation of the extensive stakeholder process, and thus Council staff believes the Department has provided sufficient justification for an immediate efficient date pursuant to A.R.S. § 41-1032(A)(2).

Council staff recommends approval of this rulemaking.

Phoenix, AZ 85007

Re: Advanced Water Purification (AWP) Regular Rulemaking: Title 18, Environmental Quality, Chapters 1, 5, 9, and 14

Dear Chair Klein:

The Arizona Department of Environmental Quality (ADEQ) hereby submits this final rulemaking package to the Governor's Regulatory Review Council (GRRC) for consideration and approval at the Council Meeting scheduled for March 4th, 2025.

The following information is provided for your use in reviewing the enclosed rules for approval pursuant to A.R.S. § 41-1052 and A.A.C. R1-6-201:

I. Information required under A.A.C. R1-6-201(A)(1):

(A)(1)(a) The public record closed for all rules on December 2nd, 2024 at 11:59 p.m.
(A)(1)(b) The rulemaking activity does not relate to a five-year review report.
(A)(1)(c) The rulemaking activity does establish a new fee; please see A.R.S. § 49-211(A) for authority.
(A)(1)(d) The rulemaking does not contain a fee increase as the AWP Program is being established for the first time and has no appropriately comparable precedent in state or Federal law.
(A)(1)(e) An immediate effective date is requested.
(A)(1)(f) The Department certifies that the preamble discloses reference to any study relevant to the rule that the agency reviewed and either did or did not rely on in the agency's evaluation of or justification for the rule (*see* subheading III, below).
(A)(1)(g) The Department's preparer of the economic, small business, and consumer impact statement will notify the Joint Legislative Budget Committee (JLBC) of the number of new full-time employees necessary to implement and enforce the rule before the rule is approved by the council, pursuant to A.R.S.

§ 41-1055(B)(3)(a) (*see* subheading III, below).

(A)(1)(h) A list of documents is enclosed (*see* subheading III, below).

II. Information required under A.A.C. R1-6-201(A)(2) through (8):

(A)(2) Four (4) Notices of Final Rulemaking (NFRMs), including the preamble, table of contents, and text of each rule (*see* subheading III, below);

(A)(3) The preambles contain an economic, small business, and consumer impact statement that contains the information required by A.R.S. § 41-1055 (*see* subheading III, below);

(A)(4) The preambles contain comments received by the agency, both written and oral, concerning the proposed rule (*see* subheading III, below);

(A)(5) No analyses were submitted to the agency regarding the rule's impact on the competitiveness of businesses in this state as compared to the competitiveness of businesses in other states;

(A)(6) Materials were incorporated by reference in this rulemaking (*see* subheading III, below);

(A)(7) The general and specific statutes authorizing the rule, including relevant statutory definitions (*see* subheading III, below);

(A)(8) A list of statutes or other rules referred to in the definitions (*see* subheading III, below).

III. List of documents enclosed (38 documents total)**:**

- One (1) Cover Letter (R1-6-201(A)(1));
  - AWP_CL.pdf
- One (1) JLBC email (R1-6-201(A)(1)(g));
  - AWP_JLBC.pdf
- Four (4) NFRMs (R1-6-201(A)(2));
  - AWP_NFRM_18_AAC_1.pdf

3. Citations to the agency's statutory rulemaking authority to include the authorizing statute (general) and the implementing statute (specific):

Authorizing statute: A.R.S. §§ 49-104(A)(1), (7); 49-203(A)(7), (9), (10)

Implementing statute: A.R.S. § 49-211

4. The effective date of the rule:

This rule shall become effective immediately after a certified original of the rule and preamble are filed with the Office of the Secretary of State pursuant to A.R.S. § 41-1032(A). The effective date is March 4, 2025.

a. If the agency selected a date earlier than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the earlier date and state the reason the agency selected the earlier effective date as provided in A.R.S. § 41-1032(A)(1) through (5):

The rule shall be effective on March 4, 2025. ADEQ selected this date pursuant to A.R.S. § 41-1032(A)(2) in order "to avoid a violation of … state law, if the need for an immediate effective date is not created due to the agency's delay or inaction". A.R.S. § 49-211 requires ADEQ to, "[o]n or before December 31, 2024 … adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program [A.K.A. - AWP regulatory program], including rules establishing permitting standards and a permit application process."

While an immediate effective date will not avoid a violation of A.R.S. § 49-211, it serves to ameliorate the extent of the violation by establishing an effective date as close in time as possible to the statutory deadline "on or before December 31, 2024". The Legislature charged ADEQ with the adoption of an advanced water purification program in Fall 2022, setting a justifiably aggressive deadline of December 31, 2024. Since that time, ADEQ diligently undertook an extensive program design and rule-writing approach to appropriately design the revolutionary program. Additionally, ADEQ conducted a special stakeholder approach commensurate with the intricacies of the program, itself, with myriad stakeholder efforts outlined in Section 7 of this Notice of Final Rulemaking. This process included engagement at all phases of the project, in the program framework and guiding principle development phase to the draft rule phase, and included multiple opportunities for ADEQ to work with and educate stakeholders, receive feedback on program components, and improve the program. Arizona is one of only a handful of states with a regulatory framework for advanced water purification, and the process was, therefore, carefully conducted to best preserve the interests of the Legislature and the health of Arizonans. While ADEQ worked just as aggressively to achieve the statutory deadline, best efforts nevertheless fell a few months short. For these reasons and pursuant to A.R.S. § 41-1032(A)(2), ADEQ did not delay or fail to act in such a way that led to the need for an immediate effective date.

b. If the agency selected a date later than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the later date and state the reason the agency selected the later effective date as provided in A.R.S. § 41-1032(B):

Not Applicable.

5. Citations to all related notices published in the *Register* as specified in R1-1-409(A) that pertain to the current record of the final rule:

Notice of Proposed Rulemaking: 30 A.A.R. 3196, Issue Date: November 1, 2024, Issue Number: 44, File Number: R24-211.

Notice of Rulemaking Docket Opening: 30 A.A.R. 2879, Issue Date: September 20, 2024, Issue Number: 38, File Number: R24, 179.

6. The agency's contact person who can answer questions about the rulemaking:

7. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, to include an explanation about the rulemaking:

***Introduction*:**

The Arizona Department of Environmental Quality ("ADEQ") is mandated by the Arizona Legislature, pursuant to Arizona Revised Statutes (A.R.S.) § 49-211, to "adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process". The statute, adopted from House Bill 2861, as enacted in the Second Regular Session on June 28, 2022, became effective on September 24, 2022. For purposes of this Notice and the final rule, the term "direct potable reuse" is synonymous with "Advanced Water Purification" (or "AWP"), as the program is now called.

ADEQ, in consideration of Arizona's water supply needs and the Legislative mandate, interpreted A.R.S. § 49-211 as a call to establish an AWP program that is both protective of human health and the environment, as well as imposing minimum burden upon the stakeholder community in achieving that goal. The result of that effort is detailed in the final programmatic requirements placed in the Arizona Administrative Code (A.A.C.), Title 18, Chapter 9, Article 8, through this Notice of Final Rulemaking (NFRM) and through the simultaneously filed associated NFRMs, proposing supporting rules and amendments to Title 18, Chapters 1, 5, 9 and 14.

***Background*:**

Arizona faces significant water supply challenges requiring proactive approaches to conservation and stewardship, in anticipation of decreased water availability in the future. Arizona is currently experiencing a severe and sustained drought, persisting since 1994. The state has experienced an average annual precipitation of approximately 12 inches, and climate data reveals a concerning trend: a consistent reduction of 0.9 inches of rainfall per year over the past three decades (Arizona State University, 2023, Climate of Arizona, https://azclimate.asu.edu/climate/). As a result of the continuing mega-drought, a Drought Emergency Declaration has existed since 1999. The impacts can be felt heavily in the rural areas of the state, where alternative water supplies are generally very limited and the economy is strongly affected by drought (e.g., grazing, irrigated agriculture, recreation, forestry). Most of rural Arizona relies exclusively on groundwater as its primary water source and lacks the groundwater regulations and conservation requirements which have been present in the state's active management areas (AMAs) and irrigation non-expansion areas (INAs). In addition to the reduced precipitation within Arizona, the Colorado River Basin is also facing decades-long drought conditions, which have led to historically low water levels in Colorado River system reservoirs. As a result, Arizona has implemented measures to reduce its consumption of Colorado River water. The Lower Colorado River Basin first experienced a Tier 1 Shortage as agreed in the 2007 Interim Guidelines and the Drought Contingency Plan in 2021. In 2022, Bureau of Reclamation Commissioner Camille Touton called on the Colorado River states to conserve between 2-4 million acre feet per year to address the critically low levels in Lake Powell and Lake Mead following a dire water year. Fortunately, voluntary reductions in the Lower Basin and a healthy water year 2022 averted a decline to critically low elevations. However, as the Basin States look ahead, climate projections and historical trends indicate that the Basin is likely to face increasing average temperatures and reduced precipitation in the coming years. Arizonans will likely be called upon to live with further reduced Colorado River supplies for the foreseeable future as the next set of operational guidelines for the Colorado River are finalized.

Beyond the shrinking water supply, economic growth presents water providers with formidable challenges in meeting demand. As water-intensive industries relocate to Arizona, industrial water demands may increase. Furthermore, there may be challenges with maintaining the necessary housing growth due to the release of the new models of groundwater conditions in the Phoenix and Pinal AMAs. The results of the groundwater flow model projections show that over a period of 100 years, the Phoenix AMA will experience 4.86 million acre-feet (maf) of unmet demand for groundwater supplies and the Pinal AMA will experience 8.1 maf of unmet demand for groundwater supplies, given current conditions. In keeping with these findings of unmet demand, the State will not approve new determinations of Assured Water Supply within the Phoenix and Pinal AMAs based on groundwater supplies. This will lead to an increased competition for limited alternative water supplies. As growth continues, there will be an increasing need for sustainable and innovative water resource management strategies to accommodate the state's evolving needs.

***What is AWP*?**

Advanced Water Purification (AWP) is defined as the treatment and distribution of a municipal wastewater stream for use as potable water without the use or with limited use of an environmental buffer (US EPA, 2017, Potable Reuse Compendium). AWP has been shown to be a safe and effective source of potable water over decades of implementation in projects that have been installed worldwide at facilities in Big Spring, Texas (2013); Wichita Falls, Texas (2014); Namibia (1968 and 2002); Singapore (2019); and South Africa (2011) (Lahnsteiner, J., Van Rensburg, P., & Esterhuizen, J., 2018, Direct potable reuse–a feasible water management option. Journal of Water Reuse and Desalination, 8(1), 14-28).

AWP applications typically consist of a conventional water reclamation facility (WRF) or wastewater treatment plant (WWTP) that performs solids, carbon, nutrient, and pathogen removal and an advanced water treatment facility (AWTF) that provides additional pathogen and trace chemical removal. An AWTF is a utility or treatment plant where recycled wastewater is treated to produce purified water to meet specific AWP requirements. AWTFs use a multi-barrier approach where several redundant unit processes in series are installed to treat WRF effluent to potable water standards. Depending on the site-specific infrastructure configuration and treatment capabilities, the AWTF effluent may be introduced into several different locations of the potable water treatment and distribution system to be reused: (i) in the intake to the existing drinking water treatment facility (DWTF); (ii) after the DWTF and prior to the potable water distribution system; or (iii) Directly into the potable water distribution system.

***Evolution of AWP in Regulations*:**

A predecessor to the AWP program was adopted in the A.A.C. in 2018 at R18-9-E701, including a definition of "[a]dvanced reclaimed water treatment facility" at R18-9-A701(1). An associated NFRM filed simultaneously with this NFRM will repeal these rules in their entirety to make way for the AWP program. This prior, less detailed, single-ruled program was placed in Title 18, Chapter 9, Article 7 of the A.A.C. Article 7 is entitled "Use of Recycled Water". Part E of Article 7 was entitled "Purified Water for Potable Use" and R18-9-E701 was entitled "Recycled Water Individual Permit for an Advanced Reclaimed Water Treatment Facility". R18-9-E701 detailed basic requirements for an advanced reclaimed water treatment facility and, during the rule's tenure, was used to permit one such facility. The facility was not authorized to, and did not, distribute purified water as drinking water through established conveyances or networks. As was stated above, in recent years, the Arizona Legislature determined a need for a more robust regulatory program for AWP. The Legislature passed House Bill 2861 into law in 2022, effectuating statute A.R.S. § 49-211, which led directly to the establishment of the final AWP program and the repeal of the previous program.

***Associated Rulemakings*:**

This final rulemaking includes four NFRMs, adding, repealing or amending rules in A.A.C. Title 18. Environmental Quality:

- Chapter 1 (Department of Environmental Quality - Administration),
- Chapter 5 (Department of Environmental Quality - Environmental Reviews and Certification),

- Chapter 9 (Department of Environmental Quality - Water Pollution Control), and
- Chapter 14 (Department of Environmental Quality - Permit and Compliance Fees).

The final changes to Chapter 1 are specific to updating the Licensing Time-Frame requirements in Article 5 to account for the new AWP program. The final changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The final additions, amendments and repeals to Chapter 9 are all aimed at making way for and establishing the AWP regulatory program. The final changes to Chapter 14 are specific to updating the Water Quality fees in Article 1 to accommodate the AWP program commensurate with other water quality programs.

***Placement, Structure and Design of the Final AWP Programmatic Rules*:**

The AWP regulatory program's central rules are placed in Title 18 (Environmental Quality), Chapter 9, (Department of Environmental Quality - Water Pollution Control), Article 8 (Advanced Water Purification) of the A.A.C. Article 8 was vacant at the time the NPRM and this NFRM was filed, with previous rules in Article 8 repealed since the year 2000.

The immediate subsections below explain the program's primary components and rules, distinguished by the "Parts" within Article 8:

- Part A. General Provisions: R18-9-A801 - R18-9-A803

This Part contains provisions applicable to the entire Article, including definitions and incorporation by reference material. R18-9-A802, "Program Review; Incorporation by Reference; Quality Assurance/Quality Control Methodologies", requires ADEQ to review the AWP program, upon certain triggers, to assess the rules and components for adequacy against currently available data and best available science in order to determine whether any rule should be amended or appealed or any incorporated by reference material updated. These triggers include updated health advisory values and other emerging scientific developments impacting the AWP program. The rule also contains a list of material incorporated by reference, including the version incorporated and where the general public may access the version. Notably, R18-9-A803 is entitled "Applicability of the Safe Drinking Water Act" and details the interconnection between the AWP program and the Safe Drinking Water Act (42 U.S.C. 300f *et seq.*). The AWP regulatory program derives its authority from Arizona state statute, as is detailed above. At the time of this rulemaking, the AWP subject matter had no direct federal regulatory analog. However, due to the flexibility of the AWP program and the multitude of options available to an AWP permittee concerning how to best employ AWP in accordance with the system needs, infrastructure, and economic situation, an AWTF may introduce advanced treated water at several locations, including to a public water system as a source (advanced treated water), or directly to distribution for human consumption (finished water). This means that there are potential interconnections between the AWP program and the protections of the Safe Drinking Water Act. Therefore, the content

of R18-9-A803 was necessary to outline that intersection. For example, the section presumptively characterizes treated wastewater as surface water under the Safe Drinking Water Act, provides that nothing in the AWP program exempts any AWP facility from applicable Safe Drinking Water Act requirements, and clarifies the connections between A.A.C. Title 18, Chapter 5, Article 5, and the AWP program.

- Part B. General Program Requirements: R18-9-B804 - R18-9-B811

This Part contains foundational requirements of the AWP program. R18-9-B804, entitled "Advanced Water Purification Operator Certification" sets forth the final applicability and requirements for AWTF operators under a new AWP operator certification. The final rule requires an AWP operator to i) pass an AWP validated examination; ii) meet advanced water treatment qualifying experience requirements; and iii) be certified as either a Grade 3 or Grade 4 drinking water or wastewater operator. Under subsection (F) of the final rule the AWP operator examination requirements are established, which will include topics specific to understanding and operation of advanced treatment technologies at an AWTF. In order to ensure that all applicants are knowledgeable of drinking water treatment technologies and operations, the AWP rule requires that applicants with a Grade 3 or Grade 4 wastewater treatment operator certification take a separate version of the AWP operator examination which tests drinking water knowledge equivalent to existing Grade 3 drinking water treatment operator examinations. Types of AWP operators include shift operators, operators in direct responsible charge, and an operator in direct responsible charge proxy. Only applicants with Grade 4 drinking water operator experience are eligible for certification as AWP operator in direct responsible charge. AWP shift operators are eligible for designation as an operator in direct responsible charge proxy.

Subsection (D) sets forth general requirements including the requirement for AWPRA facility owners to ensure proper operation of AWPRA facilities. Under this provision, ADEQ requires a facility receiving pathogen treatment credits under AWP to have at least one full-time AWP operator in direct responsible charge on staff that is onsite for at least two full shifts per day. The Department intends for an operator in direct responsible charge to be onsite, consistently, throughout the year at a frequency and duration that ensures the facility is primarily operated, hands-on, by the most experienced and qualified operator. The subsection, additionally, provides for what must occur when an operator in direct responsible charge is not onsite – the operator in direct responsible charge proxy must be onsite and the operator in direct responsible charge must be available to provide direction, if necessary. Furthermore subsection (D) provides a waiver option that an AWPRA may request at any time, which would supplant the requirement for an operator in direct responsible charge to be onsite for at least two full shifts per day with an alternative operation schedule, as agreed upon and set forth in the AWPRA's operations plan.

Subsection (K) states additional minimum qualifying experience, requiring all applicants to have at least one year of advanced water treatment qualifying experience. Advanced water treatment qualifying experience may be obtained by operating an AWP pilot facility, operating an AWP demonstration facility that does not distribute finished water, through a demonstration of

experiential reciprocity, through an apprenticeship under an AWP operator on-site at an AWP facility, or through any other Department-approved method.

The final rule includes transition provisions in subsection (M), providing a grace period of two years from the effective date of the AWP programmatic rules in Chapter 9, during which time operators of facilities receiving pathogen treatment credits under AWP are exempted from the AWP operator certification requirements in R18-9-B804 in order to allow operators reasonable time to obtain certification under the new program. During this transition period, the final rule requires AWTF operators to be Grade 4 drinking water-certified operators who have completed additional Department-approved training, as appropriate.

R18-9-B805, entitled, "Advanced Water Purification Responsible Agency Formation; Joint Plan", details final requirements for formation of the entity, known as the Advanced Water Purification Responsible Agency (AWPRA), that applies for permitting under the AWP program. R18-9-B806, entitled "General Requirements", details program prohibitions, confidentiality provisions, and the general requirement that treated wastewater used to supply an AWP project must originate as municipal wastewater. R18-9-B807, entitled "Inspections, Violations, and Enforcement", clarifies the applicable enforcement authority related to the AWP program. R18-9-B808, entitled "Recordkeeping", details final requirements for the AWPRA related to certification, collection, and retention of records. R18-9-B809, entitled "Construction and Compliance with Plans", regulates facility modifications prior to permitting. R18-9-B810, entitled "Record Drawings", lists requirements surrounding the recording and certification of project drawings. R18-9-B811, entitled "Outreach; Public Communications Plan", sets forth requirements for an AWPRA's Public Communications Plan.

- Part C. Pre-Permit and Permit Requirements: R18-9-C812 - R18-9-C818

This Part contains requirements in preparation for, and including, permit application. It includes a pre-application conference option in order to facilitate a discussion between the applicant and the Department in the preliminary stages of an application process. The Part also includes details on when a "Project Advisory Committee" may be formed to assist the Department and the applicant in project development and review. R18-9-C813, entitled, "Applicant Pathways Depending on National Pretreatment Program Applicability" details pre-permit application procedural requirements of an applicant depending on their applicability to the Clean Water Act's National Pretreatment Program (NPP). The rule enables two different pre-permit procedural approaches, one for AWPRA applicants that are subject to the NPP, and one for AWPRA applicants that are not subject to the NPP. These two pathways were created due to the importance of, and advantage associated with, NPP experience that an applicant will have in sewershed characterization, knowledge, etc., and is intended to promote application autonomy for more sophisticated facilities along with opportunities for Department assistance and review where applicable.

R18-9-C814, entitled, "Initial Source Water Characterization" details chemical and pathogen monitoring of an Advanced Water Treatment Facility's (AWTF) treated wastewater source, which comes from a Water Reclamation Facility (WRF) or Wastewater

Treatment Plant (WWTP). Initial Source Water Characterization or "ISWC" is an important step in identifying chemical and pathogen existence and load in the treated wastewater source in order to determine how to address control through treatment, source control, or a combination of the two. Of note, the ISWC Report must be finalized within three years of ISWC monitoring commencement, unless the Director allows otherwise. Such an expectation will be difficult to justify and must be accompanied by robust data.

R18-9-C815, entitled, "Pilot Study" details the requirements of pilot testing which assists in making decisions about the selection of specific advanced water treatment (AWT) processes, verifying the performance of chosen treatment processes, providing the opportunity to evaluate the effectiveness of different types of treatment processes and designing of the full-scale AWP process. Notably, the rule allows an applicant to conduct the Pilot Study and Full-Scale Verification simultaneously if the applicant chooses to build to full-scale during what would otherwise be a pilot facility build. If the applicant chooses this pathway, the rule requires a) a consultation with the Department, b) the development and submission of a "Hybrid Pilot and Full-Scale Verification Plan" to the Department for review and comment, and c) the submission of the "Hybrid Pilot and Full-Scale Verification Plan" and "Hybrid Pilot and Full-Scale Verification Report" to the Department for approval under the permit application. This optionality reflects the additional flexibility incorporated into the rule for various types of planned facilities by providing a reasonable construction pathway for facilities that opt to build full-scale at this stage.

R18-9-C816, entitled, "Permit Application" details the permit application requirements and process. R18-9-C817, entitled, "Demonstration permit" details the demonstration permit application requirements and process. An AWP Demonstration permit may be issued under the AWP program for the purpose of showcasing an AWTF for public outreach, finished water tasting, and other related non-distribution purposes. R18-9-C818, entitled, "Compliance Schedule", prescribes the requirements on the AWPRA regarding compliance schedules established by the Department in the AWP permit. It further prohibits the delivery of advanced treated water from an AWTF, or distribution of finished water, until the Department approves all compliance schedule requirements.

- Part D. General Permit Requirements: R18-9-D819 - R18-9-D823

This Part contains final requirements and conditions of permitting. It includes public notice and participation provisions in R18-9-D819 and R18-9-D820, respectively. Additionally, R18-9-D821, entitled "Permit Amendments" prescribes the final permit amendment process, which includes two amendment categories: significant and minor. R18-9-D822, entitled "Permit Term; Permit Renewal" details the five-year term of an AWP permit and the renewal application process. Lastly, R18-9-D823, entitled "Permit Suspension, Revocation, Denial, or Termination" details conditions and factors surrounding ADEQ's decision to revoke, deny, or terminate an AWP permit or AWP demonstration permit.

- Part E. Constituent Control, Monitoring, and Reporting: R18-9-E824 - R18-9-E831

This Part contains the requirements for applicant and permittee constituent control, as well as, monitoring and reporting in preparation for permit application and as a permittee in ongoing permitted operations.

R18-9-E824, entitled, "Enhanced Source Control" details the requirements and process permittees must adhere to in inventorying their sewershed, by, in part, identifying "potentially impactful non-domestic dischargers" and determining a subset therein of "impactful non-domestic dischargers". Additional control measures are required for a permittee's "impactful non-domestic dischargers". The rule also details the general requirements of a permittee's enhanced source control program.

R18-9-E825, entitled, "Tier 1 Chemical Control; Maximum Contaminant Levels" establishes the Safe Drinking Water Act's Primary Drinking Water Maximum Contaminant Levels or (MCLs) as the "Tier 1" chemicals for regulation under the AWP program. Notably, this rule cross-references the drinking water rules in A.A.C. Title 18, Chapter 4, Article 1, R18-4-102, specifically. R18-4-102 incorporates by reference the Code of Federal Regulations (CFR) Title 40, Chapter I, Subchapter D, Part 141. By cross-referencing this incorporation by reference, ADEQ intends for that version of the CFR to apply to AWP, and as that version continues to be updated in the future, the cross-reference serves as a living link between the two programs, ensuring that the same version of the CFR applies to both Chapter 4, Article 1 and the AWP program, in Chapter 9, Article 8. ADEQ plans to update the rules in Chapter 4 to incorporate the most up-to-date version of 40 CFR Part 141 by 2026, ensuring that all future AWP projects, with the first permits expected to be issued in 2027, are approved with the most current standards.

R18-9-E826, entitled, "Tier 2 Chemical Control; Advanced Water Purification-Specific Chemicals", details the process for identifying, calculating and determining the "Tier 2" chemicals for regulation under the AWP program. Tier 2 chemicals are contaminants identified under R18-9-E826 that are not regulated in the Safe Drinking Water Act, but may be present in the treated wastewater source and may pose human health concerns. Due to elevated health concerns with the treated wastewater source of AWTFs and likewise protections in similar regulatory programs and facilities around the world, the rule requires applicants and permittees to generate and maintain a Tier 2 chemical list for treatment or source control (regulation). Tier 2 list determination and associated alert and action levels to be generated under the rule will be largely based on the Environmental Protection Agency's (EPA) "2018 Edition of the Drinking Water Standards and Health Advisories Tables" (EPA HA Table).

In the case where a chemical does not have a health advisory in the EPA HA Table, but does have a notification level, or an equivalent value, in another state's drinking water program – if approved and listed by the Department in the rule – the AWPRA must compare the chemical's projected daily concentration in the AWTF's treated wastewater influent with the approved notification level, or equivalent value. Upon the comparison, if the concentration exceeds the approved value, the chemical shall become a Tier 2 chemical for the purposes of the program. The only chemical that falls into this category at the time of this rulemaking is Trimethylbenzene (1,2,4-) (CAS No. 95-63-6), which has a notification level established in California's drinking water regulations (*see* Heading No. 7 below for reference) and which has been set using an ADEQ-approved methodology. The

rule provides a placeholder for other chemicals which may be added upon due analysis by the Department in the future, as more drinking water standards are established, reviewed, and endorsed by the Department pursuant to R18-9-A802(A).

In the case where a chemical does not have a health advisory in either the EPA HA Table, nor another state's drinking water program, the rule requires the AWPRA to compare the chemical's projected daily concentration with a set of interim, Departmentally-generated health advisories, that may be updated or removed via rulemaking as additional information becomes available. If the concentration exceeds the Departmentally-generated health advisory, the chemical shall become a Tier 2 chemical, but only for ongoing monitoring purposes pursuant to R18-9-E829. Additionally, this subcategory of Tier 2 chemicals is exempt from all compliance requirements under R18-9-E829(D) and are not to be considered part of the Projected Chemical Treatment List in R18-9-E826(F), nor will be required to have action levels. The reason behind the special requirements for this sub-category is that while these chemicals are not yet widely regulated, the Department has determined a need to further examine and monitor them at this time. The EPA HA Table contains eight chemicals without health advisory values. Therefore, the Department generated health advisories for those eight chemicals using the same formulas and assumptions EPA used to develop the EPA HA Table, which can be found in the EPA publication, "Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (2000)" (*see* NFRM Section 8 below for other studies leveraged in generating these health advisories). It should be noted that when the Department endorses another state drinking water program's notification level or equivalent value the methodology used by the other state is compared and held to the standard of the formulas and assumptions used to develop the EPA HA Table as well.

In the case where a chemical does not have a health advisory in the EPA HA Table, in another state's drinking water program, nor one established by the Department, but does have a Reference Dose (RfD) or Cancer Slope Factor (CSF) in credible peer-reviewed literature or state or Federal databases, the rule requires a consultation between the applicant, the Department and/or the Project Advisory Committee (PAC) to determine a health advisory value. Thereafter, the AWPRA would compare the chemical's projected daily concentration with the determined health advisory. If the concentration exceeds the determined health advisory, the chemical shall become a Tier 2 chemical.

Lastly, in the rare case where a chemical does not have a health advisory in the EPA HA Table, in another state's drinking water program, in the Departmentally-established list, nor a RfD or CSF in credible peer-reviewed literature or state or Federal databases, the rule requires the AWPRA to determine the health risk of the chemical through reasonably appropriate bioanalytical studies and/or bioassays and to propose an action level that is reasonably protective of human health.

R18-9-E827, entitled, "Tier 3 Chemical Control; Performance-Based Indicators" details the requirement of an applicant or permittee to monitor the constituent reduction performance of selected treatment processes at pilot and full-scale treatment trains or to provide an indication of an individual process's failure. Performance-based indicators (pathogens, chemicals or compounds)

are selected and proposed by applicants or permittees along with critical control points along the treatment train, all with the purpose of isolating process performance.

R18-9-E828, entitled, "Pathogen Control" details the two options an applicant or permittee has in controlling pathogens. Pathogen control is largely based on standardized reduction of the three "reference pathogens", which are enteric viruses ("enteric"), Giardia lamblia cysts ("Giardia") and Cryptosporidium oocysts ("Crypto"). Studies show that certain reduction of these three reference pathogens can be used as an indicator of general pathogen reduction. The Department implements a "Standard Approach" to pathogen control at a log reduction of the three aforementioned reference pathogens at 13 log for enteric, 10 log for Giardia and 10 log for Crypto. This approach requires no pathogen site-specific sampling. The other option is the "Site-Specific Approach", which includes a program of site-specific pathogen sampling resulting in customized log reduction values for the reference pathogens.

R18-9-E829 and R18-9-E830 detail the ongoing monitoring and reporting requirements, respectively, while R18-9-E831 details the final requirements related to annual reporting.

- Part F. Technical and Operational Requirements: R18-9-F832 - R18-9-F837

This Part contains the technical and operation requirements of the AWP regulatory program. R18-9-F832, entitled, "Minimum Design Criteria" details the basic or minimum, mandatory requirements of an AWP operation's design, mostly pertaining to the AWTF. Minimum requirements in this section address design mandates concerning chemical and pathogen control, Total Organic Carbon removal, corrosion control, nitrogen management, Advanced Oxidation Processes (AOP), failure response time, cross-connection and minimum requirements for WRFs that are a source for the treated wastewater of an AWTF.

R18-9-F833, entitled, "Technical, Managerial, and Financial Demonstration" details the requirements of an applicant or permittee to demonstrate technical, managerial and financial capacity to operate, manage and fund the project, among other relevant considerations.

R18-9-F834, entitled, "Total Organic Carbon Management" details the requirement of an applicant or permittee to manage Total Organic Carbon (TOC) in one of two ways. The first approach ("Standard Approach") requires the applicant or permittee to maintain a limit of 2 mg/L in the advanced treated water. This approach requires no site-specific TOC sampling. The second approach ("Site-Specific Approach") requires the applicant / permittee to conduct two procedures in order to derive two preliminary TOC values, followed by a comparison of the two values to ascertain the lower value, which ultimately becomes the site-specific TOC value. The two procedures are as follows:

(1) The "Trace Organics Removal Procedure" establishes a preliminary TOC value through the TOC sampling and characterizing of the original drinking water sources that feed water consumption in a service area that is then collected in sewersheds and routed to, and treated by, a WRF that is a source of treated wastewater for an AWTF. A preliminary TOC

value for the Trace Organics Removal Procedure is derived through this process and is detailed in the rule at R18-9-F834(C)(1).

(2) The "DBP Precursor Reduction Procedure" establishes a preliminary TOC value through the conducting and then comparing of two DBP and TOC - based sampling methods (*see* (a) and (b) immediately below). Those methods (in and of themselves) result in two TOC values. The lower of those two TOC values becomes the preliminary TOC value for the DBP Precursor Reduction Procedure. This is detailed further in rule at R18-9-F834(C)(2).

(a) Method 5710 C "Simulated Distribution System Trihalomethanes" (SDS-THM) establishes a TOC value in the advanced treated water. The TOC value is derived by both conducting Standard Method 5710 C and sampling for TOC in the advanced treated water monthly for one year. This results in 12 Total Trihalomethane (THM) values and 12 TOC values. The TOC values are then averaged. Likewise, the THM values are averaged. Thereafter, the THM average is compared to the corresponding Safe Drinking Water Act - Maximum Contaminant Level (MCL) for THM. If the average THM is below the THM MCL, then the *average TOC* for that year becomes the TOC value associated with Method 5710 C - SDS-THM. If the average THM is at or above the THM MCL, then the AWPRA may not use the *average TOC* for that year as the TOC value associated with Method 5710 C - SDS-THM. However, the AWPRA may adjust components of their operation and repeat the sampling above until a 12-month average THM concentration in the advanced treated water is below the corresponding THM MCL. This method is detailed further in rule at R18-9-F834(C)(2)(a).

(b) "CCL5 - DBP Sampling Method" also establishes a TOC value in the advanced treated water. The TOC value is derived through monthly sampling of the advanced treated water for one year of both:

- TOC, and
- only the DBPs that exist in both EPA's "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables" (HA Table) (currently, that includes only Formaldehyde (CAS No. 50-00-0) and N-Nitrosodimethylamine (NDMA) (CAS No. 65-75-9)).

If the average sampling results for either DBP (Formaldehyde or NDMA) are lower than the corresponding health advisory in EPA's HA Table, then the *average TOC* for that year becomes the TOC value associated with Method CCL5 - DBP. If the average sampling results for either DBP (Formaldehyde or NDMA) are at or above the corresponding health advisory in EPA's HA Table, then the AWPRA may not use the *average TOC* for that year as the TOC Value associated with Method CCL5 - DBP. However, the AWPRA may adjust components of their operation and repeat the sampling above until any one DBP (Formaldehyde or NDMA) is below the corresponding health

advisory in EPA's HA Table. This method is detailed further in rule at R18-9-F834(C)(2)(c).

Thereafter, the applicant or permittee determines the lower of the two TOC values associated with Method 5710 C - SDS-THM & Method CCL5 - DBP (listed as "(2)(a)" and "(2)(b)" above, respectively). The lower TOC value becomes the preliminary TOC value for the DBP Precursor Reduction Procedure (listed as "(2)" above) (*See* R18-9-F834(C)(2)(d) for the corresponding rule language).

Then, the permittee determines which of the two preliminary TOC values (from the Trace Organics Removal Procedure and the DBP Precursor Reduction Procedure, listed as "(1)" and "(2)" above) is lower. That value becomes the AWPRA's site-specific TOC Limit (*See* R18-9-F834(C)(3) for the corresponding rule language).

Upon issuance of a permit and AWTF operation, a permittee may switch between the two TOC Management approaches (Standard or Site-Specific) each calendar year (*See* R18-9-F834(A) for the corresponding rule language).

Also of note, ADEQ should in the future update the TOC rule when new versions of "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables" are established (such as the "CCL 6" list or a new version of the Health Advisories Table). At that time, ADEQ should additionally update the DBPs to be sampled pursuant to subsection (C)(2)(c)(i).

R18-9-F835, entitled, "Full Scale Verification" details the requirements of verifying an AWTF's treatment train performance once built. Under the final rules, an applicant or permittee could be issued a limited permit and perform full-scale verification thereafter, through a compliance schedule item (*see* R18-9-C816(E) and R18-9-C818). Notably, the rule allows an applicant to conduct the Pilot Study and Full-Scale Verification simultaneously if the applicant chooses to build to full-scale during what would otherwise be a pilot facility build. If the applicant chooses this pathway, the rule requires a) a consultation with the Department, b) the development and submission of a "Hybrid Pilot and Full-Scale Verification Plan" to the Department for review and comment, and c) the submission of the "Hybrid Pilot and Full-Scale Verification Plan" and "Hybrid Pilot and Full-Scale Verification Report" to the Department for approval under the permit application. This optionality reflects the additional flexibility incorporated into the rule for various types of planned facilities by providing a reasonable construction pathway for facilities that opt to build full-scale at this stage.

R18-9-F836, entitled, "Operations Plan" details the requirements of an operations plan an applicant or permittee must develop for Departmental approval and follow throughout permitted operations.

R18-9-F837, entitled, "Vulnerability Assessment" details the requirements of a vulnerability assessment that must be conducted by the applicant for submission and approval by the Department for the AWP project for the purpose of identifying areas and processes with a potential to be vulnerable to attack, sabotage, or disruption.

***Further Explanation*:**

Further explanation on the program can be found in the Department's summary of the final program, known as the "Roadmap", available online at https://static.azdeq.gov/wqd/awp/roadmap.pdf. Also, the Department has responded to and published, online, an assortment of technical questions, addressing stakeholder concerns and clarifying decisions in the design of the regulatory program, under the AWP Rulemaking agency website at https://azdeq.gov/awp-resources. Other explanatory resources are available at the rulemaking's general webpage at https://azdeq.gov/awp-rulemaking.

***Changes to Existing Regulations*:**

This NFRM includes in its scope the removal of R18-9-A701 and R18-9-E701 (*see* "Evolution of AWP in Regulations" subsection above) and the amending of R18-9-B201 and R18-9-B702. R18-9-B201(E) provides that "[a] person shall not create or maintain a connection between any part of a sewage treatment facility and a potable water supply so that sewage or wastewater contaminates a potable or public water supply." In preserving the general prohibition, but excepting AWP projects, the following will be added as a second sentence in R18-9-B201(E), "[a] person may only create and maintain a connection between sewage treatment facilities, advanced water treatment facilities and potable water supply under an Advanced Water Purification permit issued pursuant to Article 8 of this Chapter." R18-9-B702(H) lists prohibited activities for reclaimed water usage under Article 7 (Use of Recycled Water). Under the existing rule, subsection R18-9-B702(H)(2) prohibits "[p]roviding water for human consumption from a reclaimed water source *except as allowed in Part E of this Article*" (emphasis added). Since R18-9-E701, which is the sole rule in "Part E", is removed by this rulemaking, it is appropriate to remove the corresponding language in the prohibition in subsection R18-9-B702(H)(2) for uniformity.

***Stakeholder Engagement*:**

ADEQ embarked on a significant stakeholder engagement process at two informal rulemaking stages: 1) AWP program framework and guiding principle development; and 2) AWP draft rule review and comments.

AWP program framework and guiding principle development:

Immediately following the effective date of A.R.S. § 49-211 in September 2022, ADEQ identified several stakeholder groups for engagement surrounding AWP program development and adoption and convened a Technical Advisory Group (TAG) (*see* ADEQ, Technical Advisory Group, https://azdeq.gov/awp-tag) in October 2022. The TAG consisted of experts and representatives from the following groups: academia; small, medium, and large utilities; regulatory agencies; and consulting engineers and scientists. The TAG routinely met twice per month - 114 meetings - and, on July 14, 2023, delivered to ADEQ the "Advanced Water Purification (AWP): Technical Advisory Group (TAG) Recommendations" (Technical Advisory Group, Advanced Water Purification (AWP): Technical Advisory Group (TAG) Recommendations, July 14, 2023, https://static.azdeq.gov/wqd/awp/tag_recommendations.pdf).

In 2023, ADEQ initiated in-depth stakeholder engagement, comprising more foundational data upon which the AWP program was

designed. ADEQ, through the assistance of HMA Public Relations and BrandOutlook, conducted an analysis of public perceptions surrounding AWP with the goal of gathering informative data for the development of the program rules. The objectives of the initiative included: understanding perceptions about the urgency of the water situation in Arizona; determining the top concerns and efforts made to alleviate water issues in Arizona; determining what people think about AWP; gathering information about barriers to implementing AWP; understanding best methods of communicating AWP to the public; and gaining feedback on the role of ADEQ in presenting AWP as a viable solution to water needs to municipalities and end users. The initiative included two phases: qualitative stakeholder interviews and a quantitative survey of Arizonans.

Under Phase One, ADEQ engaged with representatives from leading entities and organizations comprising eight key stakeholder groups including: utilities; government; academia; policy; commercial; community; agriculture; and healthcare. A summary of the key findings are as follows:

- Participants agreed that Arizona faces water challenges both now and in the future;
- Participants indicated general awareness of current water initiatives to mitigate the water issues in Arizona;
- Participants indicated disparate knowledge of AWP as a water supply option;
- Key top of mind benefits of AWP included water supply, economics, and the environment;
- Key top of mind drawbacks of AWP included the 'yuck' factor, trust issues, skepticism, and cost.
- There are clear opportunities to shift perceptions;
- The general public should be engaged early in the adoption effort;
- Sophisticated water stakeholders are willing and ready to adopt AWP but recognize the need for flexibility; and
- ADEQ has the responsibility to engage in a holistic adoption approach (*see* ADEQ, Final Report - Understanding Perceptions and Barriers to Direct Potable reuse (DPR) Adoption, Phase 1 - Qualitative Research with Stakeholders, April 10, 2023, https://static.azdeq.gov/wqd/awp/dpr_rpt_23.pdf).

Under Phase Two, ADEQ solicited a blind survey of 1,314 Arizona residents across 13 counties. A summary of the key findings are as follows:

- Residents indicated broad concern about water supply now and in the near future;
- Residents indicated personal water consumption is primarily filtered or bottled;
- Residents were receptive to AWP as a viable option to mitigate water supply concerns, with 70% indicating they were "somewhat" or "very likely" to drink AWP water;
- Residents indicated such barriers to AWP adoption as skepticism regarding safety, 'yuck' factor, and cost; and
- Residents indicated that educational outreach can overcome barriers to AWP adoption (*see* ADEQ, Final Report - 2024 Quantitative Research Regarding Advanced Water Purification (AWP), May 31, 2024,

https://static.azdeq.gov/wqd/awp/rpt_24.pdf).

Further outreach included over a dozen nation-wide presentations, discussions, teaching events, and interviews on AWP program components (*see* ADEQ, Outreach Participation, https://azdeq.gov/awp-outreach). Additionally, ADEQ has developed various public-facing resources such as:

- Fact Sheet (*see* ADEQ, Fact Sheet, What is Advanced Water Purification?, https://static.azdeq.gov/wqd/dpr/fs.pdf);
- Infographic (*see* ADEQ, Advanced Water Purification, https://static.azdeq.gov/wqd/awp/infographic.pdf);
- FAQs related to AWP and public water systems (*see* ADEQ, Public Water Systems FAQs, https://azdeq.gov/awp-faqs-PWS); and
- Comprehensive AWP webpage including information surrounding what AWP is, why it's important for Arizona, how it works, frequently asked questions, and an explainer video (*see* ADEQ, Advanced Water Purification, https://azdeq.gov/awp).

These myriad stakeholder engagement efforts were critical in ADEQ's development and public release of the "Advanced Water Purification: Proposed Program Roadmap" ("Roadmap") in November 2023 (*see* ADEQ, Advanced Water Purification Proposed Program Roadmap, November 2023, https://static.azdeq.gov/wqd/awp/roadmap.pdf). The Roadmap synthesized TAG recommendations and ADEQ's own technical expertise as well as accounted for stakeholder perceptions and feedback. The Roadmap summarized and explained the AWP program's key elements in an effort to assist stakeholders in future planning for AWP implementation, support public education and awareness, and provide transparency on ADEQ's intention and critical pathway to rulemaking on AWP.

Following the release of the Roadmap in November 2023, ADEQ held a 30-day public comment period to gather input and feedback from stakeholders and interested parties. A dozen substantial comments were received during the comment period, including comments from such stakeholders as: City of Flagstaff; City of Phoenix; Scottsdale Water; Tucson Water; and Water Reuse Arizona. ADEQ carefully reviewed and considered all comments received, and issued a cumulative response to comments on July 8, 2024 (*see* ADEQ, Advanced Water Purification Proposed Program Roadmap ADEQ Response to Comments, July 8, 2024, https://static.azdeq.gov/wqd/awp/rtc.pdf).

AWP draft rule review and comments:

ADEQ released the draft rule of the AWP program - including draft programmatic rules in 18 A.A.C. Chapter 9, draft licensing time frame rules in 18 A.A.C. Chapter 1, and draft fee rules in 18 A.A.C. Chapter 14 - on July 9, 2024 (*see* ADEQ, Advanced Water Purification, https://azdeq.gov/awp-rulemaking). Following the release of the draft rules, ADEQ held a 30-day public comment period to, once again, gather input and feedback from stakeholders and interested parties. During this period, ADEQ organized and facilitated two meetings, a Tribal Listening Session on July 31, 2024, and a Stakeholder Meeting on August 1, 2024.

ADEQ received 28 comments during this period, representing large stakeholder groups as well as interested individuals. All comments were critically analyzed and utilized throughout ADEQ's proposed rule drafting process between July and September 2024. ADEQ published responses to those comments in mid-October on its website.

8. A reference to any study relevant to the rule that the agency reviewed and proposes either to rely on or not to rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

ADEQ reviewed hundreds of studies relevant to the development of the AWP program. Those studies informed and shaped the program and were relied upon to various degrees. ADEQ evaluates and justifies usage of the data in the studies relied upon in its "*Advanced Water Purification Proposed Program Roadmap"* ("Roadmap"). The public may review the Roadmap online at the following website: https://static.azdeq.gov/wqd/awp/roadmap.pdf. The public may review a list of the studies relied upon as cited references in Section 7 of the Roadmap or may obtain copies of any study from the Department by request. Requests can be submitted to the Department by email at reuserulemaking@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

Since the Roadmap was released, ADEQ has relied upon the following additional studies in further development of the program, which are listed below and on file with the agency:

- ***Standard Methods for the Examination of Water and Wastewater, 24th ed.:***

  Summary: This book of methods is a comprehensive and standard text for water quality analysis used by researchers and regulators to assess properties of water and wastewater samples.

  Study Resource: ADEQ incorporated a number of standard methodologies by reference into the rule requirements for the AWP program. This is the most up-to-date and comprehensive resource for measuring the biological, chemical and physical characteristics of water samples and offers guidance to choose among available methods for specific elements and compounds. In this rulemaking, it is being used to define an approach for TOC analysis and for analysis of water quality samples.

  Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

  Reference: American Public Health Association, American Water Works Association, Water Environment Federation. Lipps WC, Braun-Howland EB, Baxter TE, eds. Standard Methods for the Examination of Water and Wastewater. 24th ed. Washington DC: APHA Press; 2023.

- ***Fate of Pharmaceuticals and Personal Care Products Through Municipal Wastewater Treatment Processes:***

Summary: This is a Water Environment Research Foundation book addressing removal of endocrine disrupting compounds, pharmaceuticals, and personal care products by full-scale wastewater treatment plants.

Study Resource: ADEQ incorporated the study's recommendations about Solids Retention Time (SRT) of 15 days to achieve consistent removal above 80% of endocrine disrupting compounds, pharmaceutical and personal care products typically occurring in wastewater.

Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

Reference: Stephenson, R. and Oppenheimer, Joan. Fate of Pharmaceuticals and Personal Care Products Through Municipal Wastewater Treatment Processes; 2007.

- ***Chemical Update Worksheet:***

  Summary: This is a study performed by the State of Michigan Department of Environmental Quality for Rule

  Study Resource: ADEQ incorporated the Reference Dose or Oral cancer slope factors (CSF) presented in this study for Benz[a]anthracene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Chrysene, Dimethyl phthalate, Indeno[1,2,3,-c,d]pyrene and Phenanthrene to establish Health Advisories. These compounds don't have a Health Advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

  Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

- ***Toxicity criteria on chemicals evaluated by COEHHA*:**

  Summary: This is a study performed by the California Office of Environmental Health Hazard Assessment for Rule (2015). Access date: 10/07/2024

  Study Resource: ADEQ incorporated the Oral cancer slope factors (CSF) calculated in this study for Benzo[k]fluoranthene. This compound does not have a Health Advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

  Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

  Reference: California Office of Environmental Health Hazard Assessment (1987). Benzo[k]fluoranthene [CASRN = 207-08-9]. Access date: 10/07/2024.

- ***California Division of Drinking Water***:

  Summary: This is a study performed by the California Division for Drinking Water for Rule (2001). Access date: 10/07/2024.

  Study Resource: ADEQ incorporated the Notification Level of 0.33 mg/L established for Trimethylbenzene (1,2,4-). This compound does not have a Health Advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

  Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

  Reference: California Division of Drinking Water (2001). Trimethylbenzene (1,2,4-) [CASRN = 95-63-6]. Access date: 10/07/2024.

- ***Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health***:

  Summary: This is a methodology published by the EPA for Deriving Ambient Water Quality Criteria for the Protection of Human Health (2000). Access date: 01/15/2025.

  Study Resource: ADEQ utilizes this methodology in its endorsement of Departmentally-Based health advisories and other state drinking water notification levels or equivalents in the Tier 2 rule.

Public Review: The public may review this study or may obtain copies from the Department by request. Requests can be submitted to the Department by email at awqs@azdeq.gov or by mail to Arizona Department of Environmental Quality, 1110 W. Washington Ave. Phoenix, AZ 85007.

Reference: "Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (2000)". Access date: 01/15/2025.

9. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state:

Not Applicable.

10. The summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared by ADEQ in conjunction with contracted economic and AWP technical experts to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of

water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces

impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in

the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);
- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration

of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program. This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. Part I - Cost/Benefit Stakeholder Matrix:

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			

Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).	Minimal	
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless,

in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-

dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports

between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DPR regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals

used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade

of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required, resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.

- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

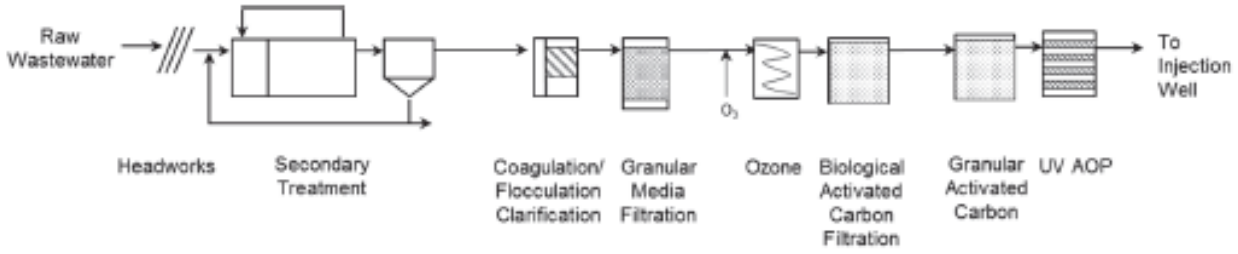
As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

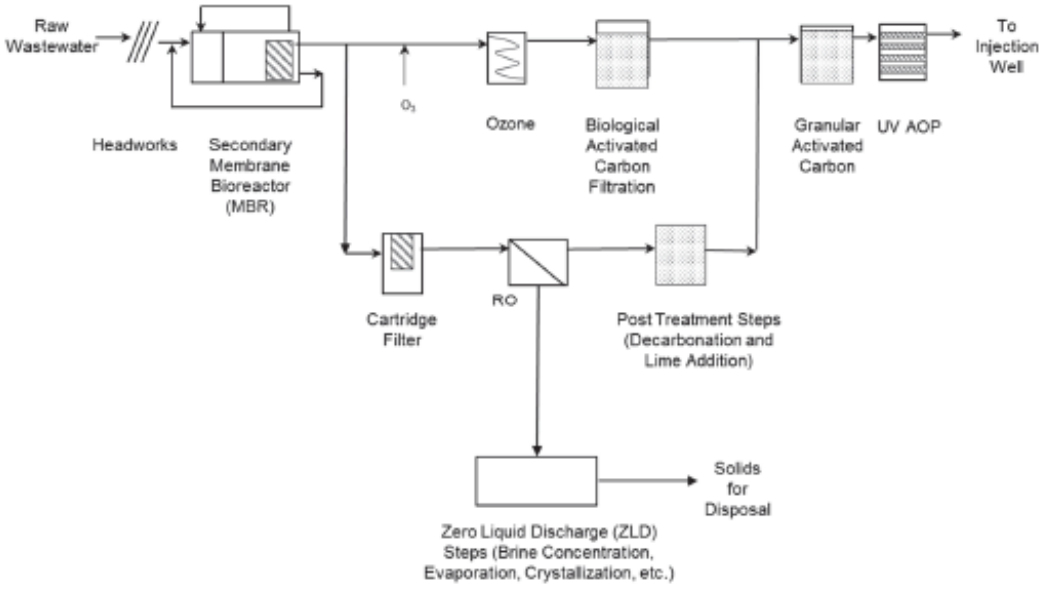
WPA - Cost Evaluation - Project 1 Ozone-BAC:

This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



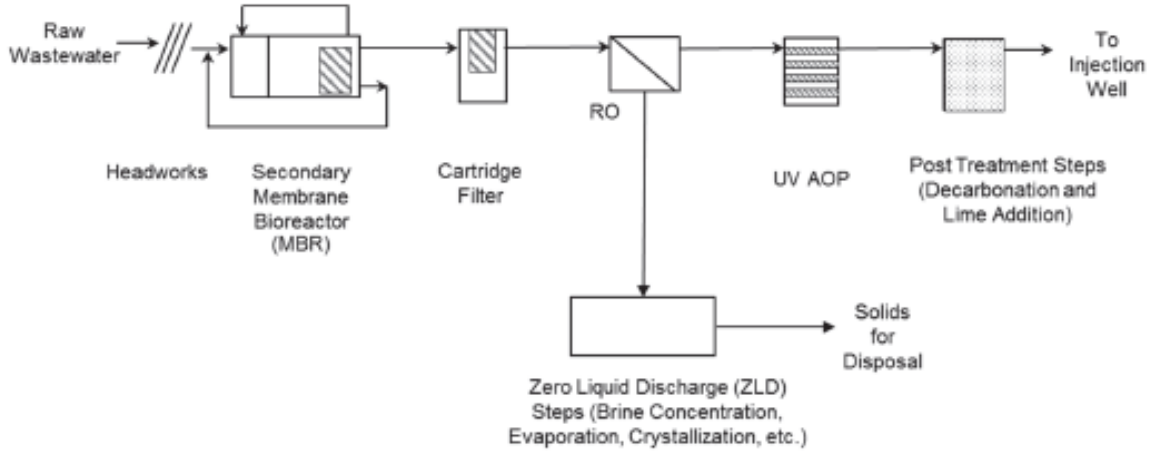
WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390
Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and oman periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC program range from 1.25 to 1.5 FTEs. In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management

requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I)

consumptive use.

- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP development should allow many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic

health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of

purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from

groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new

opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly

positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors. Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program. As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources

through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs.

ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational, and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new

source of potable water for Arizona's water users.

11. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

R18-9-A801(25) - Definitions

- In the definition of "Constituent of Concern", removed the words "target chemicals in" and added the word "chemicals" for clarity.

R18-9-A801(76) - Definitions

- In the definition of "Raw wastewater", added the word "centralized" in order to make the distinction between treatment that occurs at a discharger's site (such a pretreatment or in the collection system itself) and the centralized treatment at a Water Reclamation Facility.

R18-9-A801(92) - Definitions

- Updated the definition to match the language in the Tier 1 rule, R18-9-E825, cross-referencing A.A.C. Title 18, Chapter 4, Article 1 which incorporates by reference the Code of Federal Regulations (CFR) Title 40, Chapter I, Subchapter D, Part 141.

R18-9-A802(A) - Program Review; Incorporation by Reference; Quality Assurance/Quality Control Methodologies

- Updated the scope of when ADEQ shall review the AWP program to incorporate all significant updates to Tier 2 health advisory values, not just those established by the Department, but the health advisory values established: by EPA; by an ADEQ-approved state drinking water program health advisory notification level or equivalent; or by the Department.

R18-9-A802(B)(10) - Program Review; Incorporation by Reference; Quality Assurance/Quality Control Methodologies

- Removed the incorporation by reference citation for the Code of Federal Regulations (CFR) Title 40, Chapter I, Subchapter D, Part 141 because the final rules cross-reference A.A.C. Title 18, Chapter 4, Article 1 - R18-4-102 - which, itself, incorporates by reference 40 CFR 141. Therefore, including a version of it in the AWP material is not necessary and potentially conflicting if one is updated independently of the other.

R18-9-B804(A)(1) - Advanced Water Purification Operator Certification

- Deleted the definition of "Absence" and renumbered (A), accordingly, in order to account for changes in subsection (D) requiring an operator in direct responsible charge to be onsite at least two full shifts per day (see explanation of changes to subsection (D) below), which rendered the definition of "absence" unnecessary.

R18-9-B804(A)(5) - Advanced Water Purification Operator Certification

- Replaced "the person" with "an AWP operator" in the definition of "Direct responsible charge" in order to further clarify

that an operator in direct responsible charge is an AWP operator.

R18-9-B804(A)(6) - Advanced Water Purification Operator Certification

- Added definition for "Direct responsible charge proxy" in order to address stakeholder concerns (see NFRM Section 12) while preserving the Department's responsibility to protect public health. The definition clarifies who bears responsibility for the operations of the facility when the operator in direct responsible charge is not onsite.

R18-9-B804(A)(8) - Advanced Water Purification Operator Certification

- Updated the definition of "Onsite" to clarify that it means "physically present at" an AWPRA facility. Additionally, the remainder of the definition was cleaned-up to remove passive language and clarify the noun.

R18-9-B804(A)(11) - Advanced Water Purification Operator Certification

- Replaced "the person" with "an AWP operator" in the definition of "shift operator" in order to further clarify that a shift operator is an AWP operator.

R18-9-B804(A)(12) - Advanced Water Purification Operator Certification

- Added definition for "shift" in accordance with new language added to subsection (D) (see changes to subsection (D) below).

R18-9-B804(D)(1) - Advanced Water Purification Operator Certification

- Updated the General Requirements by clarifying the requirements for operators in direct responsible charge and adding new requirements for an operator in direct responsible charge proxy in order to address stakeholder concerns (see NFRM Section 12) while preserving the Department's responsibility to protect public health. First, the Department clarified the scope of the facilities that are required to have AWP operators pursuant to R18-9-B804 and subsection (D), by providing that "[a]ll facilities receiving treatment credit pursuant to R18-9-E828 [shall be] operated by AWP operators" (R18-9-B804(D)(1)(a)). Additionally, the Department added minimum "onsite" requirements for an operator in direct responsible charge in lieu of the "absence" definition which previously achieved the same outcome, i.e. the operator in direct responsible charge onsite for at least two full shifts per day, but did so implicitly instead of explicit, which is more appropriate. Therefore, language was added in (D)(1)(b) to state that "all facilities receiving treatment credit pursuant to R18-9-E828 [must] have a full-time operator in direct responsible charge onsite for at least two full shifts per day". Furthermore, language was added in (D)(1)(c) and (d) pursuant to the addition of an "operator in direct responsible charge proxy" establishing the minimum requirements for a "proxy" and an operator in direct responsible charge when a proxy is onsite in their stead. This ensures that all facilities that receive pathogen credits - which includes all AWTFs and some water reclamation facilities - are

operated by AWP operators pursuant to the general requirements in subsection (D).

The proposed language reads,

(D) General Requirements.

(1) A facility owner shall ensure that at all times:

(a) A facility has an on-site operator in direct responsible charge who has both a Grade 4 drinking water treatment certification and an AWP operator certification,

(b) An AWP operator makes all decisions about operational process control or system integrity regarding water quality or water quantity that affects public health. An AWPRA administrator who is not an AWP operator may make a planning decision regarding water quality or water quantity if the decision is not a direct operational process control or system integrity decision that affects public health,

(c) In the absence of the AWP operator in direct responsible charge, the AWP operator in charge of the AWTF is the shift operator,

(d) All AWTFs shall have an AWP operator in direct responsible charge,

(e) An AWTF shall be operated by AWP operators,

(f) Operators in direct responsible charge and shift operators operating an AWTF must be certified as AWP operators,

(g) All critical control points shall be operated by an AWP operator, and

(h) The names of all current AWP operators shall be reported to the Department as a component of the Operations Plan submitted pursuant to R18-9-F836.

The final language reads,

(D) General Requirements.

(1) An AWPRA shall ensure all of the following:

(a) All facilities receiving treatment credit pursuant to R18-9-E828 are operated by AWP operators,

(b) All facilities receiving treatment credit pursuant to R18-9-E828 have a full-time operator in direct responsible charge onsite for at least two full shifts per day,

(c) All facilities receiving treatment credit pursuant to R18-9-E828 have an operator in direct responsible charge, or their proxy, onsite at all times during operation,

(d) When any facilities receiving treatment credit pursuant to R18-9-E828 is operated by a direct responsible charge proxy, an operator in direct responsible charge must be reasonably available to provide immediate direction telephonically, if necessary,

(e) An AWP operator makes all decisions about operational process control or system integrity regarding water quality or water quantity that affects public health,

(f) An AWPRA administrator who is not an AWP operator may make a planning decision regarding water quality or water quantity if the decision is not a direct operational process control or system integrity decision that affects public health,

(g) All critical control points at any facility receiving treatment credit pursuant to R18-9-E828 are operated by an AWP operator, and

(h) The names of all current AWP operators are reported to the Department as a component of the Operations Plan submitted pursuant to R18-9-F836.

R18-9-B804(D)(2) - Advanced Water Purification Operator Certification

- Added new language providing the option for an AWPRA to submit a waiver request to supplant the operations requirement in (D)(1)(b) with an alternative requirement, as approved by the Department and set forth in the operations plan, in order to account for stakeholder concerns surrounding operator requirements (see NFRM Section 12) while upholding the Department's responsibility to protect human health.

R18-9-B804(D)(3) - Advanced Water Purification Operator Certification

- Added new language pursuant to the waiver request in subsection (D)(2) (explained above) setting the standard for the Department's review and grant of the waiver request, which is that the operator in direct responsible charge is not "required to be onsite for at least two full shifts per day, but shall be able to monitor operations over the facility onsite within the period specified in the operations plan". This language enables the Department to grant an alternative operations plan for the operator in direct responsible charge (upon a satisfactory showing in subsection (D)(2)) subjecting the AWPRA to the requirements as agreed upon in the operations plan, in lieu of the requirement in rule.

R18-9-B804(D)(5) - Advanced Water Purification Operator Certification

- Updated language to be more clear, from "ceases operation of a facility" to "ceases to operate a facility".

R18-9-B804(D)(7) - Advanced Water Purification Operator Certification

- Removed the subsection after determination that it was redundant given the updates to subsection (L) of R18-9-B804

(explained further below).

R18-9-B804(D)(8) - Advanced Water Purification Operator Certification

- Removed the language around the water reclamation facility operation relative to the updates made to subsection (D) which clarify that all water reclamation facilities providing treated wastewater to an AWTF, credited with pathogen removal under R18-9-E828, are required to have AWP operators pursuant to R18-9-B804 and subsection (D). Therefore, the old language in (D)(8) conflicted with the updates and the rule benefits from additional clarity with its removal.

R18-9-B804(K)(5)(d) - Advanced Water Purification Operator Certification

- Updated the language to fix an error which previously had "Grade 3" instead of "Grade 4".

R18-9-B804(K)(6)(e) - Advanced Water Purification Operator Certification

- Added a catch-all provision to the list of options for gaining advanced water treatment qualifying experience in order to provide future deference to the Department in acknowledging experience as situations emerge in the future.

R18-9-B804(L)(1) - Advanced Water Purification Operator Certification

- Updated language to clarify that AWP treatment credits may be received for pathogen removal under R18-9-E828.

R18-9-B804(L)(2) - Advanced Water Purification Operator Certification

- Updated language in subsections (L)(2)(a) and (b) to modify the requirements for the classification of wastewater treatment facilities and collection systems supplying an AWTF in response to stakeholder concerns (see NFRM Section 12) about implementability and in consideration of ADEQ's responsibility to protect human health. The updated language in (a) only requires a wastewater treatment facility that is receiving AWP treatment credits for pathogen removal, that supplies an AWTF, to be operated by an AWP operator and an operator certified at the appropriate grade for the class of facility under Title 49, Chapter 5, Article 1. The language ensures that a wastewater treatment facility receiving AWP credits is properly staffed by the most qualified operators. The updated language in (b) removes the Grade 4 requirement for collection systems and only requires that they be classified in accordance with R18-5-114.

R18-9-C813(D) - Applicant Pathways Depending on National Pretreatment Program Applicability

- Added subsection D in order to allow for submission functionality when an applicant chooses to build a pilot facility to full-scale and develops a Hybrid Pilot and Full-Scale Verification Plan.

R18-9-C815(A) - Pilot Study

- The language in subsection (A) was revised in order to allow necessary components of the Pilot Study and the Full Scale Verification rules to be required when an applicant chooses to build a pilot facility to full-scale and develops a Hybrid Pilot and Full-Scale Verification Plan. The previous language allowed Full-Scale Verification requirements to supplant Pilot

Study requirements when an applicant chooses to build a pilot facility to full-scale, which is not appropriate.

The proposed language reads,

(A) An AWPRA applicant shall develop a Pilot Study Plan and conduct piloting on a pilot treatment train.

(1) If an AWPRA builds a pilot facility to full-scale, an AWPRA may conduct full-scale verification pursuant to R18-9-F835 in lieu of the piloting requirements in this section. For the purposes of the permit application pursuant to R18-9-C816, the Full-Scale Verification Plan and Report shall be submitted instead of the Pilot Study Plan and Pilot Study Report.

The final language reads,

(A) An AWPRA applicant shall develop a Pilot Study Plan and conduct piloting on a pilot treatment train.

(1) If an AWPRA builds a pilot facility to full-scale, the AWPRA applicant may, instead, opt to conduct piloting and full-scale verification simultaneously. If the AWPRA pursues this option, the AWPRA shall:

(a) Consult with the Department, and

(b) Develop and submit a Hybrid Pilot and Full-Scale Verification Plan to the Department for review and comment prior to conducting piloting and full scale verification under this section, R18-9-F835 and other requirements which are previously determined through consultation with the Department, and

(c) For the purposes of the permit application pursuant to R18-9-C816, submit the Hybrid Pilot and Full-Scale Verification Plan and a Hybrid Pilot and Full-Scale Verification Report in lieu of the submission requirements at R18-9-C816(A)(2)(g) and (h).

R18-9-C815(B)(4) - Pilot Study

- The language in subsection (B)(4) was revised for clarity with respect to the submission requirements of National Pretreatment Program AWPRAs and Non-National Pretreatment Program AWPRAs.

The proposed language reads,

(4) The Pilot Study Plan may include the Initial Source Water Characterization Report prepared pursuant to R18-9-

C814(E), if finalized prior to piloting.

The final language reads,

(4) The Initial Source Water Characterization Report prepared pursuant to R18-9-C814(E) shall be submitted as follows:

(a) A Non-National Pretreatment Program AWPRA applicant shall submit the Initial Source Water Characterization Report as a component of the Pilot Study Plan, and

(b) A National Pretreatment Program AWPRA applicant may submit the Initial Source Water Characterization Report as a component of the Pilot Study Plan, or otherwise shall submit the Initial Source Water Characterization Report as a component of the AWP permit application prepared pursuant to R18-9-C816.

R18-9-C816(A)(2)(h) - Permit Application

- Updated language to bring clarity to if & when a Pilot Study Report, Full Scale Verification Report or a Hybrid Pilot and Full Scale Verification Report may be submitted as part of a permit application.

R18-9-C817(C)(4) - Demonstration Permit

- Updated language to more clearly align with other demonstration permit requirements in response to a stakeholder comment (see NFRM Section 12).

R18-9-C817(K) - Demonstration Permit

- Added subsection (K) to more clearly align the demonstration permit rule with the AWP permit rule (R18-9-C816(G)).

R18-9-E824(B)(4)(b)(8) - Enhanced Source Control

- Fixed a typo to the word “include”.

R18-9-E824(E) - Enhanced Source Control

- Updated the language by separating out the information into two subsections under (E), further clarifying which representatives shall form the source control committee.

R18-9-E825 - Tier 1 Chemical Control; Maximum Contaminant Levels

- Updated the language to link to A.A.C. Title 18, Chapter 4, Article 1 which incorporates by reference the Code of Federal Regulations (CFR) Title 40, Chapter I, Subchapter D, Part 141.

R18-9-E826(D)(5) - Tier 2 Chemical Control; Advanced Water Purification-Specific Chemicals

- Revised language in order to make more clear which “notification levels” are endorsed by ADEQ and how they are endorsed.

The proposed language reads,

(5) For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above but do have a

drinking water health advisory "notification level" in another state's drinking water program:

(a) Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the following corresponding state drinking water health advisory notification level: Trimethylbenzene (1,2,4-) (CAS No. 95-63-6): 0.33 mg/L.

(b) If the projected daily concentration exceeds the health advisory notification level, the chemical shall be a Tier 2 chemical.

The final language reads,

(5) For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above but do have a drinking water health advisory notification level or equivalent from a state drinking water program that was developed using a method that ADEQ approves and lists under subsection (a), below:

(a) Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the following corresponding state drinking water health advisory notification level or equivalent:

(i) Trimethylbenzene (1,2,4-) (CAS No. 95-63-6): 0.33 mg/L),

(ii) Reserved.

(b) If the projected daily concentration exceeds the health advisory notification level, the chemical shall be a Tier 2 chemical.

R18-9-E826(D)(9) - Tier 2 Chemical Control; Advanced Water Purification-Specific Chemicals

- Updated language to include alert levels, explicitly capturing ADEQ's intention for applicants to submit both action levels and alert levels to the Department following the Tier 2 analysis.
- Added subsection (e) to specifically address how an applicant establishes alert levels.

R18-9-F832(E)(4) - Minimum Design Requirements

- Updated language from "off-spec treated wastewater" to "treated off-spec wastewater" for clarification.

R18-9-F833(A)(1)(c) - Technical, Managerial, and Financial Demonstration

- Updated the monitoring plan requirement to an ongoing monitoring plan rather than a monitoring plan for initial source water characterization because the elements prescribed in the plan are requirements of the AWTF's technical capacity, not just relevant to a one-time monitoring effort during the initial source water characterization period.

R18-9-F834(C), (C)(1), (C)(2) and (C)(3) - Total Organic Carbon Management

- Language revised in order to address a lack of clarity reported by stakeholders. Underlined text below represents new language added to R18-9-F834(C), (C)(1), (C)(2) and (C)(3) in the final rule; whereas, ~~stricken~~ language below represents

language from the proposed rule removed in the final rule.

(C) Site-Specific Approach or Limit. An AWPRA shall perform the two procedures described in subsections (C)(1) and (2) below. The site-specific TOC limit shall be the lower of the two preliminary TOC values obtained from these procedures.

(1) Trace Organics Removal Procedure. The AWPRA shall submit a plan to characterize the TOC of all original drinking water sources that feed the collection system(s) that are used by the AWTF as a treated wastewater source. This plan shall be submitted for approval by the Department as part of the Pilot Study Plan pursuant to R18-9-C815(B)(3) and (D) and again in the permit application as part of the R18-9-C816(A)(2)(d) submittals.

(a) Original Drinking Water TOC Characterization requires, but is not limited to, the following:

(i) Use of Departmentally approved TOC sampling locations,

(ii) Sampling for a minimum of one year,

(iii) Sampling at weekly intervals,

(iv) Calculation of the TOC at the 50^{th} percentile (median), 75^{th} percentile, and 95^{th} percentile,

(v) Establishment of a TOC alert level at the 75^{th} percentile, and

(vi) Establishment of the TOC action level at 1.5×95^{th} percentile.

(b) Upon the characterization of TOC in the original drinking water and approval from the Department, an AWPRA shall monitor for TOC in the advanced treated water using continuous online analyzers.

(c) For the purposes of this subsection, the preliminary TOC value in mg/L for the Trace Organics Removal Procedure is the action level established in subsection (C)(1)(a)(vi) above.

(2) Disinfection Byproducts Precursor Reduction Procedure.

(a) Method 5710 C: “Simulated Distribution System Trihalomethanes (SDS - THM)”

(i) The AWPRA shall apply 5710 C Method “Simulated Distribution System Trihalomethanes (SDS - THM)” to the advanced treated water ~~to establish a TOC value~~ in order to determine the total trihalomethane (THM) concentration.

(ii) Testing and sampling shall be conducted monthly for one year.

(iii) The AWPRA shall simultaneously sample for TOC in mg/L in the advanced treated water monthly for one year.

(iv) If the average THM concentration is below the corresponding MCL for THM pursuant to R18-9-E825, the average TOC value from subsection (C)(2)(a)(iii) is the Method 5710C TOC value for the purposes of comparison in subsection (C)(2)(d) below.

(v) If the average THM concentration is at or above the corresponding THM MCL pursuant to R18-9-E825, the AWPRA may not use the average TOC value from subsection (C)(2)(a)(iii) as the Method 5710C TOC value. The AWPRA may adjust components of their operation and repeat the steps in subsection (C)(2)(a) until an average THM concentration in the advanced treated water is below the corresponding THM MCL pursuant to R18-9-E825.

(b) The AWPRA shall submit the following information on the conditions at the time Method 5710 C from subsection (C)(2)(a) above was conducted to the Department as part of the Pilot Study Report pursuant to R18-9-C815(D) and again in the permit application as part of the R18-9-C816(A)(2)(d) submittals:

(i) Temperature,

(ii) pH,

(iii) Disinfectant dose,

(iv) Residual and reaction time within the distribution system, and

(v) Other standard conditions as described in Section 5710 B "Trihalomethane Formation Potential (THMFP)".

(c) CCL5 - Disinfectant Byproducts Sampling Method.

(i) The AWPRA shall sample for ~~only~~ the following disinfection byproducts in the advanced treated water, Formaldehyde (CAS No. 50-00-0) and N-Nitrosodimethylamine (NDMA) (CAS No. 65-75-9), which are the only disinfection byproducts that exist in both EPA's "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables" ~~in the advanced treated water~~.

(ii) ~~If the sampling results in a value for any one DBP that is at or below the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", that value is the TOC value to be used in the comparison in subsection (C)(2)(d) below~~Sampling shall be conducted monthly for one year.

(iii) ~~Sampling shall be conducted monthly for one year~~The AWPRA shall simultaneously sample for TOC in mg/L in the advanced treated water monthly for one year.

(iv) If the average sampling results in a value for any one DBP is below the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", the average TOC value from subsection (C)(2)(c)(iii) is the CCL5 DBP TOC value for the purposes of comparison in subsection (C)(2)(d) below.

(v) If the average sampling result for any one DBP is at or above the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", the AWPRA may not use the average TOC value from subsection (C)(2)(c)(iii) as the CCL5 DBP TOC value. The AWPRA may adjust components of their operation and repeat the steps in subsection (C)(2)(c) until the average sampling results from any one DBP is below the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

(d) The lower of the two resultant TOC values in mg/L derived from the methods described in subsections (C)(2)(a) and (C)(2)(c) above is the preliminary TOC value for the Disinfection Byproducts Precursor Reduction Procedure.

(3) AWPRA's Site-Specific TOC Approach or Limit. The lower of the two preliminary TOC values in mg/L derived from the two procedures in (C)(1) and (2) above is the AWPRA's site-specific TOC limit.

R18-9-F835(A)(1) - Full-Scale Verification

- The language was revised in order to allow necessary components of the Pilot Study and the Full Scale Verification rules to be required when an applicant chooses to build a pilot facility to full-scale and develops a Hybrid Pilot and Full-Scale Verification Plan. The previous language allowed Full-Scale Verification requirements to supplant Pilot Study

requirements when an applicant chooses to build a pilot facility to full-scale, which is not appropriate.

The proposed language reads,

(A) An AWPRA applicant shall conduct Full-Scale Verification of the AWTF. The AWPRA applicant shall develop a Full-Scale Verification Plan for submission to the Department and shall perform full-scale verification testing of the AWTF in compliance with the Plan.

(1) If an AWPRA applicant builds a pilot facility to full-scale, the AWPRA applicant may conduct full-scale verification in lieu of the piloting requirements in R18-9-C816.

(2) If conducting full-scale verification in lieu of the piloting requirements in R18-9-C816:

(a) A Non-National Pretreatment Program AWPRA applicant shall submit the Full-Scale Verification Plan, pursuant to subsection (B) of this section, to the Department for review and comment prior to conducting Full Scale Verification under this section.

(b) A National Pretreatment Program AWPRA applicant may submit the Full-Scale Verification Plan, pursuant to subsection (B) of this section, to the Department for review and comment prior to conducting Full-Scale Verification under this section, an approach recommended by the Department, or otherwise shall submit the Full-Scale Verification Plan and Report to the Department as a component of the AWP permit application pursuant to this section and R18-9-C816.

The final language reads,

(A) An AWPRA applicant shall conduct Full-Scale Verification of the AWTF. The AWPRA applicant shall develop a Full-Scale Verification Plan for submission to the Department and shall perform full-scale verification testing of the AWTF in compliance with the Plan.

(1) If an AWPRA builds a pilot facility to full-scale, the AWPRA applicant may, instead, opt to conduct piloting and full-scale verification simultaneously. If the AWPRA pursues this option, the AWPRA shall:

(a) Consult with the Department, and

(b) Develop and submit a Hybrid Pilot and Full-Scale Verification Plan to the Department for review and comment prior to conducting piloting and full scale verification under this section, R18-9-C815, and other requirements which are previously determined through consultation with the Department, and

(c) For the purposes of the permit application pursuant to R18-9-C816, submit the Hybrid Pilot and Full-Scale Verification Plan and a Hybrid Pilot and Full-Scale Verification Report in lieu of the submission requirements at R18-9-C816(A)(2)(g) and (h).

12. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

Comment 1: General Public

Standard methods have become increasingly obsolete in addressing modern water quality concerns, because emerging contaminants are found in reclaimed waters potentially affecting public health. These contaminants include bacterial pathogens (particularly those related to antibiotic-resistant ones), viral pathogens, protozoal hosts for intracellular pathogens, and extracellular DNA (e.g., antibiotic resistance genes [ARGs]). Many of these pathogens are fastidious, slow growing, and difficult to culture for routine monitoring (viable but non-culturable). Any rulemaking must be required to remove and test for these considerations.

ADEQ Response 1:

ADEQ appreciates the comment. The Advanced Water Purification (AWP) regulatory program offers two approaches to pathogen removal, Standard and Site-Specific (*See* R18-9-E828). Both Standard and Site-Specific approaches require constant, nearly comprehensive removal of three "reference pathogens" – Enteric Virus, Giardia and Cryptosporidium. ADEQ's decision to utilize the reference pathogens as the central requirement in rule addressing pathogen removal is based on considerable research indicating that removal of these reference pathogens indicates wider removal of all pathogens to safe levels. Concerning virus removal, the Standard Approach requires a 13 log (99.99999999999%) removal of Enteric Virus, which itself indicates similar removal of viruses such as Hepatitis, HIV, and coronavirus. For Protozoa removal, the Standard Approach requires 10 log removal of Giardia, which is known to indicate wider removal of other protozoa. The Site-Specific Log Reduction approach to pathogen removal at R18-9-E828(C) also requires utilization of the reference pathogens, allowing an applicant to monitor for the reference pathogens and set site-specific log reduction values based on their specific raw wastewater instead of the standard log reduction values. The Site-Specific approach aims to achieve the same protective pathogen removal as the Standard approach. A key difference between the two approaches is that a utility can choose to get credits for some of the treatment or removal that occurs at a providing (and treating) wastewater treatment plant. Beyond the reference pathogens, the AWP program requires protective, continuous monitoring of surrogates like conductivity and turbidity to ensure proper water treatment. Further requirements include permittee cooperation with local county public health departments, as necessary, to track constituent of concern (COC) peaks from disease outbreaks or other impactful health events (*See* R18-9-E824(B)(10)(c)). Additionally, R18-9-E828(C)(9) states that analysis for Giardia lamblia cysts, Cryptosporidium oocysts and Norovirus are done using EPA methods 1623.1 and 1615, not Standard Methods. This proposed rule, as well as the aforementioned EPA methods, cite the use of Standard Methods, Section 9020, for general requirements and recommendations for QA (quality assurance) and QC (quality control) procedures only.

Comment 2: General Public

I would like to know if AWP has been successfully used in other locations, and what the rate of failure is for those systems.

ADEQ Response 2:

ADEQ appreciates the comment. The Advanced Water Purification (AWP) regulatory program allows for "Direct Potable Reuse" (DPR) to be permitted in Arizona. The EPA defines DPR as the treatment and distribution of a municipal wastewater stream for use as potable water without the use, or with limited use, of an environmental buffer. Through an Arizona State Legislative mandate, enshrined in statute at A.R.S. § 49-211, ADEQ is required to develop and put into rule a DPR regulatory program. DPR facilities have been shown to be a safe and effective source of potable water over decades of implementation through projects that have been installed worldwide, including in localities such as California (2023); Colorado (2022); Texas (2013 and 2014); Namibia (1968 and 2002); Singapore (2019); and South Africa (2011).

Additionally, Minimum Design Requirements, specifically R18-9-F832(D)(7), requires an applicant to address system failure, including the inclusion of mitigation measures like engineered storage buffers, which are typically an on-site storage facility used to provide retention time before advanced treated water is introduced into a drinking water treatment facility or distribution system. An engineered storage buffer must be sized adequately to hold off-spec water for a time period no shorter than the facility's failure response time. This ensures off-spec water will not be delivered off facility until the appropriate standards are met.

Comment 3: General Public

For my entire career, waters treated for potable purposes were never referred to as being "Purified". Purified Water has a very specific definition, quality is measured in resistivity vs. conductivity and, when put on a petri dish, will not show biological activity. While "purified" is used as an adjective in the phrase "purified water", the process of "water purification" is a verb, action word, indicating that the water being treated will eventually result in producing "purified water". Unless these treated waters are measured in megohms (Mohm), that is a very misleading title which may, in fact, result in legal activity in the event any lives are negatively impacted. I realize that "Toilet To Tap" or "Direct Potable Reuse" are unsavory titles for marketing purposes, but that should not open the door to misleading advertising, either. Purified water is not being produced or delivered.

ADEQ Response 3:

ADEQ appreciates the comment. Absent a definition for "purified water" or "purification" in Arizona Administrative Code (A.A.C.) Title 18, Chapter 9, Water Pollution Control, generally, or in the Advanced Water Purification (AWP) final rules in Article 8, specifically, ADEQ disagrees with the definition of "purified water" provided by the commenter, and refers the commenter to the definition of "Advanced Water Purification". As defined in this final rule, "Advanced Water Purification" means "the treatment or processing of treated wastewater to advanced treated water standards for the purpose of delivery to a drinking water treatment facility or a drinking water distribution system" (R18-9-A801(6)). The title, therefore, is contextualized to the scope of this program, and is not intended to mislead.

Furthermore, water purification, as recognized in the water treatment industry, is a process of removing harmful contaminants from

water to ensure its safety for a particular use, such as public consumption. Through the AWP treatment process, potable drinking water is produced by removing harmful contaminants and produces water of such a quality that meets or exceeds the drinking water requirements under the Safe Drinking Water Act (SDWA).

Comment 4: General Public

AWP will impact disinfection byproducts (DBPs). Current disinfection practices will need to be changed and, most likely, be modified on an almost continuous basis given that water qualities can change on a continuous basis. There are health benefits associated with minerals that are naturally occurring in potable water supplies, especially from aquifers. Calcium, magnesium and any variety of trace metals are all beneficial, in certain amounts, to human health. What are the plans for addressing these types of issues?

ADEQ Response 4:

ADEQ appreciates the comment. Re-mineralization is not addressed in the AWP program, but is not prohibited, nor restricted by the program either. A permittee may choose to re-mineralize advanced treated water or finished water based on what's best for the Public Water System (PWS). ADEQ agrees that AWP can impact formation of DBPs, such as N-nitrosodimethylamine (NDMA), which may form after and during treatment processes with wastewater associated DBP precursors. However, monitoring and reporting requirements for TOC management and removal, which correlates with regulated DBP precursor removal, have been established in rule (*See* R18-9-F834). Additionally, permittees are required to maintain up-to-date TOC limits in the advanced treated water. Furthermore, the safeguards against DBP formation in the SDWA will apply to the PWS. Both SDWA and AWP frameworks are designed to control contaminants to levels below the SDWA-MCLs.

Comment 5: General Public

The solution to pollution is dilution. Water is the universal solvent. Let's consider AWP as being the pollutant, i.e., man-made. So, rather than bringing this "pollutant" right to the front door of the potable treatment system, why not put it back into the natural environment, i.e. rivers, aquifers, lakes etc. Once there, Mother Nature can take over, thus yielding a more "natural" product that is relatively benign in terms of water chemistry. All potable water treatment plants already have the means for treating these waters, so there would be little need for changing treatment schemes or practices. It's an easier sell to customers, no need for more pipes in the ground, and there's greater savings for customers.

ADEQ Response 5:

ADEQ appreciates the comment. The process explained by the commenter is indirect potable reuse (IPR), wherein an environmental buffer is utilized prior to the water being treated at a drinking water treatment facility (DWTF). Alternatively, the AWP program allows for "Direct Potable Reuse" (DPR) to be permitted in Arizona as a result of a Legislative mandate, enshrined in statute at A.R.S. § 49-211, which requires ADEQ to develop a DPR regulatory program in rule. The resulting AWP program

ensures safety through a protective, technological treatment process. Additionally, the program creates flexibility for a permittee to blend the "advanced treated water" product from an Advanced Water Treatment Facility (AWTF) with other sources, if they choose, though it is not necessary to meet treatment standards, since the water will meet drinking water treatment standards before it leaves an AWTF.

Comment 6: General Public

We do not want sewage (a.k.a. – wastewater) mixed into our drinking water. There are too many toxins flushed down the drain and we don't want any of them in our body. We understand the importance of water conservation but this goes too far. The 'toilet to tap' rules you are suggesting should only be used in landscaping. There are too many chemicals and pharmaceuticals that go down the drain/toilet now to make it safe for humans. Can you guarantee 100% removal of all the bad stuff? Because we have no wish to consume someone else's blood thinner medication or diabetes medicine or birth control, etc.

ADEQ Response 6:

ADEQ appreciates the comment. The AWP program does not permit the mixing of wastewater with potable water. AWP involves a robust, multi-step treatment process combining multiple, discrete and proven technologies to treat an already treated wastewater source (i.e. wastewater that has been treated previously by a water reclamation facility) to, and in some cases beyond, drinking water standards. A three-tier approach to chemical control is a key component of the AWP program and is designed to identify, address and control traditionally unregulated or emerging contaminants that can be found in the treated wastewater source for Advanced Water Treatment Facilities. Tier 1 Chemical Control can be found in rule at R18-9-E825 and adopts the Safe Drinking Water Act Maximum Contaminant Levels as baseline standards. Additionally, Tier 2 Chemical Control requirements can be found in rule at R18-9-E826. The rule requires a comprehensive chemical inventory of all non-domestic dischargers in the permittee's collection systems, followed by individual calculations for each chemical to determine a project daily concentration and finally a comparison of that concentration with health advisories to determine a control approach. The regulations require the use of validated treatment technologies which must meet stringent monitoring and performance standards. Tier 3 Chemical Control can be found in rule at R18-9-E827, which involves utilizing, in most cases, existing chemicals or compounds in a treated wastewater to monitor performance of an individual technology or process in an Advanced Water Treatment Facility's treatment train.

Generally, the AWP program is highly protective of human health through a robust regulatory framework which encompasses pre-permitting regulations (*see* R18-9-C812 – C818), constituent control (*see* R18-9-E824 – E828), monitoring and reporting (*see* R18-9-E830 – E831), and technical and operational requirements (*see* R18-9-F832 – F837).

Comment 7: General Public

We demand all fluoride be removed from public drinking water since it has been proved to be dangerous to our health.

ADEQ Response 7:

ADEQ appreciates the comment. The AWP program adopts all Safe Drinking Water Act - Primary Drinking Water Maximum Contaminant Levels (SDWA-MCLs), including the one for fluoride, which is currently set at 4 mg/L (*See* Tier I Chemical Control; R18-9-E825). This adopted treatment standard for fluoride is derived from and developed by the U.S. Environmental Protection Agency (EPA) in accordance with the Safe Drinking Water Act (SDWA). Furthermore, removing fluoride from public water systems is beyond the scope of this rulemaking. SDWA public water system regulation continues to be applicable to any and all public water systems serving drinking water to the public. The AWP program does not supplant or supersede the requirements under the SDWA, and all AWP facilities must comply with applicable SDWA requirements.

Comment 8: General Public

Please check the Clean Water Act of 1972 which was approved to regulate the discharge of pollutants into U.S. water systems and to set quality standards. Most municipal water has fluoride, radiation, heavy metals, pharmaceuticals drugs, and industrial chemicals therein, each having detrimental health effects on the animals and humans who consume them. Researchers have long established that these and other drugs pass the municipal water filtering system which pose serious health risks.

ADEQ Response 8:

ADEQ appreciates the comment. The Clean Water Act (CWA) regulates water quality standards for protection of surface waters, to ensure navigable waters are fishable and swimmable. The Safe Drinking Water Act (SDWA), alternatively, regulates water quality standards for public drinking water supplies. ADEQ designed the AWP program to comply with all applicable standards under the SDWA and, in fact, goes beyond SDWA standards in some, necessary cases. For example, the AWP program requires control of chemical constituents that are typically found in a Water Reclamation Facility's product water (which is the "treated wastewater" source to an AWTF) that do not have SDWA Maximum Contaminant Levels (MCLs), but do have other, established health advisories (*see* Part E of the AWP program, entitled, "Constituent Control, Monitoring and Reporting"). In sum, the municipal wastewater constituents the commenter refers to are addressed through the AWP program through myriad control mechanisms, including an enhanced source control program and extensive and protective chemical and pathogen control requirements that are customized to the permittee's treated wastewater influent.

Comment 9: General Public

There are healthier alternatives. First and foremost is education. Teach Arizona residents how to conserve water. Use taxpayer dollars to retrofit homes with gray water systems and/or rainwater catchment systems.

ADEQ Response 9:

ADEQ appreciates the comment. While alternative strategies for managing water resources exist, the Arizona Legislature mandated ADEQ to adopt an AWP program (referred to in statute and literature as "direct potable reuse"), enshrining the mandate in statute

at A.R.S. § 49-211 in 2022. AWP is a key contribution to Arizona's long history of water conservation and stewardship, but as the commenter mentions, is only one tool, amongst many, which must work in conjunction with water conservation, recycling, and other sustainable management practices for a holistic approach to ensuring a safe and adequate drinking water supply for Arizonans.

Comment 10: Interest Group

In our opinion, some aspects of the rules lead to over-regulation and in some aspects the rules are dismissive of the existing processes and requirements administered or regulated by EPA and ADEQ. While we recognize the comprehensive nature of the proposed rules, we are concerned that they may be overly burdensome and not sufficiently aligned with existing EPA and ADEQ requirements regarding source water. If ADEQ determines that further regulation of source water is necessary, such regulations should apply uniformly to all water systems—not just those under AWP permitting—to enhance public health protection across both conventional and advanced wastewater and water treatment systems. Requiring the permittee to monitor for unregulated Tier 2 and some Tier 3 compounds is overly burdensome and we feel does not belong in an AWP permit. The requirement by rule to monitor for Tier 2 and Tier 3 compounds is unnecessarily burdensome to an AWP permittee and establishes de facto water quality regulation outside any CWA or SDWA framework which is a major concern. If ADEQ feels these compounds are a concern then shouldn't this monitoring be required in any other permit administered by ADEQ? The multi-barrier treatment technologies deployed for an AWP facility that purify water are inherently safer than any conventional water treatment system in Arizona. As an alternative, perhaps the framework for selecting Tier 2 chemicals as presented in the Rule could be included as guidance. ADEQ could work with the applicant to develop "performance-based indicators" based on unregulated chemicals unique to each permit and source watershed. The agreed-upon performance-based indicators could include Tier 2 and Tier 3 chemicals.

ADEQ Response 10:

ADEQ appreciates the comment. ADEQ designed the AWP program using seven guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. ADEQ aimed to achieve a balance of all these principles, especially i. "the protection of public health and the environment" and vi. "specific, practical, flexible, and implementable." To protect public health, some prescriptive regulation is required. This is especially true due to the nature of the constituents with health advisories in the Tier 2 category. Unlike traditional public water systems regulated under the Safe Drinking Water Act (SDWA) that utilize groundwater or surface water as source water, AWTFs source water from water reclamation facilities. This "treated wastewater" source or influent requires unique control in a way that neither the scopes of the Clean Water Act (CWA), nor the SDWA address. That is why special monitoring, among other requirements, is required as part of the AWP program and is not equally applicable across all water treatment programs. Further regulation of municipal treated wastewater, as a source water, is necessary under AWP because there is no federal equivalent for

such a source water.

The Tier 2 rule in the AWP program requires inventorying all chemicals in the sewershed and analyzing them using a procedure that takes into account public health protection, dilution, health advisories, and more. Additionally, once a chemical is earmarked as a Tier 2 chemical for a facility, the chemical must be addressed through a controlling mechanism; primarily, through source control or facility treatment. To ensure the requirements are not burdensome, ADEQ is not unilaterally establishing a static list of AWP-specific chemicals to control, but rather requiring a site-specific approach. The Tier 2 rule requires the applicant (an Advanced Water Purification Responsible Agency or "AWPRA") to characterize its own collection system(s) and treated wastewater influent in order to determine the presence of chemicals, which means that chemical control is only required for chemicals that are actually present in that individual AWPRA's source water.

This comprehensive approach meets the mark of public health protection when it comes to this sector of chemical control and is an approach generally supported by stakeholders and the regulated community, as is most clearly indicated through the Technical Advisory Group (TAG) recommendations for the AWP program (*see* Advanced Water Purification (AWP): Technical Advisory Group (TAG) Recommendations, page 12, https://static.azdeq.gov/wqd/awp/tag_recommendations.pdf). That group included core stakeholder representatives such as small, medium, and large Arizona utilities, and regulatory agencies. Furthermore, ADEQ conducted extensive stakeholder engagement throughout the rulemaking process prior to the proposed rule (*see* Heading No. 7, subheading "Stakeholder Engagement" of this NFRM for an in-depth discussion on the stakeholder engagement process in the development of the AWP program, including the Tier 2 framework). While ADEQ recognizes that there is some difference in opinion about the specifics of chemical control regulation, one result of this comprehensive stakeholder engagement effort is general alignment and understanding of these major components, such as the need for regulation of AWP-specific chemicals beyond the federal Maximum Contaminant Levels (MCLs), overall.

Notably, while the Tier 2 process is proposed for codification in rule, it nevertheless allows for unique outcomes customized to each permit and source watershed by factoring in the applicant's non-domestic dischargers in their watershed and the chemicals discharged by those dischargers, and as the commenter recommends, facilitates a dialogue between ADEQ and the applicant in setting design, monitoring, and treatment goals.

Comment 11: Utility

Align ongoing monitoring locations and frequency for Tier 1 and Tier 2 contaminants only at the "finished water" location and on a quarterly basis to mirror drinking water standards.

For Tier 1 contaminants, ongoing monitoring for regulated drinking water chemicals on treated wastewater at the end of the Water Reclamation Facility is burdensome and offers no compliance value. Each utility must decide if this monitoring point will assist in meeting compliance and should add monitoring for process control at locations that the utility decides will provide benefit for

system operation. However, we support monitoring and reporting for Tier l on a quarterly basis at the finished water compliance point.

For Tier 2 contaminants, we do not support ongoing monitoring of treated wastewater at the end of the Water Reclamation Facility. Ongoing monitoring at this location prior to the AWTF is burdensome and offers no compliance value. Significant treatment for these contaminants occurs in the AWTF where compliance is designed to be met. Understanding new incoming dischargers is part of our Industrial Pretreatment program and if a concern arises, additional monitoring could be conducted as needed. We suggest that Tier 2 monitoring at this location only be required when the chemical is detected in the AWTF finished water in two consecutive quarters.

We will support permit compliance monitoring at the AWTF finished water compliance point on a quarterly basis, however, performing this monitoring at the suggested monthly interval is burdensome and is more stringent than Tier 1 contaminants which are primary drinking water standards. Requiring more stringent monitoring for Tier 2 chemicals over Tier 1 chemicals implies there is more concern about these chemicals than Tier 1. Due to the complex analytical techniques needed for many Tier 2 chemicals, test results are generally received from the lab two or more weeks after sample collection. It should be noted that treatment effectiveness is monitored continuously using online analyzers at Critical Control Points throughout the treatment process.

ADEQ Response 11:

ADEQ appreciates the comment. As the commenter highlights, ADEQ requires monitoring of Tier 1 and Tier 2 chemicals in the AWP program at two locations relative to the Advanced Water Treatment Facility (AWTF): at the finished water (advanced treated water) and at the water reclamation facility effluent (treated wastewater) (*see* R18-9-E829(C) and (D)). Notably, compliance monitoring for Tier 1 and Tier 2 chemicals occurs only at the advanced treated water.

ADEQ disagrees with the commenter that monitoring at the treated wastewater provides “no compliance value”. Monitoring at this location prior to the AWTF helps characterize a highly variable source and provides necessary data to the AWPRA on treated wastewater trends, providing greater understanding to the AWPRA about what data is typical and atypical. For example, this information is necessary for the AWPRA which is required to conduct new Tier 2 analyses upon certain occurrences, including when the “AWPRA is aware of, becomes aware of, or should reasonably be aware of…significant volumetric adjustments to an AWPRA water reclamation facility’s total daily volume of treated wastewater that are likely to impact the expected concentration of any [Tier 2 chemical]” (R18-9-E826(A)(2)(a)(ii)). An AWPRA’s familiarity with the treated wastewater, derived through ongoing monitoring efforts, is a valuable tool in complying with the AWPRA’s requirement to maintain a Tier 2 chemical list. Actual measurement of the highly variable treated wastewater is an important aspect of the AWPRA’s requirement to be a holistic steward of the AWP project by providing insight into changes at a water reclamation facility as well as into non-domestic

dischargers under the enhanced source control program.

The commenter also expresses disagreement with the ongoing monitoring of Tier 2 chemicals at a monthly interval as required under R18-9-E829(D)(1) and suggests that the heightened monitoring requirement of Tier 2 chemicals indicates ADEQ's concern over these chemicals more than Tier 1. While ADEQ understands the complex analytical needs presented by monitoring Tier 2 chemicals, the more stringent requirement reflects the new, AWP-specific requirement of identifying, controlling, and monitoring Tier 2 chemicals that is not equivalent to Tier 1 chemicals, with which utilities have experience through the Safe Drinking Water Act (SDWA). The rule does, however, balance the commenter's interest in subsection (D)(9) by providing a pathway for reduced monitoring frequency for Tier 2. There are two reductions available, a decrease from monthly to quarterly and a decrease from quarterly to annually based on the amount of data demonstrating that a chemical has not been detected (R18-9-E829(D)(9)). This provision is further evidence that ADEQ is not more "concerned" about Tier 2 chemicals, but rather, intends to carefully introduce the new monitoring regime to utilities and see demonstrable progress in achieving quality standards before relaxing the requirements.

Comment 12: Utility

Though Scottsdale Water appreciates ADEQ including the use of the 2018 EPA Edition of Drinking Water Standards and Health Advisories Tables, the list should be qualified to only require compliance with chemicals that have an indicated human health risk. Many chemicals on this list are classified as "Indicates inadequate or no evidence in humans" or "Not classifiable as to human carcinogenicity", "Not likely to be carcinogenic to humans", etc. Including chemicals that do not pose a human health risk is overburdensome to the permittee.

ADEQ Response 12:

ADEQ appreciates the comment. The 2018 Edition of the Drinking Water Standards and Health Advisories Tables addresses contaminants, known or anticipated to be present in drinking water, that can cause multiple negative effects on human health, including both carcinogenic and non-carcinogenic effects. Because both, cancer and non-cancer effects, pose a threat to human health, they are being considered under the chemical control procedure in R18-9-E826 of the final AWP rule. Per this rule an applicant must generate certain inventories and conduct an analysis in order to determine chemicals that must be monitored, removed, and/or treated. The applicant must understand and list all non-domestic dischargers in the collection system that are direct or indirect sources to the water reclamation facility and generate an inventory of chemicals that are used, stored, or discharged by all of those non-domestic dischargers (or used at the water reclamation facility or advanced water treatment facility). From these lists and inventories, the applicant must conduct a "Tier 2" analysis for every identified chemical, and set action levels accordingly, in one of a variety of ways. One of the methods to set action levels for identified chemicals is to determine whether there is a corresponding health advisory value established in the "2018 Edition of the Drinking Water Standards and Health Advisories

Tables". ADEQ expects the applicant to reference this table, which contains EPA-established health advisories for known drinking water contaminants.

The 2018 document provides technical information on contaminants that can cause human health effects and are known or anticipated to occur in drinking water. These health advisories are well-known and widely utilized in drinking water treatment activities across the country. For this reason, ADEQ does not believe that the requirements related to the 2018 table are overburdensome, because the list has been determined by USEPA to contain contaminants that can cause multiple negative human health effects, including both non-carcinogenic and carcinogenic effects.

Comment 13: Utility

Concerning R18-9-E826, identification of Tier 2 chemical list should not be the function of utilities and requiring such an exercise for all applicants could result in conflicting information, including inconsistent water quality permitted at AWP facilities and across the State of Arizona. It is recommended that ADEQ establish a listing of Tier 2 chemicals. Statewide universal standards for unregulated contaminants would provide the public with a higher level of confidence in ADEQ's safe drinking water oversight.

ADEQ Response 13:

ADEQ appreciates the comment. The Tier 2 chemicals selection is site-specific and should be selected based on each utilities' sewershed and their contributing dischargers. A defined and specific list of chemicals established by ADEQ would be overburdensome for both small and large AWPRAs. Small sewersheds that do not have large industries do not need to monitor for chemicals that are not being discharged. Similarly, large sewersheds may not need to monitor chemicals that do not have significant flows as there will be a dilution effect in large flow systems. Therefore, ADEQ places the onus onto the AWPRA, and equips the AWPRA with the necessary information, to characterize wastewater and identify Tier 2 chemicals based on what is actually present in the source water. Notably, the AWPRA must deliver this list to ADEQ for review and approval, ensuring a high level of oversight.

Comment 14: Utility

The requirement of maintaining a chemical inventory list of each non-domestic dischargers list is excessive and burdensome, particularly for larger urban collection systems. As written, the rule would require the AWPRA to survey every single non-domestic discharger in the collection system. For a large urban area this may include thousands of local businesses, many of which may not hold pretreatment permits with their local sewer authority.

ADEQ Response 14:

ADEQ appreciates the comment. As the commenter notes, a primary requirement under the Tier 2 Chemical Control rule, R18-9-E826 is for the AWPRA to list "all non-domestic dischargers in the collection system that are a direct or indirect source to an AWPRA water reclamation facility" and generate "a list of chemicals that are used, stored, or discharged by all non-domestic

dischargers" from that list (R18-9-E826(B)-(C)). This chemical inventory list is critical to the identification of Tier 2 chemicals for control and must be extensive in order to ensure that all chemicals in the source water are controlled through treatment or enhanced source control. Therefore, while the requirement is burdensome, it is not overly-burdensome as the responsibility to provide safe drinking water is paramount. As with many other elements of the program, ADEQ had to balance many different interests, exemplified in the guiding principles governing the rulemaking: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. The AWP program and its regulations were designed to achieve a careful balance between all of the principles, including between public health protection and implementability.

While satisfaction of this requirement will be time-consuming and complex, it is implementable, and the program directs AWPRAs on how to generate this list of non-domestic dischargers and chemicals. Under the Enhanced Source Control rule, the AWPRA is required to identify all "potentially impactful non-domestic dischargers" (R18-9-E824(B)(4)) which must be continuously verified and investigated, and which may include site visits and inquiries into the chemicals discharged or projected to be discharged by that discharger. Knowledge and understanding of the potentially impactful non-domestic dischargers and the chemicals they discharge in the enhanced source control program directly feed the generation of the chemical inventory list in the Tier 2 rule.

For the non-domestic dischargers that are not captured in the enhanced source control program, many can be generally identified and their chemicals characterized by an understanding of their industry. For example, ADEQ agrees that for large sewersheds, it may be infeasible to conduct a chemical survey of all entities such as nail salons, dry cleaners , car washes, dentists, and/or restaurants. However, if the AWPRA identifies the type and number of dischargers, many of the chemicals can be known through knowledge of the industry; e.g. - nail salons discharge acetone; dry cleaners discharge Trichloroethylene; car washes discharge heavy metals and volatile organic compounds (VOCs); dentists discharge mercury; and restaurants discharge fats, oils, and greases (FOGs). Therefore, the generation of the chemical inventory list could include a qualitative description of the number of such establishments and the contaminants that are used or stored within these establishments. From here, this data can be used to project total daily loads contrasted with the overall flow, accounting for dilution in larger sewersheds, to project the expected concentration of chemicals and generate a Tier 2 list of chemicals (R18-9-E826(D)).

Comment 15: Utility

The list of AWPRA determined Tier 2 chemicals may include contaminants for which there is no approved analytical methodology. The Clean Water Act and the Safe Drinking Water Act both identify a rigorous process to ensure that an approved and certifiable analytical laboratory method exists for a contaminant prior to issuing a new regulation. The proposed section in the draft AWP rule sidesteps this critical process which ensures laboratories across the region produce data of the same quality.

ADEQ Response 15:

ADEQ appreciates the comment. ADEQ confirmed that analytical methodologies exist for a majority of Tier 2 contaminants. The Tier 2 rule, R18-9-E826(D), details multiple ways to derive health advisories and the corresponding analytical methodologies for chemicals. The primary option available, the option ADEQ believes will be most often utilized, is for the AWPRA to compare the projected daily concentration of each chemical against the lowest corresponding health advisory value from EPA's 2018 Health Advisory (HA) Table (R18-9-E826(D)(4)). For these chemicals, corresponding, approved analytical methodologies do exist. For chemicals that do not have an established health advisory in EPA's HA table, the AWPRA may look to a notification level or equivalent from another state's drinking water program that has been endorsed by ADEQ under (R18-9-E826(D)(5)). Currently, ADEQ has endorsed a notification level for Trimethylbenzene, and has additionally confirmed that an existing, EPA-approved lab methodology is available (R18-9-E826(D)(5)(a)(i)). For chemicals that do not have an established health advisory or an endorsed notification level from another state, the AWPRA must compare the projected daily concentration of the chemical and compare it to any listed and corresponding ADEQ Departmentally-established health advisories ((R18-9-E826(D)(6)). Here, the Department has established health advisory levels for eight chemicals or chemical compounds in rule. Additionally, the Department has confirmed that existing, EPA-approved lab methodologies are available and appropriate for all health advisories on the list.

For chemicals that do not have corresponding values from any of the aforementioned steps, but do have a Reference Dose (RfD) or Cancer Slope Factor (CSF) available in credible peer-reviewed literature or in a state or Federal database, the AWPRA must consult with ADEQ and/or the Project Advisory Committee to determine a health advisory value and approved analytical methodology (R18-9-E826(D)(7)). Lastly, for chemicals that an AWPRA is unable to derive a health advisory value for utilizing the preceding steps, the AWPRA must consult with ADEQ and the Project Advisory Committee (if necessary) to determine the health risk of the chemical through a reasonably appropriate bioanalytical study and/or bioassay, wherein the consultation would additionally determine a reasonably appropriate and Departmentally-approved analytical methodology to apply.

Additionally, the final rule at R18-9-F832(D)(10) addresses what an applicant or permittee in required to do when no reliable analytical method is available, "[w]hen there is no reliable analytical method that is technically feasible to measure a contaminant at an established health advisory concentration pursuant to R18-9-E826(D), the health advisory value shall be set at the lowest Method Detection Limit of the corresponding and most sensitive EPA-approved method."

Comment 16: Utility

A recommendation of ADEQ's Advisory Panel on Emerging Contaminants, of which Tucson Water and Pima County served as committee chairs, suggested the use of surrogate chemical class categories for use in monitoring unregulated contaminants. This recommendation is still valid and is commonplace throughout the industry and academic literature. Surrogate chemicals can be chosen strategically by ADEQ, such that they are already associated with approved analytical methodology. We strongly encourage

ADEQ to revisit the vast chemical inventory potential and allow for the use of representative surrogate compounds for Tier 2 reporting.

ADEQ Response 16:

ADEQ appreciates the comment. Under the AWP program, ADEQ requires chemical monitoring, control, and reporting for federally regulated and unregulated chemicals and provides a variety of methods to achieve that requirement. Chemicals for which federal regulations exist must be controlled through Tier 1 chemical control. All other chemicals present in the source water, i.e. site-specific chemicals identified by the AWPRA, must also be identified and controlled. The Tier 2 chemicals are specific to the AWPRA, based on a tailored analysis conducted by the AWPRA utilizing non-domestic discharger and chemical inputs from their collection system. Therefore, it is not feasible, nor practical for ADEQ to generate a list of chemicals applicable to all AWP projects. Similarly, ADEQ may not be able to contemplate all chemicals that may be present in the source water. Also, ADEQ believes that an AWPRA's ability and responsibility to control those chemicals should not be hindered by an inflexible rule.

Tier 2 chemicals must be identified through any of the processes provided for in subsection (D) of R18-9-E826. The AWPRA must compare the projected daily concentration of all inventoried chemicals against a corresponding, established health advisory from a number of recognized sources (including the EPA) before being identified as a Tier 2 chemical for the purposes of the AWP program. Those health advisory sources include EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", ADEQ approved notification levels from other state's drinking water programs or equivalents, the Department's health advisory list, or a health advisory derived from credible, peer-reviewed literature or state or Federal databases (R18-9-E826(D)(1)-(8)).

Comment 17: Interest Group

One of our primary concerns is the adequacy of water quality standards for potable reuse. The proposed rules must explicitly define baseline requirements to ensure the removal of contaminants of emerging concern, such as pharmaceuticals, personal care products, microplastics, and per- and polyfluoroalkyl substances (PFAS). PFAS, often called "forever chemicals," are particularly concerning due to their persistence in the environment and potential health impacts. While we recognize that the Arizona Department of Environmental Quality (ADEQ) is conducting a parallel process to address PFAS contamination more broadly, it is critical that these chemicals be specifically addressed in the context of AWP systems. Current documents suggest a focus on tiered chemical control measures but lack sufficient emphasis on PFAS removal within AWP-specific regulations. Additionally, monitoring and reporting requirements should include provisions for real-time public disclosure of water quality data to build public trust and accountability.

ADEQ Response 17:

ADEQ appreciates the comment. An AWPRA must comply with Tier 1 chemical control limits, which are chemical contaminants

with federally-assigned Maximum Contaminant Levels (MCLs) or treatment techniques. The language in R18-9-E825, the Tier 1 rule, has been updated to cross-reference Title 18, Chapter 4, Article 1 - R18-4-102 - which incorporates by reference the July 1, 2014 version of 40 CFR 141. ADEQ plans in the near future to update this CFR reference in the rule to the most recent version that includes the PFAS MCLs. When this is finalized, that version will automatically apply to the AWP program, and the PFAS MCLs will qualify as Tier 1 chemicals at that time, and PFAS must be monitored and controlled accordingly. For PFAS not regulated under Tier 1, Tier 2 chemical identification and treatment-based control is effective. Many treatment processes that are likely to be utilized in Advanced Water Treatment Facilities (AWTFs) are effective in the removal of microplastics like PFAS. Perhaps the most predominant example is the Reverse Osmosis process.

Synthetic organics, including pharmaceuticals and personal care products will be controlled through source control measures (*see* R18-9-E824), as well as treatment-based approaches. An Advanced Oxidation Process (AOP) is a required component of all AWP treatment trains under the AWP program, which includes a required performance benchmark for the removal of synthetic organics utilizing 1,4-Dioxane or an equivalent (*see* R18-9-F832(D)(4)). Additionally, Ozone/BAC processes must be designed to provide no less than 1.0 log reduction for pharmaceuticals such as carbamazepine and sulfamethoxazole (*see* R18-9-F832(C)(3)).

Furthermore, public disclosure of water quality data is a requirement in the Ongoing Monitoring rule (*see* R18-9-E829(D)(8)), which specifies that an AWPRA is required to report certain violations in the applicable public water system's annual consumer confidence report.

Comment 18: Interest Group

We urge ADEQ to prioritize public education and outreach in communities where AWP projects are planned. The rules currently acknowledge the need to engage the public to overcome skepticism surrounding advanced water reuse, often referred to as the "yuck factor." However, more robust community involvement and transparent communication strategies are necessary to address the public's legitimate concerns about health and safety. This includes providing clear, accessible information about treatment processes, safeguards, and monitoring results.

ADEQ Response 18:

ADEQ appreciates the comment. The AWP program rules require every AWPRA applicant/permittee to engage in a community outreach effort. As each AWPRA will be required to identify and then address the unique properties and characteristics of their treated wastewater influent or source, they are better suited to address outreach in their service area than ADEQ. Rather than ADEQ engaging in enhanced community involvement and communication strategies, the onus is therefore placed on the applicant/permittee, themselves. The rule requires the applicant to develop a Public Communications Plan in order to provide customers in the relevant service areas with "education, awareness, and transparency related to the AWP project" (R18-9-B811). Central to that rule are requirements for the AWPRA to provide consumer notification and community engagement. The AWPRA

must notify all drinking water consumers within its service area of both its intention to apply for an AWP permit, and maintain that communication throughout the pre-application and all other major program phases, through post-operation. This requirement includes, but is not limited to, providing public forums by way of public meetings to educate and inform the interested public.

The community engagement requirements incumbent upon the AWPRA include, but are not limited to, involving local government throughout the AWP project phases, as well as relevant stakeholders such as local health authorities and medical professionals. These requirements set the floor for such engagement and education, and enable and encourage the AWPRA to go further than the minimum requirements in rule by establishing additional community involvement through enhanced communication strategies.

Comment 19: Utility

In the proposed rule, "Tier 1 chemicals" are defined under R18-9-A801 with a reference to 40 CFR Part 141. There is no reference in the definition to an approval date for the MCL list. However, R18-9-E825 states "40 CFR Part 141 (published July 1, 2023)." How will the AWP program incorporate new MCLs, post-July 1, 2023?

ADEQ Response 19:

ADEQ appreciates the comment. The language in R18-9-E825 (the Tier 1 Chemical Control rule) has been updated to cross-reference R18-4-102, which incorporates by reference 40 CFR 141. That rule currently incorporates a July 1, 2014 version of the CFR. However, ADEQ is currently working on a rulemaking to update that reference in Chapter 4, Article 1 to the most up-to-date version of the CFR. Once that rule is updated, it will automatically reflect in the AWP program through that cross-reference. For new Maximum Contaminant Levels (MCLs) established in 40 CFR 141 after that date, ADEQ will incorporate those standards into Title 18, Chapter 4, Article 1 through rulemakings subject to the Arizona Administrative Procedure Act. ADEQ is responsible for administering the drinking water program (under Chapter 4) and the AWP program and will ensure those two programs are subject to the most up-to-date version of the MCLs.

Comment 20: Utility

MCLs for PFOA, PFOS, PFHxS, PHNA, HFPO-DA, and mixtures containing two or more of PFHxS, PFNA, HFPO-DA, and PFBS were published in April 2024. Therefore, please verify these PFAS would not qualify as "Tier 1 chemicals" under R18-9-E825 even though they meet the definition in R18-9-A801?

ADEQ Response 20:

ADEQ appreciates the comment. The language in R18-9-E825, the Tier 1 rule, has been updated to reference Title 18, Chapter 4, Article 1 - R18-4-102 - which incorporates by reference the July 1, 2014 version of 40 CFR 141. ADEQ plans in the near future to update this CFR reference in the rule to the most recent version that includes the PFAS MCLs. When this is finalized, that version will automatically apply to the AWP program, and the PFAS MCLs will qualify as Tier 1 chemicals at that time.

Comment 21: Utility

Revise R18-9-E826(B) to be consistent with R18-9-E824(C).

ADEQ Response 21:

ADEQ appreciates the comment. These lists mentioned by the commenter are not meant to be the same and, in fact, serve different purposes. The list in the Tier 2 Chemical Control rule (R18-9-E826(B)) is the "Non-Domestic Dischargers List". The list in the Enhanced Source Control rule (R18-9-E824(C)) is the "Impactful Non-Domestic Dischargers List". The Non-Domestic Dischargers List in the Tier 2 rule is intended to be an initial characterization of all non-domestic dischargers in an AWPRA's collection system that may be direct or indirect sources to the Advanced Water Treatment Facility (AWTF). This list is meant to be broad in order for the AWPRA to adequately characterize the scope of dischargers and chemicals present in their collection system with impacts on AWP source water. The goal of the Tier 2 rule is to generate a holistic understanding of the sources feeding the AWTF, in order to properly address chemical control, whether it be through treatment or control at the source. Alternatively, the Enhanced Source Control rule's "Impactful Non-Domestic Dischargers List" is a subset of the "Potentially Impactful Non-Domestic Dischargers List". The "Potentially List" includes entities subject to control measures such as outreach, facility visits, frequent communications, investigations, and other non-treatment tools that the AWPRA is required to utilize in order to demonstrate control over the treated wastewater source at the discharger level (*see* R18-9-E824(B)(4)). The "Impactful List" includes entities subject to control measures such as locally established discharge limits, monitoring, and targeted outreach (*see* R18-9-E824(C)).

Comment 22: Utility

Please clarify the following in R18-9-E826(C) - "List of chemicals" - Is it ADEQ's intention that the applicant/permittee list all ingredients (chemical composition)? For example, would a fuel station's inventory list "gasoline" or would it list benzene, toluene, xylene, etc.?

ADEQ Response 22:

ADEQ appreciates the comment. The purpose is to generate a list of chemical substances that are used, stored, or discharged, including chemicals used at the Water Reclamation Facility (WRF) and the Advanced Water Treatment Facility (AWTF), not to track the chemical composition of each chemical.

Comment 23: Utility

Please clarify the following in R18-9-E826(C) - "used, stored, or discharged" - It does not make sense to list all chemicals used or stored at a site if the use or storage area is not connected to the wastewater collection system. This requirement should be limited to chemicals discharged to, or with a potential to be discharged to, the wastewater collection system.

ADEQ Response 23:

ADEQ appreciates the comment. Generating a list of chemicals used or stored at a site is required because these chemicals have the potential to indirectly enter the wastewater collection system. One example is a facility that keeps raw materials/chemicals in a storage room that experiences accidental spills while transferring the chemicals from the storage room to a facility for use. This spill can cause dust, containing the chemical(s), to infiltrate the air and settle on the floor which could then be washed down a drain as the spill is cleaned, or directly down the drain from the spill itself, if not cleaned properly. This drain may feed to a pipe leading to the wastewater collection system. Therefore, it is necessary to document chemicals stored and used on site, whether they reach the collection system directly or indirectly in order to best protect human health.

Comment 24: Utility

Please clarify the following in R18-9-E826(C) - "all non-domestic dischargers" - This should be limited to all impactful non-domestic dischargers as described in R18-9-E824(C).

ADEQ Response 24:

ADEQ appreciates the comment. R18-9-E826(C), the Tier 2 rule, requires an AWPRA to generate a list of chemicals that are used, stored, or discharged by all non-domestic dischargers in the "Non-Domestic Dischargers List" generated in subsection (B) of the rule. The generation of this list is a critical requirement of the Tier 2 chemical control analysis conducted by the AWPRA and results in a list of industrial and/or commercial establishments that are present in the collection system that are a direct or indirect source to a Water Reclamation Facility (WRF) in an AWPRA. Therefore, the phrase "all non-domestic dischargers" in R18-9-E826(C) is not limited to the "Impactful Non-Domestic Dischargers List" generated under R18-9-E824. Rather, it is intended to be a separate and broader list. For more explanation on why the scope of these two rules is different, please see ADEQ Response 21.

Comment 25: Utility

Please clarify the following from R18-9-E826(D): How does an applicant/permittee find the latest health advisory notification levels in other states' drinking water programs or find the latest "reference dose or cancer slope factor in credible peer-reviewed literature or state or federal databases"? Will ADEQ have a database on their website that has up-to-date drinking water health advisories from EPA and from other states as well as reference doses and cancer slope factors?

ADEQ Response 25:

ADEQ appreciates the comment. The Tier 2 analysis in R18-9-E826(D) details the requirement for an AWPRA to identify Tier 2 chemicals for control and for setting corresponding health advisory values. The rule provides a variety of methods for achieving this requirement, including, as the commenter highlights, subsections (D)(5) and (D)(7).

Subsection (D)(5) requires the AWPRA to compare the projected daily concentration of a chemical against a corresponding state

drinking water health advisory notification level or equivalent from a state drinking water program "that was developed using a method that ADEQ approves and lists". This subsection includes a list of ADEQ-approved health advisory notification levels from other states and currently includes only Trimethylbenzene. As ADEQ becomes aware of and vets other state drinking water health advisories or equivalents, it may update the list in subsection (D)(5)(a).

Subsection (D)(7) requires the AWPRA to compare the projected daily concentration of a chemical (that cannot be established through any process in (D)(4)-(6)) to consult with ADEQ and/or the Project Advisory Committee to determine a health advisory value on a case-by-case basis by utilizing a Reference Dose (RfD) or Cancer Slope Factor (CSF) from credible peer-reviewed literature or state or federal databases. ADEQ does not intend to post a database of drinking water health advisories from EPA, from other states, nor peer-reviewed literature with reference doses and cancer slope factors online. R18-9-E826(D) provides the necessary information for an applicant / permittee to identify health advisories for any chemicals identified. The rule specifies that in some cases, the responsibility will rest with the AWPRA to find resources and present them to ADEQ for review during the consultation process provided for in the rule.

Comment 26: Local Government

We are supportive of the requirement in R18-9-E826(A)(2)(c) to conduct a Tier 2 chemical contaminant analysis at every permit renewal.

ADEQ Response 26:

ADEQ appreciates the comment.

Comment 27: Local Government

We are supportive of the requirement in R18-9-E826(C) to maintain a chemical inventory list.

ADEQ Response 27:

ADEQ appreciates the comment.

Comment 28: Local Government

The equation for "expected daily concentration", in R18-9-E826(D)(3), which is derived from total (chemical) contaminant load divided by total influent flow rate, will result in an underestimate of the maximum concentration. Such a calculation, which is intended for comparison to health advisories, will introduce bias in the form of concentrations appearing to be lower. This equation should not be the sole method to determine the maximum design concentration for processes to remove chemical contaminants.

ADEQ Response 28:

ADEQ appreciates the comment. The Tier 2 Analysis in R18-9-E826 is designed to derive the projected daily concentration of each chemical. That projected daily concentration is calculated from the projected load of each contaminant which is based on what is used, stored, and/or discharged by the non-domestic dischargers in the collection system (*see* R18-9-E826(D)(1)). The

mass loading of contaminants (or projected load) will be derived using the maximum concentration for each chemical (*see* R18-9-E826(D)(1)). The Department believes a peaking factor is not explicitly required in the Tier 2 rule.

Comment 29: Local Government

Toxic chemicals, or potentially toxic chemicals, should be prohibited from being introduced into full-scale or operating AWP facilities to determine process efficacy. This practice is not allowed in drinking water facilities even for short periods of time. The appropriate procedure would be to perform bench or pilot testing with toxic or potentially toxic chemical contaminants.

ADEQ Response 29:

ADEQ appreciates the comment. As specified in R18-9-E827(C)(1) and (2), the performance based indicators (PBI) can be selected from the pre-existing chemicals identified in treated wastewater or introduced as a new chemical if no pre-existing chemicals are relevant as a PBI. During pilot study, verification will be done for the initially chosen PBIs to evaluate the treatment train performance. This will be repeated at full scale as well. All newly introduced chemicals for a PBI purpose are unlikely to be toxic; for example, sucralose does not have any known health impacts and is a useful PBI for RO. However, for other PBIs that are problematic, such as the introduction of 1,4-Dioxane, Tier 2 requirements would apply, such as monitoring, associated action levels. Diversion of the chemical would also be required, should any treatment processes fail. Action levels or health advisory limits will be imposed to ensure compliance at the finished water location to keep the concentration below any health-related limits.

Comment 30: Utility

As a basic tenet, when establishing new rules and regulations, the regulating agency should be fair, equitable, consistent, and predictable and should consider the technological and economic cost-benefit in the development and application of rules that impact the public. Under the proposed Tier 2 requirements set out in A.A.C. R18-9-E826, the lack of equitable, consistent, and predictable standards is concerning. Specifically, each Advanced Water Purification Responsible Agency (AWPRA) could be held to a different set of chemicals controls, monitoring, and reporting requirements. Under the proposed rule, these chemical controls, monitoring, and reporting requirements may vary from AWPRA to AWPRA, depending arbitrarily on when an AWPRA submits its AWP application, the AWPRA's source water, and the subjective decisions (current and future) of other state regulators, individual ADEQ staff members assigned to a particular AWPRA project, and members of the Project Advisory Committee.

Under the SDWA, the Environmental Protection Agency (EPA) is required to establish health-based water quality standards using a 3-step process (EPA 816-F-04-030 - June, 2004) that includes the following:

1) Identify contaminants that present a risk to public health,

2) Determine a maximum contaminant level goal below which there is no known health-risk, and

3) Specify a feasible maximum contaminant level (MCL) based on health-risk. When it is not feasible (e.g., economically or technically) to specify an MCL, a treatment technique in lieu of an MCL will be established to ensure control of the contaminant.

We support the MCLs established in R18-9-E825 for Tier 1 Chemical Control. However, the proposed alert levels, action levels, and chemical control requirements set forth in R18-9-E826 for Tier 2 Chemical Control fail to meet the basic tenets of the SDWA and its 3-step process for establishing health-based water quality standards. We have previously commented to ADEQ that the constituents discussed in R18-9-E826 are, by definition, "not regulated in the SDWA" and thus have not been identified by EPA as a risk to public health. Thus, R18-9-E826 should be removed from the draft rule along with all other references to control, monitoring, and reporting of Tier 2 chemicals.

The proposed Tier 1 and Tier 3 chemical control requirements provide robust safeguards to protect public health. Furthermore, consistent with EPA's third tenet to establish treatment techniques in lieu of water quality standards, ADEQ has established in the rule robust chemical treatment techniques and barriers, beyond that of the SDWA, which forcefully protects public health. The Tier 2 requirements, which address only constituents not regulated in the SDWA and which have not been found by the EPA to pose a risk to public health, add little, if any safeguards, while adding significant costs that will be passed on to customers.

We are committed to working collaboratively with ADEQ on the development and eventual approval of Advanced Water Purification rules.

We strive to achieve a regulatory framework that provides ADEQ with the appropriate level of oversight, while also affording utilities the flexibility to design and operate facilities in a manner that aligns with the health-risk based requirements of the SDWA and offers economically viable options for our ratepayers.

ADEQ Response 30:

ADEQ appreciates the comment. The Department designed the AWP program, including the Tier 2 rule, using seven guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. While those principles guided the development of the rules, ADEQ appreciates and endorses the commenter's goal of making regulation "fair, equitable, consistent, and predictable", as well. Additionally, ADEQ recognizes that other factors play into the balance of a regulatory program's (and an individual rule's) development.

The commenter points out that chemical controls, monitoring, and reporting requirements may vary from AWPRA to AWPRA. This customization or individualistic approach to AWP regulation was designed intentionally in order to properly address unique-to-the-facility challenges each AWPRA will face in controlling constituents in their AWTF source water or "treated wastewater" influent. In fact, the approach in the Tier 2 rule identifies constituents of concern beyond the MCLs in Tier 1 and adjacent to the performance-based indicators in Tier 3, in such a way where an AWPRA will have to address only those Tier 2 chemicals that are pertinent to their facility and none more. The Tier 2 rule requires inventorying of all chemicals in the collection system and analyzing them using a procedure that takes into account public health protection, dilution, health advisories, and more.

Additionally, once a chemical is earmarked as a Tier 2 chemical for a facility, the chemical must be addressed through a control approach: primarily, through source control or facility treatment. This comprehensive approach, while challenging for permittees and ADEQ administration alike, meets the high bar necessary to adequately protect public health in the AWP context.

Also, unlike traditional public water systems regulated under the Safe Drinking Water Act (SDWA) that utilize groundwater or surface water as source water, Advanced Water Treatment Facility (AWTF) source water will come from water reclamation facilities. This "treated wastewater" source or influent requires unique control in a way that neither the scopes of the Clean Water Act (CWA), nor the SDWA address. That is why special monitoring, among other requirements, is required under the AWP program.

The commenter also voices concern over potential regulatory variance due to expected subjective decisions (current and future) of other state regulators, individual ADEQ staff members assigned to a particular AWPRA project, and members of the Project Advisory Committee. ADEQ responds to this comment by reminding the commenter that the agency is required to administer all of its programs impartially and has no intentions of deviating from this requirement in the administration of the AWP program.

Additionally, the commenter states that "...the proposed alert levels, action levels, and chemical control requirements set forth in the [Tier 2 rule] fail to meet the basic tenets of the SDWA and its 3-step process for establishing health-based water quality standards. We have previously commented to ADEQ that the constituents discussed in R18-9-E826 are, by definition, 'not regulated in the SDWA' and thus have not been identified by EPA as a risk to public health. Thus, R18-9-E826 should be removed from the draft rule along with all other references to control, monitoring, and reporting of Tier 2 chemicals." ADEQ disagrees with the commenter's position that when a chemical is not regulated under the SDWA that means the EPA has not identified it as a risk to public health or that the chemical is not a risk to public health outside of SDWA regulation or identification. On the contrary, the Tier 2 rule requires all inventoried chemicals to have their projected daily concentration (PDC) in the treated wastewater influent to the AWTF be calculated, followed by a comparison of that PDC against a corresponding, established health advisory from a number of recognized sources (including the EPA) before becoming a Tier 2 chemical for the purposes of the AWP program. Those health advisory sources include EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", ADEQ approved notification levels or equivalents derived and endorsed by ADEQ coming from other states' drinking water programs, the Department's health advisory list, or a health advisory derived from credible, peer-reviewed literature or state or Federal databases.

Comment 31: General Public

Ever heard of Flint, Michigan? Of course, everyone in the water sector has. And what was the root cause? A new potable water source that was less scaling (not more corrosive) than the previous source. Proper treatment adjustments were not made and previously scaled pipes were cleaned, thus leading to metals leaching, including lead. With the proposed rules coming on line,

what precautions are being made so as to prevent this phenomenon from happening? Most well waters here in Arizona are extremely hard; lots of water softeners in place. And municipalities, currently, do a decent job of controlling hardness via blending (when surface waters are also available) and chemical treatments. Now this new water source is going to be devoid of various ions that cause scaling; how is that to be controlled? Again, the waters do not have to be more corrosive, just less scaling, such that the saturation index is impacted and minerals are adsorbed back into solution.

ADEQ Response 31:

ADEQ appreciates the comment. The AWP program relies on the SDWA for corrosion control evaluation. However, R18-9-F832(D)(2) has specific requirements for ADEQ to ensure that the AWP program complies with corrosion. In addition, a guidance document is being developed to further address corrosion control issues and concerns. The AWP program is not designed to supplant the safeguards built into the Safe Drinking Water Act (SDWA), including those addressing corrosivity, lead and copper and others.

Comment 32: General Public

We strongly support the inclusion of a digital early warning system in the direct potable reuse regulations, as mentioned in Page 3228, Section 10 of the proposed rule. These systems are vital for real-time monitoring and quick responses to contaminants, ensuring public health and safety. In the Phoenix region, reusing wastewater is essential for our city's growth and financial success. As citizens in the Phoenix region, we strongly support a digital early warning system in our wastewater. It will enhance the reliability of treated water, reduce the risk of pollutants, and increase our confidence in water reuse. We commend ADEQ for prioritizing this requirement and encouraging its adoption in the final regulation.

ADEQ Response 32:

ADEQ appreciates the comment. Early warning requirements are retained in the AWP regulations and can be found in the final rule in R18-9-E824(B)(10) and R18-9-E831(B)(6)(j).

Comment 33: Interest Group

Requiring a wastewater system to deploy early-warning monitoring of the collections system does not fit with running an AWP. A wastewater utility may elect to conduct this step to assist with process control in operating its wastewater treatment process. However, the technology for early-warning systems relies on surrogate parameters and algorithms to correlate measured parameters to chemicals of concern. The technology is still relatively new to the industry and not what we would consider to be at a technological readiness level to be a requirement under rule.

ADEQ Response 33:

ADEQ appreciates the comment. The AWP Enhanced Source Control rule, at R18-9-E824, requires a form of early warning system and sets minimum standards for the system, but does not go so far as to prescribe a specific method, technology, or process. As

the AWP Roadmap explains, a utility can develop its own early warning system by deploying the required sensors, configuring software to detect events, and creating response rules, and additionally, emerging technology is available to provide real-time or near-real-time monitoring to detect and respond to chemical peak events. This flexibility reflects the nascent state of the technology by not restricting permittees in this effort. The Department is in the process of developing guidance documents that will provide more detail on the establishment of an early warning system.

Based on ADEQ's collaboration with direct potable reuse facilities in Singapore, Texas, and elsewhere – the Department believes that early warning systems are a necessary element of the program, and critical for protecting public health. While this requirement is a component of the final AWP rule, it was first proposed to ADEQ by the Technical Advisory Group (TAG) in their recommendations early in the design phase of the AWP program (*see* Heading No. 7, subheading "Stakeholder Engagement" of this NFRM for an in-depth discussion on the stakeholder engagement process in the development of the AWP program, including enhanced monitoring and early warning system requirements).

Because an effective early warning system is collection system-specific, ADEQ will work with the applicant during the application review process to ensure that the proposed system is adequate to meet the intent of the rule while remaining practical and implementable.

Comment 34: Utility

Concerning Enhanced Source Control at R18-9-E824, the existing technologies for early warning of discharges in collection systems are not sophisticated nor reliable enough to be able to detect and differentiate chemicals of concern from other wastewater parameters. Furthermore, online monitoring instrumentation and rapid test kits do not have the capability of detecting all constituents of concern.

ADEQ Response 34:

ADEQ appreciates the comment. The AWP rule, at R18-9-E824, requires a form of early warning system and sets minimum standards for the system, but does not go so far as to prescribe a specific method, technology, or process. This flexibility reflects the nascent state of the technology by not restricting permittees in this effort. However, based on ADEQ's collaboration with Direct Potable Reuse facilities in Singapore, Texas, and others – the Department believes that early warning systems are a necessary element of the program, and critical for protecting public health. Because an effective early warning system is collection system-specific, ADEQ will work with the applicant during the application review process to ensure that the proposed system is adequate to meet the intent of the rule while remaining practical and implementable. The Department is in the process of developing guidance documents that will provide more detail on the establishment of an early warning system.

Comment 35: Utility

Some large-scale systems collect wastewater from multiple agencies, several of which are not participants in the AWP program.

The AWPRA will not have jurisdiction to force agencies that contribute wastewater to the system but are not participants in the Advanced Water Purification Responsible Agency (AWPRA) program from more stringent requirements than currently exist. As an example, a utility that discharges wastewater to another utility's collection system that is connected to the main collection system under the AWPRA's jurisdiction will not have an obligation to maintain a list of non-domestic dischargers or inventories of chemicals used by commercial and industrial customers.

ADEQ Response 35:

ADEQ appreciates the comment. While the Advanced Water Purification Responsible Agency (AWPRA) is the applicant or permittee, it is made up of one or more partners which are all responsible for maintaining compliance with the requirements of the AWP program. Any agency, district, or wastewater treatment plant that contributes wastewater to the 'system' are considered to be "AWPRA Partners". The definition for an "AWPRA Partner" can be found at R18-9-A801, meaning "any entity that collects or provides treated wastewater to the AWP project, performs wastewater source control or treatment pursuant to this Article, or utilizes AWP project water as a source for delivery to a drinking water distribution system" (*see also* R18-9-B805 describing the AWPRA formation and the joint plan requirements). Therefore, the AWPRA is an entity composed of its AWPRA Partners, which, through a Joint Plan, must coordinate all procedures in compliance with the AWP program. The Joint Plan must include all AWPRA Partner responsibilities under the program and all enforcement and corrective actions taken should any AWPRA Partner violate the Joint Plan or a requirement of the AWP program.

Comment 36: Utility

Under R18-9-E824(B)(11), there is a requirement that the enhanced source control program be audited at least every five years. Will ADEQ provide guidance on components of the audit?

ADEQ Response 36:

ADEQ appreciates the comment. ADEQ will provide recommendations on conducting an audit in the guidance document addressing the Enhanced Source Control Program, which will be developed pursuant to R18-9-E824(D)(1); however, ADEQ will not develop specific requirements in rule or in the forthcoming guidance document on how an audit should be conducted. The Enhanced Source Control Program is specific to each AWPRA and an audit should take into account the program approved by ADEQ and the specific elements within that program.

Comment 37: Utility

Add the following language (in italics) to R18-9-E824(D)(1), "ADEQ shall develop and make available guidance on developing, conducting, and maintaining an enhanced source control program *and guidance on performing an audit of the enhanced source control program*."

ADEQ Response 37:

ADEQ appreciates the comment. ADEQ does not believe it is necessary to develop a separate guidance document on performing audits of the enhanced source control program. The rule, R18-9-E824, effectively serves as a checklist for the enhanced source control program. Additionally, the rule, in conjunction with the guidance document, provides details on developing, conducting, and maintaining an enhanced source control program (*see* R18-9-E824(D)(1)). For those reasons, ADEQ declines to adopt the recommendation by the commenter and believes that rule and guidance document will be sufficiently clear to demonstrate to the permittee the ongoing enhanced source control requirements.

Comment 38: Utility

Add the following language (in italics) to R18-9-E824(E), "An AWPRA shall form and maintain a source control committee that includes representatives *from each AWPRA partner that is required to implement an enhanced source control program*, that supplies treated wastewater to the AWP project or that owns and/or operates a water reclamation facility…"

ADEQ Response 38:

ADEQ appreciates the comment. Under R18-9-E824(B), an AWPRA applicant/permittee is the entity required to develop and maintain a locally authorized enhanced source control program. The definition of "AWPRA" is an "applicant or permittee, comprising one or more AWPRA partners, responsible for compliance with the requirements of the AWP program for a particular AWP project…" (*see* R18-9-A801(7)). Therefore, the AWPRA, itself, is the entity responsible for administering the enhanced source control program and "AWPRA partners" do not have separate programs, but are subject to the requirements under the program administered by the AWPRA entity they are a partner of.

ADEQ does agree with the commenter that the language in the proposed rule at R18-9-E824(E) can be modified to clarify that a source control committee shall include representatives from "each AWPRA partner that is part of the AWPRA's enhanced source control program". The language has been modified accordingly.

Comment 39: Interest Group

We are concerned with the strict requirement that the Direct Responsible Charge (DRC) be on-site at all times. We recommend that the language be adjusted to state that the DRC 'or their designee' must be available at all times. Additionally, the rule references that all collection and water reclamation facilities are operated by a grade 4 operator. We recommend Reclamation and Collections operations should be modified to apply in practical terms. Modifying the language to "operational oversight and management" could provide the necessary flexibility, ensuring that operations are managed effectively without mandating continuous hands-on control by highly certified personnel.

ADEQ Response 39:

ADEQ appreciates the comment. As with every component of the AWP program, ADEQ strives to balance optimal protectiveness

with reasonable practicality for permittees in order to ensure that the program is safe and implementable. ADEQ understands the interest of the commenter and critically re-examined the rule, determining that a change could, in fact, be made to the Advanced Water Purification Operator Certification rule, R18-9-B804, which better achieves a balance of ADEQ's overarching goal. Based on the recommendation, the rule language is changed in the following ways.

ADEQ added a definition for "Direct responsible charge proxy" as "an AWP shift operator who is designated by, and acts on behalf of, the operator in direct responsible charge when the operator in direct responsible charge is not onsite" (R18-9-B804(A)(6)). ADEQ made corresponding updates to subsection D, General Requirements, providing that "[a]n AWPRA shall ensure that…[a]ll facilities receiving treatment credit pursuant to R18-9-E828 have a full-time operator in direct responsible charge, or their proxy, onsite at all times during operation" (R18-9-B804(D)(1)(c)) and "...[w]hen any facility receiving treatment credit pursuant to R18-9-E828 is operated by a direct responsible charge proxy, the operator in direct responsible charge must be reasonably available to provide immediate direction telephonically, if necessary" (R18-9-B804(D)(1)(d)). The definition addition and corresponding updates to subsection D are intended to provide a practical pathway for operation of the AWP facility when the operator in direct responsible charge is unavailable – namely, the operator in direct responsible charge may delegate a proxy to perform functions in their stead so long as the operator in direct responsible charge makes themselves available, telephonically, if necessary to provide direction and guidance to the proxy.

Additionally, ADEQ believed it necessary to further clarify the requirements of the operator in direct responsible charge, given the proxy pathway provided for in the final rule. The language in subsection D is further updated to state that "[a]n AWPRA shall ensure…[a]ll facilities receiving treatment credit pursuant to R18-9-E828 have a full time operator in direct responsible charge onsite for at least two full shifts per day" (R18-9-B804(D)(1)(b)). This language clarifies ADEQ's intention for a facility to have employed, as a full-time operator, at least one operator in direct responsible charge who is primarily onsite performing the hands-on functions of their position, while accounting for the practicalities of other duties/training off-site that may be incumbent upon the operator in direct responsible charge.

The commenter also refers to the proposed rule's requirement that wastewater collection systems and wastewater treatment facilities are operated by a grade 4 operator. The commenter recommends modifying this requirement "to apply in practical terms". In response to this comment, and others exhibiting similar sentiments, ADEQ re-examined the language in the proposed rule and modified it as follows. Under the final rule, a wastewater treatment facility receiving AWP treatment credits "shall be operated by an AWP operator and an operator certified at the appropriate grade, and no grade lower, for the class of the facility pursuant to Chapter 5, Article 1 of this Title" (R18-9-B804(L)(2)(a)). Furthermore, a wastewater collection system that collects and conveys water to a wastewater treatment facility that is ultimately used as a treated wastewater supply to an Advanced Water Treatment Facility (AWTF) "shall be classified pursuant to R18-5-114 of this Title" (R18-9-B804(L)(2)(b)). These updates to subsection L

remove the outright requirement for a grade 4 operator for wastewater treatment facilities and wastewater collection systems, and instead link their operator requirements to those already established under A.A.C. Title 18, Chapter 5, Article 1. This update addresses the commenter's concern to modify these requirements "to apply in practical terms".

Comment 40: Utility

Additional water examination requirements for Grade 3 and 4 wastewater operators are too restrictive. With the qualifying experience and AWP certificate, a Wastewater Operator will have the full understanding of operator responsibility, training and response protocols for AWTF facility, the mere possession of an additional water certification is irrelevant.

ADEQ Response 40:

ADEQ appreciates the comment. R18-9-B804(K)(5) requires, among other experience requirements, all AWP certified operator applicants pass the advanced water treatment examination in order to be eligible for certification as an AWP operator. Subsection (F)(6), however, establishes an additional requirement for Grade 3 and Grade 4 wastewater treatment operator applicants, "For applicants with a Grade 3 or Grade 4 wastewater treatment operator certification, the examination shall include an additional component which tests knowledge equivalent to the Grade 3 drinking water treatment operator examination." ADEQ respectfully disagrees with the commenter in two ways. First, the commenter incorrectly states that this requirement is for an "additional water certification". The Grade 3 and Grade 4 wastewater operators are not required to possess additional drinking water treatment certification, but are required to take a separate version of the AWP operator's exam which includes an additional component that tests knowledge *equivalent* to that which is tested on a Grade 3 drinking water treatment operator examination (emphasis added). Therefore, there is no need or requirement in the AWP rule for these applicants to possess an additional certification.

Second, ADEQ disagrees that a demonstration of knowledge equivalent to a Grade 3 drinking water treatment operator is "irrelevant". AWP produces water of drinking water quality, which may be blended or distributed directly to customers. Because of this, knowledge of drinking water treatment is paramount for all operators at an advanced water treatment facility. The AWP program incorporates flexibility with operator certification by prescribing a pathway for Grade 3 and Grade 4 wastewater operators to become certified as AWP operators. However, ADEQ acknowledges that the wastewater treatment examination does not include all critical components relevant to drinking water treatment. The AWP examination, also, does not include all of these critical components, as they would be duplicative for Grade 3 and Grade 4 drinking water treatment operators. Therefore, the rule, in R18-9-B804(F)(6), prescribes an additional examination requirement in order to ensure that operators of AWP facilities possess the necessary expertise and qualifications to operate an advanced water treatment facility.

Comment 41: Utility

Requiring a Direct Responsible Charge (DRC) to be on-site at all times is impractical and does not provide enough flexibility to the utility in managing operations. The Proposed Rule implies that the DRC must be onsite for potentially 16 hours per day. If the

DRC is intended to be one person, that is not practical and creates redundancy with the shift operator. If the DRC is intended to be "multiple people" with a Grade 4 Drinking Water plus AWT certification, this puts a strain on utilities due to a statewide shortage of qualified operators and increased labor costs. It would better-serve the industry and workforce if the proposed rule language be amended to state that a DRC, or their designee, must be "available" at all times. The existing language will contribute to increased operational costs and operator fatigue.

ADEQ Response 41:

ADEQ appreciates the comment. Please see ADEQ Response 39.

Comment 42: Utility

The Rule references that all collection systems and water reclamation facilities are 'operated' by a grade 4 operator. We recommend Reclamation and Collections operations should be modified to apply in practical terms. Modifying the language to "operational oversight and management" could provide the necessary flexibility, ensuring that operations are managed effectively without mandating continuous hands-on control by highly certified personnel.

ADEQ Response 42:

ADEQ appreciates the comment. R18-9-B804(L) of the AWP program sets forth class and grade requirements relevant to AWP. This section has been updated following the release of the proposed rule. Previously subsection (L)(2) required that both a wastewater treatment plant supplying treated wastewater to an advanced water treatment facility (AWTF) and a wastewater collection system that collects and conveys wastewater as a supply to an AWTF be Grade 4 facilities for the purposes of Arizona Administrative Code (A.A.C.) Title 18, Chapter 5, Article 1. The final rule contains the following changes to this subsection: only a wastewater treatment facility “receiving AWP treatment credits under R18-9-E828 that supplies treated wastewater to an AWTF shall be a Grade 4 facility”; and wastewater collection systems that collect and convey wastewater as a supply to an AWTF shall only be classified “pursuant to R18-5-114”. In accordance with A.A.C. R18-5-104(A), facilities must have an operator certified at or above the grade of the facility. Modifying the language to “operational oversight and management”, as the commenter suggests, is contradictory to this requirement in 18 A.A.C. 5, Article 1.

Comment 43: Utility

The Draft Rule does not clearly align with the established Arizona Administrative Code requirements for treatment facility rating and operator for staffing. A Grade 4 Collections or Grade 4 Water Reclamation Plant (WRP) is allowed to be operated by one level below the grading of the plant, i.e. a Grade 3 operator.

ADEQ Response 43:

ADEQ appreciates the comment. ADEQ disagrees with the commenter that the Arizona Administrative Code (A.A.C.) allows a Grade 4 wastewater collection system or wastewater treatment plant to be operated by a Grade 3 operator. Without reference to a

specific citation in the code, ADEQ can only presume the commenter is referring to A.A.C. R18-5-104(A)(5) which permits the operator in charge of the facility to be certified at a grade no lower than one grade below the grade of the facility "in the absence of the operator in direct responsible charge". Therefore, the comment lacks the proper context for the provision, which does not allow for indefinite operation of a Grade 4 facility by a Grade 3 operator, but rather permits the operation only upon an "absence" of a Grade 4 operator.

The AWP program is distinct and separate from the requirements in Chapter 5, Article 1, except where expressly indicated otherwise. AWP is guided by the programmatic rules in 18 A.A.C. Chapter 9, Article 8. Under the AWP rule, a wastewater treatment facility receiving AWP treatment credits is required to be a Grade 4 facility (R18-9-B804(L)). Pursuant to R18-5-104(A)(5), a Grade 4 operator must operate that facility. The rule has been updated for collections systems, however, such that wastewater collection systems within an AWP project are not required to be Grade 4, but shall be classified pursuant to R18-5-114, and have an assigned operator according to the classification of the facility. Please note, too, that the rule has been updated since the proposed rule to provide an option for an "operator in direct responsible charge proxy" to operate the facility in the operator in direct responsible charge's stead, for a specific period of time defined in the rule (R18-9-B804(D)). The "proxy" is defined as an AWP shift operator "who is designated by, and acts on behalf of, the operator in direct responsible charge when the operator in direct responsible charge is not onsite" (R18-9-B804(A)(6)). Therefore, similar to the language in Chapter 5, a facility subject to the operations requirements under R18-9-B804 and subsection D, specifically, may be operated by one level below the operator in direct responsible charge in some circumstances, but not indefinitely.

Comment 44: Utility

The wastewater treatment operator examination, with the additional drinking water component on the test, is an overly restrictive pre-qualification requirement. This type of exam does not offer standardized ISO 17024 metrics that ensure validity, reliability, and legal defensibility of the certification exam process.

ADEQ Response 44:

ADEQ appreciates the comment. Generally, please see ADEQ Response 40 above. The Advanced Water Treatment Operator examination is being developed and designed by ADEQ to the same standard as existing Drinking Water and Wastewater examinations, including ensuring validity, reliability and legal defensibility.

Comment 45: Utility

At issue with Operator Certification at R18-9-B804, is the significant shortage of operators currently certified at the appropriate level to operate existing water treatment facilities. Increased requirements, although necessary, will continue to shrink that pool and may decrease interest. Many portions of the state do not have Grade 4 water or wastewater facilities currently which prevents candidates from obtaining qualifying experience. Modifying the prerequisites found in R18-9-B804(K) for advanced water

treatment operator candidates to allow those with a Grade 3 Wastewater Treatment operator certification would increase the potential candidate pool.

ADEQ Response 45:

ADEQ appreciates the comment and acknowledges the challenges of hiring certified operators. The Operator Certification rule provides a pathway for a Grade 3 wastewater treatment operator to achieve certification for an Advanced Water Purification Operator (AWPO) certification. Section (K)(4) of the Operator Certification rule sets forth requirements for an applicant to sit for admission to an AWPO examination, specifying that a Grade 3 wastewater treatment operator "shall have at least two years' experience operating a Grade 3 wastewater treatment facility" (R18-9-B804(K)(4)(c)). Subsection (K)(5) establishes the prerequisites for certification, upon passage of the AWPO examination, and provides that "[a]n applicant with Grade 3 wastewater treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator". A Grade 3 wastewater treatment applicant may earn "advanced water treatment qualifying experience" subject to subsection (K)(6) which provides options for demonstrating such experience. These options include operating a pilot facility, operating an AWP demonstration facility that is not distributing finished water for human consumption, experiential reciprocity, an apprenticeship under an AWP operator, or other experience as approved by the Department (R18-9-B804(K)(6)). This last option was added by ADEQ in response to comments received in the NPRM and intends to provide ADEQ with further flexibility in crediting qualifying experience that may not be fully contemplated in rule at this time, and acknowledges the commenter's concern surrounding implementability.

Comment 46: Utility

Additionally at issue with Operator Certification at R18-9-B804, please revise the language to state that the operator in direct responsible charge (DRC) or their designee shall be available at all times. As written, the language implies the DRC is on-site at all times (24/7).

ADEQ Response 46:

ADEQ appreciates the comment. Please see ADEQ Response 39.

Comment 47: Utility

Should R18-9-B804(K)(5)(d) list "Grade 4" wastewater treatment certification, not Grade 3? Grade 3 is already included in R18-9-B804(K)(5)(c).

ADEQ Response 47:

ADEQ appreciates the comment. Yes, the language in the final rule has been updated accordingly. R18-9-B804(K)(5)(d) now reads, "[a]n applicant with Grade 4 wastewater treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator".

Comment 48: Utility

ADEQ and permittees have made tremendous efforts to protect water supplies through Arizona's Aquifer Protection Permit (APP) compliance program and pretreatment including implementation of Best Available Demonstrated Control Technology (BADCT). The proposed increased requirements in the new rule considerably downplays and undermines any earned trust built with this program and the current delivery of high-quality reclaimed water delivered to schools, parks, golf courses, and numerous recharge facilities where it replenishes our aquifer. Much of this water makes its way back to the aquifer, where it is eventually reused as drinking water once again.

ADEQ Response 48:

ADEQ appreciates the comment. ADEQ's implementation of the AWP program is commensurate with the intention of the Arizona State Legislature, acting on behalf of Arizonans, when it mandated ADEQ to adopt all rules necessary to establish and implement an AWP program (A.R.S. § 49-211). AWP authority derives separately from ADEQ's authority to implement and administer the Aquifer Protection and Use of Recycled Water programs, which are found in A.R.S. Title 49, Chapter 2, Articles 1 and 3. Therefore, the establishment of the AWP program does not undermine the efforts under these programs and they, in fact, have different objectives. The APP program is designed to protect aquifer water quality through discharge control, while the Use of Recycled Water programs provide permitting for certain classes and uses of recycled water. AWP is designed to take a treated wastewater source and further treat that source water to a drinking water standard for the purpose of expanding and diversifying a community's source water portfolio. Furthermore, the AWP program is implemented in the Arizona Administrative Code (A.A.C.) in Title 18, Chapter 9, Article 8. Existing programs in Chapter 9 remain in force such as the Aquifer Protection and the Use of Recycled Water regulatory programs in Chapter 9 which provide a permitting framework for distribution and use of reclaimed water at schools, parks, golf courses, and elsewhere. Reclaimed water can still be utilized in accordance with Article 7, however, pursuant to the Legislative directive regarding AWP, ADEQ developed another option for water reuse which a community may decide to undertake depending on what best fits the needs and interests of a community. The ability for a water provider agency to make thoughtful determinations about the use of water in their service area will not be encumbered by ADEQ in this rulemaking, rather, ADEQ has, as the legislature intended, presented a viable, voluntary, new drinking water source for Arizonans. Therefore, under the AWP program, each applicant must be a responsible, holistic steward of the water resources in their portfolio and make decisions that are best for consumers and ecological areas, alike, within their service area.

Comment 49: Interest Group

We are particularly concerned about the potential dewatering of rivers and streams that currently receive treated effluent. Effluent discharge often serves as a critical source of water for riparian habitats, supporting biodiversity and maintaining ecosystem services. Advanced water purification could divert these flows, leaving rivers like the Santa Cruz and the San Pedro and wetlands like the

Gilbert Riparian Preserve and the Tres Rios Wetlands, among others, vulnerable to reduced volumes, which would harm aquatic and riparian ecosystems. While these ecological impacts may be beyond the scope of this rulemaking, none of these parallel processes will be implemented in a vacuum, and it is reasonable to at least acknowledge potential impacts and point to processes through which they will be addressed. The rules could account for these unintended consequences and provide strategies to mitigate impacts on environmental water needs.

ADEQ Response 49:

ADEQ appreciates the comment. The Department believes the implementation of the AWP program is commensurate with the intention of the Arizona State Legislature (acting on behalf of Arizonans) when it mandated ADEQ to adopt all rules necessary to establish and implement an AWP program (A.R.S. § 49-211). The Department designed the AWP program using seven guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. This careful balancing led to a rule that provides for, and encourages, flexibility in implementation, based on the understanding that ADEQ is not the proper entity to determine what individual water portfolios look like for water provider agencies across the State. The Department believes that the ability for a water provider agency to make thoughtful determinations about the use of water in their service area should not be encumbered by ADEQ in this rulemaking. Instead, ADEQ should, as the legislature intended, develop and present a viable, voluntary and new drinking water source for Arizonans, derived from the careful processing of treated wastewater. Therefore, under the AWP program, each applicant must be a responsible, holistic steward of the water resources in their portfolio and make decisions that are best for consumers and ecological areas, alike, within their service area and greater community.

Additionally, under the outreach requirements of the rule, there are multiple pathways and opportunities provided to the public to express their concerns and interests to a prospective or actual AWP permittee. ADEQ mandates each applicant/permittee provide the public with adequate and frequent communication and transparent opportunities to engage through easily accessible forums, including a publicly-accessible repository with public questions, comments, and responses, which shall be maintained for the lifetime of the AWP project (R18-9-B811(B)(1)(c)). Additionally, ADEQ mandates that every AWPRA applicant involve relevant stakeholders, and suggests that the stakeholder list include local environmental groups. The purpose of the outreach requirements in the AWP program are to provide myriad opportunities to engage, on a project-by-project basis, with the AWPRA, on the impact and effects of adopting AWP in a specific service area and greater community.

Comment 50: Interest Group

An issue is the management of waste byproducts generated during the purification process. Concentrate streams often contain high levels of salts, heavy metals, PFAS, and other pollutants. While the rules include some guidance on source control and treatment,

clear and enforceable guidelines for the safe disposal or reuse of these byproducts remain underdeveloped. Without robust waste management plans, the risks of secondary contamination to the environment are substantial.

ADEQ Response 50:

ADEQ appreciates the comment. The AWP rule does not modify or weaken existing requirements surrounding the management of waste byproducts, which are currently regulated by the state or Federal administrators under regulatory programs such as the Arizona Pollutant Discharge Elimination System (AZPDES) program and ADEQ's Solid and Hazardous Waste regulatory programs. In order for an applicant / permittee to properly dispose of any waste generated during the treatment process, it (including all respective partner entities) must comply with all existing regulations and processes established under the facility's waste management plan.

Comment 51: General Public

How many billions of taxpayer money are you going to waste on this project?

ADEQ Response 51:

ADEQ appreciates the comment. AWP is a voluntary program in which water provider agencies may choose to participate in after outreach and collaboration with their customers. Applicants must develop a Public Communications Plan which, among other requirements, ensures the applicant notifies all drinking water consumers of its intention to apply for an AWP permit and maintains communication with consumers throughout all major program phases (*see* R18-9-B811). ADEQ expects water provider agencies to determine whether AWP fits the needs of water customers in their respective service areas and to ensure that there is adequate customer demand, support, and ability to pay for any new Advanced Water Treatment Facility (AWTF).

The AWP program follows a fee-for-service model, deriving funding from applicants and permittees via hourly review rates for permit applications and related components as well as from annual fees. The costs charged through the program are commensurate with projected costs necessary to adequately support the program. The proposed fees are designed and calculated to be fairly assessed, imposing the least burden possible to parties subject to the fees.

Comment 52: Interest Group

We are concerned that some requirements of AWP are overly-burdensome and have the potential to make AWP unaffordable and infeasible for some communities. Our concern is from the perspective that the process of establishing new rules and regulations be fair, equitable, consistent, predictable, and consider the technological and economic cost-benefit in the development and application of rules that impact the public.

ADEQ Response 52:

ADEQ appreciates the comment. The guiding principles that governed this rulemaking take into account the need for balancing public health protection while, at the same time, making potable water affordable. The seven guiding principles are: i. protective

of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. Beyond the consideration and balancing of all the principles above, including public health protection and affordability, ADEQ further based its design of the AWP program on the best available science and consensus recommendation provided to the Department by stakeholders such as the Arizona utilities represented in the Technical Advisory Group (TAG), and other stakeholder engagement efforts (*see* Heading No. 7, subheading "Stakeholder Engagement" of this NFRM for an in-depth discussion on the stakeholder engagement process in the development of the AWP program). The holistic review of these sources, along with consultation and development with ADEQ's own subject matter experts yielded the program as it exists in the final rule. With that stated, ADEQ disagrees with the opinion that some program components are "overly-burdensome". ADEQ believes that all program components are tailored to balance the principles listed above, while ultimately providing a safe pathway for advanced water purification in Arizona.

Despite ADEQ's efforts, it is true that some Arizona communities may not be able to afford to participate in the AWP program at this time. The necessary requirements of the AWP program are accompanied by higher price tags than other less demanding and complex regulatory programs. ADEQ expects water provider agencies to determine whether AWP fits the needs of their constituents and to ensure that there is adequate customer demand, support, and ability to pay for any new advanced water treatment facility. However, looking forward, ADEQ anticipates the costs of the AWP program to decrease over time - or at least become more feasible - as key technologies become more affordable, additional funding sources become available, and there are continuous improvements in innovation, efficiency in operation, treatment, and beyond.

Comment 53: Interest Group

The proposed rules refer to AWP as a voluntary decision for a water provider. AWP could very well become an essential component of meeting a community's water demands. AWP being "voluntary" is an unacceptable basis for these over-reaching requirements that remain in the proposed rule.

ADEQ Response 53:

ADEQ appreciates the comment. The requirements in the final AWP rules are based on a variety of inputs including the Technical Advisory Group (TAG) recommendations, internal and external subject matter expertise, and extensive stakeholder engagement (*see* Heading No. 7, subheading "Stakeholder Engagement" of this NFRM for an in-depth discussion on the stakeholder engagement process in the development of the AWP program). The rule development process spans many years and the recommendation and feedback from hundreds of stakeholders, experts, practitioners, and regulators. This robust process forms the basis for the requirements in the final rule, not the fact that AWP is a voluntary program. AWP's voluntary nature has no bearing on ADEQ's development of a safe and reliable regulatory program.

Comment 54: Utility

The increased source control efforts come with additional financial burdens that may have an impact on future economic development where AWP will be used, either voluntarily or by necessity. These costs, in addition to the cost of constructing AWP infrastructure, will be passed on to customers. Much like the development of a maximum contaminant level (MCL) by the Environmental Protection Agency, financial impacts should be a consideration.

ADEQ Response 54:

ADEQ appreciates the comment. The guiding principles that governed this rulemaking take into account the need for balancing public health protection while, at the same time, making potable water affordable to customers. The seven guiding principles are: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth. The AWP program and its regulations were designed to achieve a careful balance between all of the principles, including between public health protection and affordability. The source control efforts outlined in the rule are a necessary element of the AWP program. Some Arizona communities may not be able to afford to participate in the AWP program at this time. ADEQ expects water provider agencies to determine whether AWP fits the needs of water customers in their respective service areas and ensure that there is adequate customer demand, support, and ability to pay for any new advanced water treatment facility and all adjacent requirements. However, ADEQ anticipates the costs of the program to decrease over time as key technologies become more affordable and there are continuous improvements in innovation, efficiency in operation, treatment, and beyond.

Comment 55: General Public

How will the costs described impact the cost of water for customers of utilities transitioning to AWP?

ADEQ Response 55:

ADEQ appreciates the comment. Constituents of a service area under a utility that has diversified their water portfolio through an AWP permit can expect the utility to communicate with them about any price adjustments due to AWP. AWP is a voluntary program in which water provider agencies may choose to participate in outreach and collaboration with their customers. AWP applicants must develop a Public Communications Plan which, among other requirements, ensures the applicant notifies all drinking water consumers of its intention to apply for an AWP permit and to maintain communication with consumers throughout all major program phases (*see* R18-9-B811). ADEQ expects water provider agencies to determine whether AWP fits the needs of water customers in their respective service areas and to ensure that there is adequate customer demand, support, and ability to pay for a new Advanced Water Treatment Facility (AWTF). Technologies typically used in AWP or direct potable reuse settings are in many cases, state-of-the-art and expensive. However, sourcing, buying, and conveying water to a service area's facilities can also

be expensive. Weighing those and other factors will be a part of any utility's calculations when considering AWP.

Comment 56: General Public

R18-9-A804(K)(5)(c) & (d) are exactly the same. I believe subsection (d) should be related to a Grade 4 Wastewater similar to (b).

ADEQ Response 56:

ADEQ appreciates the comment and the language in the final R18-9-B804(K)(5)(d) has been updated accordingly. Subsection (K)(5)(d) now reads, "[a]n applicant with Grade 4 wastewater treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator".

Comment 57: Utility

To be consistent with the definition of AWP, revise the definition of "Advanced Water Purification Responsible Agency Partner" to include the italicized words shown here: "…*delivery to a drinking water treatment facility* or a drinking water distribution system."

ADEQ Response 57:

ADEQ appreciates the comment. The definition of "Advanced Water Purification Responsible Agency Partner" already contemplates the recommended language from the commenter, "delivery to a drinking water treatment facility". A facility that delivers to a drinking water treatment facility under the AWP program would be the Advanced Water Treatment Facility (AWTF), which is already incorporated into the Advanced Water Purification Responsible Agency Partner definition as, "...any entity that…performs wastewater source control or treatment pursuant to this Article, or utilizes AWP project water as a source for delivery to a drinking water distribution system". Therefore, no additional language is necessary.

Comment 58: Utility

Based on the definition of "treated water augmentation," delete "directly to the distribution system" from the definition of "Blending."

ADEQ Response 58:

ADEQ appreciates the comment. ADEQ retains the language in the definition of "blending" in R18-9-A801(20) to maintain the additional clarification provided from the statement.

Comment 59: Utility

It is incorrect to state that raw wastewater "has not undergone any treatment." There are numerous wastewater pretreatment devices within Glendale's sewershed to minimize discharges of oil, grease, and/or sand into the municipal wastewater collection system. The definition should be revised (in italics): "…wastewater that is entering a Water Reclamation Facility *or Wastewater Treatment Plant* via a sewage collection system and which has not undergone any treatment…"

ADEQ Response 59:

ADEQ appreciates the comment. ADEQ has added the word "centralized" to the definition of "raw wastewater" (R18-9-A801(76)) in order to distinguish between pretreatment measures and those traditionally applied at a centralized Water Reclamation Facility. ADEQ notes that "Water Reclamation Facility" and "Wastewater Treatment Plant" hold the same definition (R18-9-A801(106)) and are used interchangeably throughout the rule. Therefore, there is no meaningful distinction between the two terms for the purposes of the AWP program.

Comment 60: Interest Group

We believe that no other local or county government should have the ability to create a rule that could restrict the reuse activity permissible by the State. We recommend adding a provision in the rule related to: "No local or county governments are allowed to create a rule that prevents a community or water provider from implementing AWP."

ADEQ Response 60:

ADEQ appreciates the comment. The Arizona Revised Statutes (A.R.S.) at section § 49-106 provides that the rules adopted by ADEQ "apply and shall be observed throughout this state" and local governing bodies may adopt ordinances and rules only insofar as those ordinances and rules "do not conflict with state law and are equal to or more restrictive than the rules of the department". Pursuant to the authority of this statute, the AWP program applies throughout the state and no local governing body may pass an ordinance or rule that conflicts with AWP or "restricts" its use, as the commenter states. A de facto prohibition on AWP would be considered a conflict of state law and therefore unenforceable. Because this provision exists in statute, ADEQ does not believe it is necessary to include the provision into the rule itself.

Comment 61: Utility

Will a new source approval (as specified in R18-5-505(B)(1)(d)) be required for AWTF effluent? Or is it "presumptively considered surface water" (as written in the proposed R18-9-A803)?

ADEQ Response 61:

ADEQ appreciates the comment. Yes, a new source approval will be required for the product water of an AWTF. The rule allows Advanced Water Treatment facilities (AWTFs) to produce two types of product water, "advanced treated water" or "finished water". "Advanced treated water" is defined at R18-9-A801(5), as the product of an AWTF which can then be delivered to an existing Public Water System (PWS) or Drinking Water Treatment Facility (DWTF) as a source water for further treatment under SDWA regulation. "Finished water" is defined at R18-9-A801(45), which can be introduced directly into a distribution system or served for human consumption without additional treatment, except for measures required to uphold water quality within the distribution system and all applicable SDWA requirements. In the "finished water" case, the AWTF would be considered a Public Water System under SDWA regulation, subject to all of the protections thereunder, including source water analysis. In the previous

case, “advanced treated water” would be considered a source water for an existing PWS / DWTF, where the SDWA safeguards would, likewise, apply. Additionally, “advanced treated water” and “finished water” are presumptively considered a “surface water” per R18-9-A803.

Comment 62: Utility

Will an Approval to Construct (R18-5-505) and Approval of Construction (R18-5-507) be required when an existing drinking water system is modified to receive AWTF effluent? This may include connection at or prior to the intake to an existing drinking water treatment facility or connection directly into a potable water distribution system.

ADEQ Response 62:

ADEQ appreciates the comment. The AWP program does not supplant or supersede the requirements under the Safe Drinking Water Act (SDWA), and all AWP facilities must comply with SDWA requirements. Any modification to an existing treatment process will require approval from the Department pursuant to A.A.C. R18-5-509. Additionally, please take note of a new rule to be added to Arizona Administrative Code (A.A.C.) Title 18, Chapter 5, Article 5, which will be entitled “Applicability of Advanced Water Purification Program” and placed at R18-5-510. This rule clarifies the inapplicability of R18-5-505 and R18-5-507 to AWPRAs, amongst other clarifications.

Comment 63: Local Government

We are concerned that the final AWP rules will be substantially weakened before publication based on the previously unpublished statement of achieving parity with drinking water rules. It is stated at 30 AAR 3186, under subtitle “Associated Rulemakings” that changes to Chapter 5 of Title 18 are based on the aim of achieving parity between drinking water regulations and AWP regulations. Considering all the constituents that are known to be or that could exist in wastewater and all the constituents not regulated by the SDWA, this is aiming substantially below the published Draft rules developed by a large number of stakeholders which were stricter than the drinking water rules.

ADEQ Response 63:

ADEQ appreciates the comment. The language in the Notice of Proposed Rulemaking (NPRM) referred to by the commenter above is as follows, “[t]he proposed changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The proposed changes in Chapter 5 aim to achieve parity between the two programs by clarifying, in each, how and where the program components are applicable.” The “Department” concedes that the use of the word “parity” is misleading. Put another way, the addition of R18-5-510 to Chapter 5, Article 5 clarifies which part(s) of, and when, the SDWA is applicable to AWP facilities and when AWP permitting and design requirements apply. These clarifying changes to the language in Chapter 5 will not weaken the

safeguards developed in the AWP program. On the contrary, the language addressing AWP in Chapter 5 requires AWTFs to be regulated by robust permitting and design requirements specific to AWP. It is also important to note that no changes to proposed language in R18-5-510 in Chapter 5, Article 5 have been made between the proposed and the final rule.

Comment 64: Local Government

We are concerned that Region 9 of the EPA may not have specifically commented or opined on the State's creative way to implement AWP regulations by superseding drinking water design criteria and permitting regulations and leaving detail to unpublished guidance. Please confirm that the EPA's opinion has been solicited, especially on paragraphs R18-9-803(A) and (B). Please share the EPA's opinions and comments on the proposed rules if any have been received. Please confirm if any of the EPA's concerns have been incorporated.

ADEQ Response 64:

ADEQ appreciates the comment. EPA has not been directly solicited to comment on the proposed rules. ADEQ is required to develop an AWP regulatory program pursuant to an Arizona State Legislative mandate, A.R.S. § 49-211, signed into state law in 2022. Therefore, the authority to develop the program is derived from state law, not Federal. The AWP program's rules provide guidance on how the program works in conjunction with the Safe Drinking Water Act (SDWA). It is important to note that nothing in the AWP program rules would negate or replace SDWA requirements. In the multi-year development of the AWP program, ADEQ conducted many stakeholder events, including a series of meetings with a Technical Advisory Group (TAG), consisting of industry and regulatory leaders in the wastewater, reuse, and drinking water fields, many of whom frequently work with the EPA and intimately understand the SDWA. Additionally, the Department had many conversations with the EPA regarding the draft program requirements and the progress of the rule development.

The AWP program is not designed to supplant the safeguards built into the SDWA. The rule allows Advanced Water Treatment Facilities (AWTFs) to create two types of product water, "advanced treated water" or "finished water". Advanced treated water is "water produced by an [AWTF]" (R18-9-A801(5)). Advanced treated water may be delivered to a public water system as a source, where it's blended with other sources such as groundwater and surface water and undergoes additional treatment prior to being distributed as drinking water to customers. The advanced treated water is only subject to regulation under the AWP program, but once it is delivered to a public water system, it becomes subject to the SDWA. Alternatively, finished water is defined as "water produced by an AWTF, or a drinking water treatment facility, and which is introduced into a distribution system or served for human consumption" (R18-9-A801(45)). Finished water can only be distributed to customers by the AWTF if the AWTF is, in addition to AWP, permitted as a public water system under the SDWA. Under this scenario, the finished water is subject to regulation under both AWP and the SDWA at the AWTF.

Comment 65: Local Government

"Raw Water" and “Treated Water" Augmentation are expressly defined. The document remains silent as to whether ATW water would be allowed to be introduced into the finished water reservoir of a groundwater treatment plant or surface water treatment plant. The response to Draft Rule Comment #88 indicated that ATW could enter the finished water reservoir and that traditional new source approval data would need to be obtained, and that additional guidance will be forthcoming, and that it would be treated as a blending situation.

Please confirm our interpretation of the meaning of this response. We believe that this would require a re-evaluation of the existing DWTF disinfection adequacy and lead and copper control strategies due to water quality of the combined streams being different in the magnitude and quality of TOC and other aspects, and potentially more flow within the same detention volume. It would also require a blending evaluation (between sources and AWP treated water) or a re--evaluation if blending for MCL compliance (arsenic or nitrate) was already in practice.

ADEQ Response 65:

ADEQ appreciates the comment. Additional clarity will be added in the guidance documents as the rule can not reasonably account for every possible situation and delivery/distribution scenario. The program has been created to be flexible to this end and the definitions contemplate the scenario described by the commenter. The rule allows Advanced Water Treatment Facilities (AWTFs) to create two types of product water, “advanced treated water” or “finished water”. While both of these types of product water are of the same quality, the types are determined by how an AWPRA utilizes the water and subject to different regulatory authority under the SDWA. Advanced treated water is “water produced by an [AWTF]” (R18-9-A801(5)). Advanced treated water may be delivered to a public water system as a source, where it’s blended with other sources such as groundwater and surface water and undergoes additional treatment prior to being distributed as drinking water through a distribution system. The advanced treated water is only subject to regulation under the AWP program, but once it is delivered to a public water system, it is regulated as drinking water under the SDWA. Alternatively, “finished water” is defined as “water produced by an AWTF, or a drinking water treatment facility, and which is introduced into a distribution system or served for human consumption” (R18-9-A801(45)). Finished water can only be distributed by the AWTF if the AWTF is permitted as a public water system under the SDWA. Under this scenario, the finished water is subject to regulation under both AWP and the SDWA at the AWTF. Put another way, “finished water” may be introduced at any location within the distribution system with proper consideration of the distribution system. Also, introducing ATW to a finished water reservoir would require a traditional new source analysis and approval. Lastly, other aspects mentioned in the comment above would also need to be re-evaluated in accordance with the SDWA.

Comment 66: Local Government

Arizona Revised Statutes 49-205 does not mention Local Authority (LA). When AWP facilities are overseen and regulated by

ADEQ, such confidential data should be available to the LA if the LA is involved with the administration of the drinking water program for other portions of the water distribution system. Local authorities should be specifically allowed to access wastewater quality, treated wastewater quality, water quality, or treatment process performance information marked "confidential business information". Information which deals with the existence, absence, or concentration of constituents and contaminants detected in treated wastewater used as a source for an AWP facility should be made exempt from confidentiality provisions and available to the public or LA upon request.

ADEQ Response 66:

ADEQ appreciates the comment. ADEQ has no plans to delegate administration of the AWP program. While some counties may continue to have delegation for their drinking water facilities, ADEQ will continue to regulate the AWP portion of the project. If a county operating a Drinking Water Treatment Facility (DWTF) is an AWPRA partner, there is an expectation that necessary (and in some cases, required) information would flow freely between the AWPRA partners. The "[a]vailability of information to the public" statute at A.R.S. § 49-205 is currently in place and applies to the AWP program. The statute does allow for "...[t]he existence or level of a concentration of a pollutant in drinking water…" to be public information, while also sealing any information that would "divulge the trade secrets of the person…".

Comment 67: Utility

The beneficial use of this water will be regulated by the Safe Drinking Water Act (SDWA), and as such, new rules proposed by ADEQ should not intentionally or unintentionally create standards or requirements that exceed the scope of the SDWA.

ADEQ Response 67:

ADEQ appreciates the comment. Due to the character and nature of the "treated wastewater" source or influent of the Advanced Water Treatment Facilities (AWTFs) regulated under the AWP program, standards and requirements that are outside the scope of the Safe Drinking Water Act (SDWA) are necessary and justified. Unlike traditional public water systems regulated under the SDWA that utilize groundwater or surface water as a source, AWTF source water is treated wastewater from water reclamation facilities. This source requires unique control in a way that neither the scopes of the Clean Water Act (CWA) nor the SDWA contemplate or address. Therefore, ADEQ disagrees that the new rules "exceed the scope of the SDWA" because AWP is a fundamentally different regulatory program from the SDWA, to which its own standards and requirements rightfully apply.

Comment 68: Utility

The process for obtaining a Demonstration Permit should be streamlined to allow parallel tracks for performing and submitting permit elements. This will encourage utilities and the public to interact on the subject of ATW and facilitate operator education and training on an operating system. According to R18-9-C817, an Advanced Water Purification Responsible Agency (AWPRA) applying for a Demonstration Permit must meet all the requirements of a full- scale permit, except for full-scale verification. While

the intent of this approach is to ensure thorough evaluation, the approach mandates the completion of both a one-year Initial Source Water Characterization (ISWC) and a Pilot study before granting a Demonstration Permit. This sequential approach (requiring the ISWC to be completed prior to final design and the one-year pilot) could delay entities seeking a Demonstration Permit by up to two years. This delay is particularly concerning given that a public outreach program with taste testing is the most effective path toward public acceptance. The two-year delay would mean the demonstrations might not commence until just before the full-scale facility comes online. Utilizing a robust pilot "skid" for the Demonstration Permit is a prudent way to fulfill the pilot's intent, while building trust and acceptance with the public and elected officials. A shorter timeline for obtaining the Demonstration Permit would be beneficial. Risk assessments should consider that the volume of water used for taste testing is small and each person is drinking the water only one-time.

ADEQ Response 68:

ADEQ appreciates the comment. Due to the sentiment in this comment and discussions with stakeholders and members of the Technical Advisory Group (TAG), ADEQ reduced the piloting requirement for Demonstration permits by adding the following language at (R18-9-C817(C)(1)(a)), "[t]he piloting requirements in R18-9-C815 may be abbreviated at the Director's discretion, but may not be of a period of less than 6 months." This occurred in the interim period between the draft rule and the proposed rule. While ADEQ does see value in engaging the public early, such engagement must be balanced with rigor to ensure the process is robust and safe. Demonstration permits in the proposed rule will allow a utility to serve water to the public as quickly as possible and create those opportunities while still being safe. Prior to serving the public, the demonstration facility must demonstrate an ability to successfully achieve water quality goals reliably. While that approach may increase the testing time period, the facility can simultaneously conduct the initial source water characterization and design/build the demonstration facility using the initial data without following a sequential approach.

Comment 69: Utility

As written, R18-9-C817(C)(4) conflicts with both R18-9-C817(A) which states a demonstration permit is for "non-distribution purposes" and R18-9-C817(B) which prohibits the introduction of advanced treated water into a drinking water distribution system. Change the language at subsection (C)(4) to: "The AWP operator shall operate the demonstration facility for public outreach, finished water tasting, and other related non-distribution purposes."

ADEQ Response 69:

ADEQ appreciates the comment. ADEQ acknowledges the rule could benefit from additional clarity. As such, the language in the final rule, R18-9-C817(C)(4), has been updated to the following: "An AWP operator shall operate the demonstration facility if the facility is utilized for the purpose of showcasing the AWTF for public outreach, finished water tasting, and other related non-distribution purposes."

Comment 70: Utility

To be consistent with the licensing timeframes and R18-9-C817(H), demonstration permits should be referred to in this section. For example: "The Department shall publish a notice of preliminary decision regarding the issuance or denial of a significant amendment, demonstration permit, or a final permit determination…"

ADEQ Response 70:

ADEQ appreciates the comment. The language in R18-9-C817(H) makes clear that demonstration permits are subject to the public participation requirements of R18-9-D820. However, ADEQ agrees that the language in R18-9-D820 can benefit from the addition of a reciprocal requirement. Therefore, the language in the final rule, R18-9-D820(A)(1), has been updated to refer to an AWP permit or AWP demonstration permit, explicitly: "The Department shall publish a notice of preliminary decision regarding the issuance or denial of a significant amendment or a final permit determination related to an AWP permit or AWP demonstration permit on its website."

Comment 71: Local Government

We support comprehensive initial and on-going (periodic) source water (wastewater) characterization. We do not support allowing pilot or full-scale demonstrations to commence before initial source water characterizations have been completed and before comprehensive and complete testing objectives have been identified and accepted by ADEQ. Wording at R18-9-C815(B)(4) implies that pilot or full scale demonstration may commence before the initial source water characterization is complete which is equivalent to having an improperly conducted test, and/or a situation with insufficient oversight, and/or has the potential for allowing inappropriate design criteria to be implemented. We support the language at R18-9-C815(E) which allows the director to deny AWP permits where piloting was improperly conducted or insufficient to demonstrate compliance.

ADEQ Response 71:

ADEQ appreciates the comment. The language in R18-9-C815(B)(4) has been updated between the proposed rules and the final rules for clarity. Under no circumstances does the AWP program allow for delivery of advanced treated water or distribution of finished water before permitting pursuant to R18-9-C816. R18-9-C815(B)(4)(a) requires the Initial Source Water Characterization (ISWC) Report be submitted for review & comment as a component of the Pilot Study Plan by Non-National Pretreatment Program AWPRA applicants due to limited experience with the source water. Whereas, R18-9-C815(B)(4)(b) provides an allowance for National Pretreatment Program AWPRA applicants to forgo submission of the ISWC Report until submitting a permit application prepared pursuant to R18-9-C816, later in the process.

Credit to the experience National Pretreatment Program AWPRAs have with their source water is the reason for this disparity. Ultimately, both categories of applicants will have to submit the ISWC Report, the Pilot Study Plan and Report, and all permit application requirements for review. AWPRAs who elect to forgo submitting an ISWC report as part of the Pilot Study Plan or

who elect to conduct the pilot and full scale verification at the same time build their facilities at risk of permit application denial, should the application information show a failure to meet standards, faulty treatment train design, or any other inadequacy.

Comment 72: Local Government

We support language allowing the ADEQ director to deny an AWP permit based on non-compliance with the ISWC requirement, or improperly conducted, or in cases of insufficient data.

ADEQ Response 72:

ADEQ appreciates the comment.

Comment 73: Local Government

We support language in R18-9-804(I)(3)(F) and R18-9-823(B)(3) and (C)(2) that the ADEQ director may terminate an AWP permit in cases of false information or misleading reports.

ADEQ Response 73:

ADEQ appreciates the comment.

Comment 74: Local Government

We are supportive of the R18-9-E826(F) requirement for AWP permit applicants to select optimized demonstration (pilot) and full-scale AWTF treatment trains based on Tier 1 MCLs, a generated Tier 2 list, and a pass-through interference list.

ADEQ Response 74:

ADEQ appreciates the comment.

Comment 75: Local Government

We are supportive of the requirement in R18-9-E826(F)(2) for AWP permit applicants to control chemicals at the source which are not sufficiently treatable in the selected AWT treatment train.

ADEQ Response 75:

ADEQ appreciates the comment.

Comment 76: Local Government

We support demonstration-scale and full-scale verification requirements proposed in the rules.

ADEQ Response 76:

ADEQ appreciates the comment.

Comment 77: Local Government

We previously commented on the definition of "Pilot", which has now changed in a manner that warrants additional comment. Pilot also means full-scale [R18-9-C815(A)(1)] and full-scale can now occur in lieu of piloting. The response to Draft Rule Comment #89 is "'Full scale' means the complete implementation and operation of an AWP system that is designed to treat

wastewater to finished water standards and to meet the potable water demand of the community." This wording, along with other Initial Source Water Characterization (ISWC) provisions [R18-9-C815(B)(4)], appears to allow the permitting of a full-scale system before all chemicals of concern are identified in a ISWC and before all pilot objectives are known or before process capabilities have been verified over sufficient time. Such definitions and approach, made in the name of flexibility, would be an abdication of the responsibility to assure public health objectives and would be especially so if Tier 2 and Tier 3 chemical contaminant provisions of the Draft and Pre-publication rules were minimized or eliminated.

ADEQ Response 77:

ADEQ appreciates the comment. While the AWP program is designed to allow flexibility where appropriate, the program protects public health where appropriate as well. Under no circumstances does the AWP program allow for delivery of advanced treated water or distribution of finished water before an AWP permit is issued pursuant to R18-9-C816. Concerning Piloting and Full Scale Verification, the final rule language under both the pilot rule, R18-9-C815, and the full-scale verification rule, R18-9-F835, provide a pathway for an AWPRA applicant that builds their pilot facility to full-scale to submit a "Hybrid Pilot and Full-Scale Verification Plan" to the Department, following a consultation. Under the "Hybrid Pilot and Full-Scale Verification Plan", the AWPRA and ADEQ will work collaboratively to create a combined approach which fulfills the intention and purpose of both piloting and full-scale verification. Additionally, please note that the definition of "full scale" at R18-9-A801(46) does not, in and of itself, constitute permitted authority. Also, the language in R18-9-C815(B)(4) has been updated between the proposed rules and the final rules for clarity. Please note that the Tier 2 and 3 chemical controls continue to be in place in the final rule and are required for all AWP permits.

Comment 78: Utility

Full scale verification should follow current commissioning timelines used for treatment plants. Requiring a one-year Full Scale Verification is impractical and not the best use of highly treated water. The industry standard for bringing a full-scale drinking water plant online, including treatment plants for Superfund sites, is generally 60-90 days. The required one-year Pilot Study already covers the seasonal water quality variations in source water. The primary goal of commissioning time for full-scale is to prove the equipment is functioning as designed as the treatment has already been validated in the pilot. In addition, not applying this very expensive highly treated water to the best beneficial use would be a poor public message especially considering the drought and shortage conditions.

ADEQ Response 78:

ADEQ appreciates the comment. There are many places in the AWP rule where the requirements are more stringent than existing federal requirements. The commissioning timeline is one such instance in which the current requirements are insufficient to adequately protect human health, under the rigorous standards of performance within the AWP program. Current commissioning

timelines within the Safe Drinking Water Act (SDWA), as the commenter refers to here, assume a surface water or groundwater source. The federal framework does not contemplate the use of treated wastewater as a source. The AWP requirement was determined upon critical consideration of this particular source. The one-year requirement in the rule intends to account for seasonal variability throughout a full year of facility operation, with the understanding that drinking water demand and treatment fluctuate over time and treated wastewater presents unique source water challenges not present at other drinking water treatment facilities.

Furthermore, the commenter alludes to redundant requirements in the program due to the piloting and the full-scale verification. This redundancy is no longer the only pathway for an AWP applicant (*See* R18-9-C815(A) and R18-9-F835(A)). The final rule language under both the pilot rule, R18-9-C815, and full-scale verification rule, R18-9-F835, provides a pathway for an AWPRA applicant that builds their pilot facility to full-scale to submit a "Hybrid Pilot and Full-Scale Verification Plan" to the Department, following a consultation. Under the "Hybrid Pilot and Full-Scale Verification Plan", the AWPRA and ADEQ will work collaboratively to create a combined approach which fulfills the intention and purpose of both piloting and full-scale verification, while acknowledging the need to avoid costly and repetitive work. There is no requirement mandating an applicant to perform both piloting and full-scale verification on the same treatment train, and the rule, in fact, accounts for flexibility in this area.

Finally, the rule does not preclude an applicant from beneficially using the advanced treated water produced at either the pilot or full-scale verification stage. An AWPRA can determine the best use for that water, including recharge or replenishment of water sources. The restriction in the rule is for delivering or distributing the water for public consumption. All other methods remain available for the AWPRA.

Comment 79: Local Government

We understand that counties will not be delegated authority with regard to the AWP program and that this separation is clear with regard to future AWTF facilities. Based on the response to Draft Rule Comment #136, we understand that WRFs that deliver treated wastewater to AWP facilities may be subject to future delegation agreements. Based on the response to Draft Rule Comment #123, it is not clear from the proposed rules whether existing, nor proposed drinking water treatment facilities that receive AWP treated water would remain delegated to certain Arizona counties or be addressed in a future delegation agreement. Based on the response to Draft Rule Comment #103, AWPRA facilities deemed part of a PWS and are defined as a DWTF in the proposed rules may remain delegated or will be addressed in a future delegation agreement.

ADEQ Response 79:

ADEQ appreciates the comment. Delegation agreements will be reviewed at the same time an AWPRA applicant begins pursuing an AWP permit. This will likely occur starting with the pre-application meeting under R18-9-C812 and will continue throughout the process, culminating in the permit issuance itself under R18-9-C816.

Comment 80: Local Government

We are in full support of the definition of "Treatment Barrier" as proposed. Our understanding is that current definition, if applied to a UV/AOP process, would require constant operation at the design dose in order to receive credit for contaminant removal. It is our further understanding that vendor algorithms or features that enable power reduction based on flow rate or contaminant concentration or surrogates such as UV transmittance or TOC would not meet this definition, and that this type of feature is inappropriate to meet the concept of a constant operation. The unacceptability of this vendor promoted feature should be addressed in rule and/or a guidance document. The response to Draft Rule Comment #77 indicated that R18-9-C816(G)(4) was modified to that end - thank you. However, this response does not fully address the issue. UV/AOP processes operating at less than full power will be in constant operation but will not produce maximum pathogen LRV or design levels of chemical contaminant removal. How will ADEQ assign treatment performance credits to UV/AOP when systems are operated at less than full power and when contaminant destruction rate constants are kept proprietary?

ADEQ Response 80:

ADEQ appreciates the comment. All operational conditions for AOP will be verified during validation (*see* R18-9-F832(D)(5)). Based on that study, credits will be assigned or not assigned, accordingly. Also, contaminant destruction rate constants are required in the application for permit. Proprietary information may be requested to be kept confidential in accordance with R18-9-B806(D).

Comment 81: Local Government

We understand that seven (7) guidance documents pertaining to design, implementation and maintenance of AWP systems are being prepared. We request that stakeholders and the public be allowed to comment on these guidance documents. It is not clear whether guidance documents will have additional process criteria. Minimum requirements need to be established in rule. Based on the proposed rules, there is a great need for additional and specific design criteria. The proposed rules are silent on unit process redundancy and reliability requirements. The public would benefit from published unit process criteria for each type of treatment plant situation; raw water augmentation, treated water augmentation, entry into finished water reservoirs (if permissible), scalping scenarios, etc.

ADEQ Response 81:

ADEQ appreciates the comment. ADEQ plans to involve the public in the development of the guidance documents, as is typical for ADEQ's development and publication of guidance outside of rule. The AWP regulations are designed to provide the necessary, minimum requirements under the program, while leaving flexibility to the AWPRA where possible. The Minimum Design Criteria rule states, "[i]n addition to the requirements of this section, treatment process configurations shall be designed using good engineering practices. Treatment process configurations shall be approved if the AWPRA applicant can demonstrate that the treatment process configuration meets or exceeds the minimum design criteria in this section" (R18-9-F832(F)) and "ADEQ shall

develop and make available guidance on designing treatment process configurations…[additionally,]treatment process configurations designed in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices" (R18-9-F832(F)(1)-(2)).

Pursuant to the rule, all AWPRAs must follow the minimum requirements in rule, and shall additionally design treatment process configurations using "good engineering practices", defined as "a set of principles, guidelines, and standards that engineers follow to ensure their work meets high levels of quality, safety, efficiency and reliability. The principles, guidelines, and standards in an ADEQ-issued AWP guidance document constitute good engineering practice" (R18-9-A801(47)).

Therefore, the guidance documents, once released, will present more information on one possible pathway to achieving "good engineering practices" in the design of treatment process configurations, but is not the only way an AWPRA may do so. This same concept applies to other elements under the AWP program such as enhanced source control, piloting, etc. Because the elements in the guidance documents will not be requirements, it is not necessary to incorporate voluminous detail in the rule. Instead, ADEQ elects to enable AWPRAs to make site-specific decisions that best meets the needs of their projects.

Comment 82: Local Government

Previously, we commented that the AWP annual report in R18-9-E831 should be attached to the Public Water System Consumer Confidence Report (CCR). The response to Draft Rule Comment #128 indicated that a change to the proposed rules was unnecessary and that CCR requirements require "all these components to be included". We are requesting that clarity be added to the proposed rules since all that would be required is for someone to report "treated wastewater", or AWP product water as a source. Specifically, the public reporting requirement should say more than "an AWP source is being introduced". Ideally, the constituents analyzed for and constituents remaining should be reported for the AWP product water regardless if introduced as a source, or introduced to an existing DWTF finished water reservoir, or introduced directly to a distribution system. Each AWPRA agency member should be required to publicly report since the AWPRA agency is not a public water system subject to SDWA requirements.

ADEQ Response 82:

ADEQ appreciates the comment. It is important to understand that the AWP program is not designed to supplant the safeguards built into the Safe Drinking Water Act (SDWA). The AWP Annual Report, as defined in R18-9-E831, is designed to be a report between the AWPRA and ADEQ, not the AWPRA and the public. The AWP program rules allow Advanced Water Treatment Facilities (AWTFs) to create two types of product water, "advanced treated water" or "finished water". "Advanced treated water" is defined at proposed rule R18-9-A801(5). It is the product of an AWTF which can then be delivered to an existing Public Water System (PWS) or Drinking Water Treatment Facility (DWTF) as a source water under SDWA regulation. AWP "Finished water" is defined at R18-9-A801(45), which can be introduced directly into a distribution system or served for human consumption without

additional treatment, except for measures required to uphold water quality within the distribution system. SDWA - CCR reporting is required in both cases. Due to this fact, the AWP program does not have a requirement for AWPRAs to create an AWP-specific CCR, as this would be redundant. SDWA - CCRs are required to be published annually for systems under 10,000 people and a future CCR rule will require these be published twice a year for systems over 10,000 people. A water system must include a discussion of source water and water sourced from an AWPRA should be included in the CCRs as a source water. An AWPRA may choose to report the characterization of the treated wastewater influent or the advanced treated water but is not required to do so under this program.

Comment 83: Local Government

The requirement to have three diverse and separate treatment processes, including AOP and one (undefined) physical separation process, is presented in rule at R18-9-F832(C). Please identify the physical separation processes that would satisfy this requirement.

ADEQ Response 83:

ADEQ appreciates the comment. Acceptable physical separation processes in an AWP treatment train could include reverse osmosis, microfiltration, ultrafiltration, nanofiltration, coagulation, flocculation and others. A decision on which physical separation process is best left for the AWPRA and may be made in consultation with ADEQ during the application process. Additionally, please note AWP rule R18-9-C812 which provides for a pre-application conference with ADEQ at the request of the AWPRA applicant.

Comment 84: Local Government

Consider adding a requirement under the Minimum Design Requirements rule (R18-9-F832(D)(5)) that destruction rate constants specific to the reactor being proposed are documented in the AOP validation report. Without such reporting, it is not possible for a regulatory oversight agency to properly evaluate an AOP process for conditions other than that of the test conditions.

ADEQ Response 84:

ADEQ appreciates the comment. The Advanced Oxidation Process (AOP) approach presented in the rule is based on sound literature reviews that are accepted in three other states with direct potable reuse programs. The rule requires all AOPs achieve the 0.5-log reduction for 1,4-dioxane as a performance benchmark (i.e., action level) unless an alternative is used. This specific 1,4-dioxane target is based on current findings that demonstrated quality and quantity of specific trace organics removal when 0.5-log reduction of 1,4-dioxane performance is achieved. An alternative approach to demonstrating AOP functionality may be used as long as the approach shows the removal of constituents of concern similar to the initial 1,4-dioxane benchmark study (*see* R18-9-F832(D)(4)(b)).

In addition to performance demonstration, all AOP designs must address the major challenges of AOP processes such as scavenging of hydroxyl radicals by carbonates, bicarbonates, nitrites, nitrate, bromides and NOM, pH, and UV light absorption. The AOP's

efficacy in significantly reducing an approved indicator compound must be validated through pilot tests. These indicators should be ADEQ-approved and resistant to elimination through other treatment methods, including biological degradation, adsorption processes, RO/NF, and conventional oxidation techniques such as hypochlorite, chloramines, permanganate, or chlorine dioxide (e.g., 1,4-Dioxane). Each pilot study should involve spiking and measuring indicator compound removal (*see* R18-9-F832(D)(4)(b)(ii)). ADEQ expects spiking 1,4-Dioxane (i.e., reference compound) and calculating removal percentages to compare with other widely accepted advanced oxidation standards.

Comment 85: Local Government

R18-9-F832(D)(9)(d), pertaining to SCADA communications, appears out of place and is not related to subsections (9)(a), (9)(b), or (9)(c), which pertain to cross connection control.

ADEQ Response 85:

ADEQ appreciates the comment. The placement of the SCADA subsection at R18-9-F832(D)(9)(d) is not out of place as the requirement of the subsection (to develop and implement cross-connection control measures properly) includes a plan describing how the Advanced Water Treatment Facility (AWTF) SCADA system communicates and interoperates with the SCADA systems of all of the AWPRA's relevant facilities. In other words, a requirement to have all relevant AWPRA SCADA systems interconnect is, generally, a cross connection control measure.

Comment 86: Local Government

Total Organic Carbon (TOC) Management: R18-9-F834 proposes two approaches for management of TOC in AWTF product water and appear to establish a TOC limit of 2 mg/L or a site-specific value to control unregulated candidate (CCL5) disinfection by-products but makes no specific mention of whether compliance with existing DBP regulations is required. Assuming that compliance with all current and future DBP regulations is required, this approach seems to create less stringent alternatives to the conventional DWTF approach that TOC and other constituents must be removed (to an appropriate degree) so that all applicable current and future DBP regulations are complied with to the degree necessary for the water ages occurring.

a. Please confirm that DWTFs receiving Advanced Treated Water (ATW) as a source (raw water augmentation) would still need to demonstrate TOC reduction (for any combination of sources) to comply with the Stage 1 DBP rule in the SDWA that requires 15% to 50% TOC reduction, depending on alkalinity.

b. Please confirm that DWTFs receiving ATW into an existing finished water reservoir are exempt from TOC reduction requirements of the stage 1 DBP rules but must still comply with Stage 2 and future DBP regulations.

c. Please confirm that AWTFs contributing "finished water" directly to the distribution system (treated water augmentation) are allowed to have TOC levels at any concentration that does not cause DBP non-compliance, current or future, in the distribution system.

ADEQ Response 86:

ADEQ appreciates the comment. The commenter mentions that the Total Organic Carbon (TOC) Management rule or TOC rule "...makes no specific mention of whether compliance with existing DBP regulations is required…". Addressing that statement, and the rest of the comment first, it is important to understand that the TOC rule in the AWP program is program-specific and a separate, stand-alone requirement to any existing disinfection byproduct (DBP) regulations in the Safe Drinking Water Act (SDWA). In the AWP setting, DBP regulations in the SDWA will continue to be required alongside the AWP TOC regulations. In fact, mention and utilization of DBPs in the TOC rule is only in regards to the site-specific approach procedures that are, in and of themselves, only proposed to derive TOC values. Please note that the TOC rule has been updated for clarity between the proposed and the final rules. Below is an explanation of the TOC rule:

This rule requires an applicant or a permittee to manage TOC in one of two ways. The first approach ("Standard Approach") requires the applicant or permittee to maintain a limit of 2 mg/L in the advanced treated water. This approach requires no site-specific TOC sampling. The second approach ("Site-Specific Approach") requires the applicant / permittee conduct two procedures, deriving two preliminary TOC values, followed by a comparison of those values to, ascertaining the lower value of the two. This value becomes the site-specific TOC value. The two procedures are as follows:

(1) The "Trace Organics Removal Procedure" establishes a preliminary TOC value through the TOC sampling and characterizing of the original drinking water sources that feed water consumption in a service area that is then collected in sewersheds and routed to, and treated by, a WRF that is a source of treated wastewater for an AWTF. A preliminary TOC value for the Trace Organics Removal Procedure is derived through this process and is detailed in rule at R18-9-F834(C)(1).

(2) The "DBP Precursor Reduction Procedure" establishes a preliminary TOC value through conducting and then comparing two DBP and TOC - based sampling methods (*see* (a) and (b) below). Those methods (in and of themselves) result in two TOC values. The lower of the two values becomes the preliminary TOC value for the DBP Precursor Reduction Procedure. This is detailed further in rule at R18-9-F834(C)(2).

(a) Method 5710 C "Simulated Distribution System Trihalomethanes" (SDS-THM) establishes a TOC value in the advanced treated water. The TOC value is derived by both conducting Standard Method 5710 C and sampling for TOC in the advanced treated water monthly for one year. This results in 12 Total Trihalomethane (THM) values and 12 TOC values. The TOC values are then averaged. Likewise, the THM values are averaged. Thereafter, the THM average is compared to the corresponding Safe Drinking Water Act - Maximum Contaminant Level (MCL) for THM. If the average THM is below the THM MCL, then the *average TOC* for that year becomes the TOC value associated with Method 5710 C - SDS-THM. If the average THM is at or above the THM MCL, then the AWPRA may not use the *average TOC* for that year as the TOC value associated with Method 5710 C - SDS-THM. However, the AWPRA may adjust components of their operation and repeat the sampling above

until a 12-month average THM concentration in the advanced treated water is below the corresponding THM MCL. This method is detailed further in rule at R18-9-F834(C)(2)(a).

(b) "CCL5 - DBP Sampling Method" also establishes a TOC value in the advanced treated water. The TOC value is derived through monthly sampling of the advanced treated water for one year of both:

- TOC, and
- only the DBPs that exist in both EPA's "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables" (HA Table) (currently, that includes only Formaldehyde (CAS No. 50-00-0) and N-Nitrosodimethylamine (NDMA) (CAS No. 65-75-9)).

If the average sampling results for either DBP (Formaldehyde or NDMA) are lower than the corresponding health advisory in EPA's HA Table, then the *average TOC* for that year becomes the TOC value associated with Method CCL5 - DBP. If the average sampling results for either DBP (Formaldehyde or NDMA) are at or above the corresponding health advisory in EPA's HA Table, then the AWPRA may not use the *average TOC* for that year as the TOC value associated with Method CCL5 - DBP. However, the AWPRA may adjust components of their operation and repeat the sampling above until any one DBP (Formaldehyde or NDMA) is below the corresponding health advisory in EPA's HA Table. This method is detailed further in rule at R18-9-F834(C)(2)(c).

Thereafter, the applicant or permittee determines the lower of the two TOC values associated with Method 5710 C - SDS-THM & Method CCL5 - DBP (listed as "(2)(a)" and "(2)(b)" above, respectively). The lower TOC value becomes the preliminary TOC value for the DBP Precursor Reduction Procedure (listed as "(2)" above) (*See* R18-9-F834(C)(2)(d) for the corresponding rule language).

Then, the applicant \ permittee determines which of the two preliminary TOC values (from the Trace Organics Removal Procedure and the DBP Precursor Reduction Procedure, listed as "(1)" and "(2)" above) is lower. That value becomes the AWPRA's site-specific TOC Limit (*See* R18-9-F834(C)(3) for the corresponding rule language).

Upon issuance of a permit and AWTF operation, a permittee may switch between the two TOC Management approaches (Standard or Site-Specific) each calendar year (*see* R18-9-F834(A) for the corresponding rule language).

Also of note, ADEQ plans to, in the future, update the TOC rule when new versions of "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables" are established. At that time, ADEQ would simultaneously update the DBPs to be sampled pursuant to R18-9-F834(C)(2)(c)(i).

13. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

There are no other matters prescribed by statute applicable specifically to ADEQ or this specific rulemaking.

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

Yes, this rulemaking establishes the Advanced Water Purification regulatory program, which includes issuing individual permits, pursuant to A.R.S. § 49-211. While the product (advanced treated water or finished water) of an Advanced Water Purification regulatory program facility is substantially the same, the facilities, activities and practices regulated by the program will be substantially different in nature due to the treated wastewater source, a multitude of viable technological process configurations, a swift pace of technological progress in the field and the custom nature of the regulated parties and their circumstances. Moreover, general permits are not "technically feasible" for the Advanced Water Purification regulatory program under A.R.S. § 41-1037(A)(3), and not used in the program.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

While the Safe Drinking Water Act (SDWA) (40 USC § 300f *et seq.*) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated wastewater" (*see* R18-9-A801) as a source, which is the subject of this final rule. In fact, SDWA only contemplates surface and ground water as sources for public water systems. Some Advanced Water Purification facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP program.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

Not Applicable.

14. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

ARTICLE 7. USE OF RECYCLED WATER

PART A. GENERAL PROVISIONS

Section

R18-9-A701. Definitions

~~1. "Advanced reclaimed water treatment facility" means a facility that treats and purifies Class A+ or Class B+ reclaimed water to produce potable water suitable for distribution for human consumption. R18-9-B702(B) does not apply to an advanced reclaimed water treatment facility. Potable water produced by an advanced reclaimed water treatment facility is not reclaimed water.~~

~~2~~1. "Direct reuse" means the beneficial use of reclaimed water for a purpose allowed by this Article. The following is not a direct reuse of reclaimed water:

a. The use of water subsequent to its discharge under the conditions of a National or Arizona Pollutant Discharge Elimination System permit;

b. The use of water subsequent to discharge under the conditions of an Aquifer Protection Permit issued under 18 A.A.C. 9, Articles 1 through 3;

c. The use of industrial wastewater, reclaimed water, or both, in a workplace subject to a federal program that protects workers from workplace exposures~~; or~~

~~d. The use of potable water produced by an advanced reclaimed water treatment facility~~.

~~3~~2. "Direct reuse site" means an area permitted for the application or impoundment of reclaimed water. An impoundment operated for disposal under an Aquifer Protection Permit is not a direct reuse site.

~~4~~3. "End user" means a person who directly reuses reclaimed water meeting the standards for Classes A+, A, B+, B, and C, established under 18 A.A.C. 11, Article 3.

~~5~~4. "Gray water" means wastewater that has been collected separately from a sewage flow and that originates from a clothes washer or a bathroom tub, shower or sink but that does not include wastewater from a kitchen sink, dishwasher or toilet. A.R.S. § 49-201(18).

~~6~~5. "Industrial wastewater" means wastewater generated from an industrial process.

~~7~~6. "Irrigation" means the beneficial use of water or reclaimed water, or both, for growing crops, turf, or silviculture, or for landscaping.

~~8~~7. "Open access" means access to reclaimed water by the general public is uncontrolled.

~~9~~8. "Open water conveyance" means any constructed open waterway, including canals and laterals, that transports reclaimed water from a sewage treatment facility to a reclaimed water blending facility or from a sewage treatment facility or reclaimed water blending facility to the point of land application or end use. An open water conveyance does not include waters of the United States.

~~10~~9. "Pipeline conveyance" means any system of pipelines that transports reclaimed water from a sewage treatment facility to a reclaimed water blending facility or from a sewage treatment facility or reclaimed water blending facility to the point of land application or end use.

~~11~~10."Reclaimed water" means water that has been treated or processed by a wastewater treatment plant or an on-site wastewater treatment facility. A.R.S. § 49-201(32).

~~12~~11."Reclaimed water agent" means a person who holds a permit to distribute reclaimed water to more than one end user.

~~13~~12."Reclaimed water blending facility" means an installation or method of operation that receives reclaimed water from a sewage treatment facility or other reclaimed water blending facility classified to produce Class C or better reclaimed water and blends it with other water so that the produced water may be used for a higher-class purpose listed in 18 A.A.C. 11, Article 3, Table A.

~~14~~13."Recycled water" means a processed water that originated as a waste or discarded water, including reclaimed water and gray water, for which the Department has designated water quality specifications to allow the water to be used as a supply.

~~15~~14."Restricted access" means that access to reclaimed water by the general public is controlled.

~~16~~15."Sewage Treatment Facility" means a sewage treatment facility as defined in 18 A.A.C. 9, Article 1.

PART B. RECLAIMED WATER

Section

R18-9-B702. General Requirements for Reclaimed Water

A. No Change.

B. No Change.

C. No Change.

D. No Change.

E. No Change.

F. No Change.

G. No Change.

H. Prohibited activities.

1. Irrigating with untreated sewage;
2. Providing water for human consumption from a reclaimed water source ~~except as allowed in Part E of this Article~~, except as permitted under Article 8 of this Chapter.
3. Providing or using reclaimed water for any of the following activities:
    a. Direct reuse for swimming, wind surfing, water skiing, or other full-immersion water activity with a potential of ingestion; or
    b. Direct reuse for evaporative cooling or misting.
4. Misapplying reclaimed water for any of the following reasons:
    a. Application of a stated class of reclaimed water of lesser quality than allowed by this Article for the type of direct reuse application;
    b. Application of reclaimed water to any area other than a direct reuse site; or
    c. Allowing runoff of reclaimed water or reclaimed water mixed with stormwater from a direct reuse site, except for:
        i. ~~agricultural~~ Agricultural return flow directed onto an adjacent field or returned to an open water conveyance; or
        ii. ~~a~~ A discharge authorized by an individual or general NPDES or AZPDES permit.

I. No Change.

J. No Change.

K. No Change.

~~PART E. PURIFIED WATER FOR POTABLE USE~~

Section

~~**R18-9-E701. Recycled Water Individual Permit For An Advanced Reclaimed Water Treatment Facility**~~

~~**A.** An application for a Recycled Water Individual Permit for an Advanced Reclaimed Water Treatment Facility must be submitted to the Department according to the requirements in R18-9-A703, as applicable.~~

~~**B.** Safe Drinking Water Act. For purposes of Safe Drinking Water Act requirements, water produced by an Advanced Reclaimed Water Treatment Facility shall be considered surface water for purposes of compliance with Title 18, Chapter 4 of the Arizona Administrative Code. Nothing in this Section exempts an applicable facility from Safe Drinking Water Act requirements.~~

~~**C.** Design Report. In addition to the information required by subsection (A), the applicant shall submit a design report for the Advanced Reclaimed Water Treatment Facility according to a form prescribed by the Department and certified by an Arizona-registered professional engineer. The design report must include the following information:~~

~~1. Characterization of source water quantity and quality, including:~~

~~a. Average and anticipated minimum and maximum source water flows to the facility;~~

~~b. Concentrations of the source water's physical, microbiological, and chemical constituents regulated for drinking water Maximum Contaminant Levels under the Safe Drinking Water Act and which the Department determines are appropriate for the particular facility and source water;~~

~~c. Description and concentrations of constituents in the source water used for unit treatment process monitoring and assessment of unit treatment process efficacy, and~~

~~d. A list of unregulated microbial and chemical constituents and corresponding concentrations in the source water a facility proposes to monitor in order to assess the treatment effectiveness of the overall treatment train. The particular constituents will depend on consideration of factors, such as:~~

~~i. Occurrence of the constituent in source and local waters,~~

~~ii. Availability of standardized laboratory methods for quantification of the constituent,~~

~~iii. Usefulness as representatives of or surrogates for larger classes of constituents, and~~

~~iv. Availability of toxicity data for the constituent.~~

2. ~~Description of, and results from, the pilot water treatment system for the facility or of analogous systems where comparable treatment components are demonstrated as appropriate for treating the particular characteristics of the applicant's proposed source water;~~
3. ~~Identification and description of the technologies, processes, methodologies, and process control monitoring to be employed for microbial control;~~
4. ~~Logarithmic reduction targets for microbial control, to ensure the product water is free of pathogens and suitable for potable use;~~
5. ~~Identification and description of technologies, processes, methodologies and process control monitoring for chemical control;~~
6. ~~Plan for monitoring the product water for public health protection;~~
7. ~~Commissioning and startup plan, including preoperational and startup testing and monitoring, expected timeframe for meeting full operational performance, and any other special startup condition meriting consideration in the individual permit;~~
8. ~~Operation and maintenance plan including corrective actions for out-of-range monitoring results and contingencies for non-compliant water;~~
9. ~~Operator training plan; and~~
10. ~~Documentation of technical, financial, and management capability.~~

ARTICLE 8. ADVANCED WATER PURIFICATION

PART A. GENERAL PROVISIONS

R18-9-A801. Definitions

In addition to the definitions in A.R.S. § 49-201, the following terms apply to this Article:

1. "Action level" means a value or criterion established in an Advanced Water Purification (AWP) permit at a critical control point that, when exceeded, triggers a required response or action to prevent a potentially hazardous event and will involve actions or responses such as additional monitoring, treatment adjustments, public notification or other corrective responses or actions.
2. "Acute exposure threats" means the increased imminent risk of adverse health effects, including infectious diseases and toxic effects from short-term exposures to contaminants in water which triggers public notice pursuant to A.A.C. R18-4-119, which incorporates 40 CFR §141.201 by reference.
3. "ADEQ" or "Department" means Arizona Department of Environmental Quality.

4. "Advanced Oxidation Process" or "AOP" means a set of chemical treatment processes whereby oxidation of organic contaminants occurs on a molecular level through reactions with hydroxyl radicals or similarly aggressive radical oxidant species.
5. "Advanced treated water" means water produced by an advanced water treatment facility (AWTF) and can be from one or more AWTFs.
6. "Advanced Water Purification" or "AWP" means the treatment or processing of treated wastewater to advanced treated water standards for the purpose of delivery to a drinking water treatment facility or a drinking water distribution system.
7. "Advanced Water Purification Responsible Agency" or "AWPRA" means the applicant or permittee, comprising one or more AWPRA Partners, responsible for compliance with the requirements of the AWP program for a particular AWP project and formed pursuant to R18-9-B805. An AWPRA must be a "person" under A.R.S. § 49-201(33).
8. "Advanced Water Purification Responsible Agency Partner" or "AWPRA Partner" means any entity that collects or provides treated wastewater to the AWP project, performs wastewater source control or treatment pursuant to this Article, or utilizes AWP project water as a source for delivery to a drinking water distribution system.
9. "Advanced Water Purification project" or "AWP project" means all facilities related to the advanced treatment of treated wastewater to drinking water standards operating under an AWP permit or demonstration permit.
10. "AWP project treatment train" means a treatment train designed to meet the requirements contained in this Article. In addition to the advanced water treatment facility (AWTF), portions of the water reclamation facility or drinking water treatment facility can be part of an AWP project treatment train.
11. "AWPRA facility" or "facility" means a drinking water treatment facility, advanced water treatment facility (AWTF), collection system, or wastewater treatment plant involved in the production of advanced treated water or finished water under this Article.
12. "Advanced Water Treatment Facility" or "AWTF" means a facility where treated wastewater is treated pursuant to the requirements of this article.
13. "Alert level" means a value or criterion established in an AWP permit at a critical control point that, when exceeded, alerts an operator that a potential problem may require a response.
14. "Amendment" means a change to the permit language resulting from a modification event.
15. "Aquifer Protection Permit" or "APP" means an individual permit or a general permit issued under A.R.S. §§ 49-203, 49-241 through 49-252, and Articles 1, 2, and 3 of this Chapter.
16. "AWP" means Advanced Water Purification (*See* R18-9-A801(6)).

17. "Barrier" means a measure (technical, operational or managerial) implemented to control microbial or chemical constituents in advanced treated water.
18. "Best Management Practices" or "Best Practices" means a set of principles, guidelines and standards that an AWPRA follows to ensure high levels of quality, safety, efficiency and reliability. The principles, guidelines and standards in an AWP guidance document constitute Best Management Practice or Best Practice.
19. "Bioassay" means tests performed using live cell cultures or mixtures of cellular components in which the potency of a chemical or water concentrate is tested based on its effect on a measurable constituent, such as inhibition or the induction of a response (including carcinogenicity and mutagenicity). Bioassays can be used to measure synergistic, additive, and antagonistic interactions between compounds that may be present in a mixture.
20. "Blending" means the mixing of advanced treated water with another water source that will result in raw water augmentation or treated water augmentation directly to the distribution system. Blending does not apply to an Engineered Storage Buffer where storage of only advanced treated water takes place.
21. "Challenge test" means a study comparing a pathogen, surrogate parameter, or indicator compound concentration between the influent and effluent of a treatment process to determine the removal capacity of the treatment process. The concentration in the influent must be high enough to ensure that a measurable concentration is detected in the effluent (i.e., filtrate detection limit).
22. "Chemical" means any substance, used in or produced by a reaction involving changes to atoms or molecules, that has a defined composition and which is either naturally occurring or manufactured.
23. "Chemical peak" means an abnormal increase in the level of a chemical that represents a potential human health hazard that is the result of intentional or unintentional illicit discharges of chemicals to the sewershed. Chemical peaks are different from normal facility variation in water quality.
24. "Compliance schedule" means a list of required items assigned by the Department to the Permittee to be completed in the AWP permit.
25. "Constituent of Concern" means a potentially harmful or difficult to treat substance that could cause treatment interference, pass-through, or a violation of a treatment technique requirement, action level or Maximum Contaminant Level in the advanced treated water or finished water. Constituents of concern include Tiers 1, 2, and 3 chemicals.
26. "Constituent" means any physical, chemical, biological, or radiological substance or matter found in water and/or wastewater.
27. "Continuous online analyzers" means a monitoring sensor or device that monitors continuously or in real time (intervals of 15 minutes or less) and is positioned directly in the process flow or sample line to measure treatment performance.

28. “Critical Control Point” means a point in the treatment train that is specifically designed to reduce, prevent, or eliminate process failure, and for which controls exist to ensure the proper performance of that process, verified via monitoring.
29. “Demonstration permit” means an AWP permit that does not include distribution of finished water to drinking water consumers.
30. “Department” means the Arizona Department of Environmental Quality.
31. “Direct integrity test” means a physical test applied to a membrane unit in order to identify and isolate integrity breaches, such as leaks that could result in contamination of the filtrate.
32. “Director” means the Director of the Arizona Department of Environmental Quality.
33. “Disinfection treatment process” means a treatment process that either physically or chemically eliminates or inactivates pathogenic microorganisms.
34. “Distribution” means the act of delivering finished water through a network of pipes or other constructed conveyances from a facility to a consumer for human consumption.
35. "Distribution system" means the infrastructure used to carry out distribution.
36. “Draft permit” means a preliminary draft of a permit upon which the Director has not yet made a final permit determination.
37. “Drinking Water Treatment Facility” means a water treatment facility that is designed and operated to meet the requirements of the Safe Drinking Water Act.
38. “Engineered Storage Buffer” means a storage facility used to provide retention time before advanced treated water is introduced into a drinking water treatment facility or distribution system.
39. “Enhanced Source Control” means a program that enables the AWPRA to prevent constituents of concern, including target chemicals, from negatively impacting the AWTF, or the water it produces, by controlling them at their source.
40. “Exceedance” means an increase in the concentration of a constituent of concern beyond an established level such as an MCL, alert level, or action level.
41. “Excursion” means a deviation from established water quality boundaries for a process or at any point in a treatment train.
42. “Failure” means a condition in which an excursion or loss of performance occurs in one or more of the unit processes that results in a treatment train to not meet a performance metric or deviate from an approved operational range for parameters, necessitating a shutdown of a specific train or the entire plant for compliance.
43. “Failure Response Time” means the maximum possible time from when a failure occurs in the treatment system to when the quality of the final product water is no longer affected by the failure. Failure response time is calculated as a sum of the sampling interval, sample turnaround time and system reaction time, with overall failure response time based on the treatment process with the highest individual failure response time.

44. "Filtration treatment process" means a treatment process that physically separates a constituent of concern from water.

45. "Finished water" or "finished drinking water" means water produced by an AWTF, or a drinking water treatment facility, and which is introduced into a distribution system or served for human consumption without additional treatment, except for measures required to uphold water quality within the distribution system.

46. "Full scale" means the complete implementation and operation of an AWP system that is designed to treat treated wastewater to advanced treated water or finished water standards and to meet the finished water demand of the community.

47. "Good engineering practice" means a set of principles, guidelines, and standards that engineers follow to ensure their work meets high levels of quality, safety, efficiency and reliability. The principles, guidelines, and standards in an ADEQ-issued AWP guidance document constitute good engineering practice.

48. "Health Advisory" or "HA" means an estimate of acceptable levels for a chemical substance in drinking water based on health effects information that is:

    a. Published by EPA;

    b. Established in credible peer-reviewed literature or state or Federal databases;

    c. Established by the Department; or

    d. Established by another state's drinking water program as a "notification level".

49. "Impactful non-domestic dischargers" means a non-domestic discharger that has been determined by the AWPRA to discharge in such a way that will or does significantly impact the AWPRA's treatment processes and may or does significantly impact public health. Such determinations are made through a significant impact analysis pursuant to R18-9-E824(C).

50. "Indicator compound" or "Indicator" or "Performance Based Indicator" means a chemical found in treated wastewater that serves as a representative substance for a particular group of trace organic compounds, embodying their physical, chemical, and biodegradation properties.

51. "Initial Source Water Characterization" or "ISWC" means baseline monitoring of chemicals and pathogens performed on the treated wastewater effluent of a Water Reclamation Facility pursuant to R18-9-C814.

52. "Interference" means a discharge which alone, or in conjunction with a discharge or discharges from other sources, both:

    a. inhibits or disrupts the Water Reclamation Facility or the Advanced Water Treatment Facility, and

    b. is the cause of a violation of any requirement of the AWP permit.

53. "Local limit" means a set of specific, local, relevant, and enforceable limits, control measures, and best management practices established to protect AWPRA Facilities from pass-through or interference that could result in a threat to public health.

54. "Log reduction value" means the measure of a treatment train's or a treatment process's ability to remove or inactivate microorganisms such as bacteria, protozoa and viruses. A log reduction value is the log reduction validated or credited for a treatment process or treatment train.
55. "Log reduction" means the logarithm base 10 of the ratio of the levels of a pathogenic organism or other contaminant before and after treatment or a reduction in the concentration of a contaminant or microorganism by a factor of 10. One log reduction corresponds to a 90-percent reduction from the original concentration.
56. "Maximum Contaminant Level" or "MCL" has the same meaning set forth in Title 18, Chapter 4, Article 1 of this Title.
57. "Modification" means a change or changes to the treatment train or operations or any other component that will result in a change in the water quality of any process, unit of operation or to the advanced treated water or finished water.
58. "Municipal wastewater" means wastewater that contains predominantly domestic waste and may include commercial and industrial waste.
59. "Non-domestic sources" means both industrial and commercial sources.
60. "National Pretreatment Program" or "NPP" means the federal program referred to by this name under the Clean Water Act that is meant to protect infrastructure and receiving waters to a fishable and swimmable standard. The NPP is designed to reduce conventional and toxic pollutant levels discharged by industries and other nondomestic wastewater sources into municipal sewer systems and into the environment. The National Pretreatment Program's implementing regulations are found at Title 40 of the Code of Federal Regulations, Parts 122, 123, 124, and 403 and chapter I, subchapter N.
61. "National Pretreatment Program AWPRA" or "NPP AWPRA" means an AWPRA subject to R18-9-C813(B).
62. "Non-National Pretreatment Program AWPRA" or "Non-NPP AWPRA" means an AWPRA subject to R18-9-C813(C).
63. "Off-specification water" or "off-spec water" means water that has a quality that does not meet standards such as drinking water MCLs or other AWP programmatic requirements such as standards associated with surrogates or indicators.
64. "Operational barrier" means a barrier in the form of measures, including operations and monitoring plans, failure and response plans, as well as operator training and certification.
65. "Operational parameter" means a measurable property used to characterize or partially characterize the operation of a treatment process and must confirm the treatment barriers are intact to ensure the process is meeting the water quality and pathogen/chemical removal goals.
66. "Original drinking water" means drinking water that was being distributed prior to the introduction of advanced treated water or finished water.
67. "Oxidized wastewater" means wastewater that is treated to a level beyond simple removal of floating and suspended solids and meets the secondary treatment levels as described in R18-9-B204(B)(1).

68. "Ozone with biologically active filtration" or "Ozone/BAC" means an ozonation process immediately followed by biologically activated carbon.
69. "Pass-through" means the occurrence of a constituent of concern exiting Water Reclamation Facilities or Advanced Water Treatment Facilities in quantities or concentrations that have a significant potential to have serious adverse public health effects or to cause a violation of a treatment technique requirement, an action level or an MCL in the advanced treated water or finished water.
70. "Pathogen" means a microorganism such as bacteria, virus, or protozoa that can cause human illness.
71. "Pilot Study" or "Pilot train" or "Pilot" means a preliminary study and treatment train, of any scale representative to the full-scale facility, which is conducted to evaluate the feasibility, duration, cost, adverse events, and to improve upon the study design prior to performance of a full-scale project.
72. "Potentially impactful non-domestic discharger" means a non-domestic discharger that has been determined by the AWPRA to pose a potential to adversely impact treatment processes or the public health or which otherwise must be identified and tracked by the AWPRA pursuant to R18-9-E824(B)(4).
73. "Product water" means water exiting a specific treatment process or a combination of treatment processes.
74. "Public water system" has the same definition as the one incorporated by reference at A.A.C. R18-4-103 (40 CFR 141.2).
75. "Quantitative Polymerase Chain Reaction" or "qPCR" means a PCR-based technique that couples amplification of a target DNA sequence with quantification of the concentration of that DNA species in the reaction.
76. "Raw wastewater" means wastewater that is entering a Water Reclamation Facility via a sewage collection system and which has not undergone any centralized treatment. For the purposes of pathogen log removal, raw wastewater means wastewater prior to any point in a wastewater treatment process that may be credited for disinfection.
77. "Raw water augmentation" means introducing advanced treated water into the raw water supply upstream of a drinking water treatment facility.
78. "Real time monitoring" or "online monitoring" means treatment performance monitoring using instruments directly in the process flow or sample line that occurs continuously or semi-continuously in intervals of 15 minutes or less.
79. "Recalcitrant Total Organic Carbon" or "rTOC" means the Total Organic Carbon (TOC) found in finished water, which once used or consumed becomes wastewater. rTOC is unlike anthropogenic TOC present in wastewater because it may not be effectively eliminated by the Water Reclamation Facility, which leaves it as a constituent of the TOC in the treated wastewater.
80. "Redundancy" means the use of multiple treatment barriers to attenuate the same type of constituent, so that if one barrier fails, performs inadequately, or is taken offline for maintenance, the overall system will still perform effectively, reducing risk.

81. "Reference Dose" or "RfD" means an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily oral exposure to the human population (including sensitive subgroups) that is likely to be without an appreciable risk of deleterious effects during a lifetime.
82. "Reference pathogens" means Enteric viruses (specifically norovirus), Giardia lamblia cysts, and Cryptosporidium oocysts.
83. "Reliability" means the ability of a treatment process or treatment train to consistently achieve the desired degree of treatment, based on its inherent redundancy, robustness, and resilience.
84. "Resilience" means the ability of a treatment train to adapt successfully and restore performance rapidly when failure occurs.
85. "Robustness" means the ability of an AWP system to address a broad variety of constituents and changes in the concentrations of the constituents in the source water and resist a failure.
86. "Safe Drinking Water Act" means the Safe Drinking Water Act (Pub. L. 93-523, as amended; 42 U.S.C. 300f et seq.).
87. "SCADA" or "SCADA System" means Supervisory Control and Data Acquisition system.
88. "Secondary treatment" means treated wastewater that meets the following treatment levels:
    a. Five-day biochemical oxygen demand (BOD5) less than 30 mg/l (30-day average) and 45 mg/l (seven-day average), or carbonaceous biochemical oxygen demand (CBOD5) less than 25 mg/l (30-day average) or 40 mg/l (seven-day average);
    b. Total suspended solids (TSS) less than 30 mg/l (30-day average) and 45 mg/l (seven-day average);
    c. pH maintained between 6.0 and 9.0 standard units; and
    d. A removal efficiency of 85 percent for BOD5, CBOD5, and TSS.
89. "Source water" means water that is characterized for chemical constituents and pathogens based on which treatment or source control is designed.
90. "Surrogate parameter" or "Surrogate" means a measurable chemical or physical property, microorganism, or chemical that has been demonstrated to provide a direct correlation with the concentration of an indicator compound or pathogen; that may be used to monitor the efficacy of constituent reduction by a treatment process; and/or that provides an indication of a treatment process failure.
91. "Target chemical" means any unregulated chemical causing a potential human health concern that may be present in the treated wastewater.
92. "Tier 1 chemicals" means contaminants regulated as Primary Drinking Water Maximum Contaminant Levels (MCLs) under 40 CFR Part 141 of the Safe Drinking Water Act, as incorporated by reference in R18-4-102, including MCLs and treatment techniques.

93. "Tier 2 chemicals" means AWP-specific contaminants pursuant to R18-9-E826 that are not regulated in the Safe Drinking Water Act, but may be present in treated wastewater and may pose human health concerns.
94. "Tier 3 chemicals" means Performance Based Indicators that are used to monitor the performance of AWP treatment trains.
95. "Total Organic Carbon" or "TOC" means the amount of organic carbon in a sample.
96. "Trace Organic Compounds" or "TOrCs" means a category of compounds such as pharmaceuticals, personal care products, and hormones.
97. "Treated wastewater" means any water or wastewater source of predominantly municipal origin coming from a Water Reclamation Facility and going to an Advanced Water Treatment Facility that has undergone treated wastewater characterization for either enhanced wastewater treatment or secondary wastewater treatment. For the purposes of the AWP program, treated wastewater originates from a Water Reclamation Facility that has liquid stream treatment processes that, at a minimum, are designed and operated to produce oxidized wastewater that achieves a defined source water quality for the purpose of additional treatment by an Advanced Water Treatment Facility.
98. "Treated water augmentation" means finished drinking water from an AWTF, permitted as a drinking water treatment facility, which is directly introduced into a distribution system for human consumption.
99. "Treatment barrier" means a barrier in constant operation, such as a physical barrier, that can be credited with treatment performance.
100. "Treatment interference" or "interference" means a discharge from a non-domestic source which, alone or in conjunction with a discharge or discharges from other sources, inhibits or disrupts the AWPRA's treatment processes or operations and has significant potential for adverse public health consequences or significant potential to cause a violation of an action level, treatment technique or an MCL in advanced treated water or finished water.
101. "Treatment mechanism" means a physical, chemical, or biological action within each treatment process that reduces the concentration of a pathogen or a chemical contaminant.
102. "Treatment process" means a sequence of physical, chemical, or biological procedures applied to municipal wastewater or treated wastewater to remove pathogens and/or chemical constituents.
103. "Treatment technique" means a required process intended to reduce the level of a contaminant in water and/or drinking water.
104. "Treatment train" means a grouping of physical, chemical, and biological treatment technologies or processes that conditions or treats water to achieve a specific water quality goal.
105. "Upset" means unintentional and temporary noncompliance with a performance metric resulting in an excursion or loss of performance in one or more of the unit processes.

106. "Water Reclamation Facility" or "Wastewater Treatment Plant" means an arrangement of devices and structures for collecting, treating, neutralizing, stabilizing, or disposing of domestic wastewater, industrial wastes, and biosolids. For the purposes of the AWP program, a wastewater treatment plant does not include industrial wastewater treatment plants or complexes whose primary function is the treatment of industrial wastes.

107. "10^{-4} cancer risk" means the concentration of a chemical in drinking water corresponding to an excess estimated lifetime cancer risk of 1 in 10,000.

R18-9-A802. Program Review; Incorporation by Reference; Quality Assurance/Quality Control Methodologies

A. The Department shall review the AWP program upon any significant update to the incorporated by reference material in the rule, any significant update to Tier 2 health advisory values, any emerging scientific developments impacting AWP treatment mechanisms, or otherwise at the Director's discretion.

1. During its review, the Department shall assess the program rules and components for adequacy against currently available data and best available science.
2. As a result of its review, the Department shall determine whether any rule should be amended or repealed, and whether any material incorporated by reference should be updated.

B. The following materials are incorporated by reference and applicable in this Article unless specifically stated otherwise. The materials include no future editions or amendments, and are on file with the Department and as indicated below:

1. Standard Methods for the Examination of Water and Wastewater, Section 5710 B, "Trihalomethane Formation Potential (THMFP)", 24th ed. 2023, available at https://www.standardmethods.org.
2. Standard Methods for the Examination of Water and Wastewater, Section 5710 C, "Simulated Distribution System Trihalomethanes (SDS-THM)", 24th ed. 2023, available at https://www.standardmethods.org.
3. Standard Methods for the Examination of Water and Wastewater, Part 1000, "Analytical and Data Quality Systems", 24th ed. 2023, available at https://www.standardmethods.org.
4. Standard Methods for the Examination of Water and Wastewater, Section 7020, "Quality System", 24th ed. 2023, available at https://www.standardmethods.org.
5. Standard Methods for the Examination of Water and Wastewater, Section 8020, "Quality Assurance and Quality Control in Laboratory Toxicity Tests", 24th ed. 2023, available at https://www.standardmethods.org.
6. Standard Methods for the Examination of Water and Wastewater, Section 9020, "Quality Assurance/Quality Control", 24th ed. 2023, available at https://www.standardmethods.org.

7. ASTM International, Designation D4194-23, "Standard Test Methods for Operating Characteristics of Reverse Osmosis and Nanofiltration Devices", February 16, 2023, available at https://www.astm.org.
8. Federal Register, 87 FR 68066, "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5", available at https://www.federalregister.gov.

11. Method 1615: Measurement of Enterovirus and Norovirus Occurrence in Water by Culture and RT-qPCR, published 2014, available at https://cfpub.epa.gov.
12. 40 CFR 261.21, "Characteristic of ignitability, published July 7, 2020, available at https://www.ecfr.gov.
13. "Considerations for Direct Potable Reuse Downstream of the Groundwater Recharge Advanced Water Treatment Facility". Brian Pecson, Shane Trussell, Elise Chen, Anya Kaufmann, & Rhodes Trussell. (2020).

C. Data collection, analysis, sampling, monitoring, reporting, and other related data quality assurance and quality control methodologies in this Article shall be conducted in accordance with the following applicable procedures in Standard Methods for the Examination of Water and Wastewater, 24th ed. 2023, available at standardmethods.org:

1. Part 1000, "Analytical and Data Quality Systems";
2. Section 7020, "Quality Control for Wastewater Samples";
3. Section 8020, "Quality Assurance and Quality Control in Laboratory Toxicity Tests"; and
4. Section 9020, "Interlaboratory Quality Control Guidelines".

R18-9-A803. Applicability of the Safe Drinking Water Act

A. For the purposes of the Safe Drinking Water Act, treated wastewater is presumptively considered surface water. Nothing in this section exempts a facility from applicable Safe Drinking Water Act requirements in Chapter 4 of this Title.

B. An AWTF that treats treated wastewater to advanced treated water standards for raw water augmentation may, at the Director's discretion, be considered part of a public water system for the purposes of compliance with the Safe Drinking Water Act and all applicable requirements of this Title.

C. An AWTF that treats treated wastewater to finished water standards for human consumption and distribution through pipes or other constructed conveyances is, or is part of, a public water system for the purposes of compliance with the Safe Drinking Water Act and all applicable requirements of this Title.

D. If the AWTF is considered a public water system under either subsections (B) or (C):

1. Permitting processes of this Article supersede the public water system permitting requirements in Chapter 5, Article 5, where they conflict, and
2. Design requirements of this Article supersede the public water system design requirements in Chapter 5, Article 5 where they conflict.

PART B. GENERAL PROGRAM REQUIREMENTS

R18-9-B804. Advanced Water Purification Operator Certification

A. Definitions. In addition to the definitions for this Article, the following terms apply to this section:

1. "Advanced Water Purification Responsible Agency administrator" or "AWPRA administrator" means an individual appointed or authorized to exercise managerial control over a designated AWP project.
2. "Advanced Water Purification certified operator" or "AWP operator" means an individual who has passed the AWP validated examination, meets the advanced water treatment qualifying experience requirements of this section, and holds a current certificate, issued by the Department, in either:
   a. The field of drinking water treatment with at least a Grade 3 or Grade 4 drinking water treatment certification; or
   b. The field of wastewater treatment with at least a Grade 3 or Grade 4 wastewater treatment certification.
3. "Advanced water treatment qualifying experience" means at least one year of hands-on experience in the operation of a minimum of three advanced water treatment processes, all within a single advanced water treatment train.
4. "AWP validated examination" means an examination that is approved by the Department after being reviewed to ensure that the examination is based on the knowledge, skills, and abilities needed to operate an AWTF.
5. "Direct responsible charge" means an AWP operator who has overall responsibility for the day-to-day, hands-on operation of an AWTF.
6. "Direct responsible charge proxy" or "proxy" means an AWP shift operator who is designated by, and acts on behalf of, the operator in direct responsible charge when the operator in direct responsible charge is not onsite.
7. "AWPRA facility" or "facility" means a drinking water treatment facility, AWTF, collection system, or wastewater treatment plant involved in the production of advanced treated water.
8. "Onsite" means physically present at any AWPRA facility where a critical control point is operated and any AWPRA facility assigned treatment credits.
9. "Professional development hour" means one hour of participation in an organized educational activity related to engineering, biological or chemical sciences, a closely related technical or scientific discipline, or operations management.

10. "Qualifying experience" means experience, skill, or knowledge obtained through employment that is applicable to the technical or operational control of all or part of a facility (A.A.C. R18-5-101).

11. "Shift operator" means an AWP operator who is in direct charge of the operation of a treatment facility for a specified period of the day and must be present at the site during the duration of the shift.

12. "Shift" means an eight-hour period of time in one day.

B. Applicability. The rules in this subsection apply to owners and operators of AWPRA facilities in Arizona.

C. Certification Committee.

1. Upon the effective date of this rule, the Director shall establish a certification committee which may, at the Department's request, make recommendations and provide the Department with technical advice and assistance related to the AWP operator certification.

2. The AWP operator certification committee shall consist of eleven members, appointed by the Director as follows:

   a. An employee of the Department who shall serve as the executive secretary and who is responsible for maintaining records of all meetings,

   b. A currently employed operator with both Grade 4 water treatment certification and AWP operator certification,

   c. A currently employed operator with both Grade 3 water treatment certification and AWP operator certification,

   d. A currently employed operator with both Grade 4 wastewater treatment certification and AWP operator certification,

   e. A currently employed operator with both Grade 3 wastewater treatment certification and AWP operator certification,

   f. A currently employed wastewater collection system operator with Grade 4 certification,

   g. A currently employed water distribution system operator with Grade 4 certification,

   h. A faculty member teaching environmental engineering in the water or wastewater fields at an Arizona university or community college,

   i. A professional engineer, registered and residing in Arizona, engaged in consulting in the field of environmental engineering,

   j. An elected or appointed municipal official,

   k. A representative of a wastewater treatment facility with a design flow of greater than 5 million gallons per day (MGD) and which participates in the National Pretreatment Program, and

   l. A representative of a wastewater treatment facility with a design flow of less than 5 MGD, which is not a participant in the National Pretreatment Program.

3. The certification committee shall meet at least twice a year. At the first meeting of each calendar year, the certification committee shall select, from among its members, a chairperson and other officers as necessary.

4. A certification committee member shall serve a term of three years.

5. A certification committee member may be reappointed, but a member shall not serve more than three consecutive terms.

6. A meeting quorum consists of the chairperson or the chairperson's designated representative, the executive secretary or the executive secretary's designated representative, and three other members of the committee.

7. In the event of a vacancy caused by death, resignation, or removal for cause, the Director shall appoint a successor for the unexpired term.

D. General Requirements.

1. An AWPRA shall ensure all of the following:

   a. All facilities receiving treatment credit pursuant to R18-9-E828 are operated by AWP operators,

   b. All facilities receiving treatment credit pursuant to R18-9-E828 have a full-time operator in direct responsible charge onsite for at least two full shifts per day,

   c. All facilities receiving treatment credit pursuant to R18-9-E828 have an operator in direct responsible charge, or their proxy, onsite at all times during operation,

   d. When any facilities receiving treatment credit pursuant to R18-9-E828 is operated by a direct responsible charge proxy, an operator in direct responsible charge must be reasonably available to provide immediate direction telephonically, if necessary,

   e. An AWP operator makes all decisions about operational process control or system integrity regarding water quality or water quantity that affects public health,

   f. An AWPRA administrator who is not an AWP operator may make a planning decision regarding water quality or water quantity if the decision is not a direct operational process control or system integrity decision that affects public health,

   g. All critical control points at any facility receiving treatment credit pursuant to R18-9-E828 are operated by an AWP operator, and

   h. The names of all current AWP operators are reported to the Department as a component of the Operations Plan submitted pursuant to R18-9-F836.

2. During the application period, or at any point thereafter, an AWPRA may submit a request to waive the requirement in subsection (1)(b) of this section if an operations plan, or amended operations plan, submitted to ADEQ pursuant to R18-9-F836 demonstrates that alternative oversight by an operator in direct responsible charge nevertheless achieves an equivalent degree of operational oversight and treatment reliability.

3. If ADEQ grants the waiver request in subsection (D)(2) above, the operator in direct responsible charge is not required to be onsite for at least two full shifts per day, but shall be able to monitor operations over the facility onsite within the period specified in the operations plan.

4. If the owner of a facility replaces an AWP operator in direct responsible charge with another AWP operator, the facility owner shall notify the Department in writing within 10 days of the replacement.

5. An AWP operator shall notify the Department in writing within 10 days of the date the AWP operator either ceases to operate a facility or commences operation of another facility.

6. An AWP operator shall operate each facility in compliance with applicable state and federal law.

E. Certification.

1. The Department shall issue an AWP operator certificate to an applicant if the applicant:

   a. Meets the experience requirements in subsection (K) for the applicable class and grade as outlined in this section,

   b. Passes a written advanced water treatment examination, and

   c. Has not had an operator's certificate revoked in Arizona or permanently revoked in another jurisdiction.

2. To apply for AWP operator certification, an applicant shall submit to the Department the following information, as applicable, on a form approved by the Director:

   a. The applicant's full name, Social Security number, and operator number(s),

   b. The applicant's current mailing address, home and work telephone numbers and e-mail address,

   c. The applicant's place of employment, including the facility identification number,

   d. The class and grade of the facility where the applicant is employed,

   e. Proof of successful completion of the advanced water treatment examination and other applicable certificates, and

   f. Documentation of the applicant's experience required under this section.

F. Examination.

1. The Department shall provide examinations for certification of AWP operators. The Department may contract with third party examiners for administration of examinations. The Department shall ensure that a list of approved examiners is available upon request.

2. The Department shall validate all examinations before administration. Each examination shall include topics such as advanced treatment technologies, system maintenance, regulatory protocols, safety, mathematics, and general system management.

3. The examiner shall grade the examination and make the results available to the applicant and the Department within seven days of the date of the examination.

4. An applicant shall not be admitted to an examination without a valid picture I.D.

5. An individual must achieve a score of at least seventy percent on the examination in order to attain a passing grade.

6. For applicants with a Grade 3 or Grade 4 wastewater treatment operator certification, the examination shall include an additional component which tests knowledge equivalent to the Grade 3 drinking water treatment operator examination.

G. Certificate Renewal.

1. If the Department renews a certificate, the certificate is renewed for a three-year period, unless the AWP operator requests a shorter renewal term in writing.

2. An AWP operator may renew their certificate without retaking the exam in accordance with the following:

   a. Prior to the end of their certificate period by submitting a renewal form; or

   b. Following the expiration of the certification period, if the AWP operator submits a completed renewal form to the Department within 90 days of the expiration date.

3. To renew a certificate, an AWP operator shall complete and submit to the Department an AWP operator certificate renewal, on a form approved by the Director.

4. An AWP operator shall provide the following documentation to the Department, upon request, if necessary to verify:

   a. Completion of at least 30 professional development hours accumulated during the certification period, of which at least 10 professional development hours directly relate to the specific job functions of the AWP operator, and

   b. Verification, in writing, by the AWP operator's supervisor, or the entity that provides the education or training, of the AWP operator's completion of each professional development hour.

5. An AWP operator shall maintain documentation of completion of professional development hours for a minimum of five years.

6. As an alternative to the requirements of subsection (G)(2), an AWP operator may renew a certificate by taking and passing an AWP operator examination.

H. Certificate Expiration.

1. A certification is valid for three years and shall expire on the expiration date, which is the end of the certification period.

2. An expired certification may be reinstated if the renewal is submitted within 90 days of expiration date, in accordance with subsection (G)(2)(b).

3. A person with an expired certificate shall re-apply in accordance with subsections (F) and (G) in order to be certified as an AWP operator.

4. An AWP operator certificate is considered expired if the supporting certificate has been denied, expired, suspended, or revoked.

I. AWP Operator Certificate Denial, Suspension, Probation, and Revocation.

1. The Department may deny, suspend, or revoke an AWP operator certificate, and may place an AWP operator on probation.
2. The Department shall deny a certificate if the application is deficient, the applicant fails to obtain a passing score on the examination, or upon any other determination that the applicant has not met the requirements of this section.
3. The Department may revoke or suspend a certificate, or place an AWP operator on probation, if the Department determines that the AWP operator:
    a. Operates a facility in a manner that violates federal or state law;
    b. Negligently operates a facility or negligently supervises the operation of a facility;
    c. Fails to comply with a Department order or court order;
    d. Obtains, or attempts to obtain, a certificate by fraud, deceit, or misrepresentation;
    e. Engages in fraud, deceit, or misrepresentation in the operation or supervision of a facility;
    f. Knowingly or negligently prepares a false or fraudulent report or record regarding the operation or supervision of a facility;
    g. Endangers the public health, safety, or welfare;
    h. Fails to comply with the terms or conditions of probation or suspension; or
    i. Fails to cooperate with an investigation by the Department including failing or refusing to provide information required by this section.
4. The action the Department takes under subsection (I)(3) may be made at the Department's discretion upon an examination of the individual facts and circumstances, the number of findings the Department makes under (I)(3), and upon consideration of other factors, such as but not limited to, additional aggravating circumstances not considered under (I)(3).
5. In performing any action under this subsection, the Department shall comply with the requirements in A.R.S. Title 41, Chapter 6, Article 10 and A.A.C. Title 18, Chapter 1, Article 2.

J. Reciprocity. The Department shall issue a certificate to an applicant who holds a valid certificate from another jurisdiction, if the applicant:

1. Passes a written, validated AWP operator examination in Arizona or in another jurisdiction that administers an AWP examination that is substantially equivalent to the examination in Arizona and validated by the Department, and
2. Submits written evidence of the experience required under subsection (K).

K. Experience.

1. The Department shall consider the following criteria to determine whether an applicant has the qualifying experience required for AWP operator certification:
    a. The type of operator certification held by the applicant, and

b. Years of qualifying experience as a certified operator for a specific grade of facility.

2. An applicant shall provide evidence of certification as one of the following:

a. A Grade 3 drinking water operator;

b. A Grade 4 drinking water operator;

c. A Grade 3 wastewater operator; or

d. A Grade 4 wastewater operator.

3. An applicant shall provide evidence of qualifying experience in the applicable facility class.

4. An applicant shall meet the following requirements for admission to an AWP operator certification examination:

a. A Grade 3 drinking water operator shall have at least two years' experience operating a Grade 3 drinking water treatment facility.

b. A Grade 4 drinking water operator shall have at least one year of experience operating a Grade 4 drinking water treatment facility.

c. A Grade 3 wastewater operator shall have at least two years' experience operating a Grade 3 wastewater treatment facility.

d. A Grade 4 wastewater operator shall have at least two years' experience operating a Grade 3 or Grade 4 wastewater treatment facility.

5. An applicant that meets the requirements of this section and has passed the advanced water treatment examination shall be certified in accordance with the following:

a. An applicant with Grade 3 drinking water treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator.

b. An applicant with Grade 4 drinking water treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP operator in direct responsible charge.

c. An applicant with Grade 3 wastewater treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator.

d. An applicant with Grade 4 wastewater treatment certification with at least one year of advanced water treatment qualifying experience shall receive certification as AWP shift operator.

6. Advanced water treatment qualifying experience may be obtained through any of the following:

a. Operating a pilot facility;

b. Operating an AWP demonstration facility that is not distributing finished water for human consumption;

c. Experiential reciprocity pursuant to subsection (J) of this section;

d. An apprenticeship under an AWP operator on-site at an AWP facility including a pilot facility, demonstration facility, or AWTF; or

e. Other experience approved by the Department.

7. Experience working at an AWTF shall count towards qualified experience at a Grade 4 drinking water plant.

L. Class and Grade Requirements.

1. Drinking Water Treatment and Distribution Systems.

a. The Department shall classify a drinking water treatment facility receiving AWP treatment credits under R18-9-E828 as an AWTF.

b. The Department shall grade water distribution system AWPRA partners pursuant to A.A.C. R18-5-115(B).

2. Wastewater Treatment and Collection Systems.

a. A wastewater treatment facility receiving AWP treatment credits under R18-9-E828 shall be operated by an AWP operator and an operator certified at the appropriate grade, and no grade lower, for the class of the facility pursuant to Chapter 5, Article 1 of this Title. These operation requirements may be met by the same operator.

b. Wastewater collection systems that collect and convey wastewater to a wastewater treatment facility that is ultimately used as a treated wastewater supply to an AWTF shall be classified pursuant to R18-5-114 of this Title.

c. For a multi-facility system, the Department shall grade each facility in accordance with this subsection.

M. Transition.

1. Beginning two years from the effective date of the AWP programmatic rules in A.A.C. Title 18, Chapter 9, Article 8, all facilities receiving treatment credit pursuant to R18-9-E828 shall be operated by AWP operators certified in accordance with this section.

2. During the two-year transition period, all AWTFs shall be operated by a Grade 4 certified drinking water operator who has completed appropriate training, approved by the Department.

R18-9-B805. Advanced Water Purification Responsible Agency Formation; Joint Plan

A. An AWPRA shall be the entity responsible for complying with the requirements of this Article.

1. Only one AWPRA shall be designated for an AWP project.

2. An AWPRA must be a person under A.R.S. § 49-201(33).

B. Joint Plan. An AWPRA shall develop a Joint Plan describing all partner coordination procedures, including but not limited to, the following:

1. Partner Details.

a. Identification of each partner associated with the AWP project throughout the project's expected operational life,

b. A description of the roles and responsibilities of each partner, including designation of a lead partner responsible for fulfilling the requirements under the communication plan established in accordance with subsection (B)(4), and

c. The legal authority of each partner to fulfill its roles and responsibilities.

2. Procedures to ensure that the AWPRA will have knowledge of the current treatment and water quality monitoring status of any water reclamation facility delivering treated wastewater as a source to the AWP project,

3. Procedures to ensure the enhanced source control program complies with the requirements in this Article, pursuant to R18-9-E824,

4. A communication plan ensuring the timely dissemination of information regarding both treated wastewater and advanced treated water or finished water quality status and monitoring among all partners,

5. Procedures to provide access to the AWPRA and all partner facilities, operations, and records for inspection at any time by the Department,

6. Procedures to execute cross-connection control requirements, pursuant to Chapter 4, Article 2 and R18-9-F832 of this Article,

7. Procedures to execute corrosion control requirements, pursuant to Chapter 4, Article 1 and R18-9-F832,

8. Procedures to notify partners and the Department of treatment failure incidents and all corresponding corrective actions taken,

9. A plan outlining all enforcement and corrective actions taken should a partner fail to meet the requirements of this Article or violate the Joint Plan, and

10. Procedures to address changes to the AWPRA partners, including the addition of new partners and the removal of existing partners, in accordance with the requirements of the AWP program.

C. The AWPRA and all partners shall sign the Joint Plan.

D. The Joint Plan shall include copies of all necessary agreements executed to facilitate the operation of the AWP project, including but not limited to, copies of permits, memorandums of understanding, joint powers agreements, or intergovernmental agreements.

R18-9-B806. General Requirements

A. Delivery of advanced treated water or distribution of finished water is prohibited unless delivery or distribution approval is explicitly given to the AWPRA, either:

1. Through issuance of the AWP permit, if full-scale certification was completed and approved as part of the application; or

2. After satisfaction of the compliance schedule requirements pursuant to R18-9-C816(E).

B. Construction materials used at the AWTF, including materials used at AWPRA partner facilities, except for water reclamation facilities, that collect, treat, store, or distribute water for human consumption through pipes or other constructed conveyances, shall be lead-free as prescribed in A.R.S. § 49-353(B). This subsection shall not apply to leaded joints necessary for the repair of cast iron pipes.

C. Treated wastewater used to supply an AWP project shall be municipal wastewater in origin.

D. Confidentiality of Information. In accordance with A.R.S. § 49-205, any information submitted to the Director pursuant to this Article may be claimed as confidential by the submitter. Any such claim must be asserted at the time of submission in the manner prescribed on the application form or instructions or, in the case of other submissions, by stamping the words "confidential business information" on each page containing such information. If no claim is made at the time of submission, the Director may make the information available to the public without further notice. If a claim is asserted, the information will be treated in accordance with the procedures in A.R.S. § 49-205.

R18-9-B807. Inspections, Violations, and Enforcement

A. The Department shall conduct inspections of a permitted AWPRA facility as specified under A.R.S. § 41-1009 and according to sanitary survey requirements in A.A.C. Title 18, Chapter 4, if applicable.

B. Any person who violates a provision of Article 8 of this Chapter, applicable provisions in Chapters 4 and 5 of this Chapter, or a condition of an AWP permit or AWP demonstration permit is subject to the applicable enforcement actions established under A.R.S. Title 49.

R18-9-B808. Recordkeeping

A. The AWPRA shall collect and retain the following information for at least ten years:

1. Copies of laboratory analyses and chain of custody forms,
2. The results of all analyses of chemicals and pathogens, including laboratory data, and
3. Copies of all plans and technical components prepared and submitted to the Department under the AWP permit application.

B. For the records described in subsections (A)(1) through (A)(3), a responsible agent of the AWPRA shall sign the following certification statement "I certify, under penalty of law, that the activities conducted pursuant to the requirements of Title 18, Chapter 9, Article 8 have been made under my direction and supervision and under a system designed to ensure that qualified personnel properly gather and evaluate the information to determine whether the applicable requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."

R18-9-B809. Construction and Compliance with Plans

A. An AWPRA shall conform to all proposed plans and specifications when constructing any part of their pilot facility such that the facility accurately reflects the proposal as recorded.

1. Prior to issuance of an AWP permit or demonstration permit and when the pilot facility is the same as the proposed full-scale facility, any change in a proposed design that will affect advanced treated water or finished water quality, capacity, flow, or performance, shall be documented by the AWPRA applicant and submitted to the Department for review and approval in the form of revised plans and specifications, record drawings and a written statement regarding the reasons for the change.
2. The record drawings shall be drafted pursuant to R18-9-B810.

B. An AWPRA shall conform to all approved plans and specifications when constructing any part of their full-scale facility.

1. Following issuance of an AWP permit, any change in an approved design that will affect advanced treated water or finished water quality, capacity, flow, or performance, shall be submitted by the AWPRA to the Department for review and approval through a permit amendment.
2. Upon a change to an approved design, the AWPRA shall notify the Department and shall not proceed with any construction related to the design change without written approval from the Department, except in cases of emergency in which the AWPRA must act promptly to respond to an immediate and significant threat to human health and approval from the Department would unduly delay or prevent the AWPRA from addressing the threat. In instances of emergency, the AWPRA shall at the first available and safe moment, but not exceeding 30 days after the emergency:
    a. Notify the Department of the emergency,
    b. Detail the change made from the approved design, and
    c. Describe all response methods utilized during the emergency to protect advanced treated water quality.
3. An AWPRA's failure to notify and obtain the Department's approval of a change in an approved design is subject to enforcement as a permit violation pursuant to R18-9-B807.

R18-9-B810. Record Drawings

A. An Arizona-registered professional engineer shall clearly and accurately record or mark, on a complete set of working project drawings, each deviation from the original plan, and a written summary of each deviation which shall include, but is not limited to:

1. A description of the deviation,
2. The reason for the deviation, and

3. The projected impact the deviation will have on advanced treated water quality. If an impact is identified, the description shall be accompanied by an explanation on how the AWPRA will address the impact to maintain compliance with advanced treated water quality standards.

B. The set of marked drawings and written summary of deviations becomes the record drawings, reflecting the project as actually built.

C. The professional engineer registered in Arizona shall sign, date, and place their engineer's seal on each sheet of the record drawings and written summary of deviations and submit them to the Department as part of the permit application. The record drawings shall be accompanied by an engineer's certificate of completion, signed by the professional engineer.

D. Quality control testing results and calculations shall be submitted with the engineer's certificate of completion together with field notes and the name of the individual witnessing the tests.

R18-9-B811. Outreach; Public Communications Plan

A. An AWPRA applicant/permittee shall develop a Public Communications Plan for the purpose of providing drinking water consumers in the service area with education, awareness, and transparency related to the AWP project.

B. Public Communications Plan. The Plan shall include, but is not limited to, the following:

1. Consumer Notification.
   a. An AWPRA applicant shall notify all drinking water consumers of its intention to apply for an AWP permit for treatment and delivery of advanced treated water or distribution of finished water as a drinking water source.
   b. An AWPRA applicant/permittee shall maintain communication with the consumers throughout all major program phases, including planning, application, operations, and post-operations.
   c. Throughout the planning phase, the AWPRA applicant shall:
      i. Communicate to the public through the use of a local, publicly-accessible repository in which the AWPRA posts information about the AWP project, contains a forum for public question and comment, and a place for responses. Such a repository shall be active at the time the AWPRA applicant submits an AWP project permit application to the Department, and shall be maintained for the lifetime of the project,
      ii. Provide at least one notification by mail or by another Department-approved method to all of its consumers prior to a public meeting related to the AWP project,
      iii. Schedule and hold at least one public meeting during the planning stage of the AWP project,
      iv. Communicate to the public through at least one additional Department-approved method in accordance with subsection (B)(2) of this section, and

v. Provide all relevant information in all appropriate languages, as necessary, and provide contact information to the public on how a consumer may obtain translated written communications or request language assistance for written and oral communications.

d. During the application phase, the AWPRA applicant shall schedule and hold at least one public meeting no less than six months prior to distributing finished water from the AWP project.

2. Acceptable Methods of Communication. Department-approved methods of communication include the following:

a. Coverage through a local news outlet (e.g. television, newspaper, social media);

b. Community event(s) (e.g. setting up table/booth);

c. Local school(s) and school events;

d. Providing opt-in email or text notifications to customers;

e. Consumer confidence reports, water bill inserts, or other mail notification;

f. Neighborhood association meeting(s) and civic organizations; or

g. Other methods may be accepted at the Director's discretion.

3. Community Engagement.

a. An AWPRA applicant shall involve local government(s) throughout the AWP project phases, as necessary.

b. An AWPRA applicant shall develop a list of all relevant stakeholders and interest-holders that they intend to communicate with. Such a list shall, at a minimum, include local health authorities and medical professionals, and may additionally include:

i. City/town councils and boards;

ii. Local elected officials;

iii. Community organizations that represent disproportionately impacted communities,

iv. Local environmental groups;

v. Industry groups; or

vi. Schools/school boards.

c. An AWPRA applicant may conduct surveys, focus groups, or other means of collecting local information for the purpose of demonstrating community perception and opinion of the prospective AWP project introduction, and throughout all succeeding project phases.

4. Certification.

a. An AWPRA applicant shall certify the Plan meets the minimum requirements in this section.

b. The certified Plan shall include details demonstrating compliance with the requirements of this section, including, but not limited to:

i. Access to the publicly-accessible repository, such as a web address,

ii. Description of the methodology selected for communication,

iii. The numbers of mailers sent to the public,

iv. The number of government entities and other leaders engaged with,

v. A description of the public meetings held including dates, times, and methods of notice, and

vi. A description of any outreach conducted in other languages.

c. An AWPRA applicant shall submit a draft Plan as a component of the AWP permit application pursuant to R18-9-C816.

d. After being issued the AWP permit, and at least 30 days prior to distributing advanced treated water or delivering finished water, an AWPRA shall submit a certified final Plan to the Department pursuant to the compliance schedule set forth in their AWP permit.

PART C. PRE-PERMIT AND PERMIT REQUIREMENTS

R18-9-C812. Pre-Application Conference; Project Advisory Committee

A. Upon request of the AWPRA applicant, the Department shall schedule and hold pre-application conference(s) with the AWPRA applicant to discuss the requirements of this Article.

B. The Department may assemble a project advisory committee for the purpose of providing project-specific technical consultation to the Department throughout the application process.

1. The project advisory committee may be composed of appropriate experts selected by the Department to assist in review as necessary.
2. Experts may include, but are not limited to, toxicologists, State of Arizona licensed engineers, epidemiologists, microbiologists, chemists, and utility representatives.
3. Project advisory committee recommendations are advisory only.
4. Reviews by the project advisory committee shall be conducted within the applicable Licensing Time Frames in Chapter 1, Article 5 of this Title.

R18-9-C813. Applicant Pathways Depending on National Pretreatment Program Applicability

A. An AWPRA applicant shall submit the application components in the order and format set forth in this section, in addition to the order and format prescribed by the applicable rules within this Article.

B. National Pretreatment Program AWPRA. An AWPRA with all water reclamation facility partner(s) subject to the National Pretreatment Program may elect to either:

1. Submit the Initial Source Water Characterization Plan and the Pilot Study Plan to the Department for review and comment prior to the AWP permit application in the order and format set forth in R18-9-C814 and R18-9-C815; or
2. Submit the Initial Source Water Characterization Report and Piloting Report to the Department for approval as components of the AWP permit application pursuant to R18-9-C816.

C. Non-National Pretreatment Program AWPRA. An AWPRA with at least one water reclamation facility partner not subject to the National Pretreatment Program shall, throughout the pre-application period and in the order and format set forth in R18-9-C814 and R18-9-C815:

1. Submit the Initial Source Water Characterization Plan and the Pilot Study Plan to the Department for review and comment, and
2. Submit the Initial Source Water Characterization Report and Pilot Report to the Department for approval pursuant to R18-9-C816.

D. An AWPRA applicant that builds a pilot facility to full-scale and develops a Hybrid Pilot and Full-Scale Verification Plan, shall follow the submission requirements pursuant to R18-9-C815(A)(1)(c) and R18-9-F835(A)(1)(c) in lieu of the submission requirements in subsections B and C of this section.

R18-9-C814. Initial Source Water Characterization

A. An AWPRA applicant shall develop an Initial Source Water Characterization Plan and shall conduct initial monitoring of any treated wastewater proposed to be used as a source for an AWTF.

B. Initial Source Water Characterization Plan. An initial source water characterization monitoring plan, or Initial Source Water Characterization Plan, shall be developed and followed when conducting initial monitoring in accordance with this section.

1. A Non-National Pretreatment Program AWPRA applicant shall submit the Initial Source Water Characterization Plan to the Department for review and comment prior to conducting initial source water monitoring under this section. Along with the Initial Source Water Characterization Plan, the AWPRA applicant shall submit the following additional preliminary components to the Department for review and comment:
   a A draft Enhanced Source Control Plan prepared pursuant to R18-9-E824,
   b. A draft technical, managerial, and financial, or Technical, Managerial, and Financial Capacity Plan, prepared pursuant to R18-9-F833,

c. A proposed pilot train designed pursuant to R18-9-C815, and

d. A draft Public Communications Plan prepared pursuant to R18-9-B811.

2. A National Pretreatment Program AWPRA applicant may submit the Initial Source Water Characterization Plan to the Department for review and comment prior to conducting initial source water monitoring under this section, or otherwise shall submit the Initial Source Water Characterization Plan and Report to the Department as a component of the AWP permit application prepared pursuant to R18-9-C816. An AWPRA applicant that elects to submit the Initial Source Water Characterization Plan to the Department for review and comment prior to conducting initial source water monitoring under this section may also elect whether or not to submit the additional preliminary components listed in subsection (B)(1) to the Department for contemporaneous review and comment.

C. Monitoring. An AWPRA applicant shall conduct initial source water monitoring at all water reclamation facilities delivering treated wastewater as a source to an AWTF as applicable under R18-9-A802(C).

1. Monitoring shall be conducted at a location before any treatment process that will be used for a treatment credit in the AWP project and before the point of diversion to the AWTF.

2. Chemical Monitoring.

a. The AWPRA applicant shall collect a minimum of twelve monthly composite samples representative of seasonal variability.

b. If there is wide variability in a chemical concentration, meaning the coefficient of variation is greater than fifty percent, the AWPRA applicant shall reasonably increase the sampling interval in order to evidence this variability.

c. The AWPRA applicant shall sample for the following chemicals, excluding those identified on the projected chemical treatment list developed in R18-9-E826:

i. Tier 1 chemicals,

ii. Tier 2 chemicals pursuant R18-9-E826(D), and

iii. Any projected Tier 3 chemicals.

3. Pathogen Monitoring.

a. The AWPRA applicant shall utilize reference pathogens to monitor pathogen treatment within the AWP project and establish log reduction requirements consistent with either a standard log reduction approach or a site-specific log reduction approach pursuant to R18-9-E828.

b. Standard Log Reduction. If the AWPRA applicant selects the standard log reduction approach to pathogen control, no initial pathogen monitoring is required as part of initial source water characterization.

c. Site-Specific Log Reduction. If the AWPRA applicant selects the site-specific log reduction approach to pathogen control, the AWPRA applicant shall perform initial pathogen monitoring as part of initial source water characterization by following the prescribed sampling protocol pursuant to R18-9-E828(C).

D. In addition to the requirements of this section, initial source water monitoring under an Initial Source Water Characterization Plan shall be conducted using good engineering practices. Methods for initial source water monitoring shall be approved if the AWPRA applicant can demonstrate that the methods are sufficiently detailed and robust for the purpose of characterizing the treated wastewater used as a source for an AWTF in such a manner that informs the proposed pilot and full-scale treatment train design and serves as an accurate representation of the collection system.

1. ADEQ shall develop and make available guidance on conducting initial source water monitoring under an Initial Source Water Characterization Plan.
2. An Initial Source Water Characterization Plan developed in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

E. Report. An Initial Source Water Characterization Report shall be finalized within three years of the commencement of initial source water monitoring or at the Director's discretion. The Initial Source Water Characterization Report shall be prepared pursuant to R18-9-A802(C) and shall include, but is not limited to, the following:

1. The date, time, frequency and exact place of sampling,
2. The name of each individual who performed the sampling,
3. The procedures used to collect the samples,
4. The dates the sample analyses were completed,
5. The name of each individual or laboratory performing sample analysis,
6. The analytical techniques or methods used to perform the sampling and analysis,
7. The chain of custody records,
8. Any field notes relating to the information described under this subsection,
9. The sampling results which account for seasonal variability,
10. Corresponding laboratory data for all samples, and
11. A copy of the Initial Source Water Characterization Plan developed in subsection (B).

F. Report Submission.

1. A Non-National Pretreatment Program AWPRA applicant shall submit the Initial Source Water Characterization Report in subsection (E) to the Department for review and comment as a component of the Pilot Study Plan prepared pursuant to R18-9-C815. Additionally, a Non-National Pretreatment Program AWPRA applicant shall submit the Initial Source Water Characterization Report as a component of the AWP permit application prepared pursuant to R18-9-C816.
2. A National Pretreatment Program AWPRA applicant, if electing to submit a Pilot Study Plan to the Department for review and comment, may include the Initial Source Water Characterization Report in subsection (E) as a component, or otherwise shall submit the Initial Source Water Characterization Report as a component of the AWP permit application prepared pursuant to R18-9-C816.

G. The Department shall consider an AWPRA applicant's conformance with the initial source water characterization requirements in this Article as a component of the AWP permit application. The Director shall deny an AWP permit application if a determination is made that, under the Initial Source Water Characterization Plan, monitoring was improperly conducted or is otherwise insufficient to achieve the objectives of chemical and pathogen characterization, or if the Initial Source Water Characterization Report is incomplete or otherwise insufficient to demonstrate compliance with the Plan.

R18-9-C815. Pilot Study

A. An AWPRA applicant shall develop a Pilot Study Plan and conduct piloting on a pilot treatment train.

1. If an AWPRA builds a pilot facility to full-scale, the AWPRA applicant may, instead, opt to conduct piloting and full-scale verification simultaneously. If the AWPRA pursues this option, the AWPRA shall:
   a. Consult with the Department, and
   b. Develop and submit a Hybrid Pilot and Full-Scale Verification Plan to the Department for review and comment prior to conducting piloting and full scale verification under this section, R18-9-F835 and other requirements which are previously determined through consultation with the Department, and
   c. For the purposes of the permit application pursuant to R18-9-C816, submit the Hybrid Pilot and Full-Scale Verification Plan and a Hybrid Pilot and Full-Scale Verification Report in lieu of the submission requirements at R18-9-C816(A)(2)(g) and (h).
2. An operator of a pilot facility may be credited with advanced water treatment qualifying experience under R18-9-B804.

B. Pilot Study Plan. A Pilot Study Plan shall be followed when constructing the pilot treatment train and piloting in accordance with this section.

1. A Non-National Pretreatment Program AWPRA applicant shall submit the Pilot Study Plan to the Department for review and comment prior to conducting piloting under this section.

2. A National Pretreatment Program AWPRA applicant may submit the Pilot Study Plan to the Department for review and comment prior to conducting piloting under this section, an approach recommended by the Department, or otherwise shall submit the Pilot Study Plan to the Department as a component of the AWP permit application prepared pursuant to R18-9-C816.

3. The Plan shall include, but is not limited to, the following:

   a. The pilot study objectives,

   b. A description of the proposed pilot treatment train,

   c. The design criteria for each treatment component pursuant to R18-9-F832,

   d. A design report and drawing,

   e. An explanation of the pilot train's representation of the scale and the performance of the proposed full-scale AWTF and the selected treatment components therein,

   f. A time period for which the pilot study will be conducted of no less than one year of continuous operation,

   g. A monitoring plan which shall include, but is not limited to, the following:

      i. The proposed monitoring, instrumentation, and any additional requirements pursuant to R18-9-A802(C).

      ii. The proposed chemical critical control points designated pursuant to R18-9-E827(D),

      iii. The proposed pathogen critical control points designated pursuant to R18-9-E828(D), and

      iv. An advanced treated water sampling plan, and

   h. The proposed Tier 3 chemical list and associated critical control points prepared pursuant to R18-9-E827,

   i. The projected chemical treatment list prepared pursuant to R18-9-E826(F), and

   j. A TOC Characterization Plan of all original drinking water sources, pursuant to the Trace Organics Removal Procedure under R18-9-F834(C)(1), if the AWPRA selects the Site-Specific TOC Management Approach.

4. The Initial Source Water Characterization Report prepared pursuant to R18-9-C814(E) shall be submitted as follows:

   a. A Non-National Pretreatment Program AWPRA applicant shall submit the Initial Source Water Characterization Report as a component of the Pilot Study Plan, and

   b. A National Pretreatment Program AWPRA applicant may submit the Initial Source Water Characterization Report as a component of the Pilot Study Plan, or otherwise shall submit the Initial Source Water Characterization Report as a component of the AWP permit application prepared pursuant to R18-9-C816.

5. The pilot treatment train shall be selected from, and optimized in accordance with, the projected chemical treatment list developed pursuant to R18-9-E826(F) and pathogen log reduction values established pursuant to R18-9-E828.

6. If a Pilot Study Plan includes the discharge of effluent and the facility is subject to the APP program, an APP application for permit coverage shall be submitted and effective before pilot train operation.

C. Piloting.

1. Pathogen and chemical removal shall be demonstrated during the pilot study by conducting sampling in accordance with the established monitoring plan developed in subsection (B)(3)(g).
2. Sampling shall be conducted at a minimum of two locations, the influent and effluent of the pilot treatment train, in accordance with the proposed critical control points.

D. Report. At the conclusion of piloting a Pilot Study Report shall be prepared and submitted to the Department as a component of the AWP permit application pursuant to R18-9-C816. The Pilot Study Report shall include, but is not limited to, the following:

1. A demonstration of the effectiveness, reliability, and consistency of the treatment components in achieving pathogen and chemical removal, as well as TOC management in accordance with the Pilot Study Plan under subsection (B),
2. A list of water reclamation facility operational parameters and ranges that produced the AWTF treated wastewater influent water quality.

E. The Department shall consider an AWPRA applicant's conformance with the pilot study requirements in this Article as a component of the AWP permit application. The Director shall deny an AWP permit application if a determination is made that, under the Pilot Study Plan, piloting was improperly conducted or is otherwise insufficient to achieve the objectives of the pilot study, or if the Pilot Study Report is incomplete or otherwise insufficient to demonstrate compliance with the Pilot Study Plan.

F. In addition to the requirements of this section, the pilot study shall be conducted using good engineering practices. Methods for conducting the pilot study shall be approved if the AWPRA applicant can demonstrate that the methods sufficiently and consistently verify the performance of the chosen treatment components, provide the opportunity to evaluate the effectiveness of different types of treatment components, and inform the design of the full-scale AWP treatment train.

1. ADEQ shall develop and make available guidance on conducting an AWP pilot study.
2. An AWP pilot study conducted in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

R18-9-C816. Permit Application

A. An AWPRA applicant for an AWP permit shall provide the Department with the following information on an application form prescribed by the Director:

1. Application: Administrative Requirements.
    a. The names and mailing addresses of all AWPRA partners,

b. The names and mailing addresses of the representative of the AWPRA and owners and operators of all AWPRA partner facilities,

c. The legal description, including latitude and longitude, of the location of all AWPRA partner facilities,

d. The expected operational life of the AWPRA partner facilities,

e. The permit number for any other federal or state environmental permit issued to any AWPRA partner for that facility or site,

f. A copy of the AWPRA's Joint Plan and corresponding agreements pursuant to R18-9-B805,

g. A copy of the certificate of disclosure required by A.R.S. § 49-109,

h. Evidence that the AWTF complies with applicable municipal or county zoning ordinances, codes, and regulations,

i. Certification in writing that the information submitted in the application is true and accurate to the best of the AWPRA applicant's knowledge, and

j. All applicable fees established in 18 A.A.C. 14.

2. Application: Technical Requirements.

a. Detailed completed or prospective construction plans of the site, presented in legible form and of sufficient scale and detail to establish construction requirements and to facilitate effective review,

b. Record drawings pursuant to R18-9-B810,

c. Complete specifications to supplement the completed or prospective construction plans in subsection (A)(2)(a), including vendor data demonstrating validation information,

d. A design report which:

i. Describes the completed or prospective construction and the basis of design,

ii. Provides design data and other pertinent information that defines the work, and

iii. Establishes the adequacy of the design to meet the system demand and comply with the requirements of this Article, and

e. A Full-Scale Verification Plan, including data demonstrating scaling feasibility, prepared pursuant to R18-9-F835,

f. A draft Operations Plan prepared pursuant to R18-9-F836,

g. The Pilot Study Plan and Report prepared pursuant to R18-9-C815, if applicable under R18-9-C815(A)(1),

h. The Full-Scale Verification Report prepared pursuant to R18-9-F835, if applicable under R18-9-C835(A)(1),

i. A list of construction material used pursuant to R18-9-B806,

j. A demonstration of technical, managerial, and financial capacity pursuant to R18-9-F833,

k. An initial Enhanced Source Control Plan pursuant to the program developed in R18-9-E824,

l. The Initial Source Water Characterization Plan and Initial Source Water Characterization Report prepared pursuant to R18-9-C814,

m. A demonstration of compliance with all minimum design requirements pursuant to R18-9-F832,

n. The proposed pathogen and chemical action levels for ongoing monitoring pursuant to R18-9-A802(C),

o. The draft Public Communications Plan pursuant to R18-9-B811,

p. A Tier 2 analysis pursuant to R18-9-E826,

q. A Tier 3 Chemical list, associated critical control points and explanation pursuant to R18-9-E827,

r. Evidence of an APP authorizing any discharge from an AWTF that occurred, occurs or will occur during piloting, full-scale verification, operation or otherwise,

s. Demonstration that the AWPRA meets applicable A.A.C. Title 18, Chapter 4 and Chapter 5 requirements, and

t. Any other relevant information required by the Department to determine whether to issue a permit.

B. Draft Permit. The Department shall provide the AWPRA applicant with a draft of the AWP permit prior to publication of the Notice of Preliminary Decision pursuant to R18-9-D820.

C. Permit Issuance or Denial. The following requirements apply in addition to the requirements in R18-9-D823:

1. The Director shall issue an AWP permit, based upon the information obtained by or made available to the Department, if the Director determines that the AWPRA applicant is in compliance with this Article, and the applicable requirements in Chapter 4, Articles 1 and 2, and Chapter 5, Article 5.
2. The Director shall provide the AWPRA applicant with written notification of the final determination to issue or deny the permit within the overall licensing time-frame requirements under 18 A.A.C. 1, Article 5, Table 10 and the following:
   a. The AWPRA applicant's right to appeal the final permit determination, including the number of days the applicant has to file a protest and the name and telephone number of the Department contact person who can answer questions regarding the appeals process,
   b. If the AWP permit is denied under R18-9-D823, the reason for the denial with reference to the statute or rule on which the denial is based, and
   c. The AWPRA applicant's right to request an informal settlement conference under A.R.S. §§ 41-1092.03(A) and 41-1092.06.

D. The Department shall only approve an AWP permit for an AWPRA applicant when all AWPRA partners are in compliance with this Chapter and applicable Chapter 4 and Chapter 5 requirements, or are making satisfactory progress towards compliance under a schedule previously approved by the Department.

E. Post-Permit Issuance Compliance Schedule.

1. The technical components listed in subsection (E)(2) below are not required as part of the application in subsections (A) and (B) but are required prior to delivery of advanced treated water or distribution of finished water.
2. The following technical components shall be submitted in the time and manner set forth in a compliance schedule which shall be established by the Department under the AWP permit:
    a. The final design documents including as-built construction and configuration reports of all engineered elements of the facility prepared pursuant to R18-9-B810 and any document changes from what was proposed in the pre-construction application requirements.
    b. An Operations Plan prepared pursuant to R18-9-F836, including, but not limited to, a list of operators who are certified by the Department appropriately for all facilities within an AWP project, including any finished water distribution systems,
    c. The Full-Scale Verification Report prepared pursuant to R18-9-F835,
    d. A vulnerability assessment prepared pursuant to R18-9-F837,
    e. Compliance with approved plans pursuant to R18-9-B809,
    f. The final Public Communications Plan pursuant to R18-9-B811,
    g. The final Enhanced Source Control Plan pursuant to the program developed in R18-9-E824,
    h. An engineer's certificate of completion of the final inspection of the AWTF, signed, dated, and sealed by an Arizona-registered professional engineer in a format approved by the Department, and
    i. Any other relevant information required by the Department.
3. Compliance schedule items under subsection (E)(2) may require a permit amendment.

F. If a compliance schedule is included as part of an AWP permit, delivery of advanced treated water or distribution of finished water is prohibited until all delivery or distribution-critical post-permit compliance schedule items pursuant to subsection (E) are met and any associated permit amendments are in effect.

G. All design plans, specifications, and design reports submitted under this section shall be signed, dated, and sealed by an Arizona-registered professional engineer. The Arizona-registered professional engineer shall demonstrate the following information to the Department for each person principally responsible for designing the facility:

1. Pertinent licenses or certifications held by the person,
2. Professional training relevant to the design of an AWTF, water reclamation facility, or drinking water treatment facility,
3. Work experience relevant to the design of AWTF, water reclamation facilities, or drinking water treatment facilities, and
4. A verification letter from an independent party certifying the performance of a manufacturer's equipment or a product that the professional engineer is relying upon for treatment credits, along with the information required under subsections (G)(1), (2), and (3) of this section, for the independent party certifying the product.

R18-9-C817. Demonstration Permit

A. An AWPRA may apply for an AWP demonstration permit for the purpose of showcasing the AWTF for public outreach, finished water tasting, and other related non-distribution purposes.

B. Introduction of advanced treated water into a drinking water distribution system for human consumption is prohibited under an AWP demonstration permit.

C. Demonstration Permit Application.

1. An AWPRA applying for an AWP demonstration permit shall comply with all requirements of this Article, and all application requirements pursuant to R18-9-C816, excluding the requirement to demonstrate full-scale verification.
    a. The piloting requirements in R18-9-C815 may be abbreviated at the Director's discretion, but may not be of a period of less than 6 months.
    b. If an applicant reports significant failures at a critical control point during abbreviated piloting, the Director may require other measures.
2. The AWPRA applicant applying for an AWP demonstration permit shall submit a preliminary application containing the information required in subsection (C)(1) to the Department on an application form prescribed by the Director.
3. The Department shall, based on the preliminary application and in consultation with the AWPRA applicant, provide the AWPRA applicant notice of any additional information that is necessary to complete the application.
4. An AWP operator shall operate the demonstration facility if the facility is utilized for the purpose of showcasing the AWTF for public outreach, finished water tasting, and other related non-distribution purposes.

D. All design plans, specifications, and design reports submitted under this section shall be signed, dated, and sealed by an Arizona-registered professional engineer. The Arizona-registered professional engineer shall make the following demonstration to the Department for each person principally responsible for designing the facility:

1. Pertinent licenses or certifications held by the person,
2. Professional training relevant to the design of an AWTF, water reclamation facility, or drinking water treatment facility, and
3. Work experience relevant to the design of AWTF, water reclamation facilities, or drinking water treatment facilities.

E. Demonstration AWTFs shall only be built to pilot or full-scale.

F. Bench scale demonstration AWTFs are prohibited.

G. An operator of an AWP demonstration facility may be credited with advanced water treatment qualifying experience under R18-9-B804.

H. The public notice and public participation requirements in R18-9-D819 and R18-9-D820 apply to demonstration permits issued under this section.

I. The permit suspension, revocation, denial, and termination requirements in R18-9-D823 apply to demonstration permits issued under this section.

J. The permit term and permit renewal requirements in R18-9-D822 apply to demonstration permits issued under this section.

K. All design plans, specifications, and design reports submitted under this section shall be signed, dated, and sealed by an Arizona-registered professional engineer. The Arizona-registered professional engineer shall demonstrate the following information to the Department for each person principally responsible for designing the facility:

1. Pertinent licenses or certifications held by the person,
2. Professional training relevant to the design of an AWTF, water reclamation facility, or drinking water treatment facility,
3. Work experience relevant to the design of AWTF, water reclamation facilities, or drinking water treatment facilities, and
4. A verification letter from an independent party certifying the performance of a manufacturer's equipment or a product that the professional engineer is relying upon for treatment credits, along with the information required under subsections (K)(1), (2), and (3) of this section, for the independent party certifying the product.

R18-9-C818. Compliance Schedule

A. An AWPRA shall follow the compliance schedule established in the AWP permit.

1. If a compliance schedule provides that an action is required more than one year after the date of permit issuance, the schedule shall establish interim requirements and dates for their achievement.
2. If the time necessary for completion of an interim requirement is more than one year and is not readily divisible into stages for completion, the permit shall contain interim dates for submission of reports on progress toward completion of the interim requirements and shall indicate a projected completion date.
3. An AWPRA shall submit to the Department a compliance schedule item report documenting that the required action was taken within the time period specified in the compliance schedule of the AWP permit.
4. After reviewing the compliance schedule activity, the Director may amend the AWP permit, based on changed circumstances relating to the required action.

B. Distribution of advanced treated water is prohibited until the Department approves all compliance schedule items established under the AWP permit pursuant to R18-9-C816(E).

C. The Department shall consider all of the following factors when setting any additional compliance schedule requirements not prescribed under R18-9-C816(E):

1. The impact on advanced treated water quality,
2. The impact on drinking water customers,
3. The requirements for permit amendment, and
4. Any other factors determined at the Director's discretion.

PART D. GENERAL PERMIT REQUIREMENTS

R18-9-D819. Public Notice

A. AWP Permits.

1. The Department shall provide the entities specified in subsection (A)(2) with monthly written notification, by regular mail or electronically, upon the occurrence of any of the following:
   a. Receipt of AWP permit or demonstration permit applications;
   b. Preliminary and final determinations by the Director related to issuance or denial of an AWP permit or demonstration permit;
   c. Issuance of significant permit amendments;
   d. A determination made by the Director to revoke a permit; or
   e. Issuance of a permit renewal.
2. Entities.
   a. Each county department of health, environmental service department, or comparable department,
   b. A federal, state, local agency, or council of government, that may be affected by the permit action, and
   c. A person who requested, in writing, notification of the activities described in subsection (A)(1).

B. The Department shall additionally post the information referenced in subsections (A)(1) and (2) on the Department website: www.azdeq.gov.

R18-9-D820. Public Participation

A. Notice of Preliminary Decision.

1. The Department shall publish a notice of preliminary decision regarding the issuance or denial of a significant amendment or a final permit determination related to an AWP project on its website.
   a. Along with the public notice, the Department shall provide a copy of the draft permit along with a fact sheet for the AWP project.

b. The AWPRA applicant or permittee of the AWP project shall publish the notice of preliminary decision regarding the issuance or denial of a significant amendment or a final permit determination in a mailer sent to all drinking water customers within their service area.

2. The Department shall accept written comments from the public before a significant amendment or a final permit determination is made. Written public comment is limited to the scope of the issuance or denial of a significant amendment or a final permit determination under subsection (A)(1) of this section.

3. The written public comment period begins on the publication date of the notice of preliminary decision and extends for a minimum of 30 days.

B. Public hearing.

1. The Department shall provide, at minimum, a 30-day notice and shall conduct a public hearing to address a notice of preliminary decision regarding a significant amendment or final permit determination if:

a. Significant public interest in a public hearing exists; or

b. Significant issues or information has been brought to the attention of the Department that have not been considered previously in the permitting process.

2. If, after publication of the notice of preliminary decision, the Department determines that a public hearing is necessary, the Department shall schedule a public hearing and publish notice of the public hearing on its website and the AWPRA applicant or permittee of the AWP project shall publish the notice of public hearing in a mailer sent to all drinking water customers within their service area.

3. The Department shall accept written public comment until the close of the hearing record.

C. The Department shall respond in writing to all comments submitted during the public comment period.

D. The Department shall notify an AWPRA applicant or permittee of a significant amendment or final permit determination through regular or electronic mail.

1. Simultaneously, and in the same manner, the Department shall provide a notice of the amendment or determination along with the summary of response to comments to any person who submitted comments or attended a public hearing on the significant amendment or final permit determination.

2. The AWPRA applicant or permittee of the AWP project shall publish the final determination regarding the issuance or denial of a significant amendment or a final permit determination in a mailer sent to all drinking water customers within their service area.

R18-9-D821. Permit Amendments

A. The Director may amend an AWP permit based upon a request or upon the Director's initiative.

1. A permittee shall submit a request for permit amendment in writing on a form prescribed by the Director with the applicable fee established in A.A.C. Title 18, Chapter 14, explaining the facts and reasons justifying the request.
2. The Department shall process amendment requests following the licensing time-frames established under A.A.C. Title 18, Chapter 1, Article 5, Table 10.
3. An amended permit supersedes the previous permit upon the effective date of the amendment.

B. Significant Amendment.

1. Significant AWP permit amendments may include, but are not limited to:
   a. Changes to the enhanced source control program that will result in a change in the water quality of any unit of operation or the advanced treated water,
   b. Any modification to the facility that will result in a change in the water quality of any unit of operation or the advanced treated water,
   c. Any change to the critical control points,
   d. Reductions to monitoring,
   e. Changes to any approved blending plans,
   f. Significant source water quality changes that will result in a change in the water quality of any unit of operation or the advanced treated water,
   g. The addition or removal of an AWPRA partner from the AWPRA, and
   h. Authorization to deliver advanced treated water or distribute finished water following completion of post-permit compliance schedule items.
2. An AWPRA shall submit, along with the detailed permit amendment request in subsection (A)(1), an explanation of the proposed modifications as well as the safeguards that the AWTF will implement to ensure that the quality of the water served will not be adversely affected by any modification.

C. Minor Amendment. Minor AWP permit amendments may include, but are not limited to:

1. Correcting typographical errors,
2. Changing non-technical administrative information,
3. Correcting minor technical errors, such as locational information and citations of law,
4. Increasing the frequency of monitoring or reporting,
5 Making changes in a recordkeeping retention requirement, and

6. Changes to the treatment train, monitoring equipment, or any other component that is not a replacement of, or substantially similar to the approved components, but will not result in a change in the advanced treated water.

D. The public notice and public participation requirements in R18-9-D819 and R18-9-D820 apply to a significant amendment. A minor amendment does not require public notice or public participation.

R18-9-D822. Permit Term; Permit Renewal

A. An AWP permit and demonstration permit are valid for five years from the date the permit is issued pursuant to R18-9-C816.

B. An AWPRA authorized under an AWP permit or demonstration permit shall submit an application for renewal on a form prescribed by the Director with the applicable fee established in A.A.C. Title 18, Chapter 14 at least 180 calendar days before the end of the permit term.

1. If an administratively complete application for renewal of an AWP permit or demonstration permit is not received by the Department prior to the end of the permit term, the AWP permit or demonstration permit expires.
2. If an administratively complete application for renewal of an AWP permit or demonstration permit is received by the Department prior to the end of the permit term, the AWP permit or demonstration permit term extends until a renewal determination is made.

C. The AWPRA shall demonstrate the following requirements to the Department in a renewal application submitted on a form prescribed by the Director:

1. Continued compliance throughout the most recent AWP permit term, or otherwise documentation of data related to any excursion from approved advanced treated water quality parameters,
    a. Excursions shall be monitored at all AWP project components including, but not limited to:
        i. The treatment process at the AWTF,
        ii. The treatment process at the WRF,
        iii. The collection system, and
        iv. Any non-domestic discharger regulated under the enhanced source control program, and
    b. If excursions are detected, the AWPRA shall demonstrate evidence of corrective actions taken in response to the excursion and data confirming that those corrective actions did not impact advanced treated water quality.
2. Facility design documents and as-built construction and configuration reports of all engineered elements of the facility which accurately represent the most current facility, pursuant to R18-9-B810, along with documentation of any compliance challenges with the approved facility design within the most recent AWP permit term,

3. Any proposed modification to an operation, treatment process, treatment configuration, or water quality parameter from the facility design most recently approved under an AWP permit shall result in preparation and submission the applicable, following documents to the Department:
    a. Detailed construction plans of the site and work to be done, presented in legible form and of sufficient scale, to establish construction requirements to facilitate effective review,
    b. Complete specifications to supplement the construction plans in subsection (C)(3)(a), including vendor data demonstrating validation information,
    c. A design plan that describes the proposed construction and basis of design, provides design data and other pertinent information that defines the work to be done, and establishes the adequacy of the design to meet the system demand and the requirements of this Article,
    d. A certificate of completion of a final inspection of the AWTF signed, dated, and sealed by an Arizona-registered professional engineer in a format approved by the Department,
    e. A Pilot Study Plan and report prepared pursuant to R18-9-C815,
    f. A list of construction material used pursuant to R18-9-B806, and
4. An updated Operations Plan, prepared pursuant to R18-9-F836, and revised, as necessary, which includes, but is not limited to:
    a. An updated list of operators who are certified by the Department appropriately for all facilities within an AWP project, including any finished water distribution systems, and
    b. Documentation of any periods of operator absence within the most recent AWP permit term, and
5. An updated vulnerability assessment, prepared pursuant to R18-9-F837, along with documentation of any compliance challenges with the vulnerability mitigation approach previously adopted within the most recent AWP permit term,
6. An updated Public Communications Plan, prepared pursuant to R18-9-B811, along with documentation of any changes to the AWPRA's service area during the most recent AWP permit term that affected plan implementation,
7. An updated Enhanced Source Control Plan, prepared pursuant to the program developed in R18-9-E824, with documentation of any changes to the Plan within the most recent AWP permit term,
8. An updated technical, managerial, and financial demonstration, prepared pursuant to R18-9-F833, with documentation of any changes made to the previously approved demonstration in effect during the most recent AWP permit term,
9. Documentation of source water characterization in compliance with the approach under initial source water characterization pursuant to R18-9-C814, as applicable if changes to the sewershed occur which impact the source water characterization report in effect during the most recent AWP permit term,

10. A renewed demonstration of compliance with all minimum design requirements pursuant to R18-9-F832, and

11. An updated Monitoring Plan, prepared pursuant to R18-9-E829, including the proposed pathogen and chemical action levels.

R18-9-D823. Permit Suspension, Revocation, Denial, or Termination

A. The Director may, after notice and opportunity for hearing, suspend or revoke an AWP permit or demonstration permit upon a determination of any of the following:

1. The AWPRA failed to comply with any applicable provision of this Title or any permit condition;
2. The AWPRA misrepresented or omitted a fact, information, or data related to an AWP permit application or permit condition;
3. A permitted activity is causing or will cause a violation of the Safe Drinking Water Act or any requirement of this Article at the entry point to a distribution system for delivery to drinking water consumers;
4. A permitted AWP facility is causing or will cause imminent and substantial endangerment to public health or the environment;
5. The AWPRA failed to maintain the financial capability pursuant to R18-9-F833; or
6. The AWPRA failed to construct a facility within five years of permit issuance.

B. The Director may deny an AWP permit or demonstration permit upon a determination that the AWPRA applicant has:

1. Failed or refused to correct a deficiency in the permit application;
2. Failed to demonstrate that the facility and the operation will comply with the requirements of this Article and all applicable requirements in Chapter 4 and Chapter 5 of this Title. The Director shall base this determination on:
   a. The information submitted in the AWP permit application;
   b. Any information submitted to the Department following a public hearing; or
   c. Any relevant information that is developed or acquired by the Department; or
3. Provided false or misleading information.

C. The Director may terminate an AWP permit or AWP demonstration permit if the AWP project covered under the permit:

1. Is in substantial non-compliance with this Article or the Safe Drinking Water Act such that the continued operation of the facility presents a risk to public health or public safety that cannot be sufficiently abated or addressed through other enforcement mechanisms available to the Department under this Article;
2. Is determined to have provided false information to the Department, or certified false or misleading reports;
3. Is abandoned or no longer actively distributing or producing water under an AWP permit or demonstration permit; or
4. At the permit holder's request upon prior notification to the Department.

PART E. CONSTITUENT CONTROL, MONITORING, AND REPORTING

R18-9-E824. Enhanced Source Control

A. Treated wastewater used to supply an AWP project shall originate from a water reclamation facility that has local authority to implement an enhanced source control program, including authority for oversight, enforcement, and inspection.

B. An AWPRA applicant shall develop, and an AWPRA permittee shall maintain, a locally authorized enhanced source control program which shall:

1. Operate pursuant to specific legal authority enforceable in State or local courts, including the ability to file civil and/or criminal complaints for program violations,
2. Identify, control, or eliminate constituents of concern discharged into the collection systems through the use of constituents of concern control methods including local ordinances and local limits,
3. Include a summary of local limits and other discharge control methods,
4. Include a list of potentially impactful non-domestic dischargers in the service area,
    a. A potentially impactful non-domestic discharger is a source that meets one or more of the following:
        i. The source is subject to the National Pretreatment Program pretreatment standards;
        ii. The source may adversely affect the AWTF operation including pass-through or interference;
        iii. The source has a potential to have serious adverse effects on public health;
        iv. The source has a potential to prevent the AWPRA from achieving requisite treatment standards for any contaminant regulated under this Article;
        v. The source has a potential to cause a violation of a Tier 1 standard; or
        vi. The source has otherwise been designated as potentially impactful by the water reclamation facility.
    b. The potentially impactful non-domestic discharger list shall be:
        i. Utilized to generate a list of impactful non-domestic dischargers, subject to additional control measures, in accordance with subsection (C) of this section,
        ii. Reported to ADEQ every year through the annual report prepared pursuant to R18-9-E831,
        iii. Continuously updated with newly introduced chemicals or new potentially impactful non-domestic dischargers, or as a result of any other event that causes a change within the collection systems impacting the advanced treated water quality,

iv. Verified through open and ongoing communication, as well as routine site visits with the identified potentially impactful non-domestic discharger. Verification may include inquiry into chemical use, potential discharges, and any potential or planned changes in operation that could impact the advanced treated water quality, and

v. Accompanied by collection system investigations to identify sources of Tier 1 or Tier 2 chemical peaks that have a significant impact on advanced treated water quality. These investigations shall occur at all necessary sewer lines, manholes, force mains, lift stations, and other collection system components.

5. Include a map of the collection system components, which shall be submitted to the Department and shall include locations of the potentially impactful non-domestic discharges in the collection system,

6. Include a list of all water reclamation facilities in the collection system that provide treated wastewater to the AWPRA as a source under the AWP program along with a description or map of their respective boundaries,

7. Include activities that protect the water reclamation facility(s) and AWTF(s) from pass-through or interference from constituents of concern which may include, but are not limited to, the creation of additional local limits or addressing routine monitoring activities,

8. Include a pollutant reduction and elimination plan that addresses both non-domestic and domestic dischargers with the goal of mitigating or eliminating constituents of concern prior to entry into the collection system. The plan shall include, at a minimum, the following:

a. A determination of whether targeted outreach is necessary. If necessary, targeted outreach shall include the development of targeted outreach programs for non-domestic dischargers determined to be impactful in accordance with subsection (C)(2) of this section,

b. Education and encouragement of non-domestic dischargers determined to not be impactful in accordance with subsection (C)(2) of this section to participate in pollution prevention programs or environmental stewardship programs that reduce or eliminate the discharge of constituents of concern into the collection system, including the requirement to consider alternatives to constituent of concern usage,

c. A public outreach program for domestic dischargers, and

d. Notification and public hearings on the AWP program and significant program developments,

9. Include a septage hauler control program that tracks and monitors loads and includes a load sampling program which shall retain all load sampling results for a minimum of five years,

10. Implement a program to receive early warning for the purpose of attaining advanced notice of an incoming constituents of concern peak. An early warning system shall include, at a minimum, the following:

a. Online monitoring instrumentation that evaluate data in real time located either in the influent to the water reclamation facility, in the collection system, or at the discharging entity that measures constituents of concern or surrogate parameter(s) and that indicates potential treatment interference, pass-through, or a violation of an AWP action level,

b. A process for notification to the AWPRA of any discharge that can potentially result in the release of contaminants above local limits established pursuant to subsection (B)(3) of this section,

c. Cooperation with local county public health departments, as necessary, to track constituents of concern peaks from disease outbreaks or other impactful health events,

d. A response plan developed pursuant to subsection (B)(12) of this section,

e. A plan for routine calibration of early warning system equipment with the goal of reliable performance,

f. A plan for rapid response and addressing of equipment failure, and

g. Other early warning measures required by the Department, which are necessary to protect the operations of the AWPRA project treatment or prevent contamination of the advanced treated water, based on a review of application components submitted to the Department for review, and on the availability of such measures,

11. Be audited at least every five years by an independent party to assess the effectiveness of the enhanced source control program in controlling the discharge of contaminants,

12. Include a clear and comprehensive response plan to address constituents of concern exceedances. The response plan shall be created in partnership with all relevant AWPRA partners. The plan shall include, at a minimum, the following:

a. A procedure for addressing constituents of concern peaks with the potential to impact advanced treated water quality,

b. An investigation and identification of the exceedance source, or if no source is identified, the initiation of a collection system sampling program,

c. The designation of the leading facility responsible for communication with the AWPRA partners,

d. A procedure for when and how to notify the Department upon a constituent of concern exceedance,

e. A procedure for the bypass and/or shutdown of the AWTF, if necessary,

f. An effective training program ensuring the understanding of the response plan by the responsible personnel,

g. A review of the operation and calibration records for online meters and any relevant analytical methods upon the detection of a constituent of concern exceedance, and

h. Submission of a memorandum of understanding or other contractual agreement between all entities necessary to effectuate the response plan, and

13. Prohibit the discharge of any of the following to the water reclamation facility:

a. Pollutants which create a fire or explosion hazard, including, but not limited to, waste streams with a closed cup flashpoint of less than 140 degrees Fahrenheit or 60 degrees Centigrade using the test methods specified in 40 CFR Part 261.21,

b. Pollutants which will cause corrosive structural damage including discharges with a pH lower than 5.0, unless the treatment works are designed to accommodate such discharges.

c. Solid or viscous pollutants in amounts which will cause obstruction to the flow resulting in interference,

d. Any pollutant, including oxygen demanding pollutants (biochemical oxygen demand, etc.) released in a discharge at a flow rate and/or pollutant concentration which will cause Interference,

e. Heat in amounts which will inhibit biological activity resulting in interference including heat in such quantities that the temperature at the water reclamation facility exceeds 40 °C (104 °F), unless the approval authority, upon request of the water reclamation facility, approves alternate temperature limits,

f. Petroleum oil, non-biodegradable cutting oil, or products of mineral oil origin in amounts that will cause interference or pass-through,

g. Pollutants which result in the presence of toxic gas, vapors, or fumes in a quantity that may cause acute worker health and safety problems, and

h. Any trucked or hauled pollutants, except at discharge points designated by the water reclamation facility, and

14. Include local authority for the AWPRA to take the following actions to determine compliance of a potentially impactful non-domestic discharger with a local ordinance:

a. Receive and analyze all self-monitoring reports and notices submitted by potentially impactful non-domestic dischargers,

b. Randomly sample and analyze effluent from potentially impactful non-domestic dischargers and conduct surveillance and inspection activities needed to identify, independent of any information supplied by such users, occasional or continuing noncompliance with any local limit or requirement, and

c. Investigate instances of noncompliance with any enhanced source control ordinance when notice of any actual or probable noncompliance has been received by the AWPRA, and

15. Report all program elements in this subsection to the Department annually, pursuant to R18-9-E831, and

16. Include any other relevant information required by the Department.

C. Impactful Non-Domestic Dischargers List.

1. From the potentially impactful non-domestic dischargers list developed in subsection (B)(4) of this section, the AWPRA applicant shall develop a list of impactful non-domestic dischargers by conducting a significant impact analysis for each potentially impactful non-domestic discharger that considers, but is not limited to, the following factors:

a. Average wastewater discharged into the collection system,

b. Dilution of discharge within the collection system,

c. The nature of the discharge and its constituents,

d. The ability of downstream treatment processes to address the discharge, and

e. The effect the discharge will have on treatment processes and advanced treated water.

2. The AWPRA permittee shall subject the identified impactful non-domestic dischargers in the collection system to additional control measures including, but not limited to:

a. Locally established discharge limits,

b. Locally established monitoring, and

c. Targeted outreach.

3. The list shall be reported to ADEQ every year through the annual report prepared pursuant to R18-9-E831.

D. In addition to the requirements of this section, an enhanced source control program shall be developed, conducted, and maintained using good engineering practices. Methods for developing, conducting, and maintaining an enhanced source control program shall be approved if the AWPRA applicant can demonstrate that the methods are sufficiently detailed and robust for the purpose of enhanced source control, pursuant to this Article.

1. ADEQ shall develop and make available guidance on developing, conducting, and maintaining an enhanced source control program.

2. An enhanced source control program developed, conducted, and maintained in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

E. An AWPRA shall form and maintain a source control committee that includes representatives from:

1. Each AWPRA partner that is part of the AWPRA's enhanced source control program, including each AWPRA partner that supplies treated wastewater to the AWP project or that owns and/or operates a water reclamation facility that provides treatment, and

2. Key non-domestic dischargers and others that discharge to the collection system chemicals that may pose a risk to public health.

R18-9-E825. Tier 1 Chemical Control; Maximum Contaminant Levels

For the purposes of this Article, Tier 1 chemicals are the chemical contaminants that have "Primary Drinking Water Standards" under 40 CFR Part 141 as incorporated by reference in R18-4-102, including those with Safe Drinking Water Act-required Maximum Contaminant Levels or Treatment Techniques.

R18-9-E826. Tier 2 Chemical Control; Advanced Water Purification-Specific Chemicals

A. An AWPRA shall conduct a Tier 2 analysis under this section in order to determine Tier 2 chemicals, propose alert and action levels for Tier 2 chemicals at the AWTF, and to identify the chemical controls necessary to be implemented by the AWPRA in the following manner:

1. An AWPRA applicant shall conduct the analysis as a required technical component of their permit application for an AWP permit or an AWP demonstration permit, pursuant to R18-9-C816 and R18-9-C817, respectively.
2. Once permitted, an AWPRA shall conduct a new Tier 2 analysis under this section:
   a. If the AWPRA is aware of, becomes aware of, or should reasonably be aware of:
      i. The identification of additional potentially impactful non-domestic dischargers pursuant to R18-9-E824(B)(4); or
      ii. Significant volumetric adjustments to an AWPRA water reclamation facility's total daily volume of treated wastewater that are likely to impact the expected concentration of any chemical pursuant to subsection (D) of this section; or
   b. If changes to any component of the permitted AWP project occur that will result in an exceedance of an action level; or
   c. At a minimum, every five years as a component of a permit renewal application pursuant to R18-9-D822.

B. Non-Domestic Dischargers List. The AWPRA applicant shall list all non-domestic dischargers in the collection system that are a direct or indirect source to an AWPRA water reclamation facility.

C. Chemical Inventory List. The AWPRA applicant shall generate a list of chemicals that are used, stored, or discharged by all non-domestic dischargers in the list from subsection (B) above. The AWPRA applicant shall add chemicals used at the water reclamation facility and the AWTF to the chemical inventory list.

D. Tier 2 Analysis. The AWPRA applicant shall conduct the following analysis for each chemical identified in the Chemical Inventory List in subsection (C) above:

1. Calculate the projected daily load for each chemical in the inventory list generated in subsection (C) for each non-domestic discharger in the list generated in subsection (B) as follows: Mass loading of contaminant (lb/day) = Flow (MGD) x Maximum Concentration (mg/L) x 8.34 (for unit conversion);
2. Calculate the projected total daily load of each chemical in the inventory list generated in subsection (C) for all non-domestic dischargers in the list generated in subsection (B), cumulatively, as follows: Total Contaminant Load (lb/day) = ∑ Mass loading (lb/day) for all dischargers;

3. Calculate the projected daily concentration of each chemical in the chemical inventory list in the treated wastewater by comparing the collection system's projected total daily load from subsection (D)(2) for each chemical in the chemical inventory list against the total influent flow of treated wastewater at the headworks of the proposed AWTF using the following formula:

$$Expected\ concentration\ (mg/L) = \frac{Total\ Contaminant\ Load\ (\frac{lb}{day})}{Total\ Influent\ Flow\ (MGD) \times 8.34}$$

4. For chemicals with one or more of the corresponding health advisory values in subsections (a)(i) through (v) below established in the "2018 Edition of the Drinking Water Standards and Health Advisories Tables":
   a. Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the lowest health advisory value, from the following available values:
      i. One-day (mg/L)
      ii. Ten-day (mg/L)
      iii. DWEL (mg/L)
      iv. Life-time (mg/L)
      v. mg/L at 10^{-4} Cancer Risk.
   b. If the projected daily concentration exceeds the health advisory value, the chemical shall be a Tier 2 chemical.
5. For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above but do have a drinking water health advisory notification level or equivalent from a state drinking water program that was developed using a method that ADEQ approves and lists under subsection (a), below:
   a. Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the following corresponding state drinking water health advisory notification level or equivalent:
      i. Trimethylbenzene (1,2,4-) (CAS No. 95-63-6): 0.33 mg/L,
      ii. *Reserved*.
   b. If the projected daily concentration exceeds the health advisory notification level, the chemical shall be a Tier 2 chemical.
6. For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above, nor a notification level in another state's drinking water program pursuant to subsection (D)(5) above:
   a. Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the corresponding Departmental health advisory value listed below:
      i. Benz[a]anthracene (CAS No. 56-55-3): 0.06 mg/L
      ii. Benzo[b]fluoranthene (CAS No. 205-99-2): 0.06 mg/L

iii. Benzo[g,h,i]perylene (CAS No. 191-24-2): 0.00001 mg/L

iv. Benzo[k]fluoranthene (CAS No. 205-99-2): 0.005 mg/L

v. Chrysene (CAS No. 218-01-9): 6 mg/L

vi. Dimethyl phthalate (CAS No. 131-11-3): 0.001 mg/L

vii. Indeno[1,2,3,-c,d]pyrene (CAS No. 193-39-5): 0.06 mg/L

viii. Phenanthrene (CAS No. 85-01-8): 0.0002 mg/L.

b. If the projected daily concentration exceeds the Departmental health advisory value, the chemical shall be a Tier 2 chemical for ongoing monitoring purposes pursuant to R18-9-E829, but shall be exempt from all compliance requirements under R18-9-E829(D) and the Projected Chemical Treatment List in subsection (F) below.

7. For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above, nor a notification level in another state's drinking water program pursuant to subsection (D)(5) above, nor a Departmental health advisory value pursuant to subsection (D)(6) above, but do have a Reference Dose (RfD) or Cancer Slope Factor (CSF) in credible peer-reviewed literature or state or Federal databases:

a. Consult with the Department and/or the Project Advisory Committee to determine a health advisory value.

b. Compare the projected daily concentration of each applicable chemical calculated in subsection (D)(3) with the corresponding health advisory determined in subsection (D)(7)(a) above.

c. If the projected daily concentration exceeds the health advisory determined in subsection (D)(7)(a), the chemical shall be a Tier 2 chemical.

8. For chemicals that do not have an established health advisory pursuant to subsection (D)(4) above, nor a notification level in another state's drinking water program pursuant to subsection (D)(5) above, nor a Departmental health advisory value pursuant to subsection (D)(6) above, nor a health advisory determined pursuant to subsection (D)(7) above:

a. An AWPRA applicant shall consult with the Department and/or the Project Advisory Committee to determine the health risk of the chemical through reasonably appropriate bioanalytical studies and/or bioassays.

b. If the health risk in subsection (D)(8)(a) above is determined to be significant, the chemical shall be a Tier 2 chemical.

c. If the bioanalytical studies and/or bioassays conducted in subsection (D)(8)(a) above are indeterminate, the chemical shall be removed through measures adopted by the AWPRA in its enhanced source control program pursuant to R18-9-E824.

9. Action and Alert Levels. An AWPRA applicant shall calculate and submit to the Department an action level and an alert level for each Tier 2 chemical.

a. The action level for the Tier 2 chemicals established under subsection (D)(4) shall be set at the same value as the lowest applicable health advisory value in the "2018 Edition of the Drinking Water Standards and Health Advisories Tables", below:

i. One-day (mg/L)

ii. Ten-day (mg/L)

iii. DWEL (mg/L)

iv. Life-time (mg/L)

v. mg/L at 10-4 Cancer Risk.

b. The action level for the Tier 2 chemicals established under subsection (D)(5) shall be set at the same value as the corresponding health advisory notification level in subsection (D)(5)(a).

c. The action level for the Tier 2 chemicals established under subsection (D)(7) shall be set at the same value as the corresponding health advisory determined in subsection (D)(7)(a).

d. The action level for the Tier 2 chemicals established under subsection (D)(8) shall be set at a value that is reasonably protective of human health, reasonably utilizing the results of the bioanalytical studies or bioassays.

e. The alert level shall be set reasonably below the action level.

E. Pass-Through or Interference Chemical List. The AWPRA applicant shall analyze the chemical inventory list in subsection (C) in order to identify chemicals that are known to or expected to pass-through or interfere with AWTF treatment processes. The AWPRA applicant shall generate a list to be used in subsection (F).

F. Projected Chemical Treatment List. Based on the Tier 1 MCLs, the Tier 2 chemicals identified in subsection (D)(4), (5), (7) and (8), and the pass-through or interference chemical list generated in subsection (E), the AWPRA applicant shall select an optimized pilot and full-scale AWTF treatment train and compile a list of chemicals that are projected to be treated by the selected treatment train.

1. During the pilot study, pursuant to R18-9-C815, the AWPRA applicant shall demonstrate chemical control of all chemicals on the Projected Chemical Treatment List through treatment at the pilot treatment train.

2. All chemicals that are not able to be controlled through treatment at the pilot or full-scale AWTF shall be controlled through measures adopted by the AWPRA in its enhanced source control program pursuant to R18-9-E824. The selected control measures shall be submitted to the Department along with the Enhanced Source Control Plan pursuant to R18-9-C816 and R18-9-C817.

G. An AWPRA shall maintain the lists of chemicals identified under subsections (C) and (E) and, if a new Tier 2 analysis conducted under subsection (D) results in a modification to any component of the AWP project, the AWPRA shall request an amendment to their AWP permit pursuant to R18-9-D821.

R18-9-E827. Tier 3 Chemical Control; Performance-Based Indicators

A. An AWPRA applicant shall identify Tier 3 chemicals for the purpose of monitoring the efficacy of reduction by a treatment component at the pilot and full-scale treatment trains or to provide an indication of a process's failure.

B. Tier 3 chemicals are composed of performance-based indicators which the AWPRA applicant shall select based on the requirements of this section.

1. The AWPRA applicant shall monitor each performance-based indicator and demonstrate chemical removal for all selected treatment components in the treatment train.
2. Performance based indicators may be grouped under a surrogate such that the AWPRA applicant may monitor removal of that surrogate in place of performance-based indicators if the following requirements are met:
    a. All performance-based indicators in the group share similar properties such that removal of the surrogate is adequately representative of every performance-based indicator in that group, and
    b. The AWPRA applicant demonstrates that the surrogate is directly correlated to the concentration of a performance-based indicator.

C. Performance based indicators. Each performance-based indicator shall be selected from pre-existing chemicals identified in the treated wastewater either through the Initial Source Water Characterization report pursuant to R18-9-C814(E) or shall otherwise be introduced by the AWPRA applicant.

1. Pre-Existing. Performance based indicators selected from pre-existing chemicals identified in the treated wastewater shall be selected in accordance with, but not limited to, the following criteria:
    a. Concentration. To demonstrate adequate percentage of removal, a performance-based indicator shall have a median concentration at least five times greater than its method reporting limit, measured as the detection ratio.
    b. Prevalence. To adequately reflect treatment efficacy, the performance-based indicator shall have a consistent detection frequency of greater than 80% in the treated wastewater.
    c. Measurability. Measurements demonstrating concentration and prevalence pursuant to subsections (C)(1)(a) and (b) of this section shall be made in accordance with established and appropriate analytical methods that are sufficiently precise and sensitive.

d. Specificity. The performance-based indicator shall be removable by the targeted treatment process(es) it is intended to monitor and shall meet the prevalence and concentration criteria at the influent of the targeted treatment process pursuant to subsections (C)(1)(a) and (b) of this section.

e. Sensitivity. The performance-based indicator shall be sufficiently sensitive such that the targeted treatment process achieves at least 75% removal when functioning as designed.

f. Diversity. For all performance-based indicators selected from pre-existing chemicals, the AWPRA applicant shall demonstrate the following:

i. Each chemical treatment process is monitored by at least one performance-based indicator, and

ii. The treatment train as a whole is monitored by at least one performance-based indicator which is partially removed by each treatment process, but only removed to at least 75% if all treatment processes are functioning as intended.

2. Introduced. If no pre-existing chemicals are relevant as a performance-based indicator for a specific treatment process, the AWPRA applicant shall introduce a performance-based indicator for the purpose of testing the selected treatment process for requisite chemical removal in compliance with this section. For each introduced performance-based indicator an AWPRA applicant shall:

a. Reasonably demonstrate the selected treatment process performance, and

b. Include an established procedure for introduction into the treatment train.

D. Critical Control Points. For each performance-based indicator, the AWPRA applicant shall designate critical control points where monitoring will occur in the pilot treatment train to indicate individual process performance. The AWPRA applicant may propose critical control points at only the treatment train influent and effluent points if all performance-based indicators are demonstrated to be sufficiently recalcitrant to upstream and downstream processes.

E. An AWPRA applicant shall include an initial Tier 3 chemical list along with proposed critical control points as a component of the Pilot Study Plan prepared pursuant to R18-9-C815.

F. In addition to the requirements of this section, the Tier 3 chemical list compilation and monitoring shall be conducted using good engineering practices. Other methods for generating, designing, and conducting Tier 3 chemicals and monitoring shall be approved if the AWPRA applicant can demonstrate that the alternative methods are sufficiently detailed and robust for the purpose of monitoring the efficacy of reduction by a treatment process at the pilot or full-scale treatment train, or providing an indication of process failure.

1. ADEQ shall develop and make available guidance on Tier 3 chemical list compilation and monitoring.

2. A Tier 3 chemical list compiled and monitored in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

R18-9-E828. Pathogen Control

A. The AWP project shall be designed and constructed to achieve pathogen reduction by following the prescribed methods to determine log reduction values for enteric viruses, Giardia lamblia cysts, and Cryptosporidium oocysts, also referred to collectively as reference pathogens, as outlined in either subsection (B) or (C) of this section.

B. Standard Log Reduction. An AWPRA applicant choosing the standard log reduction approach shall design the AWP project to achieve the following cumulative validated treatment values from raw wastewater to finished water:

1. 13 log reduction for enteric viruses,
2. 10 log reduction for Giardia lamblia cysts, and
3. 10 log reduction for Cryptosporidium oocysts.

C. Site-Specific Log Reduction. An AWPRA applicant choosing a site-specific log reduction approach shall design the AWP project based on cumulative validated treatment values determined through reference pathogen monitoring pursuant to R18-9-C814(C)(3)(c) and the following:

1. Site-specific pathogen monitoring for the reference pathogens shall be conducted over a period of at least 24 months and shall include, at a minimum:
   a. One month of initial composite sampling consistent with the following requirements:
      i. One sample taken daily, and
      ii. The samples obtained in subsection (C)(1)(a)(i) shall be used, at the end of the first month, to identify the day of the week that yields the highest pathogen density.
   b. At least 23 months of pathogen monitoring consistent with the following requirements:
      i. One sample taken per month at the same day of the week throughout the sampling period as established in subsection (C)(1)(a), and
      ii. The sample obtained in subsection (C)(1)(b)(i) shall be taken consistently during the same week each month.
2. Any missed sample collected under subsections (C)(1)(a) or (b) of this section shall result in an extension of the sampling period by another week or month as appropriate pursuant to R18-9-A802(C), and cannot be replaced with a sample from a different day,
3. Sampling shall occur at a location in the water reclamation facility treatment train before the first disinfection treatment process and before treated wastewater transference to the AWTF,
4. Sample results below method reporting limit shall be reported at the method reporting limit of the analytical instrument for characterization calculations and be flagged as such,

5. Non-detects from laboratory analysis must be demonstrated with a large sample volume analysis,

6. An AWPRA applicant shall have a cumulative validated treatment of not less than 8 log for enteric viruses, 6 log for Giardia lamblia cysts, and 5.5 log for Cryptosporidium oocysts even if non-detects are demonstrated by the sampling program,

7. The highest sample concentration for each reference pathogen shall be used to calculate the required log removal targets,

8. Norovirus shall be used as the representative enteric virus for baseline virus enumeration.

   a. The AWPRA applicant shall utilize either qPCR or culture methods for analysis,

   b. All corresponding recovery-corrected data shall be documented for review, and

   c. The results shall be documented for review with accompanying quality assurance and quality control, and

9. Laboratory analysis of samples collected pursuant to this section shall follow EPA qPCR or Culture Methods 1623.1, "Cryptosporidium and Giardia in Water by Filtration/IMS/FA" and 1615 "Measurement of Enterovirus and Norovirus Occurrence in Water by Culture and RT-qPCR" for Giardia lamblia cysts, Cryptosporidium oocysts and Norovirus. In addition, laboratories using these methods are required to follow general requirements and recommendations for quality assurance and quality control procedures in Section 9020, "Quality Assurance/Quality Control" of the Standard Methods For The Examination of Water and Wastewater, 24th Edition.

D. Critical Control Points. For each reference pathogen, the AWPRA applicant shall designate critical control points where monitoring will occur in the pilot plant and the full-scale plant in order to assess individual process performance.

1. Critical control point designation shall be accompanied by a comprehensive plan for monitoring and reporting, including, but not limited to, the following elements:

   a. Type of monitoring (i.e. online monitoring, continuous monitoring, grab samples, etc.),

   b. Frequency of monitoring (i.e. 15-minute, hourly, daily, weekly, etc.),

   c. Instantaneous flow rate and flow totalizing capability for the purpose of calculating residence times and responses,

   d. Demonstrated operational parameters confirming the treatment barriers are intact such as to ensure the process is meeting the water quality parameters and pathogen removal goals, and

   e. A list of the identified action levels and alert limits, accompanied by the corresponding responses for all critical control points, pursuant to R18-9-F836.

2. Critical control point monitoring shall occur at all validated treatment process locations.

3. The AWPRA applicant shall document the critical control point methods and the following elements as components of the Operations Plan prepared pursuant to R18-9-F836:

   a. All delay times from the pathogen sampling time, instrument analysis time, operator response time, as well as anticipated time to respond to a failure, and

b. Automated shutdown procedures based on pathogen critical control point failure, along with a description of shutdown sequences, procedures, and timing.

E. In addition to the requirements of this section, the pathogen monitoring shall be designed and conducted using good engineering practices. Methods for designing and conducting pathogen monitoring shall be approved if the AWPRA applicant can demonstrate they are sufficiently detailed and robust for the purpose of characterizing pathogens in a treated wastewater source.

1. ADEQ shall develop and make available guidance on designing and conducting pathogen monitoring.
2. Pathogen monitoring designed and conducted in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

R18-9-E829. Ongoing Monitoring Requirements

A. The AWPRA shall perform ongoing monitoring in compliance with the requirements of this section, and shall:

1. Assure compliance with both pathogen control log reduction targets and chemical control limits for Tier 1, Tier 2, and Tier 3 at the AWTF treated wastewater influent and the advanced treated water effluent,
2. Assure continued process performance at critical control points,
3. Perform sampling on the advanced treated water prior to delivery pursuant to this section, and
4. Perform additional sampling as necessary on the finished water prior to distribution pursuant to the requirements of the Safe Drinking Water Act.

B. Pathogen Control Monitoring. An AWPRA shall monitor in a manner proposed by the AWPRA and approved by the Director pursuant to R18-9-E828(D).

C. Tier 1 Chemical Control Monitoring.

1. The AWPRA shall monitor for all Tier 1 chemicals at a quarterly interval, except for Nitrite and Nitrate as Nitrogen and TOC, which shall be monitored pursuant to subsection (F) and R18-9-F834, respectively.
2. The AWPRA shall conduct Tier 1 monitoring at two locations relative to the AWTF:
   a. The treated wastewater, and
   b. The advanced treated water.
3. Violations of Tier 1 chemicals, except for TOC and Nitrogen, are the corresponding Safe Drinking Water Act-MCL values in the advanced treated water.
4. Nothing in this section exempts the AWPRA from applicable Safe Drinking Water Act monitoring requirements.

D. Tier 2 Chemical Control Monitoring.

1. The AWPRA shall monitor for all Tier 2 chemicals monthly.

2. The AWPRA shall conduct Tier 2 monitoring at two locations relative to the AWTF:
    a. The treated wastewater, and
    b. The advanced treated water.
3. Compliance monitoring for Tier 2 chemicals occurs at the advanced treated water.
4. If a monitoring result for a Tier 2 chemical indicates an exceedance of an action level, the AWPRA shall collect a confirmation sample within 24 hours of the exceedance.
5. A Tier 2 action level is violated when the average of the initial sample and the confirmation sample exceeds the action level. Upon a violation, an AWPRA shall notify the Department and conduct any required response procedures pursuant to reporting under R18-9-E830, the Operations Plan under R18-9-F836 and subsections (D)(6) - (D)(9) of this section.
6. Basic Response Procedure. Upon a violation as described in subsection (D)(5), and with the goal of reducing the concentration of the exceeded chemical to a level below the action level, the AWPRA shall:
    a. Increase the monitoring frequency of the chemical to weekly, and
    b. Initiate an investigation of the source of the chemical, the cause of the elevated result, and the efficacy of the treatment process(es).
7. An AWPRA shall conduct the corresponding advanced response procedure in subsection (D)(8) of this section if either of the following two results occur:
    a. A Tier 2 chemical with a non-cancer toxicological endpoint has a violation value of 10 times the action level; or
    b. A Tier 2 chemical considered to pose a cancer risk (corresponding to a lifetime cancer risk of $1x10^{-4}$) has a violation value of 100 times the action level.
8. Advanced Response Procedure.
    a. Under subsection (D)(7)(a) of this section, an AWPRA shall:
        i. Notify ADEQ within 24 hours of the notification of the result, and
        ii. Report the detection in the applicable public water system's annual consumer confidence report.
    b. Under subsection (D)(7)(b) of this section, an AWPRA shall:
        i. Cease delivery of advanced treated water immediately,
        ii. Notify ADEQ within 24 hours of the notification of the result,
        iii. Provide public notification if advanced treated water with those exceedances was distributed (if diverted, public notice is not required),
        iv. Report the result in the applicable public water system's annual consumer confidence report,

v. Upon returning the advanced treated water to distribution, utilize treatment or blending to meet the chemical's action level, and

vi. Propose corrective actions, such as rectifying changes to the treatment and operations of the AWTF, or installing new control measures for the treated wastewater source.

9. Reduced Monitoring Frequency Criteria. ADEQ may allow a decrease in the Tier 2 sampling frequency from monthly to quarterly, based on a review of the most recent two years of monthly analytical results showing that a chemical has not been detected.

a. The monitoring frequency may be decreased from quarterly to annually following ADEQ approval, based on a review of the most recent three years of quarterly analytical results showing the chemical has not been detected.

b. The monitoring frequency may be reverted to prior intervals at the Department's discretion.

E. Tier 3 Chemical Control Monitoring. The AWPRA shall monitor for all Tier 3 chemicals at the designated critical control points in the manner and timeframes proposed by AWPRA and approved by the Director pursuant to R18-9-E827 and R18-9-F836.

F. Ammonia and Nitrite and Nitrate as Nitrogen.

1. The AWPRA shall monitor for Ammonia and Nitrite and Nitrate as Nitrogen using continuous online analyzers.

2. The AWPRA shall conduct Ammonia, Nitrite and Nitrate monitoring at two locations relative to the AWTF:

a. The treated wastewater influent, and

b. The advanced treated water effluent.

3. The AWPRA shall demonstrate that all Ammonia has been removed at the advanced treated water effluent.

4. The AWPRA shall operate the facility in such a manner that:

a. Nitrite measured as nitrogen does not exceed 1 mg/L at the advanced treated water location daily on an absolute basis, and

b. Nitrate measured as nitrogen does not exceed 10 mg/L at the advanced treated water location daily on an absolute basis.

5. Any exceedance of 1 mg/L of nitrite and 10 mg/L of nitrate on an absolute basis, measured as Nitrogen daily, requires a public notification pursuant to A.A.C. R18-4-119.

G. Total Organic Carbon Monitoring. The AWPRA shall follow all TOC monitoring requirements established pursuant to R18-9-F834.

H. Water Reclamation Facility Operational Parameters.

1. The AWPRA applicant shall provide a list of water reclamation facility operational parameters and ranges that produced the AWTF treated wastewater influent water quality as components of:

a. The Pilot Study Plan pursuant to R18-9-C815, and

b. The AWP permit application pursuant to R18-9-C816.

2. At the water reclamation facility, the AWPRA shall monitor for the parameters identified in subsection (F) of this section and process control parameters.

3. Any significant change in the operational parameters or their ranges must be approved through a permit amendment pursuant to R18-9-D821. For the purposes of this subsection, "significant change" means any operational change that will result in a change to the treated wastewater.

I. In addition to the requirements of this section, ongoing monitoring shall be developed, proposed and conducted using best practices, proper sampling procedures, and reliable equipment. Similar monitoring program components shall be approved if the AWPRA can demonstrate that the method is sufficiently detailed and robust for the purpose of AWP ongoing monitoring pursuant to this Article.

1. ADEQ shall develop and make available guidance on AWP ongoing monitoring.

2. AWP ongoing monitoring conducted in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using best practices.

R18-9-E830. Reporting Requirements

A. An AWPRA shall conduct reporting pursuant to the applicable general reporting requirements throughout this Article and the specific reporting requirements in this section. The AWPRA shall submit reports to the Department, on a form prescribed by the Director and pursuant to relevant specifications in the permit, through an AWP online portal on the Department's website.

B. Pathogen Reporting.

1. An AWPRA shall report ongoing pathogen monitoring results monthly.

2. An ongoing pathogen monitoring report shall include, but is not limited to, the following:

a. A summary of the overall treatment train pathogen log reduction value performance,

b. A summary of the individual treatment process performance monitoring data,

c. The date, duration, and cause of each occurrence of log reduction value performance below the selected reference pathogen approach log reduction values in either R18-9-E828(B) or (C),

d. A summary of excursions of operational parameters outside the Department approved operating envelope,

e. Submission of calibration records for instruments that monitor pathogen critical control points quarterly,

f. Dates and descriptions of major equipment and process failures and corrective actions, along with data confirming that the corrective actions did not impact the approved product water quality,

g. A summary of any water quality complaints and reports of gastrointestinal illness received from customers,

h. A summary of activities of the wastewater source control program to control pathogens, and

i. Investigation or incident reports regarding cross-connection.

3. An AWPRA shall report other applicable pathogen monitoring requirements in the time and manner set forth in the AWP permit and R18-9-E828.

C. Tier 1 Reporting.

1. An AWPRA shall report ongoing Tier 1 chemical monitoring results quarterly.
2. An ongoing Tier 1 Chemical report shall include, but is not limited to, the following:
   a. A summary of the overall treatment train chemical control performance,
   b. A summary of chemicals detected as a result of monitoring conducted pursuant to R18-9-E829,
   c. Investigation or incident reports regarding cross-connection,
   d. A summary of activities of the wastewater source control program to control chemicals,
   e. Dates and descriptions of any major equipment and process failures and corrective actions, along with data confirming that the corrective actions did not impact the approved product water quality, and
   f. A summary of individual treatment process performance monitoring data.
3. An AWPRA shall report other applicable Tier 1 chemical monitoring requirements in the time and manner set forth in the AWP permit and R18-9-E829.
4. Nothing in this section exempts the AWPRA from applicable Safe Drinking Water Act reporting requirements.

D. Tier 2 Reporting.

1. An AWPRA shall report Tier 2 chemical monitoring results monthly.
2. An ongoing Tier 2 chemical report shall include, but is not limited to, the following:
   a. A summary of overall treatment train chemical control performance,
   b. A summary of chemicals detected as a result of monitoring conducted pursuant to R18-9-E829,
   c. Investigation or incident reports regarding cross-connection,
   d. A summary of enhanced source control activities,
   e. Dates and descriptions of major equipment and process failures and corrective actions, along with data confirming that the corrective actions did not impact the approved product water quality, and
   f. A summary of individual treatment process performance monitoring data.
3. An AWPRA shall report other applicable Tier 2 chemical monitoring requirements in the time and manner set forth in the AWP permit and R18-9-E826.

E. Tier 3 Reporting. An AWPRA shall report Tier 3 chemical monitoring results in the time and manner set forth in the AWP permit and R18-9-E827.

F. Ammonia and Nitrite and Nitrate as Nitrogen Reporting.

1. An AWPRA shall report Ammonia and Nitrite and Nitrate as Nitrogen chemical monitoring results quarterly.
2. An ongoing Ammonia and Nitrite and Nitrate as Nitrogen report shall include, but is not limited to, the following:
    a. A summary of overall treatment train nitrogen species control performance,
    b. A summary of nitrogen species detected as a result of monitoring conducted pursuant to R18-9-E829,
    c. Investigation or incident reports regarding cross-connection,
    d. Dates and descriptions of major equipment and process failures and corrective actions, along with data confirming that the corrective actions did not impact the approved product water quality, and
    e. A summary of individual treatment process performance monitoring data.

G. TOC Reporting. An AWPRA shall report TOC monitoring results quarterly in accordance with the selected TOC management approach pursuant to R18-9-F834.

H. Water Reclamation Facility Operational Parameters Reporting. An AWPRA shall report the water reclamation facility operational parameter monitoring results monthly pursuant to R18-9-F832.

R18-9-E831. Annual Report

A. An AWPRA shall submit an annual report to the Department, postmarked no later than March 30th.

B. The report shall include the following information from the previous calendar year:

1. A summary of the compliance status of the AWP permit and/or demonstration permit including:
    a. A list of violation(s),
    b. Any off-spec water diversions, shutdowns, or corrective action(s) taken along with data confirming that the corrective actions did not impact the approved product water quality,
    c. Required sampling and monitoring activities at critical control points, and
    d. All other related AWP permit or regulation compliance items.
2. Any expected change(s) in quantity and quality of the treated wastewater,
3. A summary of any operational or technical challenges in meeting advanced treated water quality standards,
4. Any expected treatment changes and the impact on subsequent unit processes in the treatment train and the advanced treated water,
5. A verification of all required maintenance performed at each critical control point and any other process equipment, including evidence of instrumentation calibration,
6. Enhanced source control components, pursuant to R18-9-E824, including:
    a. A summary of all sampling activities conducted at the AWPRA facilities,

b. A summary of any event resulting in upset, interference, or pass-through at any AWPRA facility,

c. A report documenting a review of established local limits along with any subsequent updates or changes by the AWPRA,

d. An update of the potentially impactful non-domestic discharger list and the impactful non-domestic discharger lists,

e. A description of any challenges under the enhanced source control program, and any proposed program changes,

f. A list of impactful non-domestic dischargers in non-compliance and any corrective actions taken, along with data confirming that the corrective actions did not impact the approved product water quality,

g. All outreach activities conducted,

h. All completed staff training related to enhanced source control, the National Pretreatment Program, or operation or maintenance of an AWPRA facility,

i. A list of any corrective or enforcement actions taken by the AWPRA against an AWPRA partner, and

j. A list of events identified through the early warning system and the actions taken to mitigate those events, and

7. The AWTF's TOC management annual approach. This includes, if applicable, the results of the annual site-specific TOC approach, including the lower value of the two site-specific procedures, and the reestablished alert and action levels pursuant to R18-9-F834, and

8. Any other information necessary to assist the Department in assessing challenges to program implementation.

PART F. TECHNICAL AND OPERATIONAL REQUIREMENTS

R18-9-F832. Minimum Design Requirements

A. An AWPRA shall meet the minimum design criteria in this section in designing and constructing a pilot treatment train and a full-scale treatment train under an AWP project.

B. Pathogen Control.

1. Under an AWP project, treated wastewater shall receive continuous pathogen treatment prior to delivery or distribution.

2. Pathogen log reduction credits will only be assigned for treatment barriers.

3. A treatment train shall contain at least one validated filtration treatment process and one validated disinfection treatment process targeting each of the three reference pathogens.

4. Each treatment process shall be credited with a minimum validated pathogen log reduction of 0.5 log reduction value.

5. Each treatment process shall not be credited with more than 6 validated pathogen log reduction credits.

6. Each treatment process may receive pathogen log reduction credits for one or more pathogens.

7. The treatment train, cumulatively, shall meet or exceed either the standard or site-specific log reduction targets for each reference pathogen pursuant to R18-9-E828.
8. An AWPRA shall maintain a pathogen monitoring strategy, which includes approved performance monitoring for surrogates, in order to receive log reduction values for a treatment process.
9. Each treatment process used to meet the requirements in this section shall have the pathogen log reduction values validated for each reference pathogen.
    a. An AWPRA may use a validation study or a previously-approved validation study report, in accordance with the protocol elements in subsection (B)(10) of this section.
    b. A validation study protocol shall be prepared by a licensed Arizona engineer with experience in drinking water or wastewater treatment, specifically in evaluating pathogen control in public water supplies.
10. The validation study protocol shall:
    a. Identify the treatment mechanism(s) of pathogen reduction by each treatment process,
    b. Identify the pathogen(s) being addressed by the treatment process, or appropriate surrogate(s) for the pathogen(s), that are used in the validation study, which shall be the one(s) most resistant to the treatment mechanism(s),
    c. Ensure that the pathogen(s) or surrogate(s) for the pathogen(s) are present in the test water in concentrations sufficient to demonstrate a pathogen log reduction,
    d. Identify the factors that influence the pathogen reduction efficiency for the treatment mechanism(s) and includes at least:
        i. Feed water characteristics such as temperature and pH,
        ii. Hydraulic loading,
        iii. Deterioration of components, and
        iv. Integrity failure, and
    e. Identify the surrogate and/or operational parameters that can be measured continuously and that will correlate with the reduction of the pathogen(s) or surrogate(s) for the pathogen(s),
    f. Identify the validation methodology to demonstrate the pathogen log removal capability of the treatment process, which shall involve a challenge test to quantify the reduction of the target pathogen or appropriate surrogate while concurrently monitoring the operational parameters to determine an operating envelope,
    g. Describe the method to collect and analyze data to formulate evidence-based conclusions,
    h. Describe the method to determine the alert and action levels and the operational monitoring and control strategy,

i. Describe the method to be used to calculate the log reduction value for the treatment process for each pathogen such that the validated log reduction value shall not exceed that achieved by 95 percent of the challenge test results when the treatment process is operating in compliance with the alert and action levels, and

j. Identify the circumstances that would require a re-validation or additional on-site validation.

11. The treatment train shall be continuously operated to achieve the log reduction value targets using validated treatment log reduction values and must conform to the Operations Plan pursuant to R18-9-F836.

12. The treatment train shall include UV disinfection with a dose of at least 300 mJ per cm2.

13. The SCADA system shall identify process failure to meet the alert and action levels and shall automatically discontinue the delivery of water to any distribution system if the treatment train does not meet the minimum design log reduction value target.

14. Treatment processes that are credited with pathogen log reductions must be continuously tracked with a SCADA system utilizing online monitoring for surrogates and/or operational parameters.

15. The treatment train shall be operated continuously in accordance with the Operations Plan pursuant to R18-9-F836 to achieve either the standard or site-specific pathogen reduction approaches pursuant to R18-9-E828.

16. Blending is not eligible to receive pathogen log reduction credit, nor validated treatment log reduction values.

C. Chemical Control.

1. Under an AWP project, treated wastewater shall receive continuous chemical treatment prior to delivery or distribution.

2. All treatment trains shall have at least three diverse and separate treatment processes, including, but not limited to:

a. An AOP that meets the requirements set forth in subsection (D)(4) of this section, and

b. A physical separation process.

3. Ozone/BAC processes shall be designed to provide no less than 1.0 log reduction of each of the following indicators: formaldehyde, acetone, carbamazepine, and sulfamethoxazole.

a. The ozonation process shall be designed to provide a ratio of the applied ozone dose to the design feed water TOC concentration greater than 1.0. Alternative design ratios may be used if reduction of 1.0 log for the indicators carbamazepine, and sulfamethoxazole is demonstrated during the pilot as part of the design of the ozonation process.

b. BAC shall be designed with an empty bed contact time of at least 15 minutes. Alternative times may be used if reduction of 1.0 log for the indicators formaldehyde and acetone is demonstrated during pilot scale as part of the design of the ozonation process.

c. Both Ozone and the BAC processes must be individually validated at full-scale with the same level of removal for the four indicators listed in this subsection.

d. At full-scale, the ozone/BAC process shall continually be monitored and recorded using surrogate and/or operational parameters with alert and action levels as approved under the Operations Plan, pursuant to R18-9-F836.

4. Each reverse osmosis membrane selected shall meet the criteria set forth in ASTM International, Designation D4194-23, "Standard Test Methods for Operating Characteristics of Reverse Osmosis and Nanofiltration Devices",

a. For a reverse osmosis treatment process, an AWPRA shall propose the following elements in a plan submitted to the Department for approval in the permit application pursuant to R18-9-C816(A)(2)(d):

i. Ongoing performance monitoring using at least one surrogate and/or operational parameter that is capable of being monitored and recorded continuously, and

ii. Alarms indicating when the integrity of the reverse osmosis membrane has been compromised.

b. The proposal shall identify:

i. The chemical control point,

ii. The surrogate(s) and/or operational parameter(s), and

iii. The alert and action levels for the surrogate(s) and/or operational parameter(s) that indicate when the integrity has been compromised.

5. During full-scale operation of a reverse osmosis treatment process, the AWPRA shall:

a. Continuously monitor and record the surrogate and/or operational parameter(s) that indicate when the integrity of the process has been compromised, and

b. Record when the alert and action levels established are exceeded pursuant to R18-9-F836.

D. Other Requirements.

1. TOC Removal. An AWPRA shall select, achieve, and maintain an up-to-date TOC limit in the advanced treated water, along with the associated alert and action levels, pursuant to R18-9-F834(B) or (C).

2. Corrosion Control. An AWPRA shall establish corrosion control provisions in the design and operation of the AWTF in accordance with, but not limited to, the following requirements:

a. Within six months of the introduction of advanced treated water as a new water source, or following any treatment changes at the AWTF affecting advanced treated water quality, an AWPRA shall control lead and copper pursuant to the requirements of A.A.C. R18-4-111,

b. An AWPRA shall evaluate any anticipated corrosivity effects through corrosivity tests or evaluations which shall include, but are not limited to:

i. Developing an understanding of factors affecting internal corrosion,

ii. Determining the extent and magnitude of corrosion,

iii. Assessing corrosion control alternatives,

iv. Selecting a corrosion control strategy,

v. Implementing a corrosion control program,

vi. Monitoring the effectiveness of the corrosion control program, and

vii. Optimizing the control program, if necessary, and

c. The Department may require an AWPRA to conduct additional corrosivity-related water quality monitoring,

d. In addition to the requirements of this section, corrosion control shall be conducted using good engineering practices. Methods for corrosion control shall be approved if the AWPRA can demonstrate that the measures meet or exceed the criteria in this subsection.

i. ADEQ shall develop and make available guidance on conducting corrosion control.

ii. Corrosion control conducted in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

3. Nitrogen Management. An AWPRA shall choose one of the following three denitrification approaches:

a. Water Reclamation Facility Approach. An AWPRA applicant reliably denitrifying at the water reclamation facility(s) shall include at least two critical control points to monitor ammonia, nitrate and nitrite:

i. A critical control point at a designated, off-spec diversion point which is monitored using continuous online analyzers, and

ii. A critical control point for monitoring the advanced treated water in order to verify compliance with the Nitrite and Nitrate as Nitrogen Tier 1 MCL pursuant to R18-9-E829.

b. AWTF Approach. An AWPRA applicant removing nitrogen species at the AWTF shall demonstrate nitrogen removal to the Nitrite and Nitrate as Nitrogen Tier 1 MCL pursuant to R18-9-E829 through an AWTF treatment process configuration, and shall include multiple critical control points:

i. A critical control point for monitoring ammonia, nitrite, and nitrate at the treated wastewater influent in order to assess the ongoing treatability within the treatment train,

ii. A critical control point located at each treatment barrier in the design responsible for the removal of ammonia (if applicable), nitrite, and nitrate, and

iii. A critical control point for monitoring the advanced treated water in order to verify compliance with the Nitrite and Nitrate as Nitrogen Tier 1 MCL pursuant to R18-9-E829.

c. Alternative Approach. An AWPRA applicant shall demonstrate a design approach that effectively and reliably removes nitrogen species for the purposes of treatment train viability and water quality compliance with applicable MCLs.

4. AOP Treatment Process. An AWPRA applicant shall include an AOP treatment process in their pilot and full-scale treatment trains. Demonstration of AOP performance shall be achieved through one of the following two methods:
    a. 1,4-Dioxane Indicator. AOP shall be validated to demonstrate that AOP can reliably achieve no less than 0.5 log reduction of the 1,4-dioxane indicator. If 1,4-dioxane is used as the AOP performance benchmark, it shall be monitored as a Tier 3 performance based indicator with an associated action level pursuant to R18-9-E827; or
    b. Alternative Compound Indicator. An AWPRA applicant may propose an alternative compound to 1,4-dioxane for AOP performance if the following criteria are met:
        i. Alternative indicators shall demonstrate resistance to elimination through other treatment methods, including biological degradation, adsorption processes, Reverse Osmosis/Nanofiltration, and conventional oxidation techniques such as hypochlorite, chloramines, permanganate, or chlorine dioxide (e.g., 1,4-Dioxane),
        ii. Each pilot study should involve spiking and measuring indicator compound removal. Spiking 1,4-Dioxane (i.e., reference compound) and calculating removal percentages to compare with other widely accepted compounds,
        iii. In pilot testing, the final concentration of any indicator compound (post-AOP treatment) should exceed the minimum reporting limit,
        iv. Operating conditions and critical monitoring parameter ranges from pilot testing shall be reported for Departmental verification and setting of monitoring parameter ranges,
        v. An AWPRA applicant must identify AWTF-specific AOP challenges, such as the scavenging of hydroxyl radicals by carbonates, bicarbonates, nitrites, nitrate, bromides, Natural Organic Matter (NOM), pH and UV light absorption,
        vi. If comprehensive pilot testing is not conducted (e.g., shorter timelines or limited scope), an AOP treatment process shall be demonstrated to achieve at least 0.5 log removal of 1,4-dioxane,
        vii. Any process sequence proposed must be validated with a rigorous study, and
        viii. Correlation with other trace organics that were considered in the study, “Considerations for Direct Potable Reuse Downstream of the Groundwater Recharge Advanced Water Treatment Facility”, along with a demonstration of an equivalent removal value for each of the trace organics.

5. AOP Validation Study Report. An AWPRA shall compile an AOP Validation Study Report which identifies:
    a. The critical control points and/or surrogate(s) and/or operational parameter(s), and
    b. Alert and action levels for the surrogate(s) and/or operational parameter(s) that indicate whether the minimum 0.5 log 1,4-dioxane reduction design criterion is being met.

6. At least one surrogate and/or operational parameter shall be capable of being monitored and recorded continuously and have associated alarms that indicate when the AOP is not operating as designed.
7. Failure Response Time. An AWPRA applicant must provide detailed design calculations identifying failure response time and specific means used to address failure response time.
    a. Factors include, but are not limited to:
        i. Level and redundancy of online instrumentation,
        ii. Sophistication and speed of automated alarm responses, and
        iii. Availability of operators and their response time.
    b. Mitigation measures include, but are not limited to, engineered storage buffers which, when used, must be sized adequately to hold off-spec water for a time period no shorter than the failure response time.
    c. If an AWPRA applicant proposes a treatment train configuration that is not followed by an engineered storage buffer, the following is required:
        i. Appropriate process control for water quality assurance,
        ii. Managerial control for demand is present,
        iii. An operational barrier for pathogen control and chemical peaks attenuation.
    d. If an engineered storage buffer is proposed, an AWPRA applicant shall justify the volume selected and account for short circuiting.
8. A treatment process configuration shall be designed to meet the Tier 1 limits utilizing, as a source, either:
    a. The Tier 1 chemicals and concentrations pursuant to R18-9-C814(C)(2); or
    b. The treated wastewater.
9. Cross-Connection. An AWPRA applicant shall develop, and the AWPRA permittee shall implement, cross-connection control measures which include, but are not limited to:
    a. Cross-connection evaluations during design, construction, and operation of the AWTF,
    b. Cross-connection control surveys, initially within one year of commencing full-scale operation, and ongoing annually thereafter,
    c. Reporting of any cross-connection incidents identified during the cross-connection control surveys to the Department in the manner prescribed by the AWP permit, along with a detailed summary of the nature and cause of the problem, the resulting corrective actions taken, and data confirming that those corrective actions will not impact advanced treated water, and

d. A plan describing how the SCADA system communicates and interoperates with the SCADA systems of all AWPRA facilities in the AWP project.

10. Method Detection Limit. When there is no reliable analytical method that is technically feasible to measure a contaminant at an established health advisory concentration pursuant to R18-9-E826(D), the health advisory value shall be set at the lowest Method Detection Limit of the corresponding and most sensitive EPA-approved method.

E. An AWPRA shall meet the following minimum design criteria in designing and operating a full-scale water reclamation facility that delivers treated wastewater to an AWTF:

1. An AWPRA water reclamation facility shall have secondary treatment that utilizes oxidation processes that remove biodegradable organic matter and suspended solids,
2. An AWPRA water reclamation facility shall meet discharge limit requirements for:
   a. Biological Oxygen Demand (BOD),
   b. Total Suspended Solids (TSS), and
   c. pH pursuant to subsection (B)(1) of R18-9-B204, and
3. An AWPRA water reclamation facility shall meet a minimum solids retention time (SRT) of 15 days. A reduction in SRT may be requested and approved by the Department if wastewater characterization demonstrates that over all seasons (represented by 12 monthly values) the proposed SRT is consistent with nitrogen reduction and COCs.
4. An AWPRA water reclamation facility shall meet the requirements for Total Nitrogen (TN) in the APP program. The TN requirements in R18-9-B204 shall be followed in order to discharge any treated wastewater or treated off-spec wastewater which cannot be supplied to the AWTF,
5. An AWPRA water reclamation facility shall be operated to produce treated wastewater of consistent quality in accordance with approved engineering design reports and the water reclamation facility operations plan. The AWPRA shall provide to the water reclamation facility a list of operational parameters, such pH, SRT, Hydraulic retention time (HRT), Dissolved Oxygen (DO), BOD, cBOD and others for the water reclamation facility.

F. In addition to the requirements of this section, treatment process configurations shall be designed using good engineering practices. Treatment process configurations shall be approved if the AWPRA applicant can demonstrate that the treatment process configuration meets or exceeds the minimum design criteria in this section.

1. ADEQ shall develop and make available guidance on designing treatment process configurations.
2. Treatment process configurations designed in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

R18-9-F833. Technical, Managerial, and Financial Demonstration

A. An AWPRA applicant shall submit the following to the Department as a demonstration of technical, managerial, and financial capacity:

1. Technical Capacity. An AWPRA applicant's technical demonstration shall include, but is not limited to:
    a. A demonstration of the availability of an existing water source or contingency plans for an alternative source in the event of AWTF failure,
    b. Comprehensive technical and engineering specifications for the AWTF, including, but not limited to, the following:
        i. Design and treatment capacity,
        ii. Demonstration of sufficient AWP source water quantity and quality,
        iii. Demonstration of technical capability to implement an enhanced source control program,
        iv. Information on storage and distribution processes,
        v. A cross-connection control plan,
        vi. A corrosion control plan, and
        vii. Manufacturer specifications showing the life span of AWTF components, and
    c. An ongoing monitoring plan, including, but not limited to, the following:
        i. Online compliance monitoring for critical control points, and
        ii. Performance monitoring and compliance monitoring for advanced treated water, and
    d. A demonstration of the ability to respond to emergency situations including water quality excursions,
    e. Documentation that the AWTF will be operated by a certified AWP operator pursuant to R18-9-B804, and
    f. An operations plan, pursuant to R18-9-F836, including, but not limited to:
        i. Maintenance requirements per the manufacturer's specification, and
        ii. Repair and replacement protocols.
2. Managerial Capacity. An AWPRA applicant's managerial demonstration shall include, but is not limited to:
    a. Documentation of ownership, management, and organization information, including, but not limited to:
        i. An organizational chart, and
        ii. Job descriptions and responsibilities, and
    b. Information or copies of contractual agreements between AWPRA partners or any other entity associated with an AWP Project, including but not limited to:
        i. Sewer collection systems,
        ii. Water Reclamation Facilities,

iii. Source water conveyance systems,

iv. Advanced Water Treatment Facilities,

v. Water distribution systems,

vi. Blending Facilities,

vii. Sale prices of source water,

viii. Quality of source water,

ix. Duration of agreement, and

x. Compliance and reporting responsibilities, and

c. Documentation of groundwater or surface water discharge permits or recycled water permits addressing potential discharges from an AWTF in contingency situations, including, but not limited to, off-spec water disposal,

d. Operational information, including, but not limited to:

i. Certified operator credentials,

ii. The number of available operators,

iii. A training plan for staff,

iv. Technical competency,

v. Technical knowledge and implementation, and

vi. An Operations Plan, pursuant to R18-9-F836, and

e. An outline of tools and procedures employed in the management of the facility, including, but not limited to:

i. An asset management and maintenance plan, and

ii. A computerized maintenance management system.

3. Financial Capacity. An AWPRA applicant's financial demonstration shall include, but is not limited to:

a. Projecting the capital cost of the project,

b. Identifying ongoing cost, including, but not limited to:

i. Operation and maintenance costs,

ii. Capital replacement costs,

iii. Energy costs,

iv. Personnel costs, and

v. 20-year lifecycle cost of equipment, and

c. A five-year financial projection, including, but not limited to, planning and management of continuous funding sources to cover the costs of the AWP project,

d. Performing financial audits and bond rating, and

e. Performing rate studies or assessment of impact fees.

B. In addition to the requirements of this section, technical, managerial, and financial capacity shall be demonstrated using best practices. Similar technical, managerial, and financial demonstration approaches shall be approved if the Department determines that the alternate technical, managerial, and financial demonstration meets or exceeds the technical, managerial, and financial criteria listed above.

1. ADEQ shall develop and make available guidance on developing a technical, managerial, and financial demonstration.
2. A technical, managerial, and financial demonstration developed in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using best practices.

R18-9-F834. Total Organic Carbon Management

A. An AWPRA shall select, achieve, and maintain an up-to-date TOC limit in the advanced treated water using one of the two approaches described in subsections (B) and (C) below.

1. Upon AWTF operation, an AWPRA may switch between the two approaches each calendar year.
2. The TOC management annual approach shall be reported as part of the annual report pursuant to R18-9-E831.

B. Standard Approach or Limit.

1. An AWTF shall not exceed 2 mg/L of TOC in the advanced treated water.
2. The AWPRA shall monitor TOC using continuous online analyzers in the advanced treated water.

C. Site-Specific Approach or Limit. An AWPRA shall perform the two procedures described in subsections (C)(1) and (2) below. The site-specific TOC limit shall be the lower of the two preliminary TOC values obtained from these procedures.

1. Trace Organics Removal Procedure. The AWPRA shall submit a plan to characterize the TOC of all original drinking water sources that feed the collection system(s) that are used by the AWTF as a treated wastewater source. This plan shall be submitted for approval by the Department as part of the Pilot Study Plan pursuant to R18-9-C815(B)(3) and (D) and again in the permit application as part of the R18-9-C816(A)(2)(d) submittals.
    a. Original Drinking Water TOC Characterization requires, but is not limited to, the following:
        i. Use of Departmentally approved TOC sampling locations,
        ii. Sampling for a minimum of one year,
        iii. Sampling at weekly intervals,
        iv. Calculation of the TOC at the 50^{th} percentile (median), 75^{th} percentile, and 95^{th} percentile,
        v. Establishment of a TOC alert level at the 75^{th} percentile, and

vi. Establishment of the TOC action level at 1.5 × 95th percentile.

b. Upon the characterization of TOC in the original drinking water and approval from the Department, an AWPRA shall monitor for TOC in the advanced treated water using continuous online analyzers.

c. For the purposes of this subsection, the preliminary TOC value in mg/L for the Trace Organics Removal Procedure is the action level established in subsection (C)(1)(a)(vi) above.

2. Disinfection Byproducts Precursor Reduction Procedure.

a. Method 5710 C: "Simulated Distribution System Trihalomethanes (SDS - THM)"

i. The AWPRA shall apply 5710 C Method "Simulated Distribution System Trihalomethanes (SDS - THM)" to the advanced treated water in order to determine the total trihalomethane (THM) concentration.

ii. Testing and sampling shall be conducted monthly for one year.

iii. The AWPRA shall simultaneously sample for TOC in mg/L in the advanced treated water monthly for one year.

iv. If the average THM concentration is below the corresponding MCL for THM pursuant to R18-9-E825, the average TOC value from subsection (C)(2)(a)(iii) is the Method 5710C TOC value for the purposes of comparison in subsection (C)(2)(d) below.

v. If the average THM concentration is at or above the corresponding THM MCL pursuant to R18-9-E825, the AWPRA may not use the average TOC value from subsection (C)(2)(a)(iii) as the Method 5710C TOC value. The AWPRA may adjust components of their operation and repeat the steps in subsection (C)(2)(a) until an average THM concentration in the advanced treated water is below the corresponding THM MCL pursuant to R18-9-E825.

b. The AWPRA shall submit the following information on the conditions at the time Method 5710 C from subsection (C)(2)(a) above was conducted to the Department as part of the Pilot Study Report pursuant to R18-9-C815(D) and again in the permit application as part of the R18-9-C816(A)(2)(d) submittals:

i. Temperature,

ii. pH,

iii. Disinfectant dose,

iv. Residual and reaction time within the distribution system, and

v. Other standard conditions as described in Section 5710 B "Trihalomethane Formation Potential (THMFP)".

c. CCL5 - Disinfectant Byproducts Sampling Method.

i. The AWPRA shall sample for the following disinfection byproducts in the advanced treated water, Formaldehyde (CAS No. 50-00-0) and N-Nitrosodimethylamine (NDMA) (CAS No. 65-75-9), which are the only disinfection byproducts that exist in both EPA's "Contaminant Candidate List 5 - Exhibit 1b - Unregulated DBPs in the DBP Group on CCL 5" and EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

ii. Sampling shall be conducted monthly for one year.

iii. The AWPRA shall simultaneously sample for TOC in mg/L in the advanced treated water monthly for one year.

iv. If the average sampling result for any one DBP is below the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", the average TOC value from subsection (C)(2)(c)(iii) is the CCL5 DBP TOC value for the purposes of comparison in subsection (C)(2)(d) below.

v. If the average sampling result for any one DBP is at or above the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables", the AWPRA may not use the average TOC value from subsection (C)(2)(c)(iii) as the CCL5 DBP TOC value. The AWPRA may adjust components of their operation and repeat the steps in subsection (C)(2)(c) until the average sampling results from any one DBP is below the corresponding health advisory in EPA's "2018 Edition of the Drinking Water Standards and Health Advisories Tables".

d. The lower of the two resultant TOC values in mg/L derived from the methods described in subsections (C)(2)(a) and (C)(2)(c) above is the preliminary TOC value for the Disinfection Byproducts Precursor Reduction Procedure.

3. AWPRA's Site-Specific TOC Approach or Limit. The lower of the two preliminary TOC values in mg/L derived from the two procedures in (C)(1) and (2) above is the AWPRA's site-specific TOC limit.

4. Once a site-specific TOC approach or limit is ascertained, an AWPRA shall establish a TOC action level and alert level based on that approach or limit, using the lower of the two values derived from subsections (C)(1) and (2). Upon the exceedance of a TOC action level, the AWPRA shall conduct one of the following two actions within 72 hours of becoming aware of the exceedance:

a. Stop conveying advanced treated water, investigate, identify, and correct the issue; or

b. Correct the issue with confirmation that advanced treated water TOC does not exceed the action level, and identify the issue.

5. Frequency of Site-Specific Procedures. AWPRA's re-selecting the site-specific TOC approach to begin a new calendar year shall repeat the two procedures in subsections (C)(1) and (2) in order to reestablish an up-to-date TOC action level and TOC alert level.

R18-9-F835. Full Scale Verification

A. An AWPRA applicant shall conduct Full-Scale Verification of the AWTF. The AWPRA applicant shall develop a Full-Scale Verification Plan for submission to the Department and shall perform full-scale verification testing of the AWTF in compliance with the Plan.

1. If an AWPRA builds a pilot facility to full-scale, the AWPRA applicant may, instead, opt to conduct piloting and full-scale verification simultaneously. If the AWPRA pursues this option, the AWPRA shall:
   a. Consult with the Department, and
   b. Develop and submit a Hybrid Pilot and Full-Scale Verification Plan to the Department for review and comment prior to conducting piloting and full scale verification under this section, R18-9-C815, and other requirements which are previously determined through consultation with the Department, and
   c. For the purposes of the permit application pursuant to R18-9-C816, submit the Hybrid Pilot and Full-Scale Verification Plan and a Hybrid Pilot and Full-Scale Verification Report in lieu of the submission requirements at R18-9-C816(A)(2)(g) and (h).
2. An AWPRA applicant shall provide evidence of an APP authorizing any discharge from an AWTF that occurred, occurs or will occur during piloting, full-scale verification, operation or otherwise.

B. Full-Scale Verification Plan. A Full-Scale Verification Testing Plan shall be developed and shall include, but is not limited to, the following requirements:

1. Detailed Testing Plan. The AWPRA applicant shall outline the verification testing procedure for each process within the AWTF, including, but not limited to:
   a. Treatment technologies and processes,
   b. Continuous online analyzers,
   c. Critical control points,
   d. Alarm systems, and
   e. Data recording instruments.
2. Monitoring Plan. The AWPRA applicant shall develop a Monitoring Plan pursuant to R18-9-E829.
3. Alarm System and Shutdown Testing Plan. The AWPRA applicant shall develop a plan to test and verify the functionality of all alarms, shutdown mechanisms, and processes proposed to be utilized in the Operations Plan developed pursuant to R18-9-F836.

4. Advanced Treated Water Diversion Plan. The AWPRA applicant shall develop a plan to obtain all necessary permits and approvals from the Department or other authorities for the purpose of diverting advanced treated water during the full-scale verification testing period.

C. Testing. Full-scale verification testing shall be conducted in accordance with the Plan established in subsection (B) as well as the requirements in this subsection:

1. The minimum testing period for AWPRAs conducting full-scale verification shall be one year,
2. An AWPRA shall, throughout the testing period, divert all advanced treated water in a manner approved by the Department pursuant to the AWP permit,
3. Before testing occurs, an AWPRA applicant shall confirm with the Department that any water reclamation facility providing treated wastewater to the AWTF has been issued an amendment to their APP(s) for provision of treated wastewater to an AWTF, and shall confirm that copies of the amended permit(s) are recorded in the AWPRA's Joint Plan pursuant to R18-9-B805.

D. Report. At the conclusion of the full-scale verification testing period, the AWPRA shall prepare and submit, in accordance with the compliance schedule established in the AWP permit, a final Full-Scale Verification Report to the Department for approval. The Report shall, at a minimum, include all information related to full-scale verification testing performed pursuant to this section, such as, but not limited to, the following components:

1. The date, time, frequency and exact place of sampling,
2. The name of each individual who performed the sampling,
3. The procedures used to collect the samples,
4. The dates the sample analyses were completed,
5. The name of each individual or laboratory performing sample analysis,
6. The analytical techniques or methods used to perform the sampling and analysis,
7. The chain of custody records,
8. Any field notes relating to the information described under this subsection,
9. The sampling results, and
10. Corresponding laboratory data for all samples.

E. An AWPRA shall not distribute advanced treated water to consumers until Departmental authorization is obtained.

R18-9-F836. Operations Plan

A. An AWPRA shall develop an Operations Plan in accordance with the compliance schedule established in the AWP permit which shall be followed throughout operation of the AWTF.

B. The Operations Plan shall include, but is not limited to, the following criteria:

1. A description of the operation of each treatment process and standard operating procedure,
2. Process schematics showing pathogen and chemical removal critical control points, alarms, and online analyzers, including all requirements pursuant to R18-9-E828(D),
3. A list of established alert levels and action levels at each critical control point,
4. A description of all inspection and maintenance protocols, schedules and other requirements for treatment process equipment,
5. A description of the ongoing monitoring requirements pursuant to R18-9-E829 and the reporting requirements pursuant to R18-9-E830,
6. The development of an emergency operations and response plan to identify and address upsets, failures, or emergency situations arising in the treatment train in an AWPRA facility that is responsible for producing advanced treated water. The emergency operations and response plan shall include, but is not limited to, the following requirements:
   a. Identification of upset conditions or emergency situations triggering a response under this subsection, including, but not limited to:
      i. Failure of critical control points,
      ii. Diversion of off-spec water,
      iii. Loss of source water to the AWTF,
      iv. Any exceedances of the alert levels and action levels, and
      v. Failures which constitute an acute exposure threat, including failure to meet pathogen log reduction values pursuant to R18-9-E828, and failure to meet Nitrite and Nitrate as Nitrogen MCLs pursuant to R18-9-E829,
   b. A decision-making procedure and the development of an off-spec water response to divert AWP process water or advanced treated water as a result of any treatment process failure or water quality deviation,
   c. Any failure to achieve the minimum target log reduction must be documented and a summary of the causes and corrective action must be reported to the Department, and
      i. The AWPRA shall take immediate action to discontinue the delivery of advanced treated water to the distribution system.
      ii. The AWPRA shall notify the Department and any public water system that is receiving the AWP project water within 60 minutes.

d. Development of a timely response procedure in the event that advanced treated water violates a requirement of this Article, including, but not limited to:

i. Identification and investigation of the points of failure within the treatment train and at the AWTF,

ii. A procedure to resolve identified failures,

iii. Clear specifications regarding the time required for response to failures or exceedances, and

iv. A procedure for the utilization of automated systems equipped with triggers and alarms, as necessary,

v. Consideration of alternative water sources, as necessary, to ensure delivery of a continuous water supply, and

vi. Compliance with all applicable public notice requirements of the Safe Drinking Water Act, and

e. Development of a shutdown plan establishing shutdown and post-shutdown protocols, including, but not limited to:

i. A procedure for draining piping and tanks, as necessary, to prevent freezing or the accumulation of stagnant non-compliant water, and

ii. A procedure for managing post-shutdown conditions, and

7. A description of staffing requirements at the AWTF including, but not limited to, the following criteria:

a. The roles and responsibilities of all staff,

b. The status of, and requirements for, certified operators,

c. A description of the annual training and continuous education requirements for all staff, and

d. A description of any provisions for training new personnel, and

8. A description of the SCADA system utilized at the AWTF along with, but not limited to, the following additional SCADA requirements:

a. A description of how the system will assist the AWTF in achieving compliance, when necessary,

b. A description of how the SCADA system will communicate and interoperate with the SCADA systems of all AWPRA facilities that provide treatment pursuant to this Article,

c. Information on how the system acquires and utilizes monitoring data to inform operators, identify failures at critical control points, and respond to failures,

d. A procedure for testing the system,

e. A protocol/procedure to secure and protect the SCADA system from unauthorized access and cyberattack, and

f. Establishment of a SCADA system testing schedule, and

9. A description of the communication procedures between the AWPRA and all relevant treatment plant operators for situations including, but not limited to:

a. Normal operations, and

b. Upset conditions and emergency response protocols.

C. In addition to the requirements of this section, an Operations Plan shall be developed using good engineering practices and best management practices. Similar Operations Plan criteria shall be approved if the AWPRA applicant can demonstrate that the Operations Plan components meet or exceed the criteria listed above.

1. ADEQ shall develop and make available guidance on developing an AWP Operations Plan.
2. An AWP Operations Plan developed in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

D. An AWPRA shall submit the Operations Plan to the Department for approval as a compliance schedule item under the AWP permit.

E. An AWPRA shall update the Operations Plan as necessary following any modifications to the treatment process that affect the operational procedures of the AWTF. The updated Operations Plan shall be submitted to the Department for approval as a component of a permit amendment application.

R18-9-F837. Vulnerability Assessment

A. An AWPRA shall conduct a vulnerability assessment for the AWP project for the purpose of identifying areas and processes with a potential to be vulnerable to attack, sabotage, or disruption.

B. The AWPRA shall consider and assess all potential hazards associated with contaminants in the municipal wastewater source.

C. The AWPRA shall develop an emergency response plan for identified hazards the AWP project may face.

D. The SCADA systems of all AWPRA facilities included in the AWP project that provide treatment pursuant to this Article shall be designed and operated such that they are secured and protected, both physically and electronically, from unauthorized access and cyberattack.

E. The AWPRA shall periodically review the vulnerability assessment along with the permit renewal pursuant to R18-9-D822, at a minimum, or at the Director's discretion. A vulnerability assessment update shall include the identification of any new hazards and the corresponding risk management controls the AWPRA will establish.

F. In addition to the requirements of this section, a vulnerability assessment shall be conducted using Best Management Practices. Methods for conducting the vulnerability assessment shall be approved if the AWPRA applicant can demonstrate that the method is sufficiently detailed and robust for the purpose of conducting a protective vulnerability assessment.

1. ADEQ shall develop and make available guidance on conducting an AWP vulnerability assessment.
2. An AWP vulnerability assessment conducted in a manner consistent with the criteria contained in an applicable ADEQ guidance document shall be considered to have been conducted using good engineering practices.

AWP NFRM Economic Impact Statement (EIS) - 18 AAC 9

A summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);
- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA

and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program.

This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. Part I - Cost/Benefit Stakeholder Matrix:

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative	Minimal	

	impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).		
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless, in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate

and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DRP regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general

requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required, resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.
- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

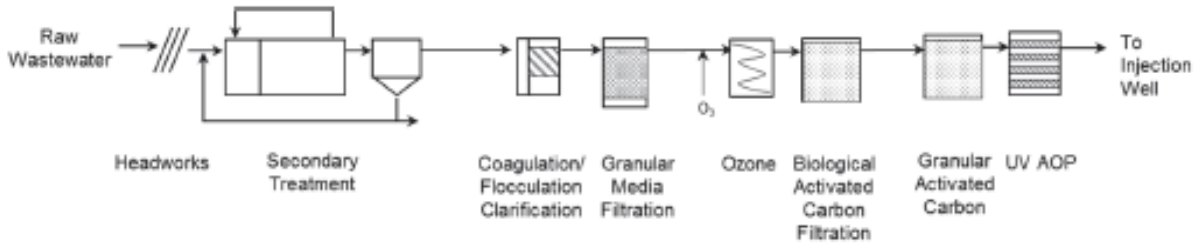
As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

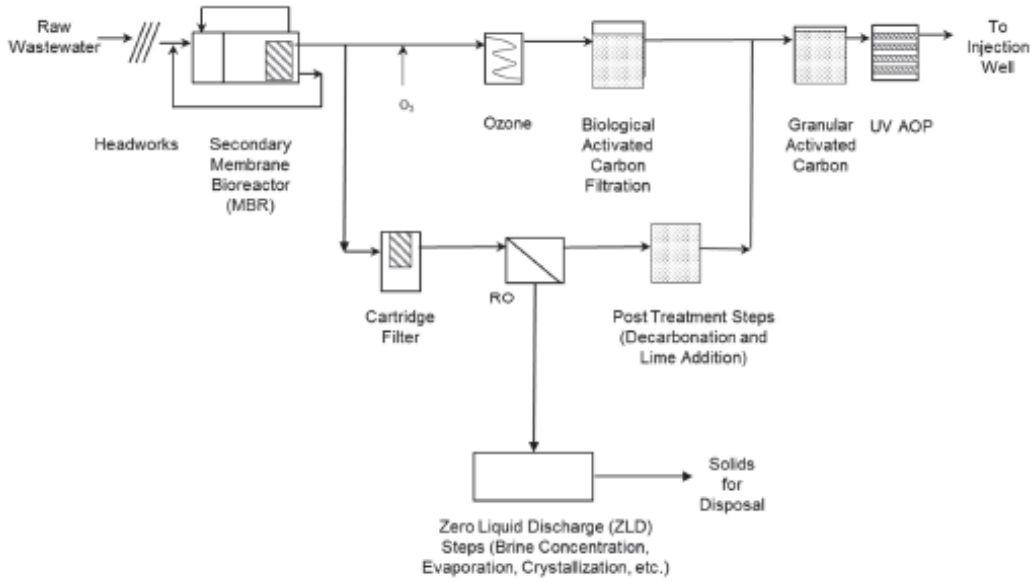
WPA - Cost Evaluation - Project 1 Ozone-BAC:

This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



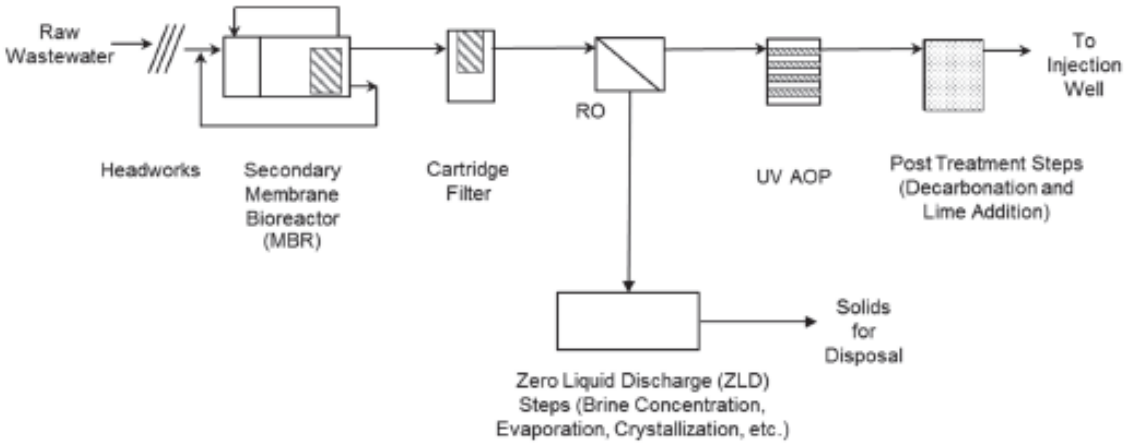
WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390

Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and often periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC Program range from 1.25 to 1.5 FTEs. In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I) consumptive use.
- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP

development should allow many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water

supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and

pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors. Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program.

As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs.

ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational, and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new source of potable water for Arizona's water users.

AWP NFRM Public Comments - 18 AAC 9

Comment 1: General Public
Standard methods have become increasingly obsolete in addressing modern water quality concerns, because emerging contaminants are found in reclaimed waters potentially affecting public health. These contaminants include bacterial pathogens (particularly those related to antibiotic-resistant ones), viral pathogens, protozoal hosts for intracellular pathogens, and extracellular DNA (e.g., antibiotic resistance genes [ARGs]). Many of these pathogens are fastidious, slow growing, and difficult to culture for routine monitoring (viable but non-culturable). Any rulemaking must be required to remove and test for these considerations.

Comment 2: General Public
I would like to know if AWP has been successfully used in other locations, and what the rate of failure is for those systems.

Comment 3: General Public
For my entire career, waters treated for potable purposes were never referred to as being "Purified". Purified Water has a very specific definition, quality is measured in resistivity vs. conductivity and, when put on a petri dish, will not show biological activity. While "purified" is used as an adjective in the phrase "purified water", the process of "water purification" is a verb, action word, indicating that the water being treated will eventually result in producing "purified water". Unless these treated waters are measured in megohms (Mohm), that is a very misleading title which may, in fact, result in legal activity in the event any lives are negatively impacted. I realize that "Toilet To Tap" or "Direct Potable Reuse" are unsavory titles for marketing purposes, but that should not open the door to misleading advertising, either. Purified water is not being produced or delivered.

Comment 4: General Public
AWP will impact disinfection byproducts (DBPs). Current disinfection practices will need to be changed and, most likely, be modified on an almost continuous basis given that water qualities can change on a continuous basis. There are health benefits associated with minerals that are naturally occurring in potable water supplies, especially from aquifers. Calcium, magnesium and any variety of trace metals are all beneficial, in certain amounts, to human health. What are the plans for addressing these types of issues?

Comment 5: General Public
The solution to pollution is dilution. Water is the universal solvent. Let's consider AWP as being the pollutant, i.e., man-made. So, rather than bringing this "pollutant" right to the front door of the potable treatment system, why not put it back into the natural environment, i.e. rivers, aquifers, lakes etc. Once there, Mother Nature can take over, thus yielding a more "natural" product that is relatively benign in terms of water chemistry. All potable water treatment plants already have the means for treating these waters, so there would be little need for changing treatment schemes or practices. It's an easier sell to customers, no need for more pipes in the ground, and there's greater savings for customers.

Comment 6: General Public
We do not want sewage (a.k.a. – wastewater) mixed into our drinking water. There are too many toxins flushed down the drain and we don't want any of them in our body. We understand the importance of water conservation but this goes too far. The 'toilet to tap' rules you are suggesting should only be used in landscaping. There are too many chemicals and pharmaceuticals that go down the drain/toilet now to make it safe for humans. Can you guarantee 100% removal of all the bad stuff? Because we have no wish to consume someone else's blood thinner medication or diabetes medicine or birth control, etc.

Comment 7: General Public
We demand all fluoride be removed from public drinking water since it has been proved to be dangerous to our health.

Comment 8: General Public
Please check the Clean Water Act of 1972 which was approved to regulate the discharge of pollutants into U.S. water systems and to set quality standards. Most municipal water has fluoride, radiation, heavy metals, pharmaceuticals drugs, and industrial chemicals therein, each having detrimental health effects on the animals and humans who consume them. Researchers have long established that these and other drugs pass the municipal water filtering system which pose serious health risks.

Comment 9: General Public
There are healthier alternatives. First and foremost is education. Teach Arizona residents how to conserve water. Use taxpayer dollars to retrofit homes with gray water systems and/or rainwater catchment systems.

Comment 10: Interest Group
In our opinion, some aspects of the rules lead to over-regulation and in some aspects the rules are dismissive of the existing processes and requirements administered or regulated by EPA and ADEQ. While we recognize the comprehensive nature of the proposed rules, we are concerned that they may be overly burdensome and not sufficiently aligned with existing EPA and ADEQ requirements regarding source water. If ADEQ determines that further regulation of source water is necessary, such regulations should apply uniformly to all water systems—not just those under AWP permitting—to enhance public health protection across both conventional and advanced wastewater and water treatment systems. Requiring the permittee to monitor for unregulated Tier 2 and some Tier 3 compounds is overly burdensome and we feel does not belong in an AWP permit. The requirement by rule to monitor for Tier 2 and Tier 3 compounds is unnecessarily burdensome to an AWP permittee and establishes de facto water quality regulation outside any CWA or SDWA framework which is a major concern. If ADEQ feels these compounds are a concern then shouldn't this monitoring be required in

any other permit administered by ADEQ? The multi-barrier treatment technologies deployed for an AWP facility that purify water are inherently safer than any conventional water treatment system in Arizona. As an alternative, perhaps the framework for selecting Tier 2 chemicals as presented in the Rule could be included as guidance. ADEQ could work with the applicant to develop "performance-based indicators" based on unregulated chemicals unique to each permit and source watershed. The agreed-upon performance-based indicators could include Tier 2 and Tier 3 chemicals.

Comment 11: Utility

Align ongoing monitoring locations and frequency for Tier 1 and Tier 2 contaminants only at the "finished water" location and on a quarterly basis to mirror drinking water standards.

For Tier 1 contaminants, ongoing monitoring for regulated drinking water chemicals on treated wastewater at the end of the Water Reclamation Facility is burdensome and offers no compliance value. Each utility must decide if this monitoring point will assist in meeting compliance and should add monitoring for process control at locations that the utility decides will provide benefit for system operation. However, we support monitoring and reporting for Tier l on a quarterly basis at the finished water compliance point.

For Tier 2 contaminants, we do not support ongoing monitoring of treated wastewater at the end of the Water Reclamation Facility. Ongoing monitoring at this location prior to the AWTF is burdensome and offers no compliance value. Significant treatment for these contaminants occurs in the AWTF where compliance is designed to be met. Understanding new incoming dischargers is part of our Industrial Pretreatment program and if a concern arises, additional monitoring could be conducted as needed. We suggest that Tier 2 monitoring at this location only be required when the chemical is detected in the AWTF finished water in two consecutive quarters.

We will support permit compliance monitoring at the AWTF finished water compliance point on a quarterly basis, however, performing this monitoring at the suggested monthly interval is burdensome and is more stringent than Tier 1 contaminants which are primary drinking water standards. Requiring more stringent monitoring for Tier 2 chemicals over Tier 1 chemicals implies there is more concern about these chemicals than Tier 1. Due to the complex analytical techniques needed for many Tier 2 chemicals, test results are generally received from the lab two or more weeks after sample collection. It should be noted that treatment effectiveness is monitored continuously using online analyzers at Critical Control Points throughout the treatment process.

Comment 12: Utility

Though Scottsdale Water appreciates ADEQ including the use of the 2018 EPA Edition of Drinking Water Standards and Health Advisories Tables, the list should be qualified to only require compliance with chemicals that have an indicated human health risk. Many chemicals on this list are classified as "Indicates inadequate or no evidence in humans" or "Not classifiable as to human carcinogenicity", "Not likely to be carcinogenic to humans", etc. Including chemicals that do not pose a human health risk is overburdensome to the permittee.

Comment 13: Utility

Concerning R18-9-E826, identification of Tier 2 chemical list should not be the function of utilities and requiring such an exercise for all applicants could result in conflicting information, including inconsistent water quality permitted at AWP facilities and across the State of Arizona. It is recommended that ADEQ establish a listing of Tier 2 chemicals. Statewide universal standards for unregulated contaminants would provide the public with a higher level of confidence in ADEQ's safe drinking water oversight.

Comment 14: Utility

The requirement of maintaining a chemical inventory list of each non-domestic dischargers list is excessive and burdensome, particularly for larger urban collection systems. As written, the rule would require the AWPRA to survey every single non-domestic discharger in the collection system. For a large urban area this may include thousands of local businesses, many of which may not hold pretreatment permits with their local sewer authority.

Comment 15: Utility

The list of AWPRA determined Tier 2 chemicals may include contaminants for which there is no approved analytical methodology. The Clean Water Act and the Safe Drinking Water Act both identify a rigorous process to ensure that an approved and certifiable analytical laboratory method exists for a contaminant prior to issuing a new regulation. The proposed section in the draft AWP rule sidesteps this critical process which ensures laboratories across the region produce data of the same quality.

Comment 16: Utility

A recommendation of ADEQ's Advisory Panel on Emerging Contaminants, of which Tucson Water and Pima County served as committee chairs, suggested the use of surrogate chemical class categories for use in monitoring unregulated contaminants. This recommendation is still valid and is commonplace throughout the industry and academic literature. Surrogate chemicals can be chosen strategically by ADEQ, such that they are already associated with approved analytical methodology. We strongly encourage ADEQ to revisit the vast chemical inventory potential and allow for the use of representative surrogate compounds for Tier 2 reporting.

Comment 17: Interest Group

One of our primary concerns is the adequacy of water quality standards for potable reuse. The proposed rules must explicitly define baseline requirements to ensure the removal of contaminants of emerging concern, such as pharmaceuticals, personal care products, microplastics, and per- and polyfluoroalkyl substances (PFAS). PFAS, often called "forever chemicals," are particularly concerning due to their persistence in the environment and potential health impacts. While we recognize that the Arizona Department of Environmental Quality (ADEQ) is conducting a parallel

process to address PFAS contamination more broadly, it is critical that these chemicals be specifically addressed in the context of AWP systems. Current documents suggest a focus on tiered chemical control measures but lack sufficient emphasis on PFAS removal within AWP-specific regulations. Additionally, monitoring and reporting requirements should include provisions for real-time public disclosure of water quality data to build public trust and accountability.

Comment 18: Interest Group

We urge ADEQ to prioritize public education and outreach in communities where AWP projects are planned. The rules currently acknowledge the need to engage the public to overcome skepticism surrounding advanced water reuse, often referred to as the "yuck factor." However, more robust community involvement and transparent communication strategies are necessary to address the public's legitimate concerns about health and safety. This includes providing clear, accessible information about treatment processes, safeguards, and monitoring results.

Comment 19: Utility

In the proposed rule, "Tier 1 chemicals" are defined under R18-9-A801 with a reference to 40 CFR Part 141. There is no reference in the definition to an approval date for the MCL list. However, R18-9-E825 states "40 CFR Part 141 (published July 1, 2023)." How will the AWP program incorporate new MCLs, post-July 1, 2023?

Comment 20: Utility

MCLs for PFOA, PFOS, PFHxS, PHNA, HFPO-DA, and mixtures containing two or more of PFHxS, PFNA, HFPO-DA, and PFBS were published in April 2024. Therefore, please verify these PFAS would not qualify as "Tier 1 chemicals" under R18-9-E825 even though they meet the definition in R18-9-A801?

Comment 21: Utility

Revise R18-9-E826(B) to be consistent with R18-9-E824(C).

Comment 22: Utility

Please clarify the following in R18-9-E826(C) - "List of chemicals" - Is it ADEQ's intention that the applicant/permittee list all ingredients (chemical composition)? For example, would a fuel station's inventory list "gasoline" or would it list benzene, toluene, xylene, etc.?

Comment 23: Utility

Please clarify the following in R18-9-E826(C) - "used, stored, or discharged" - It does not make sense to list all chemicals used or stored at a site if the use or storage area is not connected to the wastewater collection system. This requirement should be limited to chemicals discharged to, or with a potential to be discharged to, the wastewater collection system.

Comment 24: Utility

Please clarify the following in R18-9-E826(C) - "all non-domestic dischargers" - This should be limited to all impactful non- domestic dischargers as described in R18-9-E824(C).

Comment 25: Utility

Please clarify the following from R18-9-E826(D): How does an applicant/permittee find the latest health advisory notification levels in other states' drinking water programs or find the latest "reference dose or cancer slope factor in credible peer-reviewed literature or state or federal databases"? Will ADEQ have a database on their website that has up-to-date drinking water health advisories from EPA and from other states as well as reference doses and cancer slope factors?

Comment 26: Local Government

We are supportive of the requirement in R18-9-E826(A)(2)(c) to conduct a Tier 2 chemical contaminant analysis at every permit renewal.

Comment 27: Local Government

We are supportive of the requirement in R18-9-E826(C) to maintain a chemical inventory list.

Comment 28: Local Government

The equation for "expected daily concentration", in R18-9-E826(D)(3), which is derived from total (chemical) contaminant load divided by total influent flow rate, will result in an underestimate of the maximum concentration. Such a calculation, which is intended for comparison to health advisories, will introduce bias in the form of concentrations appearing to be lower. This equation should not be the sole method to determine the maximum design concentration for processes to remove chemical contaminants.

Comment 29: Local Government

Toxic chemicals, or potentially toxic chemicals, should be prohibited from being introduced into full-scale or operating AWP facilities to determine process efficacy. This practice is not allowed in drinking water facilities even for short periods of time. The appropriate procedure would be to perform bench or pilot testing with toxic or potentially toxic chemical contaminants.

Comment 30: Utility

As a basic tenet, when establishing new rules and regulations, the regulating agency should be fair, equitable, consistent, and predictable and should consider the technological and economic cost-benefit in the development and application of rules that impact the public. Under the proposed Tier 2 requirements set out in A.A.C. R18-9-E826, the lack of equitable, consistent, and predictable standards is concerning. Specifically, each Advanced Water Purification Responsible Agency (AWPRA) could be held to a different set of chemicals controls, monitoring, and reporting requirements. Under the proposed rule, these chemical controls, monitoring, and reporting requirements may vary from AWPRA to AWPRA, depending arbitrarily on when an AWPRA submits its AWP application, the AWPRA's source water, and the subjective decisions (current and future) of other state regulators, individual ADEQ staff members assigned to a particular AWPRA

project, and members of the Project Advisory Committee.
Under the SDWA, the Environmental Protection Agency (EPA) is required to establish health-based water quality standards using a 3-step process (EPA 816-F-04-030 - June, 2004) that includes the following:
1) Identify contaminants that present a risk to public health,
2) Determine a maximum contaminant level goal below which there is no known health-risk, and
3) Specify a feasible maximum contaminant level (MCL) based on health-risk. When it is not feasible (e.g., economically or technically) to specify an MCL, a treatment technique in lieu of an MCL will be established to ensure control of the contaminant.
We support the MCLs established in R18-9-E825 for Tier 1 Chemical Control. However, the proposed alert levels, action levels, and chemical control requirements set forth in R18-9-E826 for Tier 2 Chemical Control fail to meet the basic tenets of the SDWA and its 3-step process for establishing health-based water quality standards. We have previously commented to ADEQ that the constituents discussed in R18-9-E826 are, by definition, "not regulated in the SDWA" and thus have not been identified by EPA as a risk to public health. Thus, R18-9-E826 should be removed from the draft rule along with all other references to control, monitoring, and reporting of Tier 2 chemicals.
The proposed Tier 1 and Tier 3 chemical control requirements provide robust safeguards to protect public health. Furthermore, consistent with EPA's third tenet to establish treatment techniques in lieu of water quality standards, ADEQ has established in the rule robust chemical treatment techniques and barriers, beyond that of the SDWA, which forcefully protects public health. The Tier 2 requirements, which address only constituents not regulated in the SDWA and which have not been found by the EPA to pose a risk to public health, add little, if any safeguards, while adding significant costs that will be passed on to customers.
We are committed to working collaboratively with ADEQ on the development and eventual approval of Advanced Water Purification rules.
We strive to achieve a regulatory framework that provides ADEQ with the appropriate level of oversight, while also affording utilities the flexibility to design and operate facilities in a manner that aligns with the health-risk based requirements of the SDWA and offers economically viable options for our ratepayers.

Comment 31: General Public

Ever heard of Flint, Michigan? Of course, everyone in the water sector has. And what was the root cause? A new potable water source that was less scaling (not more corrosive) than the previous source. Proper treatment adjustments were not made and previously scaled pipes were cleaned, thus leading to metals leaching, including lead. With the proposed rules coming on line, what precautions are being made so as to prevent this phenomenon from happening? Most well waters here in Arizona are extremely hard; lots of water softeners in place. And municipalities, currently, do a decent job of controlling hardness via blending (when surface waters are also available) and chemical treatments. Now this new water source is going to be devoid of various ions that cause scaling; how is that to be controlled? Again, the waters do not have to be more corrosive, just less scaling, such that the saturation index is impacted and minerals are adsorbed back into solution.

Comment 32: General Public

We strongly support the inclusion of a digital early warning system in the direct potable reuse regulations, as mentioned in Page 3228, Section 10 of the proposed rule. These systems are vital for real-time monitoring and quick responses to contaminants, ensuring public health and safety. In the Phoenix region, reusing wastewater is essential for our city's growth and financial success. As citizens in the Phoenix region, we strongly support a digital early warning system in our wastewater. It will enhance the reliability of treated water, reduce the risk of pollutants, and increase our confidence in water reuse. We commend ADEQ for prioritizing this requirement and encouraging its adoption in the final regulation.

Comment 33: Interest Group

Requiring a wastewater system to deploy early-warning monitoring of the collections system does not fit with running an AWP. A wastewater utility may elect to conduct this step to assist with process control in operating its wastewater treatment process. However, the technology for early-warning systems relies on surrogate parameters and algorithms to correlate measured parameters to chemicals of concern. The technology is still relatively new to the industry and not what we would consider to be at a technological readiness level to be a requirement under rule.

Comment 34: Utility

Concerning Enhanced Source Control at R18-9-E824, the existing technologies for early warning of discharges in collection systems are not sophisticated nor reliable enough to be able to detect and differentiate chemicals of concern from other wastewater parameters. Furthermore, online monitoring instrumentation and rapid test kits do not have the capability of detecting all constituents of concern.

Comment 35: Utility

Some large-scale systems collect wastewater from multiple agencies, several of which are not participants in the AWP program. The AWPRA will not have jurisdiction to force agencies that contribute wastewater to the system but are not participants in the Advanced Water Purification Responsible Agency (AWPRA) program from more stringent requirements than currently exist. As an example, a utility that discharges wastewater to another utility's collection system that is connected to the main collection system under the AWPRA's jurisdiction will not have an obligation to maintain a list of non-domestic dischargers or inventories of chemicals used by commercial and industrial customers.

Comment 36: Utility

Under R18-9-E824(B)(11), there is a requirement that the enhanced source control program be audited at least every five

years. Will ADEQ provide guidance on components of the audit?

Comment 37: Utility

Add the following language (in italics) to R18-9-E824(D)(1), "ADEQ shall develop and make available guidance on developing, conducting, and maintaining an enhanced source control program *and guidance on performing an audit of the enhanced source control program*."

Comment 38: Utility

Add the following language (in italics) to R18-9-E824(E), "An AWPRA shall form and maintain a source control committee that includes representatives *from each AWPRA partner that is required to implement an enhanced source control program*, that supplies treated wastewater to the AWP project or that owns and/or operates a water reclamation facility…"

Comment 39: Interest Group

We are concerned with the strict requirement that the Direct Responsible Charge (DRC) be on-site at all times. We recommend that the language be adjusted to state that the DRC 'or their designee' must be available at all times. Additionally, the rule references that all collection and water reclamation facilities are operated by a grade 4 operator. We recommend Reclamation and Collections operations should be modified to apply in practical terms. Modifying the language to "operational oversight and management" could provide the necessary flexibility, ensuring that operations are managed effectively without mandating continuous hands-on control by highly certified personnel.

Comment 40: Utility

Additional water examination requirements for Grade 3 and 4 wastewater operators are too restrictive. With the qualifying experience and AWP certificate, a Wastewater Operator will have the full understanding of operator responsibility, training and response protocols for AWTF facility, the mere possession of an additional water certification is irrelevant.

Comment 41: Utility

Requiring a Direct Responsible Charge (DRC) to be on-site at all times is impractical and does not provide enough flexibility to the utility in managing operations. The Proposed Rule implies that the DRC must be onsite for potentially 16 hours per day. If the DRC is intended to be one person, that is not practical and creates redundancy with the shift operator. If the DRC is intended to be "multiple people" with a Grade 4 Drinking Water plus AWT certification, this puts a strain on utilities due to a statewide shortage of qualified operators and increased labor costs. It would better-serve the industry and workforce if the proposed rule language be amended to state that a DRC, or their designee, must be "available" at all times. The existing language will contribute to increased operational costs and operator fatigue.

Comment 42: Utility

The Rule references that all collection systems and water reclamation facilities are 'operated' by a grade 4 operator. We recommend Reclamation and Collections operations should be modified to apply in practical terms. Modifying the language to "operational oversight and management" could provide the necessary flexibility, ensuring that operations are managed effectively without mandating continuous hands-on control by highly certified personnel.

Comment 43: Utility

The Draft Rule does not clearly align with the established Arizona Administrative Code requirements for treatment facility rating and operator for staffing. A Grade 4 Collections or Grade 4 Water Reclamation Plant (WRP) is allowed to be operated by one level below the grading of the plant, i.e. a Grade 3 operator.

Comment 44: Utility

The wastewater treatment operator examination, with the additional drinking water component on the test, is an overly restrictive pre-qualification requirement. This type of exam does not offer standardized ISO 17024 metrics that ensure validity, reliability, and legal defensibility of the certification exam process.

Comment 45: Utility

At issue with Operator Certification at R18-9-B804, is the significant shortage of operators currently certified at the appropriate level to operate existing water treatment facilities. Increased requirements, although necessary, will continue to shrink that pool and may decrease interest. Many portions of the state do not have Grade 4 water or wastewater facilities currently which prevents candidates from obtaining qualifying experience. Modifying the prerequisites found in R18-9-B804(K) for advanced water treatment operator candidates to allow those with a Grade 3 Wastewater Treatment operator certification would increase the potential candidate pool.

Comment 46: Utility

Additionally at issue with Operator Certification at R18-9-B804, please revise the language to state that the operator in direct responsible charge (DRC) or their designee shall be available at all times. As written, the language implies the DRC is on-site at all times (24/7).

Comment 47: Utility

Should R18-9-B804(K)(5)(d) list "Grade 4" wastewater treatment certification, not Grade 3? Grade 3 is already included in R18-9-B804(K)(5)(c).

Comment 48: Utility

ADEQ and permittees have made tremendous efforts to protect water supplies through Arizona's Aquifer Protection Permit (APP) compliance program and pretreatment including implementation of Best Available Demonstrated Control Technology (BADCT). The proposed increased requirements in the new rule considerably downplays and undermines any earned trust built with this program and the current delivery of high-quality reclaimed water delivered to schools, parks, golf courses, and numerous recharge facilities where it replenishes our aquifer. Much of this water makes its way

back to the aquifer, where it is eventually reused as drinking water once again.

Comment 49: Interest Group

We are particularly concerned about the potential dewatering of rivers and streams that currently receive treated effluent. Effluent discharge often serves as a critical source of water for riparian habitats, supporting biodiversity and maintaining ecosystem services. Advanced water purification could divert these flows, leaving rivers like the Santa Cruz and the San Pedro and wetlands like the Gilbert Riparian Preserve and the Tres Rios Wetlands, among others, vulnerable to reduced volumes, which would harm aquatic and riparian ecosystems. While these ecological impacts may be beyond the scope of this rulemaking, none of these parallel processes will be implemented in a vacuum, and it is reasonable to at least acknowledge potential impacts and point to processes through which they will be addressed. The rules could account for these unintended consequences and provide strategies to mitigate impacts on environmental water needs.

Comment 50: Interest Group

An issue is the management of waste byproducts generated during the purification process. Concentrate streams often contain high levels of salts, heavy metals, PFAS, and other pollutants. While the rules include some guidance on source control and treatment, clear and enforceable guidelines for the safe disposal or reuse of these byproducts remain underdeveloped. Without robust waste management plans, the risks of secondary contamination to the environment are substantial.

Comment 51: General Public

How many billions of taxpayer money are you going to waste on this project?

Comment 52: Interest Group

We are concerned that some requirements of AWP are overly-burdensome and have the potential to make AWP unaffordable and infeasible for some communities. Our concern is from the perspective that the process of establishing new rules and regulations be fair, equitable, consistent, predictable, and consider the technological and economic cost-benefit in the development and application of rules that impact the public.

Comment 53: Interest Group

The proposed rules refer to AWP as a voluntary decision for a water provider. AWP could very well become an essential component of meeting a community's water demands. AWP being "voluntary" is an unacceptable basis for these over-reaching requirements that remain in the proposed rule.

Comment 54: Utility

The increased source control efforts come with additional financial burdens that may have an impact on future economic development where AWP will be used, either voluntarily or by necessity. These costs, in addition to the cost of constructing AWP infrastructure, will be passed on to customers. Much like the development of a maximum contaminant level (MCL) by the Environmental Protection Agency, financial impacts should be a consideration.

Comment 55: General Public

How will the costs described impact the cost of water for customers of utilities transitioning to AWP?

Comment 56: General Public

R18-9-A804(K)(5)(c) & (d) are exactly the same. I believe subsection (d) should be related to a Grade 4 Wastewater similar to (b).

Comment 57: Utility

To be consistent with the definition of AWP, revise the definition of "Advanced Water Purification Responsible Agency Partner" to include the italicized words shown here: "…*delivery to a drinking water treatment facility* or a drinking water distribution system."

Comment 58: Utility

Based on the definition of "treated water augmentation," delete "directly to the distribution system" from the definition of "Blending."

Comment 59: Utility

It is incorrect to state that raw wastewater "has not undergone any treatment." There are numerous wastewater pretreatment devices within Glendale's sewershed to minimize discharges of oil, grease, and/or sand into the municipal wastewater collection system. The definition should be revised (in italics): "…wastewater that is entering a Water Reclamation Facility *or Wastewater Treatment Plant* via a sewage collection system and which has not undergone any treatment…"

Comment 60: Interest Group

We believe that no other local or county government should have the ability to create a rule that could restrict the reuse activity permissible by the State. We recommend adding a provision in the rule related to: "No local or county governments are allowed to create a rule that prevents a community or water provider from implementing AWP."

Comment 61: Utility

Will a new source approval (as specified in R18-5-505(B)(1)(d)) be required for AWTF effluent? Or is it "presumptively considered surface water" (as written in the proposed R18-9-A803)?

Comment 62: Utility

Will an Approval to Construct (R18-5-505) and Approval of Construction (R18-5-507) be required when an existing drinking water system is modified to receive AWTF effluent? This may include connection at or prior to the intake to an existing drinking water treatment facility or connection directly into a potable water distribution system.

Comment 63: Local Government
We are concerned that the final AWP rules will be substantially weakened before publication based on the previously unpublished statement of achieving parity with drinking water rules. It is stated at 30 AAR 3186, under subtitle "Associated Rulemakings" that changes to Chapter 5 of Title 18 are based on the aim of achieving parity between drinking water regulations and AWP regulations. Considering all the constituents that are known to be or that could exist in wastewater and all the constituents not regulated by the SDWA, this is aiming substantially below the published Draft rules developed by a large number of stakeholders which were stricter than the drinking water rules.

Comment 64: Local Government
We are concerned that Region 9 of the EPA may not have specifically commented or opined on the State's creative way to implement AWP regulations by superseding drinking water design criteria and permitting regulations and leaving detail to unpublished guidance. Please confirm that the EPA's opinion has been solicited, especially on paragraphs R18-9-803(A) and (B). Please share the EPA's opinions and comments on the proposed rules if any have been received. Please confirm if any of the EPA's concerns have been incorporated.

Comment 65: Local Government
"Raw Water" and "Treated Water" Augmentation are expressly defined. The document remains silent as to whether ATW water would be allowed to be introduced into the finished water reservoir of a groundwater treatment plant or surface water treatment plant. The response to Draft Rule Comment #88 indicated that ATW could enter the finished water reservoir and that traditional new source approval data would need to be obtained, and that additional guidance will be forthcoming, and that it would be treated as a blending situation.
Please confirm our interpretation of the meaning of this response. We believe that this would require a re-evaluation of the existing DWTF disinfection adequacy and lead and copper control strategies due to water quality of the combined streams being different in the magnitude and quality of TOC and other aspects, and potentially more flow within the same detention volume. It would also require a blending evaluation (between sources and AWP treated water) or a re--evaluation if blending for MCL compliance (arsenic or nitrate) was already in practice.

Comment 66: Local Government
Arizona Revised Statutes 49-205 does not mention Local Authority (LA). When AWP facilities are overseen and regulated by ADEQ, such confidential data should be available to the LA if the LA is involved with the administration of the drinking water program for other portions of the water distribution system. Local authorities should be specifically allowed to access wastewater quality, treated wastewater quality, water quality, or treatment process performance information marked "confidential business information". Information which deals with the existence, absence, or concentration of constituents and contaminants detected in treated wastewater used as a source for an AWP facility should be made exempt from confidentiality provisions and available to the public or LA upon request.

Comment 67: Utility
The beneficial use of this water will be regulated by the Safe Drinking Water Act (SDWA), and as such, new rules proposed by ADEQ should not intentionally or unintentionally create standards or requirements that exceed the scope of the SDWA.

Comment 68: Utility
The process for obtaining a Demonstration Permit should be streamlined to allow parallel tracks for performing and submitting permit elements. This will encourage utilities and the public to interact on the subject of ATW and facilitate operator education and training on an operating system. According to R18-9-C817, an Advanced Water Purification Responsible Agency (AWPRA) applying for a Demonstration Permit must meet all the requirements of a full- scale permit, except for full-scale verification. While the intent of this approach is to ensure thorough evaluation, the approach mandates the completion of both a one-year Initial Source Water Characterization (ISWC) and a Pilot study before granting a Demonstration Permit. This sequential approach (requiring the ISWC to be completed prior to final design and the one-year pilot) could delay entities seeking a Demonstration Permit by up to two years. This delay is particularly concerning given that a public outreach program with taste testing is the most effective path toward public acceptance. The two-year delay would mean the demonstrations might not commence until just before the full-scale facility comes online. Utilizing a robust pilot "skid" for the Demonstration Permit is a prudent way to fulfill the pilot's intent, while building trust and acceptance with the public and elected officials. A shorter timeline for obtaining the Demonstration Permit would be beneficial. Risk assessments should consider that the volume of water used for taste testing is small and each person is drinking the water only one-time.

Comment 69: Utility
As written, R18-9-C817(C)(4) conflicts with both R18-9-C817(A) which states a demonstration permit is for "non-distribution purposes" and R18-9-C817(B) which prohibits the introduction of advanced treated water into a drinking water distribution system. Change the language at subsection (C)(4) to: "The AWP operator shall operate the demonstration facility for public outreach, finished water tasting, and other related non-distribution purposes."

Comment 70: Utility
To be consistent with the licensing timeframes and R18-9-C817(H), demonstration permits should be referred to in this section. For example: "The Department shall publish a notice of preliminary decision regarding the issuance or denial of a significant amendment, demonstration permit, or a final permit determination…"

Comment 71: Local Government
We support comprehensive initial and on-going (periodic) source water (wastewater) characterization. We do not support allowing pilot or full-scale demonstrations to commence before initial source water characterizations have been completed

and before comprehensive and complete testing objectives have been identified and accepted by ADEQ. Wording at R18-9-C815(B)(4) implies that pilot or full scale demonstration may commence before the initial source water characterization is complete which is equivalent to having an improperly conducted test, and/or a situation with insufficient oversight, and/or has the potential for allowing inappropriate design criteria to be implemented. We support the language at R18-9-C815(E) which allows the director to deny AWP permits where piloting was improperly conducted or insufficient to demonstrate compliance.

Comment 72: Local Government

We support language allowing the ADEQ director to deny an AWP permit based on non-compliance with the ISWC requirement, or improperly conducted, or in cases of insufficient data.

Comment 73: Local Government

We support language in R18-9-804(I)(3)(F) and R18-9-823(B)(3) and (C)(2) that the ADEQ director may terminate an AWP permit in cases of false information or misleading reports.

Comment 74: Local Government

We are supportive of the R18-9-E826(F) requirement for AWP permit applicants to select optimized demonstration (pilot) and full-scale AWTF treatment trains based on Tier 1 MCLs, a generated Tier 2 list, and a pass-through interference list.

Comment 75: Local Government

We are supportive of the requirement in R18-9-E826(F)(2) for AWP permit applicants to control chemicals at the source which are not sufficiently treatable in the selected AWT treatment train.

Comment 76: Local Government

We support demonstration-scale and full-scale verification requirements proposed in the rules.

Comment 77: Local Government

We previously commented on the definition of "Pilot", which has now changed in a manner that warrants additional comment. Pilot also means full-scale [R18-9-C815(A)(1)] and full-scale can now occur in lieu of piloting. The response to Draft Rule Comment #89 is "'Full scale' means the complete implementation and operation of an AWP system that is designed to treat wastewater to finished water standards and to meet the potable water demand of the community." This wording, along with other Initial Source Water Characterization (ISWC) provisions [R18-9-C815(B)(4)], appears to allow the permitting of a full-scale system before all chemicals of concern are identified in a ISWC and before all pilot objectives are known or before process capabilities have been verified over sufficient time. Such definitions and approach, made in the name of flexibility, would be an abdication of the responsibility to assure public health objectives and would be especially so if Tier 2 and Tier 3 chemical contaminant provisions of the Draft and Pre-publication rules were minimized or eliminated.

Comment 78: Utility

Full scale verification should follow current commissioning timelines used for treatment plants. Requiring a one-year Full Scale Verification is impractical and not the best use of highly treated water. The industry standard for bringing a full-scale drinking water plant online, including treatment plants for Superfund sites, is generally 60-90 days. The required one-year Pilot Study already covers the seasonal water quality variations in source water. The primary goal of commissioning time for full-scale is to prove the equipment is functioning as designed as the treatment has already been validated in the pilot. In addition, not applying this very expensive highly treated water to the best beneficial use would be a poor public message especially considering the drought and shortage conditions.

Comment 79: Local Government

We understand that counties will not be delegated authority with regard to the AWP program and that this separation is clear with regard to future AWTF facilities. Based on the response to Draft Rule Comment #136, we understand that WRFs that deliver treated wastewater to AWP facilities may be subject to future delegation agreements. Based on the response to Draft Rule Comment #123, it is not clear from the proposed rules whether existing, nor proposed drinking water treatment facilities that receive AWP treated water would remain delegated to certain Arizona counties or be addressed in a future delegation agreement. Based on the response to Draft Rule Comment #103, AWPRA facilities deemed part of a PWS and are defined as a DWTF in the proposed rules may remain delegated or will be addressed in a future delegation agreement.

Comment 80: Local Government

We are in full support of the definition of "Treatment Barrier" as proposed. Our understanding is that current definition, if applied to a UV/AOP process, would require constant operation at the design dose in order to receive credit for contaminant removal. It is our further understanding that vendor algorithms or features that enable power reduction based on flow rate or contaminant concentration or surrogates such as UV transmittance or TOC would not meet this definition, and that this type of feature is inappropriate to meet the concept of a constant operation. The unacceptability of this vendor promoted feature should be addressed in rule and/or a guidance document. The response to Draft Rule Comment #77 indicated that R18-9-C816(G)(4) was modified to that end - thank you. However, this response does not fully address the issue. UV/AOP processes operating at less than full power will be in constant operation but will not produce maximum pathogen LRV or design levels of chemical contaminant removal. How will ADEQ assign treatment performance credits to UV/AOP when systems are operated at less than full power and when contaminant destruction rate constants are kept proprietary?

Comment 81: Local Government

We understand that seven (7) guidance documents pertaining to design, implementation and maintenance of AWP systems

are being prepared. We request that stakeholders and the public be allowed to comment on these guidance documents. It is not clear whether guidance documents will have additional process criteria. Minimum requirements need to be established in rule. Based on the proposed rules, there is a great need for additional and specific design criteria. The proposed rules are silent on unit process redundancy and reliability requirements. The public would benefit from published unit process criteria for each type of treatment plant situation; raw water augmentation, treated water augmentation, entry into finished water reservoirs (if permissible), scalping scenarios, etc.

Comment 82: Local Government

Previously, we commented that the AWP annual report in R18-9-E831 should be attached to the Public Water System Consumer Confidence Report (CCR). The response to Draft Rule Comment #128 indicated that a change to the proposed rules was unnecessary and that CCR requirements require "all these components to be included". We are requesting that clarity be added to the proposed rules since all that would be required is for someone to report "treated wastewater", or AWP product water as a source. Specifically, the public reporting requirement should say more than "an AWP source is being introduced". Ideally, the constituents analyzed for and constituents remaining should be reported for the AWP product water regardless if introduced as a source, or introduced to an existing DWTF finished water reservoir, or introduced directly to a distribution system. Each AWPRA agency member should be required to publicly report since the AWPRA agency is not a public water system subject to SDWA requirements.

Comment 83: Local Government

The requirement to have three diverse and separate treatment processes, including AOP and one (undefined) physical separation process, is presented in rule at R18-9-F832(C). Please identify the physical separation processes that would satisfy this requirement.

Comment 84: Local Government

Consider adding a requirement under the Minimum Design Requirements rule (R18-9-F832(D)(5)) that destruction rate constants specific to the reactor being proposed are documented in the AOP validation report. Without such reporting, it is not possible for a regulatory oversight agency to properly evaluate an AOP process for conditions other than that of the test conditions.

Comment 85: Local Government

R18-9-F832(D)(9)(d), pertaining to SCADA communications, appears out of place and is not related to subsections (9)(a), (9)(b), or (9)(c), which pertain to cross connection control.

Comment 86: Local Government

Total Organic Carbon (TOC) Management: R18-9-F834 proposes two approaches for management of TOC in AWTF product water and appear to establish a TOC limit of 2 mg/L or a site-specific value to control unregulated candidate (CCL5) disinfection by-products but makes no specific mention of whether compliance with existing DBP regulations is required. Assuming that compliance with all current and future DBP regulations is required, this approach seems to create less stringent alternatives to the conventional DWTF approach that TOC and other constituents must be removed (to an appropriate degree) so that all applicable current and future DBP regulations are complied with to the degree necessary for the water ages occurring.

a. Please confirm that DWTFs receiving Advanced Treated Water (ATW) as a source (raw water augmentation) would still need to demonstrate TOC reduction (for any combination of sources) to comply with the Stage 1 DBP rule in the SDWA that requires 15% to 50% TOC reduction, depending on alkalinity.

b. Please confirm that DWTFs receiving ATW into an existing finished water reservoir are exempt from TOC reduction requirements of the stage 1 DBP rules but must still comply with Stage 2 and future DBP regulations.

c. Please confirm that AWTFs contributing "finished water" directly to the distribution system (treated water augmentation) are allowed to have TOC levels at any concentration that does not cause DBP non-compliance, current or future, in the distribution system.

ARTICLE 1. AQUIFER PROTECTION PERMITS - GENERAL PROVISIONS

R18-9-101. Definitions

In addition to the definitions established in A.R.S. § 49-201, the following terms apply to Articles 1, 2, 3, and 4 of this Chapter:

1. "Aggregate" means a clean graded hard rock, volcanic rock, or gravel of uniform size, between 3/4 inch and 2 1/2 inches in diameter, offering 30 percent or more void space, washed or prepared to be free of fine materials that will impair absorption surface performance, and has a hardness value of three or greater on the Moh's Scale of Hardness (can scratch a copper penny).
2. "Alert level" means a value or criterion established in an individual permit that serves as an early warning indicating a potential violation of a permit condition related to BADCT or the discharge of a pollutant to groundwater.
3. "AQL" means an aquifer quality limit and is a permit limitation set for aquifer water quality measured at the point of compliance that either represents an Aquifer Water Quality Standard or, if an Aquifer Water Quality Standard for a pollutant is exceeded in an aquifer at the time of permit issuance, represents the ambient water quality for that pollutant.
4. "Aquifer Protection Permit" means an individual permit or a general permit issued under A.R.S. §§ 49-203, 49-241 through 49-252, and Articles 1, 2, and 3 of this Chapter.
5. "Aquifer Water Quality Standard" means a standard established under A.R.S. §§ 49-221 and 49-223.
6. "AZPDES" means the Arizona Pollutant Discharge Elimination System, which is the state program for issuing, modifying, revoking, reissuing, terminating, monitoring, and enforcing permits, and imposing and enforcing pretreatment and biosolids requirements under A.R.S. Title 49, Chapter 2, Article 3.1 and 18 A.A.C. 9, Articles 9 and 10.
7. "BADCT" means the best available demonstrated control technology, process, operating method, or other alternative to achieve the greatest degree of discharge reduction determined for a facility by the Director under A.R.S. § 49-243.
8. "Bedroom" means, for the purpose of determining design flow for an on-site wastewater treatment facility for a dwelling, any room that has:
   a. A floor space of at least 70 square feet in area, excluding closets;
   b A ceiling height of at least 7 feet;
   c. Electrical service and ventilation;
   d. A closet or an area where a closet could be constructed;
   e. At least one window capable of being opened and used for emergency egress; and
   f. A method of entry and exit to the room that allows the room to be considered distinct from other rooms in the dwelling and to afford a level of privacy customarily expected for such a room.
9. "Book net worth" means the net difference between total assets and total liabilities.
10. "CCR" means coal combustion residuals which include fly ash, bottom ash, boiler slag, and flue gas desulfurization materials generated from burning coal for the purpose of generating electricity by electric utilities and independent power producers.
11. "CCR landfill" means an area of land or an excavation that receives CCR and which is not a municipal solid waste landfill, a surface impoundment, an underground injection well, a salt dome formation, a salt bed formation, an underground or surface coal mine, or a cave. A CCR landfill also includes sand and gravel pits and quarries that receive CCR, CCR piles, and any practice that does not meet the definition of beneficial use of CCR.
12. "CCR surface impoundment" means a natural topographic depression, man-made excavation, or diked area, which is designed to hold an accumulation of CCR and liquids, and the unit treats, stores, or disposes of CCR.
13. "CCR unit" means any CCR landfill which receives CCR, any CCR surface impoundment designed to hold an accumulation of CCR and liquids, and the unit treats, stores or disposes of CCR. CCR unit includes a lateral expansion of a CCR unit, or a combination of more than one of these units that receives CCR.
14. "Cesspool" means a pit, collection structure, or subsurface fluid distribution system, which may or may not be partially lined, that receives discharged sewage. A cesspool is not an on-site wastewater treatment facility, such as a septic tank, vault, or other structure permitted under Article 3 of this Chapter.
15. "Chamber technology" means a method for dispersing treated wastewater into soil from an on-site wastewater treatment facility by one or more manufactured leaching chambers with an open bottom and louvered, load-bearing sidewalls that substitute for an aggregate-filled trench described in R18-9-E302.
16. "CMOM Plan" means a Capacity, Management, Operations, and Maintenance Plan, which is a written plan that describes the activities a permittee will engage in and actions a permittee will take to ensure that the capacity of the sewage collection system, when unobstructed, is sufficient to convey the peak wet weather flow through each reach of sewer, and provides for the management, operation, and maintenance of the permittee's sewage collection system.
17. "Design capacity" means the volume of a containment feature at a discharging facility that accommodates all permitted flows and meets all Aquifer Protection Permit conditions, including allowances for appropriate peaking and safety factors to ensure sustained, reliable operation.
18. "Design flow" means the daily flow rate a facility is designed to accommodate on a sustained basis while satisfying all Aquifer Protection Permit discharge limitations and treatment and operational requirements. The design flow either incorporates or is used with appropriate peaking and safety factors to ensure sustained, reliable operation.
19. "Direct reuse site" means an area where reclaimed water is applied or impounded.
20. "Disposal works" means the system for disposing treated wastewater generated by the treatment works of a sewage treatment facility or on-site wastewater treatment facility, by surface or subsurface methods. Disposal works do not include systems for activities regulated under 18 A.A.C. 9, Article 7.
21. "*Drywell*" *means a well which is a bored, drilled or driven shaft or hole whose depth is greater than its width and is designed and constructed specifically for the disposal of storm water. Drywells do not include class 1, class 2, class 3 or class 4 injection wells as defined by the*

Federal Underground Injection Control Program (P.L. 93-523, part C), as amended. A.R.S. § 49-331(3)

22. "Dwelling" means any building, structure, or improvement intended for residential use or related activity, including a house, an apartment unit, a condominium unit, a townhouse, or a mobile or manufactured home that has been constructed or will be constructed on real property.
23. "Final permit determination" means a written notification to the applicant of the Director's final decision whether to issue or deny an Individual Aquifer Protection Permit.
24. *"Gray water" means wastewater that has been collected separately from a sewage flow and that originates from a clothes washer or a bathroom tub, shower or sink but that does not include wastewater from a kitchen sink, dishwasher or toilet.* A.R.S. § 49-201(20).
25. "Groundwater Quality Protection Permit" means a permit issued by the Arizona Department of Health Services or the Department before September 27, 1989 that regulates the discharge of pollutants that may affect groundwater.
26. "Homeowner's association" means a nonprofit corporation or unincorporated association of owners created pursuant to a declaration to own and operate portions of a planned community and which has the power under the declaration to assess association members to pay the costs and expenses incurred in the performance of the association's obligations under the declaration.
27. "Injection well" means a well that receives a discharge through pressure injection or gravity flow.
28. "Intermediate stockpile" means in-process material not intended for long-term storage that is in transit from one process to another at a mining site. Intermediate stockpile does not include metallic ore concentrate stockpiles or feedstocks not originating at the mining site.
29. "Land treatment facility" means an operation designed to treat and improve the quality of waste, wastewater, or both, by placement wholly or in part on the land surface to perform part or all of the treatment. A land treatment facility includes a facility that performs biosolids drying, processing, or composting, but not land application performed in compliance with 18 A.A.C. 9, Article 10.
30. "Mining site" means a site assigned one or more of the following primary Standard Industrial Classification Codes: 10, 12, 14, 32, and 33, and includes noncontiguous properties owned or operated by the same person and connected by a right-of-way controlled by that person to which the public is not allowed access.
31. "Nitrogen Management Area" means an area designated by the Director for which the Director prescribes measures on an area-wide basis to control sources of nitrogen, including cumulative discharges from on-site wastewater treatment facilities, that threaten to cause or have caused an exceedance of the Aquifer Water Quality Standard for nitrate.
32. "Notice of Disposal" means a document submitted to the Arizona Department of Health Services or the Department before September 27, 1989, giving notification of a pollutant discharge that may affect groundwater.
33. *"On-site wastewater treatment facility" means a conventional septic tank system or alternative system that is installed at a site to treat and dispose of wastewater of predominantly human origin that is generated at that site.* A.R.S. § 49-201(29). An on-site wastewater treatment facility does not include a pre-fabricated, manufactured treatment works that typically uses an activated sludge unit process and has a design flow of 3000 gallons per day or more.
34. "Operational life" means the designed or planned period during which a facility remains operational while being subject to permit conditions, including closure requirements. Operational life does not include post-closure activities.
35. "*Person*" *means an individual, employee, officer, managing body, trust, firm, joint stock company, consortium, public or private corporation, including a government corporation, partnership, association or state, a political subdivision of this state, a commission, the United States government or any federal facility, interstate body or other entity.* A.R.S. § 49-201(33). For the purposes of permitting a sewage treatment facility under Article 2 of this Chapter, person does not include a homeowner's association.
36. "Pilot project" means a short-term, limited-scale test designed to gain information regarding site conditions, project feasibility, or application of a new technology.
37. "Process solution" means a pregnant leach solution, barren solution, raffinate, or other solution uniquely associated with the mining or metals recovery process.
38. "Residential soil remediation level" means the applicable predetermined standard established in 18 A.A.C. 7, Article 2, Appendix A.
39. "Seasonal high water table" means the free surface representing the highest point of groundwater rise within an aquifer due to seasonal water table changes over the course of a year.
40. "Setback" means a minimum horizontal distance maintained between a feature of a discharging facility and a potential point of impact.
41. "Sewage" means untreated wastes from toilets, baths, sinks, lavatories, laundries, other plumbing fixtures, and waste pumped from septic tanks in places of human habitation, employment, or recreation. Sewage does not include gray water as defined in A.R.S. § 49-201(20), if the gray water is reused according to 18 A.A.C. 9, Article 7.
42. "Sewage collection system" means a system of pipelines, conduits, manholes, pumping stations, force mains, and all other structures, devices, and appurtenances that collect, contain, and convey sewage from its sources to the entry of a sewage treatment facility or on-site wastewater treatment facility serving sources other than a single-family dwelling.
43. "Sewage treatment facility" means a plant or system for sewage treatment and disposal, except for an on-site wastewater treatment facility, that consists of treatment works, disposal works and appurtenant pipelines, conduits, pumping stations, and related subsystems and devices. A sewage treatment facility does not include components of the sewage collection system or the reclaimed water distribution system.
44. "Surface impoundment" means a pit, pond, or lagoon with a surface dimension equal to or greater than its depth, and used for the storage, holding, settling, treatment, or discharge of liquid pollutants or pollutants containing free liquids.
45. "Tracer" means a substance, such as a dye or other chemical, used to change the characteristic of water or some other fluid to detect movement.

46. "Tracer study" means a test conducted using a tracer to measure the flow velocity, hydraulic conductivity, flow direction, hydrodynamic dispersion, partitioning coefficient, or other property of a hydrologic system.
47. "Treatment works" means a plant, device, unit process, or other works, regardless of ownership, used for treating, stabilizing, or holding municipal or domestic sewage in a sewage treatment facility or on-site wastewater treatment facility.
48. "Typical sewage" means sewage conveyed to an on-site wastewater treatment facility in which the total suspended solids (TSS) content does not exceed 430 mg/l, the five-day biochemical oxygen demand (BOD_5) does not exceed 380 mg/l, the total nitrogen does not exceed 53 mg/l, and the content of oil and grease does not exceed 75 mg/l.
49. "*Underground storage facility*" *means a constructed underground storage facility or a managed underground storage facility.* A.R.S. § 45-802.01(21).
50. "Waters of the United States" means:
    a. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide;
    b. All interstate waters, including interstate wetlands;
    c. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any waters:
        i. That are or could be used by interstate or foreign travelers for recreational or other purposes;
        ii. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
        iii. That are used or could be used for industrial purposes by industries in interstate commerce;
    d. All impoundments of waters defined as waters of the United States under this definition;
    e. Tributaries of waters identified in subsections (a) through (d);
    f. The territorial sea; and
    g. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in subsections (a) through (f).

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Amended by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final expedited rulemaking at 25 A.A.R. 3060, effective immediately September 23, 2019, pursuant to A.R.S. § 41-1027(H) (Supp. 19-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-102. Facilities to which Articles 1, 2, and 3 Do Not Apply
Articles 1, 2, and 3 do not apply to:

1. A drywell used solely to receive storm runoff and located so that no use, storage, loading, or treating of hazardous substances occurs in the drainage area;
2. A direct pesticide application in the commercial production of plants and animals subject to the Federal Insecticide, Fungicide, and Rodenticide Act (P.L. 92-516; 86 Stat. 975; 7 United States Code 135 et seq., as amended), or A.R.S. §§ 49-301 through 49-309 and applicable rules, or A.R.S. Title 3, Chapter 2, Article 6 and applicable rules.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Amended by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-103. Class Exemptions
Class exemptions. In addition to the classes or categories of facilities listed in A.R.S. § 49-250(B), the following classes or categories of facilities are exempt from the Aquifer Protection Permit requirements in Articles 1, 2, and 3 of this Chapter:

1. Facilities that treat, store, or dispose of hazardous waste and have been issued a permit or have interim status, under the Resource Conservation and Recovery Act (P.L. 94580; 90 Stat. 2796; 42 U.S.C. 6901 et seq., as amended), or have been issued a permit according to the hazardous waste management rules adopted under 18 A.A.C. 8, Article 2;
2. Underground storage tanks that contain a regulated substance as defined in A.R.S. § 49-1001;
3. Facilities for the disposal of solid waste, as defined in A.R.S. § 49-701.01, that are located in unincorporated areas and receive solid waste from four or fewer households;
4. Land application of biosolids in compliance with 18 A.A.C. 9, Articles 9 and 10;
5. CCR Units regulated by 40 CFR 257, Subpart D or by a permit in effect under a Department program approved by the United States Environmental Protection Agency in accordance with 42 U.S.C. § 6945(d)(1);
6. Underground Injection Control Class V injection wells regulated under an area or individual permit per 18 A.A.C. 9, Article 6, Part I.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Subsection 4 citation corrected to reflect recodification at 7 A.A.R. 2522 (Supp. 03-1). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final expedited rulemaking at 25 A.A.R. 3060, effective immediately September 23, 2019, pursuant to A.R.S. § 41-1027(H) (Supp. 19-3). Amended by final rulemaking at 28 A.A.R. 1903 (August 5, 2022), effective September 6, 2022 (Supp. 22-3).

R18-9-104. Transition from Notices of Disposal and Groundwater Quality Protection Permitted Facilities
A person who owns, operates, or operated a facility on or after January 1, 1986 for which a Notice of Disposal was filed or a Groundwater Quality Protection Permit was issued shall, within 90 days from the date on the Director's notification, submit an application for an Aquifer Protection Permit or a closure plan as specified under A.R.S. § 49-252. The person shall obtain a permit for continued operation, closure of the facility, or clean closure approval.

Failure to submit an application or closure plan as required terminates continuance of the Notice of Disposal or Groundwater Quality Protection Permit.

Historical Note

Adopted effective September 27, 1989 (Supp. 89-3). Amended by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-105. Permit Continuance

A. Continuance.
1. Groundwater Quality Protection Permits.
   a. Subject to R18-9-104 and other provisions of this Section, a Groundwater Quality Protection Permit issued before September 27, 1989 is valid according to the terms of the permit until replaced by an Aquifer Protection Permit issued by the Department.
   b. A person who owns or operates a facility to which a Groundwater Quality Protection Permit was issued is in compliance with Articles 1, 2, and 3 of this Chapter and A.R.S. Title 49, Chapter 2, Article 3, if the facility:
      i. Meets the conditions of the Groundwater Quality Protection Permit; and
      ii. Is not causing or contributing to the violation of any Aquifer Water Quality Standard at a point of compliance, determined by the criteria in A.R.S. § 49-244.
2. Notice of Disposal. A person who owns or operates a facility for which a Notice of Disposal was filed before September 27, 1989 complies with Articles 1, 2, and 3 of this Chapter and A.R.S. Title 49, Chapter 2, Article 3 if the facility is not causing or contributing to the violation of an Aquifer Water Quality Standard at a point of compliance, determined by the criteria in A.R.S. § 49-244.
3. Aquifer Protection Permit application submittal. A person who did not file a Notice of Disposal and does not possess a Groundwater Quality Protection Permit or an Aquifer Protection Permit for an existing facility, but submitted the information required in applicable rules before December 27, 1989, is in compliance with Articles 1, 2, and 3 of this Chapter only if the person submitted an Aquifer Protection Permit application to the Department before January 1, 2001.

B. Applicability. Subsection (A) applies until the Director:
1. Issues an Aquifer Protection Permit for the facility,
2. Denies an Aquifer Protection Permit for the facility,
3. Issues a letter of clean closure approval for the facility under A.R.S. § 49-252, or
4. Determines that the person failed to submit an application under R18-9-104.

Historical Note

Adopted effective September 27, 1989 (Supp. 89-3). Amended effective November 12, 1996 (Supp. 96-4). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-106. Determination of Applicability

A. A person who engages or who intends to engage in an operation or an activity that may result in a discharge regulated under Articles 1, 2, and 3 of this Chapter may submit a request, on a form provided by the Department, that the Department determine the applicability of A.R.S. §§ 49-241 through 49-252 and Articles 1, 2, and 3 of this Chapter to the operation or activity.

B. A person requesting a determination of applicability shall provide the following information and the applicable fee under 18 A.A.C. 14:
1. The name and location of the operation or activity;
2. The name of any person who is engaging or who proposes to engage in the operation or activity;
3. A description of the operation or activity;
4. A description of the volume, chemical composition, and characteristics of materials stored, handled, used, or disposed of in the operation or activity; and
5. Any other information required by the Director to make the determination of applicability.

C. Within 45 days after receipt of a request for a determination of applicability, the Director shall notify in writing the person making the request that the operation or activity:
1. Is not subject to the requirements of A.R.S. §§ 49-241 through 49-252 and Articles 1, 2, and 3 of this Chapter because the operation or facility does not discharge as described under A.R.S. § 49-241;
2. Is not subject to the requirements of A.R.S. §§ 49-241 through 49-252 and Articles 1, 2, and 3 of this Chapter because the operation or activity is exempted by A.R.S. § 49-250 or R18-9-103;
3. Is eligible for a general permit under A.R.S. §§ 49-245.01, 49-245.02 or 49-247 or Article 3 of this Chapter, specifying the particular general permit that would apply if the person meets the conditions of the permit; or
4. Is subject to the permit requirements of A.R.S. §§ 49-241 through 49-252 and Articles 1, 2, and 3 of this Chapter.

D. If, after issuing a determination of applicability under this Section, the Director concludes that the determination or the information relied upon for a determination is inaccurate, the Director may modify or withdraw its determination upon written notice to the person who requested the determination of applicability.

E. If the Director determines that an operation or activity is subject to the requirements of A.R.S. §§ 49-241 through 49-252, the person who owns or operates the discharging facility shall, within 90 days from receiving the Director's written notification, submit an application for an Aquifer Protection Permit or a closure plan.

Historical Note

Adopted effective September 27, 1989 (Supp. 89-3). Amended by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-107. Consolidation of Aquifer Protection Permits

A. The Director may consolidate any number of individual permits or the coverage for any facility authorized to discharge under a general permit into a single individual permit, if:
1. The facilities are part of the same project or operation and are located in a contiguous geographic area, or
2. The facilities are part of an area under the jurisdiction of a single political subdivision.

B. All applicable individual permit requirements established in Articles 1 and 2 of this Chapter apply to the consolidation of Aquifer Protection Permits.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-108. Public Notice

A. Individual permits.
1. The Department shall provide the entities specified in subsection (A)(2), with monthly written notification, by regular mail or electronically, of the following:
   a. Individual permit applications,
   b. Temporary permit applications,
   c. Preliminary and final decisions by the Director whether to issue or deny an individual or temporary permit,
   d. Closure plans received under R18-9-A209(B),
   e. Significant permit amendments and "other" permit amendments,
   f. Permit revocations, and
   g. Clean closure approvals.
2. Entities.
   a. Each county department of health, environmental services department, or comparable department;
   b. A federal, state, local agency, or council of government, that may be affected by the permit action; and
   c. A person who requested, in writing, notification of the activities described in subsection (A).
3. The Department may post the information referenced in subsections (A)(1) and (2) on the Department web site: www.azdeq.gov.

B. General permits. Public notice requirements do not apply.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-109. Public Participation

A. Notice of Preliminary Decision.
1. The Department shall publish a Notice of Preliminary Decision regarding the issuance or denial of a significant permit amendment or a final permit determination in one or more newspapers of general circulation where the facility is located.
2. The Department shall accept written comments from the public before a significant permit amendment or a final permit determination is made.
3. The written public comment period begins on the publication date of the Notice of Preliminary Decision and extends for 30 calendar days.

B. Public hearing.
1. The Department shall provide notice and conduct a public hearing to address a Notice of Preliminary Decision regarding a significant permit amendment or final permit determination if:
   a. Significant public interest in a public hearing exists, or
   b. Significant issues or information has been brought to the attention of the Department that has not been considered previously in the permitting process.
2. If, after publication of the Notice of Preliminary Decision, the Department determines that a public hearing is necessary, the Department shall schedule a public hearing and publish the Notice of Preliminary Decision at least once, in one or more newspapers of general circulation where the facility is located.
3. The Department shall accept written public comment until the close of the hearing record as specified by the person presiding at the public hearing.

C. The Department shall respond in writing to all comments submitted during the formal public comment period.

D. At the same time the Department notifies a permittee of a significant permit amendment or an applicant of the final permit determination, the Department shall send, through regular mail or electronically, a notice of the amendment or determination and the summary of response to comments to any person who submitted comments or attended a public hearing on the significant permit amendment or final permit determination.

E. General permits. Public participation requirements do not apply.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-110. Inspections, Violations, and Enforcement

A. The Department shall conduct an inspection of a permitted facility as specified under A.R.S. § 41-1009.

B. A person who owns or operates a facility contrary to a provision of Articles 1, 2, and 3 of this Chapter, violates a condition of an Aquifer Protection Permit, or violates a condition of a Groundwater Quality Protection Permit continued under R189105(A)(1) is subject to the enforcement actions established under A.R.S. Title 49, Chapter 2, Article 4.

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed; new Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-111. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-112. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-113. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-114. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-115. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-116. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-117. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-118. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-119. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-120. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Repealed effective July 14, 1998 (Supp. 98-3).

R18-9-121. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-122. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-123. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Repealed effective November 15, 1996 (Supp. 96-4).

R18-9-124. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-125. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-126. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-127. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-128. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Repealed effective November 12, 1996 (Supp. 96-4).

R18-9-129. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-130. Repealed

Historical Note
Adopted effective September 27, 1989 (Supp. 89-3). Section repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

Appendix I. Repealed

Historical Note
Appendix I repealed by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

ARTICLE 2. AQUIFER PROTECTION PERMITS - INDIVIDUAL PERMITS

PART A. APPLICATION AND GENERAL PROVISIONS

R18-9-A201. Individual Permit Application

A. An individual permit application covers one or more of the following categories:
1. Drywell,
2. Industrial,
3. Mining,
4. Wastewater,
5. Solid waste disposal, or
6. Land treatment facility.

B. An applicant for an individual permit shall provide the Department with:
1. The following information on an application form:
   a. The name and mailing address of the applicant;
   b. The name and mailing address of the owner of the facility;
   c. The name and mailing address of the operator of the facility;
   d. The legal description, including latitude and longitude, of the location of the facility;
   e. The expected operational life of the facility; and

f. The permit number for any other federal or state environmental permit issued to the applicant for that facility or site.

2. A copy of the certificate of disclosure required by A.R.S. § 49-109;
3. Evidence that the facility complies with applicable municipal or county zoning ordinances, codes, and regulations;
4. Two copies of the technical information required in R18-9-A202(A);
5. Cost estimates for facility construction, operation, maintenance, closure, and post-closure as follows.
   a. The applicant shall ensure that the cost estimates are derived by an engineer, controller, or accountant using competitive bids, construction plan take-off's, specifications, operating history for similar facilities, or other appropriate sources, as applicable.
   b. The following cost estimates that are representative of regional fair market costs:
      i. The cost of closure estimate under R18-9-A209(B)(2), consistent with the closure plan or strategy submitted under R18-9-A202(A)(10);
      ii. The estimated cost of post-closure monitoring and maintenance under R18-9-A209(C), consistent with the post-closure plan or strategy submitted under R18-9-A202(A)(10); and
      iii. For a sewage treatment facility or utility subject to Title 40 of the Arizona Revised Statutes, the operation and maintenance costs of those elements of the facility used to make the demonstration under A.R.S. § 49-243(B);
6. For a sewage treatment facility:
   a. Documentation that the sewage treatment facility or expansion conforms with the Certified Areawide Water Quality Management Plan and the Facility Plan, and
   b. The additional information required in R18-9-B202 and R18-9-B203;
7. Certification in writing that the information submitted in the application is true and accurate to the best of the applicant's knowledge; and
8. The applicable fee established in 18 A.A.C. 14.

C. Special provision for an underground storage facility as defined in A.R.S. § 45-802.01(21). A person applying for an individual permit for an underground storage facility shall submit the information described in R18-9-A201 through R18-9-A203, except for the BADCT information specified in R18-9-A202(A)(5).
1. Upon receipt of the application, the Department shall process the application in coordination with the underground storage facility permit process administered by the Department of Water Resources.
2. The Department shall advise the Department of Water Resources of each permit application received.

D. Pre-application conference. Upon request of the applicant, the Department shall schedule and hold a pre-application conference with the applicant to discuss any requirements in Articles 1 and 2 of this Chapter.

E. Draft permit. The Department shall provide the applicant with a draft of the individual permit before publication of the Notice of Preliminary Decision specified in R18-9-109.

F. Permit duration. Except for a temporary permit, an individual permit is valid for the operational life of the facility and any period during which the facility is subject to a post-closure plan under R18-9-A209(C).

G. Permit issuance or denial.
1. The Director shall issue an individual permit, based upon the information obtained by or made available to the Department, if the Director determines that the applicant will comply with A.R.S. §§ 49-241 through 49-252 and Articles 1 and 2 of this Chapter.
2. The Director shall provide the applicant with written notification of the final decision to issue or deny the permit within the overall licensing time-frame requirements under 18 A.A.C. 1, Article 5, Table 10 and the following:
   a. The applicant's right to appeal the final permit determination, including the number of days the applicant has to file a protest and the name and telephone number of the Department contact person who can answer questions regarding the appeals process;
   b. If the permit is denied under R18-9-A213(B), the reason for the denial with reference to the statute or rule on which the denial is based; and
   c. The applicant's right to request an informal settlement conference under A.R.S. §§ 41-1092.03(A) and 41-1092.06.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A202. Technical Requirements

A. Except as specified in R18-9-A201(C)(1), an applicant shall, as required under R18-9-A201(B)(4), submit the following technical information as attachments to the individual permit application:
1. A topographic map, or other appropriate map approved by the Department, of the facility location and contiguous land area showing the known use of adjacent properties, all known water well locations found within one-half mile of the facility, and a description of well construction details and well uses, if available;
2. A facility site plan showing all known property lines, structures, water wells, injection wells, drywells and their uses, topography, and the location of points of discharge. The facility site plan shall include all known borings. If the Department determines that borings are numerous, the applicant shall satisfy this requirement with a narrative description of the number and location of the borings;
3. The facility design documents indicating proposed or as-built design details and proposed or as-built configuration of basins, ponds, waste storage areas, drainage diversion features, or other engineered elements of the facility affecting discharge. When formal as-built plan submittals are not available, the applicant shall provide documentation sufficient to allow evaluation of those elements of the facility affecting discharge, following the demonstration requirements of A.R.S. § 49-243(B). An applicant seeking an Aquifer Protection Permit for a sewage treatment facility satisfies the requirements of this subsection by submitting the documents required in R18-9-B202 and R18-9-B203;
4. A summary of the known past facility discharge activities and the proposed facility discharge activities indicating all of the following:

a. The chemical, biological, and physical characteristics of the discharge;
b. The rate, volume, and frequency of the discharge for each facility; and
c. The location of the discharge and a map outlining the pollutant management area described in A.R.S. § 49-244(1);

5. A description of the BADCT employed in the facility, including:
   a. A statement of the technology, processes, operating methods, or other alternatives proposed to meet the requirements of A.R.S. § 49-243(B), (G), or (P), as applicable. The statement shall describe:
      i. The alternative discharge control measures considered,
      ii. The technical and economic advantages and disadvantages of each alternative, and
      iii. The justification for selection or rejection of each alternative;
   b. An evaluation of each alternative discharge control technology relative to the amount of discharge reduction achievable, site-specific hydrologic and geologic characteristics, other environmental impacts, and water conservation or augmentation;
   c. For a new facility, an industry-wide evaluation of the economic impact of implementation of each alternative discharge control technology;
   d. For an existing facility, a statement reflecting the consideration of factors listed in A.R.S. § 49-243(B)(1)(a) through (h);
   e. A sewage treatment facility meeting the BADCT requirements under Article 2, Part B of this Chapter satisfies the requirements under subsections (A)(5)(a) through (d).
6. Proposed points of compliance for the facility based on A.R.S. § 49-244. An applicant shall demonstrate that:
   a. The facility will not cause or contribute to a violation of an Aquifer Water Quality Standard at the proposed point of compliance; or
   b. If an Aquifer Water Quality Standard for a pollutant is exceeded in an aquifer at the time of permit issuance, no additional degradation of the aquifer relative to that pollutant and determined at the proposed point of compliance will occur as a result of the discharge from the proposed facility. In this case, the applicant shall submit an Ambient Groundwater Monitoring Report that includes:
      i. Data from eight or more rounds of ambient groundwater samples collected to represent groundwater quality at the proposed points of compliance, and
      ii. An AQL proposal for each pollutant that exceeds an Aquifer Water Quality Standard;
7. A contingency plan that meets the requirements of R18-9-A204;
8. A hydrogeologic study that defines the discharge impact area for the expected duration of the facility. The Department may allow the applicant to submit an abbreviated hydrogeologic study or, if warranted, no hydrogeologic study, based upon the quantity and characteristics of the pollutants discharged, the methods of disposal, and the site conditions. The applicant may include information from a previous study of the affected area to meet a requirement of the hydrogeologic study, if the previous study accurately represents current hydrogeologic conditions.
   a. The hydrogeologic study shall demonstrate:
      i. That the facility will not cause or contribute to a violation of an Aquifer Water Quality Standard at the applicable point of compliance; or
      ii. If an Aquifer Water Quality Standard for a pollutant is exceeded in an aquifer at the time of permit issuance, that no additional degradation of the aquifer relative to that pollutant and determined at the applicable point of compliance will occur as a result of the discharge from the proposed facility;
   b. Based on the quantity and characteristics of pollutants discharged, methods of disposal, and site conditions, the Department may require the applicant to provide:
      i. A description of the surface and subsurface geology, including a description of all borings;
      ii. The location of any perennial, intermittent, or ephemeral surface water bodies;
      iii. The characteristics of the aquifer and geologic units with limited permeability, including depth, hydraulic conductivity, and transmissivity;
      iv. The rate, volume, and direction of surface water and groundwater flow, including hydrographs, if available, and equipotential maps;
      v. The precise location or estimate of the location of the 100-year flood plain and an assessment of the 100-year flood surface flow and potential impacts on the facility;
      vi. Documentation of the existing quality of the water in the aquifers underlying the site, including, where available, the method of analysis, quality assurance, and quality control procedures associated with the documentation;
      vii. Documentation of the extent and degree of any known soil contamination at the site;
      viii. An assessment of the potential of the discharge to cause the leaching of pollutants from surface soils or vadose materials;
      ix. For an underground water storage facility, an assessment of the potential of the discharge to cause the leaching of pollutants from surface soils or vadose materials or cause the migration of contaminated groundwater;
      x. Any changes in the water quality expected because of the discharge;
      xi. A description of any expected changes in the elevation or flow directions of the groundwater expected to be caused by the facility;
      xii. A map of the facility's discharge impact area; or
      xiii. The criteria and methodologies used to determine the discharge impact area.
9. A detailed proposal indicating the alert levels, discharge limitations, monitoring requirements, compliance schedules, and temporary cessation or plans that the applicant will use to satisfy the requirements of A.R.S. Title 49, Chapter 2, Article 3, and Articles 1 and 2 of this Chapter;
10. Closure and post-closure strategies or plans; and
11. Any other relevant information required by the Department to determine whether to issue a permit.

B. An applicant shall demonstrate the ability to maintain the technical capability necessary to carry out the terms of the individual permit, including a demonstration that a certified operator will operate the facility if a certified operator is required under 18 A.A.C. 5. The applicant shall make the demonstration by submitting the following information for each person principally responsible for designing, constructing, or operating the facility:
1. Pertinent licenses or certifications held by the person;
2. Professional training relevant to the design, construction, or operation of the facility; and
3. Work experience relevant to the design, construction, or operation of the facility.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A203. Financial Requirements

A. Definitions.
1. "Book net worth" means the net difference between total assets and total liabilities.
2. "Face amount" means the total amount the insurer is obligated to pay under the policy.
3. "Net working capital" means current assets minus current liabilities.
4. "Substantial business relationship" means a pattern of recent or ongoing business transactions to the extent that a guaranty contract issued incident to that relationship is valid and enforceable.
5. "Tangible net worth" means an owner or operator's book net worth, plus subordinated debts, less goodwill, patent rights, royalties, and assets and receivables due from affiliates or shareholders.

B. Financial demonstration. A person applying for an individual permit shall demonstrate financial capability to construct, operate, close, and ensure proper post-closure care of the facility in compliance with A.R.S. Title 49, Chapter 2, Article 3; Articles 1 and 2 of this Chapter; and the conditions of the individual permit. The applicant shall:
1. Submit a letter signed by the chief financial officer stating that the applicant is financially capable of meeting the costs described in R18-9-A201(B)(5);
2. For a state or federal agency, county, city, town, or other local governmental entity, submit a statement specifying the details of the financial arrangements used to meet the estimated closure and post-closure costs submitted under R18-9-A201(B)(5), including any other details that demonstrate how the applicant is financially capable of meeting the costs described in R18-9-A201(B)(5);
3. For other than a state or federal agency, county, city, town, or other local governmental entity, submit the information required for at least one of the financial assurance mechanisms listed in subsection (C) that covers the closure and post-closure costs submitted under R18-9-A201(B)(5), including:
   a. The selected financial mechanism or mechanisms;
   b. The amount covered by each financial mechanism;
   c. The institution or company that is responsible for each financial mechanism used in the demonstration; and
   d. Any other details that demonstrate how the applicant is financially capable of meeting the costs described in R18-9-A201(B)(5); and
4. For a facility subject to R18-9-A201(B)(5)(b)(iii) and not owned by a state or federal agency, county, city, town, or other local governmental entity, submit evidence of financial arrangements to cover the operation and maintenance costs described in R18-9-A201(B)(5).

C. Financial assurance mechanisms. The applicant may use any of the following mechanisms to cover the financial assurance obligation under R18-9-A201(B)(5):
1. Financial test for self-assurance. If an applicant uses a financial test for self-assurance, the applicant shall not consolidate the financial statement with a parent or sibling company. The applicant shall make the demonstration in either subsection (C)(1)(a) or (b) and submit the information required in subsection (C)(1)(c):
   a. The applicant may demonstrate:
      i. One of the following:
         (1) A ratio of total liabilities to net worth less than 2.0 and a ratio of current assets to current liabilities greater than 1.5;
         (2) A ratio of total liabilities to net worth less than 2.0 and a ratio of the sum of net annual income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; or
         (3) A ratio of the sum of net annual income plus depreciation, depletion, and amortization to total liabilities greater than 0.1 and a ratio of current assets to current liabilities greater than 1.5;
      ii. The net working capital and tangible net worth of the applicant each are at least six times the closure cost estimate; and
      iii. The applicant has assets in the U.S. of at least 90 percent of total assets or six times the closure and post-closure cost estimate; or
   b. The applicant may demonstrate:
      i. The applicant's senior unsecured debt has a current investment-grade rating as issued by Moody's Investor Service, Inc.; Standard and Poor's Corporation; or Fitch Ratings;
      ii. The tangible net worth of the applicant is at least six times the closure cost estimate; and
      iii. The applicant has assets in the U.S. of at least 90 percent of total assets or six times the closure and post-closure cost estimate; and
   c. The applicant shall submit:
      i. A letter signed by the applicant's chief financial officer that identifies the criterion specified in subsection (C)(1)(a) or (b) and used by the applicant to satisfy the financial assurance requirements of this Section, an explanation of how the applicant meets the criterion, and certification of the letter's accuracy, and
      ii. A statement from an independent certified public accountant verifying that the demonstration submitted under subsection (C)(1)(c)(i) is accurate based on a review of the applicant's financial statements for the latest completed fiscal year or more recent financial data and no adjustment to the financial statement is necessary.

2. Performance surety bond. The applicant may use a performance surety bond if the following conditions are met:
   a. The company providing the performance bond is listed as an acceptable surety on federal bonds in Circular 570 of the U.S. Department of the Treasury;
   b. The bond provides for performance of all the covered items listed in R18-9-A201(B)(5) by the surety, or by payment into a standby trust fund of an amount equal to the penal amount if the permittee fails to perform the required activities;
   c. The penal amount of the bond is at least equal to the amount of the cost estimate developed in R18-9-A201(B)(5) if the bond is the only method used to satisfy the requirements of this Section or a pro-rata amount if used with another financial assurance mechanism;
   d. The surety bond names the Arizona Department of Environmental Quality as beneficiary;
   e. The original surety bond is submitted to the Director;
   f. Under the terms of the bond, the surety is liable on the bond obligation when the permittee fails to perform as guaranteed by the bond; and
   g. The surety payments under the terms of the bond are deposited directly into the Standby Trust Fund.
3. Certificate of deposit. The applicant may use a certificate of deposit if the following conditions are met:
   a. The applicant submits to the Director one or more certificates of deposit made payable to or assigned to the Department to cover the applicant's financial assurance obligation or a pro-rata amount if used with another financial assurance mechanism;
   b. The certificate of deposit is insured by the Federal Deposit Insurance Corporation and is automatically renewable;
   c. The bank assigns the certificate of deposit to the Arizona Department of Environmental Quality;
   d. Only the Department has access to the certificate of deposit; and
   e. Interest accrues to the permittee during the period the applicant gives the certificate as financial assurance, unless the interest is required to satisfy the requirements in R18-9-A201(B)(5).
4. Trust fund. The applicant may use a trust fund if the following conditions are met:
   a. The trust fund names the Arizona Department of Environmental Quality as beneficiary, and
   b. The trust is initially funded in an amount at least equal to:
      i. The cost estimate of the closure plan or strategy submitted under R18-9-A201(B)(5),
      ii. The amount specified in a compliance schedule approved in the permit, or
      iii. A pro-rata amount if used with another financial assurance mechanism.
5. Letter of credit. The applicant may use a letter of credit if the following conditions are met:
   a. The financial institution issuing the letter is regulated and examined by a federal or state agency;
   b. The letter of credit is irrevocable and issued for at least one year in an amount equal to the cost estimate submitted under R18-9-A201(B)(5) or a pro-rata amount if used with another financial assurance mechanism. The letter of credit provides that the expiration date is automatically extended for a period of at least one year unless the issuing institution has canceled the letter of credit by sending notice of cancellation by certified mail to the permittee and to the Director 90 days in advance of cancellation or expiration. The permittee shall provide alternate financial assurance within 60 days of receiving the notice of expiration or cancellation;
   c. The financial institution names the Arizona Department of Environmental Quality as beneficiary for the letter of credit; and
   d. The letter is prepared by the financial institution and identifies the letter of credit issue date, expiration date, dollar sum of the credit, the name and address of the Department as the beneficiary, and the name and address of the applicant as the permittee.
6. Insurance policy. The applicant may use an insurance policy if the following conditions are met:
   a. The insurance is effective before signature of the permit or substitution of insurance for other extant financial assurance instruments posted with the Director;
   b. The insurer is authorized to transact the business of insurance in the state and has an AM BEST Rating of at least a B+ or the equivalent;
   c. The permittee submits a copy of the insurance policy to the Department;
   d. The insurance policy guarantees that funds are available to pay costs as submitted under R18-9-A201(B)(5) without a deductible. The policy also guarantees that once cleanup steps begin that the insurer will pay out funds to the Director or other entity designated by the Director up to an amount equal to the face amount of the policy;
   e. The policy guarantees that while closure and post-closure activities are conducted the insurer will pay out funds to the Director or other entity designated by the Director up to an amount equal to the face amount of the policy;
   f. The insurance policy is issued for a face amount at least equal to the current cost estimate submitted to the Director for performance of all items listed in R18-9-A201(B)(5) or a pro-rata amount if used with another financial assurance mechanism. Actual payments by the insurer will not change the face amount, although the insurer's future liability is reduced by the amount of the payments, during the policy period;
   g. The insurance policy names the Arizona Department of Environmental Quality as additional insured;
   h. The policy contains a provision allowing assignment of the policy to a successor permittee. The transfer of the policy is conditional upon consent of the insurer and the Department; and
   i. The insurance policy provides that the insurer does not cancel, terminate, or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy, at a minimum, provides the insured with a renewal option at the face amount of the expiring policy. If the permittee fails to pay the premium, the insurer may cancel the policy by sending notice of cancellation by certified mail to the permittee and to the Director 90 days in advance of the cancellation. If the insurer cancels the policy, the

permittee shall provide alternate financial assurance within 60 days of receiving the notice of cancellation.

7. Cash deposit. The applicant may use a cash deposit if the cash is deposited with the Department to cover the financial assurance obligation under R18-9-A201(B)(5).
8. Guarantees.
   a. The applicant may use guarantees to cover the financial assurance obligation under R18-9-A201(B)(5) if the following conditions are met:
      i. The applicant submits to the Department an affidavit certifying that the guarantee arrangement is valid under all applicable federal and state laws. If the applicant is a corporation, the applicant shall include a certified copy of the corporate resolution authorizing the corporation to enter into an agreement to guarantee the permittee's financial assurance obligation;
      ii. The applicant submits to the Department documentation that explains the substantial business relationship between the guarantor and the permittee;
      iii. The applicant demonstrates that the guarantor meets conditions of the financial mechanism listed in subsection (C)(1). For purposes of applying the criteria in subsection (C)(1) to a guarantor, substitute "guarantor" for the term "applicant" as used in subsection (C)(1);
      iv. The guarantee is governed by and complies with state law;
      v. The guarantee continues in full force until released by the Director or replaced by another financial assurance mechanism listed under subsection (C);
      vi. The guarantee provides that, if the permittee fails to perform closure or post-closure care of a facility covered by the guarantee, the guarantor shall perform or pay a third party to perform closure or post-closure care, as required by the permit, or establish a fully funded trust fund as specified under subsection (C)(4) in the name of the owner or operator; and
      vii. The guarantor names the Arizona Department of Environmental Quality as beneficiary of the guarantee.
   b. Guarantee reporting. The guarantor shall notify or submit a report to the Department within 30 days of:
      i. An increase in financial responsibility during the fiscal year that affects the guarantor's ability to meet the financial demonstration;
      ii. Receiving an adverse auditor's notice, opinion, or qualification; or
      iii. Receiving a Department notification requesting an update of the guarantor's financial condition.
9. An applicant may use a financial assurance mechanism not listed in subsection (C)(1) through (8) if approved by the Director.

D. Loss of coverage. If the Director believes that a permittee will lose financial capability under subsection (C), the permittee shall, within 30 days from the date of receipt of the Director's request, submit evidence that the financial demonstration under subsection (B) is being met or provide an alternative financial assurance mechanism.

E. Financial assurance mechanism substitution. A permittee may substitute one financial assurance mechanism for another if the substitution is approved by the Director through an amendment under subsection (F).

F. Permit amendment. The permittee shall apply for an amendment to the individual permit if the permittee changes a financial assurance mechanism or if the permittee's revision of the closure strategy results in an increase in the estimated cost under R18-9-A201(B)(5). If a permittee seeks to amend a permit under R18-9-A211(B), the permittee shall submit a financial capability demonstration for all facilities covered by the amended individual permit with the permit amendment request.

G. Previous financial demonstration. If an applicant shows that the financial assurance demonstration required under this Section is covered within a financial demonstration already made to a governmental agency and the Department has access to that information, the applicant is not required to resubmit the information. The applicant shall certify that the current financial condition is equal to or better than the condition reflected in the financial demonstration provided to the other governmental agency. This provision does not apply to a demonstration required under subsection (F).

H. Recordkeeping. A permittee shall maintain the financial capability for the duration of the permit and report as specified in the permit.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A204. Contingency Plan

A. An individual permit shall specify a contingency plan that defines the actions to be taken if a discharge results in any of the following:
1. A violation of an Aquifer Water Quality Standard or an AQL,
2. A violation of a discharge limitation,
3. A violation of any other permit condition,
4. An alert level is exceeded, or
5. An imminent and substantial endangerment to the public health or the environment.

B. The contingency plan may include one or more of the following actions if a discharge results in any of the conditions described in subsection (A):
1. Verification sampling;
2. Notification to downstream or downgradient users who may be directly affected by the discharge;
3. Further monitoring that may include increased frequency, additional constituents, or additional monitoring locations;
4. Inspection, testing, operation, or maintenance of discharge control features at the facility;
5. Evaluation of the effectiveness of discharge control technology at the facility that may include technology upgrades;
6. Evaluation of pretreatment for sewage treatment facilities;
7. Preparation of a hydrogeologic study to assess the extent of soil, surface water, or aquifer impact;
8. Corrective action that includes any of the following measures:
   a. Control of the source of an unauthorized discharge,

b. Soil cleanup,
c. Cleanup of affected surface waters,
d. Cleanup of affected parts of the aquifer, or
e. Mitigation measures to limit the impact of pollutants on existing uses of the aquifer.

C. A permittee shall not take a corrective action proposed under subsection (B)(8) unless the action is approved by the Department.
1. Emergency response provisions and corrective actions specifically identified in the contingency plan submitted with a permit application are subject to approval by the Department during the application review process.
2. The permittee may propose to the Department a corrective action other than those already identified in the contingency plan if a discharge results in any of the conditions identified in subsection (A).
3. The Department shall approve the proposed corrective action if the corrective action provides a plan and expedient time-frame to return the facility to compliance with the facility's permit conditions, A.R.S. Title 49, Chapter 2, and Articles 1 and 2 of this Chapter.
4. The Director may incorporate corrective actions into an Aquifer Protection Permit.

D. A contingency plan shall contain emergency response provisions to address an imminent and substantial endangerment to public health or the environment including:
1. Twenty-four hour emergency response measures;
2. The name of an emergency response coordinator responsible for implementing the contingency plan;
3. Immediate notification to the Department regarding any emergency response measure taken;
4. A list of people to contact, including names, addresses, and telephone numbers if an imminent and substantial endangerment to public health or the environment arises; and
5. A general description of the procedures, personnel, and equipment proposed to mitigate unauthorized discharges.

E. A permittee may amend a contingency plan required by the Federal Water Pollution Control Act (P.L. 92-500; 86 Stat. 816; 33 U.S.C. 1251, et seq., as amended), or the Resource Conservation and Recovery Act of 1976 (P.L. 94-580; 90 Stat. 2796; 42 U.S.C. 6901 et seq., as amended), to meet the requirements of this Section and submit it to the Department for approval instead of a separate aquifer protection contingency plan.

F. A permittee shall maintain at least one copy of the contingency plan required by the individual permit at the location where day-to-day decisions regarding the operation of the facility are made. A permittee shall advise all employees responsible for the operation of the facility of the location of the contingency plan.

G. A permittee shall promptly revise the contingency plan upon any change to the information contained in the plan.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A205. Alert Levels, Discharge Limitations, and AQLs

A. Alert levels.
1. If the Department prescribes an alert level in an individual permit, the Department shall base the alert level on the site-specific conditions described by the applicant in the application submitted under R18-9-A201(A)(2) or other information available to the Department.
2. The Department may specify an alert level based on a pollutant that indicates the potential appearance of another pollutant.
3. The Department may specify the measurement of an alert level at a location appropriate for the discharge activity, considering the physical, chemical, and biological characteristics of the discharge, the particular treatment process, and the site-specific conditions.

B. Discharge limitations. If the Department prescribes discharge limitations in an individual permit, the Department shall base the discharge limitations on the considerations described in A.R.S. § 49-243.

C. AQLs. The Department may prescribe an AQL in an individual permit to ensure that the facility continues to meet the criteria under A.R.S. § 49-243(B)(2) or (3).
1. If the concentration of a pollutant in the aquifer does not exceed the Aquifer Water Quality Standard, the Department shall set the AQL at the Aquifer Water Quality Standard.
2. If the concentration of a pollutant in the aquifer exceeds the Aquifer Water Quality Standard, the Department shall set the AQL higher than the Aquifer Water Quality Standard.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A206. Monitoring Requirements

A. Monitoring.
1. The Department shall determine whether monitoring is required to assure compliance with Aquifer Protection Permit conditions and with the applicable Aquifer Water Quality Standards established under A.R.S. §§ 49-221, 49-223, 49-241 through 49-244, and 49-250 through 49-252.
2. If monitoring is required, the Director shall specify to the permittee:
   a. The type and method of monitoring;
   b. The frequency of monitoring;
   c. Any requirements for the installation, use, or maintenance of monitoring equipment; and
   d. The intervals at which the permittee reports the monitoring results to the Department.

B. Recordkeeping.
1. A permittee shall make a monitoring record for each sample taken as required by the individual permit consisting of all of the following:
   a. The date, time, and exact place of a sampling and the name of each individual who performed the sampling;
   b. The procedures used to collect the sample;
   c. The date sample analysis was completed;
   d. The name of each individual or laboratory performing the analysis;
   e. The analytical techniques or methods used to perform the sampling and analysis;
   f. The chain of custody records; and
   g. Any field notes relating to the information described in subsections (B)(1)(a) through (f).

2. A permittee shall make a monitoring record for each measurement made, as required by the individual permit, consisting of all of the following:
   a. The date, time, and exact place of the measurement and the name of each individual who performed the measurement;
   b. The procedures used to make the measurement; and
   c. Any field notes relating to the information described in subsections (B)(2)(a) and (b).
3. A permittee shall maintain monitoring records for at least 10 years after the date of the sample or measurement, unless the Department specifies a shorter time period in the permit.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A207. Reporting Requirements

A. A permittee shall notify the Department within five days after becoming aware of a violation of a permit condition or that an alert level was exceeded. The permittee shall inform the Department whether the contingency plan described in R18-9-A204 was implemented.

B. In addition to the requirements in subsection (A), a permittee shall submit a written report to the Department within 30 days after the permittee becomes aware of a violation of a permit condition. The report shall contain:
1. A description of the violation and its cause;
2. The period of violation, including exact date and time, if known, and the anticipated time period the violation is expected to continue;
3. Any action taken or planned to mitigate the effects of the violation or to eliminate or prevent recurrence of the violation;
4. Any monitoring activity or other information that indicates that a pollutant is expected to cause a violation of an Aquifer Water Quality Standard; and
5. Any malfunction or failure of a pollution control device or other equipment or process.

C. A permittee shall notify the Department within five days after the occurrence of any of the following:
1. The permittee's filing of bankruptcy, or
2. The entry of any order or judgment not issued by the Director against the permittee for the enforcement of any federal or state environmental protection statute or rule.

D. The Director shall specify the format for submitting results from monitoring conducted under R18-9-A206.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A208. Compliance Schedule

A. A permittee shall follow the compliance schedule established in the individual permit.
1. If a compliance schedule provides that an action is required more than one year after the date of permit issuance, the schedule shall establish interim requirements and dates for their achievement.
2. If the time necessary for completion of an interim requirement is more than one year and is not readily divisible into stages for completion, the permit shall contain interim dates for submission of reports on progress toward completion of the interim requirements and shall indicate a projected completion date.
3. Unless otherwise specified in the permit, within 30 days after the applicable date specified in a compliance schedule, a permittee shall submit to the Department a report documenting that the required action was taken within the time specified.
4. After reviewing the compliance schedule activity the Director may amend the Aquifer Protection Permit, based on changed circumstances relating to the required action.

B. The Department shall consider all of the following factors when setting the compliance schedule requirements:
1. The character and impact of the discharge,
2. The nature of construction or activity required by the permit,
3. The number of persons affected or potentially affected by the discharge,
4. The current state of treatment technology, and
5. The age of the facility.

C. For a new facility, the Department shall not defer to a compliance schedule any requirement necessary to satisfy the criteria under A.R.S. § 49-243(B).

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A209. Temporary Cessation, Closure, Post-closure

A. Temporary cessation.
1. A permittee shall notify the Department before a cessation of operations at the facility of at least 60 days duration.
2. The permittee shall implement any condition specified in the individual permit for the temporary cessation.
3. If the permit does not specify any temporary cessation condition, the permittee shall, prior to implementation, submit the proposed temporary cessation plan for Department approval.

B. Closure.
1. Before providing notice under subsection (B)(2), a person may request that the Director review a site investigation plan for a facility under subsection (B)(3)(a) or the results of a site investigation at a facility to determine compliance with this subsection and A.R.S. § 49-252.
2. A person shall notify the Department of the person's intent to cease operations without resuming an activity for which the facility was designed or operated.
3. The person shall submit a closure plan for Director approval within 90 days following the notification of intent to cease operations with the applicable fee established in 18 A.A.C. 14. A complete closure plan shall include:
   a. A site investigation plan that includes a summary of relevant site studies already conducted and a proposed scope of work for any additional site investigation necessary to identify:
      i. The lateral and vertical extent of contamination in soils and groundwater, using applicable standards;
      ii. The approximate quantity and chemical, biological, and physical characteristics of each

waste, contaminated water, or contaminated soil proposed for removal from the facility;

iii. The approximate quantity and chemical, biological, and physical characteristics of each waste, contaminated water, or contaminated soil that will remain at the facility; and

iv. Information regarding site conditions related to pollutant fate and transport that may influence the scope of sampling necessary to characterize the site for closure;

b. A summary describing the results of a site investigation and any other information used to identify:

i. The lateral and vertical extent of soil and groundwater contamination, using applicable standards, and the analytical results that support the determination;

ii. The approximate quantity and chemical, biological, and physical characteristics of each material scheduled for removal;

iii. The destination of the materials and documentation that the destination is approved to accept the materials;

iv. The approximate quantity and chemical, biological, and physical characteristics of each material that remains at the facility; and

v. Any other relevant information the Department determines is necessary;

c. A closure design that identifies:

i. The method used, if any, to treat any material remaining at the facility;

ii. The method used to control the discharge of pollutants from the facility;

iii. Any limitation on future land or water uses created as a result of the facility's operations or closure activities and a Declaration of Environmental Use Restriction according to A.R.S. § 49-152, if necessary; and

iv. The methods used to secure the facility;

d. An estimate of the cost of closure;

e. A schedule for implementation of the closure plan and submission of a post-closure plan if clean closure is not achieved; and

f. For an implemented closure plan, a summary report of the results of site investigation performed during closure activities, including confirmation and verification sampling.

4. Within 60 days of receipt of a complete closure plan, the Department shall determine whether the closure plan achieves clean closure.

a. If the implemented complete closure plan achieves clean closure, the Director shall:

i. If the facility is not covered by an Aquifer Protection Permit, send the person a letter of approval; or

ii. If the facility is covered by an Aquifer Protection Permit, send the person a Permit Release Notice issued under subsection (C)(2)(c).

b. If the implemented complete closure plan did not achieve clean closure, the person shall submit a post-closure plan under subsection (C) and the following documents within 90 days from the date on the Department's notice or as specified under A.R.S. § 49-252(E):

i. An application for an individual permit, or

ii. A request to amend a current individual permit to address closure activities and post-closure monitoring and maintenance at the facility.

C. Post-closure. A person shall describe post-closure monitoring and maintenance activities in an application for a permit or an amendment to an individual permit and submit it to the Department for approval.

1. The application shall include:

a. The duration of post-closure care;

b. The monitoring procedures proposed by the permittee, including monitoring frequency, type, and location;

c. A description of the operating and maintenance procedures proposed for maintaining aquifer quality protection devices, such as liners, treatment systems, pump-back systems, surface water and stormwater management systems, and monitoring wells;

d. A schedule and description of physical inspections proposed at the facility following closure;

e. An estimate of the cost of post-closure maintenance and monitoring;

f. A description of limitations on future land or water uses, or both, at the facility site as a result of facility operations; and

g. The applicable fee established in 18 A.A.C. 14.

2. The Director shall include the post-closure plan submitted under subsection (C)(1) in the individual permit or permit amendment.

a. The permittee shall provide the Department written notice that a closure plan or a post-closure plan was fully implemented within 30 calendar days of implementation of the plan. The notice shall include a summary report confirming the closure design and describing the results of sampling performed during closure activities and post-closure activities, if any, to demonstrate the level of cleanup achieved.

b. The Director may, upon receipt of the notice, inspect the facility to ensure that the closure plan has been fully implemented.

c. The Director shall issue a Permit Release Notice if the permittee satisfies all closure and post-closure requirements.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A210. Temporary Individual Permit

A. A person may apply for a temporary individual permit for either of the following:

1. A pilot project to develop data for an Aquifer Protection Permit application for the full-scale project, or

2. A facility with a discharge lasting no more than six months.

B. The applicant shall submit a preliminary application containing the information required in R18-9-A201(B)(1).

C. The Department shall, based on the preliminary application and in consultation with the applicant, determine and provide the applicant notice of any additional information in R18-9-A201(B) that is necessary to complete the application.

D. Public participation.

1. If the Director issues a temporary individual permit, the Director shall postpone the public participation requirements under R18-9-109.
2. The Director shall not postpone notification of the opportunity for public participation for more than 30 days from the date on the temporary individual permit.
3. The Director may amend or revoke the temporary individual permit after consideration of public comments.
4. The Director shall not issue a public notice or hold a public hearing if a temporary individual permit is renewed without change.
5. The Director shall follow the public participation requirements under R18-9-109 when making a significant amendment to a temporary individual permit.

E. A temporary individual permit expires after one year unless it is renewed. The Director may renew a temporary individual permit no more than one time.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A211. Permit Amendments

A. The Director may amend an individual permit based upon a request or upon the Director's initiative.
1. A permittee shall submit a request for permit amendment in writing on a form provided by the Department with the applicable fee established in 18 A.A.C. 14, explaining the facts and reasons justifying the request.
2. The Department shall process amendment requests following the licensing time-frames established under 18 A.A.C. 1, Article 5, Table 10.
3. An amended permit supersedes the previous permit upon the effective date of the amendment.

B. Significant permit amendment. The Director shall make a significant amendment to an individual permit if:
1. Part or all of an existing facility becomes a new facility under A.R.S. § 49-201;
2. A physical change in a permitted facility or a change in its method of operation results in:
   a. An increase of 10 percent or more in the permitted volume of pollutants discharged, except a sewage treatment facility;
   b. An increase in design flow of a sewage treatment facility as follows:

Permitted Design Flow	Increase in Design Flow
500,000 gallons per day or less	10%
Greater than 500,000 gallons per day but less than or equal to five million gallons per day	6%
Greater than five million gallons per day but less than or equal to 50 million gallons per day	4%
Greater than 50 million gallons per day	2%

   c. Discharge of an additional pollutant not allowed by a facility's original individual permit. The Director may consider the addition of a pollutant with a chemical composition substantially similar to a pollutant the permit currently allows by making an "other" amendment to the individual permit as prescribed in subsection (D);
   d. For any pollutant not addressed in a facility's individual permit, any increase that brings the level of the pollutant to within 80 percent or more of a numeric Aquifer Water Quality Standard at the point of compliance; or
   e. An increase in the concentration in the discharge of a pollutant listed under A.R.S. § 49-243(I);
3. Based upon available information, the facility can no longer demonstrate that its discharge will comply with A.R.S. § 49-243(B)(2) or (3);
4. The permittee requests and the Department agrees to less stringent monitoring that reduces the frequency in monitoring or reporting or reduces the number of pollutants monitored, and the permittee demonstrates that the changes will not affect the permittee's ability to remain in compliance with Articles 1 and 2 of this Chapter;
5. It is necessary to change the designation of a point of compliance;
6. It is necessary to update BADCT for a facility that was issued an individual permit and was not constructed within five years of permit issuance;
7. The permittee requests and the Department agrees to less stringent discharge limitations when the permittee demonstrates that the changes will not affect the permittee's ability to remain in compliance with Articles 1 and 2 of this Chapter;
8. It is necessary to make an addition to or a substantial change in closure requirements or to provide for post-closure maintenance and monitoring; or
9. Material and substantial alterations or additions to a permitted facility, including a change in disposal method, justify a change in permit conditions.

C. Minor permit amendment. The Director shall make a minor amendment to an individual permit to:
1. Correct a typographical error;
2. Change nontechnical administrative information, excluding a permit transfer;
3. Correct minor technical errors, such as errors in calculation, locational information, citations of law, and citations of construction specifications;
4. Increase the frequency of monitoring or reporting, or to revise a laboratory method;
5. Make a discharge limitation more stringent;
6. Make a change in a recordkeeping retention requirement; or
7. Insert calculated alert levels, AQLs, or other permit limits into a permit based on monitoring subsequent to permit issuance, if a requirement to establish the levels or limits and the method for calculation of the levels or limits was established in the original permit.

D. "Other" permit amendment.
1. The Director may make an "other" amendment to an individual permit if the amendment is not a significant or minor permit amendment prescribed in this Section, based on an evaluation of the information relevant to the amendment.
2. Examples of an "other" amendment to an individual permit include:
   a. A change in a construction requirement, treatment method, or operational practice, if the alteration complies with the requirements of Articles 1 and 2

of this Chapter and provides equal or better performance;

b. A change in an interim or final compliance date in a compliance schedule, if the Director determines just cause exists for changing the date;

c. A change in the permittee's financial assurance mechanism under R18-9-A203(C);

d. A permit transfer under R18-9-A212;

e. The replacement of monitoring equipment, including a well, if the replacement results in equal or greater monitoring effectiveness;

f. Any increase in the volume of pollutants discharged that is less than that described in subsection (B)(2)(a) or (b);

g. An adjustment of the permit to conform to rule or statutory provisions;

h. A calculation of an alert level, AQL, or other permit limit based on monitoring subsequent to permit issuance;

i. An addition of a point of compliance monitor well;

j. A combination of two or more permits at the same site as specified under R18-9-107;

k. An adjustment or incorporation of monitoring requirements to ensure Reclaimed Water Quality Standards developed under 18 A.A.C. 11, Article 3 are met; or

l. A change in a contingency plan resulting in equal or more efficient responsiveness.

E. The public notice and public participation requirements of R18-9-108 and R18-9-109 apply to a significant amendment. The public notice requirements apply to an "other" amendment. A minor amendment does not require a public notice or public participation.

F. The Director shall not amend or reissue a permit to allow use of a discharge control technology that provides a lesser degree of pollutant discharge reduction than the BADCT established in the individual Aquifer Protection Permit previously issued for a facility, unless:

1. The industrial classification of the facility has changed so that a new assessment of BADCT is appropriate,
2. The pollutant load has decreased or the pollutant composition has changed significantly to warrant a new assessment of the BADCT,
3. The Director approves a corrective or contingency action that necessitates a change in the treatment technology, or
4. The approved discharge control technology is not operating properly due to circumstances beyond the control of the owner or operator.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A212. Permit Transfer

A. The person subject to the continuance requirements under R18-9-105(A)(1), (2), or (3) shall notify the Department by certified mail within 15 days following a change of ownership. The notice shall include:

1. The name of the person transferring the facility;
2. The name of the new owner or operator;
3. The name and location of the facility;
4. The written agreement between the person transferring the facility and the new owner or operator indicating a specific date for transfer of all permit responsibility, coverage, and liability;
5. A signed declaration by the new owner or operator that the new owner or operator has reviewed the permit and agrees to the terms of the permit, including fee obligations under A.R.S. § 49-242; and
6. The applicable fee established in 18 A.A.C. 14.

B. A permittee may request that the Department transfer an individual permit to a new owner or operator.

1. The new owner or operator shall:
   a. Notify the Department by certified mail within 15 days after the change of ownership and include a written agreement between the previous and new owner indicating a specific date for transfer of all permit responsibility, coverage, and liability;
   b. Submit the applicable fee established in 18 A.A.C. 14;
   c. Demonstrate the technical and financial capability necessary to fully carry out the terms of the permit according to R18-9-A202 and R18-9-A203;
   d. Submit a signed statement that the new owner or operator has reviewed the permit and agrees to the terms of the permit; and
   e. Provide the Department with a copy of the Certificate of Disclosure if required by A.R.S. § 49-109.
2. If the Director amends the individual permit for the transfer, the new permittee is responsible for all conditions of the permit.

C. A permittee shall comply with all permit conditions until the Director transfers the permit, regardless of whether the permittee has sold or disposed of the facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A213. Permit Suspension, Revocation, Denial, or Termination

A. The Director may, after notice and opportunity for hearing, suspend or revoke an individual permit or a continuance under R18-9-105(A)(1), (2), or (3) for any of the following:

1. A permittee failed to comply with any applicable provision of A.R.S. Title 49, Chapter 2, Article 3; Articles 1 and 2 of this Chapter; or any permit condition;
2. A permittee misrepresented or omitted a fact, information, or data related to an Aquifer Protection Permit application or permit condition;
3. The Director determines that a permitted activity is causing or will cause a violation of an Aquifer Water Quality Standard at a point of compliance;
4. A permitted discharge is causing or will cause imminent and substantial endangerment to public health or the environment;
5. A permittee failed to maintain the financial capability under R18-9-A203(B); or
6. A permittee failed to construct a facility within five years of permit issuance and:
   a. It is necessary to update BADCT for the facility, and
   b. The Department has not issued an amended permit under R18-9-A211(B)(6).

B. The Director may deny an individual permit if the Director determines upon completion of the application process that the applicant has:

1. Failed or refused to correct a deficiency in the permit application;
2. Failed to demonstrate that the facility and the operation will comply with the requirements of A.R.S. §§ 49-241 through 49-252 and Articles 1 and 2 of this Chapter. The Director shall base this determination on:
   a. The information submitted in the Aquifer Protection Permit application,
   b. Any information submitted to the Department following a public hearing, or
   c. Any relevant information that is developed or acquired by the Department; or
3. Provided false or misleading information.

C. The Director shall terminate an individual permit if each facility covered under the individual permit:
1. Has closed and the Director issued a Permit Release Notice under R18-9-A209(C)(2)(c) or R18-9-A209(B)(3)(a)(ii) for the closed facility, or
2. Is covered under another Aquifer Protection Permit.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A214. Requested Coverage Under a General Permit

A. If a person who applied for or was issued an individual permit qualifies to operate a facility under a general permit established in Article 3 of this Chapter, the person may request that the individual permit be terminated and replaced by the general permit. The person shall submit the Notice of Intent to Discharge under R18-9-A301(B) with the appropriate fee established in 18 A.A.C. 14.

B. The individual permit is valid and enforceable with respect to a discharge from each facility until the Director determines that the discharge from each facility is covered under a general permit.

C. The owner or operator operating under a general permit shall comply with all applicable general permit requirements in Article 3 of this Chapter.

Historical Note
New Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

PART B. BADCT FOR SEWAGE TREATMENT FACILITIES

R18-9-B201. General Considerations and Prohibitions

A. Applicability. The requirements in this Article apply to all sewage treatment facilities, including expansions of existing sewage treatment facilities, that treat wastewater containing sewage, unless the discharge is authorized by a general permit under Article 3 of this Chapter.

B. The Director may specify alert levels, discharge limitations, design specifications, and operation and maintenance requirements in the permit that are based upon information provided by the applicant and that meet the requirements under A.R.S. § 49-243(B)(1).

C. The permittee shall ensure that a sewage treatment facility is operated by a person certified under 18 A.A.C. 5, Article 1, for the grade of the facility.

D. Operation and maintenance.
1. The owner or operator shall maintain, at the sewage treatment facility, an operation and maintenance manual for the facility and shall update the manual as needed.
2. The owner or operator shall use the operation and maintenance manual to guide facility operations to ensure compliance with the terms of the Aquifer Protection Permit and to prevent any environmental nuisance described under A.R.S. § 49-141(A).
3. The Director may specify adherence to any operation or maintenance requirement as an Aquifer Protection Permit condition to ensure that the terms of the Aquifer Protection Permit are met.
4. The owner or operator shall make the operation and maintenance manual available to the Department upon request.

E. A person shall not create or maintain a connection between any part of a sewage treatment facility and a potable water supply so that sewage or wastewater contaminates a potable or public water supply.

F. A person shall not bypass or release sewage or partially treated sewage that has not completed the treatment process from a sewage treatment facility.

G. Reclaimed water dispensed to a direct reuse site from a sewage treatment facility is regulated under Reclaimed Water Quality Standards in 18 A.A.C. 11, Article 3.

H. The preparation, transport, or land application of any biosolids generated by a sewage treatment facility is regulated under 18 A.A.C. 9, Article 10.

I. The owner or operator of a sewage treatment facility that is a new facility or undergoing a major modification shall provide setbacks established in the following table. Setbacks are measured from the treatment and disposal components within the sewage treatment facility to the nearest property line of an adjacent dwelling, workplace, or private property. If an owner or operator cannot meet a setback for a facility undergoing a major modification that incorporates full noise, odor, and aesthetic controls, the owner or operator shall not further encroach into setback distances existing before the major modification except as allowed in subsection (I)(2).

Sewage Treatment Facility Design Flow (gallons per day)	No Noise, Odor, or Aesthetic Controls (feet)	Full Noise, Odor, and Aesthetic Controls (feet)
3000 to less than 24,000	250	25
24,000 to less than 100,000	350	50
100,000 to less than 500,000	500	100
500,000 to less than 1,000,000	750	250
1,000,000 or greater	1000	350

1. Full noise, odor, and aesthetic controls means that:
   a. Noise due to the sewage treatment facility does not exceed 50 decibels at the facility property boundary on the A network of a sound level meter or a level established in a local noise ordinance,
   b. All odor-producing components of the sewage treatment facility are fully enclosed,
   c. Odor scrubbers or other odor-control devices are installed on all vents, and
   d. Fencing aesthetically matched to the area surrounding the facility.
2. The owner or operator of a sewage treatment facility undergoing a major modification may decrease setbacks if:
   a. Allowed by local ordinance; or
   b. Setback waivers are obtained from affected property owners in which the property owner acknowledges awareness of the established setbacks, basic design

of the sewage treatment facility, and the potential for noise and odor.

J. The owner or operator of a sewage treatment facility shall not operate the facility so that it emits an offensive odor on a persistent basis beyond the setback distances specified in subsection (I).

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-B202. Design Report

A. A person applying for an individual permit shall submit a design report signed, dated, and sealed by an Arizona-registered professional engineer. The design report shall include the following information:

1. Wastewater characterization, including quantity, quality, seasonality, and impact of increased flows as the facility reaches design flow;
2. The proposed method of disposal, including solids management;
3. A description of the treatment unit processes and containment structures, including diagrams and calculations that demonstrate that the design meets BADCT requirements and will achieve treatment levels specified in R18-9-B204 through R18-9-B206, as applicable, for all flow conditions indicated in subsection (A)(9). If soil aquifer treatment or other aspects of site conditions are used to meet BADCT requirements, the applicant shall document performance of the site in the design report or the hydrogeologic report;
4. A description of planned normal operation;
5. A description of key maintenance activities and a description of contingency and emergency operation for the facility;
6. A description of construction management controls;
7. A description of the facility startup plan, including preoperational testing, expected treated wastewater characteristics and monitoring requirements during startup, expected time-frame for meeting performance requirements specified in R18-9-B204, and any other special startup condition that may merit consideration in the individual permit;
8. A site diagram depicting compliance with the setback requirements established in R18-9-B201(I) for the facility at design flow, and for each phase if the applicant proposes expansion of the facility in phases;
9. The following flow information in gallons per day for the proposed sewage treatment facility. If the application proposes expansion of the facility in phases, the following flow information for each phase:
   a. The design flow of the sewage treatment facility. The design flow is the average daily flow over a calendar year calculated as the sum of all influent flows to the facility based on Table 1, Unit Design Flows, unless a different basis for determining influent flows is approved by the Department;
   b. The maximum day. The maximum day is the greatest daily total flow that occurs over a 24-hour period within an annual cycle of flow variations;
   c. The maximum month. The maximum month is the average daily flow of the month with the greatest total flow within the annual cycle of flow variations;
   d. The peak hour. The peak hour is the greatest total flow during one hour, expressed in gallons per day, within the annual cycle of flow variations;
   e. The minimum day. The minimum day is the least daily total flow that occurs over a 24-hour period within the annual cycle of flow variations;
   f. The minimum month. The minimum month is the average daily flow of the month with the least total flow within the annual cycle of flow variations; and
   g. The minimum hour. The minimum hour is the least total flow during one hour, expressed in gallons per day, within the annual cycle of flow variations; and
10. Specifications for pipe, standby power source, and water and sewer line separation.

B. The Department may inspect an applicant's facility without notice to ensure that construction conforms to the design report.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-B203. Engineering Plans and Specifications

A. A person applying for an individual permit for a sewage treatment facility with a design flow under one million gallons per day, shall submit engineering plans and specifications to the Department. The Director may waive this requirement if the Director previously approved engineering plans and specifications submitted by the same owner or operator for a sewage treatment facility with a design flow of more than one million gallons per day.

B. A person applying for an individual permit for a sewage treatment facility with a design flow of one million gallons per day or greater shall submit engineering plans and specifications if, upon review of the design report required in R18-9-B202, the Department finds that:

1. The design report fails to provide sufficient detail to determine adequacy of the proposed sewage treatment facility design;
2. The described design is innovative and does not reflect treatment technologies generally accepted within the industry;
3. The Department's calculations of removal efficiencies based on the design report show that the treatment facility cannot achieve treatment performance requirements;
4. The design report does not demonstrate:
   a. Protection from physical damage due to a 100-year flood,
   b. Ability to continuously operate during a 25-year flood, or
   c. Provision for a standby power source;
5. The design report shows inconsistency in sizing or compatibility between two or more unit process components of the sewage treatment facility;
6. The designer of the facility has:
   a. Designed a sewage treatment facility of at least a similar size on less than three previous occasions,
   b. Designed a sewage treatment facility that has been the subject of a Director enforcement action due to the facility design, or
   c. Been found by the Board of Technical Registration to have violated a provision in A.R.S. Title 32, Chapter 1;

7. The permittee seeks to expand its sewage treatment facility and the Department believes that the facility will require upgrades to the design not described and evaluated in the design report to meet the treatment performance requirements; or
8. The construction does not conform to the design report if the sewage treatment facility has already been constructed.

C. The Department shall review engineering plans and specifications upon request by an applicant seeking a permit for a sewage treatment facility, regardless of its flow.

D. The Department may inspect an applicant's facility without notice to ensure that construction generally conforms to engineering plans and specifications, as applicable.

E. Before discharging under a permit, the permittee shall submit an Engineer's Certificate of Completion signed, dated, and sealed by an Arizona-registered professional engineer in a format approved by the Department, that confirms that the facility is constructed according to the Department-approved design report or plans and specifications, as applicable.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-B204. Treatment Performance Requirements for a New Facility

A. Definition. "Week" means a seven-day period starting on Sunday and ending on the following Saturday.

B. An owner or operator of a new sewage treatment facility shall ensure that the facility meets the following performance requirements upon release of the treated wastewater at the outfall:

1. Secondary treatment levels.
   a. Five-day biochemical oxygen demand (BOD_5) less than 30 mg/l (30-day average) and 45 mg/l (seven-day average), or carbonaceous biochemical oxygen demand ($CBOD_5$) less than 25 mg/l (30-day average) or 40 mg/l (seven-day average);
   b. Total suspended solids (TSS) less than 30 mg/l (30-day average) and 45 mg/l (seven-day average);
   c. pH maintained between 6.0 and 9.0 standard units; and
   d. A removal efficiency of 85 percent for BOD_5, $CBOD_5$, and TSS;
2. Secondary treatment by waste stabilization ponds is not considered BADCT unless an applicant demonstrates to the Department that site-specific hydrologic and geologic characteristics and other environmental factors are sufficient to justify secondary treatment by waste stabilization ponds;
3. Total nitrogen in the treated wastewater is less than 10 mg/l (five-month rolling geometric mean). If an applicant demonstrates, using appropriate monitoring that soil aquifer treatment will produce a total nitrogen concentration less than 10 mg/l in wastewater that percolates to groundwater, the Department may approve soil aquifer treatment for removal of total nitrogen as an alternative to meeting the performance requirement of 10 mg/l at the outfall;
4. Pathogen removal.
   a. For a sewage treatment facility with a design flow of less than 250,000 gallons per day at a site where the depth to the seasonally high groundwater table is greater than 20 feet and there is no karstic or fractured bedrock at the surface:
      i. The concentration of fecal coliform organisms in four of the wastewater samples collected during the week is less than 200 cfu/100 ml or the concentration of *E. coli* bacteria in four of the wastewater samples collected during the week is less than 126 cfu/100 ml, based on a sampling frequency of seven daily samples per week;
      ii. The single sample maximum concentration of fecal coliform organisms in a wastewater sample is not greater than 800 cfu/100 ml or the single sample maximum concentration of *E. coli* bacteria in a wastewater sample is not greater than 504 cfu/100 ml; and
      iii. An owner or operator of a facility may request a reduction in the monitoring frequency required in subsection (B)(4)(a)(i) if equipment is installed to continuously monitor an alternative indicator parameter and the owner or operator demonstrates that the continuous monitoring will ensure reliable production of wastewater that meets the numeric concentration levels in subsections (B)(4)(a)(i) and (ii) at the discharge point;
   b. For any other sewage treatment facility:
      i. No fecal coliform organisms or no *E. coli* bacteria are detected in four of the wastewater samples collected during the week, based on a sampling frequency of seven daily samples per week;
      ii. The single sample maximum concentration of fecal coliform organisms in a wastewater sample is not greater than 23 cfu/100 ml or the single sample maximum concentration of *E. coli* is not greater than 15 cfu/100 ml;
      iii. An owner or operator may request a reduction in the monitoring frequency required in subsection (B)(4)(b)(i) if equipment is installed to continuously monitor an alternative indicator parameter and the owner or operator demonstrates that the continuous monitoring will ensure reliable production of wastewater that meets the numeric concentration levels in subsections (B)(4)(b)(i) or (ii) at the discharge point;
   c. An owner or operator may use unit treatment processes, such as chlorination-dechlorination, ultraviolet, and ozone to achieve the pathogen removal performance requirements specified in subsections (B)(4)(a) and (b);
   d. The Department may approve soil aquifer treatment for the removal of fecal coliform or *E. coli* bacteria as an alternative to meeting the performance requirement in subsection (B)(4)(a) or (b), if the soil aquifer treatment process will produce a fecal coliform or *E. coli* bacteria concentration less than that required under subsection (B)(4)(a) or (b), in wastewater that percolates to groundwater;
5. Unless governed by A.R.S. § 49-243(I), the performance requirement for each constituent regulated under R18-11-

406(B) through (E) is the numeric Aquifer Water Quality Standard;

6. The performance requirement for a constituent regulated under A.R.S. § 49-243(I) is removal to the greatest extent practical regardless of cost.
   a. An operator shall minimize trihalomethane compounds generated as disinfection byproducts using chlorination, dechlorination, ultraviolet, or ozone as the disinfection system or using a technology demonstrated to have equivalent or better performance for removing or preventing trihalomethane compounds.
   b. For other pollutants regulated by A.R.S. § 49-243(I), an operator shall use one of the following methods to achieve industrial pretreatment:
      i. Regulate industrial sources of influent to the sewage treatment facility by setting limits on pollutant concentrations, monitoring for pollutants, and enforcing the limits to reduce, eliminate, or alter the nature of a pollutant before release into a sewage collection system;
      ii. Meet the pretreatment requirements of A.R.S. § 49-255.02; or
      iii. For sewage treatment facilities without significant industrial input, conduct periodic monitoring to detect industrial discharge; and
   7. A maximum seepage rate less than 550 gallons per day per acre for all containment structures within the treatment works. A sewage treatment facility that consists solely of containment structures with no other form of discharge complies with Article 2 Part B by operating below the maximum 550 gallon per day per acre seepage rate.

C. The Director shall incorporate treated wastewater discharge limitations and associated monitoring specified in this Section into the individual permit to ensure compliance with the BADCT requirements.

D. An applicant shall formally request in writing and justify an alternative that allows less stringent performance than that established in this Section, based on the criteria specified in A.R.S. § 49-243(B)(1).

E. If the request specified in subsection (D) involves treatment or disposal works that are a demonstration, experimental, or pilot project, the Director may issue an individual permit that places greater reliance on monitoring to ensure operational capability.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-B205. Treatment Performance Requirements for an Existing Facility

For a sewage treatment facility that is an existing facility defined in A.R.S. § 49-201(16), the BADCT shall conform with the following:

1. The designer shall identify one or more design improvements that brings the facility closer to or within the treatment performance requirements specified in R18-9-B204, considering the factors listed in A.R.S. § 49-243(B)(1)(a) and (B)(1)(c) through (h);
2. The designer may eliminate from consideration alternatives identified in subsection (1) that are more expensive than the number of gallons of design flow times $1.00 per gallon; and
3. The designer shall select a design that incorporates one or more of the considered alternatives by giving preference to measures that will provide the greatest improvement toward meeting the treatment performance requirements specified in R18-9-B204.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-B206. Treatment Performance Requirements for Expansion of a Facility

For an expansion of a sewage treatment facility, the BADCT shall conform with the following:

1. New facility BADCT requirements in R18-9-B204 apply to the following expansions:
   a. An increase in design flow by an amount equal to or greater than the increases specified in R18-9-A211(B)(2)(b); or
   b. An addition of a physically separate process or major piece of production equipment, building, or structure that causes a separate discharge to the extent that the treatment performance requirements for the pollutants addressed in R18-9-B204 can practicably be achieved by the addition.
2. BADCT requirements for existing facilities established in R18-9-B205 apply to an expansion not covered under subsection (1).

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended to correct a manifest typographical error in subsection (1) (Supp. 01-1). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

ARTICLE 3. AQUIFER PROTECTION PERMITS - GENERAL PERMITS

PART A. GENERAL PROVISIONS

R18-9-A301. Discharging Under a General Permit

A. Discharging requirements.

1. Type 1 General Permit. A person may discharge under a Type 1 General Permit without submitting a Notice of Intent to Discharge if the discharge is authorized by and meets:
   a. The applicable requirements of Article 3, Part A of this Chapter; and
   b. The specific terms of the Type 1 General Permit established in Article 3, Part B of this Chapter.
2. Type 2 General Permit. A person may discharge under a Type 2 General Permit if:
   a. The discharge is authorized by and meets the applicable requirements of Article 3, Part A of this Chapter and the specific terms of the Type 2 General Permit established in Article 3, Part C of this Chapter;
   b. The person files a Notice of Intent to Discharge under subsection (B); and
   c. The person submits the applicable fee established in 18 A.A.C. 14.
3. Type 3 General Permit. A person may discharge under a Type 3 General Permit if:

a. The discharge is authorized by and meets the applicable requirements of Article 3, Part A of this Chapter and the specific terms of the Type 3 General Permit established in Article 3, Part D of this Chapter;
b. The person files a Notice of Intent to Discharge under subsection (B);
c. The person satisfies any deficiency requests from the Department regarding the administrative completeness review and substantive review and receives a written Discharge Authorization from the Director; and
d. The person submits the applicable fee established in 18 A.A.C. 14.

4. Type 4 General Permit. A person may discharge under a Type 4 General Permit if:
a. The discharge is authorized by and meets the applicable requirements of Article 3, Part A of this Chapter and the specific terms of the Type 4 General Permit established in Article 3, Part E of this Chapter;
b. The person files a Notice of Intent to Discharge under subsection (B);
c. The person satisfies any deficiency requests from the Department regarding the administrative completeness review and substantive review, including any deficiency relating to the construction of the facility;
d. The person receives a written Discharge Authorization from the Director before the facility discharges; and
e. The person submits the applicable fee established in 18 A.A.C. 14 or according to A.R.S. §§ 49-107 and 49-112.

B. Notice of Intent to Discharge.
1. A person seeking a Discharge Authorization under a general permit under subsections (A)(2), (3), or (4) shall submit, by certified mail, in person, or by another method approved by the Department, a Notice of Intent to Discharge on a form provided by the Department.
2. The Notice of Intent to Discharge shall include:
a. The name, address, and telephone number of the applicant;
b. The name, address, and telephone number of a contact person familiar with the operation of the facility;
c. The name, position, address, and telephone number of the owner or operator of the facility who has overall responsibility for compliance with the permit;
d. The legal description of the discharge areas, including the latitude and longitude coordinates;
e. A narrative description of the facility or project, including expected dates of operation, rate, and volume of discharge;
f. The additional requirements, if any, specified in the general permit for which the authorization is being sought;
g. A listing of any other federal or state environmental permits issued for or needed by the facility, including any individual permit, Groundwater Quality Protection Permit, or Notice of Disposal that may have previously authorized the discharge; and
h. A signature on the Notice of Intent to Discharge certifying that the applicant agrees to comply with all applicable requirements of this Article, including specific terms of the general permit.
3. Receipt of a completed Notice of Intent to Discharge by the Department begins the administrative completeness review for a Type 3 or Type 4 General Permit.

C. Type 3 General Permit authorization review.
1. Inspection. The Department may inspect the facility to determine that the applicable terms of the general permit have been met.
2. Discharge Authorization issuance.
a. If the Department determines, based on its review and an inspection, if conducted, that the facility conforms to the requirements of the general permit and the applicable requirements of this Article, the Director shall issue a Discharge Authorization.
b. The Discharge Authorization authorizes the person to discharge under terms of the general permit and applicable requirements of this Article.
3. Discharge Authorization denial. If the Department determines, based on its review and an inspection, if conducted, that the facility does not conform to the requirements of the general permit or other applicable requirements of this Article, the Director shall notify the person of the decision not to issue the Discharge Authorization and the person shall not discharge under the general permit. The notification shall inform the person of:
a. The reason for the denial with reference to the statute or rule on which the denial is based;
b. The person's right to appeal the denial, including the number of days the applicant has to file a protest challenging the denial and the name and telephone number of the Department contact person who can answer questions regarding the appeals process; and
c. The person's right to request an informal settlement conference under A.R.S. §§ 41-1092.03(A) and 41-1092.06.

D. Type 4 General Permit review.
1. Pre-construction phase and facility construction. A person shall not begin facility construction until the Director issues a Construction Authorization.
a. Inspection. The Department may inspect the facility site before construction to determine that the applicable terms of the general permit will be met.
b. Review. If the Department determines, based on an inspection or its review of design plans, specifications, or other required documents that the facility does not conform to the requirements of the general permit or other applicable requirements of this Article, the Department shall make a written request for additional information to determine whether the facility will meet the requirements of the general permit.
c. Construction Authorization. If the Department determines, based on the review described in subsection (D)(1)(b) and any additional information submitted in response to a written request, that the facility design conforms with the requirements of the general permit and other applicable requirements of this Article, the Director shall issue a Construction Authorization to the person seeking to discharge. A Construction Authorization for an on-site wastewater treatment facility shall contain:
i. The design flow of the facility,

ii. The characteristics of the wastewater sources contributing to the facility,
iii. The general permits that apply, and
iv. A list of the documents that are the basis for the authorization.

d. Construction Authorization denial. If the Department determines, based on the review described in subsection (D)(1)(b) and any additional information submitted in response to a written request, that the facility design does not conform to the requirements of the general permit or other applicable requirements of this Article, the Director shall notify the person of the decision not to issue a Construction Authorization. The notification shall include the information listed in subsections (D)(2)(d).

e. Construction.
i. A person shall complete construction within two years of receiving a Construction Authorization.
ii. Construction shall conform with the plans and documents approved by the Department in the Construction Authorization. A change in location, configuration, dimension, depth, material, or installation procedure does not require approval by the Department if the change continues to conform with the specific standard in this Article used as the basis for the original design.
iii. The person shall record all changes made during construction, including any changes approved under R18-9-A312(G) on the site plan as specified in R18-9-A309(C)(1) or on documents as specified in R18-9-A309(C)(2) or R18-9-E301(E), as applicable.

f. Completion of construction.
i. After completing construction of the facility, the person seeking to discharge shall submit any applicable documents specified in R18-9-A309(C) with the Request for Discharge Authorization form for an on-site wastewater treatment facility and the Engineer's Certificate of Completion specified in R18-9-E301(E) for a sewage collection system. Receipt of the documents by the Department initiates the post-construction review phase.
ii. If the Department does not receive the documentation specified in subsection (D)(1)(f)(i) by the end of the two-year construction period, the Notice of Intent to Discharge expires, and the person shall not continue construction or discharge.
iii. If the Notice of Intent to Discharge expires, the person shall submit a new Notice of Intent to Discharge under subsection (B) and the applicable fee under subsection (A)(4)(e) to begin or continue construction.

2. Post-construction phase.
a. Inspection. The Department may inspect the facility before issuing a Discharge Authorization to determine whether:
i. The construction conforms with the design authorized by the Department under subsection (D)(1)(c) and any changes recorded on the site plan as specified in R18-9-A309(C)(1) or other documents as specified in R18-9-A309(C)(2), or R18-9-E301(E), as applicable; and
ii. Terms of the general permit and applicable terms of this Article are met.

b. Deficiencies. If the Department identifies deficiencies based on an inspection of the constructed facility or during the review of documents submitted with the request for the Discharge Authorization, the Director shall provide a written explanation of the deficiencies to the person.

c. Discharge Authorization issuance.
i. Upon satisfactory completion of construction and documents required under R18-9-A309(C)(1) R18-9-A309(C)(2), or R18-9-E301(E), as applicable, the Director shall issue a Discharge Authorization.
ii. The Discharge Authorization allows a person to discharge under terms of the general permit and applicable requirements of this Article and the stated terms of the Construction Authorization.

d. Discharge Authorization denial. If, after receiving evidence of correction submitted by the person seeking to discharge, the Department determines that the deficiencies are not satisfactorily corrected, the Director shall notify the person seeking to discharge of the Director's decision not to issue the Discharge Authorization and the person shall not discharge under the general permit. The notification shall inform the person of:
i. The reason for the denial with reference to the statute or rule on which the denial is based;
ii. The person's right to appeal the denial, including the number of days the applicant has to file a protest challenging the denial and the name and telephone number of the Department contact person who can answer questions regarding the appeals process; and
iii. The person's right to request an informal settlement conference under A.R.S. §§ 41-1092.03(A) and 41-1092.06.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A302. Point of Compliance

The point of compliance is the point at which compliance with Aquifer Water Quality Standards is determined.

1. Except as provided in this Section or as stated in a specific general permit, the applicable point of compliance at a facility operating under a general permit is a vertical plane downgradient of the facility that extends through the uppermost aquifers underlying that facility.
2. The point of compliance is the limit of the pollutant management area.
a. The pollutant management area is the horizontal plane of the area on which pollutants are or will be placed.
b. If a facility operating under a general permit is located within a larger pollutant management area established under an individual permit issued to the same person, the point of compliance is the applica-

ble point of compliance established in the individual permit.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4).

R18-9-A303. Renewal of a Discharge Authorization

A. Unless a Discharge Authorization under a general permit is transferred, revoked, or expired, a person may discharge under the general permit for the authorization period as specified by the permit type, including any closure activities required by a specific general permit.

B. An authorization to discharge under a Type 1 or Type 4 General Permit is valid for the operational life of the facility.

C. A permittee authorized under a Type 2 or Type 3 General Permit shall submit an application for renewal on a form provided by the Department with the applicable fee established in 18 A.A.C. 14 at least 30 days before the end of the renewal period.
1. The following are the renewal periods for Type 2 and Type 3 General Permit Discharge Authorizations:
   a. 2.01 General Permit, five years;
   b. 2.02 General Permit, seven years;
   c. 2.03 General Permit, two years;
   d. 2.04 General Permit, five years;
   e. 2.05 General Permit, five years;
   f. 2.06 General Permit, five years; and
   g. Type 3 General Permits, five years.
2. The renewal period for coverage under a Type 2 General Permit begins on the date the Department receives the Notice of Intent to Discharge.
3. The renewal period for coverage under a Type 3 General Permit begins on the date the Director issues the written Discharge Authorization.

D. If the Discharge Authorization is not renewed within the renewal period specified in subsection (C)(1), the Discharge Authorization expires.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A304. Notice of Transfer

A. Transfer of authorization under a Type 1 General Permit.
1. A permittee transferring ownership of a facility covered by a Type 1.01 through 1.08, or 1.10 through 1.12 General Permit is not required to notify the Department of the transfer.
2. A permittee transferring ownership of an on-site wastewater treatment facility operating under a Type 1.09 General Permit shall follow the requirements under R18-9-A316.
3. A permittee transferring ownership of a sewage treatment facility operating under a Type 1.09 General Permit shall submit a Notice of Transfer to the Department by certified mail within 15 days after the date that ownership changes.

B. Transfer of authorization under a Type 2, 3, or 4.01 General Permit.
1. If a change of ownership occurs for a facility covered by a Type 2, 3, or 4.01 General Permit facility, the permittee shall provide a Notice of Transfer to the Department or to the health or environmental agency delegated by the Director to administer Type 4.01 General Permits, by certified mail within 15 days after the date that ownership changes. The Notice of Transfer, on a form approved by the Department, shall include:
   a. Any information that has changed from the original Notice of Intent to Discharge,
   b. Any other transfer requirements specified for the general permit, and
   c. The applicable fee established in 18 A.A.C. 14.
2. The Department may require a permittee covered by a Type 2, 3, or Type 4.01 General Permit to submit a new Notice of Intent to Discharge and to obtain a new authorization under R18-9-A301(A)(2), (3) and (4), as applicable, if the volume or characteristics of the discharge have changed from the original application.

C. Transfer of a Type 4.02 through 4.23 General Permit. A permittee transferring ownership of an on-site wastewater treatment facility operating under one or more Type 4.02 through 4.23 General Permits shall follow the requirements under R18-9-A316.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A305. Facility Expansion

A. A permittee may expand a facility covered by a Type 2 General Permit if, before the expansion, the permittee provides the Department with the following information by certified mail:
1. An updated Notice of Intent to Discharge,
2. A certification signed by the facility owner stating that the expansion continues to meet all the conditions of the applicable general permit, and
3. The applicable fee established under 18 A.A.C. 14.

B. A permittee may expand a facility covered by a Type 3 or Type 4 General Permit if the permittee submits a new Notice of Intent to Discharge and the Department issues a new Discharge Authorization.
1. The person submitting the Notice of Intent to Discharge for the expansion may reference the previous Notice of Intent to Discharge if the previous information is identical, but shall provide full and detailed information for any changed items.
2. The Notice of Intent to Discharge shall include:
   a. Any applicable fee established under 18 A.A.C. 14, and
   b. A certification signed by the facility owner stating that the expansion continues to meet all of the requirements relating to the applicable general permit.
3. Upon receiving the Notice of Intent to Discharge, the Department shall follow the applicable review and authorization procedures described in R18-9-A301(A)(3) or (4).

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A306. Closure

A. To satisfy the requirements under A.R.S. § 49-252, a permittee shall close a facility authorized to discharge under a general permit as follows:
1. If the discharge is authorized under a Type 1.01 through 1.08, 1.10, 1.11, 2.05, 2.06, or 4.01 General Permit, closure notification is unnecessary and clean closure is met when:
   a. The permittee removes material that may contribute to a continued discharge; and
   b. The permittee eliminates, to the greatest degree practical, any reasonable probability of further discharge from the facility and of exceeding any Aquifer Water Quality Standard at the applicable point of compliance;
2. For a discharge authorized under a Type 2.02, 3.02, 3.05 through 3.07, or 4.23 General Permit, the facility meets clean closure requirements if the permittee provides notice and submits sufficient information for the Department to determine that:
   a. Any material that may contribute to a continued discharge is removed;
   b. The permittee has eliminated to the greatest degree practicable any reasonable probability of further discharge from the facility and of exceeding any Aquifer Water Quality Standard at the applicable point of compliance; and
   c. Closure requirements, if any, established in the general permit are met;
3. If the discharge is authorized under a Type 1.12, 2.01, 2.03, 2.04, 3.01, 3.03, or 3.04 General Permit, the permittee shall comply with the closure requirements in the general permit;
4. If the discharge is from an on-site wastewater treatment facility authorized under a Type 1.09 or 4.02 through 4.22 General Permit, the permittee shall comply with the closure requirements in R18-9-A309(D); and
5. If the discharge is from a sewage treatment facility authorized under a Type 1.09 General Permit, the permittee shall comply with the closure requirements under subsection (A)(1).

B. For a facility operating under a general permit and located at a site where an individual area-wide permit has been issued, a permittee may defer some or all closure activities required by this subsection if the Director approves the deferral in writing. The permittee shall complete closure activities no later than the date that closure activities identified in the individual area-wide permit are performed.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A307. Revocation of Coverage Under a General Permit

A. After notice and opportunity for a hearing, the Director may revoke coverage under a general permit and require the permittee to obtain an individual permit for any of the following:
1. The permittee fails to comply with the terms of the general permit as described in this Article, or
2. The discharge activity conducted under the terms of the general permit causes or contributes to the violation of an Aquifer Water Quality Standard at the applicable point of compliance.

B. The Director may revoke coverage under a general permit for any or all facilities within a specific geographic area, if, due to geologic or hydrologic conditions, the cumulative discharge of the facilities has violated or will violate an Aquifer Water Quality Standard established under A.R.S. §§ 49-221 and 49-223. Unless the public health or safety is jeopardized, the Director may allow continuation of a discharge until the Department:
1. Issues a single individual permit,
2. Authorizes a discharge under another general permit, or
3. Consolidates the discharges authorized under the general permits by following R18-9-107.

C. If an individual permit is issued to replace general permit coverage, the coverage under the general permit allowing the discharge is automatically revoked upon issuance of the individual permit and notification under subsection (E) is not required.

D. If the Director revokes coverage under a general permit, the facility shall not discharge unless allowed under subsection (B) or under an individual permit.

E. If coverage under the general permit is revoked under subsections (A) or (B), the Director shall notify the permittee by certified mail of the decision. The notification shall include:
1. A brief statement of the reason for the decision;
2. The effective revocation date of the general permit coverage;
3. A statement of whether the discharge shall cease or whether the discharge may continue under the terms of revocation in subsection (B);
4. Whether the Director requires a person to obtain an individual permit, and if so:
   a. An individual permit application form, and
   b. Identification of a deadline between 90 and 180 days after receipt of the notification for filing the application;
5. The applicant's right to appeal the revocation, the number of days the applicant has to file an appeal, and the name and telephone number of the Department contact person who can answer questions regarding the appeals process; and
6. The applicant's right to request an informal settlement conference under A.R.S. §§ 41-1092.03(A) and 41-1092.06.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A308. Repealed

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Repealed by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A309. General Provisions for On-site Wastewater Treatment Facilities

A. General requirements and prohibitions.
1. No person shall discharge sewage or wastewater that contains sewage from an on-site wastewater treatment facility except under an Aquifer Protection Permit issued by the Director.

2. A person shall not install, allow to be installed, or maintain a connection between any part of an on-site wastewater treatment facility and a drinking water system or supply so that sewage or wastewater contaminates the drinking water.
3. A person shall not bypass or release sewage or partially treated sewage that has not completed the treatment process from an on-site wastewater treatment facility.
4. A person shall not use a cesspool for sewage disposal.
5. A person constructing a new on-site wastewater treatment facility or replacing the treatment works or disposal works of an existing on-site wastewater treatment facility shall connect to a sewage collection system if either (a) or (b) apply:
   a. One of the following applies:
      i. A provision of a Nitrogen Management Area designation under R18-9-A317(C) requires connection;
      ii. A county, municipal, or sanitary district ordinance requires connection; or
      iii. The on-site wastewater treatment facility is located within an area identified for connection to a sewage collection system by a Certified Area-wide Water Quality Management Plan adopted under 18 A.A.C. 5 or a master plan adopted by a majority of the elected officials of a board or council for a county, municipality, or sanitary district; or
   b. A sewer service line extension is available at the property boundary and both of the following apply:
      i. The service connection fee is not more than $6000 for a dwelling or $10 times the daily design flow in gallons for a source other than a dwelling, and
      ii. The cost of constructing the building sewer from the wastewater source to the service connection is not more than $3000 for a dwelling or $5 times the daily design flow in gallons for a source other than a dwelling.
6. The Department shall prohibit installation of an on-site wastewater treatment facility if the installation will create an unsanitary condition or environmental nuisance or cause or contribute to a violation of an Aquifer Water Quality Standard.
7. A person shall design and operate the permitted on-site wastewater treatment facility so that:
   a. Flows to the facility consist of typical sewage and do not include any motor oil, gasoline, paint, varnish, solvent, pesticide, fertilizer, or other material not generally associated with toilet flushing, food preparation, laundry, or personal hygiene;
   b. Flows to the facility from commercial operations do not contain hazardous wastes as defined under A.R.S. § 49921(5) or hazardous substances;
   c. If the sewage contains a component of nonresidential flow such as food preparation, laundry service, or other source, the sewage is adequately pretreated by an interceptor that complies with R18-9-A315 or another device authorized by a general permit or approved by the Department under R18-9-A312(G);
   d. Except as provided in subsection (A)(7)(c), a sewage flow that does not meet the numerical levels for typical sewage is adequately pretreated to meet the numerical levels before entry into an on-site wastewater treatment facility authorized by this Article;
   e. Flow to the facility does not exceed the design flow specified in the Discharge Authorization;
   f. The facility does not create an unsanitary condition or environmental nuisance, or cause or contribute to a violation of either a Aquifer Water Quality Standard or a Surface Water Quality Standard; and
   g. Activities at the site do not adversely affect the operation of the facility.
8. A person shall control the discharge of total nitrogen from an on-site wastewater treatment facility as follows:
   a. For an on-site wastewater treatment facility operating under the 1.09 General Permit or proposed for construction in a Notice of Intent to Discharge under a Type 4 General Permit and the facility is located within a Nitrogen Management Area, the provisions of R18-9-A317(D) apply;
   b. For an on-site wastewater treatment facility proposed for construction in a Notice of Intent to Discharge under R18-9-E323, the provisions of R18-9-E323(A)(4) apply;
   c. For a subdivision proposed under 18 A.A.C. 5, Article 4, for which on-site wastewater treatment facilities are used for sewage disposal, the permittee shall demonstrate in the geological report required in R18-5-408(E)(1) that total nitrogen loading from the on-site wastewater treatment facilities to groundwater is controlled by providing one of the following:
      i. For a subdivision platted for a single family dwelling on each lot, calculations that demonstrate that the number of lots within the subdivision does not exceed the number of acres contained within the boundaries of the subdivision;
      ii. For a subdivision platted for dwellings that do not meet the criteria specified in subsection (A)(8)(c)(i), calculations that demonstrate that the nitrogen loading over the total area of the subdivision is not more than 0.088 pounds (39.9 grams) of total nitrogen per day per acre calculated at a horizontal plane immediately beneath the active treatment of the disposal fields, based on a total nitrogen contribution to raw sewage of 0.0333 pounds (15.0 grams) of total nitrogen per day per person; or
      iii. An analysis by another means of demonstration showing that the nitrogen loading to the aquifer due to on-site wastewater treatment facilities within the subdivision does not cause or contribute to a violation of the Aquifer Water Quality Standard for nitrate at the applicable point of compliance.
9. Repairs and Routine Work.
   a. A Notice of Intent to Discharge is not required for repair or routine work that maintains a facility.
   b. A Notice of Intent to Discharge is required for the following non-routine work or repairs:
      i. Converting a facility from operation under gravity to one requiring a pump or other mechanical device for treatment or disposal;
      ii. Modifying or replacing a treatment works or disposal works, as defined in R18-9-101; or

iii. Modifying a facility in any manner that is inconsistent with the originally approved design and installation of the facility.

c. A permittee shall comply with any local ordinance that provides independent permitting requirements for repair or routine work.

d. A person, as defined in R18-9-101, shall not modify the facility so as to create an unsanitary condition or environmental nuisance or cause or contribute to an exceedance of a water quality standard.

10. Cumulative flows. When there is more than one on-site wastewater treatment facility on a property or on a site under common ownership or subject to a larger plan of sale or development, the Director shall determine whether an individual permit is required or whether the applicant qualifies for coverage to discharge under a general permit based on the sum of the design flows from the proposed installation and existing on-site wastewater treatment facilities on the property or site.
    a. If the sum of the design flows is less than 3000 gallons per day, the Department will process the application under R18-9-E302 through R18-9-E322, as applicable.
    b. If the sum of the design flows is equal to or more than 3000 gallons per day but less than 24,000 gallons per day, the Department will process the application under R18-9-E323.
    c. If the sum of the design flows is equal to or more than 24,000 gallons per day, the project does not qualify for coverage under a Type 4 General Permit and the applicant shall submit an application for an individual permit under Article 2 of this Chapter.
11. The use of a gray water system does not change the design, capacity, or reserve area requirements for an on-site wastewater treatment facility regulated under R18-9-E302 through R18-9-E323. The design of an on-site facility shall ensure the on-site facility can treat and dispose of the combined black water and gray water flows generated at the site. Black water includes wastewater flows from a kitchen sink. Kitchen sink wastewater flows are not gray water. Kitchen sink wastewater flows are not gray water even if a holding tank receiving kitchen sink wastewater, such as a recreational vehicle holding tank, is labeled as holding gray water. Gray water, as defined in R18-9-101, may be utilized in accordance with Article 7 of this Chapter.
12. To obtain coverage under a Type 4 General Permit, an applicant must, in the following order:
    a. Submit a Notice of Intent to Discharge according to requirements in R18-9-A301(B), R18-9-A309(B), and according to permit-specific requirements in Part E of Article 3,
    b. Receive a Construction Authorization from the Director pursuant to R18-9-A301(D)(1)),
    c. Submit a Request for Discharge Authorization according to requirements in R18-9-A301(D)(1)(f), R18-9-A309(C), and according to permit-specific requirements in Part E of Article 3, and
    d. Receive a Discharge Authorization from the Director pursuant to R18-9-A301(D)(2) and R18-9-A309(C).

B. Notice of Intent to Discharge under a Type 4 General Permit. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit the following information in a format approved by the Department:

1. A site investigation report that summarizes the results of the site investigation conducted under R18-9-A310(B), including:
    a. Results from any soil evaluation, percolation test, or seepage pit performance test;
    b. Any surface limiting condition identified in R18-9-A310(C)(2); and
    c. Any subsurface limiting condition identified in R18-9-A310(D)(2);
2. A site plan that includes:
    a. The parcel and lot number, if applicable, the property address or other appropriate legal description, the property size in acres, and the boundaries of the property;
    b. A plan of the site drawn to scale, dimensioned, and with a north arrow that shows:
        i. Proposed and existing on-site wastewater treatment facilities; dwellings and other buildings; driveways, swimming pools, tennis courts, wells, ponds, and any other paved, concrete, or water feature; down slopes and cut banks with a slope greater than 15 percent; retaining walls; and any other constructed feature that affects proper location, design, construction, or operation of the facility;
        ii. Any feature less than 200 feet from the on-site wastewater treatment facility excavation and reserve area that constrains the location of the on-site wastewater treatment facility because of setback limitations specified in R18-9-A312(C);
        iii. Topography, delineated with an appropriate contour interval, showing original and post-installation grades;
        iv. Drainage patterns, and as applicable, drainage controls and erosion protection for the facility;
        v. Location and identification of the treatment and disposal works and wastewater pipelines, the reserve disposal area, and location and identification of all sites of percolation testing and soil evaluation performed under R18-9-A310; and
        vi. Location of any public sewer if 400 feet or less from the property line;
3. The design flow of the on-site wastewater treatment facility, consisting of gray water and black water flows, expressed in gallons per day based on Table 1, Unit Design Flows, the expected strength of the wastewater if the strength exceeds the levels for typical sewage, and:
    a. For a single family dwelling, a list of the number of bedrooms and plumbing fixtures and corresponding unit flows used to calculate the design flow of the facility; and
    b. For a dwelling other than for a single family, a list of each wastewater source and corresponding unit flows used to calculate the design flow of the facility;
4. A list of materials, components, and equipment for constructing the on-site wastewater treatment facility;
5. Drawings, reports, and other information that are clear, reproducible, and in a size and format specified by the Department;

6. If pretreatment is necessary for a facility to comply with the requirements of this Chapter, including R18-9-A309(A)(7), then a design report approved by the on-site wastewater treatment facility manufacturer or manufacturers that specifies component capacities, control settings, and supplemental installation and operation practices necessary to produce typical sewage numerical levels before entry into an on-site wastewater treatment facility; and
7. For a facility that includes treatment or disposal works permitted under R18-9-E303 through R18-9-E323:
   a. Construction quality drawings that show the following:
      i. Systems, subsystems, and key components, including manufacturer's name, model number, and associated construction notes and inspection milestones, as applicable;
      ii. A title block, including facility owner, revision date, space for addition of the Department's application number, and page numbers;
      iii. A plan and profile with the elevations of wastewater pipelines, and treatment and disposal components, including calculations justifying the absorption area, to allow Department verification of hydraulic and performance characteristics;
      iv. Cross sections showing wastewater pipelines, construction details and elevations of treatment and disposal components, original and finished grades of the land surface, seasonal high water table if less than 10 feet below the bottom of a disposal works or 60 feet below the bottom of a seepage pit, and a soil elevation evaluation to allow Department verification of installation design and performance; and
   b. A draft operation and maintenance manual for the on-site wastewater treatment facility consisting of the tasks and schedules for operating and maintaining performance over a 20-year operational life;

C. Additional requirements for a Request for Discharge Authorization and for the issuance of a Discharge Authorization under a Type 4 General Permit.
1. If the entire on-site wastewater treatment facility, including treatment works and disposal works, will be permitted under R18-9-E302, the Director shall issue the Discharge Authorization if, as a part of the Request for Discharge Authorization:
   a. The site plan accurately reflects the final location and configuration of the components of the treatment and disposal works, and
   b. The applicant or the applicant's agent certifies on the Request for Discharge Authorization form that the septic tank passed the watertightness test required by R18-9-A314(5)(d).
2. If the on-site wastewater treatment facility is proposed under R18-9-E303 through R18-9-E323, either separately or in any combination with each other or with R18-9-E302, the Director shall issue the Discharge Authorization if the following documents are submitted to the Department as part of the Request for Discharge Authorization:
   a. As-built plans showing changes from construction quality drawings submitted under subsection (B)(6)(a);
   b. A final list of equipment and materials showing changes from the list submitted under subsection (B)(4);
   c. A final operation and maintenance manual for the on-site wastewater treatment facility consisting of the tasks and schedules for operating and maintaining performance over a 20-year operational life;
   d. A certification that a service contract for ensuring that the facility is operated and maintained to meet the performance and other requirements of the applicable general permits exists for at least one year following the beginning of the operation of the on-site wastewater treatment facility, including the name of the service provider, if the on-site wastewater treatment facility is permitted under:
      i. R18-9-E304;
      ii. R18-9-E308 through R18-9-E315;
      iii. R18-9-E316, if the facility includes a pump; or
      iv. R18-9-E318 through R18-9-E322;
   e. Other documents, if required by the separate general permits in 18 A.A.C. 9, Article 3, Part E;
   f. A Certificate of Completion signed by the current engineer or designer of record assuring that installation of the facility conforms to the design approved under the Construction Authorization under R18-9-A301(D)(1)(c); and a regulatory representative, such as an inspector, may not act as an applicant's agent, nor authorize backfill before the current engineer or designer of record has verified proper installation of the system;
   g. The name of the installation contractor and the Registrar of Contractor's license number issued to the installation contractor; and
   h. A certification that any septic tank installed as a component of the on-site wastewater treatment facility passed the watertightness test required by R18-9-A314(5)(d).
3. The Director shall specify in the Discharge Authorization:
   a. The permitted design flow of the facility,
   b. The characteristics of the wastewater sources contributing to the facility, and
   c. A list of the documents submitted to and reviewed by the Department satisfying subsection (C)(2).

D. Closure requirements. A person who permanently discontinues use of an on-site wastewater treatment facility or a cesspool, or is ordered by the Director to close an abandoned facility shall:
1. Remove all sewage from the facility and dispose of the sewage in a lawful manner;
2. Disconnect and remove electrical and mechanical components;
3. Remove or collapse the top of any tank or containment structure.
   a. Punch a hole in the bottom of the tank or containment structure if the bottom is below the seasonal high groundwater table;
   b. Fill the tank or containment structure or any cavity resulting from its removal with earth, sand, gravel, concrete, or other approved material; and
   c. Regrade the surface to provide drainage away from the closed area;
4. Cut and plug both ends of the abandoned sewer drain pipe between the building and the on-site wastewater treat-

ment facility not more than 5 feet outside the building foundation if practical, or cut and plug as close to each end as possible; and

5. Notify the Department within 30 days of closure.

E. Proprietary and other reviewed products.

1. The Department shall maintain a list of proprietary and other reviewed products that may be used for on-site wastewater treatment facilities to comply with the requirements of this Article. The list shall include appropriate information on the applicability and limitations of each product.
2. The list of proprietary and other reviewed products may include manufactured systems, subsystems, or components within the treatment works and disposal works if the products significantly contribute to the treatment performance of the system or provide the means to overcome site limitations. The Department will not list septic tanks, effluent filters or components that do not significantly affect treatment performance or provide the means to overcome site limitations.
3. A person may request that the Department add a product to the list of proprietary and other reviewed products. The request may include a proposed reference design for review. The Department shall ensure that performance values in the list reflect the treatment performance for defined wastewater characteristics. The Department shall assess fees under 18 A.A.C. 14 for product review.

F. Recordkeeping. A permittee authorized to discharge under one or more Type 4 General Permits shall maintain the Discharge Authorization and associated documents for the life of the facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A310. Site Investigation for Type 4 On-site Wastewater Treatment Facilities

A. Definition. For purposes of this Section, "clean water" means water free of colloidal material or additives that could affect chemical or physical properties if the water is used for percolation or seepage pit performance testing.

B. Site investigation. An applicant shall ensure that an investigator qualified under subsection (H) conducts a site investigation consisting of a surface characterization under subsection (C) and a subsurface characterization under subsection (D). The applicant shall submit the results in a format prescribed by the Department. The site investigation shall provide sufficient data to:

1. Select appropriate primary and reserve disposal areas for an on-site wastewater treatment facility considering all surface and subsurface limiting conditions in subsections (C)(2) and (D)(2); and;
2. Effectively design and install the selected facility to serve the anticipated development at the site, whether or not limiting conditions exist.

C. Surface characterization.

1. Surface characterization method. The investigator shall characterize the surface of the site where an on-site wastewater treatment facility is proposed for installation using one of the following methods:
   a. The "Standard Practice for Surface Site Characterization for On-site Septic Systems, D5879-95 (2003)," published by the American Society for Testing and Materials. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959; or
   b. Another method of surface characterization that can, with accuracy and reliability, identify and delineate the surface limiting conditions specified in subsection (C)(2).
2. Surface limiting conditions. The investigator shall determine whether, and if so, where any of the following surface limiting conditions exist:
   a. The surface slope is greater than 15 percent at the intended location of the on-site wastewater treatment facility;
   b. Minimum setback distances are not within the limits specified in R18-9-A312(C);
   c. Surface drainage characteristics at the intended location of the on-site wastewater treatment facility will adversely affect the ability of the facility to function properly;
   d. A 100-year flood hazard zone, as indicated on the applicable flood insurance rate map, is located within the property on which the on-site wastewater treatment facility will be installed, and the flood hazard zone may adversely affect the ability of the facility to function properly;
   e. An outcropping of rock that cannot be excavated exists in the intended location of the on-site wastewater treatment facility or will impair the function of soil receiving the discharge; and
   f. Fill material deposits exist in the intended location of the on-site wastewater treatment facility.

D. Subsurface characterization.

1. Subsurface characterization method. The investigator shall characterize the subsurface of the site where an on-site wastewater treatment facility is proposed for installation using one or more of the following methods:
   a. The following ASTM standard practice, which is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959: "Standard Practice for Subsurface Site Characterization of Test Pits for On-site Septic Systems, D5921-96(2003)e1 (2003)," published by the American Society for Testing and Materials;
   b. Percolation testing as specified in subsection (F);
   c. Seepage pit performance testing as specified in subsection (G); or
   d. Another method of subsurface characterization, approved by the Department, that ensures compli-

ance with water quality standards through proper system location, selection, design, installation, and operation.

2. Subsurface limiting conditions. The investigator shall determine whether any of the following limiting conditions exist in the primary and reserve areas of the on-site wastewater treatment facility within a minimum of 12 feet of the land surface or to an impervious soil or rock layer if encountered at a shallower depth:
   a. The soil absorption rate determined under R18-9-A312(D)(2) is:
      i. More than 1.20 gallons per day per square foot, or
      ii. Less than 0.20 gallons per day per square foot;
   b. The vertical separation distance from the bottom of the lowest point of the disposal works to the seasonal high water table is less than the minimum vertical separation specified in R18-9-A312(E)(1);
   c. Seasonal saturation occurs within surface soils that could affect the performance of the on-site wastewater treatment facility;
   d. One of the following subsurface conditions that may cause or contribute to the surfacing of wastewater:
      i. An impervious soil or rock layer,
      ii. A zone of saturation that substantially limits downward percolation from the disposal works,
      iii. Soil with more than 50 percent rock fragments;
   e. One of the following subsurface conditions that promotes accelerated downward movement of insufficiently treated wastewater:
      i. Fractures or joints in rock that are open, continuous, or interconnected;
      ii. Karst voids or channels; or
      iii. Highly permeable materials such as deposits of cobbles or boulders; or
   f. A subsurface condition that may convey wastewater to a water of the state and cause or contribute to an exceedance of a water quality standard established in 18 A.A.C. 11, Articles 1 and 4.
3. Applicability of subsurface characterization methods. The investigator shall:
   a. For a seepage pit constructed under R18-9-E302, test seepage pit performance using the procedure specified in subsection (G);
   b. For an on-site wastewater treatment facility other than a seepage pit, characterize soil by using the ASTM method specified in subsection (D)(1)(a) if any of the following site conditions exists:
      i. The natural surface slope at the intended location of the on-site wastewater treatment facility is greater than 15 percent;
      ii. Bedrock or similar consolidated rock formation that cannot be excavated with a shovel outcrops on the property or occurs less than 12 feet below the land surface;
      iii. The native soil at the surface or encountered in a boring, trench, or hole consists of more than 35 percent rock fragments;
      iv. The seasonal high water table occurs within 12 feet of the natural land surface as encountered in trenches or borings, or evidenced by well records or hydrologic reports;
      v. Seasonal saturation at the natural land surface occurs as indicated by soil mottling, vegetation adapted to near-surface saturated soils, or springs, seeps, or surface water near enough to the intended location of the on-site wastewater treatment facility to have a connection with potential seasonal saturation at the land surface; or
      vi. A percolation test yields results outside the limits specified in subsection (D)(2)(a) and (b).
   c. Percolation testing. The investigator may perform percolation testing as specified in subsection (F):
      i. To augment another method of subsurface characterization if useful to locate or design an on-site wastewater treatment facility, or
      ii. As the sole method of subsurface characterization if a subsurface characterization by an ASTM method is not required under subsection (D)(3)(b).

E. If an ASTM method is used for subsurface characterization, the investigator shall conduct subsurface characterization tests at the site to provide adequate, credible, and representative information to ensure proper location, selection, design, and installation of the on-site wastewater treatment facility. The investigator shall:
1. Select at least two test locations in the primary area and one test location in the reserve area to conduct the tests;
2. Perform the characterization at each test location at appropriate depths to:
   a. Establish the wastewater absorption capacity of the soil under R18-9-A312(D), and
   b. Aid in determining that a sufficient zone of unsaturated flow is provided below the disposal works to achieve necessary wastewater treatment; and
3. Submit with the site investigation report:
   a. A log of soil formations for each test location with information on soil type, texture, and classification; percentage of rock; structure; consistence; and mottles;
   b. A determination of depth to groundwater below the land surface by test trenches or borings, published groundwater data, subdivision reports, or relevant well data; and
   c. A determination of the water absorption characteristics of the soil, under R18-9-A312(D)(2)(b), sufficient to allow location and design of the on-site wastewater treatment facility.

F. Percolation testing method for subsurface characterization.
1. Planning and preparation. The investigator shall:
   a. Select at least two locations in the primary area and at least one location in the reserve area for percolation testing, to provide adequate and credible information to ensure proper location, selection, design, and installation of a properly working on-site wastewater treatment facility;
   b. Perform percolation testing at each location at intervals in the soil profile sufficient to:
      i. Establish the wastewater absorption capability of the soil under R18-9-A312(D), and
      ii. Aid in determining that a sufficient zone of unsaturated flow is provided below the disposal works to achieve necessary wastewater treatment. The investigator shall perform percolation tests at multiple depths if there is an indication of an obvious change in soil characteristics that affect the location, selection,

design, installation, or disposal performance of the on-site wastewater treatment facility;

c. Excavate percolation test holes in undisturbed soil at least 12 inches deep with dimensions of 12 inches by 12 inches, if square, or a diameter of 15 inches, if round. The investigator shall not alter the structure of the soil during the excavation;

d. Place percolation test holes away from site or soil features that yield unrepresentative or misleading data pertaining to the location, selection, design, installation, or performance of the on-site wastewater treatment facility;

e. Scarify smeared soil surfaces within the percolation test holes and remove any loosened materials from the bottom of the hole; and

f. Use buckets with holes in the sides to support the sidewalls of the percolation test hole, if necessary. The investigator shall fill any voids between the walls of the hole and the bucket with pea gravel to reduce the impact of the enlarged hole.

2. Presoaking procedure. The investigator shall:

a. Fill the percolation test hole with clean water to a depth of 12 inches above the bottom of the hole;

b. Observe the decline of the water level in the hole and record time in minutes for the water to completely drain away;

c. Repeat the steps specified in subsection (F)(2)(a) and (b) if the water drains away in less than 60 minutes.

i. If the water drains away the second time in less than 60 minutes, the investigator shall repeat the steps specified in subsections (F)(2)(a) and (b).

ii. If the water drains away a third time in less than 60 minutes, the investigator shall perform the percolation test by following subsection (F)(3); and

d. Add clean water to the hole after 60 minutes and maintain the water at a minimum depth of 9 inches for at least four more hours if it takes 60 minutes or longer for the water to drain away. The investigator shall protect the hole from precipitation and runoff, and perform the percolation test specified in subsection (F)(3) between 16 and 24 hours after presoaking.

3. Conducting the test. The investigator shall:

a. Conduct the percolation test before soil hydraulic conditions established by the presoaking procedure substantially change. The investigator shall remove loose materials in the percolation test hole to ensure that the specified dimensions of the hole are maintained and the infiltration surfaces are undisturbed native soil;

b. Fill the test hole to a depth of six inches above the bottom with clean water;

c. Observe the decline of the water level in the test hole and record the time in minutes for the water level to fall exactly 1 inch from a fixed reference point. The investigator shall:

i. Immediately refill the hole with clean water to a depth of 6 inches above the bottom, and determine and record the time in minutes for the water level to fall exactly 1 inch,

ii. Refill the hole again with clean water to a depth of 6 inches above the bottom and determine and record the time in minutes for the water to fall exactly 1 inch, and

iii. Ensure that the method for measuring water level depth is accurate and does not significantly affect the percolation rate of the test hole;

d. If the percolation rate stabilizes for three consecutive measurements by varying no more than 10 percent, use the highest percolation rate value of the three measurements. If three consecutive measurements indicate that the percolation rate results are not stabilizing or the percolation rate is between 60 and 120 minutes per inch, the investigator shall use an alternate method based on a graphical solution of the test data to approximate the stabilized percolation rate;

e. Record the percolation rate results in minutes per inch; and

f. Submit the following information with the site investigation report:

i. A log of the soil formations encountered for all percolation tests including information on texture, structure, consistence, percentage of rock fragments, and mottles, if present;

ii. Whether and which test hole was reinforced with a bucket;

iii. The locations, depths, and bottom elevations of the percolation test holes on the site investigation map;

iv. A determination of depth to groundwater below the land surface by test trenches or borings, published groundwater data, subdivision reports, or relevant well data; and

v. A determination of the water absorption characteristics of the soil, under R18-9-A312(D)(2)(a), sufficient to allow location and design of the on-site wastewater treatment facility.

G. Seepage pit performance testing method for subsurface characterization. The investigator shall test seepage pits described in R18-9-E302 as follows:

1. Planning and Preparation. The investigator shall:

a. Identify the disposal areas at the site and drill a test hole at least 18 inches in diameter to the depth of the proposed seepage pit, at least 30 feet deep, and

b. Scarify soil surfaces within the test hole and remove loosened materials from the bottom of the hole.

2. Presoaking procedure. The investigator shall:

a. Fill the bottom 6 inches of the test hole with gravel, if necessary, to prevent scouring;

b. Fill the test hole with clean water up to 3 feet below the land surface;

c. Observe the decline of the water level in the hole and determine the time in hours and minutes for the water to completely drain away;

d. Repeat the procedure if the water drains away in less than four hours; If the water drains away the second time in less than four hours, the investigator shall conduct the seepage pit performance test by following subsection (G)(3);

e. Add water to the hole and maintain the water at a depth that leaves at least the top 3 feet of hole

exposed to air for at least four more hours if the water drains away in four or more hours; and

f. Not remove the water from the hole before the seepage pit performance test if there is standing water in the hole after at least 16 hours of presoaking.

3. Conducting the test. The investigator shall:
   a. Fill the test hole with clean water up to 3 feet below land surface;
   b. Observe the decline of the water level in the hole and determine and record the vertical distance to the water level from a fixed reference point every 10 minutes. The investigator shall ensure that the method for measuring water level depth is accurate and does not significantly affect the rate of fall of the water level in the test hole;
   c. Measure the decline of the water level continually until three consecutive 10-minute measurements indicate that the infiltration rates are within 10 percent. If measurements indicate that infiltration is not approaching a steady rate or if the rate is close to a numerical limit specified in R18-9-A312(E)(1), the investigator shall use, an alternate method based on a graphical solution of the test data to approximate the final stabilized infiltration rate;
   d. Percolation test rate. Calculate the stabilized infiltration rate for a seepage pit determined by the test hole procedure specified in subsection (G)(1)(a) using the formula P = (15 / DS) x IS to determine an equivalent percolation test rate. Once "P" is determined, the investigator shall use R18-9-A312(D)(2)(a) to establish the design SAR for wastewater treated under R18-9-E302 and to calculate the required minimum sidewall area for the seepage pit using the equation specified in R18-9-E302(C)(5)(k).
      i. "P" is the percolation test rate (minutes per inch) tabulated in the first column of the table in R18-9-A312(D)(2)(a),
      ii. "DS" is the diameter of the seepage pit test hole in inches, and
      iii. "IS" is the seepage pit stabilized infiltration rate (minutes per inch) determined by the procedure specified in R18-9-A310(G)(3)(c);
   e. Submit the following information with the site investigation report:
      i. The results of the seepage pit performance testing including data, calculations, and findings on a form provided by the Department;
      ii. The log of the test hole indicating lithologic characteristics and points of change;
      iii. The location of the test hole on the site investigation map;
      iv. A determination of depth to groundwater below the land surface by borings, published groundwater data, subdivision reports, or relevant well data.
   f. Fill the test hole so that groundwater quality and public safety are not compromised if the seepage pit is drilled elsewhere or if a seepage pit cannot be sited at the location because of unfavorable test results.

H. Qualifications. An investigator shall not perform a site investigation under this Section unless the investigator has knowledge and competence in the subject area and is licensed in good standing or otherwise qualified in one of the following categories:

1. Arizona-registered professional engineer,
2. Arizona-registered geologist,
3. Arizona-registered sanitarian,
4. A certificate of training from a course recognized by the Department as sufficiently covering the information specified in this Section, or
5. Qualifies under another category designated in writing by the Department.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A311. Facility Selection for Type 4 On-site Wastewater Treatment Facilities

A. A person shall select, design, and install an on-site wastewater treatment facility that is appropriate for the site's geographic location, setback limitations, slope, topography, drainage and soil characteristics, wastewater infiltration capability, depth to the seasonal high water table, and any surface or subsurface limiting condition.

1. A person may use on-site treatment and disposal technologies covered by a Type 4 General Permit alone or in combination with another Type 4 General Permit to overcome site limitations.
2. An applicant may submit a single Notice of Intent to Discharge for an on-site wastewater treatment facility consisting of components or technologies covered by multiple general permits if the information submittal requirements of all the general permits are met.
3. The Director shall issue a single Construction Authorization under R18-9-A301(D)(1) and a single Discharge Authorization under R18-9-A301(D)(2) for an on-site wastewater treatment facility that consists of components or technologies covered by multiple general permits.
4. If either a septic tank or disposal method, or both, as identified in R18-9-E302, is appropriately used in combination with an alternative technology listed under R18-9-E303 through R18-9-E322, the applicant shall apply the design requirements specified in R18-9-E302, except that the specific requirements for R18-9-E303 through R18-9-E323, as applicable, supersede requirements in R18-9-E302 if the rules conflict. If additional modifications are necessary and appropriate to ensure adequate treatment, the applicant may request review under R18-9-A312(G) to allow the Department to approve the application.

B. A person may install a septic tank and disposal works system described in R18-9-E302 as the sole method of wastewater treatment and disposal at a site if the site investigation conducted under R18-9-A310 indicates that no limiting condition identified under R18-9-A310(C) or R18-9-A310(D) exists at the site.

1. A person may install a seepage pit only in valley-fill sediments in a basin-and-range alluvial basin and only if the seepage pit performance test results meet the criteria specified in R18-9-A312(E).
2. The person shall specify in the Notice of Intent to Discharge that no limiting conditions described in R18-9-A310(C) and (D) were identified at the site.

C. If any surface or subsurface limiting condition is identified in the site investigation report, an applicant may propose installation of a septic tank and disposal works system described in R18-9-E302 as the sole method of wastewater treatment and disposal at a facility only if:
1. The applicant submits information under R18-9-A312(G) that describes:
   a. How the design of the septic tank and disposal works system specified in R18-9-E302 was modified to overcome limiting conditions;
   b. How the modified design meets the criteria of R18-9-A312(G)(3); and
   c. A site-specific SAR under R18-9-A312(D)(2)(a) or (b), as applicable; and
2. None of the following surface or subsurface limiting conditions are identified at the site:
   a. An outcropping of rock that cannot be excavated or will impair the function of soil receiving the discharge exists in the intended location of the on-site wastewater treatment facility, as described in R18-9-A310(C)(2)(e);
   b. The vertical separation distance from the bottom of the lowest point of the disposal works to the seasonal high water table is less than the minimum vertical separation distance, as described in R18-9-A310(D)(2)(b); or
   c. A subsurface condition that promotes accelerated downward movement of insufficiently treated wastewater as described in R18-9-A310(D)(2)(e).

D. If a site can accommodate a septic tank and disposal works system described in R18-9-E302, the applicant shall not install a treatment works or disposal works described in R18-9-E303 through R18-9-E322 unless the applicant submits a statement to the Department with the Notice of Intent to Discharge acknowledging the following:
1. The applicant is aware that although a septic tank and disposal works system described in R18-9-E302 is appropriate for the site, the applicant desires to install a treatment works or disposal works authorized under R18-9-E303 through R18-9-E322; and
2. The applicant is aware that a treatment works or disposal works authorized under R18-9-E303 through R18-9-E322 may result in higher capital, operation, and maintenance costs than a septic tank and disposal works system described in R18-9-E302.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A312. Facility Design for Type 4 On-site Wastewater Treatment Facilities

A. General design requirements. An applicant shall ensure that the person designing an on-site wastewater treatment facility:
1. Signs the design documents submitted as part of the Notice of Intent to Discharge to obtain a Construction Authorization, including plans, specifications, drawings, reports, and calculations; and
2. Locates and designs the on-site wastewater treatment facility project using good design judgment and relies on appropriate design methods and calculations.

B. Design considerations and flow determination. An applicant shall ensure that the person designing the on-site wastewater treatment facility shall:
1. Design the facility to satisfy a 20-year operational life;
2. Design the facility based on the provisions of one or more of the general permits in R18-9-E302 through R18-9-E322 for facilities with a design flow of less than 3000 gallons per day, and R18-9-E323 for facilities with a design flow of 3000 gallons per day to less than 24,000 gallons per day;
3. Design the facility based on the facility's design flow and wastewater characteristics as specified in R18-9-A309(A)(7), (10) and (11) and R18-9-A309(B)(3);
4. For on-site wastewater treatment facilities permitted under R18-9-E303 through R18-9-E323, apply the following design requirements, as applicable:
   a. Include the power source and power components in construction drawings if electricity or another type of power is necessary for facility operation;
   b. If a hydraulic analysis is required under subsection (E), perform the analysis based on the location and dimensions of the bottom and sidewall surfaces of the disposal works that are identified in the design documentation;
   c. Design components, piping, ports, seals, and appurtenances to withstand installation loads, internal and external operational loads, and buoyant forces. Design ports for resistance against movement, and cap or cover openings for protection from damage and entry by rodents, mosquitoes, flies, or other organisms capable of transporting a disease-causing organism;
   d. Design tanks, liners, ports, seals, piping to and within the facility, and appurtenances for watertightness under all operational conditions;
   e. Provide adequate storage capacity above high operating level to:
      i. Accommodate a 24-hour power or pump outage, and
      ii. Contain wastewater that is incompletely treated or cannot be released by the disposal works to the native soil;
   f. If a fixed media process is used, provide in the construction drawings the media material, installation specification, media configuration, and wastewater loading rate of the media at the daily design flow;
   g. Provide a fail-safe wastewater control or operational process, if required by the general permit to prevent discharge of inadequately treated wastewater; and
   h. Reference design. If using a reference design on file with the Department, indicate the reference design within the information submitted with the Notice of Intent to Discharge.

C. Setbacks. The following setbacks apply unless the Department:
1. Specifies alternative setbacks under Article 3, Part E of this Chapter;
2. Approves a different setback under the procedure specified in subsection (G); or
3. Establishes a more stringent setback on a site- or area-specific basis to ensure compliance with water quality standards.

Features Requiring Setbacks	Setback For An On-Site Wastewater Treatment Facility, Including Reserve Area (In Feet)	Special Provisions
1. Building	10	Includes porches, decks (including pool decks), and steps (covered or uncovered), breezeways, roofed patios, carports, covered walks, and similar structures and appurtenances.
2. Property line shared with any adjoining lot or parcel not served by a common drinking water system* or an existing water well	50	A person may reduce the setback to a minimum of 5 feet from the property line if: a. The owners of any affected undeveloped adjacent properties agree, as evidenced by an appropriately recorded document, to limit the location of any new well on their property to at least 100 feet from the proposed treatment works and primary and reserve disposal works; and b. The arrangements and documentation are approved by the Department.
3. All other property lines	5	None
4. Public or private water supply well	100	None
5. Perennial or intermittent stream	100	Measured horizontally from the high water line of the peak streamflow from a 10-year, 24-hour rainfall event.
6. Lake, reservoir, or canal	100	Measured horizontally from the high water line from a 10-year, 24-hour rainfall event at the lake or reservoir and measured horizontally from the edge of the canal.
7. Drinking water intake from a surface water source (includes an open water body, downslope spring or a well tapping streamside saturated alluvium)	200	Measured horizontally from the on-site wastewater treatment facility to the structure or mechanism for withdrawing raw water such as a pipe inlet, grate, pump, intake or diversion box, spring box, well, or similar structure.
8. Wash or drainage easement with a drainage area of more than 20 acres	50	Measured horizontally from the nearest edge of the defined natural channel bank or drainage easement boundary. A person may reduce the setback to 25 feet if natural or constructed erosion protection is approved by the appropriate flood plain administrator.
9. Water main or branch water line	10	None
10. Domestic service water line (including domestic water holding tanks)	5	Measured horizontally between the water line and the wastewater pipe, except that the following are allowed: a. A water line may cross above a wastewater pipe if the crossing angle is between 45 and 90 degrees and the vertical separation distance is 1 foot or more. b. A water line may parallel a wastewater pipe with a horizontal separation distance of 1 foot to 5 feet if the bottom of the water line is 1 foot or more above the top of the wastewater pipe and is in a separate trench or on a bench in the same trench.

11. Downslopes or cut banks greater than 15 percent, culverts, and ditches from:		
a. Treatment works components	10	Measured horizontally from the bottom of the treatment works component to the closest point of daylighting on the surface.
b. Trench, bed, chamber technology, or gravelless trench with:		Measured horizontally from the bottom of the lowest point of the disposal pipe or drip lines, as applicable, to the closest point of daylighting on the surface.
i. No limiting subsurface condition specified in R18-9-A310(D)(2),	20	
ii. A limiting subsurface condition.	50	
c. Subsurface drip lines.	3	Measured horizontally from the bottom of the lowest point of the disposal pipe or drip lines, as applicable, to the closest point of daylighting on the surface.
12. Driveway	5	Measured horizontally to the nearest edge of an on-site wastewater treatment facility excavation. A person may place a properly reinforced and protected wastewater treatment facility, except for disposal works, at any location relative to a driveway if access openings, risers, and covers carry the design load and are protected from inflow.
13. Swimming pool excavation	5	Except if soil loading or stability concerns indicate the need for a greater separation distance.
14. Easement (except drainage easement)	5	None
15. Earth fissures	100	None
* A "common drinking water system" means a system that currently serves or is under legal obligation to serve the property and may include a drinking water utility, a well-sharing agreement, or other viable water supply agreement.		

D. Soil absorption rate (SAR) and disposal works sizing.

1. An applicant shall determine the soil absorption area by dividing the design flow by the applicable soil absorption rate. If soil characterization and percolation test methods yield different SAR values or if multiple applications of the same approach yield different values, the designer of the disposal works shall use the lowest SAR value unless a higher SAR value is proposed and justified to the Department's satisfaction in the Notice of Intent to Discharge.
2. The SAR used to calculate disposal works size for systems described in R18-9-E302 is as follows:
   a. The SAR by percolation testing as described in R18-9-A310(F) or (G), as applicable, is determined as follows:

Percolation Rate from Percolation Test (minutes per inch)	**SAR, Trench, Chamber, and Pit (gal/day/ft^2)**	**SAR, Bed (gal/day/ft^2)**
Less than 1.00	A site-specific SAR is required	A site-specific SAR is required
1.00 to less than 3.00	1.20	0.93
3.00	1.10	0.73
4.00	1.00	0.67

60.0+ to 120	0.20	0.13
Greater than 120	A site-specific SAR is required	A site-specific SAR is required

b. The SAR using the soil evaluation method described in R18-9-A310(E) is determined by answering the questions in the following table. The questions are read in sequence starting with "A." The first "yes" answer determines the SAR. A seepage pit is required to determine percolation rate under the procedure described in R18-9-A310(G) and would only use this table to augment the percolation test results, if appropriate.

Sequence of Soil Characteristics Questions	**SAR, Trench, Chamber, and Pit gal/day/ft^2**	**SAR, Bed gal/day/ft^2**
A. Is the horizon gravelly coarse sand or coarser?	A site-specific SAR is required	A site-specific SAR is required
B. Is the structure of the horizon moderate or strongly platy?	A site-specific SAR is required	A site-specific SAR is required
C. Is the texture of the horizon sandy clay loam, clay loam, silty clay loam, or finer and the soil structure weak platy?	A site-specific SAR is required	A site-specific SAR is required
D. Is the moist consistence stronger than firm or any cemented class?	A site-specific SAR is required	A site-specific SAR is required
E. Is the texture sandy clay, clay, or silty clay of high clay content and the structure massive or weak?	A site-specific SAR is required	A site-specific SAR is required
F. Is the texture sandy clay loam, clay loam, silty clay loam, or silt loam and the structure massive?	A site-specific SAR is required	A site-specific SAR is required
G. Is the texture of the horizon loam or sandy loam and the structure massive?	0.20	0.13
H. s the texture sandy clay, clay, or silty clay of low clay content and the structure moderate or strong?	0.20	0.13
I. Is the texture sandy clay loam, clay loam, or silty clay loam and the structure weak?	0.20	0.13
J. Is the texture sandy clay loam, clay loam, or silty clay loam and the structure moderate or strong?	0.40	0.27
K. Is the texture sandy loam, loam, or silty loam and the structure weak?	0.40	0.27
L. Is the texture sandy loam, loam, or silt loam and the structure moderate or strong?	0.60	0.40
M. Is the texture fine sand, very fine sand, loamy fine sand, or loamy very fine sand?	0.40	0.27
N. Is the texture loamy sand or sand?	0.80	0.53
O. Is the texture coarse sand?	1.20	A site-specific SAR is required

c. If the percolation rate determined under R18-9-A310(F) or (G), whichever is applicable, is a value that lies between two consecutive percolation rate values listed in subsection (2)(a), the applicant must use the higher of the two listed percolation rates to obtain the most conservative SAR.

3. For an on-site wastewater treatment facility described in a general permit other than R18-9-E302, the SAR is dependent on the ability of the facility to reduce the level of TSS and BOD_5 and is calculated using the following formula:

$$SAR_a = \left[\left(\frac{11.39}{\sqrt[3]{TSS + BOD_5}} - 1.87\right) SAR^{1.13} + 1\right] SAR$$

a. "SAR_a" is the adjusted soil absorption rate for disposal works design in gallons per day per square foot,

b. "TSS" is the total suspended solids in wastewater delivered to the disposal works in milligrams per liter,

c. "BOD_5" is the five-day biochemical oxygen demand of wastewater delivered to the disposal works in milligrams per liter, and

d. "SAR" is the soil absorption rate for septic tank effluent determined by the subsurface characterization method described in R18-9-A310.

4. An applicant shall ensure that the facility is designed so that the area of the intended installation is large enough to allow for construction of the facility and for future replacement or repair and is at least as large as the following:

a. For a dwelling, a primary area for the disposal works sized according to subsection (D)(1) and a reserve area of 100 percent of the primary area, excluding the footprint of the treatment works. A reserve area is not required for a lot in a subdivision approved before 1974 if the lot conforms to its original approved configuration;

b. For other than a dwelling, a primary area for the disposal works sized according to subsection (D)(1) and a reserve area of 100 percent of the primary area, excluding the footprint of the treatment works.

5. An applicant shall ensure that the subsurface disposal works is designed to achieve the design flow established in R18-9-A309(B)(3) through proper hydraulic function, including conditions of seasonally cold and wet weather.

E. Vertical separation distances.

1. Minimum vertical separation to the seasonal high water table for a disposal works described in R18-9-E302 receiving septic tank effluent. For a disposal works described in R18-9-E302 receiving septic tank effluent at a facility where the septic tank and disposal system described in R18-9-E302 is the sole method of treatment and disposal of wastewater, the minimum vertical separation distance between the lowest point in the disposal works and the seasonal high water table is dependent on the soil absorption rate and is determined as follows:

Soil Absorption Rate (gallons per day per square foot)			**Minimum Vertical Separation Between The Bottom Of The Disposal Works And The Seasonal High Water Table (feet)**	
Trench and Chamber	Bed	Seepage Pit	Trench, Chamber, and Bed	Seepage Pit
1.20+	0.93+	1.20+	Not allowed for septic tank effluent	Not Allowed
0.63+ to 1.20	0.42 to 0.93	0.63+ to 1.20	10	60
0.20 to 0.63	0.13 to 0.42	0.36 to 0.63	5	60
Less than 0.20	Less than 0.13	Less than 0.36	Not allowed for septic tank effluent	Not Allowed

2. Minimum vertical separation to the seasonal high water table for treatment and disposal works technologies described in R18-9-E303 through R18-9-E322. If the minimum vertical separation distance to the seasonal high water table for a disposal works receiving septic tank effluent specified in subsection (E)(1) is not met, the applicant shall comply with the following:

a. Employ one or more technologies described in R18-9-E303 through R18-9-E322 to achieve a reduced concentration of harmful microorganisms, expressed as total coliform in colony forming units per 100 milliliters (cfu/100 ml) delivered to native soil at the bottom of the disposal works. The applicant shall use the following table to select works that achieve a reduced total coliform concentration corresponding to the available vertical separation distance between the bottom of the disposal works and the seasonal high water table:

Available Vertical Separation Distance Between the Bottom of The Disposal Works and the Seasonal High Water Table (feet)		**Maximum Allowable Total Coliform Concentration, 95th Percentile, Delivered to Natural Soil by the Disposal Works (Log_{10} of coliform concentration in cfu per 100 milliliters)**
For SAR*, 0.20 to 0.63	**For SAR*, 0.63+ to 1.20**	
5	10	8**
4	8	7
3.5	7	6
3	6	5
2.5	5	4
2	4	3
1.5	3	2
1	2	1
0	0	0***

* Soil absorption rate from percolation testing or soil characterization, in gallons per square foot per day.
** Nominal value for a standard septic tank and disposal field (10^8 colony forming units per 100 ml).
*** Nominally free of coliform bacteria.

b. Include a hydraulic analysis with the Notice of Intent to Discharge, based on the dimensions of the absorption surfaces specified in R18-9-A312(B)(4)(b), showing that the soil is sufficiently permeable to conduct wastewater downward and laterally without surfacing for the site conditions at the disposal works.

3. Vertical separation from a subsurface limiting condition described in R18-9-A310(D)(2)(d) that may cause or contribute to surfacing of wastewater. If a subsurface limiting condition described in R18-9-A310(D)(2)(d) exists at the location of the disposal works, the applicant shall ensure that the design for the on-site wastewater treatment facility meets one of the following:
   a. A zone of acceptable native soil with the following characteristics exists between the bottom of the disposal works and the top of the subsurface limiting condition:
      i. The zone of soil is at least 4 feet thick, and
      ii. The zone of soil is sufficiently permeable to conduct wastewater released from the disposal works vertically downward and laterally without causing surfacing of the wastewater as documented by a hydraulic analysis submitted with the Notice of Intent to Discharge that is based on the dimensions of the absorption surfaces specified in R18-9-A312(B)(4)(b);
   b. The subsurface limiting condition is thin enough to allow placement of a disposal works into acceptable native soil beneath the subsurface limiting condition if the following criteria are met:
      i. The bottom of the subsurface limiting condition is not deeper than 10 feet below the land surface, and
      ii. The vertical separation distance from the bottom of the disposal works to the seasonal high water table complies with subsection (E)(1) or (2), as applicable; or
   c. If the disposal works is placed above the subsurface limiting condition and the depth to the subsurface limiting condition is less than 4 feet below the bottom of the disposal works, the design for the on-site wastewater treatment facility shall comply with all of the following:
      i. Employ one or more technologies described in R18-9-E303 through R18-9-E322 to achieve a reduced concentration of harmful microorganisms, expressed as total coliform in colony forming units per 100 milliliters (cfu/100 ml), delivered to acceptable native soil at the bottom of the disposal works, as follows:

Available Vertical Separation Distance from the Bottom of the Disposal Works to the Subsurface Limiting Condition (feet)	**Maximum Allowable Total Coliform Concentration, 95th Percentile, Delivered to Acceptable Native Soil by the Disposal Works (Log_{10} of coliform concentration in cfu per 100 milliliters)**

2	4
1.5	0*
1	0*
0.5	0*
0	0*

* Nominally free of coliform bacteria.

      ii. Include a hydraulic analysis with the Notice of Intent to Discharge, based on the location and dimensions of the absorption surfaces specified in R18-9-A312(B)(4)(b), showing that the soil is sufficiently permeable to conduct wastewater vertically downward and laterally without surfacing for the site conditions at the disposal works; and
      iii. If a disinfection device under R18-9-E320 is proposed but is not used with surface disposal of wastewater under R18-9-E321 or "Category A" drip irrigation disposal under R18-9-E322, provide a justification with the Notice of Intent to Discharge stating why the selected type of disposal works is favored over disposal under R18-9-E321 or R18-9-E322.
4. Vertical separation from a subsurface limiting condition described in R18-9-A310(D)(2)(e) that promotes accelerated downward movement of insufficiently treated wastewater. If a subsurface limiting condition described in R18-9-A310(D)(2)(e) exists at the location of the proposed disposal works, the applicant shall ensure that the design for the on-site wastewater treatment facility meets one of the following:
   a. A zone of naturally occurring soil with the following characteristics exists between the bottom of the disposal works and the top of the subsurface limiting condition:
      i. The zone of soil is at least 2 feet thick, and
      ii. The SAR of the soil is not less than 0.20 gallons per day per square foot nor more than 1.20 gallons per day per square foot; or
   b. The on-site wastewater treatment facility employs one or more technologies described in R18-9-E303 through R18-9-E322 that produces treated wastewater that meets a total coliform concentration of 1,000,000 ($Log_{10}6$) colony forming units per 100 milliliters, 95th percentile.

F. Materials and manufactured system components.
1. Materials. An applicant shall use aggregate if no specification for disposal works material is provided in this Article.
2. Manufactured components. If manufactured components are used, an applicant shall design, install, and operate the on-site wastewater treatment facility following the manufacturer's specifications. The applicant shall ensure that:
   a. Treatment and containment components, mechanical equipment, instrumentation, and controls have mon-

itoring, inspection, access and cleanout ports or covers, as appropriate, for monitoring and service;

b. Treatment and containment components, pipe, fittings, pumps, and related components and controls are durable, watertight, structurally sound, and capable of withstanding stress from installation and operational service; and

c. Distribution lines for disposal works are constructed of perforated high density polyethylene pipe, perforated ABS pipe, perforated PVC pipe, or other pipe material, if the pipe is suitable for wastewater disposal use and sufficient openings are available for distribution of the wastewater into the trench or bed area.

3. Electronic components. When electronic components are used, the applicant shall ensure that:

a. The component connections are compliant with the electrical code encompassed in the local building codes applicable in the county in which the facility is installed, except as required for a pressure distribution system under R18-9-E304(D)(2)(e);

b. Instructions and a wiring diagram are mounted on the inside of a control panel cover;

c. The control panel is equipped with a multimode operation switch, red alarm light, buzzer, and reset button;

d. The multimode operation switch operates in the automatic position for normal system operation; and

e. An anomalous condition is indicated by a glowing alarm light and sounding buzzer. The continued glowing of the alarm light after pressing the reset button shall signal the need for maintenance or repair of the system at the earliest practical opportunity.

4. If a conflict exists between this Article and the manufacturer's specifications, the requirements of this Article apply. Except for the requirements in subsection (D) and (E), which always apply, if the conflict voids a manufacturer's warranty, the applicant may submit a request under subsection (G) justifying use of the manufacturer's specifications.

G. Alternative design, setback, installation, or operational features. When an applicant submits a Notice of Intent to Discharge, the applicant may request that the Department review and approve a feature of improved or alternative technology, design, setback, installation, or operation that differs from a general permit requirement in this Article. Designs incorporating alternative features already approved in a current listing on the "proprietary and other reviewed product list" pursuant to R18-9-A309(E) do not need additional approval under this subsection for only those specific alternative features already approved in the proprietary products listing.

1. The applicant shall make the request for an improved or alternative feature of technology, design, setback, installation, or operation on a form provided by the Department and include:

a. A description of the requested change;

b. A citation to the applicable feature or technology, design, setback, installation, or operational requirement for which the change is being requested; and

c. Justification for the requested change, including any necessary supporting documentation.

2. The applicant shall submit the appropriate fee specified under 18 A.A.C. 14 for each requested change. For purposes of calculating the fee, a requested change that is applied multiple times in a similar manner throughout the facility is considered a single request if submitted for concurrent review.

3. The applicant shall provide sufficient information for the Department to determine that the change achieves equal or better performance compared with the general permit requirement, or addresses site or system conditions more satisfactorily than the requirements of this Article.

4. The Department shall review and may approve the request for change.

5. The Department shall deny the request for the change if the change will adversely affect other permittees or cause or contribute to a violation of an Aquifer Water Quality Standard.

6. The Department shall deny the request for the change if the change:

a. Fails to achieve equal or better performance compared to the general permit requirement;

b. Fails to address site or system conditions more satisfactorily than the general permit requirement;

c. Is insufficiently justified based on the information provided in the submittal;

d. Requires excessive review time, research, or specialized expertise by the Department to act on the request; or

e. For any other justifiable cause.

7. The Department may approve a reduced setback for a facility authorized to discharge under one or more of the general permits in R18-9-E302 through R18-9-E323, either separately or in combination, if the applicant additionally demonstrates at least one of the following:

a. The treatment performance is significantly better than that provided under R18-9-E302(B),

b. The wastewater loading rate is reduced, or

c. Surface or subsurface characteristics ensure that reduced setbacks are protective of human health or water quality.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended to correct a manifest typographical error in subsection (E)(1) (Supp. 01-1). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A313. Facility Installation, Operation, and Maintenance for On-site Wastewater Treatment Facilities

A. Facility installation. In addition to installation requirements in the general permit, the applicant shall ensure that the following tasks are performed, as applicable:

1. The facility is installed as described in design documents submitted with the Notice of Intent to Discharge;

2. Components are installed on a firm foundation that supports the components and operating loads;

3. The site is prepared to protect native soil beneath the soil absorption area and in adjacent areas from compaction, prevent smeared absorption surfaces, minimize disturbances from grubbing, and otherwise preclude damage to the disposal area that would impair performance;

4. Components are protected from damage at the construction site and installed in conformance with the manufacturer's instructions if consistent with this Article;

5. Treatment media are placed to achieve uniform density, prevent differential settling, produce a level inlet surface unless otherwise specified by the manufacturer, and avoid introduction of construction contaminants;
6. Backfill is placed to prevent damage to geotextile, liners, tanks, and other components;
7. Soil cover is shaped to shed rainfall away from the backfill areas and prevent ponding of runoff; and
8. Anti-buoyancy measures are implemented during construction if temporary saturated backfill conditions are anticipated during construction.

B. Operation and maintenance. In addition to operation and maintenance requirements in the general permit or specified in the operation and maintenance manual, the permittee shall ensure that the following tasks are performed, as applicable:

1. Pump accumulated residues, inspect and clean wastewater treatment and distribution components, and manage residues to protect human health and the environment;
2. Clean, backwash, or replace effluent filters according to the manufacturer's instructions, and manage residues to protect human health and the environment;
3. Inspect and clean the effluent baffle screen and pump tank, and properly dispose of cleaning residue;
4. Clean the dosing tank effluent screen, pump switches, and floats, and properly dispose of cleaning residue;
5. Flush lateral lines and return flush water to the pretreatment headworks;
6. Inspect, remove and replace, if necessary, and properly dispose of filter media;
7. Rod pressurized wastewater delivery lines and secondary distribution lines (for dosing systems), and return cleaning water to the pretreatment headworks;
8. Inspect and clean pump inlets and controls and return cleaning water to the pretreatment headworks;
9. Implement corrective measures if anomalous ponding, dryness, noise, odor, or differential settling is observed;
10. Inspect and monitor inspection and access ports, as applicable, to verify that operation is within expected limits for:
    a. Influent wastewater quality;
    b. The pressurized dosing system;
    c. The aggregate infiltration bed and mound system;
    d. Wastewater delivery and the engineered pad;
    e. The pressurized delivery system, filter, underdrain, and native soil absorption system;
    f. Saturation condition status in peat and other media; and
    g. Treatment system components;
11. Inspect tanks, liners, ports, seals, piping, and appurtenances for watertightness under all operational conditions;
12. Manage vegetation in areas that contain components subject to physical impairment or damage due to root invasion or animals;
13. Maintain drainage, berms, protective barriers, cover materials, and other features; and
14. Maintain the usefulness of the reserve area to allow for repair or replacement of the on-site wastewater treatment facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A314. Septic Tank Design, Manufacturing, and Installation for On-site Wastewater Treatment Facilities

A person shall not install a septic tank in an on-site wastewater treatment facility unless the tank meets the following requirements:

1. The tank is:
    a. Designed to produce a clarified effluent and provide adequate space for sludge and scum accumulations;
    b. Watertight and constructed of solid durable materials not subject to excessive corrosion or decay;
    c. Manufactured with at least two compartments unless two separate structures are placed in series. The tank is designed so that:
        i. The inlet compartment of any septic tank not placed in series is nominally 67 percent to 75 percent of the total required capacity of the tank,
        ii. Septic tanks placed in series are considered a unit and meet the same criteria as a single tank,
        iii. The liquid depth of the septic tank is at least 42 inches, and
        iv. A septic tank of 1000 gallon capacity is at least 8 feet long and the tank length of septic tanks of greater capacity is at least 2 times but not more than 3 times the width;
    d. Manufactured with at least two access openings to the tank interior, each at least 20 inches in diameter. The tank is designed so that:
        i. One access opening is located over the inlet end of the tank and one access opening is located over the outlet end;
        ii. Whenever a first compartment exceeds 12 feet in length, another access opening is provided over the baffle wall; and
        iii. Access openings and risers are constructed to ensure accessibility within 6 inches below finished grade;
    e. Manufactured so that the sewage inlet and wastewater outlet openings are not smaller than the connecting sewer pipe. The tank is designed so that:
        i. The vertical leg of round inlet and outlet fittings is at least 4 inches but not smaller than the connecting sewer pipe, and
        ii. A baffle fitting has the equivalent cross-sectional area of the connecting sewer pipe and not less than a 4 inch horizontal dimension if measured at the inlet and outlet pipe inverts;
    f. Manufactured so that the inlet and outlet pipe or baffle extends 4 inches above and at least 12 inches below the water surface when the tank is installed according to the manufacturer's instructions consistent with this Chapter. The invert of the inlet pipe is at least 2 inches above the invert of the outlet pipe;
    g. Manufactured so that the inlet and outlet fittings or baffles and compartment partitions have a free vent area equal to the required cross-sectional area of the connected sewer pipe to provide free ventilation above the water surface from the disposal works or seepage pit through the septic tank, house sewer, and stack to the outer air;
    h. Manufactured so that the open space extends at least 9 inches above the liquid level and the cover of the

septic tank is at least 2 inches above the top of the inlet fitting vent opening;

i. Manufactured so that partitions or baffles between compartments are of solid durable material (wooden baffles are prohibited) and extend at least 4 inches above the liquid level. The open area of the baffle shall be between one and 2 times the open area of the inlet pipe or horizontal slot and located at the midpoint of the liquid level of the baffle. If a horizontal slot is used, the slot shall be no more than 6 inches in height;

j. Structurally designed to withstand all anticipated earth or other loads. The tank is designed so that:

i. All septic tank covers are capable of supporting an earth load of 300 pounds per square foot; and

ii. If the top of the tank is greater than 2 feet below finish grade, the septic tank and cover are capable of supporting an additional load of 150 pounds per square foot for each additional foot of cover;

k. Manufactured or installed so that the influent and effluent ends of the tank are clearly and permanently marked on the outside of the tank with the words "INLET" or "IN," and "OUTLET" or "OUT," above or to the right or left of the corresponding openings; and

l. Clearly and permanently marked with the manufacturer's name or registered trademark, or both, the month and year, or Julian date, of manufacture, the maximum recommended depth of earth cover in feet, and the design liquid capacity of the tank. The tank is manufactured to protect the markings from corrosion so that they remain permanent and readable for the operational life of the tank.

2. Materials used to construct or manufacture septic tanks.

a. A septic tank cast-in-place at the site of use shall be protected from corrosion by coating the tank with a bituminous coating, by constructing the tank using a concrete mix that incorporates 15 percent to 18 percent fly ash, or by any other Department-approved means. The tank is designed so that:

i. The coating extends at least 4 inches below the wastewater line and covers all of the internal area above that point; and

ii. A septic tank cast-in-place complies with the "Building Code Requirements for Structural Concrete and Commentary ACI 318-02/318R-02 (2002)," and the "Code Requirements for Environmental Engineering Concrete Structures and Commentary, ACI 350/350R-01 (2001)," published by the American Concrete Institute. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington Street, Phoenix, AZ 85007 or may be obtained from American Concrete Institute, P.O. Box 9094, Farmington Hills, MI 48333-9094.

b. A steel septic tank shall have a minimum wall thickness of No. 12 U.S. gauge steel and be protected from corrosion, internally and externally, by a bituminous coating or other Department-approved means.

c. A prefabricated concrete septic tank shall meet the "Standard Specification for Precast Concrete Septic Tanks, C1227-20," published by the American Society for Testing and Materials. This information is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington Street, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International West.

d. A septic tank manufactured using fiberglass or thermoplastic shall meet the requirements set forth in "Prefabricated Septic Tanks – IAPMO/ANSI Z1000-2019," published by the International Association of Plumbing and Mechanical Officials. This information is incorporated by reference, does not include any later amendments or editions of the incorporated material, and may be viewed at the Arizona Department of Environmental Quality, 1110 W. Washington Street, Phoenix, AZ 85007 or obtained from International Association of Plumbing and Mechanical Officials, 4755 E. Philadelphia Street, Ontario, CA 917761.

3. Conformance with design, materials, and manufacturing requirements.

a. If any conflict exists between this Article and the information incorporated by reference in subsection (2), the requirements of this Article apply.

b. The Department may approve use of alternative construction materials under R18-9-A312(G). Tanks constructed of wood, block, or bare steel are prohibited.

c. The Department may inspect septic tanks at the site of manufacturing to verify compliance with subsections (1) and (2).

d. The septic tank sale documentation includes:

i. A certificate attesting that the septic tank conforms with the design, materials, and manufacturing requirements in subsections (1) and (2); and

ii. Instructions for handling and installing the septic tank.

4. The septic tank's daily design flow is determined as follows:

a. For a single family dwelling:

i. The design liquid capacity of the septic tank and the septic tank's daily design flow are determined based on the number of bedrooms and fixture count as follows:

Criteria for Septic Tank Size and Design Flow			
Number of Bedrooms	**Fixture Count**	**Minimum Design Liquid Capacity (gallons)**	**Design Flow (gal/day)**

1	7 or less	1000	150
	More than 7	1000	300
2	14 or less	1000	300
	More than 14	1000	450
3	21 or less	1000	450
	More than 21	1250	600
4	28 or less	1250	600
	More than 28	1500	750
5	35 or less	1500	750
	More than 35	2000	900
6	42 or less	2000	900
	More than 42	2500	1050
7	49 or less	2500	1050
	More than 49	3000	1200
8	56 or less	3000	1200
	More than 56	3000	1350

ii. Fixture count is determined as follows:

Residential Fixture Type	Fixture Units	Residential Fixture Type	Fixture Units
Bathtub	2	Sink, bar	1
Bidet	2	Sink, kitchen (including dishwasher)	2
Clothes washer	2	Sink, service	3
Dishwasher (Separate from kitchen)	2	Utility tub or sink	2
Lavatory, single	1	Water closet, 1.6 gallons per flush (gpf)	3
Lavatory, double in master bedroom	1	Water closet, >1.6 to 3.2 gpf	4
Shower, single stall	2	Water closet, greater than 3.2 gpf	6

b. For other than a single family dwelling, the design liquid capacity of a septic tank in gallons is 2.1 times the daily design flow into the tank as determined from Table 1, Unit Design Flows. If the wastewater strength exceeds that of typical sewage, additional tank volume is required.

c. A person may place two septic tanks in series to meet the septic tank design liquid capacity requirements if the capacity of the first tank is at least 67 percent of the total required tank capacity and the capacity of the second tank is at least 33 percent of the total required tank capacity.

5. The following requirements regarding new or replacement septic tank installation apply:
   a. Permanent surface markers for locating the septic tank access openings are provided for maintenance;
   b. A septic tank installed under concrete or pavement has the required access openings extended to grade;
   c. A septic tank effluent filter is installed on the septic tank. The filter shall:
      i. Prevent the passage of solids larger than 1/8 inch in diameter while under two feet of hydrostatic head; and
      ii. Be constructed of materials that are resistant to corrosion and erosion, sized to accommodate hydraulic and organic loading, and removable for cleaning and maintenance; and
   d. The septic tank is tested for watertightness after installation by the water test described in subsections (5)(d)(i) and (5)(d)(ii) and repaired or replaced, if necessary.
      i. The septic tank is filled with clean water, as specified in R18-9-A310(A), to the invert of the outlet and the water left standing in the tank for 24 hours and:
         (1) After 24 hours, the tank is refilled to the invert, if necessary;
         (2) The initial water level and time is recorded; and
         (3) After one hour, water level and time is recorded.
      ii. The tank passes the water test if the water level does not drop over the one-hour period. Any visible leak of flowing water is considered a failure. A damp or wet spot that is not flowing is not considered a failure.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A315. Interceptor Design, Manufacturing, and Installation for On-site Wastewater Treatment Facilities

A. Interceptor requirement. An applicant shall ensure that an interceptor as required by R18-9-A309(A)(7)(c) or necessary due to excessive amounts of grease, garbage, sand, or other

wastes in the sewage is installed between the sewage source and the on-site wastewater treatment facility.

B. Interceptor design. An applicant shall ensure that:

1. An interceptor has not less than two compartments with fittings designed for grease retention and capable of removing excessive amounts of grease, garbage, sand, or other similar wastes. An interceptor may not accept human excreta or toilet wastewater. Applicable structural and materials requirements prescribed in R18-9-A314 apply;
2. Interceptors are located as close to the source as possible and are accessible for servicing. The applicant shall ensure that access openings for servicing are at grade level and gas-tight;
3. The interceptor size for grease and garbage from non-residential kitchens is calculated using by the following equation: Interceptor Size (in gallons) = M × F × T × S.
   a. "M" is the number of meals per peak hour;
   b. "F" is the applicable waste flow rate from Table 1, Unit Design Flows.
   c. "T" is the estimated retention time:
      i. Commercial kitchen waste, dishwasher or disposal: 2.5 hours; or
      ii. Single service kitchen with utensil wash disposal: 1.5 hours;
   d. "S" is the estimated storage factor:
      i. Fully equipped commercial kitchen, 8-hour operation: 1.0;
      ii. Fully equipped commercial kitchen, 16-hour operation: 2.0;
      iii. Fully equipped commercial kitchen, 24-hour operation: 3.0; or
      iv. Single service kitchen, 1.5;
4. The interceptor size for silt and grease from laundries and laundromats is calculated using the following equation: Interceptor Size (in gallons) = M × C × F × T × S.
   a. "M" is the number of machines;
   b. "C" is the machine cycles per hour (assume 2);
   c. "F" is the waste flow rate from Table 1, Unit Design Flows;
   d. "T" is the estimated retention time (assume 2); and
   e. "S" is the estimated storage factor (assume 1.5 that allows for rock filter).

C. The applicant may calculate the size of an interceptor using different factor values than those given in subsections (B)(3) and (4) based on the values justified by the applicant in the Notice of Intent to Discharge submitted to the Department for the on-site wastewater treatment facility.

D. The Department may require installation of a sampling box if the volume or characteristics of the waste will impair the performance of the on-site wastewater treatment facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-A316. Transfer of Ownership Inspection for On-site Wastewater Treatment Facilities

A. Conforming with this Section satisfies the Notice of Transfer requirements under R18-9-A304.

B. Within six months before the date of property transfer, the person who is transferring a property served by an on-site wastewater treatment facility shall retain an inspector to perform a transfer of ownership inspection of the on-site wastewater treatment facility who meets the following qualifications:

1. Possesses working knowledge of the type of facility and the inspection process;
2. Holds a certificate of training from a course recognized by the Department as sufficiently covering the information specified in this Section by July 1, 2006; and
3. Holds a license in one of the following categories:
   a. An Arizona-registered engineer;
   b. An Arizona-registered sanitarian;
   c. An owner of a vehicle with a human excreta collection and transport license issued under 18 A.A.C. 13, Article 11 or an employee of the owner of the vehicle;
   d. A contractor licensed by the Registrar of Contractors in one of the following categories:
      i. Residential license B-4 or C-41;
      ii. Commercial license A, A-12, or L-41; or
      iii. Dual license KA or K-41;
   e. A wastewater treatment plant operator certified under 18 A.A.C 5, Article 1; or
   f. A person qualifying under another category designated by the Department.

C. The inspector shall complete a Report of Inspection on a form approved by the Department, sign it, and provide it to the person transferring the property. The Report of Inspection shall:

1. Address the physical and operational condition of the on-site wastewater treatment facility and describe observed deficiencies and repairs completed, if any;
2. Indicate that each septic tank or other wastewater treatment container on the property was pumped or otherwise serviced to remove, to the maximum extent possible, solid, floating, and liquid waste accumulations, or that pumping or servicing was not performed for one of the following reasons:
   a. A Discharge Authorization for the on-site wastewater treatment facility was issued and the facility was put into service within 12 months before the transfer of ownership inspection,
   b. Pumping or servicing was not necessary at the time of the inspection based on the manufacturer's written operation and maintenance instructions, or
   c. No accumulation of floating or settled waste was present in the septic tank or wastewater treatment container; and
3. Indicate the date the inspection was performed.

D. Before the property is transferred, the person transferring the property shall provide to the person to whom the property is transferred:

1. The completed Report of Inspection; and
2. Documents in the person's possession relating to permitting, operation, and maintenance of the on-site wastewater treatment facility.

E. The person to whom the property is transferred shall complete a Notice of Transfer on a form approved by the Department and send the form with the applicable fee specified in 18 A.A.C. 14 within 15 calendar days after the property transfer to:

1. The Department for transfer of a property with an on-site wastewater treatment facility for which construction was completed before January 1, 2001; or

2. The health or environmental agency delegated by the Director to administer the on-site wastewater treatment facility program for transfer of a property with an on-site wastewater treatment facility constructed on or after January 1, 2001.

F. If the Department issued a Discharge Authorization for the on-site wastewater treatment facility but the facility was not put into service before the property transfer, an inspection of the facility is not required and the transferee shall complete the Notice of Transfer form as specified in subsection (E).

G. Effective date.
1. The owner of an on-site wastewater treatment facility operating under a Type 4 General Permit shall comply with this Section by November 12, 2005.
2. The owner of any on-site wastewater treatment facility other than a facility identified in subsection (G)(1) shall comply with this Section by July 1, 2006.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2002 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-A317. Nitrogen Management Area

A. The Director may designate a new Nitrogen Management Area to control groundwater pollution by sources of nitrogen regulated by Title 49, Chapter 2, Article 3 of the Arizona Revised Statutes and not covered under an individual permit, modify the boundaries or requirements of a Nitrogen Management Area, or rescind designation of a Nitrogen Management Area.
1. If existing conditions or trends in nitrogen loading to an aquifer will cause or contribute to an exceedance of the Aquifer Water Quality Standard for nitrate at a point or points of current or reasonably foreseeable use of the aquifer, the Director shall use the following criteria to determine whether to designate the area as a Nitrogen Management Area:
   a. Population of the area;
   b. The degree to which the area is unsewered;
   c. Gross areal nitrogen loading, calculated as the amount of nitrogen discharged into the subsurface by use of on-site wastewater treatment facilities, divided by the land area under consideration for designation as a Nitrogen Management Area;
   d. Population growth rate of area;
   e. Existing contamination of groundwater by nitrogen species;
   f. Existing and potential impact to groundwater by sources of nitrogen other than on-site wastewater treatment facilities;
   g. Characteristics of the vadose zone and aquifer;
   h. Location, number, and areal extent of existing and potential sources of nitrogen;
   i. Location and characteristics of existing and potential drinking water supplies; and
   j. Any other information relevant to determining the severity of actual or potential nitrogen impact on the aquifer.
2. The Director may modify the boundaries or requirements of a Nitrogen Management Area or rescind designation of a Nitrogen Management Area based on:
   a. A material change to one or more criterion specified in subsection (A)(1); or
   b. The adoption by a local agency of a master plan to substantially sewer the area as soon as possible, but with a completion deadline within 10 years, unless a completion deadline of more than 10 years is approved by the Director.

B. Preliminary designation, modification, or rescission.
1. The Director shall provide a report to the mayors and members of the Board of Supervisors of all towns, cities, and counties and the directors of all sanitary districts affected by the Department's proposed action to designate, modify, or rescind a Nitrogen Management Area as follows:
   a. If the Department proposes to designate a Nitrogen Management Area, the Department shall provide a report discussing each criterion specified in subsection (A)(1).
   b. If the Department proposes to modify the boundaries or requirements of a Nitrogen Management Area or rescind the designation of a Nitrogen Management Area, the Department shall provide a report discussing applicable criteria in subsections (A)(1) and (2).
2. The town, city, county, or sanitary district receiving the Director's report may provide written comments to the Department within 120 days to dispute the factual information presented in the report and supply any information supporting the comments.
3. The Director shall evaluate the comments and supporting information obtained under subsection (B)(2) and either designate, modify, or rescind the Nitrogen Management Area or withdraw the proposal.

C. Final designation.
1. If the Director designates or modifies the Nitrogen Management Area, the Department shall:
   a. Issue or modify the Nitrogen Management Area designation and any special provisions established for the area to control groundwater pollution by sources of nitrogen regulated by Title 49, Chapter 2, Article 3 of the Arizona Revised Statutes but not covered under an individual permit. The Department shall provide notice to the mayors and members of the Board of Supervisors of all towns, cities, and counties and the directors of all sanitary districts affected by the determination;
   b. Maintain the designation and a map showing the boundaries of the Nitrogen Management Area at the Arizona Department of Environmental Quality, 1110 West Washington, Phoenix, Arizona 85007 and on the Department's web site at www.azdeq.gov; and
   c. Provide, upon request, a copy of the Nitrogen Management Area designation and a map of the area.
2. If the Director withdraws the preliminary Nitrogen Management Area designation or rescinds the Nitrogen Management Area designation, the Director shall issue a determination stating the decision and post it on the Department's web site at www.azdeq.gov.

D. Nitrogen Management Area requirements. Within a Nitrogen Management Area:
1. The Department shall issue a Construction Authorization, under R18-9-A301(D)(1)(c), for an on-site wastewater treatment facility only if the applicant proposes, in the Notice of Intent to Discharge, to employ one or more of the technologies allowed under R18-9-E302 through R18-9-E322 that achieves a discharge level containing not more than 15 mg/l of total nitrogen.

2. An agricultural operation shall use the best control measure necessary to reduce nitrogen discharge when implementing the best management practices developed under 18 A.A.C. 9, Article 4. The Director may require the owner or operator to reassess the performance of the impoundment liner systems constructed under R18-9-403 before November 12, 2005.
3. A person shall comply with any special provision established for the Nitrogen Management Area, as applicable, for the person's facility.

Historical Note

New Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

PART B. TYPE 1 GENERAL PERMITS

R18-9-B301. Type 1 General Permit

A. A 1.01 General Permit allows any discharge of wash water from a sand and gravel operation, placer mining operation, or other similar activity, including construction, foundation, and underground dewatering, if only physical processes are employed and only hazardous substances at naturally occurring concentrations in the sand, gravel, or other rock material are present in the discharge.

B. A 1.02 General Permit allows any discharge from hydrostatic tests of a drinking water distribution system and pipelines not previously used, if all the following conditions are met:
1. The quality of the water used for the test does not exceed an Aquifer Water Quality Standard or for non-drinking water pipelines, if reclaimed water is used, the reclaimed water meets Class A+ Reclaimed Water Quality Standards under A.A.C. R18-11-303 or Class B+ Reclaimed Water Quality Standards under A.A.C. R18-11-305;
2. The discharge is not to a water of the United States, unless the discharge is under an AZPDES permit; and
3. The test site is restored to its natural grade.

C. A 1.03 General Permit allows any discharge from hydrostatic tests of a pipeline, tank, or appurtenance previously used for transmission of fluid, other than those previously used for drinking water distribution systems, if all the following conditions are met:
1. All liquid discharge is contained in an impoundment lined with flexible geomembrane. The liquid is evaporated or removed from the impoundment and taken to a treatment works or landfill authorized to accept the material within:
   a. 60 days of the hydrostatic test if the liner is 10 mils, or
   b. 180 days of the hydrostatic test if the liner is 30 mils or greater;
2. The liner is placed over a layer, at least 3 inches thick, of well-sorted sand or finer grained material, or over an underliner that provides protection equal to or better than sand or finer grained material and the calculated seepage is less than 550 gallons per acre per day;
3. The liner is removed and disposed of at an approved landfill unless the liner can be reused at another test location without a reduction in integrity;
4. The test site is restored to its natural grade; and
5. If the test waters are removed using a method not specified in subsection (C)(1), including a discharge under an AZPDES permit, the test waters meet Aquifer Water Quality Standards and the specific method is approved by the Department before the discharge.

D. A 1.04 General Permit allows any discharge from a facility that, for water quality sampling, hydrologic parameter testing, well development, redevelopment, or potable water system maintenance and repair purposes, receives water, drilling fluids, or drill cuttings from a well if the discharge is to the same aquifer in approximately the same location from which the water supply was originally withdrawn, or the discharge is under an AZPDES permit.

E. A 1.05 General Permit allows a discharge to an injection well, surface impoundment, and leach line only if the discharge is filter backwash from a potable water treatment system, condensate from a refrigeration unit, overflows from an evaporative cooler, heat exchange system return water, or swimming pool filter backwash and the discharge is less than 1000 gallons per day. The 1.05 General Permit allows a discharge of those sources to a navigable water if the discharge is authorized by an AZPDES permit.

F. A 1.06 General Permit allows the burial of mining industry off-road motor vehicle waste tires at the mine site in a manner consistent with the cover requirements in R18-13-1203.

G. A 1.07 General Permit allows the operation of dockside facilities and watercraft if the following conditions are met:
1. Docks that service watercraft equipped with toilets provide sanitary facilities at dockside for the disposal of sewage from watercraft toilets. No wastewater from sinks, showers, laundries, baths, or other plumbing fixtures at a dockside facility is discharged into waters of the state;
2. Docks that service watercraft have conveniently located toilet facilities for men and women;
3. No boat, houseboat, or other type of watercraft is equipped with a marine toilet constructed and operated to discharge sewage directly or indirectly into a water of the state, nor is any container of sewage placed, left, discharged, or caused to be placed, left, or discharged in or near any waters of the state by a person;
4. Watercraft with marine toilets constructed to allow sewage to be discharged directly into waters of the state are locked and sealed to prevent usage. Chemical or other type marine toilets with approved storage containers are permitted if dockside disposal facilities are provided; and
5. No bilge water or wastewater from sinks, showers, laundries, baths, or other plumbing fixtures on houseboats or other watercraft is discharged into waters of the state.

H. A 1.08 General Permit allows for any earth pit privy, fixed or transportable chemical toilet, incinerator toilet or privy, or pail or can-type privy if allowed by a county health or environmental department under A.R.S. Title 36 or a delegation agreement under A.R.S. § 49-107.

I. A 1.09 General Permit allows:
1. The operation of:
   a. A sewage treatment facility with flows less than 20,000 gallons per day and approved by the Department before January 1, 2001, and
   b. An on-site wastewater treatment facility with flows less than 20,000 gallons per day operating before January 1, 2001;
2. The person who owns or operates a facility under subsections (I)(1)(a) or (b) to operate the facility if the following conditions are met:
   a. The discharge from the facility does not cause or contribute to a violation of a water quality standard;
   b. The owner or operator does not expand the facility to accommodate flows above the design flow or 20,000 gallons per day, whichever is less;

c. The facility only treats typical sewage;
d. The facility does not treat flows from commercial operations using hazardous substances or creating hazardous wastes, as defined in A.R.S. § 49-921(5);
e. The discharge from the facility does not create any environmental nuisance condition listed in A.R.S. § 49-141; or
f. The owner or operator does not alter the treatment or disposal characteristics of the original facility, except as allowed under R18-9-A309(A)(9)(a).

J. A 1.10 General Permit allows the operation of a sewage collection system installed before January 1, 2001 that serves downstream from the point where the daily design flow is 3000 gallons per day or that includes a manhole, force main, or lift station serving more than one dwelling regardless of flow, if:
1. The system complies with the performance standards in R18-9-E301(B),
2. No sewage is released from the sewage collection system to the land surface, and
3. The system is not operating under the 2.05 General Permit.

K. A 1.11 General Permit allows the operation of a sewage collection system that serves upstream from the point where the daily design flow is 3000 gallons per day to the building drains, or a single gravity sewer line conveying sewage from a building drain directly to an interceptor, lateral, or manhole, regardless of daily design flow, if all of the following are met:
1. The system does not cause or contribute to an exceedance of a water quality standard established in 18 A.A.C. 11, Articles 1 and 4;
2. No sewage is released from the sewage collection system to the land surface;
3. No environmental nuisance condition listed in A.R.S. § 49-141 is created;
4. The system does not include a manhole, force main, or lift station serving more than one dwelling;
5. Applicable local administrative requirements for review and approval of design and construction are followed;
6. The performance standards specified in R18-9-E301(B) are met using:
   a. Local building and construction codes,
   b. Relevant design and construction standards specified in R18-9-E301, and
   c. Appropriate operation and maintenance;
7. The system flows directly into one of the following downstream facilities:
   a. An on-site wastewater treatment facility;
   b. A sewage treatment facility operating under an individual permit; or
   c. A sewage collection system operating under a 1.10, 2.05, or 4.01 General Permit; and
8. The system is not operating under a 2.05 General Permit.

L. A 1.12 General Permit allows the discharge of wastewater resulting from washing concrete from trucks, pumps, and ancillary equipment to an impoundment if the following conditions are met:
1. The person holds an AZPDES Construction General Permit authorizing the concrete washout activities;
2. The Stormwater Pollution Prevention Plan required by the Construction General Permit issued according to 18 A.A.C. 9, Article 9, Part C, for the construction activity addresses the concrete washout activities;
3. The vegetation at the soil base of the impoundment is cleared, grubbed, and compacted to uniform density not less than 95 percent. If the impoundment is located above grade, the berms or dikes are compacted to a uniform density not less than 95 percent;
4. If groundwater is less than 20 feet below land surface, the impoundment is lined with a synthetic liner at least 30 mils thick;
5. The impoundment is located at least 50 feet from any storm drain inlet, open drainage facility, or watercourse and 100 feet from any water supply well;
6. The impoundment is designed and operated to maintain adequate freeboard to prevent overflow or discharge of wastewater;
7. The concrete washout wastewater from any wash pad is routed to the impoundment;
8. The impoundment receives only concrete washout wastewater;
9. The annual average daily flow of wastewater to the impoundment is less than 3000 gallons per day; and
10. The following closure requirements are met.
    a. The facility is closed by removing and appropriately disposing of any liquids remaining in the impoundment,
    b. The area is graded to prevent ponding of water, and
    c. Closure activities are completed before filing of the Notice of Termination under the AZPDES Construction General Permit.

Historical Note
New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

PART C. TYPE 2 GENERAL PERMITS

R18-9-C301. 2.01 General Permit: Drywells That Drain Areas Where Hazardous Substances Are Used, Stored, Loaded, or Treated

A. A 2.01 General Permit allows for a drywell that drains an area where hazardous substances are used, stored, loaded, or treated.

B. Notice of Intent to Discharge. In addition to the requirements in R18-9-A301(B), an applicant shall submit:
1. The Department registration number for the drywell or documentation that a drywell registration form was submitted to the Department;
2. For a drywell constructed more than 90 days before submitting the Notice of Intent to Discharge to the Department, a certification signed, dated, and sealed by an Arizona-registered professional engineer or geologist that a site investigation has concluded that:
   a. Analytical results from sampling the drywell settling chamber sediment for pollutants reasonably expected to be present do not exceed either the residential soil remediation levels or the groundwater protection levels;
   b. The settling chamber does not contain sediments that could be used to characterize and compare results to soil remediation levels and the chamber has not been cleaned out within the last six months;
   c. Neither a soil remediation level nor groundwater protection level is exceeded in soil samples collected from a boring drilled within 5 feet of the drywell and sampled in 5-foot increments starting from 5 feet

below ground surface and extending to 10 feet below the base of the drywell injection pipe; or

d. If coarse grained lithology prevents the collection of representative soil samples in a soil boring, a groundwater investigation demonstrates compliance with Aquifer Water Quality Standards in groundwater at the applicable point of compliance;

3. Design information to demonstrate that the requirements in subsection (C) are satisfied; and
4. A copy of the Best Management Practices Plan described in subsection (D)(5).

C. Design requirements. An applicant shall:

1. Locate the drywell no closer than 100 feet from a water supply well and 20 feet from an underground storage tank;
2. Clearly mark the drywell "Stormwater Only" on the surface grate or manhole cover;
3. Locate the bottom of the drywell hole at least 10 feet above groundwater. If during drilling and well installation the drywell borehole encounters saturated conditions, the applicant shall backfill the borehole with cement grout to at least 10 feet above the elevation of saturated conditions before constructing the drywell in the borehole;
4. Ensure that the drywell design or drainage area design includes a method to remove, intercept, or collect pollutants that may be present at the operation with the potential to reach the drywell. The applicant may include a flow control or pretreatment device, such as an interceptor, sump, or another device or structure designed to remove, intercept, or collect pollutants. The applicant may use flow control or pretreatment devices listed under R18-9-C304(D)(1) or (2) to satisfy the design requirements of this subsection;
5. Record the accurate latitude and longitude of the drywell using a Global Positioning System device or site survey; and
6. Develop and maintain a current site plan showing the location of the drywell, the latitude and longitude coordinates of the drywell, surface drainage patterns, the location of floor drains and French drains plumbed to the drywell, water supply wells, monitor wells, underground storage tanks, and chemical and waste usage, storage, loading, and treatment areas.

D. Operational and maintenance requirements.

1. A permittee shall operate the drywell only for the disposal of stormwater. The permittee shall not release industrial process waters or wastes in the drywell or drywell retention basin drainage area.
2. The permittee shall implement a Best Management Practices Plan for operation of the drywell and control of pollutants in the drywell drainage area.
3. The permittee shall keep the Best Management Practices Plan on-site or at the closest practical place of work and provide the plan to the Department upon request.
4. The permittee may substitute any Spill Prevention Containment and Control Plan, facility response plan, or an AZPDES Stormwater Pollution Prevention Plan that meets the requirements of this subsection for a Best Management Practices Plan. If the permittee submits a substitute for the Best Management Practices Plan, the permittee shall identify the conditions within the substitute plan that satisfy the requirements of subsection (D).
5. The Best Management Practices Plan shall include:
   a. A site plan showing surface drainage patterns and the location of floor drains, water supply, monitor wells, underground storage tanks, and chemical and waste usage, storage, loading, and treatment areas. The site plan shall show surface grading details designed to prevent drainage and spills of hazardous substances from leaving the drainage area and entering the drywell;
   b. A design plan showing details of drywell design and drainage design, including flow control or pretreatment devices, such as interceptors, sumps, and other devices and structures designed to remove, intercept, and collect any pollutant that may be present at the operation with the potential to reach the drywell;
   c. Procedures to prevent and contain spills and minimize discharges to the drywell;
   d. Operational practices that include routine inspection and maintenance of the drywell and associated pretreatment and flow-control devices, periodic inspection of waste storage facilities, and proper handling of hazardous substances to prevent discharges to the drywell. Routine inspection and maintenance shall include:
      i. Replacing the adsorbent material in the skimmers, if installed, when the adsorbent capacity is reached;
      ii. Maintaining valves and associated piping for a drywell injection and treatment system;
      iii. Maintaining magnetic caps and mats, if installed;
      iv. Removing sludge from the oil/water separator, if installed, and replacing the filtration or adsorption material to maintain treatment capacity;
      v. Removing sediment from the catch basin inlet filters and retention basin to maintain required storage capacity; and
   e. Procedures for periodic employee training on practices required by the Best Management Practices Plan specific to the drywell and prevention of unauthorized discharges.
6. The permittee shall implement waste management practices to prohibit and prevent discharges, other than those exempted in A.R.S. § 49-250(B)(23), in the drywell drainage area, including:
   a. Maintaining an up-to-date inventory of generated wastes and waste products;
   b. Disposing or recycling all wastes or solvents through a company licensed to handle the material;
   c. Where possible, collecting and storing waste in waste receptacles located outside the drywell drainage area. If the permittee collects and stores the waste within the drywell drainage area, the permittee shall collect and store the waste in properly designed receptacles; and
   d. Using a licensed waste hauler to transport waste offsite to a permitted waste disposal facility.

E. Inspection. A permittee shall:

1. Conduct an annual inspection of the drywell for sediment accumulation in the chambers and the flow-control and treatment systems, and remove sediment annually or when 25 percent of the effective capacity is filled, whichever comes first, to restore capacity and ensure that the drywell functions properly. The permittee shall character-

ize the sediments that are removed from the drywell after inspection and dispose of the sediments according to local, state, and federal requirements; and

2. If the stormwater fails to drain through the drywell within 36 hours, inspect the treatment system and piping to ensure that the treatment system is functioning properly, make repairs, and perform maintenance as needed to restore proper function.

F. Recordkeeping. A permittee shall maintain for at least 10 years, the following documents on-site or at the closest place of work and make the documents available to the Department upon request:

1. Documentation of drywell maintenance, inspections, employee training, and sampling activities;
2. A site plan showing the location of the drywell, the latitude and longitude coordinates of the drywell, surface drainage patterns and the location of floor drains or French drains that are plumbed to the drywell or are used to alter drainage patterns, the location of water supply wells, monitor wells, underground storage tanks, and places where hazardous substances are used, stored, or loaded;
3. A design plan showing details of drywell design and drainage design, including any flow control and pretreatment technologies;
4. An operations and maintenance manual that includes:
   a. Procedures to prevent and contain spills and minimize any discharge to the drywell and a list of actions and methods proposed to prevent and contain hazardous substance spills or leaks;
   b. Methods and procedures for inspection, operation, and maintenance activities;
   c. Procedures for spill response; and
   d. A description of the employee training program for drywell inspections, operations, maintenance, and waste management practices;
5. Drywell sediment waste characteristics and disposal manifest records for sediments removed during routine inspections and maintenance activities; and
6. Sampling plans, certified laboratory reports, and chain of custody forms for soil, sediment, and groundwater sampling associated with drywell site investigations.

G. Spills.

1. In the event of a spill, the permittee shall:
   a. Notify the Department within 24 hours of any spill of hazardous or toxic substance that enters the drywell inlet;
   b. Contain, clean up, and dispose of, according to local, state, and federal requirements, any spill or leak of a hazardous substance in the drywell drainage area and basin drainage area;
   c. If a pretreatment system is present, verify that treatment capacity has not been exceeded; and
   d. If the spill reaches the drywell injection pipe, drill a soil boring within 5 feet of the drywell inlet chamber and sample the soil in 5-foot increments from 5 feet below ground surface to a depth extending at least 10 feet below the base of the injection pipe to determine whether a soil remediation level or groundwater protection level has been exceeded in the subsurface. The permittee shall:
      i. Submit the results to the Department within 60 days of the date of the spill; and
      ii. Notify the Department if soil contamination at the facility, not related to the spill, is being addressed by an existing approved remedial action plan.
2. Based on the results of subsection (G)(1)(d), the Director may require the permittee to submit an application for clean closure or an individual Aquifer Protection Permit.

H. Closure and decommissioning requirements.

1. A permittee shall:
   a. Retain a drywell drilling contractor, licensed under 4 A.A.C. 9, to close the drywell;
   b. Remove sediments and any drainage component, such as standpipes and screens from the drywell's settling chamber and backfill the injection pipe with cement grout;
   c. Remove the settling chamber;
   d. Backfill the settling chamber excavation to the land surface with clean silt, clay, or engineered material. Materials containing hazardous substances are prohibited from use in backfilling the drywell; and
   e. Mechanically compact the backfill.
2. Within 30 days of closure and decommissioning, the permittee shall submit a written verification to the Department that all material that contributed to a discharge has been removed and any reasonable probability of further discharge from the facility and of exceeding any Aquifer Water Quality Standard at the applicable point of compliance has been eliminated to the greatest degree practical. The written verification shall specify:
   a. The reason for the closure;
   b. The drywell registration number;
   c. The general permit reference number;
   d. The materials and methods used to close the drywell;
   e. The name of the contractor who performed the closure;
   f. The completion date;
   g. Any sampling data;
   h. Sump construction details, if a sump was constructed to replace the abandoned drywell; and
   i. Any other information necessary to verify that closure has been achieved.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-C302. 2.02 General Permit: Intermediate Stockpiles at Mining Sites

A. A 2.02 General Permit allows for intermediate stockpiles not qualifying as inert material under A.R.S. § 49-201(19) at a mining site.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge under R18-9-A301(B), an applicant shall submit the construction and operation specifications used to satisfy the requirements in subsection (C)(1).

C. Design and operational requirements.

1. An applicant shall design, construct, and operate the stockpile so that it does not impound water. An applicant may rely on stormwater run-on controls or facility design features, such as drains, or both.

2. An applicant shall direct storm runoff contacting the stockpile to a mine pit or a facility covered by an individual or general permit.
3. A permittee shall maintain any engineered feature of the facility in good working condition.
4. A permittee shall visually inspect the facility at least quarterly and repair any defect as soon as practical.
5. A permittee shall not add hazardous substances to the stockpiled material.

D. Closure requirements. In addition to the closure requirements in R18-9-A306, the following apply:
1. If an intermediate stockpile covered under a 2.02 General Permit is permanently closed, a permittee shall remove any remaining material, to the greatest extent practical, and regrade the area to prevent impoundment of water.
2. The permittee shall submit a narrative description of closure measures to the Department within 30 days after closure.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-C303. 2.03 General Permit: Hydrologic Tracer Studies

A. A 2.03 General Permit allows for a discharge caused by the performance of tracer studies.
1. The 2.03 General Permit does not authorize the use of any hazardous substance, radioactive material, or any substance identified in A.R.S. § 49-243(I) in a tracer study.
2. A permittee shall complete a single tracer test within two years of the Notice of Intent to Discharge.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. A narrative description of the tracer test including the type and amount of tracer used;
2. A Material Safety Data Sheet for the tracer; and
3. Unless the injection or distribution is within the capture zone of an established passive containment system meeting the requirements of A.R.S. § 49-243(G), the following information:
   a. A narrative description of the impacts that may occur if a solution migrates outside the test area, including a list of downgradient users, if any;
   b. The anticipated effects and expected concentrations, if possible to calculate; and
   c. A description of the monitoring, including types of tests and frequency.

C. Design and operational requirements. A permittee shall:
1. Ensure that injection into a well inside the capture zone of an established passive containment system that meets the requirements of A.R.S. § 49-243(G) does not exceed the total depth of the influence of the hydrologic sink;
2. Ensure that injection into a well outside the capture zone of an established passive containment system that meets the requirements of A.R.S. § 49-243(G) does not exceed rock fracture pressures during injection of the tracer;
3. Not add a substance to a well that is not compatible with the well's construction;
4. Ensure that a tracer is compatible with the construction materials at the impoundment if a tracer is placed or collected in an existing impoundment;
5. For at least two years, monitor quarterly a well that is hydraulically downgradient of the test site for the tracer if a tracer is used outside the capture zone of an established passive containment system that meets the requirements of A.R.S. § 49-243(G) and less than 85 percent of the tracer is recovered. The permittee may adjust this period with the consent of the Department if the permittee shows that the hydraulic gradient causes the tracer to reach the monitoring point in a shorter or longer period of time;
6. Ensure that a tracer does not leave the site in concentrations distinguishable from background water quality; and
7. Monitor the amount of tracer used and recovered and submit a report summarizing the test and results to the Department within 30 calendar days of test completion.

D. Recordkeeping. A permittee shall retain the following information at the site where the facility is located for at least three years after test completion and make it available to the Department upon request.
1. Test protocols,
2. Material Safety Data Sheet information,
3. Recovery records, and
4. A copy of the report submitted to the Department under subsection (C)(7).

E. Closure requirements.
1. If a tracer was used outside the capture zone of an established passive containment system that meets the requirements of A.R.S. § 49-243(G), a permittee shall account for any tracer not recovered through attenuation, modeling, or monitoring.
2. The permittee shall achieve closure immediately following the test, or if the test area is within a pollutant management area defined in an individual permit, at the conclusion of operations.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-C304. 2.04 General Permit: Drywells that Drain Areas at Motor Fuel Dispensing Facilities Where Motor Fuels are Used, Stored, or Loaded

A. A 2.04 General Permit allows for a drywell that drains an area at a facility for dispensing motor fuel, as defined in A.A.C. R20-2-701(19), including a commercial gasoline station with an underground storage tank.
1. A drywell at a motor fuel dispensing facility using hazardous substances is eligible for coverage under the 2.04 General Permit.
2. A drywell at a vehicle maintenance facility owned or operated by a commercial enterprise or by a federal, state, county, or local government is not eligible for coverage under this general permit, unless the facility design ensures that only motor fuel dispensing areas will drain to the drywell. Areas where hazardous substances other than motor fuels are used, stored, or loaded, including service bays, are not covered under the 2.04 General Permit.
3. Definition. For purposes of this Section, "hazardous substances" means substances that are components of commercially packaged automotive supplies, such as motor oil, antifreeze, and routine cleaning supplies such as those

used for cleaning windshields, but not degreasers, engine cleaners, or similar products.

B. Notice of Intent to Discharge. In addition to the requirements in R18-9-A301(B), an applicant shall submit:

1. The Department registration number for the drywell or documentation that a drywell registration form was submitted to the Department;
2. For a drywell constructed more than 90 days before submitting the Notice of Intent to Discharge to the Department, a certification signed, dated, and sealed by an Arizona-registered professional engineer or geologist that a site investigation concluded that:
   a. Analytical results from sampling sediment from the drywell settling chamber sediment for pollutants reasonably expected to be present do not exceed either the residential soil remediation levels or the groundwater protection levels;
   b. The settling chamber does not contain sediment that could be used to characterize and compare results to soil remediation levels and the chamber has not been cleaned out within the last six months;
   c. Neither a soil remediation level nor groundwater protection level is exceeded in soil samples collected from a boring drilled within 5 feet of the drywell and sampled in 5 foot increments starting at a depth of 5 feet below ground surface and extending to a depth of 10 feet below the base of the drywell injection pipe; or
   d. If coarse grained lithology prevents the collection of soil samples in a soil boring, a groundwater investigation demonstrates compliance with Aquifer Water Quality Standards in groundwater at the applicable point of compliance.
3. Design information to demonstrate that the requirements in subsection (C) are satisfied.

C. Design requirements.

1. An applicant shall:
   a. Include a flow control or pretreatment device identified in subsections (D)(1) or (2), or both, that removes, intercepts, or collects spilled motor fuel or hazardous substances before stormwater enters the drywell injection pipe;
   b. Calculate the volume of runoff generated in the design storm event and anticipate the maximum potential contaminant release quantity to design the treatment and holding capacity of the drywell;
   c. Follow local codes and regulations to meet retention periods for removing standing water;
   d. Locate the drywell at least 100 feet from a water supply well and 20 feet from an underground storage tank;
   e. Locate the bottom of the drywell injection pipe at least 10 feet above groundwater. If during drilling and well installation the drywell borehole encounters saturated conditions, the applicant shall backfill the borehole with cement grout to a level at least 10 feet above the elevation at which saturated conditions were encountered in the borehole before constructing the drywell in the borehole;
   f. Record the accurate latitude and longitude of the drywell using a Global Positioning System device or site survey and record the location on the site plans;
   g. Clearly mark the drywell "Stormwater Only" on the surface grate or manhole cover;
   h. Develop and maintain a current site plan showing the location of the drywell, the latitude and longitude coordinates of the drywell, surface drainage patterns and the location of floor drains and French drains that are plumbed to the drywell or are used to alter drainage patterns, water supply wells, monitor wells, underground storage tanks, and chemical and waste usage, storage, loading, and treatment areas; and
   i. Prepare design plans showing details of drywell design and drainage design, including one or a combination of pre-approved technologies described in subsections (D)(1) and (2) designed to remove, intercept, and collect any pollutant that may be present at the operation with the potential to reach the drywell.
2. For an existing drywell, an applicant that cannot meet the design requirements in subsections (C)(1)(d) and (e) shall provide the Department with the date of drywell construction, the depth of the drywell borehole and injection pipe, the distance from the drywell to the nearest water supply well and from the drywell to the underground storage tank, and the depth to the groundwater from the bottom of the drywell injection pipe.

D. Flow control and pretreatment. A permittee shall ensure that motor fuels and other hazardous substances are not discharged to the subsurface. A permittee may use any of the following flow control or pretreatment technologies:

1. Flow control. The permittee shall ensure that motor fuel and hazardous substance spills are removed before allowing stormwater to enter the drywell.
   a. Normally closed manual or automatic valve. The permittee shall leave a normally closed valve in a closed position except when stormwater is allowed to enter the drywell;
   b. Raised drywell inlet. The permittee shall:
      i. Raise the drywell inlet at least six inches above the bottom of the retention basin or other storage structure, or install a six-inch asphalt or concrete raised barrier encircling the drywell inlet to provide a non-draining storage capacity within the retention basin or storage structure for complete containment of a spill; and
      ii. Ensure that the storage capacity is at least 110 percent of the volume of the design storm event required by the local jurisdiction and the estimated volume of a potential motor fuel spill based on the facility's past incident reports or incident reports for other facilities that are similar in design;
   c. Magnetic mat or cap. The permittee shall ensure that the drywell inlet is sealed with a mat or cap at all times, except after rainfall or a storm event when the mat or cap is temporarily removed to allow stormwater to enter the drywell; and that the mat or cap is always used with a retention basin or other type of storage;
   d. Primary sump, interceptor, or settling chamber. The permittee may use a primary sump, interceptor, or settling chamber only in combination with another flow control or pre-treatment technology.
      i. The permittee shall remove motor fuel or hazardous substances from the sump, interceptor,

or chamber before allowing stormwater to enter the drywell.

ii. The permittee shall install a settling chamber or sump and allow the suspended solids to settle before stormwater flows into a drywell; install the drywell injection pipe in a separate chamber and connect the sump, interceptor, or chamber to the drywell inlet by piping and valving to allow the stormwater to enter the drywell.

iii. The permittee may install fuel hydrocarbon detection sensors in the sump, interceptor, or settling chamber that use flow control to prevent fuel from discharging into the drywell;

2. Pretreatment. The permittee shall prevent the bypass of motor fuels and hazardous substances from the pretreatment system to the drywell during periods of high flow.

a. Catch basin inlet filter. The permittee shall:

i. Install a catch basin inlet filter to fit inside a catchment drain to prevent motor fuels and hazardous substances from entering the drywell,

ii. Ensure that a motor fuel spill or a spill during a high rainfall does not bypass the system and directly release to the drywell injection pipe, and

iii. Combine the catch basin inlet filter with a flow control technology to prevent contaminated stormwater from entering the drywell injection pipe;

b. Combined settling chamber and an oil/water separator.

i. The permittee shall install a system that incorporates a catch basin inlet, a settling chamber, and an oil/water separator.

ii. The permittee may incorporate a self-sealing mechanism, such as fuel hydrocarbon detection sensors that activate a valve to cut off flow to the drywell inlet.

c. Combined settling chamber and oil/water separator, and filter/adsorption. The permittee shall:

i. Allow for adequate collection and treatment capacity for solid and liquid separation; and

ii. Allow a minimum treated outflow from the system to the drywell inlet of 20 gallons per minute. If a higher outflow rate is anticipated, the applicant shall design a larger collection system with storage capacity.

d. Passive skimmer.

i. If a passive skimmer is used, the permittee shall install sufficient hydrocarbon adsorbent materials, such as pads and socks, or suspend the materials on top of the static water level in a sump or other catchment to absorb the entire volume of expected or potential spill.

ii. The permittee may use a passive skimmer only in combination with another flow control or pre-treatment technology.

E. Operation and maintenance. A permittee shall:

1. Operate the drywell only for the subsurface disposal of stormwater;
2. Remove or treat any motor fuel or hazardous substance spills;
3. Replace the adsorbent material in skimmers, if installed; when the adsorbent capacity is reached;
4. Maintain valves and associated piping;
5. Maintain magnetic caps and mats, if installed;
6. Remove sludge from the oil/water separator and replace the filtration or adsorption materials to maintain treatment capacity;
7. Remove sediment from the catch basin inlet filters and retention basins to maintain required storage capacity;
8. Remove accumulated sediment from the settling chamber annually or when 25 percent of the effective settling capacity is filled, whichever occurs first; and
9. Provide new employee training within one month of hire and annual employee training on how to maintain and operate flow control and pretreatment technology used in the drywell.

F. Inspection. A permittee shall:

1. Conduct an annual inspection of the drywell for sediment accumulation in the chambers and in the flow control and treatment systems to ensure that the drywell is functioning properly; and
2. If the stormwater fails to drain through the drywell within 36 hours, inspect the treatment system and piping to ensure that it is functioning properly, make repairs, and perform maintenance as needed to restore proper function.

G. Recordkeeping. A permittee shall maintain, for at least 10 years, the following documents on-site or at the closest place of work and make the documents available to the Department upon request:

1. Documentation of drywell maintenance, inspections, employee training, and sampling activities;
2. A site plan showing the location of the drywell, the latitude and longitude coordinates of the drywell, surface drainage patterns and the location of floor drains or French drains that are plumbed to the drywell or are used to alter drainage patterns, water supply wells, monitor wells, underground storage tanks, and places where motor fuel and hazardous substances are used, stored, or loaded;
3. A design plan showing details of drywell design and drainage design, including one or a combination of the pre-approved flow control and pretreatment technologies;
4. An operations and maintenance manual that includes:
   a. Procedures to prevent and contain spills and minimize any discharge to the drywell and a list of actions and specific methods proposed for motor fuel and hazardous substance spills or leaks;
   b. Methods and procedures for inspection, operation, and maintenance activities;
   c. Procedures for spill response; and
   d. A description of the employee training program for drywell inspections, operations, and maintenance;
5. Drywell sediment waste characterization and disposal manifest records for sediments removed during routine inspections and maintenance activities; and
6. Sampling plans, certified laboratory reports, and chain of custody forms for soil, sediment, and groundwater sampling associated with drywell site investigations.

H. Spills.

1. In the event of a spill, a permittee shall:
   a. Notify the Department within 24 hours of any spill of motor fuel or hazardous or toxic substances that enters into the drywell inlet;
   b. Contain, clean up, and dispose of, according to local, state, and federal requirements, any spill or leak of

motor fuel or hazardous substance in the drywell drainage area and basin drainage area;
c. If a pretreatment system is present, verify that treatment capacity has not been exceeded; and
d. If the spill reaches the injection pipe, drill a soil boring within 5 feet of the drywell inlet chamber and sample in 5-foot increments from 5 feet below ground surface to a depth extending at least 10 feet below the base of the injection pipe to determine whether a soil remediation level or groundwater protection level has been exceeded in the subsurface. The permittee shall:
i. Submit the results to the Department within 60 days of the date of the spill; and
ii. Notify the Department if soil contamination at the facility, not related to the spill, is being addressed by an existing approved remedial action plan.

2. The Director may, based on the results of subsection (H)(1)(d), require the permittee to submit an application for clean closure or an individual Aquifer Protection Permit.

I. Closure and decommissioning requirements.
1. A permittee shall:
a. Retain a drywell drilling contractor, licensed under 4 A.A.C. 9, to close the drywell;
b. Remove sediments and any drainage component, such as standpipes and screens from the drywell's settling chamber and backfill the injection pipe with cement grout;
c. Remove the settling chamber;
d. Backfill the settling chamber excavation to the land surface with clean silt, clay, or engineered material. A permittee shall not use materials containing hazardous substances in backfilling the drywell; and
e. Mechanically compact the backfill.
2. Within 30 days of closure and decommissioning, the permittee shall submit a written verification to the Department that all material that contributed to a discharge has been removed and any reasonable probability of further discharge from the facility and of exceeding any Aquifer Water Quality Standard at the applicable point of compliance has been eliminated to the greatest degree practical. The written verification shall specify:
a. The reason for the closure;
b. The drywell registration number;
c. The general permit reference number;
d. The materials and methods used to close the drywell;
e. The name of the contractor who performed the closure;
f. The completion date;
g. Any sampling data;
h. Sump construction details, if a sump was constructed to replace the abandoned drywell; and
i. Any other information necessary to verify that closure has been achieved.

Historical Note

New Section made by final rulemaking at 8 A.A.R. 4096, effective September 15, 2002 (Supp. 02-3). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-C305. 2.05 General Permit: Capacity, Management, Operation, and Maintenance of a Sewage Collection System

A. Definition. For purposes of this Section, "imminent and substantial threat to public health or the environment" means when:
1. The volume of a release is more than 2000 gallons; or
2. The volume of a release is more than 50 gallons but less than 2000 gallons and any one of the following apply:
a. The release entered onto a recognized public area and members of the public were present during the release or before the release was mitigated;
b. The release occurred on a public or private street and pedestrians were at risk of being splashed by vehicles during the release or before the release was mitigated;
c. The release entered a perennial stream, an intermittent stream during a time of flow, a waterbody other than an ephemeral stream, a normally dry detention or sedimentation basin, or a drywell;
d. The release occurred within an occupied building due to a condition in the permitted sewage collection system; or
e. The release occurred within 100 feet of a school or a public or private drinking water supply well.

B. A 2.05 General Permit allows a permittee to manage, operate, and maintain a sewage collection system under the terms of a CMOM Plan that complies with subsection (D). The Department considers a sewage collection system operating in compliance with an AZPDES permit that incorporates provisions for capacity, management, operation, and maintenance of the system to comply with the provisions of the 2.05 General Permit regardless of whether a Notice of Intent to Discharge for the system was submitted to the Department.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. The name and ownership of any downstream sewage collection system and sewage treatment facility that receives sewage from the applicant's sewage collection system;
2. A map of the service area for which general permit coverage is sought, showing streets and sewage service boundaries for the sewage collection system;
3. A statement indicating that the CMOM Plan is in effect and the principal officer or ranking elected official of the sewage collection system has approved the plan; and
4. A statement indicating whether a local ordinance requires an on-site wastewater treatment facility to hookup to the sewage collection system.

D. CMOM Plan.
1. A permittee shall continuously implement a CMOM Plan for the sewage collection system under the permittee's ownership, management, or operational control. The CMOM Plan shall include information to comply with subsection (E)(1) and instructions on:
a. How to properly manage, operate, and maintain all parts of the sewage collection system that are owned or managed by the permittee or under the permittee's operational control, to meet the performance requirements in R18-9-E301(B);
b. How to maintain sufficient capacity to convey the base flows and peak wet weather flow of a 10-year, 24-hour storm event for all parts of the collection system owned or managed by the permittee or under the permittee's operational control;

c. All reasonable and prudent steps to minimize infiltration to the sewage collection system;
d. All reasonable and prudent steps to stop all releases from the collection system owned or managed by the permittee or under the permittee's operational control; and
e. The procedure for reporting releases described in subsection (F).

2. The permittee shall maintain and update the CMOM Plan for the duration of this general permit and make it available for Department and public review.
3. If the Department requests the CMOM Plan and upon review finds that the CMOM Plan is deficient, the Department shall:
a. Notify the permittee in writing of the specific deficiency and the reason for the deficiency, and
b. Establish a deadline of at least 60 days to allow the permittee to correct the deficiency and submit the amended provision to the Department for approval.

E. Sewage release response determination. If the sewage collection system releases sewage, the Director shall consider any of the following factors in determining compliance:
1. Sufficiency of the CMOM Plan.
a. The level of detail provided by the CMOM Plan is appropriate for the size, complexity, and age of the system;
b. The level of detail provided by the CMOM Plan is appropriate considering geographic, climatic, and hydrological factors that may influence the sewage collection system;
c. The CMOM Plan provides schedules for the periodic preventative maintenance of the sewage collection system, including cleaning of all reaches of the sewage collection system below a specified pipe diameter.
i. The CMOM Plan may allow inspection of sewer lines by Closed Circuit Television (CCTV) and postponement of cleaning to the next scheduled cleaning cycle if the CCTV inspection indicated that cleaning of a reach of the sewer is not needed.
ii. The CMOM Plan may specify inspection and cleaning schedules that differ according to pipe diameter or other characteristics of the sewer;
d. The CMOM Plan identifies components of the sewage collection system that have insufficient capacity to convey, when properly maintained, the peak wet weather flow of a 10-year, 24-hour storm event. For those identified components, a capital improvement plan exists for achieving sufficient wet weather flow capacity within ten years of the effective date of permit coverage;
e. The CMOM Plan includes an overflow emergency response plan appropriate to the size, complexity, and age of the sewage collection system considering geographic, climatic, and hydrological factors that may influence the system;
f. The CMOM Plan establishes a procedure to investigate and enforce against any commercial or industrial entity whose flows to the sewage collection system have caused or contributed to a release;
g. The CMOM Plan adequately addresses management of flows from upstream sewage collection systems not under the ownership, management, or operational control of the permittee; or
h. Any other factor necessary to determine if the CMOM Plan is sufficient;

2. Compliance with the CMOM Plan.
a. The permittee's response to releases as established in the overflow emergency response plan, including whether:
i. Maintenance staff responds to and arrive at the release within the time period specified in the plan;
ii. Maintenance staff follow all written procedures to remove the cause of the release;
iii. Maintenance staff contain, recover, clean up, disinfect, and otherwise mitigate the release of sewage; and
iv. Required notifications to the Department, public health agencies, drinking water suppliers, and the public are provided;
b. The permittee's activities and timeliness in:
i. Implementing specified periodic preventative maintenance measures;
ii. Implementing the capital improvement plan; and
iii. Investigating and enforcing against an upstream sewage collection system, not under the ownership and operational control of the permittee, if those systems are impediments to the proper management of flows in the permittee's sewage collection system; or
c. Any other factor necessary to determine CMOM Plan compliance;

3. Compliance with the reporting requirements in subsection (F) and the public notice requirements in subsection (G); or
4. The release substantially endangers public health or the environment.

F. Reporting requirements.
1. Sewage releases.
a. A permittee shall report to the Department, by telephone, facsimile, or on the applicable notification form on the Department's Internet web site, any release that is an imminent and substantial threat to public health or the environment as soon as practical, but no later than 24 hours of becoming aware of the release.
b. A permittee shall submit a report to the Department within five business days after becoming aware of a release that is an imminent and substantial threat to public health or the environment. The report shall include:
i. The location of the release;
ii. The sewage collection system component from which the release occurred;
iii. The date and time the release began, was stopped, and when mitigation efforts were completed;
iv. The estimated number of persons exposed to the release, the estimated volume of sewage released, the reason the release is considered an imminent and substantial threat to public health or the environment if the volume is 2000 gallons or less, and where the release flowed;

v. The efforts made by the permittee to stop, contain, and clean up the released material;
vi. The amount and type of disinfectant applied to mitigate any associated public health or environmental risk; and
vii. The cause of the release or effort made to determine the cause and any effort made to help prevent a future reoccurrence.

2. Annual report. The permittee shall:
   a. Submit an annual report to the Department postmarked no later than March 1. The report shall:
      i. Tabulate all releases of more than 50 gallons from the permitted sewage collection system;
      ii. Provide the date of any release that is an imminent and substantial threat to public health or the environment; and
      iii. For other reportable releases under subsection (F)(2)(a)(i), provide the information in subsection (F)(1)(b);
   b. Provide an amended map of the service area boundaries if, during the calendar year, any area was removed from the service area or if any area was added to the service area that the permittee wishes to include under the 2.05 General Permit and associated CMOM Plan.

G. Public notice. The permittee shall:
1. Post a notice, in a format approved by the Department, at any location where there were more than three reportable releases under subsection (F)(2)(a) from the sewage collection system during any 12-month period,
2. Include within the notice a warning that identified the releases or potential releases at the location and potential health hazards from any release,
3. Post the notice at a place where the public is likely to come in contact with the release, and
4. Maintain the postings until no releases from the location are reported for at least 12 months from the last release and the permittee followed all actions specified in the CMOM Plan to prevent releases at that location during the period.

Historical Note

New Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-C306. 2.06 General Permit: Fish Hatchery Discharge to a Perennial Surface Water

A. A 2.06 General Permit allows a fish hatchery to discharge to a perennial surface water if Aquifer Water Quality Standards are met at the point of discharge and the fish hatchery is operating under a valid AZPDES permit.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall provide:
1. The applicable AZPDES permit number;
2. A description of the facility; and
3. A laboratory report characterizing the wastewater discharge, including the analytical results for all numeric Aquifer Water Quality Standards under R18-11-406.

C. Design and operational requirements. An applicant shall:
1. Collect a representative sample of the discharge to demonstrate compliance with all numeric Aquifer Water Quality Standards and make the results available to the Department upon request, and
2. Maintain a record of the average and daily flow rates and make it available to the Department upon request.

Historical Note

New Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

PART D. TYPE 3 GENERAL PERMITS

R18-9-D301. 3.01 General Permit: Lined Impoundments

A. A 3.01 General Permit allows a lined surface impoundment and a lined secondary containment structure. A permittee shall:
1. Ensure that inflow to the lined surface impoundment or lined secondary containment structure does not contain organic pollutants identified in A.R.S. § 49-243(I);
2. Ensure that inflow to the lined surface impoundment or lined secondary containment structure is from one or more of the following sources:
   a. Evaporative cooler overflow, condensate from a refrigeration unit, or swimming pool filter backwash;
   b. Wastewater that does not contain sewage, temporarily stored for short periods of time due to process upsets or rainfall events, provided the wastewater is promptly removed from the facility as required under subsection (D)(5). Facilities that continually contain wastewater as a normal function of facility operations are not covered under this general permit;
   c. Stormwater runoff that is not permitted under A.R.S. § 49-245.01 because the facility does not receive solely stormwater or because the runoff is regulated but not considered stormwater under the Clean Water Act;
   d. Emergency fire event water;
   e. Wastewater from air pollution control devices at asphalt plants if the wastewater is routed through a sedimentation trap or sump and an oil/water separator before discharge;
   f. Non-contact cooling tower blowdown and non-contact cooling water, except discharges from electric generating stations with more than 100 megawatts generating capacity;
   g. Boiler blowdown;
   h. Wastewater derived from a potable water treatment system, including clarification sludge, filtration backwash, lime and lime-softening sludge, ion exchange backwash, and reverse osmosis spent waste;
   i. Wastewater from food washing;
   j. Heat exchanger return water;
   k. Wastewater from industrial laundries;
   l. Hydrostatic test water from a pipeline, tank, or appurtenance previously used for transmission of fluid;
   m. Wastewater treated through an oil/water separator before discharge; and
   n. Cooling water or wastewater from food processing.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. A listing and description of all sources of inflow;
2. A representative chemical analysis of each expected source of inflow. If a sample is not available before facility construction, a permittee shall provide the chemical

analysis of each inflow to the Department within 60 days of each inflow to the facility;

3. A narrative description of how the conditions of this general permit are satisfied. The narrative shall include a Quality Assurance/Quality Control program for liner installation, impoundment maintenance and repair, and impoundment operational procedures; and
4. A contingency plan that specifies actions proposed in case of an accidental release from the facility, overtopping of the impoundment, breach of the berm, or unauthorized inflows into the impoundment or containment structure.

C. Design and installation requirements. An applicant shall:

1. Design and construct surface water controls to:
   a. Ensure that the impoundment or secondary containment structure maintains, using design volume or mechanical systems, normal operating volumes, if any, and any inflow from the 100-year, 24-hour storm event. The facility shall maintain at least 2 feet of freeboard or an alternative level of freeboard that the applicant demonstrates is reasonable, considering the size of the impoundment and meteorologic and other site-specific factors; and
   b. Direct any surface water run-on from the 100-year 24-hour storm event around the facility if not intended for capture by facility;
2. Ensure that the facility design accommodates any significant geologic hazard, addressing static and seismic stability. The applicant shall document any design adjustments made for this reason in the Notice of Intent to Discharge;
3. Ensure that site preparation includes, as appropriate, clearing the area of vegetation, grubbing, grading, and embankment and subgrade preparation. The applicant shall ensure that supporting surface slopes and foundation are stable and structurally sound; and
4. Comply with the following impoundment lining requirements:
   a. If a synthetic liner is used, ensure that the liner is at least a 30-mil geomembrane liner or a 60-mil liner if High Density Polyethylene, or an alternative, that the liner's calculated seepage rate is less than 550 gallons per acre per day, and:
      i. Anchor the liner by securing it in an engineered anchor trench;
      ii. Ensure that the liner is ultraviolet resistant if it is regularly exposed to sunlight; and
      iii. Ensure that the liner is constructed of a material that is chemically compatible with the wastewater or impounded solution and is not affected by corrosion or degradation;
   b. If a soil liner is used:
      i. Ensure that it resists swelling, shrinkage, and cracking and that the liner's calculated seepage rate is less than 550 gallons per acre per day;
      ii. Ensure that the soil is at least 1-foot thick and compacted to a uniform density of 95 percent to meet the "Standard Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effect (12,400 ft-lbf/ft^3), D698-00ae1," (2000) published by the American Society for Testing and Materials. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959; and
      iii. Upon installation, protect the soil liner to prevent desiccation; and
   c. For new facilities, develop and implement a construction Quality Assurance/Quality Control program that addresses site and subgrade preparation, inspection procedures, field testing, laboratory testing, and final inspection after construction of the liner to ensure functional integrity.

D. Operational requirements. A permittee shall:

1. Maintain sufficient freeboard to manage the 100-year, 24-hour storm event including at least 2 feet of freeboard under normal operating conditions. Management of the 100-year, 24-hour storm event may be through design, pumping, or a combination of both;
2. Remove accumulated residues, sediments, debris, and vegetation to maintain the integrity of the liner and the design capacity of the impoundment;
3. Perform and document a visual inspection for damage to the liner and for accumulation of residual material at least monthly. The operator shall conduct an inspection within 72 hours after the facility receives a significant volume of stormwater inflow;
4. Repair damage to the liner by following the Quality Assurance/Quality Control Plan required under subsection (B)(3); and
5. Remove all inflow from the impoundment as soon as practical, but no later than 60 days after a temporary event, for facilities designed to contain inflow only for temporary events, such as process upsets.

E. Recordkeeping. A permittee shall maintain at the site, the following information for at least 10 years and make it available to the Department upon request:

1. Construction drawings and as-built plans, if available;
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure;
3. Capacity design criteria;
4. A list of standard operating procedures;
5. The construction Quality Assurance/Quality Control program documentation; and
6. Records of any inflow into the impoundment other than those permitted by this Section.

F. Reporting requirements.

1. If the liner leaks, as evidenced by a drop in water level not attributable to evaporation, or if the berm breaches or an impoundment is overtopped due to a catastrophic or other significant event, the permittee shall report the circumstance to the Department within five days of discovery and implement the contingency plan required in subsection (B)(4). The permittee shall submit a final report to the Department within 60 days of the event summarizing the circumstances of the problem and corrective actions taken.
2. The permittee shall report unauthorized flows into the impoundment to the Department within five days of discovery and implement the contingency plan required in subsection (B)(4).

G. Closure requirements. The permittee shall notify the Department of the intent to close the facility permanently. Within 90 days following closure notification the permittee shall comply with the following requirements, as applicable:
1. Remove liquids and any solid residue on the liner and dispose appropriately;
2. Inspect the liner for evidence of holes, tears, or defective seams that could have leaked;
3. If evidence of leakage is discovered, remove the liner in the area of suspected leakage and sample potentially impacted soil. If soil remediation levels are exceeded, the permittee shall define the lateral and vertical extent of contamination and, within 60 days of the exceedance, notify the Department and submit an action plan for achieving clean closure for the Department's approval before implementing the plan;
4. If there is no evidence of holes, tears, or defective seams that could have leaked:
   a. Cover the liner in place or remove it for disposal or reuse if the impoundment is an excavated impoundment,
   b. Remove and dispose of the liner elsewhere if the impoundment is bermed, and
   c. Grade the facility to prevent the impoundment of water; and
5. Notify the Department within 60 days following closure that the action plan was implemented and the closure is complete.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D302. 3.02 General Permit: Process Water Discharges from Water Treatment Facilities

A. A 3.02 General Permit allows filtration backwash and discharges obtained from sedimentation and coagulation in the water treatment process from facilities that treat water for industrial process or potable uses. The permittee shall ensure that:
1. Liquid fraction. The discharge meets:
   a. All numeric Aquifer Water Quality Standards for inorganic chemicals, organic chemicals, and pesticides established in R18-11-406(B) through (D);
   b. The discharge meets one of the following criteria for microbiological contaminants:
      i. Either the concentration of fecal coliform organisms is not more than 2/100 ml or the concentration of *E. coli* bacteria is not more than 1/100 ml, or
      ii. Either the concentration of fecal coliform organisms is less than 200/100 ml or the concentration of *E. coli* bacteria is less than 126/100 ml if the average daily flow processed by the water treatment facility is less than 250,000 gallons; and
2. Solid Fraction. The solid material in the discharge qualifies as inert material, as defined in A.R.S. § 49-201(19).

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. A characterization of the discharge, including a representative chemical and biological analysis of expected discharges and all source waters; and
2. The design capacity of any impoundment covered by this general permit.

C. Impoundment design and siting requirements. An applicant shall:
1. Ensure that the depth to the static groundwater table is greater than 20 feet;
2. Not locate the area of discharge immediately above karstic or fractured bedrock, unless the discharge meets the microbial limits specified in subsection (A)(1)(b)(i);
3. Maintain a minimum horizontal setback of 100 feet between the facility and any water supply well;
4. Design and construct an impoundment to maintain, using design volume or mechanical systems, normal operating volumes and any inflow from the 100-year, 24-hour storm event. The applicant shall:
   a. Divert any surface water run-on from the 100-year, 24-hour storm event around the facility if not intended for capture by facility design; and
   b. Design the facility to maintain 2 feet of freeboard or an alternative level of freeboard that the applicant demonstrates is reasonable, considering meteorological factors, the size of the impoundment, and other site-specific factors; or
   c. Discharge to surface water under the conditions of an AZPDES permit; and
5. Manage off-site disposal of sludge according to A.R.S. Title 49, Chapter 4.

D. Operational requirements.
1. Inorganic chemical, organic chemical, and pesticide monitoring.
   a. The permittee shall monitor any discharge annually to determine compliance with the requirements of subsection (A).
   b. If the concentration of any pollutant exceeds the numeric Aquifer Water Quality Standard, the permittee shall submit a report to the Department with a proposal for mitigation and shall increase monitoring frequency for that pollutant to quarterly.
   c. If, in the quarterly sampling, the condition in subsection (D)(1)(b) continues for two consecutive quarters, the permittee shall submit an application for an individual permit.
2. Microbiological contaminant monitoring.
   a. The permittee shall monitor any discharge annually to determine compliance with the requirements of subsection (A)(1)(b).
   b. If the concentration of any pollutant exceeds the limits established in subsection (A)(1)(b), the permittee shall submit a report to the Department with a proposal for mitigation and increase monitoring frequency for that pollutant to monthly.
   c. If, in the monthly sampling, the condition in subsection (D)(2)(b) continues for three consecutive months, the permittee shall submit an application for an individual permit.

E. Recordkeeping. A permittee shall maintain at the site, the following information, if applicable for the disposal method, for at least 10 years, and make it available to the Department upon request:
1. Construction drawings and as-built plans, if available;

2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure;
3. Water quality data collected under subsection (D);
4. Standard operating procedures; and
5. Records of any discharge other than those identified under subsection (B).

F. Reporting requirements. The permittee shall:
1. Report unauthorized flows into the impoundment to the Department within five days of discovery, and
2. Submit the report required in subsections (D)(1)(b) or (2)(b) within 30 days of receiving the analytical results.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D303. 3.03 General Permit: Vehicle and Equipment Washes

A. A 3.03 General Permit allows a facility to discharge water from washing vehicle exteriors and vehicle equipment. The 3.03 General Permit does not authorize:
1. Discharge water that typically results from the washing of vehicle engines unless the discharge is to a lined surface impoundment;
2. Direct discharges of sanitary sewage, vehicle lubricating oils, antifreeze, gasoline, paints, varnishes, solvents, pesticides, or fertilizers;
3. Discharges resulting from washing the interior of vessels used to transport fuel products or chemicals, or washing equipment contaminated with fuel products or chemicals; or
4. Discharges resulting from washing the interior of vehicles used to transport mining concentrates that originate from the same mine site, unless the discharge is to a lined surface impoundment.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit a narrative description of the facility and a design of the disposal system and wash operations.

C. Design, installation, and testing requirements. An applicant shall:
1. Design and construct the wash pad:
   a. To drain and route wash water to a sump or similar sediment-settling structure and an oil/water separator or a comparable pretreatment technology;
   b. Of concrete or material chemically compatible with the wash water and its constituents; and
   c. To support the maximum weight of the vehicle or equipment being washed with an appropriate safety factor;
2. Not use unlined ditches or natural channels to convey wash water;
3. Ensure that a surface impoundment meets the requirements in R18-9-D301(C)(1) through (3). The applicant shall ensure that berms or dikes at the impoundment can withstand wave action erosion and are compacted to a uniform density not less than 95 percent;
4. Ensure that a surface impoundment required for wash water described in subsection (A)(1) meets the design and installation requirements in R18-9-D301(C);
5. If wash water is received by an unlined surface impoundment or engineered subsurface disposal system, the applicant shall:
   a. Ensure that the annual daily average flow is less than 3000 gallons per day;
   b. Maintain a minimum horizontal setback of 100 feet between the impoundment or subsurface disposal system and any water supply well;
   c. Ensure that the bottom of the surface impoundment or subsurface disposal system is at least 50 feet above the static groundwater level and the intervening material does not consist of karstic or fractured bedrock;
   d. Ensure that the wash water receives primary treatment before discharge through, at a minimum, a sump or similar structure for settling sediments or solids and an oil/water separator or a comparable pretreatment technology designed to reduce oil and grease in the wastewater to 15 mg/l or less;
   e. Withdraw the separated oil from the oil/water separator using equipment such as adjustable skimmers, automatic pump-out systems, or level sensing systems to signal manual pump-out; and
   f. If a subsurface disposal system is used, design the system to prevent surfacing of the wash water.

D. Operational requirements. The permittee shall:
1. Inspect the oil/water separator before operation to ensure that there are no leaks and that the oil/water separator is in operable condition;
2. Inspect the entire facility at least quarterly. The inspection shall, at a minimum, consist of a visual examination of the wash pad, the sump or similar structure, the oil/water separator, and all surface impoundments;
3. Visually inspect each surface impoundment at least monthly, to ensure the volume of wash water is maintained within the design capacity and freeboard limitation;
4. Repair damage to the integrity of the wash pad or impoundment liner as soon as practical;
5. Maintain the oil/water separator to achieve the operational performance of the separator;
6. Remove accumulated sediments in all surface impoundments to maintain design capacity; and
7. Use best management practices to minimize the introduction of chemicals not typically associated with the wash operations. Only biodegradable surfactant or soaps are allowed. The permittee shall not use products that contain chemicals in concentrations likely to cause a violation of an Aquifer Water Quality Standard at the applicable point of compliance.

E. Monitoring requirements.
1. If wash water is discharged to an unlined surface impoundment or other area for subsurface disposal, the permittee shall monitor the wash water quarterly at the point of discharge for pH and for the presence of C_{10} through C_{32} hydrocarbons using a Department of Health Services certified method.
2. If pH is not between 6.0 and 9.0 or the concentration of C_{10} through C_{32} hydrocarbons exceeds 50 mg/l, the permittee shall, within 30 days of the monitorings, submit a report to the Department with a proposal for mitigation and shall increase monitoring frequency to monthly.

3. If the condition in subsection (E)(2) persists for three consecutive months, the permittee shall submit, within 90 days, an application for an individual permit.

F. Recordkeeping. A permittee shall maintain the following information for at least 10 years and make it available to the Department upon request:
1. Construction drawings and as-built plans, if available;
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure; and
3. The Material Safety Data Sheets for the chemicals used in the wash operations and any required monitoring results.

G. Closure requirements. A permittee shall comply with the closure requirements specified in R18-9-D301(G) if a liner has been used. If no liner is used the permittee shall remove and appropriately dispose of any liquids and grade the facility to prevent impoundment of water.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D304. 3.04 General Permit: Non-Stormwater Impoundments at Mining Sites

A. A 3.04 General Permit allows discharges to lined surface impoundments, lined secondary containment structures, and associated lined conveyance systems at mining sites.
1. The following discharges are allowed under the 3.04 General Permit:
   a. Seepage from tailing impoundments, unleached rock piles, or process areas;
   b. Process solution temporarily stored for short periods of time due to process upsets or rainfall, provided the solution is promptly removed from the facility as required under subsection (D);
   c. Stormwater runoff not permitted under A.R.S. § 49-245.01 because the facility does not receive solely stormwater or because the runoff is regulated but not considered stormwater under the Clean Water Act; and
   d. Wash water specific to sand and gravel operations not covered by R18-9-B301(A).
2. Facilities that continually contain process solution as a normal function of facility operations are not eligible for coverage under the 3.04 General Permit. If a normal process solution contains a pollutant regulated under A.R.S. § 49-243(I) the 3.04 General Permit does not apply if the pollutant will compromise the integrity of the liner.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. A description of the sources of inflow to the facility. An applicant shall include a representative chemical analysis of expected sources of inflow to the facility unless a sample is not available, before facility construction, in which case the applicant shall provide a chemical analysis of solution present in the facility to the Department within 90 days after the solution first enters the facility;
2. Documentation demonstrating that the facility design and operation under subsections (C) and (D) have been reviewed by a mining engineer or an Arizona-registered professional engineer before submission to the Department; and
3. A contingency plan that specifies actions proposed in case of an accidental release from the facility, overtopping of the impoundment, breach of the berm, or unauthorized inflows into the impoundment or containment structure.

C. Design, construction, and installation requirements. An applicant shall:
1. Design and construct the impoundment or secondary containment structure as specified under R18-9-D301(C)(1);
2. Ensure that conveyance systems are capable of handling the peak flow from the 100-year storm;
3. Construct the liner as specified in R18-9-D301(C)(4)(a);
4. Develop and implement a Quality Assurance/Quality Control program that meets or exceeds the liner manufacturer's guidelines. The program shall address site and subgrade preparation, inspection procedures, field testing, laboratory testing, repair of seams during installation, and final inspection of the completed liner for functional integrity;
5. If the facility is located in the 100-year flood plain, design the facility so it is protected from damage or flooding as a result of a 100-year, 24-hour storm event;
6. Design and manage the facility so groundwater does not come into contact with the liner;
7. Ensure that the facility design addresses any significant geologic hazard relating to static and seismic stability. The applicant shall document any design adjustments made for this reason in the Notice of Intent to Discharge;
8. Ensure that the site preparation includes, as appropriate, clearing the area of vegetation, grubbing, grading, and embankment and subgrade preparation. The applicant shall ensure that supporting surface slopes and foundation are stable and structurally sound;
9. Ensure that the liner is anchored by being secured in an engineered anchor trench. If regularly exposed to sunlight, the applicant shall ensure that the liner is ultraviolet resistant; and
10. Use compacted clay subgrade in areas with shallow groundwater conditions.

D. Operational requirements. The permittee shall:
1. Maintain the freeboard required in subsection (C)(1) through design, pumping, or both;
2. Remove accumulated residues, sediments, debris, and vegetation to maintain the integrity of the liner and the design capacity of the impoundment;
3. Perform and document a visual inspection for cracks, tears, perforations and residual build-up at least monthly. The operator shall conduct and document an inspection after the facility receives significant volumes of stormwater inflow;
4. Report cracks, tears, and perforations in the liner to the Department, and repair them as soon as practical, but no later than 60 days under normal operating conditions, after discovery of the crack, tear, or perforation;
5. For facilities that temporarily contain a process solution due to process upsets, remove the process solution from the facility as soon as practical, but no later than 60 days after cessation of the upset; and
6. For facilities that temporarily contain a process solution due to rainfall, remove the process solution from the facility as soon as practical.

E. Recordkeeping. A permittee shall maintain the following information for at least 10 years and make it available to the Department upon request:

1. Construction drawings and as-built plans, if available;
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results and facility closure;
3. Capacity design criteria;
4. A list of standard operating procedures;
5. The Quality Assurance/Quality Control program required under subsection (C)(4); and
6. Records of any unauthorized flows into the impoundment.

F. Reporting requirements.
1. If the liner is breached, as evidenced by a drop in water level not attributable to evaporation, or if the impoundment breaches or is overtopped due to a catastrophic or other significant event, the permittee shall report the circumstance to the Department within five days of discovery and implement the contingency plan required in subsection (B)(3). The permittee shall submit a final report to the Department within 60 days of the event summarizing the circumstances of the problem and corrective actions taken.
2. The permittee shall report unauthorized flows into the impoundment to the Department within five days of discovery and implement the contingency plan required in subsection (B)(3).

G. Closure requirements.
1. The permittee shall notify the Department of the intent to close the facility permanently.
2. Within 90 days following closure notification the permittee shall comply with the following requirements, as applicable:
   a. Remove liquids and any solid residue on the liner and dispose appropriately;
   b. Inspect the liner for evidence of holes, tears, or defective seams that could have leaked;
   c. If evidence of leakage is discovered, remove the liner in the area of suspected leakage and sample potentially impacted soil. If soil remediation levels are exceeded, the permittee shall, within 60 days notify the Department and submit an action plan for the Department's approval before implementing the plan;
   d. If there is no evidence of holes, tears, or defective seams that could have leaked:
      i. Cover the liner in place or remove it for disposal or reuse if the impoundment is an excavated impoundment,
      ii. Remove and dispose of the liner elsewhere if the impoundment is bermed, and
      iii. Grade the facility to prevent the impoundment of water; and
3. Notify the Department within 60 days following closure that the action plan has been implemented and the closure is complete.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D305. 3.05 General Permit: Disposal Wetlands

A. A 3.05 General Permit allows discharges of reclaimed water into constructed or natural wetlands, including waters of the United States, waters of the state, and riparian areas, for disposal. This general permit does not apply if the purpose of the wetlands is to provide treatment.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit the name and individual permit number of the facility providing the reclaimed water.

C. Design requirements. An applicant shall:
1. Ensure that the reclaimed water released into the wetland meets numeric and narrative Aquifer Water Quality Standards for all parameters except for coliform bacteria and is Class A+ reclaimed water. A+ reclaimed water is wastewater that has undergone secondary treatment established under R18-9-B204(B)(1), filtration, and meets a total nitrogen concentration under R18-9-B204(B)(3) and fecal coliform limits under R18-9-B204(B)(4);
2. Maintain a minimum horizontal separation of 100 feet between any water supply well and the maximum wetted area of the wetland;
3. Post signs at points of access and every 250 feet along the perimeter of the wetland stating, "CAUTION. THESE WETLANDS CONTAIN RECLAIMED WATER. DO NOT DRINK." The applicant shall ensure that the signs are in English and Spanish, or in English with inclusion of the international "do not drink" symbol; and
4. Ensure that wetland siting is consistent with local zoning and land use requirements.

D. Operational requirements.
1. A permittee shall manage the wetland to minimize vector problems.
2. The permittee shall submit to the Department and implement a Best Management Practices Plan for operation of the wetland. The Best Management Practices Plan shall include:
   a. A site plan showing the wetland footprint, point of inflow, stormwater drainage, and placement of vegetation;
   b. Management of flows into and through the wetland to minimize erosion and damage to vegetation;
   c. Management of visitation and use of the wetlands by the public;
   d. A management plan for vector control;
   e. A plan or criteria for enhancing or supplementing of wetland vegetation; and
   f. Management of shallow groundwater conditions on existing on-site wastewater treatment facilities.
3. The permittee shall perform quarterly inspections to review bank integrity, erosion evidence, the condition of signage and vegetation, and correct any problem noted.

E. Recordkeeping. A permittee shall maintain the following information for at least 10 years and make it available to the Department upon request:
1. Construction drawings and as-built plans, if available; and
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure.

F. Reporting requirements. The permittee shall, by January 30, provide the Department in writing with an annual assessment of the biological condition of the wetland, including the volume of inflow to the wetland in the past year.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by

final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D306. 3.06 General Permit: Constructed Wetlands to Treat Acid Rock Drainage at Mining Sites

A. A 3.06 General Permit allows the operation of constructed wetlands that receive, with the intent to treat, acid rock drainage from a closed facility.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit a design, including information on the quality of the influent, the treatment process to be used, the expected quality of the wastewater, and the nutrients and other constituents that will indicate wetland performance.

C. Design, construction, and installation. An applicant shall:
1. Ensure that:
   a. Water released into the treatment wetland is compatible with construction materials and vegetation;
   b. Water released from the treatment wetland:
      i. Meets numeric Aquifer Water Quality Standards,
      ii. Has a pH between 6.0 and 9.0, and
      iii. Has a sulfate concentration less than 1000 mg/l; and
   c. Water released from the treatment wetland complies with and is released under an individual permit and an AZPDES Permit, if required;
2. Construct the treatment wetland with a liner, using a low-hydraulic conductivity synthetic liner, site-specific liner, or both, to achieve a calculated seepage rate of less than 550 gallons per acre per day. The applicant shall:
   a. Ensure that, if a synthetic liner is used, such as geomembrane, the liner is underlain by at least 6 inches of prepared and compacted subgrade;
   b. Anchor the liner along the perimeter of the treatment wetland; and
   c. Manage the plants in the treatment wetland to prevent species with root penetration that impairs liner performance;
3. Design the treatment wetland for optimum:
   a. Sizing appropriate for the anticipated treatment,
   b. Cell configuration,
   c. Vegetative species composition, and
   d. Berm configuration;
4. Construct and locate the treatment wetland so that it:
   a. Maintains physical integrity during a 100-year, 24-hour storm event; and
   b. Operates properly during a 25-year, 24-hour storm event;
5. Ensure that the bottom of the treatment wetland is at least 20 feet above the seasonal high groundwater table; and
6. If public access to the treatment wetland is anticipated or encouraged, post signs at points of access and every 250 feet along the perimeter of the treatment wetland stating, "CAUTION. THESE WETLANDS CONTAIN MINE DRAINAGE WATER. DO NOT DRINK." The permittee shall ensure that the signs are in English and Spanish, or in English with inclusion of the international "do not drink" symbol.

D. Operational requirements.
1. The permittee shall monitor the water leaving the treatment wetlands at least quarterly for the standards specified in subsection (C)(1)(b). Monitoring shall include nutrients or other constituents used as indicators of treatment wetland performance.
2. The permittee shall submit to the Department and implement a Best Management Practices Plan for operation of the treatment wetland. The Best Management Practices Plan shall include:
   a. A site plan showing the treatment wetland footprint, point of inflow, stormwater drainage, and placement of vegetation;
   b. A contingency plan to address problems, including treatment performance, wash-out and vegetation die-off, and a plan to apply for an individual permit if the treatment wetland is unable to achieve the treatment standards in subsection (C)(1)(b) on a continued basis;
   c. Management of flows into and through the treatment wetland to minimize erosion and damage to vegetation;
   d. A description of the measures for restricting access to the treatment wetlands by the public;
   e. A management plan for vector control; and
   f. A plan or criteria for enhancing or supplementing treatment wetland vegetation.
3. The permittee shall perform quarterly inspections to review the bank and liner integrity, erosion evidence, and the condition of signage and vegetation, and correct any problems noted.

E. Recordkeeping. A permittee shall maintain the following information for at least 10 years and make it available to the Department upon request:
1. Construction drawings and as-built plans, if available; and
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure.

F. Reporting requirements.
1. If preliminary laboratory results indicate that the quality of the water leaving the treatment wetlands does not meet the standards specified in subsection (C)(1)(b), the permittee may request that the laboratory re-analyze the sample before reporting the results to the Department. The permittee shall:
   a. Conduct verification sampling within 15 days of receiving final laboratory results,
   b. Conduct verification sampling only for parameters that are present in concentrations greater than the standards specified in subsection (C)(1)(b), and
   c. Notify the Department in writing within five days of receiving final laboratory results.
2. If the final laboratory result confirms that the quality of the water leaving the treatment wetlands does not meet the standards in subsection (C)(1)(b), the permittee shall implement the contingency plan required by subsection (D)(2)(b) and notify the Department that the plan is being implemented.
3. The permittee shall, by January 30, provide the Department in writing with an annual assessment of the biological condition of the treatment wetland, including the volume of inflow to the treatment wetland in the past year.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by

final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-D307. 3.07 General Permit: Tertiary Treatment Wetlands

A. A 3.07 General Permit allows constructed wetlands that receive with the intent to treat, discharges of reclaimed water that meet the secondary treatment level requirements specified in R18-9-B204(B)(1).

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit:
1. The name and individual permit number of any facility that provides the reclaimed water to the treatment wetland;
2. The name and individual permit number of any facility that receives water released from the treatment wetland;
3. The design of the treatment wetland construction and management project, including information on the quality of the influent, the treatment process, and the expected quality of the wastewater;
4. A Best Management Practices Plan that includes:
   a. A site plan showing the treatment wetland footprint, point of inflow, stormwater drainage, and placement of vegetation;
   b. A contingency plan to address any problem, including treatment performance, wash-out, and vegetation die-off;
   c. A management plan for flows into and through the treatment wetland to minimize erosion and damage to vegetation;
   d. A description of the measures for restricting access to the treatment wetlands by the public;
   e. A management plan for vector control; and
   f. A plan or criteria for enhancing or supplementing treatment wetland vegetation.

C. Design requirements. An applicant shall:
1. Release water from the treatment wetland under an individual permit and an AZPDES permit, if required. The applicant shall release water from the treatment wetland only to a direct reuse site if the site is permitted to receive reclaimed water of the quality generated under the individual permit specified in subsection (B)(1);
2. Construct and locate the treatment wetland so that it:
   a. Maintains physical integrity during a 100-year, 24-hour storm event; and
   b. Operates properly during a 25-year, 24-hour storm event;
3. Ensure that the bottom of the treatment wetland is at least 20 feet above the seasonal high groundwater table;
4. Maintain a minimum horizontal separation of 100 feet between a water supply well and the maximum wetted area of the treatment wetland;
5. Maintain the setbacks specified in R18-9-B201(I) for no noise, odor, or aesthetic controls between the property boundary at the site and the maximum wetted area of the treatment wetland;
6. Fence the treatment wetland area to prevent unauthorized access;
7. Post signs at points of access stating "CAUTION. THESE WETLANDS CONTAIN RECLAIMED WATER, DO NOT DRINK." The applicant shall ensure that the signs are in English and Spanish, or in English with inclusion of the international "do not drink" symbol;
8. Construct the treatment wetland with a liner using low hydraulic conductivity liner, site-specific liner, or both, to achieve a calculated seepage rate of less than 550 gallons per acre per day. The applicant shall:
   a. Ensure that if a synthetic liner is used, such as geomembrane, the liner is underlain by at least 6 inches of prepared and compacted subgrade;
   b. Anchor the liner along the perimeter of the treatment wetland; and
   c. Manage the plants in the treatment wetland to prevent species with root penetration that impairs liner performance;
9. Calculate the size and depth of the treatment wetland so that the rate of flow allows adequate treatment detention time. The applicant shall design the treatment wetland with at least two parallel treatment cells to allow for efficient system operation and maintenance;
10. Ensure that the treatment wetland vegetation includes cattails, bulrush, common reed, or other species of plants with high pollutant treatment potential to achieve the intended water quality identified in subsection (B)(3); and
11. Ensure that construction and operation of the treatment wetlands is consistent with local zoning and land use requirements.

D. Operational requirements. The permittee shall:
1. Implement the Best Management Practices Plan approved under subsection (B);
2. Monitor wastewater leaving the treatment wetland to ensure that discharge water quality meets the expected wastewater quality specified in subsection (B)(3). The permittee shall ensure that analyses of wastewater samples are conducted by a laboratory certified by the Department of Health Services, following the Department's Quality Assurance/Quality Control requirements;
3. Follow the prescribed measures as required in the contingency plan under subsection (B)(4)(b) and submit a written report to the Department within five days if verification sampling demonstrates that an alert level or discharge limit is exceeded;
4. Inspect the treatment wetlands at least quarterly for bank and liner integrity, erosion evidence, and condition of signage and vegetation, and correct any problem discovered; and
5. Ensure that the treatment wetland is operated by a certified operator under 18 A.A.C. 5, Article 1.

E. Recordkeeping. A permittee shall maintain the following information for at least 10 years and make it available to the Department upon request:
1. Construction drawings and as-built plans, if available; and
2. A log book or similar documentation to record inspection results, repair and maintenance activities, monitoring results, and facility closure.

F. Reporting requirements. The permittee shall, by January 30, provide the Department in writing with an annual assessment of the biological condition of the treatment wetland including the volume of inflow to the treatment wetland in the past year.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

PART E. TYPE 4 GENERAL PERMITS

R18-9-E301. 4.01 General Permit: Sewage Collection Systems

A. A 4.01 General Permit allows for construction and operation of a new sewage collection system or expansion of an existing sewage collection system involving new construction as follows:
1. A sewage collection system or portion of a sewage collection system that serves downstream from the point where the daily design flow is 3000 gallons per day based on Table 1, Unit Design Flows, except a gravity sewer line conveying sewage from a single building drain directly to an interceptor, collector sewer, lateral, or manhole regardless of daily design flow;
2. A sewage collection system that includes a manhole; or
3. A sewage collection system that includes a force main or lift station serving more than one dwelling.

B. Performance. An applicant shall design, construct, and operate a sewage collection system so that the sewage collection system:
1. Provides adequate wastewater flow capacity for the planned service area;
2. Minimizes sedimentation, blockage, and erosion through maintenance of proper flow velocities throughout the system;
3. Prevents releases of sewage to the land surface through appropriate sizing, capacities, and inflow and infiltration prevention measures throughout the system;
4. Protects water quality through minimization of exfiltration losses from the system;
5. Provides for adequate inspection, maintenance, testing, visibility, and accessibility;
6. Maintains system structural integrity; and
7. Minimizes septic conditions in the sewage collection system.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B), an applicant shall submit the following information:
1. A statement on a form approved by the Director, signed by the owner or operator of the sewage treatment facility that treats or processes the sewage from the proposed sewage collection system.
   a. The statement shall affirm that the additional volume of wastewater delivered to the facility by the proposed sewage collection system will not cause any flow or effluent quality limits of the individual permit for the facility to be exceeded.
   b. If the facility is classified as a groundwater protection permit facility under A.R.S. § 49-241.01(C), or if no flow or effluent limits are applicable, the statement shall affirm that the design flow of the facility will not be exceeded;
2. If the proposed sewage collection system delivers wastewater to a downstream sewage collection system under different ownership or control, a statement on a form approved by the Director, signed by the owner or operator of the downstream sewage collection system, affirming that the downstream system can maintain the performance required by subsection (B) when receiving the increased flows;
3. A general site plan showing the boundaries and key aspects of the project;
4. Construction quality drawings that provide overall details of the site and the engineered works comprising the project including:
   a. The plans and profiles for all sewer lines, manholes, force mains, depressed sewers, and lift stations with sufficient detail to allow Department verification of design and performance characteristics;
   b. Relevant cross sections showing construction details and elevations of key components of the sewage collection system to allow Department verification of design and performance characteristics, including the slope of each gravity sewer segment stated as a percentage; and
   c. Drainage features and controls, and erosion protection as applicable, for the components of the project; and
   d. Horizontal and vertical location of utilities within the area affected by the sewer line construction;
5. Documentation of design flows for significant components of the sewage collection system and the basis for calculating the design flows;
6. Drawings, reports, and other information that are clear, reproducible, and in a size and format specified by the Department. The applicant may submit the drawings in a Department-approved electronic format; and
7. Design documents, including plans, specifications, drawings, reports, and calculations that are signed, dated, and sealed by an Arizona-registered professional engineer. The designer shall use good engineering judgment by following engineering standards of practice, and rely on appropriate engineering methods, calculations, and guidance.

D. Design requirements.
1. General Provisions. An applicant shall design and construct a new sewage collection system or an expansion of an existing sewage collection system involving new construction, according to the requirements of this general permit. An applicant shall:
   a. Base design flows for components of the system on unit flows specified in Table 1, Unit Design Flows.
   b. Design gravity sewer lines and all other sewage collection system components, including, manholes, force mains, lift stations, depressed sewers, and appurtenant devices and structures to accommodate maximum sewage flows as follows:
      i. Any point in a sewer main when flowing full can accommodate a peak wet weather flow calculated by multiplying the sum of the upstream sources of flow from Table 1, Unit Design Flows by a dry weather peaking factor based on upstream population, as tabulated below, and adding a wet weather infiltration and inflow rate based on either a percentage of peak dry weather flow or a gallons per acre rate of flow;

Upstream Population	Dry Weather Peaking Factor
100	3.62
200	3.14
300	2.90
400	2.74
500	2.64
600	2.56

700	2.50
800	2.46
900	2.42
1000	2.38
1001 to 10,000	$PF = (6.330 \times p^{-0.231}) + 1.094$
10,001 to 100,000	$PF = (6.177 \times p^{-0.233}) + 1.128$
More than 100,000	$PF = (4.500 \times p^{-0.174}) + 0.945$
PF = Dry Weather Peaking Factor p = Upstream Population	

ii. For a lift station serving less than 600 single family dwelling units (d.u.), use either of the following methods to size the pumps for peak dry weather flow in gallons per minute and add an allowance for wet weather flow and infiltration:

(1) Peak dry weather flow = 17 $d.u.^{0.42}$, or

(2) Peak dry weather flow = 11.2 $(population)^{0.42}$

iii. If justified by the applicant, the Department may accept lower unit flow values in the served area due to significant use of low-flow fixtures, hydrographs of actual flows, or other factors;

c. Use the "Uniform Standard Specifications for Public Works Construction" (revisions through 2004) and the "Uniform Standard Details for Public Works Construction" (revisions through 2004) published by the Maricopa Association of Governments, and the "Standard Specifications for Public Improvements," (2003 Edition), and "Standard Details for Public Improvements," (2003 Edition), published jointly by Pima County Wastewater Management and the City of Tucson, as the applicable design and construction criteria, unless the Department approves alternative design standards or specifications. An applicant in a county other than Maricopa and Pima shall use design and construction criteria from either the Maricopa Association of Governments or the Pima County Wastewater Management and the City of Tucson for the facility unless alternative criteria are designated by the Department.

i. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material.

ii. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the Maricopa Association of Governments, 302 N. 1st Avenue, Suite 300, Phoenix, Arizona 85003, or on the web at http://www.mag.maricopa.gov/archive/Newpages/on-line.htm; or from Pima County Wastewater Management, 201 N. Stone Avenue, Tucson, Arizona 85701-1207, or on the web at http://www.pima.gov/wwm/stddet;

d. Ensure that sewage collection system components are separated from drinking water distribution system components as specified in 18 A.A.C. 5, Article 5;

e. Ensure that sewage collection system components are separated from reclaimed water system components as specified in 18 A.A.C. 9, Article 6; and

f. Request review and approval of an alternative to a design feature specified in this Section by following the requirements in R18-9-A312(G).

2. Gravity sewer lines. An applicant shall:

a. Ensure that any sewer line that runs between manholes, if not straight, is of constant horizontal curvature with a radius of curvature not less than 200 feet;

b. Cover each sewer line with at least 3 feet of earth cover meeting the requirements of subsection (D)(2)(h). The applicant shall:

i. Include at least one note specifying this requirement in construction plans;

ii. If site-specific limitations prevent 3 feet of earth cover, provide the maximum cover attainable, construct the sewer line of ductile iron pipe or other design of equivalent or greater tensile and compressive strength, and note the change on the construction plans; and

iii. Ensure that the design of the pipe and joints can withstand crushing or shearing from any expected static and live load to protect the structural integrity of the pipe. Construction plans shall note locations requiring these measures;

c. If sewer lines cross or are constructed in floodways;

i. Place the lines at least 2 feet below the level of the 100-year storm scour depth and calculated 100-year bed degradation and construct the lines using ductile iron pipe or pipe with equivalent tensile strength, compressive strength, shear resistance, and scour protection.

ii. If it is not possible to maintain the 2 feet of clearance specified in subsection (D)(2)(c)(i), using the process described in R18-9-A312(G), provide a design that ensures that the sewer line will withstand any lateral and vertical load for the scour and bed degradation conditions specified in subsection (D)(2)(c)(i);

iii. Ensure that sewer lines constructed in a floodway extend at least 10 feet beyond the boundary of the 100-year storm scouring;

iv. If a sewer line is constructed in a floodway and is longer than the applicable maximum manhole spacing distance in subsection (D)(3)(a), using the process described in R18-9-A312(G), provide a design that ensures the performance standards in subsection (B) are met; and

v. Note locations requiring these measures on the construction plans;

d. Ensure that each sewer line is 8 inches in diameter or larger except the first 400 feet of a dead end sewer line with no potential for extension may be 6 inches in diameter if the design flow criteria specified in subsections (D)(1)(a) and (D)(1)(b) are met and the sewer line is installed with a slope sufficient to achieve a velocity of at least 3 feet per second when flowing full. If the line is extended, the applicant seeking the extension shall replace the entire length with larger pipe to accommodate the new design flow unless the applicant demonstrates with engineering calculations that using the existing 6-inch pipe will accommodate the design flow;

e. Design sewer lines with at least the minimum slope calculated from Manning's Formula using a coeffi-

cient of roughness of 0.013 and a sewage velocity of 2 feet per second when flowing full.

i. An applicant may request a smaller minimum slope under R18-9-A312(G) if the smaller slope is justified by a quarterly program of inspections, flushings, and cleanings.

ii. If a smaller minimum slope is requested, the applicant shall not specify a slope that is less than 50 percent of that calculated from Manning's formula using a coefficient of roughness of 0.013 and a sewage velocity of 2 feet per second.

iii. The ratio of flow depth in the pipe to the diameter of the pipe shall not exceed 0.75 in peak dry weather flow conditions;

f. Design sewer lines to avoid a slope that creates a sewage velocity greater than 10 feet per second. The applicant shall construct any sewer line carrying a flow with a normal velocity of greater than 10 feet per second using ductile iron pipe or pipe with equivalent erosion resistance, and structurally reinforce the receiving manhole or sewer main;

g. Design and install sewer lines, connections, and fittings with materials that meet or exceed manufacturer's specifications consistent with this Chapter to:

i. Limit inflows, infiltration, and exfiltration;

ii. Resist corrosion in the ambient electrochemical environment;

iii. Withstand anticipated static and live loads; and

iv. Provide internal erosion protection;

h. Indicate trenching and bedding details applicable for each pipe material and size in the design plans. Unless the Department approved alternative design standards or specifications under subsection (D)(1)(c), the applicant shall place and bed the sewer lines in trenches following the specifications in "Trench Excavation, Backfilling, and Compaction" (Section 601) revised 2004, published by the Maricopa Association of Governments; and "Rigid Pipe Bedding for Sanitary Sewers" (WWM 104) revised July 2002, and "Flexible Pipe Bedding for Sanitary Sewers" (WWM 105) revised July 2002, published by Pima County Wastewater Management. This material is part of the material incorporated by reference in subsection (D)(1)(b).

i. Perform a deflection test of the total length of all sewer lines made of flexible materials to ensure that the installation meets or exceeds the manufacturer's recommendations and record the results;

j. Test each segment of the sewer line for leakage using the applicable method below and record the results:

i. "Standard Test Method for Installation of Acceptance of Plastic Gravity Sewer Lines Using Low-Pressure Air, F1417-92(1998)," published by the American Society for Testing and Materials;

ii. "Standard Practice for Testing Concrete Pipe Sewer Lines by Low-Pressure Air Test Method, C924-02 (2002)," published by the American Society for Testing and Materials;

iii. "Standard Test Method for Low-Pressure Air Test of Vitrified Clay Pipe Lines, C828-03 (2003)," published by the American Society for Testing and Materials;

iv. "Standard Test Method for Hydrostatic Infiltration Testing of Vitrified Clay Pipe Lines, C1091-03a (2003)," published by the American Society for Testing Materials;

v. "Standard Practice for Infiltration ion and Exfiltration Acceptance Testing of Installed Precast Concrete Pipe Sewer Lines, C969-02 (2002)," published by the American Society for Testing Material; or

vi. "Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications, D2321-00 (2000)," published by the American Society for Testing Materials; or

vii. The material listed in subsections (D)(2)(j)(i) through (vi) is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959;

k. Test the total length of the sewer line for uniform slope by lamp lighting, remote camera or similar method approved by the Department, and record the results; and

l. Minimize the planting within the disturbed area of new sewage collection system construction of plant species having roots that are likely to reach and damage the sewer or impair the operation of the sewer or visual and vehicular access to any manhole.

3. Manholes.

a. An applicant shall install manholes at all grade changes, size changes, alignment changes, sewer intersections, and at any location necessary to comply with the following spacing requirements:

Sewer Pipe Diameter (inches)	Maximum Manhole Spacing (feet)
Less than 8	400
8 to less than 18	500
18 to less than 36	600
36 to less than 60	800
60 or greater	1300

b. The Department shall allow greater manhole spacing if the applicant follows the procedure provided in R18-9-A312(G) and provides documentation showing the operator possesses or has available specialized sewer cleaning equipment suitable for the increased spacing.

c. The applicant shall ensure that manhole design is consistent with "Pre-cast Concrete Sewer Manhole" #420-1, revised January 1, 2004 and #420-2, revised January 1, 2001, "Offset Manhole for 8" – 30" Pipe" #421 (1998), and "Sewer Manhole and Cover Frame Adjustment" #422, revised January 1, 2001, published by the Maricopa Association of Governments; and "Manholes and Appurtenant Items" (WWM 201 through WWM 211, except WWM 204, 205, and

206), revised July 2002, published by Pima County Wastewater Management. This material is part of the material incorporated by reference in subsection (D)(1)(b).

d. The applicant shall not locate manholes in areas subject to more than incidental runoff from rain falling in the immediate vicinity unless the manhole cover assembly is designed to restrict or eliminate stormwater inflow.

e. The applicant shall test each manhole using one of the following test protocols:

i. Watertightness testing by filling the manhole with water. The applicant shall ensure that the drop in water level following presoaking does not exceed 0.0034 of total manhole volume per hour;

ii. Negative air pressure testing using the "Standard Test Method for Concrete Sewer Manholes by Negative Air Pressure (Vacuum) Test, C1244-02e1 (2002)," published by the American Society for Testing and Materials. This material is incorporated by reference, does not include any later amendments or editions of the incorporated material and may be viewed at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007, or obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959; or

iii. Holiday testing of a lined manhole constructed with uncoated rebar using the "High-Voltage Electrical Inspection of Pipeline Coatings, RP0274-2004 (2004)," published by the National Association of Corrosion Engineers (NACE International). This material is incorporated by reference as modified below, does not include any later amendments or editions of the incorporated material and may be viewed at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or obtained from NACE International, 1440 South Creek Drive, Houston, Texas 77084-4906. The following substitutions apply:

(1) Where the word "metal" is used in the standard, use the word "surface" instead; and

(2) Where the words "pipe" or "pipeline" are used, use the word "manhole" instead.

f. The applicant shall perform manhole testing under subsection (D)(3)(e) after installation of the manhole cone or top riser to verify watertightness integrity of the manhole from the top of the cone or riser down.

i. Upon satisfactory test results, the applicant shall install the manhole ring and any spacers, complete the joints, and seal the manhole to a watertight condition.

ii. If the applicant can install the manhole cone or top riser, spacers, and ring to final grade without disturbance or adjustment by later construction, the applicant may perform the testing from the top of the manhole ring on down.

g. The applicant shall locate a manhole to provide adequate visibility and vehicular maintenance accessibility following construction.

4. Force mains. An applicant may install a force main if it meets the following design, installation, and testing requirements. The applicant shall:

a. Design force mains to maintain a minimum flow velocity of 3 feet per second and a maximum flow velocity of 7 feet per second. The applicant may design for sustained periods of flow above 7 feet per second, if the applicant justifies the design using the process specified in R18-9-A312(G);

b. Ensure that force mains have the appropriate valves and controls required to prevent drainback to the lift station. If drainback is necessary during cold weather to prevent freezing, the control system may allow manual or automatic drainback;

c. Incorporate air release valves or other appropriate components in force mains at all high points along the line to eliminate air accumulation. If engineering calculations provided by the applicant demonstrate that air will not accumulate in a given high point under typical flow conditions, the Department shall waive the requirement for an air release valve;

d. Design restrained joints or thrust blocks on force mains to accommodate water hammer, surge control, and to prevent excessive movement of the force main. Submitted construction plans shall show restrained joint or thrust block locations and details;

e. If a force main is proposed to discharge directly to a sewage treatment facility without entering a flow equalization basin, include in the Notice of Intent to Discharge a statement from the owner or operator of the sewage treatment facility that the design is acceptable;

f. Design a force main to withstand a pressure of 50 pounds per square inch or more above the design working pressure for two hours and test upon completion to ensure no leakage;

g. Supply flow to a force main using a lift station that meets the requirements of subsection (D)(5); and

h. Ensure that force mains are designed to control odor.

5. Lift stations. An applicant shall:

a. Secure a lift station to prevent tampering and affix on its exterior, or on the nearest vertical object if the lift station is entirely below grade, at least one warning sign that includes the 24-hour emergency phone number of the owner or operator of the collection system;

b. Protect lift stations from physical damage from a 100-year flood event. An applicant shall not construct a lift station in a floodway;

c. Lift station wet well design.

i. Ensure that the minimum wet well volume in gallons is 1/4 of the product of the minimum pump cycle time, in minutes, and the total pump capacity, in gallons per minute;

ii. Protect the wet well against corrosion to provide at least a 20-year operational life;

iii. Ensure that wet well volume does not allow the sewage retention time to exceed 30 minutes unless the sewage is aerated, chemicals are added to prevent or eliminate hydrogen sulfide formation, or adequate ventilation is provided.

Notwithstanding these measures, the applicant shall not allow the septic condition of the sewage to adversely affect downstream collection systems or sewage treatment facility performance;

iv. Ensure that excessively high or low levels of sewage in the wet well trigger an audible or visible alarm at the wet well site and at the system control center;

v. Ensure that a wet well designed to accommodate more than 5000 gallons per day has a horizontal cross-sectional area of at least 20 square feet; and

vi. Ensure that lift stations are designed to prevent odor from emanating beyond the lift station site;

d. Equip a lift station wet well with at least two pumps. The applicant shall ensure that:

i. The pumps are capable of passing a 2.5-inch sphere or are grinder pumps;

ii. The lift station is capable of operating at design flow with any one pump out of service; and

iii. Piping, valves, and controls are arranged to allow independent operation of each pump;

e. Not use suction pumps if the sewage lift is more than 15 feet. The applicant shall ensure that other types of pumps are self-priming and that pump water brake horsepower is at least 0.00025 times the product of the required discharge, in gallons per minute, and the required total dynamic head, in feet; and

f. For lift stations receiving an average flow of more than 10,000 gallons per day, include a standby power source and redundant wastewater level controls in the lift station design that will provide immediate service and remain available for 24 hours per day if the main power source or controls fail.

6. Depressed sewers. An applicant shall:

a. Size the depressed sewer to attain a minimum velocity of 3 feet per second through all barrels of the depressed sewer when the flow equals or exceeds the design daily peak dry weather flow,

b. Design the depressed sewer to convey the sewage flow through at least two parallel pipes at least 6 inches in diameter,

c. Include an inlet and outlet structure at each end of the inverted sewer,

d. Design the depressed sewer so that the barrels are brought progressively into service as flow increases to its design value, and

e. Design the depressed sewer to minimize release of odors to the atmosphere.

E. Additional Discharge Authorization requirements. An applicant shall:

1. Supply a signed, dated, and sealed Engineer's Certificate of Completion in a format approved by the Department that provides the following:

a. Confirmation that the project was completed in compliance with the requirements of this Chapter, as described in the plans and specifications corresponding to the Construction Authorization issued by the Director, or with changes that are reflected in as-built plans submitted with the Engineer's Certificate of Completion;

b. As-built plans, if required, that are properly identified and numbered; and

c. Satisfactory field test results from deflection, leakage, and uniform slope testing;

2. Provide any other relevant information required by the Department to determine that the facility conforms to the terms of the 4.01 General Permit; and

3. Provide a signed certification on a form approved by the Department that:

a. Confirms that an operation and maintenance manual exists for the sewage collection system;

b. Confirms that the operation and maintenance manual addresses components of operation and maintenance specified on the certification form;

c. Provides the 24-hour emergency number of the owner or operator of the sewage collection system; and

d. Provides an address where the operation and maintenance manual is maintained and confirms that the manual is available for inspection at that address by the Department on request.

F. Operation and maintenance requirements. The permittee shall:

1. Operate the new sewage collection system or expansion of an existing sewage collection system involving new construction using the operation and maintenance manual certified by the owner or operator in subsection (E)(3), to meet the performance standards specified in subsection (B), unless the permittee is operating the sewage collection system under a CMOM Plan under the general permit established in R18-9-C305;

2. Ensure that the sewage collection system is operated according to the operator certification requirements in 18 A.A.C. 5, Article 1; and

3. For safety during operation and maintenance of lift station and other confined space components of the sewage collection system, follow all applicable state and federal confined space entry requirements.

G. Recordkeeping. A person owning or operating a facility permitted under this Section shall maintain the documents listed in subsection (E) for the life of the facility and make them available to the Department upon request.

H. Repairs.

1. A Notice of Intent to Discharge is not required for sewage collection system repairs. Repairs include work performed in response to deterioration or damage of existing structures, devices, and appurtenances with the intent to maintain or restore the system to its original design flow and operational characteristics. Repairs do not include changes in vertical or horizontal alignment.

2. Components used in the repair shall meet the design, installation, and operational requirements of this Section.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E302. 4.02 General Permit: Septic Tank with Disposal by Trench, Bed, Chamber Technology, or Seepage Pit, Less Than 3000 Gallons Per Day Design Flow

A. A 4.02 General Permit allows for the construction and operation of a system with less than 3000 gallons per day design flow consisting of a septic tank dispensing wastewater to an approved means of disposal described in this Section. Only

gravity flow of wastewater from the septic tank to the disposal works is authorized by this general permit.

1. The standard septic tank and disposal works design specified in the 4.02 General Permit serves sites where no site limitations are identified by the site investigation conducted under R18-9-A310.
2. If site conditions allow, this general permit authorizes the discharge of wastewater from a septic tank meeting the requirements of R18-9-A314 to one of the following disposal works:
   a. Trench,
   b. Bed,
   c. Chamber technology, or
   d. Seepage pit.

B. Performance. An applicant shall design a system consisting of a septic tank and one of the disposal works listed in subsection (A)(2) so that treated wastewater released to the native soil meets the following criteria:

1. TSS of 75 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 150 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 100,000,000 (Log_{10} 8) colony forming units per 100 milliliters, 95th percentile.

C. Design and installation requirements.

1. General provisions. In addition to the applicable requirements in R18-9-A312, the applicant shall:
   a. Ensure that the septic tank meets the requirements specified in R18-9-A314;
   b. Before placing aggregate or disposal pipe in a prepared excavation, remove all smeared or compacted surfaces from trenches by raking to a depth of 1 inch and removing loose material. The applicant shall:
      i. Place aggregate in the trench to the depth and grade specified in subsection (C)(2);
      ii. Place the drain pipe on aggregate and cover it with aggregate to the minimum depth specified in subsection (C)(2); and
      iii. Cover the aggregate with landscape filter material, geotextile, or similar porous material to prevent filling of voids with earth backfill;
   c. Use a grade board stake placed in the trench to the depth of the aggregate if the disposal pipe is constructed of drain tile or flexible pipe that will not maintain alignment without continuous support;
   d. Disposal pipe. If two or more disposal pipes are installed, install a distribution box approved by the Department of sufficient size to receive all lateral lines and flows at the head of each disposal works and:
      i. Ensure that the inverts of all outlets are level and the invert of the inlet is at least 1 inch above the outlets;
      ii. Design distribution boxes to ensure equal flow and install the boxes on a stable level surface such as a concrete slab or native or compacted soil; and
      iii. Protect concrete distribution boxes from corrosion by coating them with an appropriate bituminous coating, constructing the boxes with concrete that has a 15 to 18 percent fly ash content, or by using other equivalent means;
   e. Construct all lateral pipes running from a distribution box to the disposal works with watertight joints and ensure that multiple disposal laterals, wherever practical, are of uniform length;
   f. Lay pipe connections between the septic tank and a distribution box on natural ground or compact fill and construct the pipe connections with watertight joints;
   g. Construct steps within distribution line trenches or beds, if necessary, to maintain a level disposal pipe on sloping ground. The applicant shall construct the lines between each horizontal section with watertight joints and install them on natural or unfilled ground; and
   h. Ensure that a disposal works consisting of trenches, beds, chamber technology, or seepage pits is not paved over or covered by concrete or any material that can reduce or inhibit possible evaporation of wastewater through the soil to the land surface or oxygen transport to the soil absorption surfaces.
2. Trenches.
   a. The applicant shall calculate the trench absorption area as the total of the trench bottom area and the sum of both trench sidewall areas to a maximum depth of 48 inches below the bottom of the disposal pipe.
   b. The applicant shall ensure that trench bottoms and disposal pipe are level. The applicant shall calculate trench sizing from the soil absorption rate specified under R18-9-A312(D) and the design flow established in R18-9-A312(B).
   c. The following design criteria for trenches apply:

Trenches	**Minimum**	**Maximum**
1. Number of trenches	1 (2 are recommended)	No Maximum
2. Length of trench[1]	----	100 feet
3. Bottom width of trench	12 inches	36 inches
4. Trench absorption area (sq. ft. of absorption area per linear foot of trench)	No Minimum	11 sq. ft.
5. Depth of cover over aggregate surrounding disposal pipe	9 inches	24 inches[2]
6. Thickness of aggregate material over disposal pipe	2 inches	2 inches
7. Thickness of aggregate material under disposal pipe	12 inches	No Maximum
8. Slope of disposal pipe	Level	Level
9. Disposal pipe diameter	3 inches	4 inches
10. Spacing of trenches (measured between nearest sidewalls)	2 times effective depth[3] or five feet, whichever is greater	No Maximum

Notes:
[1] If unequal trench lengths are used, proportional distribution of wastewater is required.
[2] For more than 24 inches, Standard Dimensional Ratio 35 or equivalent strength pipe is required.
[3] The effective depth is the distance between the bottom of the disposal pipe and the bottom of the trench bed.

d. The applicant may substitute clean, durable, crushed, and washed recycled concrete for aggregate if noted in design documents and the trench absorption area calculation excludes the trench bottom.

3. Beds. An applicant shall:
   a. If a bed is installed, use the soil absorption rate specified in R18-9-A312(D) for "SAR, Bed. The applicant may, in computing the bed bottom absorption area, include the bed bottom and the perimeter sidewall area not more than 36 inches below the disposal pipe;
   b. Comply with the following design criteria for beds:

Gravity Beds	Minimum	Maximum
1. Number of disposal pipes	2	No Maximum
2. Length of bed	No Minimum	100 feet
3. Distance between disposal pipes	4 feet	6 feet
4. Spacing of beds measured between nearest sidewalls	2 times effective depth[1] or 5 feet, whichever is greater	No Maximum
5. Width of bed	10 feet	12 feet
6. Distance from disposal pipe to sidewall	3 feet	3 feet
7. Depth of cover over disposal pipe	9 inches	14 inches
8. Thickness of aggregate material under disposal pipe	12 inches	No Maximum
9. Thickness of aggregate material over disposal pipe	2 inches	2 inches
10. Slope of disposal pipe	Level	Level
11. Disposal pipe diameter	3 inches	4 inches

Note:
[1] The effective depth is the distance between the bottom of the disposal pipe and the bottom of the bed.

4. Chamber technology. An applicant shall:
   a. Calculate an effective chamber absorption area to size the disposal works area and determine the number of chambers needed. The effective absorption area of each chamber is calculated as follows:
      $A = (1.8 \times B \times L) + (2 \times V \times L)$
      i. "A" is the effective absorption area of each chamber,
      ii. "B" is the exterior width of the bottom of the chamber,
      iii. "V" is the vertical height of the louvered sidewall of the chamber, and
      iv. "L" is the length of the chamber;
   b. Calculate the disposal works size and number of chambers from the effective absorption area of each chamber and the soil absorption rates specified in R18-9-A312(D);
   c. Ensure that the sidewall of the chamber provides at least 35 percent open area for sidewall credit and that the design and construction minimizes the movement of fines into the chamber area. The applicant shall not use filter fabric or geotextile against the sidewall openings.

5. Seepage pits. If allowed by R18-9-A311(B)(1), the applicant shall:
   a. Design a seepage pit to comply with R18-9-A312(E)(1) for minimum vertical separation distance;
   b. Ensure that multiple seepage pit installations are served through a distribution box approved by the Department or connected in series with a watertight connection laid on undisturbed or compacted soil. The applicant shall ensure that the outlet from the pit has a sanitary tee with the vertical leg extending at least 12 inches below the inlet;
   c. Ensure that each seepage pit is circular and has an excavated diameter of 4 to 6 feet. If multiple seepage pits are installed, ensure that the minimum spacing between seepage pit sidewalls is 12 feet or three times the diameter of the seepage pit, whichever is greater. The applicant may use the alternative design procedure specified in R18-9-A312(G) for a proposed seepage pit more than 6 feet in diameter;
   d. For a gravel filled seepage pit, backfill the entire pit with aggregate. The applicant shall ensure that each pit has a breather conductor pipe that consists of a perforated pipe at least 4 inches in diameter, placed vertically within the backfill of the pit. The pipe shall extend from the bottom of the pit to within 12 inches below ground level;
   e. For a lined, hollow seepage pit, lay a concrete liner or a liner of a different protective material in the pit on a firm foundation and fill excavation voids behind the liner with at least 9 inches of aggregate;
   f. For the cover of a lined seepage pit, use an approved one or two piece reinforced concrete slab with a minimum compressive strength of 2500 pounds per square inch. The applicant shall ensure that the cover:
      i. Is at least 5 inches thick and designed to support an earth load of at least 400 pounds per square foot;
      ii. Has a 12-inch square or diameter minimum access hole with a plug or cap that is coated on the underside with an protective bituminous seal, constructed of concrete with 15 percent to 18 percent fly ash content, or made of other nonpermeable protective material; and
      iii. Has a 4 inch or larger inspection pipe placed vertically not more than 6 inches below ground level;
   g. Ensure that the top of the seepage pit cover is 4 to 18 inches below the surface of the ground;

h. Install a vented inlet fitting in every seepage pit to prevent flows into the seepage pit from damaging the sidewall. An applicant may use a 1/4 bend fitting placed through an opening in the top of the slab cover if a one or two piece concrete slab cover inlet is used;

i. Bore seepage pits five feet deeper than the proposed pit depth to verify underlying soil characteristics and backfill the five feet of overdrill with low permeability drill cuttings or other suitable material;

j. Backfill seepage pits that terminate in gravelly, coarse sand zones five feet above the beginning of the zone with low permeability drill cuttings or other suitable material;

k. Determine the minimum sidewall area for a seepage pit from the design flow and the soil absorption rate derived from the testing procedure described in R18-9-A310(G). The effective absorption surface for a seepage pit is the sidewall area only. The sidewall area is calculated using the following formula:

$A = 3.14 \times D \times H$

i. "A" is the minimum sidewall area in square feet needed for the design flow and soil absorption rate for the installation,

ii. "D" is the diameter of the proposed seepage pit in feet,

iii. "H" is the vertical height in feet in the seepage pit through which wastewater infiltrates native soil. The applicant shall ensure that H is at least 10 feet for any seepage pit.

D. Operation and maintenance. The permittee shall follow the applicable operation and maintenance requirements in R18-9-A313.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E303. 4.03 General Permit: Composting Toilet, Less Than 3000 Gallons Per Day Design Flow

A. A 4.03 General Permit allows for the use of a composting toilet with less than 3000 gallons per day design flow.

1. Definition. For purposes of this Section, "composting toilet" means a manufactured turnkey or kit form treatment technology that receives human waste from a waterless toilet directly into an aerobic composting chamber where dehydration and biological activity reduce the waste volume and the content of nutrients and harmful microorganisms to an appropriate level for later disposal at the site or by other means.
2. An applicant may use a composting toilet if:
   a. Limited water availability prevents use of other types of on-site wastewater treatment facilities,
   b. Environmental constraints prevent the discharge of wastewater or nutrients to a sensitive area,
   c. Inadequate space prevents use of other systems,
   d. Severe site limitations exist that make other forms of treatment or disposal unacceptable, or
   e. The applicant desires maximum water conservation.
3. A permittee may use a composting toilet only if:
   a. Wastewater is managed as provided in this Section and, if gray water is separated and reused, the gray water reuse complies with18 A.A.C. 9, Article 7; and
   b. Soil conditions support subsurface disposal of all wastewater sources.

B. Restrictions.

1. A permittee shall ensure that no more than 50 persons per day use the composting toilet.
2. A composting toilet shall only receive human excrement unless the manufacturer's specifications allow the deposit of kitchen or other wastes into the toilet.

C. Performance. An applicant shall ensure that:

1. The composting toilet provides containment to prevent the discharge of toilet contents to the native soil except leachate, which may drain to the wastewater disposal works described in subsection (F);
2. The composting toilet limits access by vectors to the contained waste; and
3. Wastewater is disposed into the subsurface to prevent any wastewater from surfacing.

D. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), the applicant shall submit the following information:

1. Composting toilet.
   a. The name and address of the composting toilet system manufacturer;
   b. A copy of the manufacturer's warranty, and the specifications for installation operation, and maintenance;
   c. The product model number;
   d. Composting rate, capacity, and waste accumulation volume calculations;
   e. Documentation of listing by a national listing organization indicating that the composting toilet meets the stated manufacturer's specifications for loading, treatment performance, and operation, unless the composting toilet is listed under R18-9-A309(E) or is a component of a reference design approved by the Department;
   f. The method of vector control;
   g. The planned method and frequency for disposing the composted human excrement residue; and
   h. The planned method for disposing of the drainage from the composting unit; and
2. Wastewater.
   a. The number of bedrooms in the dwelling or persons served on a daily basis, as applicable, and the corresponding design flow of the disposal works for the wastewater;
   b. The results from soil evaluation or percolation testing that adequately characterize the soils into which the wastewater will be dispersed and the locations of soil evaluation and percolation testing on the site plan; and
   c. The design for the disposal works in subsection (F), including the location of the interceptor, the location and configuration of the trench or bed used for wastewater dispersal, the location of connecting wastewater pipelines, and the location of the reserve area.

E. Design requirements for a composting toilet. An applicant shall ensure that:

1. The composting chamber is watertight, constructed of solid durable materials not subject to excessive corrosion or decay, and is constructed to exclude access by vectors;
2. The composting chamber has airtight seals to prevent odor or toxic gas from escaping into the building. The system may be vented to the outside;
3. The capacity of the chamber and rate of composting are calculated based on:
   a. The lowest monthly average chamber temperature; or
   b. The yearly average chamber temperature, if the composting toilet is designed to compost on a yearly cycle or longer; and
4. The composting system provides adequate storage of all waste produced during the months when the average temperature is below 55^{o}F, unless a temperature control device is installed to increase the composting rate and reduce waste volume.

F. Design requirements for the disposal works.
1. Interceptor. An applicant shall ensure that the design complies with the following:
   a. An interceptor may not accept human excreta or toilet wastewater;
   b. Wastewater passes into an interceptor before it is conducted to the subsurface for dispersal;
   c. The interceptor is designed to remove grease, oil, fibers, and solids to ensure long-term performance of the trench or bed used for subsurface dispersal;
   d. The interceptor is covered to restrict access and eliminate habitat for mosquitoes and other vectors; and
   e. Minimum interceptor size is based on design flow.
      i. For a dwelling, the following apply:

No. of Bedrooms	Design Flow (gallons per day)	Minimum Interceptor Size (gallons)	
		Kitchen Wastewater Only (All gray water sources are collected and reused)	Combined Non-Toilet Wastewater (Gray water is not separated and reused)
1 (7 fixture units or less)	90	42	200
1-2 (greater than 7 fixture units)	180	84	400
3	270	125	600
4	330	150	700
5	380	175	800
6	420	200	900
7	460	225	1000

      ii. For other than a dwelling, minimum interceptor size in gallons is 2.1 times the design flow from Table 1, Unit Design Flows.
2. Dispersal of wastewater. An applicant shall ensure that the design complies with the following:
   a. A trench or bed is used to disperse the wastewater into the subsurface;
   b. Sizing of the trench or bed is based on the design flow as determined in subsection (F)(1)(e), including all black and gray water, and an SAR determined under R18-9-A312(D);
   c. The minimum vertical separation from the bottom of the trench or bed to a limiting subsurface condition is at least 5 feet; and
   d. Other aspects of trench or bed design follow R18-9-E302, as applicable.
3. Setback distances. Setback distances are no less than 1/4 of the setback distances specified in R18-9-A312(C), but not less than 5 feet, except the setback distance from wells is 100 feet.

G. Operation and maintenance requirements. A permittee shall:
1. Composting toilet.
   a. Provide adequate mixing, ventilation, temperature control, moisture, and bulk to reduce fire hazard and prevent anaerobic conditions;
   b. Follow manufacturer's specifications for addition of any organic bulking agent to control liquid drainage, promote aeration, or provide additional carbon;
   c. Follow the manufacturer's specifications for operation and maintenance regarding movement of material within the composting chamber;
   d. If batch system containers are mounted on a carousel, place a new container in the toilet area if the previous one is full;
   e. Ensure that only human waste, paper approved for septic tank use, and the amount of bulking material required for proper maintenance is introduced to the composting chamber. The permittee shall remove all other materials or trash. If allowed by the manufacturer's specifications the permittee may add, other nonliquid compostable food preparation residues to the toilet;
   f. Ensure that any liquid end product is:
      i. Sprayed back onto the composting waste material;
      ii. Removed by a person who licensed a vehicle under 18 A.A.C. 13, Article 11; or
      iii. Is drained to the interceptor described in subsection (F);
   g. Remove and dispose of composted waste as necessary, using a person who licensed a vehicle under 18 A.A.C. 13, Article 11 if the waste is not placed in a disposal area for burial or used on-site as mulch;
   h. Before ending use for an extended period take measures to ensure that moisture is maintained to sustain bacterial activity and free liquids in the chamber do not freeze; and
   i. After an extended period of non-use, empty the composting chamber of solid end product and inspect all mechanical components to verify that the mechanical components are operating as designed;
2. Wastewater Disposal Works.

a. Ensure that the interceptor is maintained regularly according to manufacturer's instructions to prevent grease and solid wastes from impairing performance of the trench or bed used for dispersal of wastewater, and
b. Protect the area of the trench or bed from soil compaction or other activity that will impair dispersal performance.

H. Reference design.
1. An applicant may use a composting toilet that achieves the performance requirements in subsection (C) by following a reference design on file with the Department.
2. The applicant shall file a form provided by the Department for supplemental information about the proposed system with the applicant's submittal of the Notice of Intent to Discharge.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-E304. 4.04 General Permit: Pressure Distribution System, Less Than 3000 Gallons Per Day Design Flow

A. A 4.04 General Permit allows for the use of a pressurized distribution of wastewater system with a design flow less than 3000 gallons per day that treats wastewater to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a "pressure distribution system" means a tank, pump, controls, and piping that conducts wastewater under pressure in controlled amounts and intervals to a bed or trench or other means of distribution authorized by a general permit for an on-site wastewater treatment facility.
2. An applicant may use a pressure distribution system if a gravity flow system is unsuitable, inadequate, unfeasible, or cost prohibitive because of site limitations or other conditions, or if needed to optimally distribute wastewater.

B. Performance. An applicant shall ensure that a pressure distribution system:
1. Disperses wastewater so that:
   a. Loading rates are optimized for the intended purpose, and
   b. The wastewater is delivered under pressure and evenly distributed within the disposal works, and
2. Prevents ponding on the land surface.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), the applicant shall submit:
1. A copy of operation, maintenance, and warranty materials for the principal components; and
2. A copy of dosing specifications, including pump curves, dispersing component details, and float control settings.

D. Design requirements.
1. Pumps. An applicant shall ensure that pumps used in the on-site wastewater treatment facility:
   a. Are rated for wastewater service by the manufacturer and certified by Underwriters Laboratories;
   b. Achieve the minimum design flow rate and total dynamic head requirements for the particular site; and
   c. Incorporate a quick disconnect using compression-type unions for pressure connections. The applicant shall ensure that:
      i. Quick-disconnects are accessible in the pressure piping, and
      ii. A pump has adequate lift attachments for removal and replacement of the pump and switch assembly without entering the dosing tank or process chamber.
2. Switches, controls, alarms, timers, and electrical components. An applicant shall ensure that:
   a. Switches and controls accommodate the minimum and maximum dose capacities of the distribution network design. The applicant shall not use pressure diaphragm level control switches;
   b. Fail-safe controls that can be tested in the field are used to prevent discharge of inadequately treated wastewater. The applicant shall include counters or flow meters if critical to control functions, such as timed dosing;
   c. Control panels and alarms:
      i. Are either mounted in an exterior location visible from the structure served, mounted in a conspicuous location on the side of the structure served, or mounted in a conspicuous location adjacent to the structure served,
      ii. Provide manual pump switch and alarm test features, and
      iii. Include written instructions covering standard operation and alarm events;
   d. Audible and visible alarms are used for all critical control functions, such as pump failures, treatment failures, and excess flows. The applicant shall ensure that:
      i. The visual portion of the signal is conspicuous from a distance 50 feet from the system and its appurtenances;
      ii. The audible portion of the signal is between 70 and 75 db at 5 feet and is discernible from a distance of 50 feet from the system and its appurtenances;
      iii. Alarms, test features, and controls are on a non-dedicated electrical circuit separate from the dedicated circuit for the pump with constant visual confirmation that the circuit is electrically active; and
      iv. The alarm is clearly audible and visible inside the structure served;
   e. All electrical wiring complies with the National Electrical Code, 2005 Edition, published by the National Fire Protection Association. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the National Fire Protection Association, 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101. The applicant shall ensure that:
      i. Connections are made using National Electrical Manufacturers Association (NEMA) 4x junction boxes certified by Underwriters Laboratories; and

ii. All controls are in NEMA 3r, 4, or 4x enclosures for outdoor use.

3. Dosing tanks and wastewater distribution components.
   a. An applicant shall:
      i. Design dosing tanks to withstand anticipated internal and external loads under full and empty conditions, and design concrete tanks to meet the "Standard Specification for Precast Concrete Water and Wastewater Structures, C913-02 (2002)," published by the American Society for Testing and Materials. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959;
      ii. Design dosing tanks to be easily accessible and have secured covers;
      iii. Install risers to provide access to the inlet and outlet of the tank and to service internal components;
      iv. Ensure that the volume of the dosing tank accommodates bottom depth below maximum drawdown, maximum design dose, including any drainback, volume to high water alarm, and a reserve volume above the high water alarm level that is not less than the daily design flow volume. If the tank is time dosed, the applicant shall ensure that the combined surge capacity and reserve volume above the high water alarm is not less than the daily design flow volume;
      v. Ensure that dosing tanks are watertight and anti-buoyant;
      vi. Design the wastewater distribution components to withstand system pumping pressures;
      vii. Design the wastewater distribution system to allow air to purge from the system;
      viii. Design pressure piping to minimize freezing during cold weather;
      ix. Ensure that the end of each wastewater distribution line is accessible for maintenance;
      x. Ensure that orifices emit the design discharge rate uniformly throughout the wastewater distribution system; and
      xi. Design orifices using orifice shields to provide proper distribution of wastewater to the receiving medium.
   b. An applicant may use a septic tank second compartment or a second septic tank in series as a dosing tank if all dosing tank requirements of this Section are met and a screened vault is used instead of the septic tank effluent filter.
4. Design SAR. If the site conditions of the property for the on-site wastewater treatment facility do not require pressure distribution, but an applicant chooses to use pressure distribution, the applicant shall use a design SAR for the absorption surfaces in the disposal works that is not more than 1.10 times the adjusted SAR determined in R18-9-A312(D).

E. Additional Discharge Authorization requirements. An applicant shall obtain copies of instructions for the critical controls of the system from the person who installed the pressure distribution system. The applicant shall submit one copy of the instructions with the information required in subsection (C).

F. Operation and maintenance requirements. In addition to the applicable requirements specified in R18-9-A313(B), a permittee shall ensure that:
1. The operation and maintenance manual for the on-site wastewater treatment facility that supplies the wastewater to the pressure distribution system specifies inspection and maintenance needed for the following items:
   a. Sludge level in the bottom of the treatment and dosing tanks,
   b. Watertightness,
   c. Condition of electrical and mechanical components, and
   d. Piping and other components functioning within design limits;
2. All critical control functions are specified in the operation and maintenance manual for testing to demonstrate compliance with design specifications, including:
   a. Alarms, test features, and controls;
   b. Float switch level settings;
   c. Dose rate, volume, and frequency, if applicable;
   d. Distal pressure or squirt height, if applicable; and
   e. Voltage test on pumps, motors, and controls, as applicable;
3. The finished grade is observed and maintained for proper surface drainage. The applicant shall observe the levelness of the tank for differential settling. If there is settling, the applicant shall grade the facility to maintain surface drainage.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-E305. 4.05 General Permit: Gravelless Trench, Less Than 3000 Gallons Per Day Design Flow

A. A 4.05 General Permit allows for the use of a gravelless trench with less than 3000 gallons per day design flow receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a "gravelless trench" means a disposal technology characterized by installation of a proprietary pipe and geocomposite or other substitute media into native soil instead of the distribution pipe and aggregate fill used in a trench allowed in R18-9-E302.
2. A permittee may use a gravelless trench if suitable gravel or volcanic rock aggregate is unavailable, excessively expensive, or if adverse site conditions make movement of gravel difficult, damaging, or time consuming.

B. Performance. An applicant shall design a gravelless trench so that treated wastewater released to the native soil meets the following criteria:
1. TSS of 75 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 150 milligrams per liter, 30-day arithmetic mean;

3. Total nitrogen (as nitrogen) of 53 milligrams per liter, 5-month arithmetic mean; and
4. Total coliform level of 100,000,000 (Log_{10} 8) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit the following:
1. The soil absorption area that would be required if a conventional disposal trench filled with aggregate was used at the site,
2. The configuration and size of the proposed gravelless disposal works, and
3. The manufacturer's installation instructions and warranty of performance for absorbing wastewater into the native soil.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall:
1. Ensure that the top of the gravelless disposal pipe or similar disposal mechanism is at least 6 inches below the surface of the native soil and 12 to 36 inches below finished grade if approved fill is placed on top of the installation;
2. Calculate the infiltration surface as follows:
   a. For 8-inch diameter pipe, 2 square feet of absorption area is allowed per linear foot;
   b. For 10-inch diameter pipe, 3 square feet of absorption area is allowed per linear foot;
   c. For bundles of two pipes of the same diameter, the absorption area is calculated as 1.67 times the absorption area of one pipe; and
   d. For bundles of three pipes of the same diameter, the absorption area is calculated as 2.00 times the absorption area of one pipe;
3. Use a pressure distribution system meeting the requirements of R18-9-E304 in medium sand, coarse sand, and coarser soils; and
4. Construct the drainfield of material that will not decay, deteriorate, or leach chemicals or byproducts if exposed to sewage or the subsurface soil environment.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall:
1. Install the gravelless pipe material according to manufacturer's instructions if the instructions are consistent with this Chapter,
2. Ensure that the installed disposal system can withstand the physical disturbance of backfilling and the load of any soil cover above natural grade placed over the installation, and
3. Shape any backfill and soil cover in the area of installation to prevent settlement and ponding of rainfall for the life of the disposal works.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall inspect the finished grade in the vicinity of the gravelless disposal works for maintenance of proper drainage and protection from damaging loads.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E306. 4.06 General Permit: Natural Seal Evapotranspiration Bed, Less Than 3000 Gallons Per Day Design Flow

A. A 4.06 General Permit allows for the use of a natural seal evapotranspiration bed with less than 3000 gallons per day design flow receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a "natural seal evapotranspiration bed" means a disposal technology characterized by a bed of sand or other media with an internal wastewater distribution system, contained on the bottom and sidewalls by an engineered liner consisting of natural soil and clay materials.
2. An applicant may use a natural seal evapotranspiration bed if site conditions restrict soil infiltration or require reduction of the volume of wastewater discharged to the native soil underlying the natural seal liner.

B. Restrictions. Unless a person provides design documentation to show that a natural seal evapotranspiration bed will properly function, the person shall not install this technology if:
1. Average minimum temperature in any month is 20° F or less,
2. Over 1/3 of the average annual precipitation falls in a 30-day period, or
3. Design flow exceeds net evaporation.

C. Performance. An applicant shall ensure that a natural seal evapotranspiration bed:
1. Minimizes discharge to the native soil through the natural seal liner,
2. Maximizes wastewater disposed to the atmosphere by evapotranspiration, and
3. Prevents ponding of wastewater on the bed surface and maintains an interval of unsaturated media directly beneath the bed surface.

D. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. Capillary rise potential test results for the media used to fill the evapotranspiration bed, unless sand meeting a D_{50} of 0.1 millimeter (50 percent by weight of grains equal to or smaller than 0.1 millimeter) is used; and
2. Water mass balance calculations used to size the evapotranspiration bed.

E. Design requirements. An applicant shall:
1. Ensure that the evapotranspiration bed is from 18 to 36 inches deep and shall calculate the bed design based on the capillary rise of the bed media, following the "Standard Test Method for Capillary-Moisture Relationships for Coarse- and Medium-Textured Soils by Porous-Plate Apparatus, D2325-68 (2000)," incorporated by reference in R18-9-E307(E), and the anticipated maximum frost depth;
2. Ensure the media is sand or other durable material;
3. Base design area calculations on a water mass balance for the winter months and the design seepage rate;
4. Ensure that the natural seal liner is a durable, low-hydraulic conductivity liner and is accompanied by the liner performance specification and calculations for bottom and sidewall seepage rate;
5. If a surfacing layer is used, use topsoil, dark cinders, decomposed granite, or similar landscaping material placed to a maximum depth of 2 inches and ensure that:
   a. If topsoil is used as a surfacing layer for growth of landscape plants:
      i. The topsoil is a fertile, friable soil obtained from well-drained arable land;

ii. The topsoil is free of nut grass, refuse, roots, heavy clay, clods, noxious weeds, or any other material toxic to plant growth;
iii. The pH of the topsoil is between 5.5 and 8.0;
iv. The plasticity index of the topsoil is between 3 and 15; and
v. The topsoil contains approximately 1-1/2 percent organic matter, by dry weight, either natural or added;

b. If landscaping material other than topsoil is used as a surfacing layer, the material meets the following gradation:

Sieve Size	Percent Passing
1”	100
1/2”	95-100
No. 4	90-100
No. 10	70-100
No. 200	15-70

6. Use shallow-rooted, non-invasive, salt- and drought-tolerant evergreens if vegetation is planted on the evapotranspiration bed;
7. Install at least two observation ports to determine the level of the liquid surface of wastewater within the evapotranspiration bed;
8. Design the bed to pump out the saturated zone if accumulated salts or a similar condition impairs bed performance; and
9. Instead of the minimum vertical separation required under R18-9-A312(E), ensure that the minimum vertical separation from the bottom of the natural seal evapotranspiration bed liner to the seasonal high water table is at least 12 inches.

F. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall ensure that:
1. The liner covers the bottom and all sidewalls of the bed and is installed on a stable base according to the manufacturer’s installation specifications;
2. If the inlet pipe passes through the liner, the joint is tightly sealed to minimize leakage during the operational life of the facility;
3. The liner is leak tested under the supervision of an Arizona-registered professional engineer to confirm the design leakage rate; and
4. A 2- to 4-inch layer of 1/2- to 1-inch gravel or crushed stone is placed around the distribution pipes within the bed. The applicant shall ensure that the filter cloth is placed on top of the gravel or crushed stone to prevent sand from settling into the gravel or crushed stone.

G. Additional Discharge Authorization requirements. An applicant shall submit the satisfactory results of the leakage test required under subsection (F)(3) to the Department before the Department issues the Discharge Authorization.

H. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall:
1. Not allow irrigation of an evapotranspiration bed, and
2. Protect the bed from vehicle loads and other damaging activities.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E307. 4.07 General Permit: Lined Evapotranspiration Bed, Less Than 3000 Gallons Per Day Design Flow

A. A 4.07 General Permit allows for the use of a lined evapotranspiration bed receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a “lined evapotranspiration bed” means a disposal technology characterized by a bed of sand or other media with an internal wastewater distribution system contained on the bottom and sidewalls by an impervious synthetic liner.
2. An applicant may use a lined evapotranspiration bed if site conditions restrict soil infiltration or require reduction or elimination of the volume of wastewater or nitrogen load discharged to the native soil.
3. Provision of a reserve area is not required for a lined evapotranspiration bed.

B. Restrictions. Unless a person provides design documentation to show that a lined evapotranspiration bed will properly function, the person shall not install this technology if:
1. Average minimum temperature in any month is 20° F or less,
2. Over 1/3 of average annual precipitation falls in a 30-day period, or
3. Design flow exceeds net evaporation.

C. Performance. An applicant shall ensure that a lined evapotranspiration bed:
1. Prevents discharge to the native soil by a synthetic liner,
2. Attains full disposal of wastewater to the atmosphere by evapotranspiration, and
3. Prevents ponding of wastewater on the bed surface and maintains an interval of unsaturated media directly beneath the bed surface.

D. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. Capillary rise potential test results for the media used to fill the evapotranspiration bed, unless sand meeting a D_{50} of 0.1 millimeter (50 percent by weight of grains equal to or smaller than 0.1 millimeter in size) is used; and
2. Water mass balance calculations used to size the evapotranspiration bed.

E. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall:
1. Ensure that the evapotranspiration bed is from 18 to 36 inches deep and calculate the bed design on the basis of the capillary rise of the bed media, according to the “Standard Test Method for Capillary-Moisture Relationships for Coarse- and Medium-Textured Soils by Porous-Plate Apparatus, D2325-68 (2003),” published by the American Society for Testing and Materials and the anticipated maximum frost depth. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959;
2. Ensure the media is sand or other durable material;
3. Base design area calculations on a water mass balance for the winter months;

4. Ensure that the evapotranspiration bed liner is a durable, low hydraulic conductivity synthetic liner that has a calculated bottom area and sidewall seepage rate of less than 550 gallons per acre per day;
5. If a surfacing layer is used, use topsoil, dark cinders, decomposed granite, or similar landscaping material placed to a maximum depth of 2 inches. The applicant shall ensure that:
   a. If topsoil is used as a surfacing layer for growth of landscape plants:
      i. The topsoil is a fertile, friable soil obtained from well-drained arable land;
      ii. The topsoil is free of nut grass, refuse, roots, heavy clay, clods, noxious weeds, or any other material toxic to plant growth;
      iii. The pH of the topsoil is between 5.5 and 8.0;
      iv. The plasticity index of the topsoil is between 3 and 15; and
      v. The topsoil contains approximately 1 1/2 percent organic matter, by dry weight, either natural or added;
   b. If another landscaping material is used as a surfacing layer, the material meets the following gradation:

Sieve Size	Percent Passing
1”	100
1/2”	95-100
No. 4	90-100
No. 10	70-100
No. 200	15-70

6. Use shallow-rooted, non-invasive, salt and drought tolerant evergreens if vegetation is planted on the evapotranspiration bed;
7. Install at least two observation ports to allow determination of the depth to the liquid surface of wastewater within the evapotranspiration bed;
8. Design the bed to pump out the saturated zone if accumulated salts or a similar condition impairs bed performance; and
9. Instead of the minimum vertical separation required under R18-9-A312(E), ensure that the minimum vertical separation from the bottom of the evapotranspiration bed liner to the surface of the seasonal high water table or impervious layer or formation is at least 12 inches.

F. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall ensure that:
1. All liner seams are factory fabricated or field welded according to manufacturer’s specifications. The applicant shall ensure that:
2. The liner covers the bottom and all sidewalls of the bed and is cushioned on the top and bottom with layers of sand at least 2 inches thick or other puncture-protective material;
3. If the inlet pipe passes through the liner, the joint is tightly sealed to minimize leakage during the operational life of the facility;
4. The liner is leak tested under the supervision of an Arizona-registered professional engineer; and
5. A 2- to 4-inch layer of one-half to 1-inch gravel or crushed stone is placed around the distribution pipes within the bed. The applicant shall place filter cloth on top of the gravel or crushed stone to prevent sand from settling into the crushed stone or gravel.

G. Additional Discharge Authorization requirements. An applicant shall submit the liner test results sealed by an Arizona-registered professional engineer to the Department for issuance of the Discharge Authorization.

H. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall:
1. Not allow irrigation of an evapotranspiration bed; and
2. Protect the bed from vehicle loads and other damaging activities.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E308. 4.08 General Permit: Wisconsin Mound, Less Than 3000 Gallons Per Day Design Flow

A. A 4.08 General Permit allows for the use of a Wisconsin mound with a design flow of less than 3000 gallons per day receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a “Wisconsin mound” means a disposal technology characterized by:
   a. An above-grade bed system that blends with the land surface into which is dispensed pressure dosed wastewater from a septic tank or other upstream treatment device,
   b. Dispersal of wastewater under unsaturated flow conditions through the engineered media system contained in the mound, and
   c. Wastewater treated by passage through the mound before percolation into the native soil below the mound.
2. An applicant may use a Wisconsin mound if:
   a. The native soil has excessively high or low permeability,
   b. There is little native soil overlying fractured or excessively permeable rock, or
   c. A reduction in minimum vertical separation is desired.

B. Performance. An applicant shall design a Wisconsin mound so that treated wastewater released to the native soil meets the following criteria:
1. Performance Category A.
   a. TSS of 20 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 20 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, 5-month arithmetic mean; and
   d. Total coliform level of 1000 (Log_{10} 3.0) colony forming units per 100 milliliters, 95th percentile; or
2. Performance Category B.
   a. TSS of 30 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, 5-month arithmetic mean; and
   d. Total coliform level of 300,000 (Log_{10} 5.5) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. Specifications for the internal wastewater distribution system media proposed for use in the Wisconsin mound;
2. Two scaled or dimensioned cross sections of the mound (one of the shortest basal area footprint dimension and one of the lengthwise dimension); and
3. Design calculations following the "Wisconsin Mound Soil Absorption System: Siting, Design, and Construction Manual," published by the University of Wisconsin – Madison, January 1990 Edition (the Wisconsin Mound Manual). This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the University of Wisconsin – Madison, SSWMP, 1525 Observatory Drive, Room 345, Madison, WI 53706.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:
1. Pressure dosed wastewater is delivered into the Wisconsin mound through a pressurized line and secondary distribution lines into an engineered aggregate infiltration bed, or equivalent system, in conformance with R18-9-E304 and the Wisconsin Mound Manual. The applicant shall ensure that the aggregate is washed;
2. Wastewater is applied to the inlet surface of the mound media at not more than 1.0 gallon per day per square foot of mound bed inlet surface if the mound bed media conforms with the "Standard Specification for Concrete Aggregates, C33-03 (2003)," published by the American Society for Testing and Materials and the Wisconsin Mound Manual, except if cinder sand is used that is the appropriate grade with not more than 5 percent passing a #200 screen. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959. The applicant shall:
   a. For cinder sand, ensure that the rate is not more than 0.8 gallons per day per square foot of mound bed inlet surface; and
   b. Wash the media used for the mound bed;
3. The aggregate infiltration bed and mound bed is capped by coarser textured soil, such as sand, sandy loam, or silt loam. An applicant shall not use silty clay, clay loam, or clays;
4. The cap material is covered by topsoil, following the procedure in the Wisconsin Mound Manual, and the topsoil is capable of supporting vegetation, is not clay, and is graded to drain;
5. The top and bottom surfaces of the aggregate infiltration bed are level and do not exceed 10 feet in width and that:
   a. The minimum depth of the aggregate infiltration bed is 9 inches, or
   b. Synthetic filter fabric permeable to water and air and capable of supporting the cap and topsoil load is placed on the top surface of the aggregate infiltration bed;
6. The minimum depth of mound bed media is:
   a. Performance Category A, 24 inches; or
   b. Performance Category B, 12 inches;
7. The maximum allowable side slope of the mound bed, cap material, and topsoil is not more than one vertical to three horizontal;
8. Ports for inspection and monitoring are provided to verify performance, including verification of unsaturated flow within the aggregate infiltration bed. The applicant shall:
   a. Install a vertical PVC pipe and cap with a minimum diameter of 4 inches as an inspection port at the end of the disposal line, and
   b. Install the pipe with a physical restraint to maintain pipe position;
9. The main pressurized line and secondary distribution lines for the aggregate infiltration bed are equipped at appropriate locations with cleanouts to grade;
10. The following requirements and the setbacks specified in R18-9-A312(C) are observed:
   a. Increase setbacks for the following downslope features at least 30 feet from the toe of the mound system:
      i. Property line,
      ii. Driveway,
      iii. Building,
      iv. Ditch or interceptor drain, or
      v. Any other feature that impedes water movement away from the mound; and
   b. Ensure that no upslope natural feature or improvement channels surface water or groundwater to the mound area;
11. The portion of the basal area of native soil below the mound conforms to the Wisconsin Mound Manual. The applicant shall:
   a. Calculate the absorption of wastewater into the native soil for only the effective basal area;
   b. Apply the soil absorption rate specified in R18-9-A312(D). The applicant may increase allowable loading rate to the mound bed inlet surface up to 1.6 times if the wastewater dispersed to the mound is pretreated to reduce the sum of TSS and BOD_5 to 60 mg/l or less. The applicant may increase the soil absorption rate to not more than 0.20 gallons per day per square foot of basal area if the following slowly permeable soils underlie the mound:
      i. Sandy clay loam, clay loam, silty clay loam, or finer with weak platy structure; or
      ii. Sandy clay loam, clay loam, silty clay loam, or silt loam with massive structure;
12. The slope of the native soil at the basal area does not exceed 25 percent, and a slope stability analysis is performed whenever the basal area or site slope within 50 horizontal feet from the mound system footprint exceeds 15 percent.

E. Installation. An applicant shall:
1. Prepare native soil for construction of a Wisconsin mound system. The applicant shall:
   a. Mow vegetation and cut down trees in the vicinity of the basal area site to within 2 inches of the surface;
   b. Leave in place boulders and tree stumps and other herbaceous material that would excessively alter the soil structure if removed after mowing and cutting;

c. Plow native soil serving as the basal area footprint along the contours to 7- to 8- inch depth;
d. Not substitute rototilling for plowing; and
e. Begin mound construction immediately after plowing;

2. Place each layer of the bed system to prevent differential settling and promote uniform density; and
3. Use the Wisconsin Mound Manual to guide any other detail of installation. The applicant may vary installation procedures and criteria depending on mound design but shall use installation procedures and criteria that are at least equivalent to those in the Wisconsin Mound Manual.

F. Operation and maintenance requirements. In addition to the applicable requirements specified in R18-9-A313(B), the permittee shall:

1. If an existing mound system shows evidence of overload or hydraulic failure, conduct the following sequence of evaluations:
   a. Verify the actual loading and performance of the pretreatment system.
   b. Verify the watertightness of the pretreatment and dosing tanks;
   c. Determine the dosing rates and dosing intervals to the aggregate infiltration bed and compare it with the original design to evaluate the presence or absence of saturated conditions in the aggregate infiltration bed;
   d. If the above steps in subsections (F)(1)(a) through (c) do not indicate an anomalous condition, evaluate the site and recalculation of the disposal capability to determine if mound lengthening is feasible;
   e. Determine if site modifications are possible including changing surface drainage patterns at upgrade locations and lowering the groundwater level by installing interceptor drains to reduce native soil saturation at shallow levels; and
   f. Determine if the basal area can be increased, consistent with R18-9-A309(A)(9)(b)(iv);
2. Prepare servicing and waste disposal procedures and task schedules necessary for clearing the main pressurized wastewater line and secondary distribution lines, septic tank effluent filter, pump intake, and controls.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E309. 4.09 General Permit: Engineered Pad System, Less Than 3000 Gallons Per Day Design Flow

A. A 4.09 General Permit allows for the use of an engineered pad system receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).

1. Definition. For purposes of this Section, an "engineered pad system" means a treatment and disposal technology characterized by:
   a. The delivery of pretreated wastewater by gravity or pressure distribution to the engineered pad and sand bed assembly, followed by dispersal of the wastewater into the native soil; and
   b. Wastewater movement through the engineered pad and sand bed assembly by gravity under unsaturated flow conditions to provide additional passive biological treatment.
2. The applicant may use an engineered pad system if:
   a. The native soil is excessively permeable,
   b. There is little native soil overlying fractured or excessively permeable rock, or
   c. The available area is limited for installing a disposal works authorized by R18-9-E302.

B. Performance. An applicant shall ensure that:

1. The engineered pad system is designed so that the treated wastewater released to the native soil meets the following criteria:
   a. TSS of 50 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 50 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, 5-month arithmetic mean; and
   d. Total coliform level of 1,000,000 (Log_{10} 6) colony forming units per 100 milliliters, 95th percentile; or
2. The engineered pad system is designed to meet any other performance, loading rate, and configuration criteria specified in the reviewed product list maintained by the Department as required under R18-9-A309(E).

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit design materials and construction specifications for the engineered pad system.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:

1. Gravity and pressurized wastewater delivery is from a septic tank or intermediate watertight chamber equipped with a pump and controls. The applicant shall ensure that:
   a. Delivered wastewater is distributed onto the top of the engineered pad system and achieves even distribution by good engineering practice, and
   b. The dosing rate for pressurized wastewater delivery is at least four doses per day and no more than 24 doses per day;
2. The sand bed consists of mineral sand washed to conform to the "Standard Specification for Concrete Aggregates, C33-03 (2003)," which is incorporated by reference in R18-9-E308(D)(2), unless the performance testing and design specifications of the engineered pad manufacturer justify a substitute specification. The applicant shall ensure that:
   a. The sand bed design provides for the placement of at least 6 inches of sand bed material below and along the perimeter of each pad, and
   b. The contact surface between the bottom of the sand bed and the native soil is level;
3. The spacing between adjacent two-pad-wide rows is at least two times the distance between the bottom of the distribution pipe and the bottom of the sand bed or 5 feet, whichever is greater;
4. The wastewater distribution system installed on the top of the engineered pad system is covered with a breathable geotextile material and the breathable geotextile material is covered with at least 10 inches of backfill.
   a. The applicant shall ensure that rocks and cobbles are removed from backfill cover and grade the backfill for drainage.

b. The applicant may place the engineered pad system above grade, partially bury it, or fully bury it depending on site and service circumstances;
5. The engineered pad system is constructed with durable materials and capable of withstanding stress from installation and operational service; and
6. At least two inspection ports are installed in the engineered pad system to confirm unsaturated wastewater treatment conditions at diagnostic locations.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall place sand media to obtain a uniform density of 1.3 to 1.4 grams per cubic centimeter.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), an applicant shall inspect the backfill cover for physical damage or erosion and promptly repair the cover, if necessary.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended to correct a manifest typographical error in subsection (B)(2) (Supp. 01-1). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E310. 4.10 General Permit: Intermittent Sand Filter, Less Than 3000 Gallons Per Day Design Flow

A. A 4.10 General Permit allows for the use of an intermittent sand filter receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, an "intermittent sand filter" means a treatment technology characterized by:
   a. The pressurized delivery of pretreated wastewater to an engineered sand bed in a containment vessel equipped with an underdrain system or designed as a bottomless filter;
   b. Delivered wastewater dispersed throughout the sand media by periodic doses from the delivery pump to maintain unsaturated flow conditions in the bed; and
   c. Wastewater that is treated during passage through the media, collected by a bed underdrain chamber, and removed by pump or gravity to the disposal works, or wastewater that percolates downward directly into the native soil as part of a bottomless filter design.
2. An applicant may use an intermittent sand filter if:
   a. The native soil is excessively permeable,
   b. There is little native soil overlying fractured or excessively permeable rock, or
   c. The applicant desires a reduction in setback distances or minimum vertical separation.

B. Performance. An applicant shall ensure that:
1. An intermittent sand filter with underdrain system is designed so that it produces treated wastewater that meets the following criteria:
   a. TSS of 10 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 10 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 40 milligrams per liter, 5-month arithmetic mean; and
   d. Total coliform level or 1000 (Log_{10} 3) colony forming units per 100 milliliters, 95th percentile; or
2. An intermittent sand filter with a bottomless filter is designed so that it produces treated wastewater released to the native soil that meets the following criteria:
   a. TSS of 20 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 20 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
   d. Total coliform level of 100,000 (Log_{10} 5 colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit specifications for the media proposed for use in the intermittent sand filter.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:
1. Pressurized wastewater delivery is from the septic tank or separate watertight chamber with a pump sized and controlled to deliver the pretreated wastewater to the top of the intermittent sand filter. The applicant shall ensure that the dosing rate is at least 4 doses per day and not more than 24 doses per day;
2. The pressurized wastewater delivery system provides even distribution in the sand filter through good engineering practice. The applicant shall:
   a. Specify all necessary controls, pipes, valves, orifices, filter cover materials, gravel, or other distribution media, and monitoring and servicing components in the design documents; and
   b. Ensure that the cover and topsoil is 6 to 12 inches in depth and graded to drain;
3. The sand filter containment vessel is watertight, structurally sound, durable, and capable of withstanding stress from installation and operational service. The applicant may place the intermittent sand filter above grade, partially buried, or fully buried depending on site and service circumstances;
4. Media used in the intermittent sand filter is mineral sand and that the media is washed and conforms to "Standard Specification for Concrete Aggregates, C33-03," which is incorporated by reference in R18-9-E308(D)(2);
5. The sand media depth is a minimum of 24 inches with the top and bottom surfaces level and the maximum wastewater loading rate is 1.0 gallons per day per square foot of inlet surface at the rated daily design flow;
6. The underdrain system:
   a. Is within the containment vessel;
   b. Supports the filter media and all overlying loads from the unsupported construction above the top surface of the sand media;
   c. Has sufficient void volume above the normal high level of the intermittent sand filter effluent to prevent saturation of the bottom of the sand media by a 24-hour power outage or pump malfunction; and
   d. Includes necessary monitoring, inspection, and servicing features;
7. Inspection ports are installed in the distribution media and in the underdrain;
8. The bottomless filter is designed similar to the underdrain system, except that the sand media is positioned on top of the native soil absorption surface. The applicant shall ensure that companion modifications are made that eliminate the containment vessel bottom and underdrain and

relocate the underdrain inspection port to ensure reliable indication of the presence or absence of water saturation in the sand media;

9. The native soil absorption system is designed to ensure that the linear loading rate does not exceed site disposal capability; and
10. The bottomless sand filter discharge rate per unit area to the native soil does not exceed the adjusted soil absorption rate for the quality of wastewater specified in subsection (B)(2).

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall place the containment vessel, underdrain system, filter media, and pressurized wastewater distribution system in an excavation with adequate foundation and each layer installed to prevent differential settling and promote a uniform density throughout of 1.3 to 1.4 grams per cubic centimeter within the sand media.

F. Operation and maintenance requirements. The applicant shall follow the applicable requirements in R18-9-A313(B).

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E311. 4.11 General Permit: Peat Filter, Less Than 3000 Gallons Per Day Design Flow

A. A 4.11 General Permit allows for the use of a peat filter receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).

1. Definition. For purposes of this Section, a "peat filter" means a disposal technology characterized by:
   a. The dosed delivery of treated wastewater to the peat bed, which can be a manufactured module or a disposal bed excavated in native soil and filled with compacted peat;
   b. Wastewater passing through the peat that is further treated by removal of positively charged molecules, filtering, and biological activity before entry into native soil; and
   c. If the peat filter system is constructed as a disposal bed filled with compacted peat, wastewater that is absorbed into native soil at the bottom and sides of the bed.
2. An applicant may configure a modular system if a portion of the wastewater that has passed through the peat filter is recirculated back to the pump chamber.
3. An applicant may use a peat filter system if:
   a. The native soil is excessively permeable,
   b. There is little native soil overlying fractured or excessively permeable rock,
   c. A reduction in setback distances or minimum vertical separation is desired, or
   d. Cold weather inhibits performance of other treatment or disposal technologies.

B. Performance. An applicant shall ensure that a peat filter is designed so that it produces treated wastewater that meets the following criteria:

1. TSS of 15 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 15 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 53 milligrams per liter, 5-month arithmetic mean; and
4. Total coliform level of 100,000 (Log_{10} 5) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:

1. Specifications for the peat media proposed for use in the peat filter or provided in the peat module, including:
   a. Porosity;
   b. Degree of humification;
   c. pH;
   d. Particle size distribution;
   e. Moisture content;
   f. A statement of whether the peat is air dried, and whether the peat is from sphagnum moss or bog cotton; and
   g. A description of the degree of decomposition;
2. Specifications for installing the peat media; and
3. If a peat module is used:
   a. The name and address of the manufacturer,
   b. The model number, and
   c. A copy of the manufacturer's warranty.

D. Design requirements.

1. If a pump tank is used to dose the peat module or bed, an applicant shall:
   a. Ensure that the pump tank is sized to contain the dose volume and a reserve volume above the high water alarm that will contain the volume of daily design flow; and
   b. Use a control panel with a programmable timer to dose at the applicable loading rate.
2. Peat module system. In addition to the applicable requirements in R18-9-A312, the applicant shall:
   a. Size the gravel bed supporting the peat filter modules to allow it to act as a disposal works and ensure that the bed is level, long, and narrow, and installed on contour to optimize lateral movement away from the disposal area;
   b. For modules designed to allow wastewater flow through the peat filter and base material into underlying native soil, size the base on which the modules rest to accommodate the soil absorption rate of the native soil;
   c. Place fill over the module so that it conforms to the manufacturer's specification. If the fill is planted, the applicant shall use only grass or shallow rooted plants; and
   d. Ensure that the peat media depth is at least 24 inches, the peat is installed with the top and bottom surfaces level, and the maximum wastewater loading rate is 5.5 gallons per day per square foot of inlet surface at the rated daily design flow, unless the Department approves a different wastewater loading rate under R18-9-A309(E).
3. Peat filter bed system. In addition to the applicable requirements in R18-9-A312, the applicant shall ensure that:
   a. The bed is filled with peat derived from sphagnum moss and compacted according to the installation specification;
   b. The maximum wastewater loading rate is 1 gallon per day per square foot of inlet surface at the rated daily design flow;
   c. At least 24 inches of installed peat underlies the distribution piping and 10 to 14 inches of installed peat overlies the piping;

d. The cover material over the peat filter bed is slightly mounded to promote runoff of rainfall. The applicant shall not place additional fill over the peat; and
e. The peat is air dried, with a porosity greater than 90 percent, and a particle size distribution of 92 to 100 percent passing a No. 4 sieve and less than 8 percent passing a No. 30 sieve.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), the applicant shall:
1. Peat module system.
   a. Compact the bottom of all excavations for the filter modules, pump, aerator, and other components to provide adequate foundation, slope the bottom toward the discharge to minimize ponding, and ensure that the bottom is flat, and free of debris, rocks, and sharp objects. If the excavation is uneven or rocky, the applicant shall use a bed of sand or pea gravel to create an even, smooth surface;
   b. Place the peat filter modules on a level, 6-inch deep gravel bed;
   c. Place backfill around the modules and grade the backfill to divert surface water away from the modules;
   d. Not place objects on or move objects over the system area that might damage the module containers or restrict airflow to the modules;
   e. Cover gaps between modules to prevent damage to the system;
   f. Fit each system with at least one sampling port that allows collection of wastewater at the exit from the final treatment module;
   g. Provide the modules and other components with anti-buoyancy devices to ensure stability in the event of flooding or high water table conditions; and
   h. Provide a mechanism for draining the filter module inlet line; or
2. Peat filter bed system.
   a. Scarify the bottom and sides of the leaching bed excavation to remove any smeared surfaces, and:
      i. Unless directed by an installation specification consistent with this Chapter, place peat media in the excavation in 6-inch lifts; and
      ii. Compact each lift before the next lift is added. The applicant shall take care to avoid compaction of the underlying native soil;
   b. Lay distribution pipe in trenches cut in the compacted peat, and
      i. Ensure that at least 3 inches of aggregate underlie the pipe to reduce clogging of holes or scouring of the peat surrounding the pipe, and
      ii. Place peat on top of and around the sides of the pipes.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall inspect the finished grade over the peat filter for proper drainage, protection from damaging loads, and root invasion of the wastewater distribution system and perform maintenance as needed.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E312. 4.12 General Permit: Textile Filter, Less Than 3000 Gallons Per Day Design Flow

A. A 4.12 General Permit allows for the use of a textile filter receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a "textile filter" means a disposal technology characterized by:
   a. The flow of wastewater into a packed bed filter in a containment structure or structures. The packed bed filter uses a textile filter medium with high porosity and surface area; and
   b. The textile filter medium provides further treatment by removing suspended material from the wastewater by physical straining, and reducing nutrients by microbial action.
2. An applicant may use a textile filter in conjunction with a two-compartment septic tank or a two-tank system if the second compartment or tank is used as a recirculation and blending tank. The applicant shall divert a portion of the wastewater flow from the textile filter back into the second tank for further treatment.
3. An applicant may use a textile filter if:
   a. Nitrogen reduction is desired,
   b. The native soil is excessively permeable,
   c. There is little native soil overlying fractured or excessively permeable rock, or
   d. A reduction in setback distances or minimum vertical separation is desired.

B. Performance. An applicant shall ensure that a textile filter is designed so that it produces treated wastewater that meets the following criteria:
1. TSS of 15 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 15 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 30 milligrams per liter, five-month arithmetic mean, or 15 milligrams, five-month arithmetic mean per liter if documented under subsection (C)(4); and
4. Total coliform level of 100,000 (Log_{10} 5) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. The name and address of the filter manufacturer;
2. The filter model number;
3. A copy of the manufacturer's filter warranty;
4. If the system is for nitrogen reduction to 15 milligrams per liter, five-month arithmetic mean, specifications on the nitrogen reduction performance of the filter system and corroborating third-party test data;
5. The manufacturer's operation and maintenance recommendations to achieve a 20-year operational life; and
6. If a pump or aerator is required for proper operation, the pump or aerator model number and a copy of the manufacturer's warranty.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:
1. The textile medium has a porosity of greater than 80 percent;
2. The wastewater is delivered to the textile filter by gravity flow or a pump;
3. If a pump is used to dose the textile filter, the pump and appurtenances meet following criteria:

a. The textile media loading rate and wastewater recirculation rate are based on calculations that conform with performance data listed in the reviewed product list maintained by the Department as required under R18-9-A309(E),
b. The tank and recirculation components are sized to contain the dose volume and a reserve volume above the high water level alarm that will contain the volume of daily design flow, and
c. A control panel with a programmable timer is used to dose the textile media at the applicable loading rate and wastewater recirculation rate.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall:
1. Before placing the filter modules, slope the bottom of the excavation for the modules toward the discharge point to minimize ponding;
2. Ensure that the bottom of all excavations for the filter modules, pump, aerator, or other components is level and free of debris, rocks, and sharp objects. If the excavation is uneven or rocky, the applicant shall use a bed of sand or pea gravel to create an even, smooth surface;
3. Provide the modules and other components with antibuoyancy devices to ensure they remain in place in the event of high water table conditions; and
4. Provide a mechanism for draining the filter module inlet line.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313, the permittee shall not flush corrosives or other materials known to damage the textile material into any drain that transmits wastewater to the on-site wastewater treatment facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E313. 4.13 General Permit: Denitrifying System Using Separated Wastewater Streams, Less Than 3000 Gallons Per Day Design Flow

A. A 4.13 General Permit allows for the use of a separated wastewater streams, denitrifying system for a dwelling.
1. Definition. For purposes of this Section a "denitrifying system using wastewater streams" means a gravity flow treatment and disposal system for a dwelling that requires separate plumbing drains for conducting dishwasher, kitchen sink, and toilet flush water to wastewater treatment tank "A" and all other wastewater to a wastewater treatment tank "B."
   a. Treated wastewater from tanks "A" and "B" is delivered to an engineered composite disposal bed system that includes an upper distribution pipe to deliver treated wastewater from tank "A" to a columnar celled, sand-filled bed.
   b. The wastewater drains downward into a sand bed, then into a pea gravel bed with an internal distribution pipe system that delivers the treated wastewater from tank "B."
   c. The entire composite bed is constructed within an excavation about 6 feet deep.
   d. The system operates under gravity flow from tanks "A" and "B."
   e. An engineered sampling assembly is installed at the midpoint of the disposal line run and at the base of the composite bed during construction to monitor system performance.
2. An applicant may use a separated wastewater streams, denitrifying system where total nitrogen reduction is required under this Article before release to the native soil.

B. Performance. An applicant shall ensure that a separated wastewater streams, denitrifying system is designed so that the treated wastewater released to the native soil meets the following criteria:
1. TSS of 30 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 30 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 1,000,000 (Log_{10} 6) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. The applicant shall comply with the Notice of Intent to Discharge requirements in R18-9-A301(B) and R18-9-A309(B).

D. Design, installation, operation, and maintenance requirements. The applicant shall comply with the applicable design, installation, operation, and maintenance requirements in R18-9-A312, R18-9-A313(A), and R18-9-A313(B).

E. Reference design.
1. An applicant may use a separated wastewater streams, denitrifying system achieving the performance requirements specified in subsection (B) by following a reference design on file with the Department.
2. The applicant shall file a form provided by the Department for supplemental information about the proposed system with the applicant's submittal of the Notice of Intent to Discharge.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E314. 4.14 General Permit: Sewage Vault, Less Than 3000 Gallons Per Day Design Flow

A. A 4.14 General Permit allows for the use of a sewage vault that receives sewage.
1. An applicant may use a sewage vault if a severe site or operational constraint prevents installation of a conventional septic tank and disposal works or any other on-site wastewater treatment facility allowed under this Article; or
2. An applicant may install a sewage vault as a temporary measure if connection to a sewer or installation of another on-site wastewater treatment facility occurs within two years of the connection or installation.

B. Performance. An applicant shall:
1. Not allow a discharge from a sewage vault to the native soil or land surface, and
2. Pump and dispose of vault contents at a sewage treatment facility or other sewage disposal mechanism allowed by law.

C. Notice of Intent to Discharge. The applicant shall comply with the Notice of Intent to Discharge requirements in R18-9-A301(B) and R18-9-A309(B), except that a site investigation under R18-9-A309(B)(1) is not required if the reason for using a sewage vault is an operational constraint that exists irrespec-

tive of the results of a site investigation conducted under R18-9-A310(B).

D. Design requirements. In addition to the requirements in R18-9-A312, an applicant shall:
1. Install a sewage vault with a capacity that is at least 10 times the daily design flow determined by R18-9-A314(4)(a)(i),
2. Use design elements to prevent the buoyancy of the vault if installed in an area where a high groundwater table may impinge on the vault,
3. Test the sewage vault for leakage using the procedure under R18-9-A314(5)(d). The tank passes the water test if the water level does not drop over a 24-hour period,
4. Install an alarm or signal on the vault to indicate when 85 percent of the vault capacity is reached, and
5. Contract with a person who licensed a vehicle under 18 A.A.C. 13, Article 11 to pump out the vault on a schedule specified within the contract to ensure that the vault is pumped before full.

E. Installation, operation, and maintenance requirements. The applicant shall comply with the applicable installation, operation, and maintenance requirements in R18-9-A313(A) and (B).

F. Reference design.
1. An applicant may use a sewage vault that achieves the performance requirements in subsection (B) by following a reference design on file with the Department.
2. The applicant shall file a form provided by the Department for supplemental information about the proposed storage vault with the applicant's submittal of the Notice of Intent to Discharge.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-E315. 4.15 General Permit: Aerobic System Less Than 3000 Gallons Per Day Design Flow

A. A 4.15 General Permit allows for the construction and use of an aerobic system that uses aeration for treatment.
1. Definition. For purposes of this Section, an "aerobic system" means a treatment unit consisting of components that:
   a. Mechanically introduce oxygen to wastewater,
   b. Typically provide clarification of the wastewater after aeration, and
   c. Convey the treated wastewater by pressure or gravity distribution to the disposal works.
2. An applicant may use an aerobic system if:
   a. Enhanced biological processing is needed to treat wastewater with high organic content,
   b. A soil or site condition is not adequate for installation of a standard septic tank and disposal works under R18-9-E302,
   c. A highly treated wastewater amenable to disinfection is needed, or
   d. Nitrogen removal from the wastewater is needed and removal performance of the system is documented according to subsection (C)(6).

B. Performance.
1. An applicant shall ensure that the aerobic system is designed so that the treated wastewater released to the native soil meets the following criteria:
   a. TSS of 30 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean, or as low as 15 milligrams, five-month arithmetic mean per liter if documented under subsection (C)(6); and
   d. Total coliform level of 300,000 (Log_{10} 5.5) colony forming units per 100 milliliters, 95th percentile.
2. An applicant may use an aerobic system that meets the following less stringent performance criteria if the aerobic technology is listed by the Department under R18-9-A309(E) and the Department bases its review and listing on the technology being less costly and simpler to operate when compared to other aerobic technologies:
   a. TSS of 60 milligrams per liter, 30-day arithmetic mean;
   b. BOD_5 of 60 milligrams per liter, 30-day arithmetic mean;
   c. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean, or as low as 15 milligrams, five month arithmetic mean per liter, if documented under subsection (C)(6); and
   d. Total coliform level of 1,000,000 (Log_{10} 7) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. The name and address of the aerobic system manufacturer;
2. The model number of the aerobic system;
3. Evidence of performance specified in subsection (B)(1) or (B)(2), as applicable;
4. A list of pretreatment components needed to meet performance requirements;
5. A copy of the manufacturer's warranty and operation and maintenance recommendations to achieve performance over a 20-year operational life; and
6. If the aerobic system will be used for nitrogen removal from the wastewater, either:
   a. Evidence of a valid product listing under R18-9-E309(E) indicating nitrogen removal performance, or
   b. Specifications and third party test data corroborating nitrogen reduction to the intended level.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:
1. The wastewater is delivered to the aerobic treatment unit by gravity flow either directly or by a lift pump;
2. An interceptor or other pretreatment device is incorporated if necessary to meet the performance criteria specified in subsection (B)(1) or (2), or if recommended by the manufacturer for pretreatment if a garbage disposal appliance is used;
3. A clarifier is provided after aeration for any treatment technology that achieves performance that is equal to or better than the performance criteria specified in subsection (B)(1); and
4. Ports for inspection and monitoring are provided to verify performance.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall ensure that:
1. The installation of the aerobic treatment components conforms to manufacturer's specifications that do not conflict with Articles 1 and 3 of this Chapter and to the design documents specified in the Construction Authorization issued under R18-9-A301(D)(1)(c); and
2. Excavation and foundation work, and backfill placement is performed to prevent differential settling and adverse drainage conditions.

F. Operation and maintenance requirements. The permittee shall:
1. Follow the applicable requirements in R18-9-A313(B), and
2. Ensure that filters are cleaned and replaced as necessary.

G. Reference design.
1. An applicant may use an aerobic system that achieves the applicable performance requirements by following a reference design on file with the Department.
2. An applicant using a reference design shall submit, with the Notice of Intent to Discharge, supplemental information specific to the proposed installation on a form approved by the Department.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E316. 4.16 General Permit: Nitrate-Reactive Media Filter, Less Than 3000 Gallons Per Day Design Flow

A. A 4.16 General Permit allows for the construction and use of a nitrate-reactive media filter receiving pretreated wastewater.
1. Definition. "Nitrate-reactive media filter" means a treatment technology characterized by:
   a. The application of pretreated, nitrified wastewater to a packed bed filter in a containment structure. A packed bed filter consists of nitrate-reactive media that receives pretreated wastewater under appropriate design and operational conditions, and
   b. The ability of the nitrate-reactive filter to further treat the nitrified wastewater by removing total nitrogen by chemical and physical processes.
2. An applicant shall use a nitrate-reactive media filter with a treatment or disposal works to pretreat and dispose of the wastewater.
3. An applicant may use a nitrate-reactive media filter if nitrogen reduction is required under this Article.

B. Restrictions. The applicant shall not use any product to supply pretreated wastewater to the nitrate-reactive media filter unless:
1. The product meets the pretreatment requirements for the filter based on product performance information in the product listing, and
2. The product is listed by the Department as a reviewed product under R18-9-A309(E).

C. Performance. An applicant shall ensure that a nitrate-reactive media filter is designed so that it produces treated wastewater that does not exceed the following criteria:
1. TSS of 30 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 10 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 1,000,000 (Log_{10} 6) colony forming units per 100 milliliters, 95th percentile.

D. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:
1. The name and address of the filter manufacturer;
2. The filter model number;
3. The manufacturer's requirements for pretreated wastewater supplied to the nitrate-reactive media filter;
4. The manufacturer's specifications for design, installation, and operation for the nitrate-reactive media filter system and appurtenances;
5. The manufacturer's warranty for the nitrate-reactive media filter system and appurtenances;
6. The manufacturer's operation and maintenance recommendations to achieve a 20-year operational life for the nitrate-reactive media filter system and appurtenances; and
7. The manufacturer name and model number for all appurtenances that significantly contribute to achieving the performance required in subsection (C).

E. Design requirements. In addition to the applicable design requirements specified in R18-9-A312, an applicant shall ensure that:
1. The nitrate-reactive media filter and appurtenances conform with manufacturer's specifications,
2. The loading rate of pretreated wastewater to the nitrate-reactive media inlet surface meets the manufacturer's specification and does not exceed 5.00 gallons per day per square foot of media inlet surface area, and
3. The bed packed with nitrate reactive media is at least 24 inches thick.

F. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall ensure that:
1. The nitrate-reactive media filter and appurtenances are installed according to manufacturer's specifications to achieve proper wastewater treatment, hydraulic performance, and operational life; and
2. Anti-buoyancy devices are installed when high water table or extreme soil saturation conditions are likely during operational life of the facility.

G. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B) and the manufacturer's specifications for the nitrite-reactive media filter, the permittee shall not dispose of corrosives or other materials that are known to damage the nitrate-reactive media filter system into the on-site wastewater treatment facility.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Section repealed; new Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (Supp. 05-3).

R18-9-E317. 4.17 General Permit: Cap System, Less Than 3000 Gallons Per Day Design Flow

A. A 4.17 General Permit allows for the use of a cap fill cover over a conventional trench disposal works receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. For purposes of this Section, a "cap system" means a disposal technology characterized by:
   a. A soil cap, consisting of engineered fill placed over a trench that is not as deep as a trench allowed by R18-9-E302; and
   b. A design that compensates for reduced trench depth by maintaining and enhancing the infiltration of

wastewater into native soil through the trench sidewalls.

2. An applicant may use a cap system if:
   a. There is little native soil overlying fractured or excessively permeable rock, or
   b. A high water table does not allow the minimum vertical separation to be met by a system authorized by R18-9-E302.

B. Performance. An applicant shall ensure that the design soil absorption rate and vertical separation complies with this Chapter for a trench, based on the following performance, unless additional pretreatment is provided:
1. TSS of 75 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 150 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 100,000,000 (Log_{10} 8) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit specifications for the proposed cap fill material.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:
1. The soil texture from the natural grade to the depth of the layer or the water table that limits the soil for unsaturated wastewater flow is no finer than silty clay loam;
2. Cap fill material used is free of debris, stones, frozen clods, or ice, and is the same as or one soil group finer than that of the disposal site material, except that the applicant shall not use fill material finer than clay loam as an additive;
3. Trench construction.
   a. The trench bottom is at least 12 inches below the bottom of the disposal pipe and not more than 24 inches below the natural grade, and the trench bottom and disposal pipe are level;
   b. The aggregate cover over the disposal pipe is 2 inches thick and the top of the aggregate cover is level and not more than 9 inches above the natural grade;
   c. The cap fill cover above the top of the aggregate cover is at least 9 inches but not more than 18 inches thick. The applicant shall ensure that:
      i. The cap surface is protected to prevent erosion and sloped to route surface drainage around the ends of the trench; and
      ii. If the top of the aggregate is at or below the original ground surface, the cap surface has side slopes not more than one vertical to three horizontal; or
      iii. If the top of the aggregate is above the original ground surface, the horizontal extent of the finished fill edges is at least 10 feet beyond the nearest trench sidewall or endwall;
   d. The criteria for trench length, bottom width and spacing, and disposal pipe size is the same as that for the trench system prescribed in R18-9-E302;
   e. Permeable geotextile fabric is placed on the aggregate top, trench end, and sidewalls extending above natural grade;
   f. The native soil within the disposal site and the adjacent downgradient area to a 50-foot horizontal distance does not exceed a 12 percent slope if the top of the aggregate cover extends above the natural grade at any location along the trench length. The applicant shall ensure that the slope within the disposal site and the adjacent downgradient area to a 50-foot horizontal distance does not exceed 20 percent if the top of the aggregate cover does not extend above the natural grade;
   g. The fill material is compacted to a density of 90 percent of the native soil if the invert elevation of the disposal pipe is at or above the natural grade at any location along the trench length;
   h. At least one observation port is installed to the bottom of each cap fill trench;
   i. The effective absorption area for each trench is the sum of the trench bottom area and the sidewall area. The height of the sidewall used for calculating the sidewall area is the vertical distance between the trench bottom and the lowest point of the natural land surface along the trench length; and
   j. If the applicant uses correction factors for soil absorption rate under R18-9-A312(D)(3) and minimum vertical separation under R18-9-A312(E), additional wastewater pretreatment is provided.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall prepare the disposal site when high soil moisture is not present and equipment operations do not create platy soil conditions. The applicant shall:
1. Plow or scarify the fill area to disrupt the vegetative mat while avoiding smearing,
2. Construct trenches as specified in subsection (D)(3),
3. Scarify the site and apply part of the cap fill to the fill area and blend the fill with the scarified native soil within the contact layers, and
4. Follow the construction design specified in the Construction Authorization issued under R18-9-A301(D)(1)(c).

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall inspect and repair the cap fill and other surface features as needed to ensure proper disposal function, proper drainage of surface water, and prevention of damaging loads on the cap.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E318. 4.18 General Permit: Constructed Wetland, Less Than 3000 Gallons Per Day Design Flow

A. A 4.18 General Permit allows for the use of a constructed wetland receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).
1. Definition. “Constructed wetland” means a treatment technology characterized by a lined excavation, filled with a medium for growing plants and planted with marsh vegetation. The treated wastewater flows horizontally through the medium in contact with the aquatic plants.
   a. As the wastewater flows through the wetland system, additional treatment is provided by filtering, settling, volatilization, and evapotranspiration.
   b. The wetland system allows microorganisms to break down organic material and plants to take up nutrients and other pollutants.

c. The wastewater treated by a wetland system is discharged to a subsurface soil disposal system.

2. An applicant may use a constructed wetland if further wastewater treatment is needed before disposal.

B. Performance. An applicant shall ensure that a constructed wetland is designed so that it produces treated wastewater that meets the following criteria:

1. TSS of 20 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 20 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 45 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 100,000 (Log_{10} 5) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. The applicant shall comply with the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B).

D. Design, installation, operation, and maintenance requirements. The permittee shall comply with the applicable design, installation, operation, and maintenance requirements in R18-9-A312, R18-9-A313(A), and R18-9-A313(B).

E. Reference design.

1. An applicant may use a constructed wetland that achieves the performance requirements in subsection (B) by following a reference design on file with the Department.
2. The applicant shall file a form provided by the Department for supplemental information about the proposed constructed wetland with the applicant's submittal of the Notice of Intent to Discharge.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E319. 4.19 General Permit: Sand-Lined Trench, Less Than 3000 Gallons Per Day Design Flow

A. A 4.19 General Permit allows for the use of a sand-lined trench receiving wastewater treated to a level equal to or better than that specified in R18-9-E302(B).

1. Definition. For purposes of this Section, a "sand-lined trench" means a disposal technology characterized by:
   a. Engineered placement of sand or equivalently graded glass in trenches excavated in native soil,
   b. Wastewater dispersed throughout the media by pressure distribution technology as specified in R18-9-E304 using a timer-controlled pump in periodic uniform doses that maintain unsaturated flow conditions, and
   c. Wastewater treated during travel through the media and absorbed into the native soil at the bottom of the trench.
2. An applicant may use a sand-lined trench if:
   a. The native soil is excessively permeable,
   b. There is little native soil overlying fractured or excessively permeable rock, or
   c. Reduction in setback distances, or minimum vertical separation is desired.

B. Performance. An applicant shall ensure that a sand-lined trench is designed so that treated wastewater released to the native soil meets the following criteria:

1. TSS of 20 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 20 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
4. Total coliform level of 100,000 (Log_{10} 5) colony forming units per 100 milliliters, 95th percentile.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit specifications for the proposed media in the trench.

D. Design requirements. In addition to the applicable requirements in R18-9-A312, an applicant shall ensure that:

1. The media used in the trench is mineral sand, crushed glass, or cinder sand and that:
   a. The media conforms to "Standard Specifications for Concrete Aggregates, C33-03," which is incorporated by reference in R18-9-E308(D)(2), "Standard Test Method for Materials Finer than 75-µm (No. 200) Sieve in Mineral Aggregates by Washing, C117-04 (2004)," published by the American Society for Testing and Materials, or an equivalent method approved by the Department. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959; and
   b. Sieve analysis complies with the "Standard Test Method for Materials Finer than 75-µm (No. 200) Sieve in Mineral Aggregates by Washing, C11704," which is incorporated by reference in subsection (D)(1)(a), or an equivalent method approved by the Department;
2. Trenches.
   a. Distribution pipes are capped on the end;
   b. The spacing between trenches is at least two times the distance between the bottom of the distribution pipe and the bottom of the trench or 5 feet, whichever is greater;
   c. The inlet filter media surface, wastewater distribution pipe, and bottom of the trench are level and the maximum effluent loading rate is not more than 1.0 gallon per day per square foot of sand media inlet surface;
   d. The depth of sand below the gravel layer containing the distribution system is at least 24 inches;
   e. The gravel layer containing the distribution system is 5 to 12 inches thick, at least 36 inches wide, and level;
   f. Permeable geotextile fabric is placed at the base of and along the sides of the gravel layer, as necessary. The applicant shall ensure that:
      i. Geotextile fabric is placed on top of the gravel layer, and
      ii. Any cover soil placed on top of the geotextile fabric is capable of maintaining vegetative growth while allowing passage of air;
   g. At least one observation port is installed to the bottom of each sand lined trench;
   h. If the trench is installed in excessively permeable soil or rock, at least 1 foot of loamy sand is placed in the trench below the filter media. The minimum vertical separation distance is measured from the bottom of the loamy sand; and

i. The trench design is based on the design flow, native soil absorption area at the trench bottom, minimum vertical separation below the trench bottom, design effluent infiltration rate at the top of the sand fill, and the adjusted soil absorption rate for the final effluent quality; and

3. The dosing system consists of a timer-controlled pump, electrical components, and distribution network and that:
   a. Orifice spacing on the distribution piping does not exceed 4 square feet of media infiltrative surface area per orifice, and
   b. The dosing rate is at least four doses per day and not more than 24 doses per day.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A), an applicant shall ensure that the filter media is placed in the trench to prevent differential settling and promote a uniform density throughout of 1.3 to 1.4 grams per cubic centimeter.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B), the permittee shall ensure that:
1. The septic tank filter and pump tank are inspected and cleaned;
2. The dosing tank pump screen, pump switches, and floats are cleaned yearly and any residue is disposed of lawfully; and
3. Lateral lines are flushed and the liquid waste discharged into the treatment system headworks.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E320. 4.20 General Permit: Disinfection Devices, Less Than 3000 Gallons Per Day Design Flow

A. A 4.20 General Permit allows for the use of a disinfection device to reduce the level of harmful organisms in wastewater, provided the wastewater is pretreated to equal or better than the performance criteria in R18-9-E315(B)(1)(a). An applicant may use a disinfection device if:
1. The disinfection device kills the microorganisms by exposing the wastewater to heat, ultraviolet radiation, or a chemical disinfectant.
2. Some means of disinfection is required before discharge.
3. A reduction in harmful microorganisms, as represented by the total coliform level, is needed for surface or near surface disposal of the wastewater or reduction of the minimum vertical separation distance specified in R18-9-A312(E) is desired.

B. Restrictions.
1. Unless the disinfection device is designed to operate without electricity, an applicant shall not install the device if electricity is not permanently available at the site.
2. The 4.20 General Permit does not authorize a disinfection device that releases chemical disinfectants or disinfection byproducts harmful to plants or wildlife in the discharge area or causes a violation of an Aquifer Water Quality Standard.

C. Performance. An applicant shall ensure that:
1. A fail-safe wastewater control or operational process is incorporated to prevent a release of inadequately treated wastewater;
2. The performance of a disinfection device meets the level of disinfection needed for the type of disposal and produces effluent that:
   a. Is nominally free of coliform bacteria;
   b. Is clear and odorless, and
   c. Has a dissolved oxygen content of at least 6 milligrams per liter;

D. Design requirements. An applicant shall ensure that an on-site wastewater treatment facility with a disposal works designed to discharge to the land surface includes disinfection technology that conforms with the following requirements:
1. Chlorine disinfection.
   a. Available chlorine is maintained as indicated in the following table:

pH of Wastewater (s.u.)	Required Concentration of Available Chlorine in Wastewater (mg/L)	
	Wastewater to the Disinfection Device Meets a TSS of 30 mg/L and BOD5 of 30 mg/L	Wastewater to the Disinfection Device Meets a TSS of 20 mg/L and BOD5 of 20 mg/L
6	15 – 30	6 – 10
7	20 – 35	10 – 20
8	30 – 45	20 – 35

   b. The minimum chlorine contact time is 15 minutes for wastewater at 70°F and 30 minutes for wastewater at 50°F, based on a flow equal to four times the daily design flow;
2. Contact chambers are watertight and made of plastic, fiberglass, or other durable material and are configured to prevent short-circuiting; and
3. For a device that disinfects by another method other than chlorine disinfection, dose and contact time are determined to reliably produce treated wastewater that is nominally free of coliform bacteria, based on a flow equal to four times the daily design flow.

E. Operation and maintenance. A permittee shall ensure that:
1. If the disinfection device relies on the addition of chemicals for disinfection, the device is operated to minimize the discharge of disinfection chemicals while achieving the required level of disinfection; and
2. The disinfection device is inspected and maintained at least once every three months by a qualified person.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

R18-9-E321. 4.21 General Permit: Surface Disposal, Less Than 3000 Gallons Per Day Design Flow

A. A 4.21 General Permit allows for surface application of treated wastewater that is nominally free of coliform bacteria produced by the treatment works of an on-site wastewater treatment facility.

B. Performance. An applicant shall ensure that the treated wastewater distributed for surface application meets the following criteria:
1. TSS of 30 milligrams per liter, 30-day arithmetic mean;
2. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
3. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean;
4. Is nominally free of total coliform bacteria as indicated by a total coliform level of Log_{10} 0 colony forming units per 100 milliliters, 95th percentile.

C. Restrictions. The applicant shall not install the disposal works if weather records indicate that:
1. Average minimum temperature in any month is 20°F or less, or
2. Over 1/3 of the average annual precipitation falls in a 30-day period.

D. Design requirements. An applicant shall ensure that:
1. The land surface application rate does not exceed the lowest application rate as determined under R18-9-A312(D) minus no greater than 50 percent of the evapotranspiration that may occur during the month with the least evapotranspiration in any soil zone within the top 5 feet of soil;
2. The design incorporates sprinklers, bubbler heads, or other dispersal components that optimize wastewater loading rates and prevent ponding on the land surface;
3. The design specifies containment berms:
   a. Compacted to a minimum of 95 percent Proctor;
   b. Designed to contain the runoff of the 10-year, 24-hour storm event in addition to the daily design flow; and
   c. Designed to remain intact in the event of a more severe rainfall event; and
4. The design incorporates placement of signage on hose bibs, human ingress points to the surface disposal area, and at intervals around the perimeter of the surface disposal area to provide notification of use of treated wastewater and a warning against ingestion.

E. Installation requirements. An applicant shall ensure that installation of the wastewater dispersal components conforms to manufacturer's specifications that do not conflict with this Article and to the design documents specified in the Construction Authorization issued under R18-9-A301(D)(1)(c).

F. Operation and maintenance. In addition to the requirements specified in R18-9-A313(B), the permittee shall operate and maintain the surface disposal works to:
1. Prevent treated wastewater from coming into contact with drinking fountains, water coolers, or eating areas;
2. Contain all treated wastewater within the bermed area; and
3. Ensure that hose bibs discharging treated wastewater are secured to prevent use by the public.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Section repealed; new Section made by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (Supp. 05-3).

R18-9-E322. 4.22 General Permit: Subsurface Drip Irrigation Disposal, Less Than 3000 Gallons Per Day Design Flow

A. A 4.22 General Permit allows for the construction and use of a subsurface drip irrigation disposal works that receives high quality wastewater from an on-site wastewater treatment facility to dispense the wastewater to an irrigation system that is buried at a shallow depth in native soil. A 4.22 General Permit includes a pressure distribution system under R18-9-E304.
1. The subsurface drip irrigation disposal works is designed to disperse the treated wastewater into the soil under unsaturated conditions by pressure distribution and timed dosing. The applicant shall ensure that the pressure distribution system meets the requirements specified in R18-9-E304, and the Department shall consider whether the requirements of R18-9-E304 are met when processing the application under R18-9-A301(B).
2. A subsurface drip irrigation disposal works reduces the downward percolation of wastewater by enhancing evapotranspiration to the atmosphere.
3. An applicant may use a subsurface drip irrigation disposal works to overcome site constraints, such as high groundwater, shallow soils, slowly permeable soils, or highly permeable soils, or if water conservation is needed.
4. The subsurface drip irrigation disposal works includes pipe, pressurization and dosing components, controls, and appurtenances to reliably deliver treated wastewater to driplines using supply and return manifold lines.

B. Performance. An applicant shall ensure that:
1. Treated wastewater that meets the following criteria is delivered to a subsurface drip irrigation disposal works:
   a. Performance Category A.
      i. TSS of 20 milligrams per liter, 30-day arithmetic mean;
      ii. BOD_5 of 20 milligrams per liter, 30-day arithmetic mean;
      iii. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
      iv. Total coliform level of one colony forming unit per 100 milliliters, 95th percentile; or
   b. Performance Category B.
      i. TSS of 30 milligrams per liter, 30-day arithmetic mean;
      ii. BOD_5 of 30 milligrams per liter, 30-day arithmetic mean;
      iii. Total nitrogen (as nitrogen) of 53 milligrams per liter, five-month arithmetic mean; and
      iv. Total coliform level of 300,000 (Log_{10} 5.5) colony forming units per 100 milliliters, 95th percentile; and
2. The subsurface drip irrigation works is designed to meet the following performance criteria:
   a. Prevention of ponding on the land surface, and
   b. Incorporation of a fail-safe wastewater control or operational process to prevent inadequately treated wastewater from being discharged.

C. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements in R18-9-A301(B), R18-9-A309(B), and R18-9-E304, the applicant shall submit:
1. Documentation of the pretreatment method proposed to achieve the wastewater criteria specified in subsection (B)(1), such as the type of pretreatment system and the manufacturer's warranty;
2. Initial filter and drip irrigation flushing settings;
3. Site evapotranspiration calculations if used to reduce the size of the disposal works; and

4. If supplemental irrigation water is introduced to the subsurface drip irrigation disposal works, an identification of the cross-connection controls, backflow controls, and supplemental water sources.

D. Design requirements. In addition to the applicable design requirements specified in R18-9-A312, an applicant shall ensure that:

1. The design requirements of R18-9-E304 are followed, except that:
   a. The requirement for quick disconnects in R18-9-E304(D)(1)(c) is not applicable, and
   b. The applicant may provide the reserve volume specified in R18-9-E304(D)(3)(a)(iv) in an oversized treatment tank or a supplemental storage tank;
2. Drip irrigation components and appurtenances are properly placed.
   a. Performance category A subsurface drip irrigation disposal works. The applicant shall ensure that:
      i. Driplines and emitters are placed to prevent ponding on the land surface, and
      ii. Cover material and placement depth follow manufacturer's requirements to prevent physical damage or ultraviolet degradation of components and appurtenances; or
   b. Performance category B subsurface drip irrigation disposal works. The applicant shall ensure that:
      i. Driplines and emitters are placed at least 6 inches below the surface of the native soil;
      ii. A cover of soil or engineered fill is placed on the surface of the native soil to achieve a total emitter burial depth of at least 12 inches;
      iii. Cover material and placement depth follow manufacturer's requirements to prevent physical damage or ultraviolet degradation of components and appurtenances; and
      iv. The drip irrigation disposal works is not used for irrigating food crops;
3. Wastewater is filtered upstream of the dripline emitters to remove particles 100 microns in size and larger;
4. A pressure regulator is provided to limit the pressure of wastewater in the drip irrigation disposal works;
5. Wastewater pipe meets the approved pressure rating in "Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120, D1785-04a (2004)," or "Standard Specification for Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe, Schedules 40 and 80, F441/F441M-02 (2002)," published by the American Society for Testing and Materials. This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the American Society for Testing and Materials International, 100 Barr Harbor Drive, West Conshohocken, PA 19428-2959;
6. The system design flushes the subsurface drip irrigation disposal works components with wastewater at a minimum velocity of 2 feet per second, unless the manufacturer's manual and warranty specify another flushing practice. The applicant shall ensure that piping and appurtenances allow the wastewater to be pumped in a line flushing mode of operation with discharge returned to the treatment system headworks;
7. Air vacuum release valves are installed to prevent water and soil drawback into the emitters;
8. Driplines.
   a. Driplines are placed from 12 to 24 inches apart unless other configurations are allowed by the manufacturer's specifications;
   b. Dripline installation and design requirements, including the allowable deflection, follow manufacturer's requirements;
   c. The maximum length of a single dripline follows manufacturer's specifications to provide even distribution;
   d. The dripline incorporates a herbicide to prevent root intrusion for at least 10 years;
   e. The dripline incorporates a bactericide to reduce bacterial slime buildup;
   f. Disinfection does not reduce the life of the bactericide or herbicide in the dripline;
   g. Any return flow from a drip irrigation disposal works to the treatment works does not impair the treatment performance; and
   h. When dripline installation is under subsection (E)(1)(b) or (c), backfill consists of the excavated soil or similar soil obtained from the site that is screened for removal of debris and rock larger than 1/2-inch;
9. Emitters.
   a. Emitters are spaced no more than 2 feet apart, and
   b. Emitters are designed to discharge from 0.5 to 1.5 gallons per hour;
10. A suitable backflow prevention system is installed if supplemental water for irrigation is introduced to the pumping system. The applicant shall not introduce supplemental water to the treatment works;
11. The drip irrigation disposal works is installed in soils classified as:
    a. Sandy clay loam, clay loam, silty clay loam, or finer with weak platy structure or in soil with a percolation rate from 45 to 120 minutes per inch;
    b. Sandy clay loam, clay loam, silty clay loam, or silt loam with massive structure or in soil with a percolation rate from 31 to 120 minutes per inch; and
    c. Other soils if an appropriate site-specific SAR is determined;
12. The minimum vertical separation distances are 1/2 of those specified in R18-9-A312(E)(2) if the design evapotranspiration rate during the wettest 30-day period of the year is 50 percent or more of design flow, except that the applicant shall not use a minimum vertical separation distance less than 1 foot;
13. In areas where freezing occurs, the irrigation system is protected as recommended by the manufacturer;
14. If drip irrigation components are used for a disposal works using a shaded trench constructed in native soil, the following requirements are met:
    a. The trench is between 12 and 24 inches wide;
    b. The trench bottom is between 12 and 30 inches below the original grade of native soil and level to within 2 inches per 100 feet of length;
    c. Two driplines are positioned in the bottom of the trench, not more than 4 inches from each sidewall;
    d. The trench with the positioned driplines is filled to a depth of 6 to 10 inches with decomposed granite or C-33 sand or a mixture of both, with mixture com-

position, if applicable, and placement specified on the construction drawing;

e. A minimum of 8 inches of backfill is placed over the decomposed granite or C-33 sand fill to an elevation of 1 to 3 inches above the native soil finished grade;

f. Observation ports are placed at both ends of each shaded trench to confirm the saturated wastewater level during operation; and

g. A separation distance of 24 inches or more is maintained between the nearest sidewall of an adjacent trench; and

15. The soil absorption area used for design of a drip irrigation works is calculated using:

a. For a design that uses the shaded trench method described in subsection (D)(14), the bottom and sidewall area of the shaded trench not more than 4 square feet per linear foot of trench; or

b. For all other designs, the number of emitters times an area for each emitter where the emitter area is a square centered on each emitter with the side dimension equal to the emitter separation distance selected by the designer in accordance with R18-9-E322(D)(9)(a), excluding all areas of overlap of adjacent squares.

E. Installation requirements. In addition to the applicable requirements in R18-9-A313(A) and R18-9-E304, the applicant shall ensure that:

1. The dripline is installed by:
   a. A plow mechanism that cuts a furrow, dispenses pipe, and covers the dripline in one operation;
   b. A trencher that digs a trench 4 inches wide or less;
   c. Digging the trench with hand tools to minimize trench width and disruption to the native soil; or
   d. Without trenching, removing surface vegetation, scarifying the soil parallel with the contours of the land surface, placing the pipe grid, and covering with fill material, unless prohibited in subsection (D)(2)(b)(ii);
2. Drip irrigation pipe is stored to preserve the herbicidal and bactericidal characteristics of the pipe;
3. Pipe deflection conforms to the manufacturer's requirements and installation is completed without kinking to prevent flow restriction;
4. A shaded trench drip irrigation disposal works is installed as specified in the design documents used for the Construction Authorization; and
5. The pressure piping and electrical equipment are installed according to the Construction Authorization in R18-9-A301(D)(1)(c) and any local building codes.

F. Operation and maintenance requirements. In addition to the applicable requirements in R18-9-A313(B) and R18-9-E304, the permittee shall:

1. Test any fail-safe wastewater control or operational process quarterly to ensure proper operation to prevent discharge of inadequately treated wastewater, and
2. Maintain the herbicidal and bacteriological capability of the drip irrigation disposal works.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-E323. 4.23 General Permit: 3000 to less than 24,000 Gallons Per Day Design Flow

A. A 4.23 General Permit allows for the construction and use of an on-site wastewater treatment facility with a design flow from 3000 gallons per day to less than 24,000 gallons per day or more than one on-site wastewater treatment facility on a property or on adjacent properties under common ownership with a combined design flow from 3000 to less than 24,000 gallons per day if all of the following apply:

1. Except as specified in subsection (A)(3), the treatment and disposal works consists of technologies or designs that would otherwise be covered under other general permits, but are either sized larger to accommodate increased flows or, will be located at a site that cumulatively accommodates flows between 3000 gallons per day to less than 24,000 gallons per day;
2. The on-site wastewater treatment facility complies with all applicable requirements of Articles 1, 2, and 3 of this Chapter;
3. The facility is not a system or a technology that would otherwise be covered by one of the following general permits available for a design flow of less than 3000 gallons per day:
   a. An aerobic system as described in R18-9-E315;
   b. A disinfection device described in R18-9-E320, except that an ultraviolet radiation disinfection device is allowed; or
   c. A seepage pit or pits described in R18-9-E302; and
4. The discharge of total nitrogen to groundwater is controlled.
   a. An applicant shall:
      i. Demonstrate that the nitrogen loading calculated over the property served by the on-site wastewater treatment facility, including streets, common areas, and other non-contributing areas, is not more than 0.088 pounds (39.9 grams) of total nitrogen per day per acre calculated at a horizontal plane immediately beneath the zone of active treatment of the on-site wastewater treatment facility including its disposal field; or
      ii. Justify a nitrogen loading that is equally protective of aquifer water quality as the nitrogen loading specified in subsection (A)(4)(a)(i) based on site-specific hydrogeological or other factors.
   b. For purposes of the demonstration in subsection (A)(4)(a)(i), the applicant may assume that 0.0333 pounds (15.0 grams) of total nitrogen per day per person is contributed to raw sewage and may determine the nitrogen concentration in the treated wastewater at a horizontal plane immediately beneath the zone of active treatment of the on-site wastewater treatment facility including its disposal field.

B. Notice of Intent to Discharge. In addition to the Notice of Intent to Discharge requirements specified in R18-9-A301(B) and R18-9-A309(B), an applicant shall submit:

1. A performance assurance plan consisting of tasks, schedules, and estimated annual costs for operating, maintaining, and monitoring performance over a 20-year operational life;
2. Design documents and the performance assurance plan, signed, dated, and sealed by an Arizona-registered professional engineer;

3. Any documentation submitted under the alternative design procedure in R18-9-A312(G) that pertains to achievement of better performance levels than those specified in the general permit for the corresponding facility with a design flow of less than 3000 gallons per day, or for any other alternative design, construction, or operational change proposed by the applicant; and
4. A demonstration of total nitrogen discharge control specified in subsection (A)(4).

C. Design requirements. The applicant shall comply with the applicable requirements in R18-9-A312 and the applicable general permits for the treatment works and disposal works used in the design of the on-site wastewater treatment facility.

D. Installation requirements. The applicant shall comply with the applicable requirements in R18-9-A313(A) and the applicable general permits for the treatment works and disposal works used in the design of the on-site wastewater treatment facility.

E. Operation and maintenance requirements. The applicant shall comply with the applicable requirements in R18-9-A313(B) and the applicable general permits for the treatment works and disposal works used in the design of the on-site wastewater treatment facility.

F. Additional Discharge Authorization requirements. In addition to any other requirements, the applicant shall submit the following information before the Discharge Authorization is issued.
1. A signed, dated, and sealed Engineer's Certificate of Completion in a format approved by the Department affirming that:
   a. The project was completed in compliance with the requirements of this Section and as described in the plans and specifications, or
   b. Any changes are reflected in as-built plans submitted with the Engineer's Certificate of Completion.
2. The name of the service provider or certified operator that is responsible for implementing the performance assurance plan.

G. Reporting requirement. The permittee shall provide the Department with the following information on the anniversary date of the Discharge Authorization:
1. A form signed by the certified operator or service provider that:
   a. Provides any data or documentation required by the performance assurance plan,
   b. Certifies compliance with the requirements of the performance assurance plan, and
   c. Describes any additions to the facility during the year that increased flows and certifies that the flow did not exceed 24,000 gallons per day during any day; and
2. Any applicable fee required by 18 A.A.C. 14.

H. Facility expansion. If an expansion of an on-site wastewater treatment facility or site operating under this Section involves the installation of a separate on-site wastewater treatment facility on the property with a design flow of less than 3000 gallons per day, the applicant shall submit the applicable Notice of Intent to Discharge and fee required under 18 A.A.C. 14 for the separate on-site wastewater treatment facility in order to add the facility to the existing site operating under this Section.
1. The applicant shall indicate in the Notice of Intent to Discharge the Department's file number and the issuance date of the Discharge Authorization previously issued by the Director under this Section for the property.
2. Upon satisfactory review, the Director shall reissue the Discharge Authorization for this Section, with the new issuance date and updated information reflecting the expansion.
3. If the expansion causes the accumulative design flow from on-site wastewater treatment facilities on the property to equal or exceed 24,000 gallons per day, the Director shall not reissue the Discharge Authorization, but shall require the applicant to submit an application for an individual permit addressing all proposed and operating facilities on the property.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

Theater Indoor Drive-in	 Seat Car space	 5 10

Note: Unit flow rates published in standard texts, literature sources, or relevant area or regional studies are considered by the Department, if appropriate to the project.

Historical Note

New Section adopted by final rulemaking at 7 A.A.R. 235, effective January 1, 2001 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3). Amended by final rulemaking at 29 A.A.R. 1023 (May 12, 2023), effective June 19, 2023 (Supp. 23-2).

ARTICLE 4. NITROGEN MANAGEMENT GENERAL PERMITS

R18-9-401. Definitions

In addition to the definitions established in A.R.S. §§ 49-101 and 49-201 and A.A.C. R18-9-101, the following terms apply to this Article:

1. "Application of nitrogen fertilizer" means any use of a substance containing nitrogen for the commercial production of a crop or plant. The commercial production of a crop or plant includes commercial sod farms and nurseries.
2. "Contact stormwater" means stormwater that comes in contact with animals or animal wastes within a concentrated animal feeding operation.
3. "Crop or plant needs" means the amount of water and nitrogen required to meet the physiological demands of a crop or plant to achieve a defined yield.
4. "Crop or plant uptake" means the amount of water and nitrogen that can be physiologically absorbed by the roots and vegetative parts of a crop or plant following the application of water.
5. "Impoundment" means any structure, other than a tank or a sump, designed and maintained to contain liquids. A structure that stores or impounds only non-contact stormwater is not an impoundment under this Article.
6. "Liner" or "lining system" means any natural, amendment, or synthetic material used to reduce seepage of impounded liquids into a vadose zone or aquifer.
7. "NRCS guidelines" means the United States Department of Agriculture, Natural Resources Conservation Service, National Engineering Handbook, Part 651 Agricultural Waste Management Field Handbook, Chapter 10, 651.1080, Appendix 10D – Geotechnical, Design, and Construction Guideline (November 1997). This material is incorporated by reference and does not include any later amendments or editions of the incorporated material. Copies of the incorporated material are available for inspection at the Arizona Department of Environmental Quality, 1110 W. Washington, Phoenix, AZ 85007 or may be obtained from the United States Department of Agriculture, Natural Resources Conservation Service at ftp://ftp.wcc.nrcs.usda.gov/downloads/wastemgmt/AWMFH/awmfh-chap10-app10d.pdf.

Historical Note

Adopted effective January 4, 1991 (Supp. 91-1). Section R18-9-401 renumbered from R18-9-201 and amended by final rulemaking at 7 A.A.R. 235, effective December 8, 2000 (Supp. 00-4). Amended by final rulemaking at 11 A.A.R. 4544, effective November 12, 2005 (05-3).

R18-9-402. Nitrogen Management General Permits: Nitrogen Fertilizers

An owner or operator may apply a nitrogen fertilizer under this general permit without submitting a notice to the Director, if the owner or operator complies with the following best management practices:

1. Limit application of the fertilizer so that it meets projected crop or plant needs;

49-211. Direct potable reuse of treated wastewater; fees; rules

A. On or before December 31, 2024, the director shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program. Monies collected pursuant to this section shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

B. On or before December 31, 2024, the director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process.

49-104. Powers and duties of the department and director

A. The department shall:

1. Formulate policies, plans and programs to implement this title to protect the environment.

2. Stimulate and encourage all local, state, regional and federal governmental agencies and all private persons and enterprises that have similar and related objectives and purposes, cooperate with those agencies, persons and enterprises and correlate department plans, programs and operations with those of the agencies, persons and enterprises.

3. Conduct research on its own initiative or at the request of the governor, the legislature or state or local agencies pertaining to any department objectives.

4. Provide information and advice on request of any local, state or federal agencies and private persons and business enterprises on matters within the scope of the department.

5. Consult with and make recommendations to the governor and the legislature on all matters concerning department objectives.

6. Promote and coordinate the management of air resources to ensure their protection, enhancement and balanced utilization consistent with the environmental policy of this state.

7. Promote and coordinate the protection and enhancement of the quality of water resources consistent with the environmental policy of this state.

8. Encourage industrial, commercial, residential and community development that maximizes environmental benefits and minimizes the effects of less desirable environmental conditions.

9. Ensure the preservation and enhancement of natural beauty and man-made scenic qualities.

10. Provide for the prevention and abatement of all water and air pollution including that related to particulates, gases, dust, vapors, noise, radiation, odor, nutrients and heated liquids in accordance with article 3 of this chapter and chapters 2 and 3 of this title.

11. Promote and recommend methods for the recovery, recycling and reuse or, if recycling is not possible, the disposal of solid wastes consistent with sound health, scenic and environmental quality policies. The department shall report annually on its revenues and expenditures relating to the solid and hazardous waste programs overseen or administered by the department.

12. Prevent pollution through regulating the storage, handling and transportation of solids, liquids and gases that may cause or contribute to pollution.

13. Promote the restoration and reclamation of degraded or despoiled areas and natural resources.

14. Participate in the state civil defense program and develop the necessary organization and facilities to meet wartime or other disasters.

15. Cooperate with the Arizona-Mexico commission in the governor's office and with researchers at universities in this state to collect data and conduct projects in the United States and Mexico on issues that are within the scope of the department's duties and that relate to quality of life, trade and economic development in this state in a manner that will help the Arizona-Mexico commission to assess and enhance the economic competitiveness of this state and of the Arizona-Mexico region.

16. Unless specifically authorized by the legislature, ensure that state laws, rules, standards, permits, variances and orders are adopted and construed to be consistent with and not more stringent than the corresponding federal law that addresses the same subject matter. This paragraph does not adversely affect standards adopted by an Indian tribe under federal law.

17. Provide administrative and staff support for the oil and gas conservation commission.

B. The department, through the director, shall:

1. Contract for the services of outside advisers, consultants and aides reasonably necessary or desirable to enable the department to adequately perform its duties.

2. Contract and incur obligations reasonably necessary or desirable within the general scope of department activities and operations to enable the department to adequately perform its duties.

3. Use any medium of communication, publication and exhibition when disseminating information, advertising and publicity in any field of its purposes, objectives or duties.

4. Adopt procedural rules that are necessary to implement the authority granted under this title but that are not inconsistent with other provisions of this title.

5. Contract with other agencies, including laboratories, in furthering any department program.

6. Use monies, facilities or services to provide matching contributions under federal or other programs that further the objectives and programs of the department.

7. Accept gifts, grants, matching monies or direct payments from public or private agencies or private persons and enterprises for department services and publications and to conduct programs that are consistent with the general purposes and objectives of this chapter. Monies received pursuant to this paragraph shall be deposited in the department fund corresponding to the service, publication or program provided.

8. Provide for the examination of any premises if the director has reasonable cause to believe that a violation of any environmental law or rule exists or is being committed on the premises. The director shall give the owner or operator the opportunity for its representative to accompany the director on an examination of those premises. Within forty-five days after the date of the examination, the department shall provide to the owner or operator a copy of any report produced as a result of any examination of the premises.

9. Supervise sanitary engineering facilities and projects in this state, authority for which is vested in the department, and own or lease land on which sanitary engineering facilities are located, and operate the facilities, if the director determines that owning, leasing or operating is necessary for the public health, safety or welfare.

10. Adopt and enforce rules relating to approving design documents for constructing, improving and operating sanitary engineering and other facilities for disposing of solid, liquid or gaseous deleterious matter.

11. Define and prescribe reasonably necessary rules regarding the water supply, sewage disposal and garbage collection and disposal for subdivisions. The rules shall:

(a) Provide for minimum sanitary facilities to be installed in the subdivision and may require that water systems plan for future needs and be of adequate size and capacity to deliver specified minimum quantities of drinking water and to treat all sewage.

(b) Provide that the design documents showing or describing the water supply, sewage disposal and garbage collection facilities be submitted with a fee to the department for review and that no lots in any subdivision be offered for sale before compliance with the standards and rules has been demonstrated by approval of the design documents by the department.

12. Prescribe reasonably necessary measures to prevent pollution of water used in public or semipublic swimming pools and bathing places and to prevent deleterious conditions at those places. The rules shall prescribe minimum standards for the design of and for sanitary conditions at any public or semipublic swimming pool or bathing place and provide for abatement as public nuisances of premises and facilities that do not comply with the minimum standards. The rules shall be developed in cooperation with the director of the department of health services and shall be consistent with the rules adopted by the director of the department of health services pursuant to section 36-136, subsection I, paragraph 10.

13. Prescribe reasonable rules regarding sewage collection, treatment, disposal and reclamation systems to prevent the transmission of sewage borne or insect borne diseases. The rules shall:

(a) Prescribe minimum standards for the design of sewage collection systems and treatment, disposal and reclamation systems and for operating the systems.

(b) Provide for inspecting the premises, systems and installations and for abating as a public nuisance any collection system, process, treatment plant, disposal system or reclamation system that does not comply with the minimum standards.

(c) Require that design documents for all sewage collection systems, sewage collection system extensions, treatment plants, processes, devices, equipment, disposal systems, on-site wastewater treatment facilities and reclamation systems be submitted with a fee for review to the department and may require that the design documents anticipate and provide for future sewage treatment needs.

(d) Require that construction, reconstruction, installation or initiation of any sewage collection system, sewage collection system extension, treatment plant, process, device, equipment, disposal system, on-site wastewater treatment facility or reclamation system conform with applicable requirements.

14. Prescribe reasonably necessary rules regarding excreta storage, handling, treatment, transportation and disposal. The rules may:

(a) Prescribe minimum standards for human excreta storage, handling, treatment, transportation and disposal and shall provide for inspection of premises, processes and vehicles and for abating as public nuisances any premises, processes or vehicles that do not comply with the minimum standards.

(b) Provide that vehicles transporting human excreta from privies, septic tanks, cesspools and other treatment processes be licensed by the department subject to compliance with the rules. The department may require payment of a fee as a condition of licensure. The department shall establish by rule a fee as a condition of licensure, including a maximum fee. The fees shall be deposited, pursuant to sections 35-146 and 35-147, in the solid waste fee fund established by section 49-881.

15. Perform the responsibilities of implementing and maintaining a data automation management system to support the reporting requirements of title III of the superfund amendments and reauthorization act of 1986 (P.L. 99-499) and article 2 of this chapter.

16. Approve remediation levels pursuant to article 4 of this chapter.

17. Establish or revise fees by rule pursuant to the authority granted under title 44, chapter 9, articles 8 and 9 and chapters 4 and 5 of this title for the department to adequately perform its duties. All fees shall be fairly assessed and impose the least burden and cost to the parties subject to the fees. In establishing or revising fees, the department shall base the fees on the direct and indirect costs of the department's relevant duties, including employee salaries and benefits, professional and outside services, equipment, in-state travel and other necessary operational expenses directly related to issuing licenses as defined in title 41, chapter 6 and enforcing the requirements of the applicable regulatory program.

18. Appoint a person with a background in oil and gas conservation to act on behalf of the oil and gas conservation commission and administer and enforce the applicable provisions of title 27, chapter 4 relating to the oil and gas conservation commission.

C. The department may:

1. Charge fees to cover the costs of all permits and inspections it performs to ensure compliance with rules adopted under section 49-203 except that state agencies are exempt from paying the fees.

2. Monies collected pursuant to this subsection shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

3. Contract with private consultants for the purposes of assisting the department in reviewing applications for licenses, permits or other authorizations to determine whether an applicant meets the criteria for issuance of the license, permit or other authorization. If the department contracts with a consultant under this paragraph, an applicant may request that the department expedite the application review by requesting that the department use the services of the consultant and by agreeing to pay the department the costs of the consultant's services. Notwithstanding any other law, monies paid by applicants for expedited reviews pursuant to this paragraph are appropriated to the department for use in paying consultants for services.

D. The director may:

1. If the director has reasonable cause to believe that a violation of any environmental law or rule exists or is being committed, inspect any person or property in transit through this state and any vehicle in which the person or property is being transported and detain or disinfect the person, property or vehicle as reasonably necessary to protect the environment if a violation exists.

2. Authorize in writing any qualified officer or employee in the department to perform any act that the director is authorized or required to do by law.

49-201. Definitions

In this chapter, unless the context otherwise requires:

1. "Administrator" means the administrator of the United States environmental protection agency.

2. "Aquifer" means a geologic unit that contains sufficient saturated permeable material to yield usable quantities of water to a well or spring.

3. "Best management practices" means those methods, measures or practices to prevent or reduce discharges and includes structural and nonstructural controls and operation and maintenance procedures. Best management practices may be applied before, during and after discharges to reduce or eliminate the introduction of pollutants into receiving waters. Economic, institutional and technical factors shall be considered in developing best management practices.

4. "CERCLA" means the comprehensive environmental response, compensation, and liability act of 1980, as amended (P.L. 96-510; 94 Stat. 2767; 42 United States Code sections 9601 through 9657), commonly known as "superfund".

5. "Clean closure" means implementation of all actions specified in an aquifer protection permit, if any, as closure requirements, as well as elimination, to the greatest degree practicable, of any reasonable probability of further discharge from the facility and of either exceeding aquifer water quality standards at the applicable point of compliance or, if an aquifer water quality standard is exceeded at the time the permit is issued, causing further degradation of the aquifer at the applicable point of compliance as provided in section 49-243, subsection B, paragraph 3. Clean closure also means postclosure monitoring and maintenance are unnecessary to meet the requirements in an aquifer protection permit.

6. "Clean water act" means the federal water pollution control act amendments of 1972 (P.L. 92-500; 86 Stat. 816; 33 United States Code sections 1251 through 1376), as amended.

7. "Closed facility" means:

(a) A facility that ceased operation before January 1, 1986, that is not, on August 13, 1986, engaged in the activity for which the facility was designed and that was previously operated and for which there is no intent to resume operation.

(b) A facility that has been approved as a clean closure by the director.

(c) A facility at which any postclosure monitoring and maintenance plan, notifications and approvals required in a permit have been completed.

8. "Concentrated animal feeding operation" means an animal feeding operation that meets the criteria prescribed in 40 Code of Federal Regulations part 122, appendix B for determining a concentrated animal feeding operation for purposes of 40 Code of Federal Regulations sections 122.23 and 122.24, appendix C.

9. "Department" means the department of environmental quality.

10. "Direct reuse" means the beneficial use of reclaimed water for specific purposes authorized pursuant to section 49-203, subsection A, paragraph 7.

11. "Director" means the director of environmental quality or the director's designee.

12. "Discharge" means the direct or indirect addition of any pollutant to the waters of the state from a facility. For purposes of the aquifer protection permit program prescribed by article 3 of this chapter, discharge means the addition of a pollutant from a facility either directly to an aquifer or to the land surface or the vadose zone in such a manner that there is a reasonable probability that the pollutant will reach an aquifer.

13. "Discharge impact area" means the potential areal extent of pollutant migration, as projected on the land surface, as the result of a discharge from a facility.

14. "Discharge limitation" means any restriction, prohibition, limitation or criteria established by the director, through a rule, permit or order, on quantities, rates, concentrations, combinations, toxicity and characteristics of pollutants.

15. "Effluent-dependent water" means a surface water or portion of a surface water that consists of a point source discharge without which the surface water would be ephemeral. An effluent-dependent water may be perennial or intermittent depending on the volume and frequency of the point source discharge of treated wastewater.

16. "Environment" means WOTUS, any other surface waters, groundwater, drinking water supply, land surface or subsurface strata or ambient air, within or bordering on this state.

17. "Ephemeral water" means a surface water or portion of surface water that flows or pools only in direct response to precipitation.

18. "Existing facility" means a facility on which construction began before August 13, 1986 and that is neither a new facility nor a closed facility. For the purposes of this definition, construction on a facility has begun if the facility owner or operator has either:

(a) Begun, or caused to begin, as part of a continuous on-site construction program any placement, assembly or installation of a building, structure or equipment.

(b) Entered a binding contractual obligation to purchase a building, structure or equipment that is intended to be used in its operation within a reasonable time. Options to purchase or contracts that can be terminated or modified without substantial loss, and contracts for feasibility engineering and design studies, do not constitute a contractual obligation for purposes of this definition.

19. "Facility" means any land, building, installation, structure, equipment, device, conveyance, area, source, activity or practice from which there is, or with reasonable probability may be, a discharge.

20. "Gray water" means wastewater that has been collected separately from a sewage flow and that originates from a clothes washer or a bathroom tub, shower or sink but that does not include wastewater from a kitchen sink, dishwasher or toilet.

21. "Hazardous substance" means:

(a) Any substance designated pursuant to sections 311(b)(2)(A) and 307(a) of the clean water act.

(b) Any element, compound, mixture, solution or substance designated pursuant to section 102 of CERCLA.

(c) Any hazardous waste having the characteristics identified under or listed pursuant to section 49-922.

(d) Any hazardous air pollutant listed under section 112 of the federal clean air act (42 United States Code section 7412).

(e) Any imminently hazardous chemical substance or mixture with respect to which the administrator has taken action pursuant to section 7 of the federal toxic substances control act (15 United States Code section 2606).

(f) Any substance that the director, by rule, either designates as a hazardous substance following the designation of the substance by the administrator under the authority described in subdivisions (a) through (e) of this paragraph or designates as a hazardous substance on the basis of a determination that such substance represents an imminent and substantial endangerment to public health.

22. "Inert material" means broken concrete, asphaltic pavement, manufactured asbestos-containing products, brick, rock, gravel, sand and soil. Inert material also includes material that when subjected to a water leach test that is designed to approximate natural infiltrating waters will not leach substances in concentrations that exceed numeric aquifer water quality standards established pursuant to section 49-223, including overburden and wall rock that is not acid generating, taking into consideration acid neutralization potential, and that has not and will not be subject to mine leaching operations.

23. "Intermittent water" means a surface water or portion of surface water that flows continuously during certain times of the year and more than in direct response to precipitation, such as when it receives water from a spring, elevated groundwater table or another surface source, such as melting snowpack.

24. "Major modification" means a physical change in an existing facility or a change in its method of operation that results in a significant increase or adverse alteration in the characteristics or volume of the pollutants discharged, or the addition of a process or major piece of production equipment, building or structure that is physically separated from the existing operation and that causes a discharge, provided that:

(a) A modification to a groundwater protection permit facility as defined in section 49-241.01, subsection C that would qualify for an area-wide permit pursuant to section 49-243 consisting of an activity or structure listed in section 49-241, subsection B shall not constitute a major modification solely because of that listing.

(b) For a groundwater protection permit facility as defined in section 49-241.01, subsection C, a physical expansion that is accomplished by lateral accretion or upward expansion within the pollutant management area of the existing facility or group of facilities shall not constitute a major modification if the accretion or expansion is accomplished through sound engineering practice in a manner compatible with existing facility design, taking into account safety, stability and risk of environmental release. For a facility described in section 49-241.01, subsection C, paragraph 1, expansion of a facility shall conform with the terms and conditions of the applicable permit. For a facility described in section 49-241.01, subsection C, paragraph 2, if the area of the contemplated expansion is not identified in the notice of disposal, the owner or operator of the facility shall submit to the director the information required by section 49-243, subsection A, paragraphs 1, 2, 3 and 7.

25. "New facility" means a previously closed facility that resumes operation or a facility on which construction was begun after August 13, 1986 on a site at which no other facility is located or to totally replace the process or production equipment that causes the discharge from an existing facility. A major modification to an existing facility is deemed a new facility to the extent that the criteria in section 49-243, subsection B, paragraph 1 can be practicably applied to such modification. For the purposes of this definition, construction on a facility has begun if the facility owner or operator has either:

(a) Begun, or caused to begin as part of a continuous on-site construction program, any placement, assembly or installation of a building, structure or equipment.

(b) Entered a binding contractual obligation to purchase a building, structure or equipment that is intended to be used in its operation within a reasonable time. Options to purchase or contracts that can be terminated or modified without substantial loss, and contracts for feasibility engineering and design studies, do not constitute a contractual obligation for purposes of this definition.

26. "Nonpoint source" means any conveyance that is not a point source from which pollutants are or may be discharged to WOTUS.

27. "Non-WOTUS protected surface water" means a protected surface water that is not a WOTUS.

28. "Non-WOTUS waters of the state" means waters of the state that are not WOTUS.

29. "On-site wastewater treatment facility" means a conventional septic tank system or alternative system that is installed at a site to treat and dispose of wastewater of predominantly human origin that is generated at that site.

30. "Ordinary high watermark" means the line on the shore of an intermittent or perennial protected surface water established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris or other appropriate means that consider the characteristics of the channel, floodplain and riparian area.

31. "Perennial water" means a surface water or portion of surface water that flows continuously throughout the year.

32. "Permit" means a written authorization issued by the director or prescribed by this chapter or in a rule adopted under this chapter stating the conditions and restrictions governing a discharge or governing the construction, operation or modification of a facility. For the purposes of regulating non-WOTUS protected surface waters, a permit shall not include provisions governing the construction, operation or modification of a facility except as necessary for the purpose of ensuring that a discharge meets water quality-related effluent limitations or to require best management practices for the purpose of ensuring that a discharge does not cause an exceedance of an applicable surface water quality standard.

33. "Person" means an individual, employee, officer, managing body, trust, firm, joint stock company, consortium, public or private corporation, including a government corporation, partnership, association or state, a political subdivision of this state, a commission, the United States government or any federal facility, interstate body or other entity.

34. "Point source" means any discernible, confined and discrete conveyance, including any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation or vessel or other floating craft from which pollutants are or may be discharged to WOTUS or protected surface water. Point source does not include return flows from irrigated agriculture.

35. "Pollutant" means fluids, contaminants, toxic wastes, toxic pollutants, dredged spoil, solid waste, substances and chemicals, pesticides, herbicides, fertilizers and other agricultural chemicals, incinerator residue, sewage, garbage, sewage sludge, munitions, petroleum products, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and mining, industrial, municipal and agricultural wastes or any other liquid, solid, gaseous or hazardous substances.

36. "Postclosure monitoring and maintenance" means those activities that are conducted after closure notification and that are necessary to:

(a) Keep the facility in compliance with either the aquifer water quality standards at the applicable point of compliance or, for any aquifer water quality standard that is exceeded at the time the aquifer protection permit is issued, the requirement to prevent the facility from further degrading the aquifer at the applicable point of compliance as provided under section 49-243, subsection B, paragraph 3.

(b) Verify that the actions or controls specified as closure requirements in an approved closure plan or strategy are routinely inspected and maintained.

(c) Perform any remedial, mitigative or corrective actions or controls as specified in the aquifer protection permit or perform corrective action as necessary to comply with this paragraph and article 3 of this chapter.

(d) Meet property use restrictions.

37. "Practicably" means able to be reasonably done from the standpoint of technical practicability and, except for pollutants addressed in section 49-243, subsection I, economically achievable on an industry-wide basis.

38. "Protected surface waters" means waters of the state listed on the protected surface waters list under section 49-221, subsection G and all WOTUS.

39. "Public waters" means waters of the state open to or managed for use by members of the general public.

40. "Recharge project" means a facility necessary or convenient to obtain, divert, withdraw, transport, exchange, deliver, treat or store water to infiltrate or reintroduce that water into the ground.

41. "Reclaimed water" means water that has been treated or processed by a wastewater treatment plant or an on-site wastewater treatment facility.

42. "Regulated agricultural activity" means the application of nitrogen fertilizer or a concentrated animal feeding operation.

43. "Safe drinking water act" means the federal safe drinking water act, as amended (P.L. 93-523; 88 Stat. 1660; 95-190; 91 Stat. 1393).

44. "Standards" means water quality standards, pretreatment standards and toxicity standards established pursuant to this chapter.

45. "Standards of performance" means performance standards, design standards, best management practices, technologically based standards and other standards, limitations or restrictions established by the director by rule or by permit condition.

46. "Tank" means a stationary device, including a sump, that is constructed of concrete, steel, plastic, fiberglass, or other non-earthen material that provides substantial structural support, and that is designed to contain an accumulation of solid, liquid or gaseous materials.

47. "Toxic pollutant" means a substance that will cause significant adverse reactions if ingested in drinking water. Significant adverse reactions are reactions that may indicate a tendency of a substance or mixture to cause long lasting or irreversible damage to human health.

48. "Trade secret" means information to which all of the following apply:

(a) A person has taken reasonable measures to protect from disclosure and the person intends to continue to take such measures.

(b) The information is not, and has not been, reasonably obtainable without the person's consent by other persons, other than governmental bodies, by use of legitimate means, other than discovery based on a showing of special need in a judicial or quasi-judicial proceeding.

(c) No statute specifically requires disclosure of the information to the public.

(d) The person has satisfactorily shown that disclosure of the information is likely to cause substantial harm to the business's competitive position.

49. "Vadose zone" means the zone between the ground surface and any aquifer.

50. "Waters of the state" means all waters within the jurisdiction of this state including all perennial or intermittent streams, lakes, ponds, impounding reservoirs, marshes, watercourses, waterways, wells, aquifers, springs, irrigation systems, drainage systems and other bodies or accumulations of surface, underground, natural, artificial, public or private water situated wholly or partly in or bordering on the state.

51. "Well" means a bored, drilled or driven shaft, pit or hole whose depth is greater than its largest surface dimension.

52. "Wetland" means, for the purposes of non-WOTUS protected surface waters, an area that is inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and under normal conditions does support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

53. "WOTUS" means waters of the state that are also navigable waters as defined by section 502(7) of the clean water act.

54. "WOTUS protected surface water" means a protected surface water that is a WOTUS.

49-203. Powers and duties of the director and department

A. The director shall:

1. Adopt, by rule, water quality standards in the form and subject to the considerations prescribed by article 2 of this chapter.

2. Adopt, by rule, a permit program for WOTUS that is consistent with but not more stringent than the requirements of the clean water act for the point source discharge of any pollutant or combination of pollutants into WOTUS. The program and the rules shall be sufficient to enable this state to administer the permit program identified in section 402(b) of the clean water act, including the sewage sludge requirements of section 405 of the clean water act and as prescribed by article 3.1 of this chapter.

3. Apply the program and rules authorized under paragraph 2 of this subsection to point source discharges to non-WOTUS protected surface waters, consistent with section 49-255.04, which establishes the program components and rules that do not apply to non-WOTUS protected surface waters. The following are exempt from the non-WOTUS protected surface waters point source discharge program:

(a) Discharges to a non-WOTUS protected surface water incidental to a recharge project.

(b) Established or ongoing farming, ranching and silviculture activities such as plowing, seeding, cultivating, minor drainage or harvesting for the production of food, fiber or forest products or upland soil and water conservation practices.

(c) Maintenance but not construction of drainage ditches.

(d) Construction and maintenance of irrigation ditches.

(e) Maintenance of structures such as dams, dikes and levees.

4. Adopt, by rule, a program to control nonpoint source discharges of any pollutant or combination of pollutants into WOTUS.

5. Adopt, by rule, an aquifer protection permit program to control discharges of any pollutant or combination of pollutants that are reaching or may with a reasonable probability reach an aquifer. The permit program shall be as prescribed by article 3 of this chapter.

6. Adopt, by rule, the permit program for underground injection control described in the safe drinking water act.

7. Adopt, by rule, technical standards for conveyances of reclaimed water and a permit program for the direct reuse of reclaimed water.

8. Adopt, by rule or as permit conditions, discharge limitations, best management practice standards, new source performance standards, toxic and pretreatment standards and other standards and conditions as reasonable and necessary to carry out the permit programs and regulatory duties described in paragraphs 2 through 6 of this subsection.

9. Assess and collect fees to revoke, issue, deny, modify or suspend permits issued pursuant to this chapter and to process permit applications. The director may also assess and collect costs reasonably necessary if the director must conduct sampling or monitoring relating to a facility because the owner or operator of the facility has refused or failed to do so on order by the director. The director shall set fees that are reasonably related to the department's costs of providing the service for which the fee is charged. Monies collected from aquifer protection permit fees and from Arizona pollutant discharge elimination system permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. Monies from other permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund unless otherwise provided by law. Monies paid by an applicant for review by consultants for the department pursuant to section 49-241.02, subsection B shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. State agencies are exempt from all fees imposed pursuant to this chapter.

10. Adopt, modify, repeal and enforce other rules that are reasonably necessary to carry out the director's functions under this chapter.

11. Require monitoring at an appropriate point of compliance for any organic or inorganic pollutant listed under section 49-243, subsection I if the director has reason to suspect the presence of the pollutant in a discharge.

12. Adopt rules establishing what constitutes a significant increase or adverse alteration in the characteristics or volume of pollutants discharged for purposes of determining what constitutes a major modification to an existing facility under the definition of new facility pursuant to section 49-201. Before adopting these rules, the director shall determine whether a change at a particular facility results in a significant increase or adverse alteration in the characteristics or volume of pollutants discharged on a case-by-case basis, taking into account site conditions and operational factors.

13. Consider evidence gathered by the Arizona navigable stream adjudication commission established by section 37-1121 when deciding whether a permit is required to discharge pursuant to article 3.1 of this chapter.

B. The director may:

1. On presentation of credentials, enter into, on or through any public or private property from which a discharge has occurred, is occurring or may occur or on which any disposal, land application of sludge or treatment regulated by this chapter has occurred, is occurring or may be occurring and any public or private property where records relating to a discharge or records that are otherwise required to be maintained as prescribed by this chapter are kept, as reasonably necessary to ensure compliance with this chapter. The director or a department employee may take samples, inspect and copy records required to be maintained pursuant to this chapter, inspect equipment, activities, facilities and monitoring equipment or methods of monitoring, take photographs and take other action reasonably necessary to determine the application of, or compliance with, this chapter. The owner or managing agent of the property shall be afforded the opportunity to accompany the director or department employee during inspections and investigations, but prior notice of entry to the owner or managing agent is not required if reasonable grounds exist to believe that notice would frustrate the enforcement of this chapter. If the director or department employee obtains any samples before leaving the premises, the director or department employee shall give the owner or managing agent a receipt describing the samples obtained and a portion of each sample equal in volume or weight to the portion retained. If an analysis is made of samples, or monitoring and testing are performed, a copy of the results shall be furnished promptly to the owner or managing agent.

2. Require any person who has discharged, is discharging or may discharge into the waters of the state under article 3, 3.1 or 3.3 of this chapter and any person who is subject to pretreatment standards and requirements or sewage sludge use or disposal requirements under article 3.1 of this chapter to collect samples, to establish and maintain records, including photographs, and to install, use and maintain sampling and monitoring equipment to determine the absence or presence and nature of the discharge or indirect discharge or sewage sludge use or disposal.

3. Administer state or federal grants, including grants to political subdivisions of this state, for the construction and installation of publicly and privately owned pollutant treatment works and pollutant control devices and establish grant application priorities.

4. Develop, implement and administer a water quality planning process, including a ranking system for applicant eligibility, wherein appropriated state monies and available federal monies are awarded to political subdivisions of this state to support or assist regional water quality planning programs and activities.

5. Enter into contracts and agreements with the federal government to implement federal environmental statutes and programs.

6. Enter into intergovernmental agreements pursuant to title 11, chapter 7, article 3 if the agreement is necessary to more effectively administer the powers and duties described in this chapter.

7. Participate in, conduct and contract for studies, investigations, research and demonstrations relating to the causes, minimization, prevention, correction, abatement, mitigation, elimination, control and remedy of discharges and collect and disseminate information relating to discharges.

8. File bonds or other security as required by a court in any enforcement actions under article 4 of this chapter.

C. Subject to section 38-503 and other applicable statutes and rules, the department may contract with a private consultant to assist the department in reviewing aquifer protection permit applications and on-site wastewater treatment facilities to determine whether a facility meets the criteria and requirements of this chapter and the rules adopted by the director. Except as provided in section 49-241.02, subsection B, the department shall not use a private consultant if the fee charged for that service would be greater than the fee the department would charge to provide that service. The department shall pay the consultant for the services rendered by the consultant from fees paid by the applicant or facility to the department pursuant to subsection A, paragraph 9 of this section.

D. The director shall integrate all of the programs authorized in this section and other programs affording water quality protection that are administered by the department for purposes of administration and enforcement and shall avoid duplication and dual permitting to the maximum extent practicable.

49-203. Powers and duties of the director and department

A. The director shall:

1. Adopt, by rule, water quality standards in the form and subject to the considerations prescribed by article 2 of this chapter.

2. Adopt, by rule, a permit program for WOTUS that is consistent with but not more stringent than the requirements of the clean water act for the point source discharge of any pollutant or combination of pollutants into WOTUS. The program and the rules shall be sufficient to enable this state to administer the permit program identified in section 402(b) of the clean water act, including the sewage sludge requirements of section 405 of the clean water act and as prescribed by article 3.1 of this chapter.

3. Apply the program and rules authorized under paragraph 2 of this subsection to point source discharges to non-WOTUS protected surface waters, consistent with section 49-255.04, which establishes the program components and rules that do not apply to non-WOTUS protected surface waters. The following are exempt from the non-WOTUS protected surface waters point source discharge program:

(a) Discharges to a non-WOTUS protected surface water incidental to a recharge project.

(b) Established or ongoing farming, ranching and silviculture activities such as plowing, seeding, cultivating, minor drainage or harvesting for the production of food, fiber or forest products or upland soil and water conservation practices.

(c) Maintenance but not construction of drainage ditches.

(d) Construction and maintenance of irrigation ditches.

(e) Maintenance of structures such as dams, dikes and levees.

4. Adopt, by rule, a program to control nonpoint source discharges of any pollutant or combination of pollutants into WOTUS.

5. Adopt, by rule, an aquifer protection permit program to control discharges of any pollutant or combination of pollutants that are reaching or may with a reasonable probability reach an aquifer. The permit program shall be as prescribed by article 3 of this chapter.

6. Adopt, by rule, the permit program for underground injection control described in the safe drinking water act.

7. Adopt, by rule, technical standards for conveyances of reclaimed water and a permit program for the direct reuse of reclaimed water.

8. Adopt, by rule or as permit conditions, discharge limitations, best management practice standards, new source performance standards, toxic and pretreatment standards and other standards and conditions as reasonable and necessary to carry out the permit programs and regulatory duties described in paragraphs 2 through 6 of this subsection.

9. Assess and collect fees to revoke, issue, deny, modify or suspend permits issued pursuant to this chapter and to process permit applications. The director may also assess and collect costs reasonably necessary if the director must conduct sampling or monitoring relating to a facility because the owner or operator of the facility has refused or failed to do so on order by the director. The director shall set fees that are reasonably related to the department's costs of providing the service for which the fee is charged. Monies collected from aquifer protection permit fees and from Arizona pollutant discharge elimination system permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. Monies from other permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund unless otherwise provided by law. Monies paid by an applicant for review by consultants for the department pursuant to section 49-241.02, subsection B shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. State agencies are exempt from all fees imposed pursuant to this chapter.

10. Adopt, modify, repeal and enforce other rules that are reasonably necessary to carry out the director's functions under this chapter.

11. Require monitoring at an appropriate point of compliance for any organic or inorganic pollutant listed under section 49-243, subsection I if the director has reason to suspect the presence of the pollutant in a discharge.

12. Adopt rules establishing what constitutes a significant increase or adverse alteration in the characteristics or volume of pollutants discharged for purposes of determining what constitutes a major modification to an existing facility under the definition of new facility pursuant to section 49-201. Before adopting these rules, the director shall determine whether a change at a particular facility results in a significant increase or adverse alteration in the characteristics or volume of pollutants discharged on a case-by-case basis, taking into account site conditions and operational factors.

13. Consider evidence gathered by the Arizona navigable stream adjudication commission established by section 37-1121 when deciding whether a permit is required to discharge pursuant to article 3.1 of this chapter.

B. The director may:

1. On presentation of credentials, enter into, on or through any public or private property from which a discharge has occurred, is occurring or may occur or on which any disposal, land application of sludge or treatment regulated by this chapter has occurred, is occurring or may be occurring and any public or private property where records relating to a discharge or records that are otherwise required to be maintained as prescribed by this chapter are kept, as reasonably necessary to ensure compliance with this chapter. The director or a department employee may take samples, inspect and copy records required to be maintained pursuant to this chapter, inspect equipment, activities, facilities and monitoring equipment or methods of monitoring, take photographs and take other action reasonably necessary to determine the application of, or compliance with, this chapter. The owner or managing agent of the property shall be afforded the opportunity to accompany the director or department employee during inspections and investigations, but prior notice of entry to the owner or managing agent is not required if reasonable grounds exist to believe that notice would frustrate the enforcement of this chapter. If the director or department employee obtains any samples before leaving the premises, the director or department employee shall give the owner or managing agent a receipt describing the samples obtained and a portion of each sample equal in volume or weight to the portion retained. If an analysis is made of samples, or monitoring and testing are performed, a copy of the results shall be furnished promptly to the owner or managing agent.

2. Require any person who has discharged, is discharging or may discharge into the waters of the state under article 3, 3.1 or 3.3 of this chapter and any person who is subject to pretreatment standards and requirements or sewage sludge use or disposal requirements under article 3.1 of this chapter to collect samples, to establish and maintain records, including photographs, and to install, use and maintain sampling and monitoring equipment to determine the absence or presence and nature of the discharge or indirect discharge or sewage sludge use or disposal.

3. Administer state or federal grants, including grants to political subdivisions of this state, for the construction and installation of publicly and privately owned pollutant treatment works and pollutant control devices and establish grant application priorities.

4. Develop, implement and administer a water quality planning process, including a ranking system for applicant eligibility, wherein appropriated state monies and available federal monies are awarded to political subdivisions of this state to support or assist regional water quality planning programs and activities.

5. Enter into contracts and agreements with the federal government to implement federal environmental statutes and programs.

6. Enter into intergovernmental agreements pursuant to title 11, chapter 7, article 3 if the agreement is necessary to more effectively administer the powers and duties described in this chapter.

7. Participate in, conduct and contract for studies, investigations, research and demonstrations relating to the causes, minimization, prevention, correction, abatement, mitigation, elimination, control and remedy of discharges and collect and disseminate information relating to discharges.

8. File bonds or other security as required by a court in any enforcement actions under article 4 of this chapter.

C. Subject to section 38-503 and other applicable statutes and rules, the department may contract with a private consultant to assist the department in reviewing aquifer protection permit applications and on-site wastewater treatment facilities to determine whether a facility meets the criteria and requirements of this chapter and the rules adopted by the director. Except as provided in section 49-241.02, subsection B, the department shall not use a private consultant if the fee charged for that service would be greater than the fee the department would charge to provide that service. The department shall pay the consultant for the services rendered by the consultant from fees paid by the applicant or facility to the department pursuant to subsection A, paragraph 9 of this section.

D. The director shall integrate all of the programs authorized in this section and other programs affording water quality protection that are administered by the department for purposes of administration and enforcement and shall avoid duplication and dual permitting to the maximum extent practicable.

49-241. Permit required to discharge

A. Unless otherwise provided by this article, any person who discharges or who owns or operates a facility that discharges shall obtain an aquifer protection permit from the director.

B. Unless exempted under section 49-250, or unless the director determines that the facility will be designed, constructed and operated so that there will be no migration of pollutants directly to the aquifer or to the vadose zone, the following are considered to be discharging facilities and shall be operated pursuant to either an individual permit or a general permit, including agricultural general permits, under this article:

1. Surface impoundments, including holding, storage settling, treatment or disposal pits, ponds and lagoons.

2. Solid waste disposal facilities except for mining overburden and wall rock that has not been and will not be subject to mine leaching operations.

3. Injection wells.

4. Land treatment facilities.

5. Facilities that add a pollutant to a salt dome formation, salt bed formation, dry well or underground cave or mine.

6. Mine tailings piles and ponds.

7. Mine leaching operations.

8. Underground water storage facilities.

9. Sewage treatment facilities, including on-site wastewater treatment facilities.

10. Wetlands designed and constructed to treat municipal and domestic wastewater for underground storage.

C. The director shall provide public notice and an opportunity for public comment on any request for a determination from the director under subsection B of this section that there will be no migration of pollutants from a facility. A public hearing may be held at the discretion of the director if sufficient public comment warrants a hearing. The director may inspect and may require reasonable conditions and appropriate monitoring and reporting requirements for a facility managing pollutants that are determined not to migrate under subsection B of this section. The director may identify types of facilities, available technologies and technical criteria for facilities that will qualify for a determination. The director's determination may be revoked on evidence that pollutants have migrated from the facility. The director may impose a review fee for a determination under subsection B of this section. Any issuance, denial or revocation of a determination may be appealed pursuant to section 49-323.

D. The director shall annually make the fee schedule for aquifer protection permit applications available to the public on request and on the department's website, and a list of the names and locations of the facilities that have filed applications for aquifer protection permits, with a description of the status of each application, is available to the public on request.

E. The director shall prescribe the procedures for aquifer protection permit applications and fee collection under this section. The director shall deposit, pursuant to sections 35-146 and 35-147, all monies collected under this section in the water quality fee fund established by section 49-210 and may authorize expenditures from the fund, subject to legislative appropriation, to pay reasonable and necessary costs of processing and issuing permits and administering the registration program.

49-241.01. Groundwater protection permit facilities; schedule; definition

A. The director shall complete the issuance or denial of aquifer protection permits or clean closure approval for all groundwater protection permit facilities on the following schedule:

1. By January 1, 2004, for all groundwater protection permits for nonmining facilities.

2. By January 1, 2006, for all groundwater protection permits for mining facilities.

B. The failure by the director to issue or deny an aquifer protection permit for a groundwater protection permit facility within the time prescribed by this section does not excuse a person from continuing to comply with all statutory and regulatory requirements applicable to that person's facility.

C. For purposes of this section, "groundwater protection permit facility" means either of the following:

1. A facility for which a groundwater quality protection permit was issued pursuant to the Arizona administrative code and for which an aquifer protection permit has never been issued.

2. A facility for which a notice of disposal was filed pursuant to the Arizona administrative code and for which an aquifer protection permit has never been issued.

49-241.02. Aquifer protection permit program fees

A. The department shall adopt by rule fees to pay the expenses incurred in implementing the aquifer protection permit program. Monies collected pursuant to this section shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

B. If the department contracts with a consultant under section 49-203, an applicant may request that the department expedite the application review by requesting that the department use the services of the consultant and agreeing to pay to the department the costs of the consultant's services regardless of the other provisions of this section.

49-242. Procedural requirements for individual permits; annual registration of permittees; fee

A. The director shall prescribe by rule requirements for issuing, denying, suspending or modifying individual permits, including requirements for submitting notices, permit applications and any additional information necessary to determine whether an individual permit should be issued, and shall prescribe conditions and requirements for individual permits.

B. Each owner of an injection well, a land treatment facility, a dry well, an on-site wastewater treatment facility with a capacity of more than three thousand gallons per day, a recharge facility or a facility that discharges to protected surface waters to whom an individual or area-wide permit is issued shall register the permit with the director each year and pay an annual registration fee for each permit based on the total daily discharge of pollutants pursuant to subsection E of this section.

C. Each owner of a surface impoundment, a facility that adds a pollutant to a salt dome formation, salt bed formation, underground cave or mine, a mine tailings pile or pond, a mine leaching operation, a sewage or sludge pond or a wastewater treatment facility to whom an individual or area-wide permit is issued shall register the permit with the director each year and pay an annual registration fee for each permit based on the total daily influent of pollutants pursuant to subsection E of this section.

D. Pending the issuance of individual or area-wide aquifer protection permits, each owner of a facility that is prescribed in subsection B or C of this section that is operating on September 27, 1990 pursuant to the filing of a notice of disposal or a groundwater quality protection permit issued under title 36 shall register the notice of disposal or the permit with the director each year and shall pay an annual registration fee for each notice of disposal or permit based on the total daily influent or discharge of pollutants pursuant to subsection E of this section.

E. The director shall establish by rule an annual registration fee for facilities prescribed by subsections B, C and D of this section. The fee shall be measured in part by the amount of discharge or influent per day from the facility.

F. For a site with more than one permit subject to the requirements of this section, the owner or operator of the facility at that site shall pay the annual registration fee prescribed pursuant to subsection E of this section based on the permit that covers the greatest gallons of discharge or influent per day plus one-half of the annual registration fee for gallons of discharge or influent for each additional permit.

G. The director shall prescribe the procedures to register the notice of disposal or permit and collect the fee under this section. The director shall deposit, pursuant to sections 35-146 and 35-147, all monies collected under this section in the water quality fee fund established by section 49-210 and may authorize expenditures from the fund to pay the reasonable and necessary costs of administering the registration program.

49-243. Information and criteria for issuing individual permit; definition

A. The director shall consider, and the applicant for an individual permit may be required to furnish with the application, the following information:

1. The design of the discharge facility. When formal as-built submittals are unavailable, the applicant shall provide sufficient documentation to allow evaluation of those elements of the facility affecting discharge pursuant to the demonstration required in subsection B, paragraph 1 of this section.

2. A description of how the facility will be operated.

3. Existing and proposed pollutant control measures.

4. A hydrogeologic study defining and characterizing the discharge impact area, including the vadose zone.

5. The use of water from aquifers in the discharge impact area.

6. The existing quality of the water in the aquifers in the discharge impact area.

7. The characteristics of the pollutants discharged by the facility.

8. Closure strategy.

9. Any other relevant federal or state permits issued to the applicant.

10. Any other relevant information the director may require.

B. The director shall issue a permit to a person for a facility other than water storage at a storage facility pursuant to title 45, chapter 3.1 if the person demonstrates that either paragraphs 1 and 2 or paragraphs 1 and 3 of this subsection will be met:

1. That the facility will be so designed, constructed and operated as to ensure the greatest degree of discharge reduction achievable through application of the best available demonstrated control technology, processes, operating methods or other alternatives, including, where practicable, a technology permitting no discharge of pollutants. In determining best available demonstrated control technology, processes, operating methods or other alternatives, the director shall take into account any treatment process contributing to the discharge, site specific hydrologic and geologic characteristics and other environmental factors, the opportunity for water conservation or augmentation and economic impacts of the use of alternative technologies, processes or operating methods on an industry-wide basis. A discharge reduction to an aquifer achievable solely by means of site specific characteristics does not, in itself, constitute compliance with this paragraph. The requirements of this paragraph for wetlands designed and constructed to treat municipal and domestic wastewater for underground storage pursuant to section 49-241, subsection B may be met by including seepage through the bottom of the facility if it is demonstrated that site characteristics can act to achieve performance levels established as the best available demonstrated control technology by the director. In addition, the director shall consider the following factors for existing facilities:

(a) Toxicity, concentrations and quantities of discharge likely to reach an aquifer from various types of control technologies.

(b) The total costs of the application of the technology in relation to the discharge reduction to be achieved from such application.

(c) The age of equipment and facilities involved.

(d) The industrial and control process employed.

(e) The engineering aspects of the application of various types of control techniques.

(f) Process changes.

(g) Non-water quality environmental impacts.

(h) The extent to which water available for beneficial uses will be conserved by a particular type of control technology.

2. That pollutants discharged will in no event cause or contribute to a violation of aquifer water quality standards at the applicable point of compliance for the facility.

3. That no pollutants discharged will further degrade at the applicable point of compliance the quality of any aquifer that at the time of the issuance of the permit violates the aquifer quality standard for that pollutant.

C. An applicant shall satisfy the requirements of subsection B, paragraph 1 of this section either by making a demonstration that the facility will meet the criteria of that paragraph or by agreeing to utilize the appropriate presumptive controls adopted by the director pursuant to section 49-243.01, subsection A.

D. In assessing technology, processes, operating methods and other alternatives for the purposes of this section, "practicable" means able to be reasonably done from the standpoint of technical practicality and, except for pollutants addressed in subsection I of this section, economically achievable on an industry-wide basis.

E. The determination of economic impact on an industry-wide basis for purposes of subsection B, paragraph 1 of this section shall take into account differences in industry sectors, the type and size of the operation and the reasonableness of applying controls in an arid or semiarid setting.

F. Control measures designed to further reduce discharge may not be required if the director determines that site specific conditions, in conjunction with technology, processes, operating methods or other alternatives are sufficient to meet the requirements of subsection B, paragraph 1 of this section.

G. A discharging facility at an open pit mining operation shall be deemed to satisfy the requirements of subsection B, paragraph 1 of this section if the director determines that both of the following conditions are satisfied:

1. The mine pit creates a passive containment that is sufficient to capture the pollutants discharged and that is hydrologically isolated to the extent that it does not allow pollutant migration from the capture zone. For the purposes of this paragraph, "passive containment" means natural or engineered topographical, geological

or hydrological control measures that can operate without continuous maintenance. Monitoring and inspections to confirm performance of the passive containment do not constitute maintenance.

2. The discharging facility employs additional processes, operating methods or other alternatives to minimize discharge.

H. The director shall issue a permit to a person for water storage at a storage facility proposed under title 45, chapter 3.1 if the person demonstrates that the facility will be so designed, constructed and operated as to ensure that the project will not cause or contribute to the violation of any standard adopted pursuant to section 49-223 at the applicable point of compliance for the facility.

I. With respect to the following pollutants, the permit applicant for a new facility must meet the criteria of subsection B, paragraph 1 of this section to limit discharges to the maximum extent practicable regardless of cost:

1. Any organic substance listed by the secretary of the department of health and human services pursuant to 42 United States Code section 241(b)(4), as known to be carcinogens or reasonably anticipated to be carcinogens.

2. Any organic substance listed in 40 Code of Federal Regulations section 261.33(e), regardless of whether the substance is a waste subject to regulation under the resource conservation recovery act (P.L. 94-580; 90 Stat. 2795).

3. Any organic toxic pollutant that the director lists by rule after determining that minute amounts of that pollutant in drinking water will present a substantial short-term or long-term human health threat.

J. The director, by rule, may prescribe requirements for issuing a single permit applicable to all similar facilities under common ownership and located in a contiguous geographic area in lieu of an individual permit for each facility.

K. The director shall consider and may prescribe in the permit the following terms and conditions as necessary to ensure compliance with this article:

1. Monitoring requirements.

2. Record keeping and reporting requirements.

3. Contingency plan requirements.

4. Discharge limitations.

5. Compliance schedule requirements.

6. Closure requirements and, for a facility that cannot achieve clean closure, postclosure monitoring and maintenance requirements.

7. Alert levels that, when exceeded, may require adjustments of permit conditions or appropriate actions as are required by the contingency plans.

8. Such other terms and conditions as the director deems necessary to ensure compliance with this article.

L. With the consent of the applicant or permittee, the director may include in an aquifer protection permit for an existing facility the requirement that the applicant or permittee undertake a remedial action, as defined in section 49-281, to prevent, minimize or mitigate damage to the public health or welfare or to the waters of the state resulting from a discharge that occurred before August 13, 1986, if the following conditions are met:

1. The selection of remedial action, including the level and extent of cleanup, was determined according to the criteria in section 49-282.06 and the rules adopted pursuant to that section.

2. The pollutant that was discharged constituted a hazardous substance.

M. With the consent of the applicant or permittee, the director may include in an aquifer protection permit as a condition the mitigation measures authorized under section 49-286 instead of issuing a mitigation order under section 49-286.

N. The director may deny a permit for a facility if the director determines that the applicant is incapable of fully carrying out the terms and conditions of the permit, including any conditions that require monitoring or installing and maintaining discharge control measures. The following apply to an application for a permit or to an issued permit:

1. The director may require the applicant to furnish information, such as past performance, including compliance with or violations of similar laws or rules, and technical and financial competence, relevant to its capability to comply with the permit terms and conditions.

2. For the purposes of evaluating an applicant's financial competence for closure, the director may consider a closure strategy and cost estimate rather than a detailed closure plan. Except for a state or federal agency or a county, city, town or other local governmental entity, the cost estimate shall be based on the cost for the applicant or permittee to hire a third party to conduct the closure strategy or plan unless the financial responsibility mechanism provided pursuant to this subsection is a self-assurance or a guarantee and the director determines that the applicant or permittee is technically and financially capable of closing the facility at its own cost and, if necessary, of conducting postclosure monitoring and maintenance. Except for a state or federal agency or a county, city, town or other local governmental entity, the permittee shall update its cost estimate:

(a) For the duration of the permit on a periodic basis as scheduled in the permit but not more frequently than once every five years. The cost estimate shall be updated to adjust for inflation or as necessary to reflect increased or decreased costs resulting from changes to the facility or to the facility closure strategy or plan, or to any other relevant conditions related to the facility.

(b) For a significant amendment as defined by rule adopted by the director, if required to address incremental changes in the cost estimate that result from the significant amendment.

3. Except for a state or federal agency or a county, city, town or other local governmental entity, the applicant or permittee shall demonstrate financial responsibility to cover the estimated costs to close the facility and, if necessary, to conduct postclosure monitoring and maintenance by providing to the director for approval a financial assurance mechanism or combination of mechanisms as prescribed in rules adopted by the director or in 40 Code of Federal Regulations section 264.143 (f)(1) and (10) as of January 1, 2014. An applicant or permittee that demonstrates financial responsibility by means of a self-assurance or

guarantee shall aggregate the estimated closure and postclosure costs for all aquifer protection permits in this state for which the applicant, permittee or guarantor has provided a self-assurance or a guarantee in order to determine whether the applicant, permittee or guarantor meets the applicable financial test.

4. The permittee shall maintain its demonstration of financial responsibility prescribed in this subsection for the duration of the individual permit. Except for a state or federal agency or a county, city, town or other local governmental entity, the permittee shall periodically demonstrate financial responsibility and report to the director that the financial assurance mechanism is being maintained as scheduled in the permit and as prescribed in paragraph 3 of this subsection but not more frequently than once every two years. The permit's applicable reporting schedule shall be based on the type of financial assurance mechanism that is selected pursuant to this subsection.

5. A demonstration of financial responsibility made for a facility as prescribed by section 49-770 shall suffice, in whole or in part, for any demonstration of financial responsibility prescribed by this section.

6. A demonstration of financial assurance or competence required under this section or section 49-770 for a facility shall not be required before completion of construction but shall be required before the department issues approval to operate. Financial assurance for a facility is not required pursuant to this section if substantially similar financial assurance for that facility is required and has been provided pursuant to other federal, state or local laws, and evidence of that financial assurance is filed with the director.

7. Financial information required to be supplied under this subsection is confidential.

O. The director shall require an applicant for an individual permit to submit evidence that the discharging facility complies with applicable municipal or county zoning ordinances and regulations. The director shall not issue the permit unless it appears from the evidence submitted by the applicant that the facility complies with the applicable zoning ordinances and regulations.

P. The director may issue a single area-wide permit applicable to facilities under common ownership and located in a contiguous geographic area in lieu of an individual permit for each facility. In issuing an area-wide permit, the demonstration required under subsection B, paragraphs 2 and 3 of this section may be considered collectively for all facilities included in the permit. The director may evaluate discharge reduction collectively for existing facilities in the pollutant management area by considering any one or all of the factors set forth in subsection B, paragraph 1 of this section. The director may consolidate those permit conditions listed in subsection K of this section that have general applicability to the facilities included in the area-wide permit. An area-wide permit shall specify all of the following:

1. A description of the pollutant management area and point or points of compliance.

2. Those facilities that have been evaluated individually for meeting the criteria in subsection B, paragraph 1 of this section and that are included in the area-wide permit.

3. For multiple facilities within the pollutant management area that are substantially similar in nature and, considered alone, would have a small discharge impact area compared to other facilities in the area, narrative permit conditions may be used to define the best available demonstrated control technology, processes, operating methods or other alternatives consistent with subsection B, paragraph 1 of this section replacing the need for an individual technical review.

4. A compliance schedule for submittal and evaluation of information regarding design and discharge for existing facilities within the pollutant management area that, because of the small size, quantity or quality of discharge, or physical location with regard to the point or points of compliance, the director has determined that review for the purposes of subsection B, paragraph 1 of this section shall be conducted in the future. In determining the requirements and length of a compliance schedule for an area-wide permit, the director shall consider the character and impact of the discharge, the nature of the activities necessary to prepare appropriate technical submittals, the number of persons potentially affected by the discharge, the current state of treatment technology, and the age of the facility.

Q. The director may expedite processing of an aquifer protection permit application by a permit applicant who proposes a new facility to discharge liquids that do not contain any pollutant in a concentration that exceeds a numeric aquifer water quality standard. The director shall not require the applicant to complete a hydrogeologic study in order to obtain the permit unless the permit applicant is relying on site specific characteristics to meet the requirements of subsection B, paragraph 1 of this section or unless the study is necessary to demonstrate compliance with narrative aquifer water quality standards. Applications made pursuant to this subsection shall have precedence and be considered by the department before all other aquifer protection permit applications.

49-243.01. Presumptive best available demonstrated control technology

A. The director may establish, by rule, presumptive best available demonstrated control technology, processes, operating methods or other alternatives, consistent with section 49-243, subsection B, paragraph 1, for a class of facilities, if the director determines that the facilities in that class are substantially similar in nature. Once presumptive controls are established by rule for a particular class of facilities the director shall review those rules every five years and, if appropriate, revise the rules for that class of facilities.

B. An owner or operator of a facility who applies for an individual permit under section 49-243 shall be deemed to have demonstrated that the design meets the requirements of section 49-243, subsection B, paragraph 1, if the application incorporates the presumptive controls for that class of facilities established pursuant to subsection A of this section.

C. A person or group of persons who own or operate facilities that are required to obtain a permit pursuant to this article may petition the director to establish by rule presumptive best available demonstrated control technology, processes, operating methods or other alternatives for that class of facilities. The director may grant the petition if he determines that the following conditions have been met:

1. The petition identifies the class of facilities for which rule adoption is requested.

2. The petition includes a description of the presumptive controls for the requested class of facilities.

3. The petition complies with section 41-1033.

4. The class of facilities described in the petition satisfies subsection A of this section.

D. The owner or operator of a facility with a permit shall not be required to obtain a new or modified permit because of rules adopted or revised pursuant to subsection A of this section. Any complete application that is filed before the effective date of any rules adopted or revised pursuant to this section shall be processed by the department without requiring compliance with the rules adopted or revised pursuant to subsection A of this section.

49-244. Point of compliance

The director shall designate a point or points of compliance for each facility receiving a permit under this article. For the purposes of this chapter, the point of compliance is the point at which compliance must be determined for either the aquifer water quality standards or, if an aquifer water quality standard is exceeded at the time the aquifer protection permit is issued, the requirement that there be no further degradation of the aquifer as provided in section 49-243, subsection B, paragraph 3. The point of compliance shall be a vertical plane downgradient of the facility that extends through the uppermost aquifers underlying that facility. For an aquifer that has no existing or reasonably foreseeable drinking water beneficial use, the director may establish monitoring for compliance in another aquifer in lieu of monitoring in the uppermost aquifer. The point of compliance shall be determined as follows:

1. Except as provided in paragraph 2 of this section, for a pollutant that is a hazardous substance the point of compliance is the limit of the pollutant management area. The pollutant management area is the limit projected in the horizontal plane of the area on which pollutants are or will be placed. The pollutant management area includes horizontal space taken up by any liner, dike or other barrier designed to contain pollutants in the facility. If the facility contains more than one discharging activity, the pollutant management area is described by an imaginary line circumscribing the several discharging activities.

2. A point of compliance for hazardous substances other than that identified in paragraph 1 of this section may be approved by the director if the facility owner or operator can demonstrate either:

(a) That it is technically impracticable or inappropriate considering the likely fate or transport of a pollutant in an aquifer to monitor at the boundary specified in paragraph 1 of this section.

(b) The alternative point of compliance will allow installation and operation of the monitoring facilities that are substantially less costly. Such a request by a facility owner or operator under this paragraph must be supported by an analysis of the volume and characteristics of the pollutants that may be discharged and the ability of the vadose zone to attenuate the particular pollutants that may be discharged, including such factors as climate, hydrology, geology and soil chemistry. In no event shall an alternative point of compliance be further from the boundary specified in paragraph 1 of this section than is necessary for purposes of this paragraph, subdivisions (a) and (b) of this paragraph, and in no event shall it be so located as to result in an increased threat to an existing or reasonably foreseeable drinking water source. In addition an alternate compliance point for a hazardous substance pursuant to this subdivision shall never be further downgradient than any of the following:

(i) The property boundary.

(ii) Any point of an existing or reasonably foreseeable future drinking water source.

(iii) Seven hundred fifty feet from the edge of the pollutant management area.

3. For pollutants that are not hazardous substances the director, in identifying a point of compliance, shall take into account the volume and characteristics of the pollutants, the practical difficulties associated with implementation of applicable water pollution control requirements, whether the facility is a new facility or an existing facility, water conservation and augmentation and the site-specific characteristics of the facility, including, but not limited to, climate, hydrology, geology, soil chemistry and pollutant levels in the aquifer. The point of compliance must be so located as to ensure protection of all current and reasonably foreseeable future uses of the aquifer.

49-245. Criteria for issuing general permit

A. The director may issue by rule a general permit for a defined class of facilities if all of the following apply:

1. The cost of issuing individual permits cannot be justified by any environmental or public health benefit that may be gained from issuing individual permits.

2. The facilities, activities or practices in the class are substantially similar in nature.

3. The director is satisfied that appropriate conditions under a general permit for operating the facilities or conducting the activity will meet the applicable requirements in section 49-243 or, as to facilities for which the director has established best management practices, section 49-246.

B. In addition to other applicable enforcement actions, if a person violates the conditions of a general permit, the director may revoke the general permit for that person and require that the person obtain an individual permit. A general permit may be revoked, modified or suspended at any time by the director if necessary to comply with this chapter.

C. Rules establishing a general permit shall include terms and conditions to ensure that all discharges and facilities will meet the requirements of this chapter and shall provide for the collective or individual revocation of the general permit if necessary to ensure compliance with this chapter.

D. Rules adopted pursuant to subsection A of this section may require a person who owns or operates a facility seeking coverage under a general permit to notify the director of the person's intent to operate the facility pursuant to the general permit and pay the applicable fee required pursuant to section 49-203.

E. Until revised rules that are proposed after December 31, 2024 are effective, and only for on-site wastewater treatment facilities with a design flow of three thousand gallons per day or more, an on-site wastewater treatment facility with a design flow of three thousand gallons per day or more but less than seventy-five thousand gallons per day may discharge under a general permit if the on-site wastewater treatment facility complies with existing general permit rules and is operated by a service provider that is certified by the technology manufacturer. The director shall include an addendum to the general permit authorization that requires on-site wastewater treatment facilities to conduct maintenance, monitoring, recordkeeping and reporting in addition to the requirements of the general permit.

F. For an on-site wastewater treatment facility with a design flow of fifty thousand gallons per day or more or for a site with multiple on-site wastewater treatment facilities with a collective design flow of fifty thousand gallons per day or more, the director may require the facility by an addendum to the general permit authorization to provide adequate financial assurance.

G. The director shall establish fees for general permits issued pursuant to subsections E and F of this section. The department shall deposit the fees, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

H. Not later than one hundred and eighty days after the effective date of revised rules that are proposed after December 31, 2024, and only for on-site wastewater treatment facilities with a design flow of three thousand gallons per day or more, a permittee prescribed by subsection E or F of this section shall transition the permittee's facility consistent with the revised on-site wastewater treatment facility permit program.

49-245.01. Storm water general permit

A. A general permit is issued for facilities used solely for the management of storm water and that are regulated by the clean water act or article 3.1 of this chapter, including catchments, impoundments and sumps, provided the following conditions are met:

1. The owner or operator of the facility has obtained a national pollutant discharge elimination system permit issued pursuant to the clean water act or an Arizona pollutant discharge elimination system permit under article 3.1 of this chapter for any storm water discharges at the facility, or that the facility has applied, and not been denied coverage, for these types of permits for any storm water discharges at the facility.

2. The owner or operator notifies the director that the facility has met the requirements of paragraph 1 of this subsection.

3. The owner or operator of the facility has in place any required storm water pollution prevention plan.

B. If the director determines that discharges of storm water from a facility or facilities covered by this general permit are causing a violation of aquifer water quality standards at the applicable point of compliance, the director may revoke the general permit of the facility or facilities or may require that an individual permit be obtained pursuant to section 49-243. If the director determines that discharges of storm water from a facility or facilities covered by this general permit, with reasonable probability, may cause a violation of aquifer water quality standards at the applicable point of compliance, the director may require a facility or facilities covered by the general permit to obtain an individual permit pursuant to section 49-243.

49-245.02. General permit for certain discharges associated with man-made bodies of water

A. A general permit is issued for the following discharges:

1. Disposal in vadose zone injection wells of storm water mixed with reclaimed wastewater or groundwater, or both, from man-made bodies of water associated with golf courses, parks and residential common areas, provided that:

(a) The vadose zone injection wells are inventoried pursuant to the underground injection control program under either:

(i) State rules approved by the United States environmental protection agency pursuant to 42 United States Code section 300h.

(ii) Federal regulations adopted by the United States environmental protection agency pursuant to 42 United States Code section 300h.

(b) The discharge occurs only in response to storm events.

(c) With the exception of the aquifer water quality standard for microbiological contaminants, the reclaimed wastewater meets aquifer water quality standards before being placed into the body of water, as documented by a water quality analysis submitted with the vadose zone injection well registration. The owner or operator of the vadose zone injection wells shall demonstrate continued compliance with this subdivision by submitting to the department the results of any monitoring required as part of an aquifer protection permit or wastewater reuse permit for any facility providing reclaimed wastewater to the man-made body of water. For purposes of this general permit, monitoring shall be conducted at least semiannually. The monitoring results shall be submitted to the department semiannually beginning six months after the inventory made pursuant to subdivision (a) of this paragraph.

(d) The vadose zone injection wells shall be located at least one hundred feet from any water supply well.

(e) A vertical separation of forty feet shall be provided between the bottom of the vadose zone injection wells and the water table to allow the aquifer water quality standard for microbiological contaminants to be met in the uppermost aquifer.

(f) The vadose zone injection wells are not used for any other purpose.

2. Subsurface discharges from man-made bodies of water associated with golf courses, parks and residential common areas, provided that:

(a) The body of water contains only groundwater, storm water or reclaimed wastewater, or a combination thereof.

(b) The reclaimed wastewater complies with the terms of a wastewater reuse permit before being placed into the body of water.

(c) The body of water is lined and maintained to achieve a hydraulic conductivity of 10-7 cm/sec or less.

3. Point source discharges to protected surface waters from man-made bodies of water associated with golf courses, parks and residential common areas that contain only groundwater, storm water or reclaimed wastewater, or a combination thereof, provided that:

(a) The discharges are subject to a valid national pollutant discharge elimination system permit or an Arizona pollutant discharge elimination system permit under article 3.1 of this chapter.

(b) The discharges occur only in response to storm events.

(c) With the exception of the aquifer water quality standard for microbiological contaminants, the reclaimed wastewater meets aquifer water quality standards before being placed into the body of water.

B. If the director determines that discharges from a facility covered by this general permit are causing a violation of aquifer water quality standards, the director may revoke the general permit of the facility or may require that an individual permit be obtained pursuant to section 49-243. If the director determines that discharges from a facility covered by this general permit may cause, with reasonable probability, a violation of aquifer water quality standards, the director may require the facility to obtain an individual permit pursuant to section 49-243.

49-246. Criteria for developing best management practices

A. Pursuant to section 49-245, the director may issue a general permit for facilities requiring implementation of best management practices appropriate to the class of discharges to be regulated. The director shall:

1. Identify the aquifer water quality problem which must be addressed and determine that protection of aquifer water quality standards can be accomplished through development and implementation of a best management practice for the class of discharge.

2. Assign a specific advisory committee to create the specific class best management practice to regulate the problem and report its recommendations to the director on a specified schedule.

3. On issuing a general permit containing best management practices, make a reasonable ef fort to notify persons conducting or managing the activity subject to the best management practices of the requirements of the best management practices contained in the general permit.

B. The director may establish best management practices for the following facilities or activities:

1. On-site facilities for urban runoff.

2. Storm sewers.

3. Urban runoff.

4. Silvicultural activities.

5. Septic tanksystems.

C. The director may by rule establish best management practices for additional facilities or activities pursuant to this section, if all of the following apply:

1. The facilities or activities meet the criteria in section 49-245, subsection A, paragraphs 1 and 2.

2. The individual facilities or activities within the class are conducted over a large geographic area.

49-247. Agricultural general permits; best management practices for regulated agricultural activities

A. The director shall adopt by rule, pursuant to the requirements of this section, agricultural general permits consisting of best management practices for regulated agricultural activities. Agricultural general permits are not subject to section 49-245 or 49-246. Except as provided in subsection G of this section, a person is not required to obtain an individual permit for a regulated agricultural activity.

B. The terms and conditions of agricultural general permits adopted pursuant to this section shall be agricultural best management practices which have been determined by the director to be the most practical and effective means of reducing or preventing the discharge of pollutants by regulated agricultural activities. Agricultural best management practices may vary within the state, according to regional and hydrogeologic conditions. The director may waive the use of best management practices in a designated region if the director determines that existing regulated agricultural activities will not cause or contribute to a violation of the adopted water quality standards.

C. The director shall adopt, by rule, agricultural best management practices.

D. In adopting agricultural best management practices, the director shall consider:

1. The availability, the effectiveness and the economic and institutional considerations of alternative technologies.

2. The potential nature and severity of discharges from regulated agricultural activities and their effect on public health and the environment.

E. In adopting best management practices for regulated agricultural activities, the director shall require the application of all economically feasible best management practices which have been determined by the director to be the most practical and effective means of reducing or preventing the discharge of pollutants by regulated agricultural activities but shall not require application of more stringent practices if such a requirement would result in cessation of the regulated activity.

F. Compliance with best management practices adopted pursuant to this section constitutes compliance with this article.

G. If the director, after providing a person with notice and an opportunity for a hearing, determines that the person has violated the applicable best management practices, the director may revoke the agricultural general permit for that person and require that the person obtain a permit pursuant to section 49-241.

H. The director may periodically reexamine, evaluate and propose any modification to or waiver of agricultural best management practices necessary to meet the requirements of this article.

49-249. Aqifer polltion information

The director shall make available to the public upon request and on the agency's web site every five years the levels of pollutants in aquifers in this state and the effects of regulation under this chapter in general and best management practices in particular on controlling or reducing pollution in aquifers.

49-250. Exemptions

A. The director, by rule, may exempt specifically described classes or categories of facilities from the aquifer protection permit requirements of this article on a finding either that there is no reasonable probability of degradation of the aquifer or that aquifer water quality will be maintained and protected because the discharges from the facilities are regulated under other federal or state programs that provide the same or greater aquifer water quality protection as provided by this article.

B. The following are exempt from the aquifer protection permit requirement of this article:

1. Household and domestic activities.

2. Household gardening, lawn watering, lawn care, landscape maintenance and related activities.

3. The noncommercial use of consumer products generally available to and used by the public.

4. Ponds used for watering livestock and wildlife.

5. Mining overburden returned to the excavation site, including any common material that has been excavated and removed from the excavation site and that has not been subjected to any chemical or leaching agent or process of any kind.

6. Facilities used solely for surface transportation or storage of groundwater, surface water for beneficial use or reclaimed water that is regulated pursuant to section 49-203, subsection A, paragraph 7 for beneficial use.

7. Discharge to a community sewer system.

8. Facilities that are required to obtain a permit for the direct reuse of reclaimed water.

9. Leachate resulting from the direct, natural infiltration of precipitation through undisturbed regolith or bedrock if pollutants are not added to the leachate as a result of any material or activity placed or conducted by man on the ground surface.

10. Surface impoundments used solely to contain storm runoff, except for surface impoundments regulated by the federal clean water act or article 3.1 of this chapter.

11. Closed facilities. However, if the facility ever resumes operation the facility shall obtain an aquifer protection permit and the facility shall be treated as a new facility for purposes of section 49-243.

12. Facilities for the storage of water pursuant to title 45, chapter 3.1 unless reclaimed water is added.

13. Facilities using central Arizona project water for underground storage and recovery projects under title 45, chapter 3.1, article 6.

14. Water storage at a groundwater saving facility that has been permitted under title 45, chapter 3.1.

15. Application of water from any source, including groundwater, surface water or wastewater, to grow agricultural crops or for landscaping purposes, except as provided in section 49-247.

16. Discharges to a facility that is exempt pursuant to paragraph 6 of this subsection if those discharges are regulated pursuant to 33 United States Code section 1342 or article 3.1 of this chapter.

17. Solid waste and special waste facilities if rules addressing aquifer protection are adopted by the director pursuant to section 49-761 or 49-855 and those facilities obtain plan approval pursuant to those rules. This exemption shall apply only if the director determines that aquifer water quality standards will be maintained and protected because the discharges from those facilities are regulated under rules adopted pursuant to section 49-761 or 49-855 that provide aquifer water quality protection that is equal to or greater than aquifer water quality protection provided pursuant to this article.

18. Facilities used in:

(a) Corrective actions taken pursuant to chapter 6, article 1 of this title in response to a release of a regulated substance as defined in section 49-1001 except for those off-site facilities that receive for treatment or disposal materials that are contaminated with a regulated substance and that are received as part of a corrective action.

(b) Response or remedial actions undertaken pursuant to article 5 of this chapter or pursuant to CERCLA.

(c) Corrective actions taken pursuant to the resource conservation and recovery act of 1976, as amended (42 United States Code sections 6901 through 6992).

(d) Other remedial actions that have been reviewed and approved by the appropriate governmental authority and taken pursuant to applicable federal or state laws.

19. Municipal solid waste landfills as defined in section 49-701 that have solid waste facility plan approval pursuant to section 49-762.

20. Storage, treatment or disposal of inert material.

21. Structures that are designed and constructed not to discharge and that are built on an impermeable barrier that can be visually inspected for leakage.

22. Pipelines and tanks designed, constructed, operated and regularly maintained so as not to discharge.

23. Surface impoundments and dry wells that are used to contain storm water in combination with discharges from one or more of the following activities or sources:

(a) Firefighting system testing and maintenance.

(b) Potable water sources, including waterline flushings.

(c) Irrigation drainage and lawn watering.

(d) Routine external building wash down without detergents.

(e) Pavement wash water if no spills or leaks of toxic or hazardous material have occurred unless all spilled material has first been removed and no detergents have been used.

(f) Air conditioning, compressor and steam equipment condensate that has not contacted a hazardous or toxic material.

(g) Foundation or footing drains in which flows are not contaminated with process materials.

(h) Occupational safety and health administration or mining safety and health administration safety equipment.

24. Industrial wastewater treatment facilities designed, constructed and operated as required by section 49-243, subsection B, paragraph 1 and using a treatment system approved by the director to treat wastewater to meet aquifer water quality standards prior to discharge, if that water is stored at a groundwater storage facility pursuant to title 45, chapter 3.1.

25. Any point source discharge caused by a storm event and authorized in a permit issued pursuant to section 402 of the clean water act or an Arizona pollutant discharge elimination system permit under article 3.1 of this chapter.

26. Except for class V wells that are operating as prescribed by rules adopted pursuant to article 3.3 of this chapter or 42 United States Code section 300h-1(c), any underground injection well covered by a permit issued under article 3.3 of this chapter or under 42 United States Code section 300h-1(c).

27. Coal combustion residuals units that are regulated under 40 Code of Federal Regulations part 257, subpart D or by a permit in effect under the coal combustion residuals program established pursuant to chapter 4, article 11 of this title and approved by the United States environmental protection agency as prescribed by 42 United State Code section 6945(d)(1).

49-251. Temporary emergency waiver

A. A facility owner or operator may apply for, and the director may issue, a temporary emergency waiver of compliance with the requirement to obtain a permit or with any applicable permit requirement, surface or aquifer water quality standard or discharge limitation if the waiver will not endanger human health or welfare, and if the director finds any of the following:

1. That an emergency of such severity exists that water supplies for domestic uses will be inadequate to meet demand unless the facility is able to temporarily exceed one or more water quality standards or discharge limitations by its discharge into waters of the state.

2. That there has been a breakdown of equipment or upset of operations resulting in a discharge to waters of the state in excess of one or more water quality standards or discharge limitations, and both of the following apply:

(a) The breakdown or upset was beyond the control of the facility owner or operator and the facility was being operated in compliance with this chapter before the discharge.

(b) The breakdown or upset will be corrected in a reasonable period of time.

3. That the activity that is the subject of the waiver is necessary to protect human health or welfare or minimize potential adverse impacts to the environment.

B. A temporary emergency waiver of compliance issued by the director may be subject to such reasonable terms and conditions as the director deems necessary. The director may grant a waiver after the occurrence of the activity that is subject to the waiver if the applicant demonstrates that exigent circumstances made it impractical to secure the waiver in advance.

C. As a condition to the issuance of a temporary emergency waiver of compliance, the director may require the facility owner or operator to provide notice of the waiver to all downstream or downgradient users directly affected by both:

1. Publication on not less than three consecutive days, or on three consecutive weeks in the case of weekly publications, in a newspaper or newspapers of general circulation in the area in which the emergency or breakdown has occurred or is occurring.

2. Furnishing a copy of the publication to the radio and television stations serving the area in which the emergency or breakdown has occurred or is occurring.

D. The facility owner or operator shall furnish a copy of the publication to the director.

E. A temporary emergency waiver of compliance issued pursuant to this section shall remain in effect as long as necessary to accommodate the emergency but in no event longer than ninety days.

F. A person operating under a temporary emergency waiver is not subject to section 49-262 or 49-263 for discharges allowed under the temporary emergency waiver but is subject to article 5 of this chapter.

49-252. Closure notification and approval

A. A person who owns or operates a dry well subject to this article or a groundwater protection permit facility as defined in section 49-241.01, subsection C or a person who has been issued a permit pursuant to this article shall notify the director of the intent to permanently cease an activity for which the facility or a portion of the facility was designed or operated.

B. Within ninety days of the notification in subsection A of this section, the owner or operator shall submit a closure plan to the director.

C. Within sixty days of submittal of a complete closure plan, the director shall determine whether or not the closure plan is for a clean closure.

D. If the director determines that the closure plan is for a clean closure, the director shall send a letter of approval to the owner or operator and no aquifer protection permit shall be required.

E. If the director determines that the proposed closure plan achieves a closure condition other than clean closure, the owner or operator shall submit either an application for an aquifer protection permit or a request to modify a current aquifer protection permit in order to address closure activities and postclosure monitoring and maintenance at the facility. The director shall require submittal of a permit application or a request to modify a permit within ninety days or a reasonable time not to exceed one year, if the applicant can supply a scope of workjustifying a schedule for collecting the technical information necessary to apply.

D-3.

DEPARTMENT OF ENVIRONMENTAL QUALITY
Title 18, Chapter 1

Amend: Table 10

GOVERNOR'S REGULATORY REVIEW COUNCIL

ATTORNEY MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: March 4, 2025

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: February 10, 2025

SUBJECT: **DEPARTMENT OF ENVIRONMENTAL QUALITY**
Title 18, Chapter 1

Amend: Table 10

Summary:

This regular rulemaking from the Department of Environmental Quality (Department) seeks to amend one (1) table in Title 18, Chapter 1, Article 5 regarding Licensing Time-Frames. Specifically, the Department is amending Table 10 related to Water Permit Licensing Time-Frames to include the Licensing Time-Frame (LTF) requirements for the new Advanced Water Purification (AWP) program.

Pursuant to A.R.S. § 49-211, the Legislature mandated the Department "adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process". With this rulemaking the Department is setting the LTFs for the new AWP program. The Department indicates, generally, the LTFs for the AWP program's license issuances are based on LTFs currently in place for the Aquifer Protection Permits. The Department indicates it anticipates that all AWP permit applications will be significantly complicated, necessitating a lengthy review and processing time period. Like the Complex Individual Aquifer Protection Permit LTFs, the Department establishes for the two AWP permits and the Significant AWP Amendment ("Permit", "Demonstration Permit" and "Significant Amendment"), 35 days for the

administrative completeness review and 249 days for the substantive review. This makes the overall time frame 284 days. If a public hearing is required, 45 days are added to the substantive review and the overall time frame, making 294 days for the substantive review and 329 days overall. Additionally, the Department establishes LTFs for a Significant Amendment to an AWP Demonstration Permit and a Permit Renewal ("Demonstration Permit Significant Amendment" and "Permit Renewal") to be the same as an Individual Aquifer Protection Permit Significant Amendment: 35 days for the administrative completeness review and 186 days for the substantive review. This makes the overall time frame 221 days. If a public hearing is required, 45 days are added to the substantive review and the overall time frame, making 231 and 266 days, respectively. Lastly, the Department establishes for a Minor Amendment ("Minor Amendment") LTFs that mirror the APP "Other Amendments": 35 days for the administrative completeness review and 100 days for the substantive review. This makes the overall time frame 135 days. Like APP "Other Amendments", no public hearing is required for AWP Minor Amendment. The Department states it has determined these LTFs provide a reasonable time period for processing such applications.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

The Department cites both general and specific statutory authority for these rules.

2. Do the rules establish a new fee or contain a fee increase?

The Department indicates, while this rulemaking package does not contain a new fee or fee increase, other rulemakings related to implementation of the AWP program do contain new fees as authorized by A.R.S. § 41-211(A).

3. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

The Department indicates it did not review any study relevant to this rulemaking.

4. Summary of the agency's economic impact analysis:

The Department is adopting the AWP regulatory program pursuant to statutory mandate at A.R.S. § 49-211. According to the Department, the program offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

The entities with the largest expected impact as a result of the AWP program are the Arizona Water Provider Agencies (WPAs). This impact is specific to capital costs, operations/maintenance costs, and permitting/compliance costs. Fundamentally, the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency as they determine what technology is best to address their operations.

5. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

The Department has determined that the responsibility for evaluating less costly or intrusive alternatives falls on potential program participants rather than the Department itself. Because participation in the AWP program is voluntary, each WPA is expected to assess whether AWP is the best option for its specific needs or if alternative water supply methods, such as brackish groundwater reverse osmosis (BWRO), would be more cost-effective. While BWRO is considered a primary alternative, it is generally more expensive and comes with its own programmatic framework rather than mandating specific projects, the cost-effectiveness and burden of implementation ultimately rest with each WPA, ensuring that those who choose to participate do so based on a careful evaluation of costs and benefits.

6. What are the economic impacts on stakeholders?

Stakeholders are identified as: the Department, WPAs, Municipal governments, WPA customers, the general public, and the Arizona environment.

The Department will incur costs for hiring staff to oversee the program, but these will be offset through application and annual fees. WPAs face the most significant costs, including capital investments, compliance, and ongoing operations. However, participation is voluntary, and financial barriers may decrease over time. Estimated capital costs for AWP projects range from $208 million to $276 million, with annual maintenance costs between $3.3 million and $10.9 million.

Municipal governments may be impacted given their relationship to the WPAs in their communities. WPA customers may see higher rates but, along with the general public, will benefit from increased water availability. The environment benefits from reduced groundwater reliance.

7. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

The Department indicates there were no changes between the Notice of Proposed Rulemaking published in the Administrative Register on November 1, 2024 and the Notice of Final Rulemaking now before the Council for consideration.

8. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

The Department indicates it received no public comments regarding this rulemaking.

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

Pursuant to A.R.S. § 41-1037(A), if an agency proposes an amendment to an existing rule that requires the issuance of a regulatory permit, license, or agency authorization, the agency shall use a general permit, as defined by A.R.S. § 41-1001(12), if the facilities, activities or practices in the class are substantially similar in nature unless certain exceptions apply.

A.R.S. § 41-1001(12) defines "general permit" to mean "a regulatory permit, license or agency authorization that is for facilities, activities or practices in a class that are substantially similar in nature and that is issued or granted by an agency to a qualified applicant to conduct identified operations or activities if the applicant meets the applicable requirements of the general permit, that requires less information than an individual or traditional permit, license or authorization and that does not require a public hearing."

The Department indicates this rulemaking establishes the AWP regulatory program, which includes issuing individual permits, pursuant to A.R.S. § 49-211. The Department states, while the product (advanced treated water or finished water) of an AWP regulatory program facility is substantially the same, the facilities, activities and practices regulated by the program will be substantially different in nature due to the treated wastewater source, a multitude of viable technological process configurations, a swift pace of technological progress in the field, and the custom nature of the regulated parties and their circumstances. As such, the Department indicates general permits are not "technically feasible" for the AWP regulatory program under A.R.S. § 41-1037(A)(3), and not used in the program. Council staff believes the Department is in compliance with A.R.S. § 41-1037.

10. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

The Department indicates, while the Safe Drinking Water Act (SDWA) (40 USC § 300f *et seq*.) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated wastewater" (*see* R18-9-A801) as a source, which is the subject of this final rule. The Department states, SDWA

only contemplates surface and ground water as sources for public water systems. The Department indicates some AWP facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP program.

11. Conclusion

This regular rulemaking from the Department seeks to amend one (1) table in Title 18, Chapter 1, Article 5 regarding Licensing Time-Frames. Specifically, the Department is amending Table 10 related to Water Permit Licensing Time-Frames to include the Licensing Time-Frame requirements for the new AWP program.

The Department is requesting an immediate effective date pursuant to A.R.S. § 41-1032(A)(2) to "avoid a violation of…state law, if the need for an immediate effective date is not created due to the agency's delay or inaction." A.R.S. § 49-211 requires the Department to, "[o]n or before December 31, 2024...adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." The Department indicates, while an immediate effective date will not avoid a violation of A.R.S. § 49-211, it serves to ameliorate the extent of the violation by establishing an effective date as close in time as possible to the statutory deadline "on or before December 31, 2024". The Department indicates the Legislature charged it with the adoption of an advanced water purification program in Fall 2022, setting a justifiably aggressive deadline of December 31, 2024. Since that time, the Department indicates it has diligently undertaken an extensive program design and rule-writing approach to appropriately design the revolutionary program. Additionally, the Department indicates it conducted a special stakeholder approach commensurate with the intricacies of the program, itself, with myriad stakeholder efforts. The Department stated this process included engagement at all phases of the project, in the program framework and guiding principle development phase to the draft rule phase, and included multiple opportunities for the Department to work with and educate stakeholders, receive feedback on program components, and improve the program. The Department states, while it worked aggressively to achieve the statutory deadline, best efforts nevertheless fell a few months short. As such, the Department indicates it did not delay or fail to act in such a way that led to the need for an immediate effective date. Council staff believes the Department has provided adequate justification for an immediate effective date pursuant to A.R.S. § 41-1032(A)(2).

Council staff recommends approval of this rulemaking.

Arizona Department of Environmental Quality

Katie Hobbs
Governor

Karen Peters
Deputy Director

January 16, 2025

Jessica Klein, Chair
Governor's Regulatory Review Council
100 N. 15th Ave., Ste. 302
Phoenix, AZ 85007

Re: Advanced Water Purification (AWP) Regular Rulemaking: Title 18, Environmental Quality, Chapters 1, 5, 9, and 14

Dear Chair Klein:

The Arizona Department of Environmental Quality (ADEQ) hereby submits this final rulemaking package to the Governor's Regulatory Review Council (GRRC) for consideration and approval at the Council Meeting scheduled for March 4th, 2025.

The following information is provided for your use in reviewing the enclosed rules for approval pursuant to A.R.S. § 41-1052 and A.A.C. R1-6-201:

I. Information required under A.A.C. R1-6-201(A)(1):

(A)(1)(a) The public record closed for all rules on December 2nd, 2024 at 11:59 p.m.
(A)(1)(b) The rulemaking activity does not relate to a five-year review report.
(A)(1)(c) The rulemaking activity does establish a new fee; please see A.R.S. § 49-211(A) for authority.
(A)(1)(d) The rulemaking does not contain a fee increase as the AWP Program is being established for the first time and has no appropriately comparable precedent in state or Federal law.
(A)(1)(e) An immediate effective date is requested.
(A)(1)(f) The Department certifies that the preamble discloses reference to any study relevant to the rule that the agency reviewed and either did or did not rely on in the agency's evaluation of or justification for the rule (*see* subheading III, below).
(A)(1)(g) The Department's preparer of the economic, small business, and consumer impact statement will notify the Joint Legislative Budget Committee (JLBC) of the number of new full-time employees necessary to implement and enforce the rule before the rule is approved by the council, pursuant to A.R.S.

§ 41-1055(B)(3)(a) (*see* subheading III, below).

(A)(1)(h) A list of documents is enclosed (*see* subheading III, below).

II. Information required under A.A.C. R1-6-201(A)(2) through (8):

(A)(2) Four (4) Notices of Final Rulemaking (NFRMs), including the preamble, table of contents, and text of each rule (*see* subheading III, below);

(A)(3) The preambles contain an economic, small business, and consumer impact statement that contains the information required by A.R.S. § 41-1055 (*see* subheading III, below);

(A)(4) The preambles contain comments received by the agency, both written and oral, concerning the proposed rule (*see* subheading III, below);

(A)(5) No analyses were submitted to the agency regarding the rule's impact on the competitiveness of businesses in this state as compared to the competitiveness of businesses in other states;

(A)(6) Materials were incorporated by reference in this rulemaking (*see* subheading III, below);

(A)(7) The general and specific statutes authorizing the rule, including relevant statutory definitions (*see* subheading III, below);

(A)(8) A list of statutes or other rules referred to in the definitions (*see* subheading III, below).

III. List of documents enclosed (38 documents total)**:**

- One (1) Cover Letter (R1-6-201(A)(1));

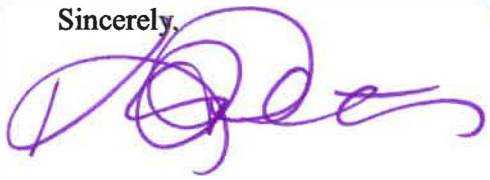
Thank you for your timely review and approval. Please contact Jon Rezabek or Natalie Kilker, Legal Specialists, Water Quality Division, 602-771-8219, 602-771-0358 or rezabek.jon@azdeq.gov, kilker.natalie@azdeq.gov if you have any questions.

Sincerely,



Karen Peters, Deputy Director
Arizona Department of Environmental Quality

Enclosures

NOTICE OF FINAL RULEMAKING

TITLE 18. ENVIRONMENTAL QUALITY

CHAPTER 1. DEPARTMENT OF ENVIRONMENTAL QUALITY - ADMINISTRATION

PREAMBLE

1. Permission to proceed with this final rulemaking was granted under A.R.S. § 41-1039 by the governor on:

August 28, 2024

2. Article, Part, or Section Affected (as applicable) **Rulemaking Action**

Table 10 Amend

3. Citations to the agency's statutory rulemaking authority to include the authorizing statute (general) and the implementing statute (specific):

Authorizing statute: A.R.S. §§ 49-104(A)(1), (7); 49-203(A)(7), (9), (10)

Implementing statute: A.R.S. § 49-211

4. The effective date of the rule:

This rule shall become effective immediately after a certified original of the rule and preamble are filed with the Office of the Secretary of State pursuant to A.R.S. § 41-1032(A). The effective date is March 4, 2025.

a. If the agency selected a date earlier than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the earlier date and state the reason the agency selected the earlier effective date as provided in A.R.S. § 41-1032(A)(1) through (5):

The rule shall be effective on March 4, 2025. ADEQ selected this date pursuant to A.R.S. § 41-1032(A)(2) in order "to avoid a violation of … state law, if the need for an immediate effective date is not created due to the agency's delay or inaction".

A.R.S. § 49-211 requires ADEQ to, "[o]n or before December 31, 2024 … adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program [A.K.A. - AWP regulatory program], including rules establishing permitting standards and a permit application process."

While an immediate effective date will not avoid a violation of A.R.S. § 49-211, it serves to ameliorate the extent of the violation by establishing an effective date as close in time as possible to the statutory deadline "on or before December 31, 2024". The Legislature charged ADEQ with the adoption of an advanced water purification program in Fall 2022, setting a justifiably aggressive deadline of December 31, 2024. Since that time, ADEQ diligently undertook an extensive program design and rule-writing approach to appropriately design the revolutionary program. Additionally, ADEQ conducted a special stakeholder approach commensurate with the intricacies of the program, itself, with myriad stakeholder efforts outlined in Section 7 of this Notice of Final Rulemaking. This process included engagement at all phases of the project, in the program framework and guiding principle development phase to the draft rule phase, and included multiple opportunities

for ADEQ to work with and educate stakeholders, receive feedback on program components, and improve the program. Arizona is one of only a handful of states with a regulatory framework for advanced water purification, and the process was, therefore, carefully conducted to best preserve the interests of the Legislature and the health of Arizonans. While ADEQ worked just as aggressively to achieve the statutory deadline, best efforts nevertheless fell a few months short. For these reasons and pursuant to A.R.S. § 41-1032(A)(2), ADEQ did not delay or fail to act in such a way that led to the need for an immediate effective date.

b. If the agency selected a date later than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the later date and state the reason the agency selected the later effective date as provided in A.R.S. § 41-1032(B):

Not Applicable.

5. Citations to all related notices published in the *Register* as specified in R1-1-409(A) that pertain to the current record of the final rule:

Notice of Proposed Rulemaking: 30 A.A.R. 3185, Issue Date: November 1, 2024, Issue Number: 44, File Number: R24-209.

Notice of Rulemaking Docket Opening: 30 A.A.R. 2876, Issue Date: September 20, 2024, Issue Number: 38, File Number: R24, 175.

6. The agency's contact person who can answer questions about the rulemaking:

7. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, to include an explanation about the rulemaking:

***Introduction*:**

The Arizona Department of Environmental Quality ("ADEQ") is mandated by the Arizona Legislature, pursuant to Arizona Revised Statutes (A.R.S.) § 49-211, to "adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater

program, including rules establishing permitting standards and a permit application process". The statute, adopted from House Bill 2861, as enacted in the Second Regular Session on June 28, 2022, became effective on September 24, 2022. For purposes of this Notice and the final rule, the term "direct potable reuse" is synonymous with "Advanced Water Purification" (or "AWP"), as the program is now called.

ADEQ, in consideration of Arizona's water supply needs and the Legislative mandate, interpreted A.R.S. § 49-211 as a call to establish an AWP program that is both protective of human health and the environment, as well as imposing minimum burden upon the stakeholder community in achieving that goal. The result of that effort is detailed in the final rules to be placed in the Arizona Administrative Code (A.A.C.), Title 18, Chapters 1, 5, 9 and 14, through this Notice of Final Rulemaking (NFRM) and through the simultaneously filed associated NFRMs.

***Background*:**

Arizona faces significant water supply challenges requiring proactive approaches to conservation and stewardship, in anticipation of decreased water availability in the future. Arizona is currently experiencing a severe and sustained drought, persisting since 1994. The state has experienced an average annual precipitation of approximately 12 inches, and climate data reveals a concerning trend: a consistent reduction of 0.9 inches of rainfall per year over the past three decades (Arizona State University, 2023, Climate of Arizona, https://azclimate.asu.edu/climate/). As a result of the continuing mega-drought, a Drought Emergency Declaration has existed since 1999. The impacts can be felt heavily in the rural areas of the state, where alternative water supplies are generally very limited and the economy is strongly affected by drought (e.g., grazing, irrigated agriculture, recreation, forestry). Most of rural Arizona relies exclusively on groundwater as its primary water source and lacks the groundwater regulations and conservation requirements which have been present in the state's active management areas (AMAs) and irrigation non-expansion areas (INAs).

In addition to the reduced precipitation within Arizona, the Colorado River Basin is also facing decades-long drought conditions, which have led to historically low water levels in Colorado River system reservoirs. As a result, Arizona has implemented measures to reduce its consumption of Colorado River water. The Lower Colorado River Basin first experienced a Tier 1 Shortage as agreed in the 2007 Interim Guidelines and the Drought Contingency Plan in 2021. In 2022, Bureau of Reclamation Commissioner Camille Touton called on the Colorado River states to conserve between 2-4 million acre feet per year to address the critically low levels in Lake Powell and Lake Mead following a dire water year. Fortunately, voluntary reductions in the Lower Basin and a healthy water year 2022 averted a decline to critically low elevations. However, as the Basin States look ahead, climate projections and historical trends indicate that the Basin is likely to face increasing average temperatures and reduced precipitation in the coming years. Arizonans will likely be called upon to live with further reduced Colorado River supplies for the foreseeable future as the next set of operational guidelines for the Colorado River are finalized.

Beyond the shrinking water supply, economic growth presents water providers with formidable challenges in meeting demand. As water-intensive industries relocate to Arizona, industrial water demands may increase. Furthermore, there may be challenges with maintaining the necessary housing growth due to the release of the new models of groundwater conditions in the Phoenix and Pinal

AMAs. The results of the groundwater flow model projections show that over a period of 100 years, the Phoenix AMA will experience 4.86 million acre-feet (maf) of unmet demand for groundwater supplies and the Pinal AMA will experience 8.1 maf of unmet demand for groundwater supplies, given current conditions. In keeping with these findings of unmet demand, the State will not approve new determinations of Assured Water Supply within the Phoenix and Pinal AMAs based on groundwater supplies. This will lead to an increased competition for limited alternative water supplies. As growth continues, there will be an increasing need for sustainable and innovative water resource management strategies to accommodate the state's evolving needs.

***What is AWP*?**

Advanced Water Purification (AWP) is defined as the treatment and distribution of a municipal wastewater stream for use as potable water without the use or with limited use of an environmental buffer (US EPA, 2017, Potable Reuse Compendium). AWP has been shown to be a safe and effective source of potable water over decades of implementation in projects that have been installed worldwide at facilities in Big Spring, Texas (2013); Wichita Falls, Texas (2014); Namibia (1968 and 2002); Singapore (2019); and South Africa (2011) (Lahnsteiner, J., Van Rensburg, P., & Esterhuizen, J., 2018, Direct potable reuse–a feasible water management option. Journal of Water Reuse and Desalination, 8(1), 14-28).

AWP applications typically consist of a conventional water reclamation facility (WRF) or wastewater treatment plant (WWTP) that performs solids, carbon, nutrient, and pathogen removal and an advanced water treatment facility (AWTF) that provides additional pathogen and trace chemical removal. An AWTF is a utility or treatment plant where recycled wastewater is treated to produce purified water to meet specific AWP requirements. AWTFs use a multi-barrier approach where several redundant unit processes in series are installed to treat WRF effluent to potable water standards. Depending on the site-specific infrastructure configuration and treatment capabilities, the AWTF effluent may be introduced into several different locations of the potable water treatment and distribution system to be reused: (i) in the intake to the existing drinking water treatment facility (DWTF); (ii) after the DWTF and prior to the potable water distribution system; or (iii) Directly into the potable water distribution system.

***Evolution of AWP in Regulations*:**

A predecessor to the AWP program was adopted in the A.A.C. in 2018 at R18-9-E701, including a definition of "[a]dvanced reclaimed water treatment facility" at R18-9-A701(1). An associated NFRM filed simultaneously with this NFRM will repeal these rules in their entirety to make way for the AWP program. This prior, less detailed, single-ruled program was placed in Title 18, Chapter 9, Article 7 of the A.A.C. Article 7 is entitled "Use of Recycled Water". Part E of Article 7 was entitled "Purified Water for Potable Use" and R18-9-E701 was entitled "Recycled Water Individual Permit for an Advanced Reclaimed Water Treatment Facility". R18-9-E701 detailed basic requirements for an advanced reclaimed water treatment facility and, during the rule's tenure, was used to permit one such facility. The facility was not authorized to, and did not, distribute purified water as drinking water through established conveyances or networks. As was stated above, in recent years, the Arizona Legislature determined a need for a more robust regulatory program for AWP. The Legislature passed House Bill 2861 into law in 2022, effectuating statute A.R.S. § 49-211, which led directly to the establishment of the final AWP program and the repeal of the previous program.

***Associated Rulemakings*:**

This final rulemaking includes four NFRMs, adding, repealing or amending rules in A.A.C. Title 18. Environmental Quality:

- Chapter 1 (Department of Environmental Quality - Administration),
- Chapter 5 (Department of Environmental Quality - Environmental Reviews and Certification),
- Chapter 9 (Department of Environmental Quality - Water Pollution Control), and
- Chapter 14 (Department of Environmental Quality - Permit and Compliance Fees).

The final changes to Chapter 1 are specific to updating the Licensing Time-Frame requirements in Article 5 to account for the new AWP program. The final changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The final additions, amendments and repeals to Chapter 9 are all aimed at making way for and establishing the AWP regulatory program. The final changes to Chapter 14 are specific to updating the Water Quality fees in Article 1 to accommodate the AWP program commensurate with other water quality programs.

***Choosing LTFs for the AWP Program*:**

Generally, the LTFs that are final for the AWP program's license issuances are based on LTFs currently in place for the Aquifer Protection Permits (*See* Table 10. Water Permit Licensing Time-frames). ADEQ anticipates that all AWP permit applications will be significantly complicated, necessitating a lengthy review and processing time period. Like the Complex Individual Aquifer Protection Permit LTFs (*See* Table 10. Water Permit Licensing Time-frames), ADEQ establishes for the two AWP permits and the Significant AWP Amendment ("Permit", "Demonstration Permit" and "Significant Amendment"), 35 days for the administrative completeness review and 249 days for the substantive review. This makes the overall time frame 284 days. If a public hearing is required, 45 days are added to the substantive review and the overall time frame, making 294 days for the substantive review and 329 days overall. Additionally, ADEQ establishes LTFs for a Significant Amendment to an AWP Demonstration Permit and a Permit Renewal ("Demonstration Permit Significant Amendment" and "Permit Renewal") to be the same as an Individual Aquifer Protection Permit Significant Amendment: 35 days for the administrative completeness review and 186 days for the substantive review. This makes the overall time frame 221 days. If a public hearing is required, 45 days are added to the substantive review and the overall time frame, making 231 and 266 days, respectively. Lastly, ADEQ establishes for a Minor Amendment ("Minor Amendment") LTFs that mirror the APP "Other Amendments": 35 days for the administrative completeness review and 100 days for the substantive review. This makes the overall time frame 135 days. Like APP "Other Amendments", no public hearing is required for AWP Minor Amendment. The Department has determined these LTFs provide a reasonable time period for processing such applications.

8. A reference to any study relevant to the rule that the agency reviewed and proposes either to rely on or not to rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

Not Applicable.

9. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state:

Not applicable

10. A summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies

(WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough

detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);

- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program. This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. **Part I - Cost/Benefit Stakeholder Matrix:**

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).	Minimal	
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal

	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless, in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and

findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DPR regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into

a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific

AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required, resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for

instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.
- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

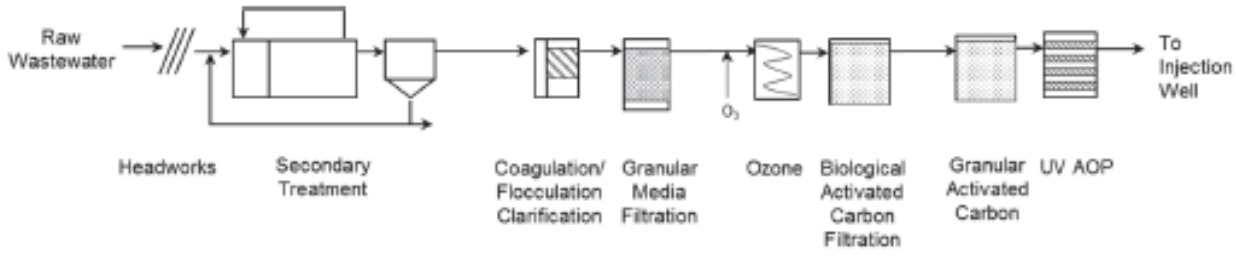
WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

WPA - Cost Evaluation - Project 1 Ozone-BAC:

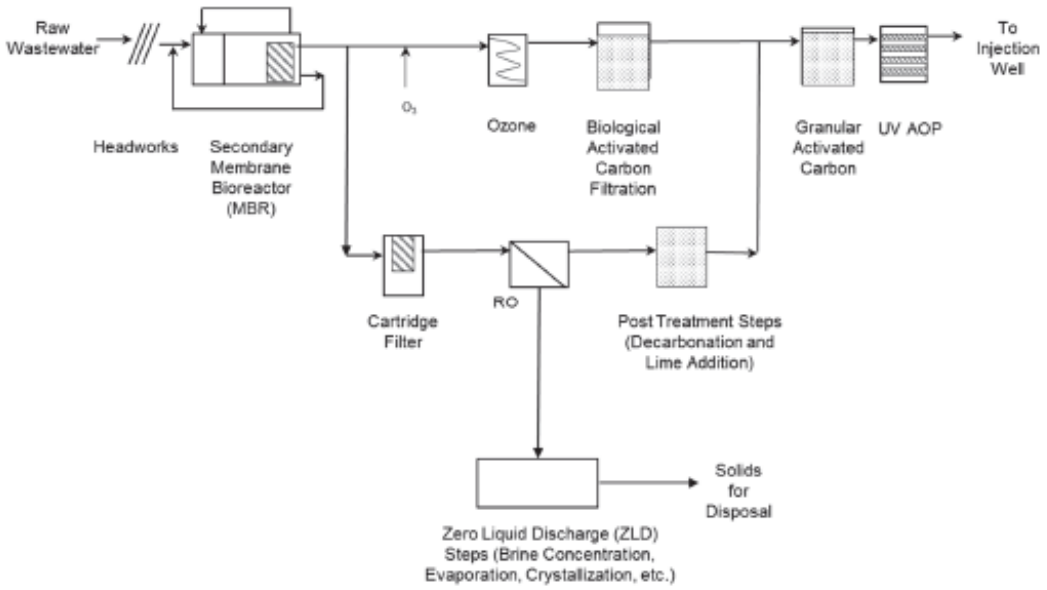
This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for

oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

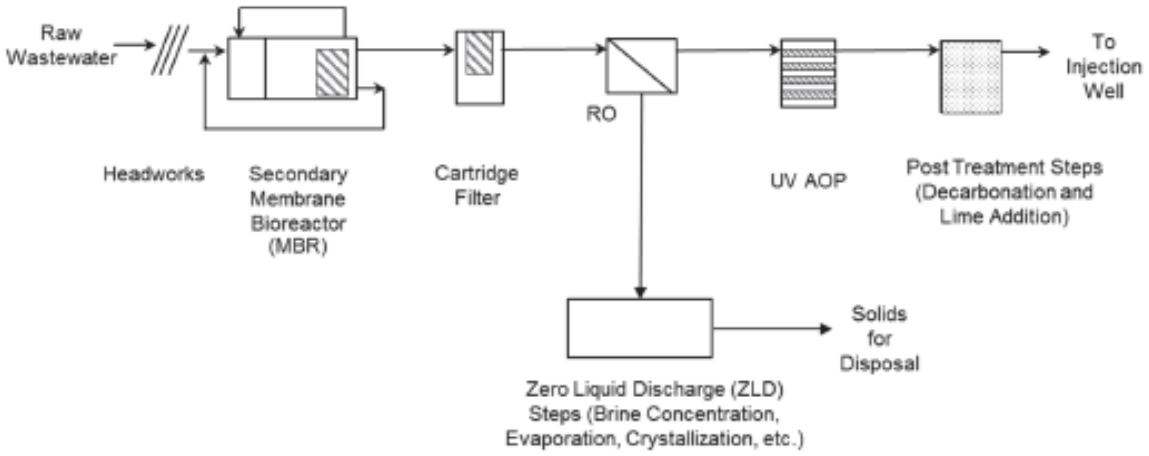
This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for

applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390
Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and often periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC Program range from 1.25 to 1.5 FTEs. In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be

impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I) consumptive use.
- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP development should allow

many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and

Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use

terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary

for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore,

in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water

supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors. Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program. As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs. ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and

implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational, and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new source of potable water for Arizona's water users.

11. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

No changes.

12. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

Not Applicable.

13. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

There are no other matters prescribed by statute applicable specifically to ADEQ or this specific rulemaking.

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

Yes, this rulemaking establishes the Advanced Water Purification regulatory program, which includes issuing individual permits, pursuant to A.R.S. § 49-211. While the product (advanced treated water or finished water) of an Advanced Water Purification regulatory program facility is substantially the same, the facilities, activities and practices regulated by the program will be substantially different in nature due to the treated wastewater source, a multitude of viable technological process configurations, a swift pace of technological progress in the field, and the custom nature of the regulated parties and their circumstances. Moreover, general permits are not "technically feasible" for the Advanced Water Purification regulatory program under A.R.S. § 41-1037(A)(3), and not used in the program.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

While the Safe Drinking Water Act (SDWA) (40 USC § 300f *et seq.*) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated

wastewater" (*see* R18-9-A801) as a source, which is the subject of this final rule. In fact, SDWA only contemplates surface and ground water as sources for public water systems. Some Advanced Water Purification facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP program.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

Not Applicable.

14. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

Not Applicable.

15. Whether the rule was previously made, amended or repealed as an emergency rule. If so, cite the notice published in the *Register* as specified in R1-1-409(A). Also, the agency shall state where the text was changed between the emergency and the final rulemaking packages:

Not Applicable.

14. The full text of the rules follows:

Rule text begins on the next page.

Minor Amendment	A.R.S. §§ 49-211 18 A.A.C. 9, Article 8	35	100	135
Demonstration Permit **Significant Amendment** No public hearing Public hearing	A.R.S. §§ 49-211 18 A.A.C. 9, Article 8	35 35	186 231[1]	221 266

[1]A request for a public hearing allows the Department 60 days to publish the notice of public hearing and for the official comment period. Forty-five business days are added to the substantive review time-frame.

[2]Each request for an alternative design, installation, or operational feature under R18-9-A312(G) to a Type 4 General Permit adds eight business days to the substantive review time-frame.

[3]EPA reserves the right, under 40 CFR 123.44, to take 90 days to supply specific grounds for objection to a draft or proposed permit when a general objection is filed within the review period. The first 30 days run concurrently with the Department's official comment period. Forty-five business days will be added to the substantive review time-frame to allow for the EPA review.

[4]If a request for a variance is submitted to the Department, 40 CFR 124.62 requires that specific variances are subject to review by EPA. Under 40 CFR 123.44, EPA reserves the right to take 90-days to approve or deny the variance. Sixty-four business days will be added to the substantive review time-frame to allow for the EPA review.

[5]"Major facility" means any NPDES "facility or activity" classified as such by the EPA in conjunction with the Director.

[6]"Minor facility" means any facility that is not classified as a major facility.

AWP NFRM Economic Impact Statement (EIS) - 18 AAC 1

A summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);
- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA

and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program.

This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. Part I - Cost/Benefit Stakeholder Matrix:

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative	Minimal	

	impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).		
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless, in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate

and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DRP regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general

requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required, resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.
- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

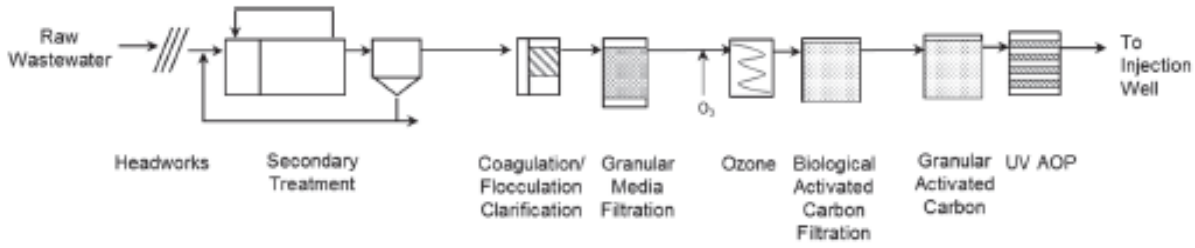
As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

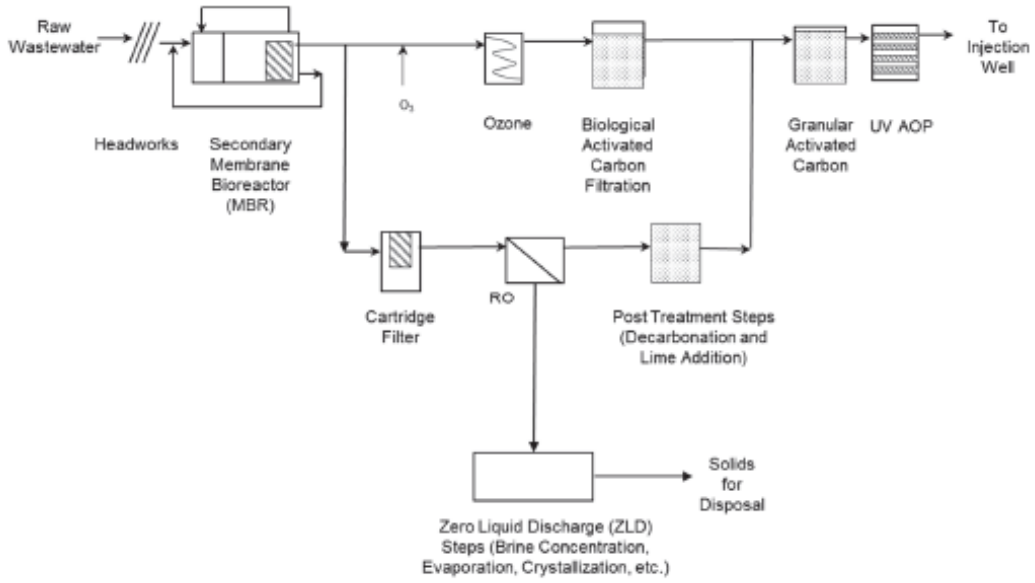
WPA - Cost Evaluation - Project 1 Ozone-BAC:

This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



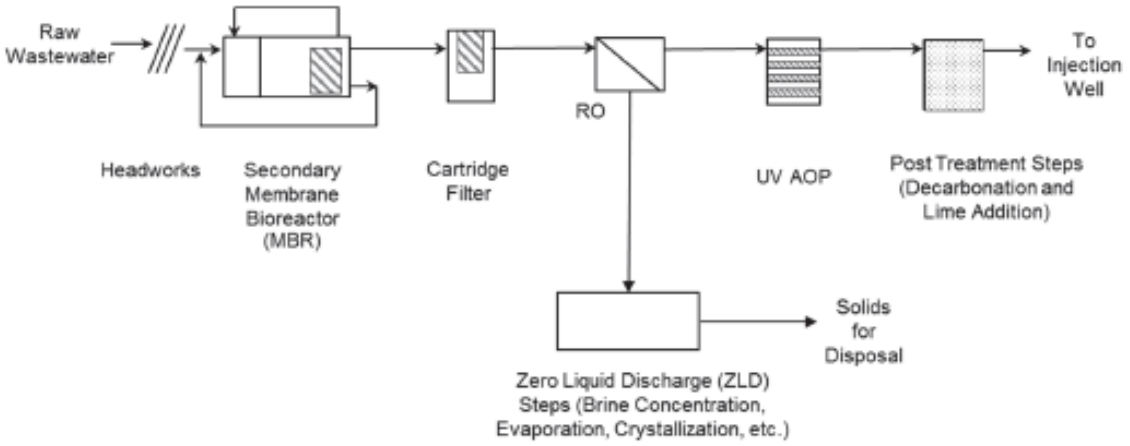
WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390

Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and often periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC Program range from 1.25 to 1.5 FTEs. In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I) consumptive use.
- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP

development should allow many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water

supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and

pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors. Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program.

As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs.

ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational, and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new source of potable water for Arizona's water users.

[1] A request for a public hearing allows the Department 60 days to publish the notice of public hearing and for the official comment period. Forty-five business days are added to the substantive review time-frame.
[2] Each request for an alternative design, installation, or operational feature under R18-9-A312(G) to a Type 4 General Permit adds eight business days to the substantive review time-frame.
[3] EPA reserves the right, under 40 CFR 123.44, to take 90 days to supply specific grounds for objection to a draft or proposed permit when a general objection is filed within the review period. The first 30 days run concurrently with the Department's official comment period. Forty-five business days will be added to the substantive review time-frame to allow for the EPA review.
[4] If a request for a variance is submitted to the Department, 40 CFR 124.62 requires that specific variances are subject to review by EPA. Under 40 CFR 123.44, EPA reserves the right to take 90-days to approve or deny the variance. Sixty-four business days will be added to the substantive review time-frame to allow for the EPA review.
[5] "Major facility" means any NPDES "facility or activity" classified as such by the EPA in conjunction with the Director.
[6] "Minor facility" means any facility that is not classified as a major facility.

49-104. Powers and duties of the department and director

A. The department shall:

1. Formulate policies, plans and programs to implement this title to protect the environment.

2. Stimulate and encourage all local, state, regional and federal governmental agencies and all private persons and enterprises that have similar and related objectives and purposes, cooperate with those agencies, persons and enterprises and correlate department plans, programs and operations with those of the agencies, persons and enterprises.

3. Conduct research on its own initiative or at the request of the governor, the legislature or state or local agencies pertaining to any department objectives.

4. Provide information and advice on request of any local, state or federal agencies and private persons and business enterprises on matters within the scope of the department.

5. Consult with and make recommendations to the governor and the legislature on all matters concerning department objectives.

6. Promote and coordinate the management of air resources to ensure their protection, enhancement and balanced utilization consistent with the environmental policy of this state.

7. Promote and coordinate the protection and enhancement of the quality of water resources consistent with the environmental policy of this state.

8. Encourage industrial, commercial, residential and community development that maximizes environmental benefits and minimizes the effects of less desirable environmental conditions.

9. Ensure the preservation and enhancement of natural beauty and man-made scenic qualities.

10. Provide for the prevention and abatement of all water and air pollution including that related to particulates, gases, dust, vapors, noise, radiation, odor, nutrients and heated liquids in accordance with article 3 of this chapter and chapters 2 and 3 of this title.

11. Promote and recommend methods for the recovery, recycling and reuse or, if recycling is not possible, the disposal of solid wastes consistent with sound health, scenic and environmental quality policies. The department shall report annually on its revenues and expenditures relating to the solid and hazardous waste programs overseen or administered by the department.

12. Prevent pollution through regulating the storage, handling and transportation of solids, liquids and gases that may cause or contribute to pollution.

13. Promote the restoration and reclamation of degraded or despoiled areas and natural resources.

14. Participate in the state civil defense program and develop the necessary organization and facilities to meet wartime or other disasters.

15. Cooperate with the Arizona-Mexico commission in the governor's office and with researchers at universities in this state to collect data and conduct projects in the United States and Mexico on issues that are within the scope of the department's duties and that relate to quality of life, trade and economic development in this state in a manner that will help the Arizona-Mexico commission to assess and enhance the economic competitiveness of this state and of the Arizona-Mexico region.

16. Unless specifically authorized by the legislature, ensure that state laws, rules, standards, permits, variances and orders are adopted and construed to be consistent with and not more stringent than the corresponding federal law that addresses the same subject matter. This paragraph does not adversely affect standards adopted by an Indian tribe under federal law.

17. Provide administrative and staff support for the oil and gas conservation commission.

B. The department, through the director, shall:

1. Contract for the services of outside advisers, consultants and aides reasonably necessary or desirable to enable the department to adequately perform its duties.

2. Contract and incur obligations reasonably necessary or desirable within the general scope of department activities and operations to enable the department to adequately perform its duties.

3. Use any medium of communication, publication and exhibition when disseminating information, advertising and publicity in any field of its purposes, objectives or duties.

4. Adopt procedural rules that are necessary to implement the authority granted under this title but that are not inconsistent with other provisions of this title.

5. Contract with other agencies, including laboratories, in furthering any department program.

6. Use monies, facilities or services to provide matching contributions under federal or other programs that further the objectives and programs of the department.

7. Accept gifts, grants, matching monies or direct payments from public or private agencies or private persons and enterprises for department services and publications and to conduct programs that are consistent with the general purposes and objectives of this chapter. Monies received pursuant to this paragraph shall be deposited in the department fund corresponding to the service, publication or program provided.

8. Provide for the examination of any premises if the director has reasonable cause to believe that a violation of any environmental law or rule exists or is being committed on the premises. The director shall give the owner or operator the opportunity for its representative to accompany the director on an examination of those premises. Within forty-five days after the date of the examination, the department shall provide to the owner or operator a copy of any report produced as a result of any examination of the premises.

9. Supervise sanitary engineering facilities and projects in this state, authority for which is vested in the department, and own or lease land on which sanitary engineering facilities are located, and operate the facilities, if the director determines that owning, leasing or operating is necessary for the public health, safety or welfare.

10. Adopt and enforce rules relating to approving design documents for constructing, improving and operating sanitary engineering and other facilities for disposing of solid, liquid or gaseous deleterious matter.

11. Define and prescribe reasonably necessary rules regarding the water supply, sewage disposal and garbage collection and disposal for subdivisions. The rules shall:

(a) Provide for minimum sanitary facilities to be installed in the subdivision and may require that water systems plan for future needs and be of adequate size and capacity to deliver specified minimum quantities of drinking water and to treat all sewage.

(b) Provide that the design documents showing or describing the water supply, sewage disposal and garbage collection facilities be submitted with a fee to the department for review and that no lots in any subdivision be offered for sale before compliance with the standards and rules has been demonstrated by approval of the design documents by the department.

12. Prescribe reasonably necessary measures to prevent pollution of water used in public or semipublic swimming pools and bathing places and to prevent deleterious conditions at those places. The rules shall prescribe minimum standards for the design of and for sanitary conditions at any public or semipublic swimming pool or bathing place and provide for abatement as public nuisances of premises and facilities that do not comply with the minimum standards. The rules shall be developed in cooperation with the director of the department of health services and shall be consistent with the rules adopted by the director of the department of health services pursuant to section 36-136, subsection I, paragraph 10.

13. Prescribe reasonable rules regarding sewage collection, treatment, disposal and reclamation systems to prevent the transmission of sewage borne or insect borne diseases. The rules shall:

(a) Prescribe minimum standards for the design of sewage collection systems and treatment, disposal and reclamation systems and for operating the systems.

(b) Provide for inspecting the premises, systems and installations and for abating as a public nuisance any collection system, process, treatment plant, disposal system or reclamation system that does not comply with the minimum standards.

(c) Require that design documents for all sewage collection systems, sewage collection system extensions, treatment plants, processes, devices, equipment, disposal systems, on-site wastewater treatment facilities and reclamation systems be submitted with a fee for review to the department and may require that the design documents anticipate and provide for future sewage treatment needs.

(d) Require that construction, reconstruction, installation or initiation of any sewage collection system, sewage collection system extension, treatment plant, process, device, equipment, disposal system, on-site wastewater treatment facility or reclamation system conform with applicable requirements.

14. Prescribe reasonably necessary rules regarding excreta storage, handling, treatment, transportation and disposal. The rules may:

(a) Prescribe minimum standards for human excreta storage, handling, treatment, transportation and disposal and shall provide for inspection of premises, processes and vehicles and for abating as public nuisances any premises, processes or vehicles that do not comply with the minimum standards.

(b) Provide that vehicles transporting human excreta from privies, septic tanks, cesspools and other treatment processes be licensed by the department subject to compliance with the rules. The department may require payment of a fee as a condition of licensure. The department shall establish by rule a fee as a condition of licensure, including a maximum fee. The fees shall be deposited, pursuant to sections 35-146 and 35-147, in the solid waste fee fund established by section 49-881.

15. Perform the responsibilities of implementing and maintaining a data automation management system to support the reporting requirements of title III of the superfund amendments and reauthorization act of 1986 (P.L. 99-499) and article 2 of this chapter.

16. Approve remediation levels pursuant to article 4 of this chapter.

17. Establish or revise fees by rule pursuant to the authority granted under title 44, chapter 9, articles 8 and 9 and chapters 4 and 5 of this title for the department to adequately perform its duties. All fees shall be fairly assessed and impose the least burden and cost to the parties subject to the fees. In establishing or revising fees, the department shall base the fees on the direct and indirect costs of the department's relevant duties, including employee salaries and benefits, professional and outside services, equipment, in-state travel and other necessary operational expenses directly related to issuing licenses as defined in title 41, chapter 6 and enforcing the requirements of the applicable regulatory program.

18. Appoint a person with a background in oil and gas conservation to act on behalf of the oil and gas conservation commission and administer and enforce the applicable provisions of title 27, chapter 4 relating to the oil and gas conservation commission.

C. The department may:

1. Charge fees to cover the costs of all permits and inspections it performs to ensure compliance with rules adopted under section 49-203 except that state agencies are exempt from paying the fees.

2. Monies collected pursuant to this subsection shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

3. Contract with private consultants for the purposes of assisting the department in reviewing applications for licenses, permits or other authorizations to determine whether an applicant meets the criteria for issuance of the license, permit or other authorization. If the department contracts with a consultant under this paragraph, an applicant may request that the department expedite the application review by requesting that the department use the services of the consultant and by agreeing to pay the department the costs of the consultant's services. Notwithstanding any other law, monies paid by applicants for expedited reviews pursuant to this paragraph are appropriated to the department for use in paying consultants for services.

D. The director may:

1. If the director has reasonable cause to believe that a violation of any environmental law or rule exists or is being committed, inspect any person or property in transit through this state and any vehicle in which the person or property is being transported and detain or disinfect the person, property or vehicle as reasonably necessary to protect the environment if a violation exists.

2. Authorize in writing any qualified officer or employee in the department to perform any act that the director is authorized or required to do by law.

49-203. Powers and duties of the director and department

A. The director shall:

1. Adopt, by rule, water quality standards in the form and subject to the considerations prescribed by article 2 of this chapter.

2. Adopt, by rule, a permit program for WOTUS that is consistent with but not more stringent than the requirements of the clean water act for the point source discharge of any pollutant or combination of pollutants into WOTUS. The program and the rules shall be sufficient to enable this state to administer the permit program identified in section 402(b) of the clean water act, including the sewage sludge requirements of section 405 of the clean water act and as prescribed by article 3.1 of this chapter.

3. Apply the program and rules authorized under paragraph 2 of this subsection to point source discharges to non-WOTUS protected surface waters, consistent with section 49-255.04, which establishes the program components and rules that do not apply to non-WOTUS protected surface waters. The following are exempt from the non-WOTUS protected surface waters point source discharge program:

(a) Discharges to a non-WOTUS protected surface water incidental to a recharge project.

(b) Established or ongoing farming, ranching and silviculture activities such as plowing, seeding, cultivating, minor drainage or harvesting for the production of food, fiber or forest products or upland soil and water conservation practices.

(c) Maintenance but not construction of drainage ditches.

(d) Construction and maintenance of irrigation ditches.

(e) Maintenance of structures such as dams, dikes and levees.

4. Adopt, by rule, a program to control nonpoint source discharges of any pollutant or combination of pollutants into WOTUS.

5. Adopt, by rule, an aquifer protection permit program to control discharges of any pollutant or combination of pollutants that are reaching or may with a reasonable probability reach an aquifer. The permit program shall be as prescribed by article 3 of this chapter.

6. Adopt, by rule, the permit program for underground injection control described in the safe drinking water act.

7. Adopt, by rule, technical standards for conveyances of reclaimed water and a permit program for the direct reuse of reclaimed water.

8. Adopt, by rule or as permit conditions, discharge limitations, best management practice standards, new source performance standards, toxic and pretreatment standards and other standards and conditions as reasonable and necessary to carry out the permit programs and regulatory duties described in paragraphs 2 through 6 of this subsection.

9. Assess and collect fees to revoke, issue, deny, modify or suspend permits issued pursuant to this chapter and to process permit applications. The director may also assess and collect costs reasonably necessary if the director must conduct sampling or monitoring relating to a facility because the owner or operator of the facility has refused or failed to do so on order by the director. The director shall set fees that are reasonably related to the department's costs of providing the service for which the fee is charged. Monies collected from aquifer protection permit fees and from Arizona pollutant discharge elimination system permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. Monies from other permit fees shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund unless otherwise provided by law. Monies paid by an applicant for review by consultants for the department pursuant to section 49-241.02, subsection B shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210. State agencies are exempt from all fees imposed pursuant to this chapter.

10. Adopt, modify, repeal and enforce other rules that are reasonably necessary to carry out the director's functions under this chapter.

11. Require monitoring at an appropriate point of compliance for any organic or inorganic pollutant listed under section 49-243, subsection I if the director has reason to suspect the presence of the pollutant in a discharge.

12. Adopt rules establishing what constitutes a significant increase or adverse alteration in the characteristics or volume of pollutants discharged for purposes of determining what constitutes a major modification to an existing facility under the definition of new facility pursuant to section 49-201. Before adopting these rules, the director shall determine whether a change at a particular facility results in a significant increase or adverse alteration in the characteristics or volume of pollutants discharged on a case-by-case basis, taking into account site conditions and operational factors.

13. Consider evidence gathered by the Arizona navigable stream adjudication commission established by section 37-1121 when deciding whether a permit is required to discharge pursuant to article 3.1 of this chapter.

B. The director may:

1. On presentation of credentials, enter into, on or through any public or private property from which a discharge has occurred, is occurring or may occur or on which any disposal, land application of sludge or treatment regulated by this chapter has occurred, is occurring or may be occurring and any public or private property where records relating to a discharge or records that are otherwise required to be maintained as prescribed by this chapter are kept, as reasonably necessary to ensure compliance with this chapter. The director or a department employee may take samples, inspect and copy records required to be maintained pursuant to this chapter, inspect equipment, activities, facilities and monitoring equipment or methods of monitoring, take photographs and take other action reasonably necessary to determine the application of, or compliance with, this chapter. The owner or managing agent of the property shall be afforded the opportunity to accompany the director or department employee during inspections and investigations, but prior notice of entry to the owner or managing agent is not required if reasonable grounds exist to believe that notice would frustrate the enforcement of this chapter. If the director or department employee obtains any samples before leaving the premises, the director or department employee shall give the owner or managing agent a receipt describing the samples obtained and a portion of each sample equal in volume or weight to the portion retained. If an analysis is made of samples, or monitoring and testing are performed, a copy of the results shall be furnished promptly to the owner or managing agent.

2. Require any person who has discharged, is discharging or may discharge into the waters of the state under article 3, 3.1 or 3.3 of this chapter and any person who is subject to pretreatment standards and requirements or sewage sludge use or disposal requirements under article 3.1 of this chapter to collect samples, to establish and maintain records, including photographs, and to install, use and maintain sampling and monitoring equipment to determine the absence or presence and nature of the discharge or indirect discharge or sewage sludge use or disposal.

3. Administer state or federal grants, including grants to political subdivisions of this state, for the construction and installation of publicly and privately owned pollutant treatment works and pollutant control devices and establish grant application priorities.

4. Develop, implement and administer a water quality planning process, including a ranking system for applicant eligibility, wherein appropriated state monies and available federal monies are awarded to political subdivisions of this state to support or assist regional water quality planning programs and activities.

5. Enter into contracts and agreements with the federal government to implement federal environmental statutes and programs.

6. Enter into intergovernmental agreements pursuant to title 11, chapter 7, article 3 if the agreement is necessary to more effectively administer the powers and duties described in this chapter.

7. Participate in, conduct and contract for studies, investigations, research and demonstrations relating to the causes, minimization, prevention, correction, abatement, mitigation, elimination, control and remedy of discharges and collect and disseminate information relating to discharges.

8. File bonds or other security as required by a court in any enforcement actions under article 4 of this chapter.

C. Subject to section 38-503 and other applicable statutes and rules, the department may contract with a private consultant to assist the department in reviewing aquifer protection permit applications and on-site wastewater treatment facilities to determine whether a facility meets the criteria and requirements of this chapter and the rules adopted by the director. Except as provided in section 49-241.02, subsection B, the department shall not use a private consultant if the fee charged for that service would be greater than the fee the department would charge to provide that service. The department shall pay the consultant for the services rendered by the consultant from fees paid by the applicant or facility to the department pursuant to subsection A, paragraph 9 of this section.

D. The director shall integrate all of the programs authorized in this section and other programs affording water quality protection that are administered by the department for purposes of administration and enforcement and shall avoid duplication and dual permitting to the maximum extent practicable.

49-211. Direct potable reuse of treated wastewater; fees; rules

A. On or before December 31, 2024, the director shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program. Monies collected pursuant to this section shall be deposited, pursuant to sections 35-146 and 35-147, in the water quality fee fund established by section 49-210.

B. On or before December 31, 2024, the director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process.

D-4.

DEPARTMENT OF ENVIRONMENTAL QUALITY
Title 18, Chapter 5

New Section: R18-5-510

GOVERNOR'S REGULATORY REVIEW COUNCIL

ATTORNEY MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: March 4, 2025

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: February 18, 2025

SUBJECT: **DEPARTMENT OF ENVIRONMENTAL QUALITY**
Title 18, Chapter 5

New Section: R18-5-510

Summary:

This regular rulemaking from the Department of Environmental Quality (Department) seeks to add one (1) rule Title 18, Chapter 5, Article 5 regarding minimum design criteria for public water systems. This rulemaking is one part of the four part rulemaking submitted by the Department regarding Advance Water Purification (AWP). In 2022, the Department was required by the legislature to create the AWP program and to create the accompanying rules.

Specifically, this rule is needed to clarify that AWP facilities are not subject to A.A.C. R18-5-505 or R18-5-507 because the standards for AWP facilities need to be higher and are addressed specifically in the proposed AWP rules in Chapter 9. The new rule is also intended to clarify that proposed rules in Title 18, Chapter 9, Article 8 will supersede the permitting requirements found in Chapter 5, Article 5. In addition, any conflicts related to design requirements found in Chapter 5, Article 5 and the proposed rules in Chapter 9, Article 8, the design requirements in Chapter 9, Article 8 will apply.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

The Department cites both general and specific statutory authority for these rules.

2. Do the rules establish a new fee or contain a fee increase?

This rulemaking does not establish a new fee or contain a fee increase. Other Department rulemakings related to the AWP program do establish fees.

3. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

The Department indicates it did not review any study relevant to this rulemaking. Other Department rulemakings did reference studies and those will be addressed in those rulemakings.

4. Summary of the agency's economic impact analysis:

The Department states that the rulemaking addressed by the economic, small business, and consumer impact statement (EIS) consists of a number of new sections, as well as amendments in existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters and the respective articles affected therein, are, Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The Department indicates that the rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory programs (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater plant. This AWTF-treated water can then be delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking distribution system. In both cases, the safeguards of the federal Sate Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source for existing users and supports Arizona's future population growth and economic development.

5. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

The Department indicates that AWP participation is entirely voluntary and in no way precludes any Arizona Water Provider Agencies (WPAs) from instead implementing another approach or water supply resource to meet its water supply needs. The Department states that this approach recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

6. What are the economic impacts on stakeholders?

The Department states that the full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment. The Department indicates that while not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of he AWP program.

The Board believes that the entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. The Board states that, fundamentally, the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can consistently be achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic discharges, their AWPRA partners, etc. Therefore, the Department states that the EIS cannot determine, with exact specificity, the impact to each WPA. The Department indicates it has developed cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. Those three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with side-Strean Reverse Osmosis (RO), and 3) Full-Stream RO.

The Department states that upon evaluation of these representative projects, the EIS provides expected costs related to the implementation of AWP for WPAs enabling them to make informed decisions about whether AWP is a good option for their communities. For Project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For Project 2, Ozone-BAC with side-Stream RO, the estimated costs are aa follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated cost are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

AWP is not anticipated to have an impact of water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of the Advanced Water Treatment Facility (AWTF) development and operations to them. Customers of participating WPAs will, however, benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. The Department indicates that regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. The Department states that it is expected that each participating WPA will do a

comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

The Department states that in addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources.

The Department states that no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs. The Department indicates that the probable cost effect from future AWP development and implementation will be limited to WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

7. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

The Department indicates that there were no changes between the proposed rules and the final rules.

8. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

The Department indicates it received two comments as it relates to this rulemaking.

Comment 1 was from a utility organization and stated the following:

- The proposed new language indicates advanced water purification facilities are not subject to R18-5-505 (approval to construct), nor R18-5-507 (approval of construction). However, the requirements of the Safe Drinking Water Act are still applicable. Therefore, language should be added to R18-5-505 that is similar to what is proposed at R18-9-A803: "Nothing in this section exempts a facility from applicable Safe Drinking Water Act requirements in Chapter 4 of this Title."

The Department responded with the following:

- ADEQ appreciates the comment. The AWP program does not supplant or supersede the applicable requirements under the Safe Drinking Water Act (SDWA). Therefore, all AWP facilities must comply with applicable SDWA requirements. However, this rulemaking does include clarifying language to be added to Arizona Administrative Code (A.A.C.)

Title 18, Chapter 5, Article 5. Specifically, a new rule entitled "Applicability of Advanced Water Purification Program" will be placed at R18-5-510 which clarifies the inapplicability of R18-5-505 and R18-5-507 to AWPRAs, amongst other clarifications. Furthermore, in A.A.C. Title 18, Chapter 9, Article 8, the language at R18-9-A803(A) states that compliance with the AWP rules does not exempt a facility from applicable SDWA requirements. R18-5-510 distinguishes between Advanced Water Treatment Facilities that will become (in addition to AWP regulation) Public Water Systems (PWSs), for the purposes of the SDWA and traditional PWSs, which do not involve AWP.

The second comment came from a local government and stated the following:

- We are concerned that the final AWP rules will be substantially weakened before publication based on the previously unpublished statement of achieving parity with drinking water rules. It is stated at 30 AAR 3186, under subtitle "Associated Rulemakings" that changes to Chapter 5 of Title 18 are based on the aim of achieving parity between drinking water regulations and AWP regulations. Considering all the constituents that are known to be or that could exist in wastewater and all the constituents not regulated by the SDWA, this is aiming substantially below the published Draft rules developed by a large number of stakeholders which were stricter than the drinking water rules.

The Department responded with the following:

- ADEQ appreciates the comment. The language in the Notice of Proposed Rulemaking (NPRM) referred to by the commenter above is as follows, "[t]he proposed changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The proposed changes in Chapter 5 aim to achieve parity between the two programs by clarifying, in each, how and where the program components are applicable." The "Department" concedes that the use of the word "parity" is misleading. Put another way, the addition of R18-5-510 to Chapter 5, Article 5 clarifies which part(s) of, and when, the SDWA is applicable to AWP facilities and when AWP permitting and design requirements apply. These clarifying changes to the language in Chapter 5 will not weaken the safeguards developed in the AWP program. On the contrary, the language addressing AWP in Chapter 5 requires AWTFs to be regulated by robust permitting and design requirements specific to AWP. It is also important to note that no changes to the proposed language in R18-5-510 in Chapter 5, Article 5 have been made between the proposed and the final rule.

Council staff believes that the department adequately addressed the comments in accordance with A.R.S. § 41-1052(D)(7).

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

This specific rulemaking does not create a permit or a license. The Department's other proposed rulemakings before the Council do require a permit or license and are addressed in those particular rulemakings. As a summary of those permitting requirements, they are specific to AWP programs and it would not be technically feasible to issue a general permit under A.R.S. § 41-1037(A)(3).

10. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

The Department indicates, while the Safe Drinking Water Act (SDWA) (40 USC § 300f et seq.) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated wastewater" (see R18-9-A801) as a source, which is the subject of this final rule. The Department states, SDWA only contemplates surface and ground water as sources for public water systems. The Department indicates some AWP facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP program.

The purpose of the proposed R18-5-510 is to clarify that when there is overlap between the two, that all SDWA requirements must be met. Specific permitting requirements found in R18-5-505 and R18-5-707 would not meet the elevated standards of the AWP program and is why they are specifically exempted.

11. Conclusion

This regular rulemaking by the Department seeks to add one rule regarding Advance Water purification systems to the existing rules for minimum design criteria for public water systems. The Department specifically seeks to add the rule to clarify the scope of their new Advance Water Purification program and when those program rules govern and supersede other DEQ water programs.

The Department is seeking an immediate effective date pursuant to A.R.S. § 41-1032(A)(2) to "avoid a violation of...state law, if the need for an immediate effective date is not created due to the agency's delay or inaction." The Department was required to complete a rulemaking by December 31, 2024 per A.R.S. § 49-211. The Department indicates that while that date has passed, the goal of the immediate effective date is to prevent the length of time without having this program in place to a minimum. The Department has indicated they have worked diligently in the time frame and have worked extensively with stakeholders to create this program. The Department states that while they could not meet the statutory deadline it was a result of ensuring this new regulatory program was as least burdensome as possible while protecting the health of Arizonans. Council staff believes the Department has provided sufficient documentation of the extensive stakeholder process, and thus Council staff belives the

Department has provided sufficient justification for an immediate efficient date pursuant to A.R.S. § 41-1032(A)(2).

Council staff recommends approval of this rulemaking.

Arizona Department of Environmental Quality

Katie Hobbs
Governor

Karen Peters
Deputy Director

January 16, 2025

Jessica Klein, Chair
Governor's Regulatory Review Council
100 N. 15th Ave., Ste. 302
Phoenix, AZ 85007

Re: Advanced Water Purification (AWP) Regular Rulemaking: Title 18, Environmental Quality, Chapters 1, 5, 9, and 14

Dear Chair Klein:

The Arizona Department of Environmental Quality (ADEQ) hereby submits this final rulemaking package to the Governor's Regulatory Review Council (GRRC) for consideration and approval at the Council Meeting scheduled for March 4th, 2025.

The following information is provided for your use in reviewing the enclosed rules for approval pursuant to A.R.S. § 41-1052 and A.A.C. R1-6-201:

I. Information required under A.A.C. R1-6-201(A)(1):

(A)(1)(a) The public record closed for all rules on December 2nd, 2024 at 11:59 p.m.
(A)(1)(b) The rulemaking activity does not relate to a five-year review report.
(A)(1)(c) The rulemaking activity does establish a new fee; please see A.R.S. § 49-211(A) for authority.
(A)(1)(d) The rulemaking does not contain a fee increase as the AWP Program is being established for the first time and has no appropriately comparable precedent in state or Federal law.
(A)(1)(e) An immediate effective date is requested.
(A)(1)(f) The Department certifies that the preamble discloses reference to any study relevant to the rule that the agency reviewed and either did or did not rely on in the agency's evaluation of or justification for the rule (*see* subheading III, below).
(A)(1)(g) The Department's preparer of the economic, small business, and consumer impact statement will notify the Joint Legislative Budget Committee (JLBC) of the number of new full-time employees necessary to implement and enforce the rule before the rule is approved by the council, pursuant to A.R.S.

§ 41-1055(B)(3)(a) (*see* subheading III, below).

(A)(1)(h) A list of documents is enclosed (*see* subheading III, below).

II. Information required under A.A.C. R1-6-201(A)(2) through (8):

(A)(2) Four (4) Notices of Final Rulemaking (NFRMs), including the preamble, table of contents, and text of each rule (*see* subheading III, below);

(A)(3) The preambles contain an economic, small business, and consumer impact statement that contains the information required by A.R.S. § 41-1055 (*see* subheading III, below);

(A)(4) The preambles contain comments received by the agency, both written and oral, concerning the proposed rule (*see* subheading III, below);

(A)(5) No analyses were submitted to the agency regarding the rule's impact on the competitiveness of businesses in this state as compared to the competitiveness of businesses in other states;

(A)(6) Materials were incorporated by reference in this rulemaking (*see* subheading III, below);

(A)(7) The general and specific statutes authorizing the rule, including relevant statutory definitions (*see* subheading III, below);

(A)(8) A list of statutes or other rules referred to in the definitions (*see* subheading III, below).

III. List of documents enclosed (38 documents total)**:**

- One (1) Cover Letter (R1-6-201(A)(1));
  - AWP_CL.pdf
- One (1) JLBC email (R1-6-201(A)(1)(g));

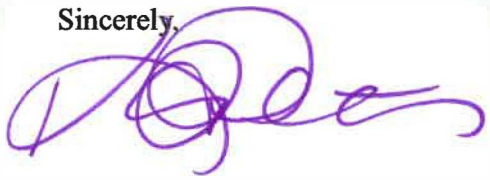
Sincerely,



Karen Peters, Deputy Director
Arizona Department of Environmental Quality

Enclosures

NOTICE OF FINAL RULEMAKING

TITLE 18. ENVIRONMENTAL QUALITY

CHAPTER 5. DEPARTMENT OF ENVIRONMENTAL QUALITY - ENVIRONMENTAL REVIEWS AND CERTIFICATION

PREAMBLE

1. Permission to proceed with this final rulemaking was granted under A.R.S. § 41-1039 by the governor on:

March 5, 2024

2. Article, Part, or Section Affected (as applicable)	**Rulemaking Action**
R18-5-510	New Section

3. Citations to the agency's statutory rulemaking authority to include the authorizing statute (general) and the implementing statute (specific):

Authorizing statute: A.R.S. §§ 49-104(A)(1), (7); 49-203(A)(7), (9), (10)

Implementing statute: A.R.S. § 49-211

4. The effective date of the rule:

This rule shall become effective immediately after a certified original of the rule and preamble are filed with the Office of the Secretary of State pursuant to A.R.S. § 41-1032(A). The effective date is March 4, 2025.

a. If the agency selected a date earlier than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the earlier date and state the reason the agency selected the earlier effective date as provided in A.R.S. § 41-1032(A)(1) through (5):

The rule shall be effective on March 4, 2025. ADEQ selected this date pursuant to A.R.S. § 41-1032(A)(2) in order "to avoid a violation of … state law, if the need for an immediate effective date is not created due to the agency's delay or inaction".

A.R.S. § 49-211 requires ADEQ to, "[o]n or before December 31, 2024 … adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program [A.K.A. - AWP regulatory program], including rules establishing permitting standards and a permit application process."

While an immediate effective date will not avoid a violation of A.R.S. § 49-211, it serves to ameliorate the extent of the violation by establishing an effective date as close in time as possible to the statutory deadline "on or before December 31, 2024". The Legislature charged ADEQ with the adoption of an advanced water purification program in Fall 2022, setting a justifiably aggressive deadline of December 31, 2024. Since that time, ADEQ diligently undertook an extensive program design and rule-writing approach to appropriately design the revolutionary program. Additionally, ADEQ conducted a special stakeholder approach commensurate with the intricacies of the program, itself, with myriad stakeholder efforts outlined in Section 7 of this Notice of Final Rulemaking. This process included engagement at all phases of the project, in

the program framework and guiding principle development phase to the draft rule phase, and included multiple opportunities for ADEQ to work with and educate stakeholders, receive feedback on program components, and improve the program. Arizona is one of only a handful of states with a regulatory framework for advanced water purification, and the process was, therefore, carefully conducted to best preserve the interests of the Legislature and the health of Arizonans. While ADEQ worked just as aggressively to achieve the statutory deadline, best efforts nevertheless fell a few months short. For these reasons and pursuant to A.R.S. § 41-1032(A)(2), ADEQ did not delay or fail to act in such a way that led to the need for an immediate effective date.

b. If the agency selected a date later than the 60-day effective date as specified in A.R.S. § 41-1032(A), include the later date and state the reason the agency selected the later effective date as provided in A.R.S. § 41-1032(B):

Not Applicable.

5. Citations to all related notices published in the *Register* as specified in R1-1-409(A) that pertain to the current record of the final rule:

Notice of Proposed Rulemaking: 30 A.A.R. 3192, Issue Date: November 1, 2024, Issue Number: 44, File Number: R24-210.

Notice of Rulemaking Docket Opening: 30 A.A.R. 2878, Issue Date: September 20, 2024, Issue Number: 38, File Number: R24, 176.

6. The agency's contact person who can answer questions about the rulemaking:

Name: Jon Rezabek
Natalie Kilker
Title: Legal Specialists
Division: Water Quality
Address: Arizona Department of Environmental Quality
1110 W. Washington Ave.
Phoenix, AZ 85007

Fax: (602) 771-2366
Email: reuserulemaking@azdeq.gov
Website: https://www.azdeq.gov/awp-rulemaking

7. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, to include an explanation about the rulemaking:

***Introduction*:**

The Arizona Department of Environmental Quality ("ADEQ") is mandated by the Arizona Legislature, pursuant to Arizona Revised Statutes (A.R.S.) § 49-211, to "adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process". The statute, adopted from House Bill 2861, as enacted in the Second Regular Session on June 28, 2022, became effective on September 24, 2022. For purposes of this Notice and the final rule, the term "direct potable reuse" is synonymous with "Advanced Water Purification" (or "AWP"), as the program is now called.

ADEQ, in consideration of Arizona's water supply needs and the Legislative mandate, interpreted A.R.S. § 49-211 as a call to establish an AWP program that is both protective of human health and the environment, as well as imposing minimum burden upon the stakeholder community in achieving that goal. The result of that effort is detailed in the final rules to be placed in the Arizona Administrative Code (A.A.C.), Title 18, Chapters 1, 5, 9 and 14, through this Notice of Final Rulemaking (NFRM) and through the simultaneously filed associated NFRMs.

***Background*:**

Arizona faces significant water supply challenges requiring proactive approaches to conservation and stewardship, in anticipation of decreased water availability in the future. Arizona is currently experiencing a severe and sustained drought, persisting since 1994. The state has experienced an average annual precipitation of approximately 12 inches, and climate data reveals a concerning trend: a consistent reduction of 0.9 inches of rainfall per year over the past three decades (Arizona State University, 2023, Climate of Arizona, https://azclimate.asu.edu/climate/). As a result of the continuing mega-drought, a Drought Emergency Declaration has existed since 1999. The impacts can be felt heavily in the rural areas of the state, where alternative water supplies are generally very limited and the economy is strongly affected by drought (e.g., grazing, irrigated agriculture, recreation, forestry). Most of rural Arizona relies exclusively on groundwater as its primary water source and lacks the groundwater regulations and conservation requirements which have been present in the state's active management areas (AMAs) and irrigation non-expansion areas (INAs). In addition to the reduced precipitation within Arizona, the Colorado River Basin is also facing decades-long drought conditions, which have led to historically low water levels in Colorado River system reservoirs. As a result, Arizona has implemented measures to reduce its consumption of Colorado River water. The Lower Colorado River Basin first experienced a Tier 1 Shortage as agreed in the 2007 Interim Guidelines and the Drought Contingency Plan in 2021. In 2022, Bureau of Reclamation Commissioner Camille Touton called on the Colorado River states to conserve between 2-4 million acre feet per year to address the critically low levels in Lake Powell and Lake Mead following a dire water year. Fortunately, voluntary reductions in the Lower Basin and a healthy water year 2022 averted a decline to critically low elevations. However, as the Basin States look ahead, climate projections and historical trends indicate that the Basin is likely to face increasing average temperatures and reduced precipitation in the coming years. Arizonans will likely be called upon to live with further reduced Colorado River supplies for the foreseeable future as the next set of operational guidelines for the Colorado River are finalized.

Beyond the shrinking water supply, economic growth presents water providers with formidable challenges in meeting demand. As water-intensive industries relocate to Arizona, industrial water demands may increase. Furthermore, there may be challenges with maintaining the necessary housing growth due to the release of the new models of groundwater conditions in the Phoenix and Pinal AMAs. The results of the groundwater flow model projections show that over a period of 100 years, the Phoenix AMA will experience 4.86 million acre-feet (maf) of unmet demand for groundwater supplies and the Pinal AMA will experience 8.1 maf of unmet demand for groundwater supplies, given current conditions. In keeping with these findings of unmet demand, the State will not approve new determinations of Assured Water Supply within the Phoenix and Pinal AMAs based on groundwater supplies. This will lead to an increased competition for limited alternative water supplies. As growth continues, there will be an increasing need for sustainable and innovative water resource management strategies to accommodate the state's evolving needs.

***What is AWP*?**

Advanced Water Purification (AWP) is defined as the treatment and distribution of a municipal wastewater stream for use as potable water without the use or with limited use of an environmental buffer (US EPA, 2017, Potable Reuse Compendium). AWP has been shown to be a safe and effective source of potable water over decades of implementation in projects that have been installed worldwide at facilities in Big Spring, Texas (2013); Wichita Falls, Texas (2014); Namibia (1968 and 2002); Singapore (2019); and South Africa (2011) (Lahnsteiner, J., Van Rensburg, P., & Esterhuizen, J., 2018, Direct potable reuse–a feasible water management option. Journal of Water Reuse and Desalination, 8(1), 14-28).

AWP applications typically consist of a conventional water reclamation facility (WRF) or wastewater treatment plant (WWTP) that performs solids, carbon, nutrient, and pathogen removal and an advanced water treatment facility (AWTF) that provides additional pathogen and trace chemical removal. An AWTF is a utility or treatment plant where recycled wastewater is treated to produce purified water to meet specific AWP requirements. AWTFs use a multi-barrier approach where several redundant unit processes in series are installed to treat WRF effluent to potable water standards. Depending on the site-specific infrastructure configuration and treatment capabilities, the AWTF effluent may be introduced into several different locations of the potable water treatment and distribution system to be reused: (i) in the intake to the existing drinking water treatment facility (DWTF); (ii) after the DWTF and prior to the potable water distribution system; or (iii) Directly into the potable water distribution system.

***Evolution of AWP in Regulations*:**

A predecessor to the AWP program was adopted in the A.A.C. in 2018 at R18-9-E701, including a definition of "[a]dvanced reclaimed water treatment facility" at R18-9-A701(1). An associated NFRM filed simultaneously with this NFRM will repeal these rules in their entirety to make way for the AWP program. This prior, less detailed, single-ruled program was placed in Title 18, Chapter 9, Article 7 of the A.A.C. Article 7 is entitled "Use of Recycled Water". Part E of Article 7 was entitled "Purified Water for Potable Use" and R18-9-E701 was entitled "Recycled Water Individual Permit for an Advanced Reclaimed Water Treatment Facility". R18-9-E701 detailed basic requirements for an advanced reclaimed water treatment facility and, during the rule's tenure,

was used to permit one such facility. The facility was not authorized to, and did not, distribute purified water as drinking water through established conveyances or networks. As was stated above, in recent years, the Arizona Legislature determined a need for a more robust regulatory program for AWP. The Legislature passed House Bill 2861 into law in 2022, effectuating statute A.R.S. § 49-211, which led directly to the establishment of the final AWP program and the repeal of the previous program.

***Associated Rulemakings*:**

This final rulemaking includes four NFRMs, adding, repealing or amending rules in A.A.C. Title 18. Environmental Quality:

- Chapter 1 (Department of Environmental Quality - Administration),
- Chapter 5 (Department of Environmental Quality - Environmental Reviews and Certification),
- Chapter 9 (Department of Environmental Quality - Water Pollution Control), and
- Chapter 14 (Department of Environmental Quality - Permit and Compliance Fees).

The final changes to Chapter 1 are specific to updating the Licensing Time-Frame requirements in Article 5 to account for the new AWP program. The final changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The final additions, amendments and repeals to Chapter 9 are all aimed at making way for and establishing the AWP regulatory program. The final changes to Chapter 14 are specific to updating the Water Quality fees in Article 1 to accommodate the AWP program commensurate with other water quality programs.

***Necessity of Adding R18-5-510*:**

The addition of a new section at R18-5-510 contains language that reflects AWP programmatic rule R18-9-A803, which is entitled "Applicability of the Safe Drinking Water Act" and details the interconnection between the AWP program and the Safe Drinking Water Act (42 U.S.C. 300f *et seq.*). The AWP regulatory program derives its authority from Arizona state statute, as is detailed above. At the time of this rulemaking, the AWP subject matter had no direct federal regulatory analog. However, due to the flexibility of the AWP program and the multitude of options available to an AWP permittee concerning how to best employ AWP in accordance with the system needs, infrastructure, and economic situation, an AWTF may introduce advanced treated water at several locations, including to a public water system as a source (advanced treated water), or directly to distribution for human consumption (finished water). This means that there are potential interconnections between the AWP program and the protections of the Safe Drinking Water Act. Therefore, the content of the final programmatic rule at R18-9-A803 and its final corresponding rule at R18-5-510 was necessary to outline that intersection. Specifically, R18-5-510 specifies that AWP permitting processes in Chapter 9, Article 8 supersede permitting process requirements in A.A.C. Title 18, Chapter 5, Article 5, including R18-5-505 (Approval to Construct) and R18-5-507. (Approval of Construction). Lastly, R18-5-510 specifies that where AWP design requirements in A.A.C. Title 18, Chapter 9, Article 8 requirements conflict with requirements in A.A.C. Title 18, Chapter 5, Article

5, AWP design requirements supersede. Depending on the AWP project specifics, provisions in A.A.C. Title 18, Chapter 5, Article 5 may be applicable.

8. A reference to any study relevant to the rule that the agency reviewed and proposes either to rely on or not to rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

Not Applicable.

9. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state:

Not applicable

10. A summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and

infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);
- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for

additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program. This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. Part I - Cost/Benefit Stakeholder Matrix:

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact	Minimal	

	some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).		
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless, in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with

rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could

involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DPR regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ

believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that

the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment

processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required,

resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.
- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public

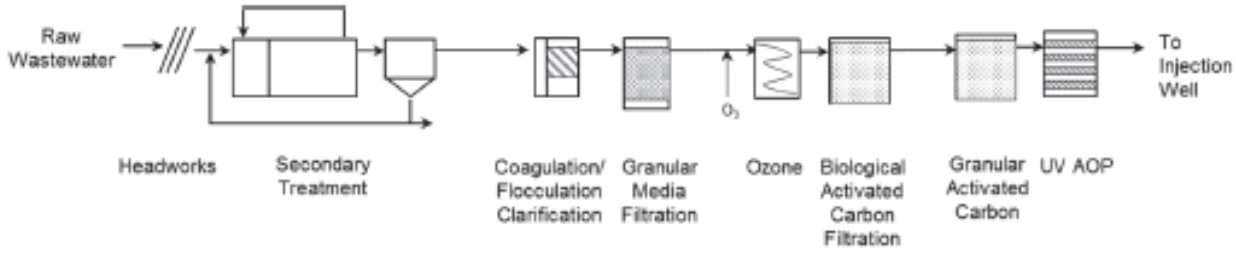
confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

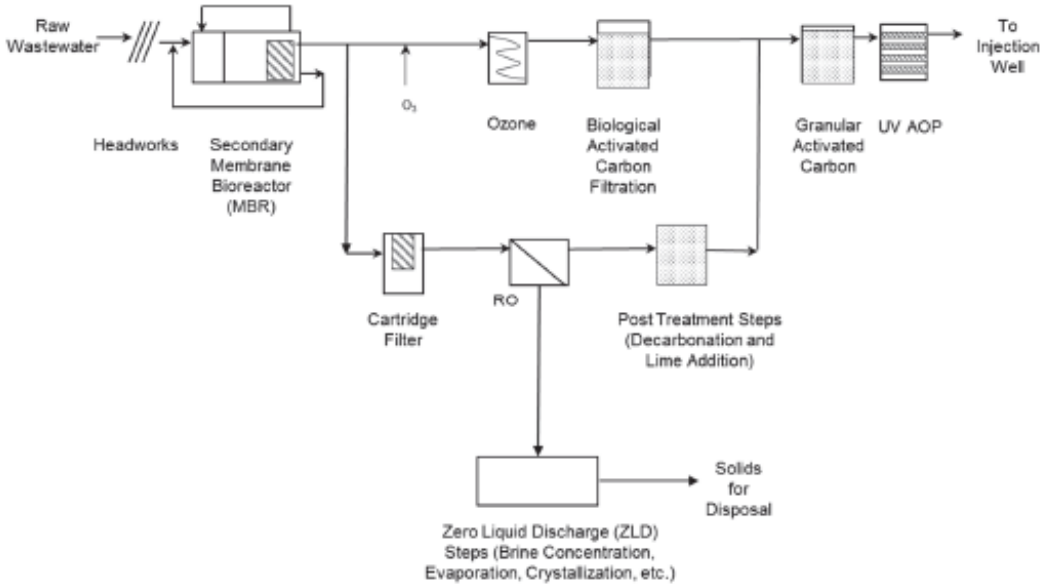
WPA - Cost Evaluation - Project 1 Ozone-BAC:

This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



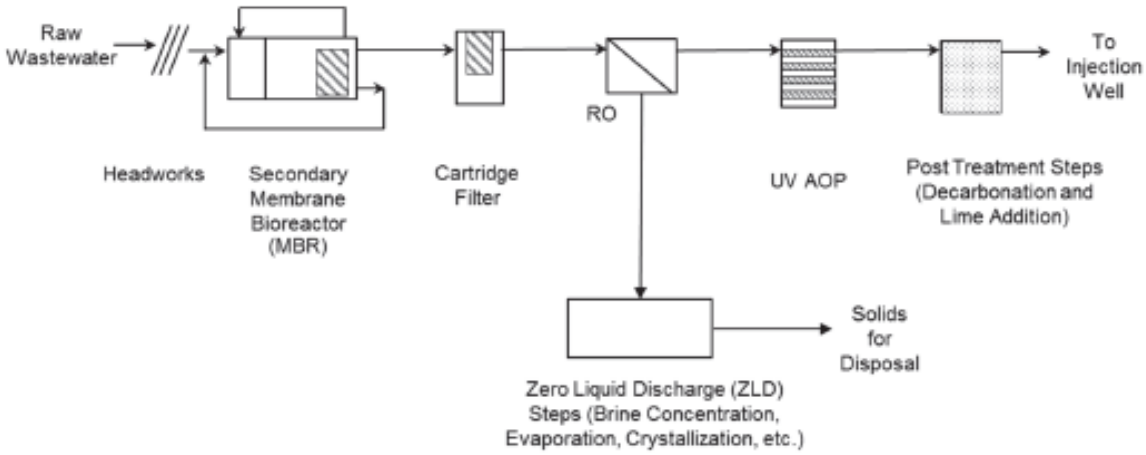
WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390
Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and often periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC Program range from 1.25 to 1.5 FTEs.

In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do

a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I) consumptive use.
- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP development should allow many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high

quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that

water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part

of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change

for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are

necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors.

Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program. As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs. ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational,

and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new source of potable water for Arizona's water users.

11. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

No changes.

12. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

Comment 1: Utility

The proposed new language indicates advanced water purification facilities are not subject to R18-5-505 (approval to construct), nor R18-5-507 (approval of construction). However, the requirements of the Safe Drinking Water Act are still applicable. Therefore, language should be added to R18-5-505 that is similar to what is proposed at R18-9-A803: "Nothing in this section exempts a facility from applicable Safe Drinking Water Act requirements in Chapter 4 of this Title."

ADEQ Response 1:

ADEQ appreciates the comment. The AWP program does not supplant or supersede the *applicable* requirements under the Safe Drinking Water Act (SDWA). Therefore, all AWP facilities must comply with *applicable* SDWA requirements. However, this rulemaking does include clarifying language to be added to Arizona Administrative Code (A.A.C.) Title 18, Chapter 5, Article 5. Specifically, a new rule entitled "Applicability of Advanced Water Purification Program" will be placed at R18-5-510 which clarifies the inapplicability of R18-5-505 and R18-5-507 to AWPRAs, amongst other clarifications.

Furthermore, in A.A.C. Title 18, Chapter 9, Article 8, the language at R18-9-A803(A) states that compliance with the AWP rules does not exempt a facility from *applicable* SDWA requirements. R18-5-510 distinguishes between Advanced Water Treatment Facilities that will become (in addition to AWP regulation) Public Water Systems (PWSs), for the purposes of the SDWA and traditional PWSs, which do not involve AWP.

Comment 2: Local Government

We are concerned that the final AWP rules will be substantially weakened before publication based on the previously unpublished statement of achieving parity with drinking water rules. It is stated at 30 AAR 3186, under subtitle "Associated Rulemakings" that changes to Chapter 5 of Title 18 are based on the aim of achieving parity between drinking water regulations and AWP regulations. Considering all the constituents that are known to be or that could exist in wastewater and all the constituents not regulated by the SDWA, this is aiming substantially below the published Draft rules developed by a large

number of stakeholders which were stricter than the drinking water rules.

ADEQ Response 2:

ADEQ appreciates the comment. The language in the Notice of Proposed Rulemaking (NPRM) referred to by the commenter above is as follows, "[t]he proposed changes to Chapter 5 are specific to amending the Minimum Design Criteria in Article 5 to correspond with the rules in the AWP program which outline the interconnection between AWP and the Safe Drinking Water Act, specifically between AWP permitting and design requirements and those in Article 5, applicable to public water systems. The proposed changes in Chapter 5 aim to achieve parity between the two programs by clarifying, in each, how and where the program components are applicable." The "Department" concedes that the use of the word "parity" is misleading. Put another way, the addition of R18-5-510 to Chapter 5, Article 5 clarifies which part(s) of, and when, the SDWA is applicable to AWP facilities and when AWP permitting and design requirements apply. These clarifying changes to the language in Chapter 5 will not weaken the safeguards developed in the AWP program. On the contrary, the language addressing AWP in Chapter 5 requires AWTFs to be regulated by robust permitting and design requirements specific to AWP. It is also important to note that no changes to the proposed language in R18-5-510 in Chapter 5, Article 5 have been made between the proposed and the final rule.

13. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

There are no other matters prescribed by statute applicable specifically to ADEQ or this specific rulemaking.

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

Yes, this rulemaking establishes the Advanced Water Purification regulatory program, which includes issuing individual permits, pursuant to A.R.S. § 49-211. While the product (advanced treated water or finished water) of an Advanced Water Purification regulatory program facility is substantially the same, the facilities, activities and practices regulated by the program will be substantially different in nature due to the treated wastewater source, a multitude of viable technological process configurations, a swift pace of technological progress in the field and the custom nature of the regulated parties and their circumstances. Moreover, general permits are not "technically feasible" for the Advanced Water Purification regulatory program under A.R.S. § 41-1037(A)(3), and not used in the program.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

While the Safe Drinking Water Act (SDWA) (40 USC § 300f *et seq.*) does regulate the treatment and delivery of drinking water from public water systems across the United States, it does not explicitly regulate the treatment of "treated wastewater" (*see* R18-9-A801) as a source, which is the subject of this final rule. In fact, SDWA only contemplates surface

and ground water as sources for public water systems. Some Advanced Water Purification facilities will be considered public water systems for the purposes of the SDWA and regulated in accordance with the SDWA in addition to the final AWP program.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

Not Applicable.

14. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

Not Applicable.

15. Whether the rule was previously made, amended or repealed as an emergency rule. If so, cite the notice published in the *Register* as specified in R1-1-409(A). Also, the agency shall state where the text was changed between the emergency and the final rulemaking packages:

Not Applicable.

16. The full text of the rule follows:

Rule text begins on the next page.

TITLE 18. DEPARTMENT OF ENVIRONMENTAL QUALITY

CHAPTER 5. DEPARTMENT OF ENVIRONMENTAL QUALITY

ENVIRONMENTAL REVIEWS AND CERTIFICATION

ARTICLE 5. MINIMUM DESIGN CRITERIA

Section

ARTICLE 5. MINIMUM DESIGN CRITERIA

R18-5-510. Applicability of Advanced Water Purification Program

A. Advanced water purification permitting processes in Chapter 9, Article 8 supersede permitting process requirements in this Article. Advanced water purification facilities are neither subject to A.A.C. R18-5-505 (approval to construct) nor A.A.C. R18-5-507 (approval of construction) requirements in this Article.

B. Where advanced water purification design requirements in Chapter 9, Article 8 conflict with requirements in this Article, advanced water purification design requirements supersede design requirements in this Article.

AWP NFRM Economic Impact Statement (EIS) - 18 AAC 5

A summary of the economic, small business, and consumer impact:

This Economic, Small Business, and Consumer Impact Statement has been prepared to meet the requirements of A.R.S. § 41-1055.

A. An Identification of the Rulemaking:

The rulemaking addressed by this Economic, Small Business, and Consumer Impact Statement (EIS) consists of a number of new sections, as well as amendments to existing sections, in four (4) chapters in Title 18 of the Arizona Administrative Code (A.A.C.). Those chapters, and the respective articles affected therein, are; Chapter 1, Article 5; Chapter 5, Article 5; Chapter 9, Articles 2, 7 and 8; and Chapter 14, Article 1. The rulemaking is being conducted in order to adopt the Advanced Water Purification (AWP) regulatory program (formerly "Direct Potable Reuse" program) pursuant to statutory mandate at Arizona Revised Statutes (A.R.S.) § 49-211.

Arizona's ongoing issues with water scarcity, combined with real concerns over meeting demand for expanding communities, highlight the need to develop additional sources of water that can meet growing municipal water demands. In response to increasing state water scarcity, the Arizona legislature mandated through A.R.S. § 49-211 that "...the [ADEQ] director shall adopt all rules necessary to establish and implement a direct potable reuse of treated wastewater program, including rules establishing permitting standards and a permit application process." As a result, ADEQ has been charged with developing a program that allows for and regulates the advanced treatment of previously treated municipal wastewater to achieve a drinking-water-quality product, providing a new and convenient water source, known as the AWP program.

AWP is an innovative set of water treatment processes applied at an Advanced Water Treatment Facility (AWTF) that directly purify treated wastewater originating from a community's wastewater treatment plant. This AWTF-treated water can then be either delivered to existing Drinking Water Treatment Facilities (DWTFs) for further treatment or blending or distributed directly to a drinking water distribution system. In both cases, the safeguards of the federal Safe Drinking Water Act (SDWA) continue to apply. The AWP program thus offers the potential for a new and sustainable water source that can provide a consistent supply of water for existing users and support Arizona's future population growth and economic development.

B. A summary of the EIS:

General Impacts

The full scope of stakeholders who may incur direct impacts from this rulemaking include ADEQ, Arizona Water Provider Agencies (WPAs), Municipal governments, WPA customers, the general public, and the Arizona environment, identified, generally, here, and in more detail throughout the rest of the Economic Impact Statement (EIS) below. While not all costs and benefits are borne evenly, these are the identified groups generally impacted from the implementation of the AWP regulatory program.

ADEQ is the sole state agency responsible for the implementation and administration of the AWP program. As detailed in this EIS, impacts to ADEQ include the hiring of new staff commensurate with the expanded technical oversight necessary to administer the AWP program. However, the projected future costs to ADEQ will be offset through its fee-for-service model which places the burden for AWP program services on the applicants and permittees through application fees and annual fees, and the overall impact is therefore expected to be moderate. This approach was mandated by the Arizona Legislature through A.R.S. § 49-211, subsection (A), which states, "...[ADEQ] shall establish by rule permit fees sufficient to administer a direct potable reuse of treated wastewater program…" Therefore, the Legislature charged ADEQ with developing and administering the AWP program and required ADEQ to establish fees sufficient to maintain the program. ADEQ's proposed fees, detailed in the Chapter 14 NFRM, were calculated to match the projected costs of the nascent program.

Next, the WPAs that elect to apply for a permit under the AWP program are affected by the capital costs of the AWP investment, increased compliance and monitoring, and ongoing operations and maintenance responsibility. While the expected costs to participating WPAs are expected to be significant, this impact is balanced against both the voluntary and emerging natures of the AWP program. AWP is not mandated for any WPA and financial barriers to entry may be lowered over time as the program becomes more established. Additionally, Municipal governments are not delegated any administration functions of the program but may be impacted given their relationship to the WPAs in their communities. Local governments may be the WPA, and as such, face significant impacts incumbent on any WPA engaged with the AWP program.

Furthermore, WPA customers are directly impacted by the new supply, beneficially through the delivery of the additional water supply to them, and financially through impacts in water rates. Notably, these impacts are only relevant to customers of WPAs that have adopted AWP in their service area. Customers may face higher water rates as a result of AWP, however, the exact costs are not known to ADEQ as the WPA is responsible for setting reasonable rates on a case-by-case basis in consideration of their service area. The general public is generally impacted by the option of a new water supply alternative for communities, providing an overall net increase in water availability for beneficial use such as drinking. Finally, the environment is impacted, beneficially through potential decreased reliance on groundwater and surface water supplies from WPAs using AWP water as a source, but also faces impacts from changes in water use as a result of expanded, potentially lucrative use options such as reduced groundwater discharge or reclaimed water delivery.

Specific Impacts

The entity with the largest expected impact as a result of the AWP regulatory program is the WPAs. This impact is specific to capital costs, operations/maintenance cost, and permitting/compliance costs. Fundamentally the AWP program is intended to be flexible, setting minimum requirements in rule necessary for the protection of human health and the environment and in enough detail to facilitate a performance standard that can be consistently achieved by permittees under the program. However, the program leaves many details and specifics up to the discretion of the Advanced Water Purification Responsible Agency (AWPRA) as they determine what technology, treatment train configuration, etc. is best to address their treated wastewater influent, their contributing non-domestic dischargers, their AWPRA partners, etc. Therefore, the EIS cannot determine, with exact specificity, the impacts to each WPA. However, the EIS provides cost evaluations for three representative AWP projects, in an effort to provide a range of potential options. These three projects represent different treatment trains: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO.

Upon an evaluation of these representative projects, this EIS provides expected costs related to the implementation of AWP for WPAs, enabling them to make informed decisions about whether AWP is a good option for their communities. For project 1, Ozone-BAC, the estimated costs are as follows: capital costs - $208.0 million; annual operations and maintenance costs - $3.3 million. For project 2, Ozone-BAC with Side-Stream RO, the estimated costs are as follows: capital costs - $229.0 million; annual operations and maintenance costs - $8.5 million. For project 3, Full-Stream RO, the estimated costs are as follows: capital costs - $276.0 million; annual operations and maintenance costs - $10.9 million.

Stakeholder Process

All stakeholders identified as entities impacted under this EIS have been subject to the AWP stakeholder engagement process. This process commenced in 2023 with a survey of the general public, a survey of more specific stakeholders, and the establishment of a Technical Advisory Group (TAG) for development of the AWP rules. The TAG consisted of experts and representatives from academia, utilities, regulatory agencies, and engineers and scientists. In combination with the additional stakeholders and conversations with expected applicants (WPAs), this effort was a comprehensive discussion on all programmatic elements, including economic impacts.

C. Identification of the persons who will be directly affected, bear the costs of, or directly benefit from the rules:

Recycled water is costly, but for some communities it may be the most cost-effective alternative for new and reliable long-term water supplies. The AWP program will operate uniquely among existing water programs as it will be state-run and has no federal equivalent. This rulemaking establishes rules, including permitting standards and a permit application process, for participating in the AWP program, a voluntary program. The decision to apply for a permit under the AWP program rests entirely with the entity wishing to pursue AWP as an addition to their drinking water portfolio.

While the AWP program is voluntary, there will be costs to each adopting entity for permitting and compliance requirements and infrastructure implementation. There may also be cascading cost impacts to other persons or groups (such as customers), but these costs will be borne throughout the water system and will be discussed in advance with stakeholders by water provider agencies.

ADEQ has identified the following list of affected entities and persons who stand to incur direct impacts and/or costs, but also potentially significant benefits, from this rulemaking:

- Arizona Department of Environmental Quality (ADEQ);
- Arizona Water Provider Agencies (WPAs);
- Municipal governments;
- WPA water customers, both residential and nonresidential;
- General public; and
- Arizona environment.

D. Cost/Benefit Analysis:

Comprehensive assessment of the AWP program requires identification of the program's impacts across affected persons and entities. Future AWP implementation can be expected to result in a range of impacts, both beneficial and adverse, which could include:

- Improvements in water availability throughout the water system;
- Operational changes for WPAs;
- Increased capital and operating and maintenance (O&M) expenses for WPAs;
- Increased rates for water customers;
- Enhanced drought resilience of the water system;
- Potential shifts in water rights allocations; and
- Changes in agricultural water usage.

The nature and magnitude of AWP-related costs and benefits will depend on several key factors related to each entity's AWP technology choice and the approach necessary for its implementation, as well as the context within which future development occurs. As noted previously, the voluntary nature of the AWP program allows entities to choose freely whether to engage with the program and thus evaluate potential cost impacts well in advance of adoption.

This EIS is a program-level assessment that evaluates the general impacts from future AWP implementation through the AWP program. As such, it does not estimate specific impacts for any individual project, as those would inherently require consideration of that project's specific circumstances (e.g. water demand, location, and hydrology) and resource conditions. This EIS acknowledges that each AWP project will have cost increase impacts on both a participating WPA

and its customers, while advising that project-level assessments and precise quantifications of any specific impacts (e.g., water rate increases to customers, additional permitting fees to ADEQ, potential changes in water usage patterns, changes in infrastructure maintenance costs, possible need for additional staff or training, and potential changes in local ecosystems due to altered water flows) were not evaluated as part of this EIS. Nonetheless, this EIS provides a general assessment of the expected cost effects on WPAs and ADEQ from the AWP program.

This section outlines ADEQ's analyses of the expected costs and benefits of this rulemaking, made through consultation with ADEQ staff and AWP subject matter experts (SMEs). Part 1 provides a summary table of the affected stakeholder groups with a description of identified potential AWP program effects, and their corresponding revenue and cost effect findings. Part 2 provides a more detailed discussion of stakeholder impacts, analyses, and findings.

1. Part I - Cost/Benefit Stakeholder Matrix:

Minimal	Moderate	Substantial	Significant
$10,000 or less	$10,001 to $1,000,000	$1,000,001 or more	Cost/Burden cannot be calculated, but the Department expects it to be significant.

Description of Affected Groups	Description of Effect	Increased Cost/Decreased Revenue	Decreased Cost/Increased Revenue
A. State and Local Government Agencies			
Arizona Department of Environmental Quality (ADEQ)	Increased agency responsibilities for administration, oversight, and management of AWP "fee-for-service" program, in which the State will be reimbursed for most AWP-related costs.	Minimal	
	Initial start-up, implementation, and subsequent program oversight activities may result in non-reimbursed costs to the State.	Moderate	
Water Provider Agencies (WPAs)	Increased compliance and monitoring	Moderate	
	Construction of AWTF and O&M responsibilities.	Substantial	
	Revenue changes from expanded customer base and/or deliveries.		Significant
Municipal Governments (non-WPAs)	Coordination with WPA and other agencies.	Moderate	
	Impact on tax revenue from resulting community expansion.		Significant
B. Customers			
WPA Customers	Impact to user water rates.	Minimal	
	Additional water supply that will allow existing and new business and residential growth.		Moderate
	Impacts upon public health related to water quality.	None identified	None identified
C. General Public			
Arizona Water System	Overall net increase in water availability. Additional water will allow community economic development and growth.		Minimal
	Existing surface water purchases can be diverted to other users or uses.		Moderate
	Groundwater resources can be made available for other users or uses.		Significant
	Diverted wastewater outflow may decrease return flows for downstream users.	Minimal	
Downstream Users	All existing supply commitments will be maintained or renegotiated, however diversion of wastewater outflows for AWP use may impact some downstream users. State environmental and permitting processes will consider and address project-specific cases and conditions. Negative	Minimal	

	impacts to downstream users are thus expected to be minimal (subject to mitigation if necessary).		
D. Arizona Environment/ Ecosystem			
Environmental	Reduced groundwater use and depletion with decreased risks of land subsidence and infrastructure damage.		Significant
	Reduced water outflow from wastewater treatment facilities may result in reduced groundwater recharge.		Minimal
	Reduction in poor quality outflow from wastewater treatment facilities may improve water quality in receiving water body		Minimal

2. Part II - Individual Stakeholder Summaries / Calculations

The following section provides an explanatory discussion of expected AWP costs and benefits to the program's various stakeholders. The section outlines the key factors and analysis used to determine the impact findings reported in Part 1 of Section D, above.

State and Local Government Agencies - ADEQ

ADEQ will incur moderate costs as a result of implementing this rulemaking and administering the program. The rulemaking process itself required significant staff time for technical review, rule composition, facilitation and evaluation of public input and other necessary tasks. Additionally, ADEQ will incur costs for AWP-related staff expansion and performance of new AWP-associated administrative responsibilities needed to implement and operate the AWP program. ADEQ currently anticipates that it will need to hire new staff with the necessary technical expertise for a variety of program implementation and oversight roles. These positions will likely include engineers (for design review and compliance of AWP facilities) and non-engineer staff for administrative tasks (e.g., project management, permit writing, operator certification coordination, other program support needs, etc.).

The AWP program's duties and tasks will vary based on the number, type, and phase of WPA participants and it is expected that adequately qualified agency staff may be able to perform several roles. It is expected that the AWP program will grow over time as more utilities seek and implement AWP permits, with permitting and administrative support growing equivalently. Nevertheless, in order to support the administration of the AWP program in the near term, ADEQ plans on hiring 2.5 new full-time employees (FTE). These 2.5 FTEs will be split primarily between permit specialist positions, inspectors, and administrative duties. Funding those positions will incur moderate costs to ADEQ annually which will be offset by permit service fees and annual fees.

There will also be costs associated with meeting requirements during the AWP approval and permitting process, which will adhere to all applicable state laws and aim to serve the regulated community while being protective of public health and the environment. ADEQ envisions that this permitting process will function similarly to other ADEQ permitting processes (such as for obtaining Aquifer Protection Permits). The AWP permitting process was developed and will be adopted into the A.A.C. in accordance with rulemaking requirements in the Arizona Administrative Procedure Act.

ADEQ's management and administration of the AWP approval and permitting process will be performed on a "fee-for-service" basis, under which the State will be reimbursed for most AWP-related costs, and thus future ADEQ responsibilities for the AWP program should be achieved with little fiscal cost to the State of Arizona. Instead, as described below, administrative and oversight costs for AWP deployment will be borne initially by WPAs and then ultimately passed on to customers for cost recovery through rate-setting.

Water Provider Agencies (WPAs)

The decision to participate in the AWP program rests entirely with any WPA wishing to pursue AWP as an addition to their drinking water portfolio. For those WPAs choosing to implement AWP, there will be increases in costs, primarily associated with permitting/compliance/regulation, capital investment, and operations. Participating WPAs will incur program-specific regulatory and compliance costs, capital costs for AWTF construction and system integration with their water systems, and additional operations and maintenance (O&M) costs over the long-term. Other additional program-specific regulatory and compliance costs could include permitting, compliance costs to meet new environmental standards, and expenses for regular inspections and audits. As noted previously, WPA-incurred costs will be largely recouped from customers through adjustments in water rates (subject to Arizona Corporation Commission approvals).

Data collected for this EIS aims to provide a representation of the economic impacts expected from implementing AWP technologies in Arizona and includes information from stakeholders working on various aspects of AWP rulemaking. Analysis for this EIS involved the review of key SME opinions solicited by ADEQ to support its development of high-level estimates for projected permitting, compliance, capital, and O&M costs to participating WPAs.

AWP-related costs have been assessed, estimated, and reported "in toto" in many cases, as appropriate. This approach best meets this EIS's purposes of representing and evaluating the overall net economic effects of the final rulemaking by determining the overall total combined costs for the various component cost items. This approach is particularly appropriate for evaluation of O&M and compliance costs, which may be performed by an individual staff person; are likely project-specific; and/or are inter-related or inter-dependent, preventing them from being reliably estimated individually and simply aggregated. Furthermore, a higher-level summary assessment may provide a more appropriate

and reasonable valuation given inherent imprecision estimating costs that are project-specific, numerous, relatively small, and difficult to quantify individually.

While there will be cost increases, the potential exists for AWP technology to cost less than other available alternatives. As a result, participating WPAs may realize a benefit (cost savings) from AWP implementation.

Water Provider Agencies (WPAs) - Implementation Costs

Implementation costs for an AWTF could include: land acquisition, site preparation, purchase, and installation of advanced treatment technologies, system integration with existing water systems, and engineering and permitting. System integration could involve infrastructure upgrades, installation of new pipelines, and development of blending facilities. The AWP program includes considerable flexibility for each participating WPA to select the AWP technology and approach most suitable and cost-effective for its specific circumstances.

In general, the technical requirements of AWP deployment will result in facility designs that will require capital costs related to the development and building of all new required AWP infrastructure. The potential costs of implementing technological enhancements related to AWP processes within existing wastewater infrastructure are discussed below. Key WPA technical requirements for AWP development are also summarized, with additional discussion on this EIS's evaluation approach to, and findings on, expected impacts to participating WPAs. While the detailed technical and design requirements incumbent upon the WPA applicant are detailed in the final rule, the following technical and design capital costs for AWP development and installation will predominantly impact the WPAs.

WPA Implementation Costs - Permitting

The permitting process complies with all relevant state laws, with the dual aim of serving the needs of the regulated community and safeguarding public health and the environment. The fees established in this rulemaking are in direct response to a legislative mandate to ensure that the rule establishes "permit fees sufficient to administer a direct potable reuse of treated wastewater program" with all fees deposited in the water quality fee fund (A.R.S. § 49-211(A)). This structure mimics the fee approach for other Water Quality Division programs, which are self-funded, fee-based programs. Therefore, the objective in setting AWP fees for permittees - the Water Provider Agencies (WPAs) (or Advanced Water Purification Responsible Agencies, i.e. "AWPRAs") - is to fund the program from the regulated entities, who voluntarily undertake participation in the AWP program. While ADEQ is guided by its statutory mandate, ADEQ did analyze other direct potable reuse (DPR) programs within other states. However, upon analysis, ADEQ determined that a comparison of these states provides minimal value to comparing the reasonableness or adequacy of AWP's fees.

Other states with DPR regulatory programs in development that ADEQ analyzed include Texas and Colorado. According to reports between ADEQ and the Colorado Department of Public Health and the Environment (CDPHE), Colorado's DPR regulations are established, but neither the staff, nor the fees to support the program have been fully determined or installed. Despite the installation of the regulations, CDPHE is not yet administering the program because there are no current permittees. Currently, CDPHE is actively working with stakeholders to determine the best way to derive funding for the program. According to reports between ADEQ and Texas (through the Texas Commission on Environmental Quality (TCEQ)), Texas' DRP regulatory program is funded through a combination of federal and state funds and fees. Therefore, TCEQ is not required to recover its full DPR program cost through DPR program fees alone. In fact, according to reports between ADEQ and TCEQ, Texas' DPR program does not currently have DPR-specific fees.

Considering the comparative analysis above and ADEQ's legislatively required financial structure in A.R.S. § 49-211(A), ADEQ believes the fees contained in the final rule (*see* A.A.C. Title 18, Chapter 14, Article 1) are in line with the Legislative mandate and carefully designed to support the administration of the program (*see* Heading No. 7, subheading "Fees" above).

WPA Implementation Costs - Enhanced Source Control

Traditional source control programs are designed to protect wastewater treatment plant infrastructure, collection systems, and receiving water bodies under an existing regulatory framework through the National Pretreatment Program (NPP) of the federal Clean Water Act. Because AWP projects create potable water, directly, without an environmental buffer, the program requires Enhanced Source Control (ESC).

ESC includes the control, elimination, or minimization of "constituents of concern" discharged from non-domestic dischargers into a wastewater collection system. Such constituents of concern include federally-regulated chemicals, AWP-regulated chemicals, and performance-based indicator compounds, which are necessary to eliminate or minimize discharges of constituents of concern into the wastewater collection system that is providing the source water for the Advanced Water Treatment Facility (AWTF) in the AWP project.

ESC measures may result in capital and/or increased O&M costs for wastewater customers in which constituents of concern have been found. The magnitude of the cost increases will vary, but in many cases it is anticipated that simple technology discharge management measures (such as temporary retention tanks and scheduled releases, sand filtration, coagulation/flocculation, or use of activated charcoal) could be effective and relatively low cost.

Additionally, a Pollutant Reduction and Elimination Plan specific to each ESC implementation will need to be developed to build relationships with non-domestic dischargers, increase participation in pollution prevention methods to control release of constituents of concern in the collection system, and educate the public about protecting source water. Additional information regarding the specifics of individual ESC programs can be found in R18-9-E824.

WPA Implementation Costs - Nitrogen Removal

The AWP program recognizes the critical importance of nitrogen removal during the treatment process. Nitrogen, primarily in the forms of nitrate and ammonia, can have significant environmental and health impacts if not adequately managed. The AWP program implements flexible strategies for nitrogen removal, allowing facilities to utilize either wastewater treatment processes at water treatment facilities or advanced treatment technologies at AWTFs. These include: biological nitrogen removal (BNR), which uses bacteria to convert nitrogen from one form to another; membrane bioreactors (MBRs) that combine conventional treatment with membrane filtration; an anaerobic ammonia oxidation process that converts ammonium and nitrite directly into nitrogen gas; ion exchange, which removes nitrogen compounds by exchanging them with other ions; and/or adsorption, where nitrogen-containing compounds adhere to the surface of a solid phase.

The choice of strategy depends on various factors, such as the concentration and form of nitrogen in the wastewater, discharge requirements, available infrastructure and resources, and overall treatment objectives. This dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Advanced Oxidation Process

The Advanced Oxidation Process (AOP) is a cornerstone of the AWP program's treatment strategy under the minimum design criteria of the rule, R18-9-F832. AOPs are designed to generate highly reactive hydroxyl radicals, which effectively oxidize and break down a wide range of organic contaminants. This AWP program mandates the inclusion of an AOP treatment process in all AWTF treatment trains, with specific performance benchmarks, achieved through a selection of one of two available methods. This requirement underscores the program's commitment to addressing contaminants of emerging concern and ensuring the safety and quality of the treated water, and the dual-pathway approach ensures that the specific needs and capacities of different facilities can be met while still achieving the stringent standards required under AWP.

WPA Implementation Costs - Other Technical and Design Requirements

In addition to nitrogen removal and advanced oxidation, the AWP program outlines a comprehensive set of technical and design requirements. These include the establishment of multiple barrier treatments, management of total organic carbon (TOC), and the implementation of robust monitoring and reporting systems. The program also emphasizes the need for full-scale verification testing, corrosion control measures, and cross-connection prevention to maintain the integrity of the water supply.

WPA - Operational, Monitoring, and Compliance (OMC) Costs

Once an AWTF has been built, there will be subsequent operating processes and protocols that will increase annual O&M expenditures for a WPA. Additional O&M costs over the long-term could encompass routine system maintenance, replacement of aging equipment, energy costs, personnel costs for system operation, and monitoring, and expenses for ongoing water quality testing and reporting. It is not anticipated that AWP adoption will have any impact upon non-participating WPAs.

Operating an AWTF involves a variety of costs. These include the cost of energy required to run the facility, the cost of chemicals used in water treatment processes, and the cost of labor for personnel who operate and maintain the facility. Additionally, there are costs associated with the regular maintenance of equipment and infrastructure, as well as the eventual replacement of aging equipment. These costs can vary depending on the size and complexity of the facility, the quality of the source water, and the specific treatment processes used.

WPA - OMC - Annual Labor, Power, Chemicals, Replacement and Maintenance

The annual costs of operating an AWTF include labor, which refers to salaries and benefits for employees who operate and maintain the facility. Labor may include costs for training and professional development. Annual costs also include power, the cost of the electricity needed to run the facility's pumps, treatment processes, and other equipment. In addition, many water treatment processes require the use of chemicals to remove contaminants from the water. The cost of these chemicals can vary depending on the quality of the source water and the specific treatment processes used. Finally, over time, equipment and infrastructure will need to be repaired or replaced. These costs can be significant, especially for larger facilities or those using more advanced treatment processes. Regular maintenance can help to extend the life of equipment and reduce the need for costly replacements. These costs are ongoing and must be budgeted for each year to ensure the smooth operation of an AWTF.

WPA - OMC - Operator Certification

An additional certification will be required for operators of certain AWPRA facilities, including all AWTFs and some water reclamation facilities. Such additional certification will naturally come with training and implementation costs, but will also provide the benefit of improved understanding of AWP technology and operations at the WPA level. Operator certification standards for AWP systems will be required to encompass the specific knowledge, skills and experience to maintain the reliability, resilience, and continual performance of AWP systems and respond adeptly to any system failure. The new certification process will encompass a range of critical elements, including comprehensive coverage of AWP technologies, a deep exploration of source water risks and risk management strategies, proficiency in critical control point methodologies, in-depth knowledge of specific AWP regulatory requirements, and the capability to manage operational responses effectively.

The certification program for AWP operators is similar to that of the existing water and wastewater certifications from the American Water Works Association (AWWA) - California - Nevada Section. This Advanced Water Purification Operator Certification would also focus on specific advanced treatment technologies required for AWP and include general

requirements to define AWP in the broader picture of public health protection, pathogen and pollutant targets, and other issues. WPAs will need to ensure that its operations staff have the necessary knowledge and experience to successfully complete certification.

WPA - OMC - Enhanced Source Control

As described above, ESC involves strategies to prevent or reduce pollutants in the water supply at the source. The costs associated with ESC processes can include monitoring costs for regular testing of water quality, infrastructure costs for construction or upgrade of facilities to prevent contamination, and regulatory compliance costs for adhering to environmental regulations. Additionally, there are costs for education and outreach to inform the public or specific industries about best practices for preventing water pollution, and maintenance costs for upkeep of infrastructure or equipment used for source control.

While these costs can be significant, the benefits of ESC, such as improved water quality, reduced treatment costs, and better public health outcomes, often outweigh the expenses. Costs can vary depending on local conditions, the specific water source, and the nature of potential pollutants. Therefore, a detailed cost/benefit analysis by an AWPRA is often necessary when considering ESC measures.

WPA - OMC - Chemical Monitoring

ADEQ has established a three-tiered monitoring approach to managing regulated chemicals in the treated wastewater at the water treatment facility under the AWP program. Tier 1 includes monitoring of chemicals currently covered under the Safe Drinking Water Act (SDWA); Tier 2 includes AWP-specific contaminants that are not federally regulated but may pose a health concern; and Tier 3 requires performance-based indicators to establish treatment performance. At each tier, robust monitoring is required, resulting in increased O&M costs, which ensures high standards of water quality are maintained for WPA customers and any downstream users/uses.

WPA - OMC - Monitoring and Reporting

Participating in the AWP program will come with increased monitoring and reporting requirements, and associated costs. Beyond costs, however, there will also be considerable benefits from increased monitoring and reporting. First, increased collection of data and technical information will make WPA staff better informed about, and better able to track and measure, the operations and performance of their facilities. Additional collection of water recycling metrics, for instance, can improve operator and manager understandings of their current performance and assist them with adapting and improving, so that they can achieve higher standards and/or greater efficiencies.

Second, improved tracking of performance data and metrics will facilitate comparisons between different AWP systems, enhancing ADEQ's and each WPA's ability to learn and improve future operations. Data reporting to ADEQ by individual WPAs, for instance, will inform and support ADEQ's monitoring and oversight capabilities.

WPA - OMC - Federal and State Compliance

The AWP rulemaking requires participating WPAs to conform with existing EPA guidelines. There are specific EPA compliance requirements in addition to the required chemical monitoring presented above. These include:

- 1. Laboratory Analysis. Laboratories performing analyses must comply with the Health and Safety Code, known as the Environmental Laboratory Accreditation Act. Chemical analysis methods should be approved by the EPA for use in compliance with the SDWA.
- 2. Reporting. AWTFs are required to report analytical results for ongoing compliance monitoring of pathogens and chemicals. Reports must include detail regarding the ESC program, cross-connection incidents, and any other relevant information as per AWP program requirements.

These requirements are part of final program standards that will ensure the protection of public health through the control of both pathogens and chemicals in the AWP process.

WPA - OMC - Additional Agency Compliance

The final regulations for the AWP program require WPAs to adhere to established numerical criteria (such as regulated pollutant concentrations that must not be exceeded to protect water quality and public health, and action level thresholds that necessitate immediate corrective measures). These standards and thresholds, which may include limits on contaminants like nutrients or heavy metals, are set by associated agencies or organizations and are integral to WPA operation.

WPA - OMC - Public Communications

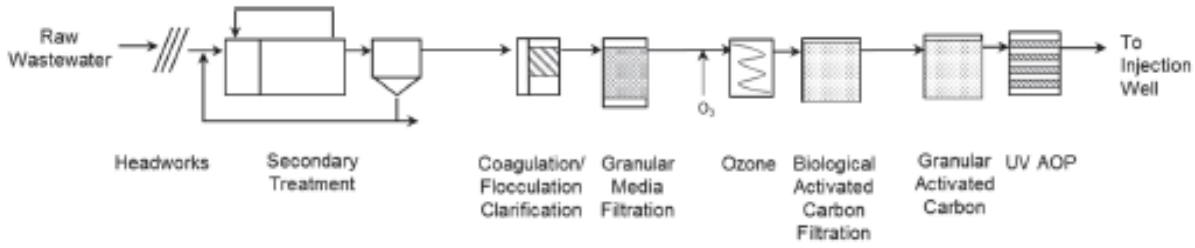
As part of AWP implementation, each WPA and associated partners must develop and implement a "Public Communication Plan" within their service area to notify the public of the possibility of their transition to AWP, address public concerns, build public confidence, and garner public acceptance for AWP (*see* R18-9-B811). Most WPAs already have community relations staff resources allocated for their current water programs, so the level of additional effort required for adequate and successful communication to the public about AWPs will vary between agencies according to their circumstances.

WPA - Cost Evaluation

ADEQ has identified three representative AWP projects for analysis within this EIS, each using a different AWTF treatment train: 1) Ozone-Biologically Activated Carbon (BAC), 2) Ozone-BAC with Side-Stream Reverse Osmosis (RO), and 3) Full-Stream RO. These projects have been selected as they represent a range of treatment options, reflecting the different processes available to meet the diverse needs and capacities of different facilities. This EIS evaluated these representative projects to assess expected costs and benefits of implementing AWP technologies using each of them in Arizona, thereby supporting informed decision-making and strategic planning for water resource management in the state.

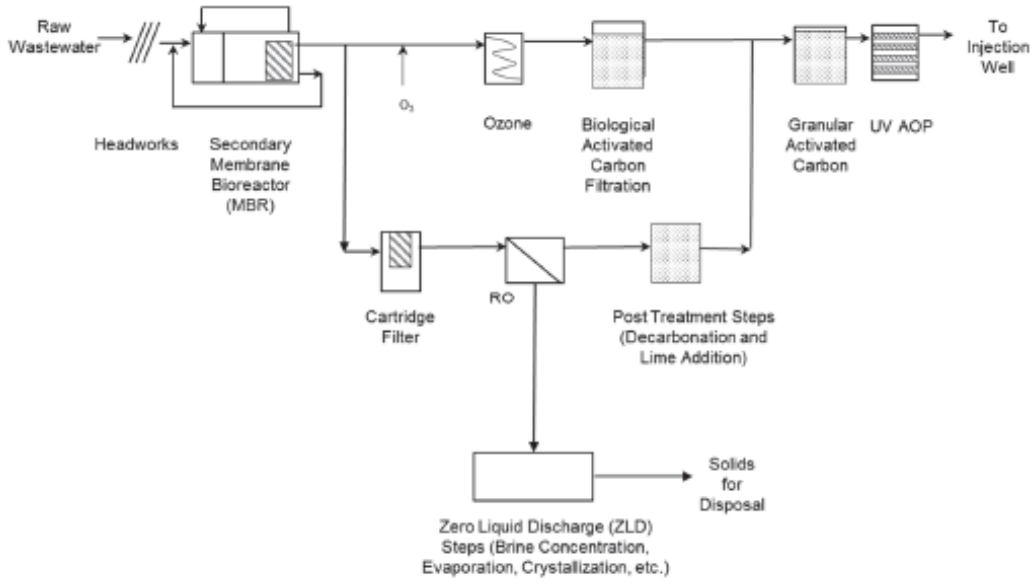
WPA - Cost Evaluation - Project 1 Ozone-BAC:

This train is adapted from injection well potable reuse (PR) projects. The Ozone-BAC process involves the use of ozone for oxidation and biofiltration for organic and microbial contaminant removal but does not significantly reduce the concentration of Total Dissolved Solids (TDS). This train is ideal for applications where the primary concern is the removal of targeted bulk and trace organic contaminants, but not for cases where the TDS of the source water is high and/or TDS reduction is needed to meet purified water quality targets.



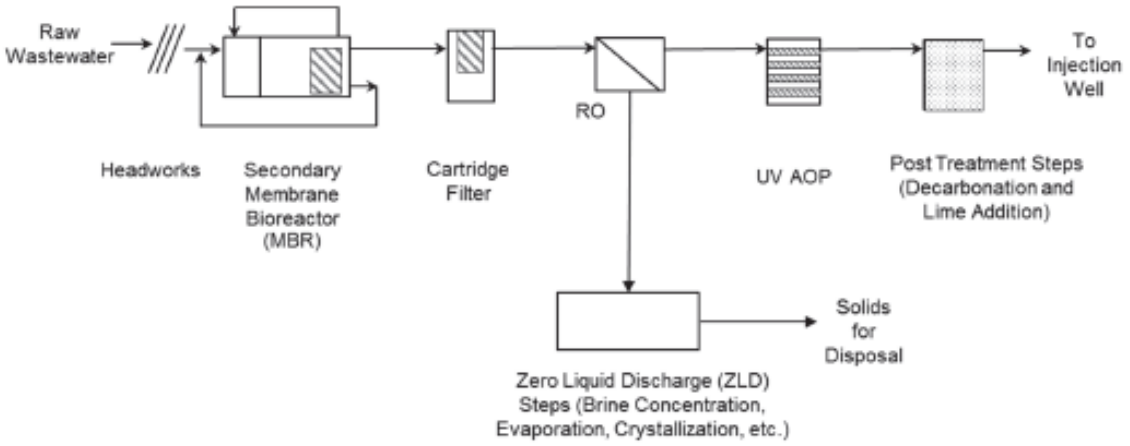
WPA - Cost Evaluation - Project 2 Ozone-BAC with Side-Stream RO:

This train includes a side-stream RO treatment for a portion of the water being treated for enhanced salinity reduction. It is suitable for injection-well PR projects where some salinity must be controlled. The side-stream RO allows for the removal of dissolved solids from a portion of the water, and thus helps to manage overall salinity levels and to reduce project costs by implementing a more targeted approach to RO treatment.



WPA - Cost Evaluation - Project 3 Full-Stream RO:

This train is suitable for injection well PR projects where full-stream reverse osmosis (RO) treatment is required. Full-stream RO treats the entire flow of water, providing comprehensive removal of salts and other dissolved solids. This train is ideal for applications where salinity control is necessary.



WPA - Cost Evaluation - Capital Cost

Capital and O&M costs have been estimated for each of the three representative AWP projects. These high-level "typical" cost estimates are used to derive approximate unit cost estimates to provide "ball-park" representation of the likely costs for participating WPA and its customers. Unit-supplied water values are derived from these estimates to provide an indication of the AWP's potential customer costs and enable cost comparisons with other water supply alternatives, such as desalination.

The cost data developed for the three representative AWP projects include expenditures for AWTF design and construction, required water recovery facility enhancements, an ESC program, and O&M. Together these demonstrate representative costs that a WPA can be expected to incur to develop and operate a typical 6 million gallon per day (MGD) AWTF with an assumed 30-year useful life. Unit costs are presented in constant 2024 dollars and thus do not include any inflation effects. It is also assumed that an AWTF will be funded with low-interest loans (such as federal Water Infrastructure Finance and Innovation Act programs), which, when applied to current 2024-dollar terms, will approximate to a zero (0) percent real interest rate.

The estimated capital costs for the representative projects are shown in the table below.

Representative Project	Project Type	Capital Costs, $M	Annualized Capital Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$208.0	$1,000
Project 2	Carbon Based Advanced Treatment (CBAT) with Sidestream Reverse Osmosis (RO) (a)	$229.0	$1,100
Project 3	Full Reverse Osmosis (RO) with Brine Management	$276.0	$1,400

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

WPA - Cost Evaluation - O&M and Compliance Costs

The estimated annual O&M costs for each of the representative projects are provided in the table below. These costs include labor, materials, equipment repair/replacement and power. Staff costs are based on an estimated average labor cost of $80,000 and $0.20 kWh power cost for operations.

Representative Projects	Project Type	Annual O&M Costs, $M/yr	Annualized Capital + O&M Costs, $/AFY
Project 1	Carbon Based Advanced Treatment (CBAT)	$3.3	$1,520
Project 2	Carbon Based Advanced Treatment (CBAT) w/ Sidestream Reverse Osmosis (RO) (a)	$8.5	$2,390

Project 3	Full Reverse Osmosis (RO) w/ Brine Management	$10.9	$2,990

Note: (a) Assumes sidestream RO of 55% of CBAT flow. AFY is acre feet per year.

In addition, as discussed above, participating WPAs will incur additional monitoring and compliance costs. These activities are recognized as distinct and additional to the duties required of the AWP's operations staff. However, the net cost to the WPA is expected to be relatively minor, as these responsibilities are standard and often periodic. It is estimated that 1 FTE should be able to perform the necessary monitoring and compliance activities.

Regarding ESC, a high-level summary of the estimated costs for implementing a full ESC Program range from 1.25 to 1.5 FTEs. In some cases, WPAs have reported an additional analytical cost of 2 to 3 FTEs necessary for monitoring events. At a full-burdened typical wage cost of approximately $139,000 per year, the estimated implementation cost for a full ESC program would be expected to be in the range of $175,000 to $210,000 per year.

As discussed previously, ADEQ's oversight and administration of the AWP program will be provided on a fee-for-service basis charged to the participating WPA.

Municipal Governments

The future planning of communities in Arizona will likely be dictated by the availability of water resources, from planning for and permitting additional residential and nonresidential growth; to planning for public facilities, such as schools, offices, and correctional facilities. Therefore, municipal governments are an integral component in the process of selecting AWP or another water source alternative. As a result, municipal governments will likely be working with / directing the WPAs when determining the amount of water needed to support the current needs of and projected growth within their communities. Municipal governments will also be indirectly impacted by the AWP program as it plans for and permits residential and nonresidential development.

It is likely that municipal governments will be directly impacted by the AWP program as they support the WPA in evaluating alternatives for new sources of water. One of the major components specific to any ESC requirements for AWTF operations will be the establishment of legal authority, regulatory agreements between agencies, and specific enhanced wastewater management requirements and compliance. Municipal governments will also likely be responsible for implementing the outreach efforts that will explain the AWP selection process to their communities. In addition, municipal governments as water customers will be impacted by any rate increases that occur from AWP implementation. While there will be impacts to municipal governments from AWP, the impacts are not anticipated to be significantly different from the impacts associated with implementing other water source alternatives. If AWP is more cost-effective than other alternatives, there may even end up being greater demand for residential and nonresidential development in AWP-adopting municipalities because of their more affordable water.

Notably, municipal governments may, in fact, be the WPA in their community. In this scenario, the impacts to the municipal government are best revealed through the WPA impact analysis, above, rather than the impact analysis under this section. If a municipal government is the WPA, their expected impacts are significant.

WPA Customers

AWP is not anticipated to have an impact on water customers served by non-participating WPAs. Only AWP water customers will incur increased costs, as they can expect to face higher water rates once WPAs pass on the costs of AWTF development and operations to them. Customers of participating WPAs will, however, also benefit from the greater availability and reliability of the potable quality water supplied through their community's AWP, as described below, especially if their "willingness to pay and use" value exceeds the price charged to them by the WPA to receive the water. Regardless, all user rate increases are the responsibility of each WPA and as such will vary based on specific circumstances. It is, of course, expected that each participating WPA will do a comprehensive analysis before AWP adoption to ensure that there is adequate customer demand, support, and ability to pay for any new AWTF within their service area.

As discussed, participating in the AWP program is voluntary and it is anticipated that WPAs will select the water supply alternative that is the most cost-effective and best meets the needs of its customers. Therefore, if AWP is selected, the rate impacts will likely be less than the impacts of alternative water supplies, thus customers may experience less of a rate impact than if AWP was not available.

WPA Customers - Water Supply Availability

WPA customers will benefit from greater water supply reliability and availability from the additional potable water supplied through AWPs and will enjoy confidence in their WPA's ability to fully meet its service community's current water needs and future demands. Full representation of an AWP's total impact on local water availability should recognize the following water supply improvements:

- Net increase in supplied water: Unlike water purchases and transfers, wastewater recycling will result in "net new" quantities of potable water, as formerly non-potable water discharges are instead treated for municipal and industrial (M&I) consumptive use.
- Increased Supply Reliability: AWP will provide a more sustainable supply option, since its production will not be directly impacted by metrological and/or hydrological conditions.
- Local Control and Supply Flexibility: AWP-served communities will reduce their dependency on imported water and/or existing (often dwindling) groundwater resources. The new water supplies obtained from AWP

development should allow many communities to maintain or improve their groundwater levels and availability.

As noted previously, only the above qualitative considerations of impacts for customers of AWP-participant WPAs have been provided, as rate impact estimations will be highly project-specific and were not evaluated as part of this EIS.

WPA Customers - Water Quality

As one of ADEQ's three (3) environmental divisions, the Water Quality Division (WQD) is responsible for administering the Department's water protection and improvement programs. The WQD protects and enhances public health and the environment by ensuring that healthy drinking water is provided by public water systems, and by controlling current and future sources of surface and groundwater pollution. The Division's programs include, among others, the Safe Drinking Water program, the Groundwater Protection program, and the Recycled Water program.

All recycled water delivered by AWP systems is anticipated to be of equal water quality to existing drinking water supplies due to advancements in AWP technology and the high water quality standards of the SDWA. As a result, future AWP customers are not expected to face any increased public health risks or concerns from AWP, and indeed can expect to enjoy clean water of high quality.

General Public

In addition to the direct impacts to WPAs and their customers, AWP deployment can be expected to have broader impacts on the general public. Direct cost impacts from AWP technology adoption are expected to be predominantly experienced by the agencies, businesses, and individuals connected with AWP operations. However, due to the interconnectedness of Arizona's regional and local water systems, and the scarcity and importance of water within the state, future AWP deployment can be expected to have impacts on the broader populations of residents and businesses within the state and state-wide water resources. Key components and constituencies that would potentially be impacted include the Arizona water system, community economies, the environment, and downstream water users, as described below.

General Public - Arizona Water System

The Colorado River system, which supplies 36 percent of Arizona's total water use, has experienced extensive drought conditions for the past 19 years. Furthermore, it can be expected that climate change may result in even greater long-term reductions in Colorado River supplies. Arizona maintains six Active Management Areas (AMAs), designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Established in 1980, these AMAs cover those areas of the state where significant groundwater depletion has historically occurred. As Arizona heads into a drier future, it is unlikely that its groundwater safe-yield requirements will be reliably met and thereafter maintained in any of the state's AMAs. Groundwater currently provides 41 percent of the state's water, but recent groundwater modeling has projected that over the next 100 years, unmet groundwater demand within the Phoenix AMA will reach nearly 4.9 million acre-feet (MAF), and unmet demand within the Pinal AMA will exceed 8 MAF. Furthermore, in 2022, the Federal Government called upon Arizona and its neighboring Colorado River states to conserve between 2 to 4 MAF per year to address the critically low levels in Lake Powell and Lake Mead.

AWP may thus represent an important supplemental water supply source that can enhance the AMA regions and their local sub-areas' abilities to operate more sustainably. The Arizona water system at large could see significant benefits from this rulemaking by providing WPAs with another option for providing potable water. All Arizona water customers, whether they be serviced by an AWP system or other municipal water system, could benefit from improved water availability and reliability within the state's water system if AWP implementation adds substantial net new water supplies to the state's water system.

General Public - Community Economic Development and Growth

The Arizona Department of Water Resources (ADWR) created the Assured Water Supply Program and the Adequate Water Supply Program to address the concern of limited groundwater supplies in Arizona. The Assured Water Supply Program operates within Arizona's six AMAs and is designed to sustain the state's economic health by preserving groundwater resources and promoting long-term water supply planning. Conversely, the Adequate Water Supply Program operates outside of the AMAs to ensure that water supply adequacy or inadequacy is disclosed in the public report provided to potential home or land purchasers, and that any water supply limitations are described in promotional or advertising material for new developments. Each program has independently verified that current water supply cannot match pace with current projections of population growth and water supply demand.

According to recent data, Arizona witnessed a substantial 12% population increase between 2010 and 2020. Furthermore, more than another one million new people are predicted to take up residence in Arizona over the next decade. At the state's current average water use rate of 146 gallons per day, this projected one million population growth will result in 164 thousand acre-feet of increased residential water demand. New water supplies to meet demand are therefore critically required, and AWP represents an option with considerable potential for supporting the water demands of such anticipated growth and the requirements of the programs. Indeed, in some areas, growth may not be possible without AWP; while in others, AWP may provide the least-costly option for meeting the increased water demand of Arizona's planned development.

Additionally, AWP sourced water also supports future economic development since it can be readily used for a wide variety of purposes and/or locations. In-state surface water supplies, on the other hand, are typically highly location dependent and also subject to water right requirements that may restrict who may use the water where and for what purposes. AWP source water can thus be used to meet Assured Water Supply requirements in sub-basins and areas with insufficient native groundwater to support the future water needs of all proposed development, whether it be residential or commercial. Finally, AWP sourced water may also reduce the demand for future water transfers that reallocate water

supplies from agricultural use for urban customers, which will result in land fallowing and lost agricultural activity.

General Public - Downstream Users

WPA applicants to the AWP program will be required to maintain all previous commitments to downstream water users. WPAs will have to demonstrate that they have the necessary water use rights to divert wastewater supplies for their AWP operations. Use terms and conditions for wastewater outflows will vary between locations and specific utilities. In some cases, dependent ecosystems may formally or informally be recognized as committed water users for wastewater outflows; as such, the impacts to adjacent ecosystems may warrant mitigation. This would be evaluated on a project-specific basis during each AWTF's permit approval process.

Except in cases of contracted use commitments (e.g. non-potable deliveries to the Palo Verde nuclear plant), within most of the state's hydrological systems, wastewater discharge return flow effects and downstream uses are typically limited and not well defined. As a result, potential AWP impacts to downstream users will be project-specific. They are also difficult to estimate and likely outside the WPA's jurisdiction and management authority. As a result, such AWP-related effects were not evaluated as part of this EIS.

Arizona Environment

Current state environmental regulations will evaluate project-specific impacts that may be expected from any proposed AWP development and will recommend appropriate mitigation and/or design changes as necessary to minimize any significant adverse environmental effects. However, in general, the incidental effects from WPAs' discretionary (i.e. uncommitted) current wastewater discharges may be considered to represent indirect and secondary outcomes with lesser relevance/importance than the AWP's direct positive impacts on regional water availability and reliability. AWP recycling of wastewater outflows will not directly affect the state's groundwater resources, since AWP will not result in direct groundwater extraction. AWP may result in some potential indirect groundwater reductions from its diversion of current wastewater outflows. Groundwater conditions within the state could be indirectly impacted, to the extent that current wastewater discharges would normally recharge groundwater aquifers though natural percolation will be diverted by AWP reuse of those water quantities.

AWP may also have a net-positive impact on state groundwater resources by reducing the use of groundwater to meet the state's future water supply needs. It is anticipated that AWP-related groundwater depletion will be less than that which would result from groundwater extraction water supply options designed for either potable use or as new water supply alternatives (e.g. desalination of brackish groundwater). Improved groundwater sustainability can also be expected to result in environmental benefits from reduced land subsidence risks and/or adverse intrusion effects on other aquifers. The economic costs of any such adverse impacts will vary depending on the specific circumstances but will typically represent substantial economic losses to affected properties, and land uses that will be costly to mitigate.

E. A general description of the probable impact on private and public employment in business agencies, and political subdivisions of this state directly affected by the rulemaking:

ADEQ expects that net direct effect on long-term public or private employment from this rulemaking will result in a minimal or negligible increase. While construction of each new AWTF will result in short-term employment increases for the regional economy, AWP implementation is not anticipated to have direct, long-term impact on local employment. As discussed in Section D, each new AWTF will require a limited increase in operational staff for participating WPAs. Similarly, ADEQ staff necessary for future program oversight and administration will require a relatively small increase in agency staffing. Furthermore, the AWP-related job impacts for both WPAs and ADEQ will likely be similar compared to those that would otherwise be expected from other water supply expansion alternatives (e.g. new brackish desalination).

The extent that any AWP-related increase in employment (both from its construction and subsequent operations) will represent net gains for the region's economy will depend on whether the WPA might otherwise be expected to pursue alternate development of their water system (e.g. new desalination facilities) or would forego system expansion entirely. In either case, the direct net effect on private and public employment within the region's economy would be very small and represent a near negligible change for the region's business sectors and economy.

The potential indirect employment impacts from the AWP, however, could be more substantial if WPAs would otherwise be unwilling or unable to improve their water supplies. Under those circumstances, AWP implementation would be expected to allow future economic growth and development that would otherwise not occur under Arizona's Assured and Adequate Water Supply Programs' requirements. In this case, new employment generated by the increased economic growth and development might be recognized as an "increase to employment" benefit that could, at least in part, be attributed to the AWP.

F. A statement on the probable impact of the rules on small business:

In this EIS, ADEQ uses the term "small business" consistent with A.R.S. § 41-1001(21), which defines a "small business" as "a concern, including its affiliates, which is independently owned and operated; which is not dominant in its field; and which employs fewer than one hundred full-time employees or which had gross annual receipts of less than four million dollars in its last fiscal year." ADEQ has determined that, for the most part, this rulemaking will not generate a significant and/or disproportionate impact on small businesses. As noted previously, the AWP is a voluntary program that will provide each participating WPA with new opportunities for increasing and improving local water supplies. As such, each WPA can determine whether an AWP program's benefits to its operations and customers will justify investment costs into the program and potential increases in subsequent annual O&M expenses. AWP costs will most directly affect WPAs, with secondary effects on customers (because of improved water availability and

pass-through rate cost impacts). AWP rules are thus anticipated to have only an indirect impact on Arizona small businesses. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers would not be expected to be disproportionately impacted as compared to a WPA's other customers.

1. An identification of the small business subject to the rules:

As discussed above, no small businesses would be directly subject to AWP rulemaking, as it is a voluntary program for WPAs.

2. The administrative and other costs required for compliance with the rules:

All administrative and other compliance costs related to the AWP will be directly applicable to ADEQ and the participating WPAs. Any such costs incurred by participating WPAs will have only an indirect cost effect on its customers (residential, business, municipal, and other nonresidential) as approved by the Utilities Division of Arizona's Corporation Commission. Furthermore, in the absence of any differentiation in either the distribution of AWP-related water supply changes or rate charges, small business water customers are not expected to be disproportionately impacted compared to a water utility's other customers.

3. A description of the methods that the agency may use to reduce the impact on small businesses, as required in A.R.S. § 41-1035:

In the absence of any direct or disproportionate indirect impacts to small businesses from the AWP, no mitigation measures are necessary to reduce any AWP-related future impacts to small businesses.

4. The probable costs and benefits to private persons and consumers who are directly affected by the rules:

See Section D for discussion on ratepayer impacts to AWP customers. Note that probable cost effects from future AWP development and implementation will be limited solely to the WPA customers. Accordingly, no cost impacts from future AWP development and implementation to non-participating WPAs would be expected.

G. A statement of the probable effect on state revenues:

AWP implementation will result in increased oversight and administration by ADEQ, as previously discussed. However, the AWP program will operate under the State's fee-for-service model, so that ADEQ-incurred administrative expenses will be recovered from AWP applicant application and permit fees. As a result, no decrease in state revenues should result directly from the AWP program. The AWP program can be expected to result in future increases in state revenues to the extent that its supplemental increases in water delivery and supply improvements should foster economic growth and development that would otherwise not occur. The tax and other economic benefits from the AWP supported growth would represent future indirect and predominantly positive effects on state revenues and economic conditions.

H. A description of any less intrusive or less costly methods of achieving the purpose of the rulemaking:

A.R.S. § 41-1055 requires identification and description of any less intrusive or less costly alternative methods of achieving the AWP regulation's purpose. For any such AWP alternatives, the required description needs to provide: (1) the monetizing of its costs and benefits and (2) the rationale for not using non-selected alternatives. As discussed previously, AWP participation is entirely voluntary and in no way precludes any WPA from instead implementing another approach or water supply resource to meet its water supply needs. This approach thus recognizes that each WPA is the best and most appropriate analyst of, and decision-maker, for its own specific water system needs, resources and alternative supply options.

As such, potential AWP program participants will evaluate their own agency/project-specific circumstances to determine if there are, in fact, less intrusive or less costly alternative methods that would be preferable. Furthermore, the AWP rulemaking's programmatic nature generally precludes any specific project-level determinations of its relative cost or intrusiveness, since any such determination will depend on specific project circumstances as well as implementation approach and design. The cost-effectiveness determination and rationale for any AWTF's development will be the sole responsibility of its WPA and will consequently override and/or negate the applicability of this EIS' alternative methods description requirements.

Generally, brackish groundwater reverse osmosis (BWRO) is considered the primary alternative for obtaining net new water supplies that would match AWP in terms of supply reliability and local control. However, BWRO is likely to be a more expensive alternative, and still comes with its own set of limitations and project-specific circumstances. There is an extensive body of research and analysis on the technical and economic viability of both recycled water and BWRO development. Review of these studies indicates that there is a wide range in the costs of supplied water for these systems, determined by a variety of factors. Several key factors will determine the technical and economic viability of BRWO deployment: (1) groundwater resource conditions, including both supply quantities and salinity levels; (2) pumping depths for extraction; (3) locational proximity to community water systems and conveyance/integration infrastructure requirements; (4) energy consumption; (5) brine by-product waste disposal (either ground injection or treatment for landfill); (6) capital and operational costs; and (7) environmental concerns and impacts from long-term groundwater depletion, subsidence potential and/or effects on neighboring aquifers.

It is also important to note that all else being equal, AWP systems facing salinity issues that require reverse osmosis treatment are likely to have higher supplied water costs, and these may be comparable to those that would be expected for BWRO supplied water.

I. A description of any data on which the rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data:

The purpose of this section of the EIS is to identify the data and analysis previously used to develop the AWP program.

As explained throughout this EIS, the AWP program will offer Arizona WPAs new opportunities to develop potable water sources through treatment and recycling of its wastewater outflows. Due to the need for additional water supply options, the Arizona legislature mandated pursuit of the AWP program through A.R.S. § 49-211. As discussed in Section D, the AWP program is entirely voluntary, and its regulations will apply solely to participating WPAs. As a result, non-participating WPAs will not be affected by any AWP requirements. ADEQ has chosen to offer AWP as a voluntary and optional program to place decision-making responsibility for needs determination, cost evaluation and participation on the WPAs who will be responsible for implementing the technology and who best understand how it stands to impact their specific circumstances, and customers' needs.

ADEQ has undergone an extensive and detailed process to develop its AWP regulations. The AWP regulation development has to-date included significant planning and analysis for its formulation. In addition to technical analyses, ADEQ has consulted with WPAs that are considering participating in the AWP program.

Please see Section 7 of this NFRM for a comprehensive overview of AWP regulations, as well as the rationales and data used for the AWP program's design and implementation approach. The various AWP regulatory requirements have generally been developed and adopted to ensure that AWP program implementation fulfills the agency's overall mission to protect and enhance public health and the environment of Arizona. Towards this goal, the AWP program has been developed and designed to conform with ADEQ's guiding principles: i. protective of public health and the environment; ii. community-supported; iii. scientifically-based; iv. reasonably affordable; v. transparent, informative, and communicative; vi. specific, practical, flexible, and implementable; and vii. accounts for future conditions and growth.

The protection of public health and the environment, and the development of a program grounded in hydrological science, are the preeminent guiding principles that are most relevant to AWP program requirements and standards. As such, ADEQ has focused extensively and deliberately on AWP regulations that will ensure the water supply system's proposed technical, design, operational, and compliance regulations address public health concerns, and that public safety is maintained. Without ADEQ's rigorous regulatory guidelines and future oversight, there would be an increased risk of potential public health/safety issues and/or incidents. Due to the complexity of the technical issues and the wide variety of WPA circumstances, extensive regulatory guidance, requirements, safeguards and agency oversight are essential to ensuring that AWP can be a safe, sustainable, and effective new source of potable water for Arizona's water users.

AWP NFRM Public Comments - 18 AAC 5

Comment 1: Utility
The proposed new language indicates advanced water purification facilities are not subject to R18-5-505 (approval to construct), nor R18-5-507 (approval of construction). However, the requirements of the Safe Drinking Water Act are still applicable. Therefore, language should be added to R18-5-505 that is similar to what is proposed at R18-9-A803: "Nothing in this section exempts a facility from applicable Safe Drinking Water Act requirements in Chapter 4 of this Title."

Comment 2: Local Government
We are concerned that the final AWP rules will be substantially weakened before publication based on the previously unpublished statement of achieving parity with drinking water rules. It is stated at 30 AAR 3186, under subtitle "Associated Rulemakings" that changes to Chapter 5 of Title 18 are based on the aim of achieving parity between drinking water regulations and AWP regulations. Considering all the constituents that are known to be or that could exist in wastewater and all the constituents not regulated by the SDWA, this is aiming substantially below the published Draft rules developed by a large number of stakeholders which were stricter than the drinking water rules.

TITLE 18. ENVIRONMENTAL QUALITY

CHAPTER 5. DEPARTMENT OF ENVIRONMENTAL QUALITY ENVIRONMENTAL REVIEWS AND CERTIFICATION

ARTICLE 1. CLASSIFICATION OF WATER AND WASTEWATER FACILITIES AND CERTIFICATION OF OPERATORS

Article 1, consisting of Sections R18-5-101 through R18-5-115, recodified from R18-4-101 through R18-4-115 (Supp. 95-2).

Article 5 renumbered as Article 1 consisting of Sections R18-4-101 through R18-4-115, effective October 23, 1987.

Former Sections R9-20-504 through R9-20-512, R9-20-517, R9-20-519, and R9-20-520 amended and renumbered as Article 5 consisting of Sections R9-20-501, R9-20-503 through R9-20-510, R9-20-512, R9-20-514, and R9-20-515; and new Sections R9-20-502, R9-20-511, and R9-20-513 adopted effective October 23, 1987.

Former Sections R9-20-501 through R9-20-503, R9-20-513 through R9-20-516, and R9-20-518 repealed effective October 23, 1987.

Section

ARTICLE 2. PUBLIC AND SEMIPUBLIC SWIMMING POOLS AND SPAS

Article 2, consisting of Sections R18-5-201 through R18-5-251 and Illustrations A and B, adopted effective February 19, 1998 (Supp. 98-1).

Section

ARTICLE 3. WATER QUALITY MANAGEMENT PLANNING

Article 3, consisting of Sections R18-5-301 through R18-5-303, adopted by final rulemaking at 7 A.A.R. 559, effective January 2, 2001 (Supp. 01-1).

Section

ARTICLE 4. SUBDIVISIONS

Former Title 9, Chapter 8, Article 11, consisting of Sections R9-8-1011 through R9-8-1015, R9-8-1021, R9-8-1026, R9-8-1027, R9-8-1031, and R9-8-1032 through R9-8-1036 renumbered as Title 18, Chapter 5, Article 4, consisting of Sections R18-5-401 through R18-5-411 (Supp. 89-2).

Section

ARTICLE 5. MINIMUM DESIGN CRITERIA

Article 5, consisting of R18-5-501 through R18-5-509, recodified from 18 A.A.C. 4, Article 5 at 10 A.A.R. 585, effective January 30, 2004 (Supp. 04-1).

ARTICLE 1. CLASSIFICATION OF WATER AND WASTEWATER FACILITIES AND CERTIFICATION OF OPERATORS

R18-5-101. Definitions

The terms in this Article have the following meanings:

"Certified operator" or "operator" means an individual who holds a current certificate issued by the Department in the field of water or wastewater treatment, water distribution, or wastewater collection.

"Collection system" means a pipeline or conduit, a pumping station, a force main, or any other device or appurtenance used to collect and conduct wastewater to a central point for treatment and disposal.

"Department" means the Department of Environmental Quality or its designated representative.

"Director" means the Director of the Department of Environmental Quality or the Director's designated representative.

"Direct responsible charge" means day-to-day decision making responsibility for a facility or a major portion of a facility.

"Distribution system" means a pipeline, appurtenance, or device of a public water system that conducts water from a water source or treatment plant to consumers for domestic or potable use.

"Facility" means a water treatment plant, wastewater treatment plant, distribution system, or collection system.

"Industrial waste" means the liquid, gaseous, or solid waste produced at an industrial operation.

"Onsite operator" means an operator who visits a facility at least daily to ensure that the facility is operating properly.

"Onsite representative" means an individual located at a facility who monitors the daily operation at the facility and maintains contact with the remote operator regarding the facility.

"Operator" has the same meaning as certified operator, as defined in this Section.

"PDH" means professional development hour, as defined in this Section.

"Population equivalent" means the population that would contribute an equal amount of biochemical oxygen demand (BOD) computed on the basis of 0.17 pounds of five-day, 20-degree centigrade BOD per capita per day.
