

DEPARTMENT OF PUBLIC SAFETY

Title 13, Chapter 13, Article 1, School Bus Minimum Standards

Amend: R13-13-101; R13-13-102

GOVERNOR'S REGULATORY REVIEW COUNCIL

STAFF MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: July 10, 2018

AGENDA ITEM: E-2

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: June 19, 2018

SUBJECT: DEPARTMENT OF PUBLIC SAFETY (R-18-0703)
Title 13, Chapter 13, Article 1, School Bus Minimum Standards

Amend: R13-13-101; R13-13-102

SUMMARY OF THE RULEMAKING

This rulemaking, from the Department of Public Safety (Department or DPS), seeks to amend two rules in A.A.C Title 13, Chapter 13, Article 1, related to certification of school bus drivers. This rulemaking relates in part to the five-year review report approved by the Council on October 7, 2014. The Governor's Office granted an exemption from the moratorium on November 30, 2017.

A.R.S. §§ 28-3228, 41-619.51, 41-1758 and 41-1758.01 were recently amended to require school bus drivers to possess an identity verified fingerprint clearance card for certification with the Department. See H.B. 2247, Fifty-third Legislature, First Regular Session 2017. Under the Department's current rule, drivers are only required to possess a fingerprint clearance card. This rulemaking proposes to update the rule language to reflect the amended statutory requirement. Additionally, the Department proposes to add language regarding cancellation or suspension of bus driver certification for failure to comply with A.R.S. §§ 28-3228, 41-1758.03(D) and 41-1758.07(D), which detail situations where a clearance card is revoked or otherwise invalid.

Proposed Action

- R13-13-101 - *Definitions*: Add definitions for "fingerprint clearance card" and "identity verified clearance card."
- R13-13-102 - *Certification of School Bus Drivers*:
 - Strike requirement for bus drivers to submit fingerprint card and processing fee.
 - Add language requiring possession of identity verified fingerprint clearance card for certification.

- Add language requiring Department to cancel or suspend certification for violations of A.R.S. §§ 28-3228, 41-1758.03(D), or 41-1758.07(D).

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

Yes. The Department cites to A.R.S. § 41-1713(A)(4) as general authority for the rules, which states “the Department shall make rules necessary for operation of the Department.” In addition, A.R.S. § 28- 3228 requires the Department to “adopt rules that establish minimum standards for the certification of school bus drivers.”

2. Do the rules establish a new fee or contain a fee increase?

No. The rules do not establish a new fee or contain a fee increase.

3. Summary of the agency's economic impact analysis:

The Department is aligning the rules with statutory changes that require school bus drivers to receive the same level clearance card as teachers and other school employees. The cost of the identity verified fingerprint clearance card (IVFCC) is \$67, an increase from the previous school bus driver background check fee of \$22. The \$67 fee is calculated as follows:

- \$15: Record Processing Fund, for initial state criminal history check
- \$10: Federal Bureau of Investigation, for federal criminal history check
- \$35: Fingerprint Clearance Card Fund, to administer the fingerprint clearance card program
- \$7: Board of Fingerprinting, for Board operations

The Department estimates that there are currently 5,971 existing school bus drivers that will need to obtain an IVFCC. The Department also estimates that, on an annual basis, 1,178 new school bus drivers will need to obtain the IVFCC.

4. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

The economic impacts of this rulemaking are predominantly caused by statutory mandates. School bus drivers will have increased costs in order to obtain an identity verified fingerprint clearance card. This rulemaking will ensure that the Department is complying with statute. The benefits outweigh the costs.

5. What are the economic impacts on stakeholders?

Key stakeholders are the Department, the Board, school bus drivers, school districts, and private school bus transportation businesses. The Department will benefit from this rulemaking because it will be complying with statutory mandates. The Department will also see modest

increases in revenue. The Board will benefit from this rulemaking because it will see a modest increase in revenue.

School bus drivers will bear the increased costs of obtaining an identity verified fingerprint clearance card. The cost will increase from \$22 to \$67, and the identity verified fingerprint clearance card will be valid for six years. The Department notes that the increased security requirements are created by statutes, not rules.

School districts will also bear some of the costs of this rulemaking. With a higher barrier for entry into the school bus driving occupation, school districts may have difficulty recruiting enough skilled workers for this occupation. School districts have the option to pay for the identity verified fingerprint clearance card if they are unable to recruit enough bus drivers. The Department notes that the increased security requirements are created by statutes, not rules.

Private school bus transportation businesses will be impacted in the same manner as school districts listed above.

6. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

Yes. The Department indicates that it received one comment during the oral proceeding on May 8, 2018. The comment raised various issues regarding expiration, notice, and justification. The comment, along with the Department's response, are on pages 4 and 5 of the Notice of Final Rulemaking. Council staff believes the Department adequately addressed the comment on the proposed rules.

7. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

No. No changes were made between the proposed rules and the final rules.

8. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

No. The Department indicates that no federal law applies to the rules.

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

Yes. The Department indicates that issuance of a general permit is not technically feasible due to the individual examinations, testing, and record review necessary for certification.

10. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

No. The Department did not review or rely on any study for this rulemaking.

11. Conclusion

If approved, this rulemaking will become effective immediately upon filing with the Secretary of State. The Department requests this immediate effective date under A.R.S. § 41-1032(A)(2) as the rule avoids violation of state law. Council staff recommends approval of the rulemaking.

ARIZONA DEPARTMENT OF PUBLIC SAFETY

2102 WEST ENCANTO BLVD. P.O. BOX 6638 PHOENIX, ARIZONA 85005-6638 (602) 223-2000

"Courteous Vigilance"

DOUGLAS A. DUCEY FRANK L. MILSTEAD
Governor Director

May 9, 2018

Ms. Nicole Ong Colyer, Chair
The Governor's Regulatory Review Council
100 N 15th Ave, Ste 402
Phoenix, AZ 85007

Dear Ms. Ong Colyer,

The Department of Public Safety submits a Notice of Final Expedited Rulemaking for Arizona Administrative Code Title 13, *Public Safety*, Chapter 13, *Department of Public Safety-School Buses*, Article 1, Sections 101 and 102 for review and approval by the council. The following information is provided pursuant to R1-6-201:

1. Close of Record Date: The rulemaking record was closed on May 8, 2018, pursuant to the Notice of Proposed Rulemaking following a period for public comment and an oral proceeding. The oral proceeding was held on May 8, 2018 with one attendee from the public and no written comments received. The public comments are included in the Notice of Final Rulemaking.
2. Relation to Five-Year Review Report: This rulemaking is not related to five-year review report.
3. Establishment of new fees: This rulemaking does not establish new fees.
4. Establishment of fee increase: The rulemaking does not establish a fee increase.
5. Request for immediate effective date under A.R.S. § 41-1032: An immediate effective date is requested. A.R.S. § 28-3228(D) was put into effect to protect the safety of children riding in school buses by conducting criminal activity background checks of school bus drivers and to comply with the timelines of the statute. By statute, all new school bus drivers or school bus drivers with expired clearances shall have the new identity-verified fingerprint clearance card by January 1, 2019. By statute, all new school bus drivers and drivers with expired certifications will have their certifications cancelled on January 1, 2019 if the drivers do not obtain a valid identity-verified fingerprint clearance card.
6. Evaluations of studies related to the rulemaking: No external studies related to the rulemaking were evaluated.

7. Necessity of Full-time Employees: The rulemaking does not require an increase in full-time employees to implement the rules.
8. List of Documents:
 - a. Signed cover letter.
 - b. Notice of Final Rulemaking including the Preamble and rule text.
 - c. Governor's Office rulemaking waiver approvals.
 - d. School Bus Advisory Council meeting agenda and minutes.
 - e. Authorizing statutes.
 - f. Economic Impact Statement.

Sincerely,

Colonel Frank L. Milstead
Director

PKS/pks

Enclosures

pertain to the record of the proposed rule:

Notice of Rulemaking Docket Opening: 23 A.A.R. 3497, December 22, 2017

Notice of Proposed Rulemaking: 24 A.A.R. 609, March 23, 2018

5. The agency's contact person who can answer questions about the rulemaking:

Name: Lance Larson, Sergeant

Address: Arizona Department of Public Safety

POB 6638, Mail Drop 1240

Phoenix, AZ 85009-6638

Telephone:(602) 712-5808

E-mail: llarson@azdps.gov

6. An agency's justification and reason why the rule should be made, amended, repealed, or renumbered, to include an explanation about the rulemaking:

The rules are being amended to update language relating to HB2247, Fifty-third Legislature, First Regular Session 2017 amending A.R.S. §§ 28-3228, 41-619.51, 41-1758 and 41-1758.01 relating to school bus drivers. The bill eliminated the need for school bus driver applicants to submit processing fees and a full set of fingerprints to the Department for the purpose of obtaining a state and federal criminal records check pursuant to A.R.S. § 41-1750 and Public Law 92-544. Effective August 8, 2017 pursuant to A.R.S. § 28-3228(C)(1) and (D), additional language requiring an identify verified fingerprint clearance card to become a certified school bus driver needs to be added to the rules. Additionally, language to allow for the cancellation or suspension of a school bus driver's certification should be added if the school bus driver violates the restrictions set forth in A.R.S. §§ 28-3228, 41-1758.03(D) and 41-1758.07(D).

In accordance with A.R.S. § 28-3228, the Department consulted with the Arizona School Bus Advisory Council on March 6, 2018 where the council voted and approved the proposed rulemaking.

The Department received a rulemaking waiver from Mr. Tim Roemer, Public Safety Policy Advisor to Governor Ducey on November 30, 2017.

7. A reference to any study relevant to the rule that the agency reviewed and proposes to

either rely on or not rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

The Department did not rely on any study in its evaluation of or justification for the rule.

8. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rule will diminish a previous grant of authority of a political subdivision of this state:

The rulemaking does not diminish a previous grant of authority of a political subdivision of this state.

9. A summary of the economic, small business, and consumer impact:

The Department intends to amend R13-13-101 and R13-13-102 for the purpose of updating the language relating to recently signed House Bill 2247; which eliminated the need for school bus driver applicants to submit processing fees and a full set of fingerprints to the Department for the purpose of obtaining a state and federal criminal records check pursuant to A.R.S. § 41-1750 and Public Law 92-544. Effective August 8, 2017, and in accordance with A.R.S. § 28-3228, additional language requiring an identity verified fingerprint clearance card to become a certified school bus driver needs to be added to the text of the rule.

Under the current rule, all school bus drivers undergo a background check at a cost of \$22 per application, which is now outdated. There are approximately 7,856 bus drivers statewide with an approximate average annual new driver application rate of 1,178. As a result of new legislation, all existing and new school bus drivers will be required to obtain an identity verified fingerprint clearance card. The cost to obtain an identity verified fingerprint clearance card is \$67, which is valid for six years. The Department assesses a \$67 fee under A.R.S. § 15-106 for every clearance card application and renewal. The \$67 is derived from the following: \$15 is deposited into the Records Processing Fund to pay for the initial state criminal history check (A.R.S. §. 41-1750(J)); \$10 is allocated to the FBI for the federal criminal history check; \$35 is deposited into the Fingerprint Clearance Card Fund (A.R.S. §

41-1758.06) for the administration of the fingerprint clearance card program; and, \$7 is distributed to the Board of Fingerprinting Fund (A.R.S. § 41-619.56) to fund their operations.

The Department estimates there are approximately 5,971 existing school bus drivers that will need to obtain an identity verified fingerprint clearance card by December 31, 2018. The cost associated with the identity verified fingerprint clearance card will be the responsibility of the school bus driver applicants, school districts, and private transportation providers.

10. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

After consultation with the Governor's Regulatory Review Council staff, nonsubstantive changes were made. The Department narrowed the statutory references for *fingerprint clearance card* and *identity verified fingerprint clearance card* where the intended meanings stay the same. The proposed language in Section 102(K)(2) was amended to remove for clarity *based on the totality of the circumstances* as it is unneeded language when the intent is to cancel or suspend a certificate for a school bus driver under the statutory authorities listed.

11. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

The Department consulted with the School Bus Advisory Council on March 6, 2018 pursuant to A.R.S. § 28-3228. The council had no substantive comments relevant to this rulemaking and during the open public comment portion of the agenda no public member from the audience spoke on the rulemaking. The council voted and approved of the rulemaking as presented in the Notice of Proposed Rulemaking at the March 6 meeting.

The Department conducted a public meeting on May 8, 2018 with one attendee.

Attendee: Mr. John Spilary, Agua Fria School District

Question: School bus drivers are upset that we have to get a new card costing us \$75 and our current one is no longer valid, why?

Answer: School bus drivers with cards issued before August 9, 2017 are grandfathered until they

expire. After August 9, 2017, any drivers with expired cards or new drivers are required to obtain the new identity-verified fingerprint card by January 2019. The cost is \$67.

Question: What federal law is requiring this and why do we have to go through new hoops to get this new card? Why was this law passed without driver input?

Answer: There is no related federal law, this is a state law requirement. While the Department understands Mr. Spilary's concerns, the Department is required to follow state law enacted by the Governor and legislature.

Question: Why do only school bus drivers need this? Other CDL commercial drivers are not required to have it.

Answer: Other commercial drivers are typically hauling cargo or adults and have separate rules to follow by the Arizona Motor Vehicle Division. School bus drivers are now statutorily mandated to receive the same level clearance card as teachers and other school employees for the protection of the children on the school bus. Previous to this new law, school bus drivers did not receive the same level of background check as teachers and other school employees; this law brings the school bus drivers up to the same standards.

Question: Why did DPS not notify any of the drivers and districts of the law change?

Answer: The Department notified all school district transportation directors over a year ago of the upcoming legislation and provides monthly e-mail updates to the transportation directors. The School Bus Advisory Council is aware of the legislative change. More specific information is available on the Department's website.

Question: If I get this new card while I'm working for my current district and then I change jobs to a new district, does my card remain valid and travel with me?

Answer: Yes, your card remains with you and remains valid until the expiration date on the card regardless of a change in employers.

The Department did not receive any written comments by the close of the rulemaking record as specified in the Notice of Proposed Rulemaking.

12. All agency's shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

a. Whether the rule requires a permit, whether a general permit is used, and if not, the reason why a general permit is not used:

Pursuant to A.R.S. § 28-3228, the rules require a permit for each individual driver of a school bus. For the safety of the transported children, each individual school bus driver is subject to a physical examination, controlled substance and alcohol testing, physical performance tests, must possess a driver license of sufficient endorsements, have a driving record review, and receive specialty training including first aid and cardiopulmonary resuscitation. These driver-specific requirements, pursuant to A.R.S. § 41-1037(A)(3) do not allow for a general permit to be issued.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law, and if so, citation to the statutory authority to exceed the requirements of federal law:

There is no corresponding federal law applicable to the rules.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

The Department did not receive any analysis that compares the rule's impact on business competitiveness in this state compared to other states.

13. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

Not applicable

14. Whether the rule previously made, amended, or repealed as an emergency rule. If so, cite the notice published in the Register as specified in R1-4-409(A). Also, the agency

shall state where the text was changed between the emergency and the final rulemaking packages:

The rule was not previously made, amended, or repealed as an emergency rule.

15. The full text of the rules follows:

TITLE 13. PUBLIC SAFETY
CHAPTER 13. DEPARTMENT OF PUBLIC SAFETY SCHOOL BUSES
ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

Section

R13-13-101. Definitions

R13-13-102. Certification of School Bus Drivers

ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

R13-13-101. Definitions

In this Chapter, unless otherwise specified:

“Accident” means any unexpected occurrence involving a moving or non-moving school bus that results in any bodily injury or fatality to a passenger or non-passenger, damage to personal or real property outside the school bus, or damage to the school bus that affects the integrity of the school bus or results in a major defect as described in R13-13-108(B).

“Alternately flashing signal lamps” means a system of red or red and amber lamps that are mounted horizontally to both the front and rear of the school bus body and used to inform the public that the school bus is preparing to stop or has stopped to load or unload passengers. Alternately flashing signal lamps can be either a four-lamp system as described in R13-13-107(17)(c)(i) or an eight-lamp system as described in R13-13-9-107(c)(ii).

“Alteration” means any addition, modification, or removal of any equipment or component after a school bus is inspected by the Department, which may affect the operations of the school bus; compliance with the statutes or rules applicable to school buses; or the health, safety, or welfare of any individual.

“Applicant” means an individual who submits an application to the Department to obtain a certificate to operate a school bus.

“ASE” means National Institute of Automotive Service Excellence.

“Auxiliary fan” means a device mounted inside the school bus body used to supplement the heating, defrosting, or air-conditioning systems by circulating air in the school bus.

“Behind-the-wheel instructor” means an individual qualified under R13-13-103 to provide behind-the-wheel training to applicants.

“Behind-the-wheel training” means the complete physical control of a school bus by an applicant while accompanied by and under direct observation of a behind-the-wheel instructor.

“Belt cutter” means a hand-held instrument containing a blade used to sever a seat belt or a wheelchair-securement device.

“Certificate” means a written authorization issued by the Department to operate a school bus in Arizona.

“Chassis” means the part of a school bus that consists of all base components, including the frame, front and rear suspension, exhaust system, brakes, engine, engine hood or cover, transmission, front and rear axles, front fenders, drive train and shaft, fuel system, engine air intake and filter, clutch and accelerator pedals, steering wheel, tires, heating and cooling system, battery, and controls and instruments to operate the school bus.

“Chassis cowl” means those parts of a Type C school bus that are located in front of the cowl and attached before a school bus manufacturer adds the school bus body.

“Citation” has the same meaning as at A.R.S. § 28-1872.

“Classroom instructor” means an individual qualified under R13-13-103 to provide classroom training to:

Applicants to operate a school bus,

Individuals becoming qualified to teach classroom training,

Individuals becoming qualified to teach techniques of behind-the-wheel training, or

School bus drivers taking refresher training.

“Classroom training” means the courses required by the Department of an applicant before the applicant is certified or of an individual seeking qualification as a classroom or behind-the-wheel instructor.

“Commercial driver license” has the same meaning as at A.R.S. § 28-3001.

“Controlled substances and alcohol testing” means a determination of an applicant's or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, and alcohol prescribed by 49 CFR 382, October 2006 (no later amendments or editions), and conducted in accordance with the procedures at 49 CFR 40, October 2006 (no later amendments or editions), both published by the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department; and a determination of an applicant's or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, barbiturates, benzodiazepines, methadone, and propoxyphene as required by these rules and conducted in accordance with a procedure that is generally accepted in the scientific community to be accurate and reliable.

“Cowl” means the portion of the chassis in a Type C school bus that separates the school bus engine from the school bus driver's compartment.

“Cutaway van” means a chassis to which a completed driver's compartment is attached before a school bus manufacturer adds a school bus body.

“dB(A)” means decibels A scale, a term denoting that noise level has been adjusted to duplicate human hearing.

“Driver's compartment” means the part of a school bus body that is separated from the passenger compartment by a barrier and contains the controls and instruments for the operation of the school bus.

“Emergency-brake system” means mechanical components used to slow or stop a school bus after a failure of the service-brake system.

“Emergency exit” means an opening in a school bus, including a door, push-out window, or roof hatch, used to unload passengers in the event of an occurrence that requires immediate evacuation of the school bus.

“Employer” means a private business or school district that hires applicants and certified school bus drivers to operate school buses.

“Fingerprint clearance card” has the same requirements as in A.R.S. § 41-1758.03.

“Frame” means the structural foundation upon which a school bus chassis is constructed.

“Frontage road” means a street that parallels an interstate highway and furnishes access to streets and property that would otherwise be unreachable from the interstate highway.

“Gross vehicle weight rating” means the value specified by the manufacturer as the maximum total loaded weight of a school bus, calculated in accordance with R13-13-106(27).

“Health care professional” means:

A physician licensed to practice medicine under A.R.S. § 32-1401 et seq., osteopathy under A.R.S. § 32-1800 et seq., or chiropractic under A.R.S. § 32-900 et seq.;

A physician licensed to practice medicine, osteopathy, or chiropractic in a state contiguous to Arizona;

A physician employed by the United States government and licensed by a state or territory of the United States;

A physician assistant licensed under A.R.S. § 32-2501 et seq.; or

A registered nurse practitioner licensed under A.R.S. § 32-1601 et seq.

“Highway” has the same meaning as at A.R.S. § 28-101.

“Identification” means the signs, lettering, or numbers placed on the interior or exterior of a school bus body, including the glass areas, but does not include the lettering, numbers, or logos of a manufacturer or distributor of the manufacturer's product.

“Identity verified fingerprint clearance card” has the same requirements as A.R.S. § 15-106.

“Ignition power-deactivation switch” means a device that when set causes the engine of a motor vehicle to stop operating if the transmission is placed into gear or the parking-brake system is released.

“Interstate highway” means the designation given by the federal government to the system of highways connecting two or more states of the United States.

“Lamp” means a device that is covered by a lens and used to produce artificial light.

“Major defect” means a condition that exists to the interior or exterior of a school bus that causes the Department or owner to place the school bus out of service while the defect is being corrected.

“Manufacturer” means an entity engaged in the manufacturing or assembling of a school bus chassis, school bus body, or school bus chassis and body.

“Medical practitioner” has the same meaning as at A.R.S. § 32-1901.

“Minor defect” means a condition that exists to the interior or exterior of a school bus that is not a major defect and allows the school bus to remain in operation while the defect is being corrected.

“Off-duty” means the time a school bus driver is not on-duty.

“On-duty” means the period between the time a school bus driver begins to work for the employer or is required to be ready to work for the employer until the time the school bus driver is relieved from work and all responsibility for performing work for the employer. The time on-duty is used only to determine when a school bus driver must be provided time

off-duty. Time on-duty may be compensated by the employer or an entity other than the employer or may be uncompensated. On-duty includes:

All time at an employer's place of business, waiting to be dispatched;

All time performing an operations check of a school bus in accordance with R13-13-108, or servicing or conditioning a school bus;

All time driving a school bus, including loading or unloading the school bus, and remaining in readiness to drive a school bus;

All time, at the direction of the employer, travelling but not driving a school bus or assuming any other responsibility to the employer. If the school bus driver is afforded at least eight consecutive hours off-duty upon arrival at the school bus driver's destination after travelling but not driving a school bus or assuming any other responsibility to the employer, the school bus driver shall be considered off-duty for the entire period travelling but not driving the school bus or assuming any other responsibility to the employer;

All time repairing, obtaining assistance, or remaining in attendance upon a disabled school bus;

All time preparing required reports and records;

All time providing a breath or urine sample, including travel time to and from the collection site, to comply with the testing requirements of this Chapter;

All time performing any other work for the employer; and

All time performing any compensated work for any entity other than the employer.

“Out of service” means a school bus cannot be used to transport passengers.

“Owner” means the public or governmental agency or institution or private company in whose name a school bus is titled.

“Parking-brake system” means mechanical components used to prevent the movement of a school bus while loading or unloading a passenger or when the school bus is parked.

“Passenger” means an individual who rides in a school bus but does not participate in the operation of the school bus.

“Passenger compartment” means that part of the school bus body that is separated from the school bus driver's compartment by a barrier and holds the passengers to be transported.

“Physical examination” means an evaluation of an applicant's or school bus driver's medical status performed by a health care professional according to this Article.

“Physical examination form” means the Arizona Department of Transportation, Motor Vehicle Division, Medical Examination Report, which is used to record the results of a physical examination and may be obtained from the Department or Arizona Department of Transportation, Motor Vehicle Division.

“Physical performance test” means an evaluation of an applicant's or school bus driver's reflexes, agility, and strength performed according to this Article.

“Physical performance test form” means the document used to record the results of a physical performance test and may be obtained from the Department.

“Push-out window” means safety glass enclosed in a frame on a school bus that moves to the outside of the school bus when force is applied to the window from inside the school bus.

“Refresher training” means the courses required by the Department of each school bus driver to maintain certification as a school bus driver in Arizona.

“Restraining barrier” means a structure located in front of any school bus seat that restricts the forward motion of a passenger.

“Rub rail” means a horizontal steel bar attached to the outside of a school bus body used to reinforce the sides of the school bus.

“Safety glass” has the same meaning as at A.R.S. § 28-959(F).

“School” means a school as defined by A.R.S. § 15-101(19), accommodation school as defined by A.R.S. § 15-101(1), charter school as defined by A.R.S. § 15-101(3), or private school as defined by A.R.S. § 15-101(18).

“School bus” has the same meaning as at A.R.S. § 28-101.

“School bus body” means a structure assembled upon a chassis designed to carry a school bus driver and passengers.

“School bus driver” means an individual who is certified by the Department as meeting the requirements at A.R.S. § 28- 3228 and R13-13-102 to operate a school bus in Arizona.

“School district” has the same meaning as at A.R.S. § 15-101 (20).

“Service-brake system” means mechanical components used to slow or stop a school bus.

“Service door” means a metal structure used to close the opening of a service entrance.

“Service entrance” means an opening in a school bus used to load or unload passengers.

“Special needs school bus” means a school bus that is designed to transport disabled passengers, some of whom may use a wheelchair, and is constructed with a service entrance and a special-service entrance.

“Special-service entrance” means an opening in a school bus that accommodates a wheelchair lift for the loading or unloading of a passenger who uses a wheelchair.

“Special-service entrance door” means a metal structure used to close the opening of a special-service entrance.

“Street” has the same meaning as at A.R.S. § 28-101.

“Traffic control signal” has the same meaning as at A.R.S. § 28-601.

“Training” means the instruction, courses, classes, or workshops provided by the Department or the employer that are required to obtain or maintain certification as a school bus driver or qualification as a classroom or behind-the-wheel instructor, or qualification to administer the physical performance test in Arizona.

“Transport” or “transporting” means a school bus driver sets a school bus in motion to carry passengers or objects authorized by the school district to be carried in a school bus.

“Type A school bus” means a conversion bus constructed utilizing a cutaway front section vehicle with a left side driver's door. This definition includes two classifications: Type A-1,

with a Gross Vehicle Weight Rating (GVWR) of 14,500 pounds or less; and Type A-2, with a GVWR greater than 14,500 pounds and less than or equal to 21,500 pounds.

“Type B school bus” means a school bus constructed utilizing a stripped chassis. The entrance door is behind the front wheels. This definition includes two classifications: Type B-1, with a GVWR of 10,000 pounds or less, and Type B-2, with a GVWR greater than 10,000 pounds.

“Type C school bus,” also known as a conventional style school bus, means a school bus constructed utilizing a chassis with a hood and front fender assembly. The entrance door is behind the front wheels. A Type C school bus may have a cutaway truck chassis or truck chassis with cab with or without a left side door and with a GVWR greater than 21,500 pounds.

“Type D school bus,” also known as a rear engine or front engine transit-style school bus, means a school bus constructed utilizing a stripped chassis. The entrance door is ahead of the front wheels.

“Van” means a covered or enclosed truck.

“Wheelchair” means a mobility aid consisting of a frame, seat, and three or four wheels, which is used to support and carry a disabled passenger.

“Wheelchair lift” means an electric hydraulic mechanism and platform in a school bus used to raise and lower a passenger in a wheelchair.

“Wheelchair-lift platform” means a horizontal surface upon which a wheelchair sits while being raised or lowered.

“Wheelchair-passenger restraint” means a combination of a pelvic and an upper torso restraint, including buckles and fasteners, designed to secure a passenger in a wheelchair within a school bus.

“Wheelchair-passenger restraint anchorage” means equipment for fastening wheelchair-passenger restraints to the interior of a school bus.

“Wheelchair-securement anchorage” means equipment for fastening a wheelchair-securement device to a school bus floor.

“Wheelchair-securement device” means a strap or webbing, including buckles and fasteners, used for fastening a wheelchair to a wheelchair-securement anchorage.

“Wheelchair-securement system” means components used to fasten a wheelchair to the interior of a school bus, including a wheelchair-securement anchorage and a wheelchair-securement device.

R13-13-102. Certification of School Bus Drivers

- A.** Certification requirements: An individual shall not operate a school bus in Arizona without being certified by the Department. An applicant for certification shall:
1. Be a minimum of 18 years of age;
 2. Possess a valid identity verified fingerprint clearance card.

- ~~2.3.~~ Submit all of the following to the Department through the employer:
- ~~a.~~ ~~A completed fingerprint card and fingerprint card processing fee.~~
 - ~~b.~~a. An application signed and dated by the applicant that states the applicant's:
 - i. Name, home address, and home phone number;
 - ii. Any alias ever used by the applicant;
 - iii. Social Security number;
 - iv. Date of birth;
 - v. Arizona commercial driver license number;
 - vi. Date of previous application for certification, if any;
 - vii. Intended employer's name;
 - viii. Convictions for a felony or misdemeanor, if any, in this state or any other state; ~~and~~
 - ix. Total points accumulated against the applicant's driving record during the two years immediately preceding the date of application using the point system contained in A.A.C. R17-4-404; and
 - x. Identity verified fingerprint clearance card number.
 - ~~e.~~b. Completed physical examination form, completed physical performance test form, and results of controlled substances testing; and
 - ~~d.~~c. A verification made under penalty of perjury that all submitted information is true and complete;
- ~~3.4.~~ Possess a current Arizona commercial driver license under A.R.S. § 28- 3101;
- ~~4.5.~~ Possess any Arizona driver license endorsement required under A.R.S. § 28-3103;
- ~~5.6.~~ Meet the driving record requirements listed in this Article; and
- ~~6.7.~~ Complete the training requirements listed in this Article.

B. Physical examination

1. An applicant or school bus driver shall submit to a physical examination that is conducted by a health care professional in accordance with the physical examination form. An applicant or school bus driver is qualified to be certified as a school bus driver only if the health care professional conducts the physical examination in accordance with the physical examination form and concludes that the applicant or school bus driver has no condition that would interfere with the applicant's or school bus driver's ability to:
 - a. Operate a school bus safely,
 - b. Evacuate a school bus during an emergency or during a drill required under R13-13-104(D), and
 - c. Perform the operations checks required under R13-13-108(D).
2. An applicant or school bus driver who is insulin dependent shall obtain the waiver described in A.A.C. R17-5-208.
3. An applicant shall submit the completed physical examination form and, if applicable, a copy of the waiver required under subsection (B)(2), to the Department through the employer.
4. The initial physical examination of an applicant, conducted in accordance with the physical examination form, expires 24 months from the date of the physical examination unless a shorter time is specified by the health care professional who administers the physical examination. A school bus driver shall submit to a physical examination before the expiration date of the previous physical examination and send the completed physical

examination form to the Department through the employer before the end of the month in which the previous physical examination expires.

5. If a health care professional determines that further testing of an applicant or school bus driver is needed by an ophthalmologist or optometrist, the health care professional shall refer the applicant or school bus driver to:
 - a. An ophthalmologist licensed under A.R.S. § 32-1401 et seq.,
 - b. An optometrist licensed under A.R.S. § 32-1701 et seq.,
 - c. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by a state contiguous to Arizona, or
 - d. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by any state or territory of the United States and employed by the United States government.
6. In addition to the physical examinations required by this Article, the Department or the employer may require a physical examination of an applicant or school bus driver for an impairment that would affect the ability to perform the activities listed in subsection (B)(1). The Department or employer shall base its decision to require an additional physical examination upon consideration of the appearance or actions of the applicant or school bus driver or of medical information received by the Department regarding the applicant or school bus driver. The applicant or school bus driver shall submit results of a physical examination conducted under this subsection to the Department through the employer within 30 days of the date of the physical examination.

C. Controlled substances and alcohol testing

1. An applicant or school bus driver shall submit to alcohol and controlled substances testing as required by A.R.S. § 28-3228(C)(2) and as prescribed by this Article and 49 CFR 382 October 2006 (no later amendments or editions). The testing shall be conducted in accordance with the procedures at 49 CFR 40 October 2006 (no later amendments or editions), both published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department, except for the changes in 49 CFR 40 and 49 CFR 382 listed in subsections (C)(1)(a) through (C)(1)(i).
 - a. 49 CFR 40.3
 - i. “Employee,” means an applicant or a school bus driver as defined at R13-13-101.
 - ii. “Employer” has the same meaning as at R13-13-101.
 - b. 49 CFR 382.107
 - i. “Commercial motor vehicle” has the same meaning as at A.R.S. § 28-3001(3).
 - ii. “Driver” means a school bus driver as defined at R13-13-101.
 - iii. “Employer” has the same meaning as at R13-13-101.
 - iv. “Performing a safety-sensitive function” means any time during which a school bus driver is on-duty except when the school bus driver is being compensated by an entity other than the employer.
 - v. “Safety-sensitive function” means any activity for which a school bus driver is on-duty except when the school bus driver is performing an activity for and being compensated by an entity other than the employer.
 - c. 49 CFR 382.207. In both sentences, the word “four” is changed to “eight.”
 - d. 49 CFR 382.301(b), (c), and (d): Delete these subsections.

- e. 49 CFR 382.303(a) and (b): Change the word “occurrence” to “accident,” as defined in R13-13-101, and delete the words “operating on a public road in commerce.”
 - f. 49 CFR 382.303(a)(1) and (b)(1): Delete the words “, if the accident involved the loss of human life”
 - g. 49 CFR 382.303(a)(2) and (b)(2): Delete the words “, if the accident involved:”
 - h. 49 CFR 382.303(a)(2)(i) and (ii) and (b)(2)(i) and (ii): Delete these subsections.
 - i. 49 CFR 382.303(c): In the table, in the column headed “Test must be performed by employer,” change “No” to “Yes.”
2. In addition to the testing required by 49 CFR 382, an applicant shall submit to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 3. In addition to the testing required by 49 CFR 382, a school bus driver shall submit annually to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 4. The employer shall ensure that a school bus driver is tested for use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, or propoxyphene or alcohol when required to do so by these rules or when requested by the Department.
 5. The employer shall submit any and all negative results of testing done under subsection (C) to the Department within 30 days of the date of testing or within 12 months of the school bus driver's previous test, whichever is sooner, by providing the Department a copy of the report submitted to the employer by the entity that conducted the testing.
 6. The employer shall immediately notify the Department by telephone of any and all positive results of testing done under subsection (C) and shall submit to the Department within five days a copy of the report submitted to the employer by the entity that conducted the testing.

D. Physical performance test

1. An applicant shall pass a physical performance test that consists of the following eight standards:
 - a. Climbing and descending the steps of a school bus three times in 30 seconds;
 - b. Alternately activating the throttle and the service-brake system of a school bus 10 times in 10 seconds;
 - c. Depressing and holding the clutch, if applicable, and service-brake system of a school bus for three seconds, five consecutive times;
 - d. Opening and closing a manually operated service door three times without stopping. If the school bus has an automatic service door, operate the manual override of the service door;
 - e. Operating at least two hand controls, one on each side of the steering wheel, within eight seconds while maintaining control of a moving school bus;
 - f. Starting in a seat-belted position, exit a school bus from the rear-most floor-level emergency exit within 20 seconds;
 - g. Carrying or dragging a 125-pound object 30 feet in 30 seconds; and

- h. Lowering a 30-pound object from a floor-level emergency exit to the ground and lifting the same object from the ground to the school bus floor.
2. A school bus driver who is certified on the effective date of this subsection shall pass the physical performance test within one year from the effective date of this subsection.
3. A school bus driver shall pass the physical performance test again no later than 24 months after previously passing the physical performance test.
4. An applicant or school bus driver who fails the physical performance test may take the test again after 24 hours. An applicant or school bus driver may take the physical performance test no more than three times in 90 days. If an applicant fails the physical performance test on the third attempt, the Department shall not further consider the applicant for certification unless the applicant complies again with the requirements of this Section.
5. The employer shall ensure that a school bus driver who fails the physical performance test does not operate a school bus until the school bus driver passes the physical performance test.
6. If a school bus driver takes and fails the physical performance test three times, the Department shall cancel the school bus driver's certification.
7. An employer shall ensure that the physical performance test is administered by a person who has completed Department-authorized training, using the largest type of school bus that an applicant or school bus driver may be required to operate.
8. A person who administers the physical performance test shall either pass or fail the applicant or school bus driver taking the test, complete the physical performance test form, and submit the completed form to the Department and the employer within seven days of the physical performance test.

E. Driving record

1. During the 24 months before the date of application or during any 24-month period while certified as a school bus driver, an applicant or school bus driver shall not accumulate eight or more points against a driving record in this state using the point system contained in A.A.C. R17-4-404.
2. During the 10 years before the date of application, an applicant shall not have repeatedly received citations for violation of traffic law.

F. Training requirements of a school bus driver

1. Before being certified by the Department as a school bus driver, an applicant shall complete a minimum of 14 hours of classroom training in the following:
 - a. State and federal traffic laws,
 - b. Behind-the-wheel driving operations,
 - c. School bus driver's responsibilities to passengers and school,
 - d. Inspections and operations checks,
 - e. Records and reports,
 - f. Special needs transportation, and
 - g. Accidents and emergencies.
2. An employer shall ensure that classroom training is taught by a classroom instructor who is qualified under R13-13-103.
3. At least seven days before classroom training, the classroom instructor shall notify the Department in writing of the date, time, and location of classroom training. The

classroom instructor shall notify the Department by any means available at least 24 hours before the date, time, or location of classroom training is changed or canceled.

4. After completion of classroom training, the classroom instructor shall administer to the applicant a written examination standardized by the Department.
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in subsection (F)(1).
 - b. Each question has a value of two points. To pass the examination an applicant shall receive a score that equals or exceeds 80% of the total possible score.
 - c. If an applicant is unable to read or speak English, the employer shall arrange to have the examination administered orally to the applicant in the language with which the applicant is most familiar.
 - d. If an applicant does not pass the examination on the first attempt, the applicant may take an examination two more times within 12 months of the first attempt. A different examination shall be administered to an applicant who is taking an examination for the second or third time. The period between examinations shall be a minimum of 24 hours. If the applicant fails the examination on the third attempt, the applicant shall be considered further only if the applicant complies again with the requirements in this Section.
5. The classroom instructor shall submit the following information in a written report to the Department and the employer within seven days from the date of the conclusion of a classroom training course:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each applicant's name, and
 - g. Each applicant's examination score.
6. In addition to the report required under subsection (F)(5), the classroom instructor shall maintain and submit to the employer within seven days from the conclusion of a classroom training course, a classroom-training course log that includes:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of the training course,
 - d. Name of each applicant attending the training course,
 - e. Subject matter taught in each hour, and
 - f. Which hours of training were attended by each applicant.
7. In addition to the classroom training, an applicant shall complete behind-the-wheel training consisting of a minimum of 20 hours operating a school bus in Arizona.
 - a. An employer shall ensure that behind-the-wheel training is taught by a behind-the-wheel instructor who is qualified under R13-13-103.
 - b. During behind-the-wheel training, a behind-the-wheel instructor shall be present and observing the applicant while the applicant is operating the school bus.

- c. The employer shall ensure that no one except the applicant, behind-the-wheel instructor, employer, and Department employees are aboard the school bus while the applicant actually operates the school bus.
- d. The behind-the-wheel instructor shall maintain and submit to the employer within seven days from the conclusion of the applicant's behind-the-wheel training, a behind-the-wheel training log that includes:
 - i. Instructor's name,
 - ii. Instructor's identification number,
 - iii. Applicant's name,
 - iv. Date of each behind-the-wheel training session, and
 - v. Actual number of hours at each training session that the applicant operates a school bus.
- e. At the conclusion of behind-the-wheel training, the behind-the-wheel instructor shall use a copy of the Proof of Completion of Behind-the-wheel Training and Driving Test form to administer to the applicant the driving test described on the form. The driving test shall measure the applicant's ability to operate a school bus safely and in a manner consistent with state law. The behind-the-wheel instructor shall either pass or fail the applicant and submit the completed form to the Department and the employer within seven days of the driving test.

G. First aid and cardiopulmonary resuscitation

- 1. Before being certified, an applicant shall complete classroom instruction in cardiopulmonary resuscitation and basic first aid. The instruction in cardiopulmonary resuscitation shall include performing cardiopulmonary resuscitation on adults, children, and infants.
- 2. The instruction shall be conducted by an individual currently certified as an instructor in first aid and cardiopulmonary resuscitation by a program approved by a nationally recognized organization such as the American Heart Association, American Red Cross, National Safety Council, American Safety and Health Institute, or Arizona Bureau of Mines; by an emergency medical technician licensed in Arizona; or by an agency of the U.S. government.
- 3. An applicant shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card issued to the applicant or other written documentation as proof of completion of the first-aid and cardiopulmonary resuscitation training.
- 4. A school bus driver shall renew first-aid and cardiopulmonary resuscitation training before expiration of the current training. Renewal instruction shall be provided by an individual described in subsection (G)(2). The school bus driver shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card or other written documentation as proof of renewal of training.

H. The Department shall process an application for certification as a school bus driver under R13-13-109.

I. Refresher training

1. A school bus driver shall have refresher training no later than 24 months following completion of the training required by subsection (F). Refresher training shall consist of a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1).
2. After completing the first refresher training, the school bus driver shall complete a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1) every 24 months following the last refresher training.
3. An employer shall ensure that refresher training is taught by a classroom instructor who is qualified under R13-13-103.
4. A classroom instructor shall teach refresher training and shall submit the following information in a written report to the Department and the employer within seven days from completion of the refresher training:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each school bus driver's name, and
 - g. Each school bus driver's certification number.
5. In addition to the report required under subsection (I)(4), the classroom instructor shall maintain and submit to the employer within seven days from the conclusion of a refresher training course, a refresher-training course log that includes:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of the refresher training course,
 - d. Name and certification number of each school bus driver attending the refresher training course,
 - e. Subject matter taught in each hour, and
 - f. Which hours of refresher training were attended by each school bus driver.

J. Records

1. The employer shall maintain qualification and training records of an applicant who is certified and of a school bus driver who terminates employment, and qualification records of an applicant who is denied certification, for 24 months from the date of certification, termination of employment, or denial of certification.
2. The employer shall maintain records of testing required under subsection (C) in accordance with 49 CFR 382.401, October 2006 (no later amendments or editions), published at the U. S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department. In this subsection, "controlled substances," as used in 49 CFR 382.401, means marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene.
3. The employer shall transfer the records of a school bus driver to a subsequent employer upon written request by the subsequent employer or school bus driver.
4. Qualification records include:
 - a. Application,
 - b. Driving record,

- c. Copy of physical examination form, and
 - d. Physical performance test form.
5. Training records include:
- a. A copy of the classroom-training course log required under subsection (F)(6) that shows the applicant's attendance,
 - b. A copy of the refresher-training course log required under subsection (I)(5) that shows the school bus driver's attendance,
 - c. The classroom training examination score,
 - d. The applicant's behind-the-wheel training log,
 - e. The Proof of Completion of Behind-the-wheel Training and Driving Test form,
 - f. A copy of the first-aid card and cardiopulmonary resuscitation card or other written documentation of completion of first-aid and cardiopulmonary resuscitation training, and
 - g. A copy of the school bus driver certification card issued by the Department.

K. Denial, cancellation, or suspension of certificate

1. Based on an assessment of the totality of the circumstances, the Department may deny a certificate to an applicant or may cancel or suspend a certificate of a school bus driver for:
- a. Failing to meet or comply with the requirements of this Article;
 - b. Being convicted of or subject to an outstanding warrant for any felony;
 - c. Being convicted of or subject to an outstanding warrant for any misdemeanor reasonably related to the occupation of a school bus driver including, but not limited to:
 - i. Citation for any moving motor vehicle violation, including but not limited to, violations of A.R.S. § 28-1591 et seq.;
 - ii. Driving under the influence (A.R.S. § 28-1381 et seq.);
 - iii. Any sexual offense (A.R.S. § 13-1401 et seq.);
 - iv. Any abuse of a child (A.R.S. § 13-3623); or
 - v. Use, sale, or possession of a controlled substance (A.R.S. § 13-3401 et seq.).
 - d. Demonstrating behavior that endangers the educational welfare or personal safety of students, teachers, or school bus drivers or other co-workers;
 - e. Providing false, incomplete, or misleading information to the Department;
 - f. Driving or being in actual physical control of a school bus under a circumstance listed in A.R.S. § 28-1381(A);
 - g. Under A.R.S. §§ 28-3301 through 28-3322, having a commercial driver license canceled, suspended, revoked, or denied; or
 - h. Having a verified positive result to any controlled substance or alcohol test required by subsections (C)(1), (2), or (3), at any time.
2. The Department shall cancel or suspend a certificate of a school bus driver for:
- a. Having a fingerprint clearance card that is invalid, suspended, canceled or revoked pursuant to A.R.S. § 28-3228 and A.R.S. Title 41, Chapter 12, Article 3.1; or
 - b. Operating a school bus in violation of A.R.S. § 41-1758.03(D) or A.R.S. § 41-1758.07(D) which preclude a person from driving any vehicle to transport employees or clients of the employer as part of the person's employment including students, teachers or other co-workers.

23. Any conviction, violation, warrant, or other misconduct described in this Section shall be considered, whether or not the school bus driver was operating a school bus at the time of the conviction, violation, warrant, or other misconduct.
 34. An applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended may request a hearing within 30 days from the date of receipt of the notice of the denial, cancellation, or suspension. The hearing shall be conducted according to the procedures contained in A.R.S. Title 41, Chapter 6, Article 10.
 45. The Department shall inform an applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended of the amount of time that must elapse before the applicant or the school bus driver may reapply for certification. The Department shall include this information in the notice of denial, cancellation, or suspension and the notice of final order, if any, served on the applicant or school bus driver. In determining the amount of time that must elapse before reapplication, the Department shall consider:
 - a. The seriousness of the offense leading to denial, cancellation, or suspension;
 - b. The frequency with which the offense occurred; and
 - c. The amount of time required to correct the offense.
- L. If a school bus driver is terminated from or leaves employment, the employer shall provide written notice to the Department within 30 days of the termination or leaving. If a school bus driver transfers employment from one employer to a second employer, within 14 days of the transfer the second employer shall provide written notice to the Department of the:
1. School bus driver's name,
 2. School bus driver's certification number,
 3. Name of the transferring employer, and
 4. Effective date of the transfer.

Economic, Small Business and Consumer Impact Statement
ARS §41-1055

School Bus Rulemaking
December 2017

Preamble:

1. An identification of the proposed rulemaking, including all of the following:

Under A.R.S. § 28-900(A), the Department of Public Safety, in consultation with the School Bus Advisory Council, establishes minimum standards to improve the safety and welfare of school bus passengers. The Department also establishes minimum standards for certification as a school bus driver pursuant to A.R.S. § 28-3228. The rules are enforced by the Department.

The Department intends to amend R13-13-101 and R13-13-102 for the purpose of updating the language relating to recently signed House Bill 2247, which eliminated the need for school bus driver applicants to submit processing fees and a full set of fingerprints to the Department for the purpose of obtaining a state and federal criminal records check pursuant to A.R.S. § 41-1750 and Public Law 92-544. Effective August 8, 2017, and in accordance with A.R.S. § 28-3228, additional language requiring an identity verified fingerprint clearance card to become a certified school bus driver needs to be added to the text of the rule.

(a) The conduct and its frequency of occurrence that the rule is designed to change.

R13-13-101 and R13-13-102

The rule amendments are intended to address the updated legislative language contained in A.R.S. § 28-3228; which requires identity verified fingerprint clearance cards for new school bus drivers after August 8, 2017, and for all existing active schools bus drivers after December 31, 2018.

There are currently 7,856 school bus drivers in Arizona that will need to obtain or maintain existing fingerprint clearance cards. Additionally, the Department currently certifies an annual average of 1,176 new bus drivers each year.

(b) The harm resulting from the conduct the rule is designed to change and the likelihood it will continue to occur if the rule is not changed.

After August 8, 2017, the language in A.A.C. R13-13-101 and R13-13-102 will not be consistent with the updated legislative changes to A.R.S. § 28-3228; which will require identity verified fingerprint clearance cards for all school bus drivers.

(c) The estimated change in frequency of the targeted conduct expected from the rule change.

The R13-13-101 and R13-13-102 rule amendments will provide consistency in language and eliminate the discrepancy between rule and state statute.

2. A brief summary of the information included in the economic, small business and consumer impact statement.

The Department intends to amend R13-13-101 and R13-13-102 for the purpose of updating the language relating to recently signed House Bill 2247; which eliminated the need for school bus driver applicants to submit processing fees and a full set of fingerprints to the Department for the purpose of obtaining a state and federal criminal records check pursuant to A.R.S. § 41-1750 and Public Law 92-544. Effective August 8, 2017, and in accordance with A.R.S. § 28-3228, additional language requiring an identity verified fingerprint clearance card to become a certified school bus driver needs to be added to the text of the rule.

Under the current rule, all school bus drivers undergo a background check at a cost of \$22 per application, which is now outdated. There are approximately 7,856 bus drivers statewide with an approximate average annual new driver application rate of 1,178. As a result of new legislation, all existing and new school bus drivers will be required to obtain an identity verified fingerprint clearance card. The cost to obtain an identity verified fingerprint clearance card is \$67, which is valid for six years. The Department assesses a \$67 fee under A.R.S. § 15-106 for every clearance card application and renewal. The \$67 is derived from the following: \$15 is deposited into the Records Processing Fund to pay for the initial state criminal history check (A.R.S. §. 41-1750(J)); \$10 is allocated to the FBI for the federal criminal history check; \$35 is deposited into the Fingerprint Clearance Card Fund (A.R.S. § 41-1758.06) for the administration of the fingerprint clearance card program; and, \$7 is distributed to the Board of Fingerprinting Fund (A.R.S. § 41-619.56) to fund their operations.

The Department estimates there are approximately 5,971 existing school bus drivers that will need to obtain an identity verified fingerprint clearance card by December 31, 2018. The cost associated with the identity verified fingerprint clearance card will be the responsibility of the school bus driver applicants, school districts, and private transportation providers.

3. If the economic, small business and consumer impact summary accompanies a proposed rule, the name and address of agency employees who may be contacted to submit or request additional data

on the information included in the economic, small business and consumer impact statement.

Name: Lance Larson, Sergeant
Address: Arizona Department of Public Safety
Student Transportation Unit, Mail Drop 1240
P.O. Box 6638
Phoenix, AZ 85005-6638
Telephone: (602) 223-2522
E-mail: LLarson@azdps.gov

The economic, small business and consumer impact statement:

1. An identification of the proposed rulemaking.

The Department intends to amend R13-13-101 and R13-13-102 for the purpose of updating the language relating to recently signed House Bill 2247, which eliminated the need for school bus driver applicants to submit processing fees and a full set of fingerprints to the Department for the purpose of obtaining a state and federal criminal records check pursuant to A.R.S. § 41-1750 and Public Law 92-544. Effective August 8, 2017, and in accordance with A.R.S. § 28-3228, additional language requiring an identity verified fingerprint clearance card to become a certified school bus driver needs to be added to the text of the rule.

2. An identification of the persons who will be directly affected by, bear the costs of or directly benefit from the proposed rulemaking.

Persons or entities directly affected by, bearing the costs of, or directly benefiting from the rulemaking includes the following:

- Arizona school districts
- Arizona Department of Public Safety, Applicant Clearance Card Team
- School bus drivers
- Arizona Board of Fingerprinting
- Private school bus companies

3. Cost benefit analysis of the following:

- a. **The probable costs and benefits to the implementing agency and other agencies directly affected by the implementation and enforcement of the proposed rulemaking. The probable costs to the implementing agency shall include the number of new full-time employees necessary to implement and enforce the proposed rule. The preparer of the economic, small business and consumer impact statement shall notify the joint legislative budget committee of the number of new full-time employees necessary to implement and enforce the rule before the rule is approved by the council.**

Under the current rule, all bus drivers undergo a background check at a cost of \$22 per application, which is now outdated. There are approximately 7,856 bus drivers statewide with an approximate average annual new driver application rate of 1,178. As a result of new legislation, all existing and new school bus drivers will be required to obtain an identity verified fingerprint clearance card. The cost to obtain a fingerprint clearance card is \$67, which is valid for six years. The Department assesses a \$67 fee under A.R.S. § 15-106 for every clearance card application and renewal. The \$67 is derived from the following: \$15 is deposited into the Records Processing Fund to pay for the initial state criminal history check (A.R.S. § 41-1750(J)); \$10 is allocated to the FBI for the federal criminal history check; \$35 is deposited into the Fingerprint Clearance Card Fund (A.R.S. § 41-1758.06) for the administration of the fingerprint clearance card program; and, \$7 is distributed to the Board of Fingerprinting Fund (A.R.S. § 41-619.56) to fund their operations.

The Department anticipates the \$67 fee will support the proposed amendments without the need for additional full-time employees.

The Department estimates an average annual new school bus driver application rate of 1,178. The increased identity verified fingerprint clearance card caseload would result in annual fingerprint clearance card application revenues of \$78,926.

The \$67 fee will be offset by the \$22 fee already required for each background check under the current rule resulting in a net fee increase of \$45; which would result in a total new fingerprint clearance card annual revenue of \$53,000.

Of the \$78,926, \$17,670 would be deposited into the Records Processing Fund for the initial state criminal history check, \$11,780 would be deposited into the FBI fund for federal criminal history checks, \$41,230 would be allocated to the Fingerprint Clearance Card Fund for the administration of the clearance card program, and \$8,246 would be deposited into the Board of Fingerprinting Fund for operating costs.

The Board of Fingerprinting estimates there will be additional good-cause exemption hearings for identity verified fingerprint clearance cards, however, it is unknown what the overall impact on the board will be. The Board believes the additional revenues to their fund will be sufficient to cover any new costs.

- b. The probable costs and benefits to a political subdivision of this state directly affected by the implementation and enforcement of the proposed rulemaking.**

The school districts in Arizona will incur minimal costs if the employer elects to cover the fee. Generally, fees associated with fingerprint clearance cards are the responsibility of the applicant; however, some school districts may elect to assist the applicant with the fee.

- c. The probable costs and benefits to businesses directly affected by the proposed rulemaking, including any anticipated effect on the revenues or payroll expenditure of employers who are subject to the proposed rulemaking.**

Businesses are indirectly affected by the rule change; but could have a minimal economic impact relating to R13-13-101 and R13-12-102. Business impact is expected to be minimal for private transportation providers that employ school bus drivers who are required to obtain a valid identity verified fingerprint clearance card.

- 4. A general description of the probable impact on private and public employment in businesses, agencies and political subdivisions of this state directly affected by the proposed rulemaking.**

There should be minimal impact, if any, on public employment in state, county, municipal or other political agencies or subdivisions directly affected by this rulemaking. Certain school bus drivers may have their certificates denied, canceled, or revoked as a result of the Governor's and Legislature's intent to pass House Bill 2247 amending A.R.S. §§ 28-3228, 41-619.51, 41-1758 and 41-1758.01. There should be no impact on employment of other school district personnel. School districts and private companies hiring school bus drivers may see a minimal increase in costs, should they be required to hire and/or train additional school bus drivers to replace those who have had their certificates denied, suspended or revoked as a result of the statutes and rules changes.

- 5. A statement of the probable impact of the proposed rulemaking on small businesses. The statement shall include:**

- a. **An identification of the small business subject to the proposed rulemaking.**

Amendments to R13-13-101 and R13-13-102 may have a minimal economic impact on small businesses that provide student transportation for school districts. The minimal impact would only be realized if the businesses decides to pay the fingerprint clearance card fee, which would normally be paid for by the applicant or the business loses the employee because the employee's certification was suspended or revoke under statute requiring a new employee to be hired and trained.

- b. **The administrative and other costs required for compliance with the proposed rulemaking.**

The Department anticipates small businesses will incur minimal administrative or other costs as a result of these rule amendments.

- c. **A description of the methods prescribed in section 41-1035 that the agency may use to reduce the impact on small businesses with reasons for the agency's decision to use or not to use each method.**

There are no means to reduce the impact on small business due to the statutory requirements for the school bus driver to have a valid identity verified fingerprint clearance card. The Department is not able to control the fee from the FBI and Board of Fingerprinting. Internally, the Department believes it is currently charging fees that are appropriate to maintain current service levels.

- d. **The probable cost and benefit to private persons and consumers who are directly affected by the proposed rulemaking.**

The rules require private persons applying for a school bus driver certification to pay a \$22 fee for background checks and processing. Under the new statutory changes, private persons are required to obtain an identity verified fingerprint clearance card for a fee of \$67, which results in a net increase of \$45. While this is an increase, the increase is a result of statutory requirements for an identity verified fingerprint clearance card which involves other units and statutory funds in the Department. For some persons, as outlined above, their employer may in some cases absorb the fee.

6. **A statement of the probable effect on state revenues.**

The Department estimates an average annual new school bus driver application rate of 1,178. The increased fingerprint clearance card caseload would result in annual fingerprint clearance card application revenues of \$78,926. This would be offset by the \$22 fee required for each background check per the current rule, which would result in a total new fingerprint clearance card annual revenue of \$53,000. Of the \$78,926, \$17,670 would be deposited into the Records Processing Fund for the initial state criminal history check, \$11,780 would be deposited into the FBI Fund for federal criminal history checks, \$41,230 would be allocated to the Fingerprint Clearance Card Fund for the administration of the clearance card program, and \$8,246 would be deposited into the Board of Fingerprinting Fund for operating costs.

7. **A description of any less intrusive or less costly alternative methods of achieving the purpose of the proposed rulemaking, including the monetizing of the costs and benefits for each option and providing the rationale for not using non-selected alternatives.**

There are no less intrusive or less costly alternatives for achieving the purpose of the rulemaking due to the statutory requirement for the school bus driver to now possess a valid identity verified fingerprint clearance card.

8. **A description of any data on which a rule is based with a detailed explanation of how the data was obtained and why the data is acceptable data. An agency advocating that any data is acceptable data has the burden of proving that the data is acceptable. For the purposes of this paragraph, "acceptable data" means empirical, replicable and testable data as evidenced in supporting documentation, statistics, reports, studies or research.**

The rulemaking is not based on any review of data. The rulemaking is based on a statutory requirement that school bus drivers now possess a new identity verified fingerprint clearance card.

TITLE 13. PUBLIC SAFETY
CHAPTER 13. DEPARTMENT OF PUBLIC SAFETY
SCHOOL BUSES

ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

Section

ARTICLE 2. MINIMUM STANDARDS FOR SCHOOL BUSES OPERATED ON ALTERNATIVE FUEL

Section

- R13-13-201. Minimum Standards for Compressed Natural Gas Fuel Systems
- R13-13-202. Inspection and Maintenance of Compressed Natural Gas Fuel Systems

ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

R13-13-101. Definitions

In this Chapter, unless otherwise specified:

“Accident” means any unexpected occurrence involving a moving or non-moving school bus that results in any bodily injury or fatality to a passenger or non-passenger, damage to personal or real property outside the school bus, or damage to the school bus that affects the integrity of the school bus or results in a major defect as described in R13-13-108(B).

“Alternately flashing signal lamps” means a system of red or red and amber lamps that are mounted horizontally to both the front and rear of the school bus body and used to inform the public that the school bus is preparing to stop or has stopped to load or unload passengers. Alternately flashing signal lamps can be either a four-lamp system as described in R13-13-107(17)(c)(i) or an eight-lamp system as described in R13-13-9-107(c)(ii).

“Alteration” means any addition, modification, or removal of any equipment or

component after a school bus is inspected by the Department, which may affect the operations of the school bus; compliance with the statutes or rules applicable to school buses; or the health, safety, or welfare of any individual.

“Applicant” means an individual who submits an application to the Department to obtain a certificate to operate a school bus.

“ASE” means National Institute of Automotive Service Excellence.

“Auxiliary fan” means a device mounted inside the school bus body used to supplement the heating, defrosting, or air-conditioning systems by circulating air in the school bus.

“Behind-the-wheel instructor” means an individual qualified under R13-13-103 to provide behind-the-wheel training to applicants.

“Behind-the-wheel training” means the complete physical control of a school bus by an applicant while accompanied by and under direct observation of a behind-the-wheel instructor.

“Belt cutter” means a hand-held instrument containing a blade used to sever a seat belt or a wheelchair-securement device.

“Certificate” means a written authorization issued by the Department to operate a school bus in Arizona.

“Chassis” means the part of a school bus that consists of all base components, including the frame, front and rear suspension, exhaust system, brakes, engine, engine hood or cover, transmission, front and rear axles, front fenders, drive train and shaft, fuel system, engine air intake and filter, clutch and accelerator pedals, steering wheel, tires, heating and cooling system, battery, and controls and instruments to operate the school bus.

“Chassis cowl” means those parts of a Type C school bus that are located in front of the cowl and attached before a school bus manufacturer adds the school bus body.

“Citation” has the same meaning as at A.R.S. § 28-1872.

“Classroom instructor” means an individual qualified under R13-13-103 to provide classroom training to:

Applicants to operate a school bus,

Individuals becoming qualified to teach classroom training,

Individuals becoming qualified to teach techniques of behind-the-wheel training,

or

School bus drivers taking refresher training.

“Classroom training” means the courses required by the Department of an applicant before the applicant is certified or of an individual seeking qualification as a classroom or behind-the-wheel instructor.

“Commercial driver license” has the same meaning as at A.R.S. § 28-3001.

“Controlled substances and alcohol testing” means a determination of an applicant's

or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, and alcohol prescribed by 49 CFR 382, October 2006 (no later amendments or editions), and conducted in accordance with the procedures at 49 CFR 40, October 2006 (no later amendments or editions), both published by the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department; and a determination of an applicant's or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, barbiturates, benzodiazepines, methadone, and propoxyphene as required by these rules and conducted in accordance with a procedure that is generally accepted in the scientific community to be accurate and reliable.

“Cowl” means the portion of the chassis in a Type C school bus that separates the school bus engine from the school bus driver’s compartment.

“Cutaway van” means a chassis to which a completed driver's compartment is attached before a school bus manufacturer adds a school bus body.

“dB(A)” means decibels A scale, a term denoting that noise level has been adjusted to duplicate human hearing.

“Driver’s compartment” means the part of a school bus body that is separated from the passenger compartment by a barrier and contains the controls and instruments for the operation of the school bus.

“Emergency-brake system” means mechanical components used to slow or stop a school bus after a failure of the service-brake system.

“Emergency exit” means an opening in a school bus, including a door, push-out window, or roof hatch, used to unload passengers in the event of an occurrence that requires immediate evacuation of the school bus.

“Employer” means a private business or school district that hires applicants and certified school bus drivers to operate school buses.

“Frame” means the structural foundation upon which a school bus chassis is constructed.

“Frontage road” means a street that parallels an interstate highway and furnishes access to streets and property that would otherwise be unreachable from the interstate highway.

“Gross vehicle weight rating” means the value specified by the manufacturer as the maximum total loaded weight of a school bus, calculated in accordance with R13-13-106(27).

“Health care professional” means:

A physician licensed to practice medicine under A.R.S. § 32-1401 et seq., osteopathy under A.R.S. § 32-1800 et seq., or chiropractic under A.R.S. § 32-900 et seq.;

A physician licensed to practice medicine, osteopathy, or chiropractic in a state

contiguous to Arizona;

A physician employed by the United States government and licensed by a state or territory of the United States;

A physician assistant licensed under A.R.S. § 32-2501 et seq.; or

A registered nurse practitioner licensed under A.R.S. § 32-1601 et seq.

“Highway” has the same meaning as at A.R.S. § 28-101.

“Identification” means the signs, lettering, or numbers placed on the interior or exterior of a school bus body, including the glass areas, but does not include the lettering, numbers, or logos of a manufacturer or distributor of the manufacturer's product.

“Ignition power-deactivation switch” means a device that when set causes the engine of a motor vehicle to stop operating if the transmission is placed into gear or the parking-brake system is released.

“Interstate highway” means the designation given by the federal government to the system of highways connecting two or more states of the United States.

“Lamp” means a device that is covered by a lens and used to produce artificial light.

“Major defect” means a condition that exists to the interior or exterior of a school bus that causes the Department or owner to place the school bus out of service while the defect is being corrected.

“Manufacturer” means an entity engaged in the manufacturing or assembling of a school bus chassis, school bus body, or school bus chassis and body.

“Medical practitioner” has the same meaning as at A.R.S. § 32-1901.

“Minor defect” means a condition that exists to the interior or exterior of a school bus that is not a major defect and allows the school bus to remain in operation while the defect is being corrected.

“Off-duty” means the time a school bus driver is not on-duty.

“On-duty” means the period between the time a school bus driver begins to work for the employer or is required to be ready to work for the employer until the time the school bus driver is relieved from work and all responsibility for performing work for the employer. The time on-duty is used only to determine when a school bus driver must be provided time off-duty. Time on-duty may be compensated by the employer or an entity other than the employer or may be uncompensated. On-duty includes:

All time at an employer's place of business, waiting to be dispatched;

All time performing an operations check of a school bus in accordance with R13-13-108, or servicing or conditioning a school bus;

All time driving a school bus, including loading or unloading the school bus, and remaining in readiness to drive a school bus;

All time, at the direction of the employer, travelling but not driving a school bus or assuming any other responsibility to the employer. If the school bus driver is

afforded at least eight consecutive hours off-duty upon arrival at the school bus driver's destination after travelling but not driving a school bus or assuming any other responsibility to the employer, the school bus driver shall be considered off-duty for the entire period travelling but not driving the school bus or assuming any other responsibility to the employer;

All time repairing, obtaining assistance, or remaining in attendance upon a disabled school bus;

All time preparing required reports and records;

All time providing a breath or urine sample, including travel time to and from the collection site, to comply with the testing requirements of this Chapter;

All time performing any other work for the employer; and

All time performing any compensated work for any entity other than the employer.

“Out of service” means a school bus cannot be used to transport passengers.

“Owner” means the public or governmental agency or institution or private company in whose name a school bus is titled.

“Parking-brake system” means mechanical components used to prevent the movement of a school bus while loading or unloading a passenger or when the school bus is parked.

“Passenger” means an individual who rides in a school bus but does not participate in the operation of the school bus.

“Passenger compartment” means that part of the school bus body that is separated from the school bus driver's compartment by a barrier and holds the passengers to be transported.

“Physical examination” means an evaluation of an applicant's or school bus driver's medical status performed by a health care professional according to this Article.

“Physical examination form” means the Arizona Department of Transportation, Motor Vehicle Division, Medical Examination Report, which is used to record the results of a physical examination and may be obtained from the Department or Arizona Department of Transportation, Motor Vehicle Division.

“Physical performance test” means an evaluation of an applicant's or school bus driver's reflexes, agility, and strength performed according to this Article.

“Physical performance test form” means the document used to record the results of a physical performance test and may be obtained from the Department.

“Push-out window” means safety glass enclosed in a frame on a school bus that moves to the outside of the school bus when force is applied to the window from inside the school bus.

“Refresher training” means the courses required by the Department of each school bus driver to maintain certification as a school bus driver in Arizona.

“Restraining barrier” means a structure located in front of any school bus seat that

restricts the forward motion of a passenger.

“Rub rail” means a horizontal steel bar attached to the outside of a school bus body used to reinforce the sides of the school bus.

“Safety glass” has the same meaning as at A.R.S. § 28-959(F).

“School” means a school as defined by A.R.S. § 15-101(19), accommodation school as defined by A.R.S. § 15-101(1), charter school as defined by A.R.S. § 15-101(3), or private school as defined by A.R.S. § 15-101(18).

“School bus” has the same meaning as at A.R.S. § 28-101.

“School bus body” means a structure assembled upon a chassis designed to carry a school bus driver and passengers.

“School bus driver” means an individual who is certified by the Department as meeting the requirements at A.R.S. § 28- 3228 and R13-13-102 to operate a school bus in Arizona.

“School district” has the same meaning as at A.R.S. § 15-101 (20).

“Service-brake system” means mechanical components used to slow or stop a school bus.

“Service door” means a metal structure used to close the opening of a service entrance.

“Service entrance” means an opening in a school bus used to load or unload passengers.

“Special needs school bus” means a school bus that is designed to transport disabled passengers, some of whom may use a wheelchair, and is constructed with a service entrance and a special-service entrance.

“Special-service entrance” means an opening in a school bus that accommodates a wheelchair lift for the loading or unloading of a passenger who uses a wheelchair.

“Special-service entrance door” means a metal structure used to close the opening of a special-service entrance.

“Street” has the same meaning as at A.R.S. § 28-101.

“Traffic control signal” has the same meaning as at A.R.S. § 28-601.

“Training” means the instruction, courses, classes, or workshops provided by the Department or the employer that are required to obtain or maintain certification as a school bus driver or qualification as a classroom or behind-the-wheel instructor, or qualification to administer the physical performance test in Arizona.

“Transport” or “transporting” means a school bus driver sets a school bus in motion to carry passengers or objects authorized by the school district to be carried in a school bus.

“Type A school bus” means a conversion bus constructed utilizing a cutaway front section vehicle with a left side driver's door. This definition includes two

classifications: Type A-1, with a Gross Vehicle Weight Rating (GVWR) of 14,500 pounds or less; and Type A-2, with a GVWR greater than 14,500 pounds and less than or equal to 21,500 pounds.

“Type B school bus” means a school bus constructed utilizing a stripped chassis. The entrance door is behind the front wheels. This definition includes two classifications: Type B-1, with a GVWR of 10,000 pounds or less, and Type B-2, with a GVWR greater than 10,000 pounds.

“Type C school bus,” also known as a conventional style school bus, means a school bus constructed utilizing a chassis with a hood and front fender assembly. The entrance door is behind the front wheels. A Type C school bus may have a cutaway truck chassis or truck chassis with cab with or without a left side door and with a GVWR greater than 21,500 pounds.

“Type D school bus,” also known as a rear engine or front engine transit-style school bus, means a school bus constructed utilizing a stripped chassis. The entrance door is ahead of the front wheels.

“Van” means a covered or enclosed truck.

“Wheelchair” means a mobility aid consisting of a frame, seat, and three or four wheels, which is used to support and carry a disabled passenger.

“Wheelchair lift” means an electric hydraulic mechanism and platform in a school bus used to raise and lower a passenger in a wheelchair.

“Wheelchair-lift platform” means a horizontal surface upon which a wheelchair sits while being raised or lowered.

“Wheelchair-passenger restraint” means a combination of a pelvic and an upper torso restraint, including buckles and fasteners, designed to secure a passenger in a wheelchair within a school bus.

“Wheelchair-passenger restraint anchorage” means equipment for fastening wheelchair-passenger restraints to the interior of a school bus.

“Wheelchair-securement anchorage” means equipment for fastening a wheelchair-securement device to a school bus floor.

“Wheelchair-securement device” means a strap or webbing, including buckles and fasteners, used for fastening a wheelchair to a wheelchair-securement anchorage.

“Wheelchair-securement system” means components used to fasten a wheelchair to the interior of a school bus, including a wheelchair-securement anchorage and a wheelchair-securement device.

R13-13-102. Certification of School Bus Drivers

A. Certification requirements: An individual shall not operate a school bus in Arizona without being certified by the Department. An applicant for certification shall:

1. Be a minimum of 18 years of age;
2. Submit all of the following to the Department through the employer:
 - a. A completed fingerprint card and fingerprint card processing fee;
 - b. An application signed and dated by the applicant that states the applicant's:
 - i. Name, home address, and home phone number;
 - ii. Any alias ever used by the applicant;
 - iii. Social Security number;
 - iv. Date of birth;
 - v. Arizona commercial driver license number;
 - vi. Date of previous application for certification, if any;
 - vii. Intended employer's name;
 - viii. Convictions for a felony or misdemeanor, if any, in this state or any other state; and
 - ix. Total points accumulated against the applicant's driving record during the two years immediately preceding the date of application using the point system contained in A.A.C. R17-4-404;
 - c. Completed physical examination form, completed physical performance test form, and results of controlled substances testing; and
 - d. A verification made under penalty of perjury that all submitted information is true and complete;
3. Possess a current Arizona commercial driver license under A.R.S. § 28- 3101;
4. Possess any Arizona driver license endorsement required under A.R.S. § 28-3103;
5. Meet the driving record requirements listed in this Article; and
6. Complete the training requirements listed in this Article.

B. Physical examination

1. An applicant or school bus driver shall submit to a physical examination that is conducted by a health care professional in accordance with the physical examination form. An applicant or school bus driver is qualified to be certified as a school bus driver only if the health care professional conducts the physical examination in accordance with the physical examination form and concludes that the applicant or school bus driver has no condition that would interfere with the applicant's or school bus driver's ability to:
 - a. Operate a school bus safely,
 - b. Evacuate a school bus during an emergency or during a drill required under R13-13-104(D), and
 - c. Perform the operations checks required under R13-13-108(D).
2. An applicant or school bus driver who is insulin dependent shall obtain the waiver described in A.A.C. R17-5-208.
3. An applicant shall submit the completed physical examination form and, if applicable, a copy of the waiver required under subsection (B)(2), to the

- Department through the employer.
4. The initial physical examination of an applicant, conducted in accordance with the physical examination form, expires 24 months from the date of the physical examination unless a shorter time is specified by the health care professional who administers the physical examination. A school bus driver shall submit to a physical examination before the expiration date of the previous physical examination and send the completed physical examination form to the Department through the employer before the end of the month in which the previous physical examination expires.
 5. If a health care professional determines that further testing of an applicant or school bus driver is needed by an ophthalmologist or optometrist, the health care professional shall refer the applicant or school bus driver to:
 - a. An ophthalmologist licensed under A.R.S. § 32-1401 et seq.,
 - b. An optometrist licensed under A.R.S. § 32-1701 et seq.,
 - c. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by a state contiguous to Arizona, or
 - d. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by any state or territory of the United States and employed by the United States government.
 6. In addition to the physical examinations required by this Article, the Department or the employer may require a physical examination of an applicant or school bus driver for an impairment that would affect the ability to perform the activities listed in subsection (B)(1). The Department or employer shall base its decision to require an additional physical examination upon consideration of the appearance or actions of the applicant or school bus driver or of medical information received by the Department regarding the applicant or school bus driver. The applicant or school bus driver shall submit results of a physical examination conducted under this subsection to the Department through the employer within 30 days of the date of the physical examination.
- C. Controlled substances and alcohol testing
1. An applicant or school bus driver shall submit to alcohol and controlled substances testing as required by A.R.S. § 28-3228(C)(2) and as prescribed by this Article and 49 CFR 382 October 2006 (no later amendments or editions). The testing shall be conducted in accordance with the procedures at 49 CFR 40 October 2006 (no later amendments or editions), both published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department, except for the changes in 49 CFR 40 and 49 CFR 382 listed in subsections (C)(1)(a) through (C)(1)(i).
 - a. 49 CFR 40.3
 - i. “Employee,” means an applicant or a school bus driver as defined at R13-13-101.
 - ii. “Employer” has the same meaning as at R13-13-101.
 - b. 49 CFR 382.107
 - i. “Commercial motor vehicle” has the same meaning as at A.R.S. §

- 28-3001(3).
- ii. "Driver" means a school bus driver as defined at R13-13-101.
 - iii. "Employer" has the same meaning as at R13-13-101.
 - iv. "Performing a safety-sensitive function" means any time during which a school bus driver is on-duty except when the school bus driver is being compensated by an entity other than the employer.
 - v. "Safety-sensitive function" means any activity for which a school bus driver is on-duty except when the school bus driver is performing an activity for and being compensated by an entity other than the employer.
- c. 49 CFR 382.207. In both sentences, the word "four" is changed to "eight."
 - d. 49 CFR 382.301(b), (c), and (d): Delete these subsections.
 - e. 49 CFR 382.303(a) and (b): Change the word "occurrence" to "accident," as defined in R13-13-101, and delete the words "operating on a public road in commerce."
 - f. 49 CFR 382.303(a)(1) and (b)(1): Delete the words ", if the accident involved the loss of human life"
 - g. 49 CFR 382.303(a)(2) and (b)(2): Delete the words ", if the accident involved:"
 - h. 49 CFR 382.303(a)(2)(i) and (ii) and (b)(2)(i) and (ii): Delete these subsections.
 - i. 49 CFR 382.303(c): In the table, in the column headed "Test must be performed by employer," change "No" to "Yes."
- 2. In addition to the testing required by 49 CFR 382, an applicant shall submit to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 - 3. In addition to the testing required by 49 CFR 382, a school bus driver shall submit annually to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 - 4. The employer shall ensure that a school bus driver is tested for use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, or propoxyphene or alcohol when required to do so by these rules or when requested by the Department.
 - 5. The employer shall submit any and all negative results of testing done under subsection (C) to the Department within 30 days of the date of testing or within 12 months of the school bus driver's previous test, whichever is sooner, by providing the Department a copy of the report submitted to the employer by the entity that conducted the testing.
 - 6. The employer shall immediately notify the Department by telephone of any and all positive results of testing done under subsection (C) and shall submit to the Department within five days a copy of the report submitted to the employer by the entity that conducted the testing.
- D. Physical performance test

1. An applicant shall pass a physical performance test that consists of the following eight standards:
 - a. Climbing and descending the steps of a school bus three times in 30 seconds;
 - b. Alternately activating the throttle and the service-brake system of a school bus 10 times in 10 seconds;
 - c. Depressing and holding the clutch, if applicable, and service-brake system of a school bus for three seconds, five consecutive times;
 - d. Opening and closing a manually operated service door three times without stopping. If the school bus has an automatic service door, operate the manual override of the service door;
 - e. Operating at least two hand controls, one on each side of the steering wheel, within eight seconds while maintaining control of a moving school bus;
 - f. Starting in a seat-belted position, exit a school bus from the rear-most floor-level emergency exit within 20 seconds;
 - g. Carrying or dragging a 125-pound object 30 feet in 30 seconds; and
 - h. Lowering a 30-pound object from a floor-level emergency exit to the ground and lifting the same object from the ground to the school bus floor.
2. A school bus driver who is certified on the effective date of this subsection shall pass the physical performance test within one year from the effective date of this subsection.
3. A school bus driver shall pass the physical performance test again no later than 24 months after previously passing the physical performance test.
4. An applicant or school bus driver who fails the physical performance test may take the test again after 24 hours. An applicant or school bus driver may take the physical performance test no more than three times in 90 days. If an applicant fails the physical performance test on the third attempt, the Department shall not further consider the applicant for certification unless the applicant complies again with the requirements of this Section.
5. The employer shall ensure that a school bus driver who fails the physical performance test does not operate a school bus until the school bus driver passes the physical performance test.
6. If a school bus driver takes and fails the physical performance test three times, the Department shall cancel the school bus driver's certification.
7. An employer shall ensure that the physical performance test is administered by a person who has completed Department-authorized training, using the largest type of school bus that an applicant or school bus driver may be required to operate.
8. A person who administers the physical performance test shall either pass or fail the applicant or school bus driver taking the test, complete the physical performance test form, and submit the completed form to the Department and the employer within seven days of the physical performance test.

E. Driving record

1. During the 24 months before the date of application or during any 24-month period while certified as a school bus driver, an applicant or school bus driver shall not accumulate eight or more points against a driving record in this state using the point system contained in A.A.C. R17-4-404.

2. During the 10 years before the date of application, an applicant shall not have repeatedly received citations for violation of traffic law.

F. Training requirements of a school bus driver

1. Before being certified by the Department as a school bus driver, an applicant shall complete a minimum of 14 hours of classroom training in the following:
 - a. State and federal traffic laws,
 - b. Behind-the-wheel driving operations,
 - c. School bus driver's responsibilities to passengers and school,
 - d. Inspections and operations checks,
 - e. Records and reports,
 - f. Special needs transportation, and
 - g. Accidents and emergencies.
2. An employer shall ensure that classroom training is taught by a classroom instructor who is qualified under R13-13-103.
3. At least seven days before classroom training, the classroom instructor shall notify the Department in writing of the date, time, and location of classroom training. The classroom instructor shall notify the Department by any means available at least 24 hours before the date, time, or location of classroom training is changed or canceled.
4. After completion of classroom training, the classroom instructor shall administer to the applicant a written examination standardized by the Department.
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in subsection (F)(1).
 - b. Each question has a value of two points. To pass the examination an applicant shall receive a score that equals or exceeds 80% of the total possible score.
 - c. If an applicant is unable to read or speak English, the employer shall arrange to have the examination administered orally to the applicant in the language with which the applicant is most familiar.
 - d. If an applicant does not pass the examination on the first attempt, the applicant may take an examination two more times within 12 months of the first attempt. A different examination shall be administered to an applicant who is taking an examination for the second or third time. The period between examinations shall be a minimum of 24 hours. If the applicant fails the examination on the third attempt, the applicant shall be considered further only if the applicant complies again with the requirements in this Section.
5. The classroom instructor shall submit the following information in a written report to the Department and the employer within seven days from the date of the conclusion of a classroom training course:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each applicant's name, and

- by a nationally recognized organization such as the American Heart Association, American Red Cross, National Safety Council, American Safety and Health Institute, or Arizona Bureau of Mines; by an emergency medical technician licensed in Arizona; or by an agency of the U.S. government.
3. An applicant shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card issued to the applicant or other written documentation as proof of completion of the first-aid and cardiopulmonary resuscitation training.
 4. A school bus driver shall renew first-aid and cardiopulmonary resuscitation training before expiration of the current training. Renewal instruction shall be provided by an individual described in subsection (G)(2). The school bus driver shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card or other written documentation as proof of renewal of training.
- H.** The Department shall process an application for certification as a school bus driver under R13-13-109.
- I.** Refresher training
1. A school bus driver shall have refresher training no later than 24 months following completion of the training required by subsection (F). Refresher training shall consist of a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1).
 2. After completing the first refresher training, the school bus driver shall complete a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1) every 24 months following the last refresher training.
 3. An employer shall ensure that refresher training is taught by a classroom instructor who is qualified under R13-13-103.
 4. A classroom instructor shall teach refresher training and shall submit the following information in a written report to the Department and the employer within seven days from completion of the refresher training:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each school bus driver's name, and
 - g. Each school bus driver's certification number.
 5. In addition to the report required under subsection (I)(4), the classroom instructor shall maintain and submit to the employer within seven days from the conclusion of a refresher training course, a refresher-training course log that includes:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of the refresher training course,
 - d. Name and certification number of each school bus driver attending the refresher training course,
 - e. Subject matter taught in each hour, and

f. Which hours of refresher training were attended by each school bus driver.

J. Records

1. The employer shall maintain qualification and training records of an applicant who is certified and of a school bus driver who terminates employment, and qualification records of an applicant who is denied certification, for 24 months from the date of certification, termination of employment, or denial of certification.
2. The employer shall maintain records of testing required under subsection (C) in accordance with 49 CFR 382.401, October 2006 (no later amendments or editions), published at the U. S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department. In this subsection, "controlled substances," as used in 49 CFR 382.401, means marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene.
3. The employer shall transfer the records of a school bus driver to a subsequent employer upon written request by the subsequent employer or school bus driver.
4. Qualification records include:
 - a. Application,
 - b. Driving record,
 - c. Copy of physical examination form, and
 - d. Physical performance test form.
5. Training records include:
 - a. A copy of the classroom-training course log required under subsection (F)(6) that shows the applicant's attendance,
 - b. A copy of the refresher-training course log required under subsection (I)(5) that shows the school bus driver's attendance,
 - c. The classroom training examination score,
 - d. The applicant's behind-the-wheel training log,
 - e. The Proof of Completion of Behind-the-wheel Training and Driving Test form,
 - f. A copy of the first-aid card and cardiopulmonary resuscitation card or other written documentation of completion of first-aid and cardiopulmonary resuscitation training, and
 - g. A copy of the school bus driver certification card issued by the Department.

K. Denial, cancellation, or suspension of certificate

1. Based on an assessment of the totality of the circumstances, the Department may deny a certificate to an applicant or may cancel or suspend a certificate of a school bus driver for:
 - a. Failing to meet or comply with the requirements of this Article;
 - b. Being convicted of or subject to an outstanding warrant for any felony;
 - c. Being convicted of or subject to an outstanding warrant for any misdemeanor reasonably related to the occupation of a school bus driver including, but not limited to:
 - i. Citation for any moving motor vehicle violation, including but not limited

- to, violations of A.R.S. § 28-1591 et seq.;
 - ii. Driving under the influence (A.R.S. § 28-1381 et seq.);
 - iii. Any sexual offense (A.R.S. § 13-1401 et seq.);
 - iv. Any abuse of a child (A.R.S. § 13-3623); or
 - v. Use, sale, or possession of a controlled substance (A.R.S. § 13-3401 et seq.).
 - d. Demonstrating behavior that endangers the educational welfare or personal safety of students, teachers, or school bus drivers or other co-workers;
 - e. Providing false, incomplete, or misleading information to the Department;
 - f. Driving or being in actual physical control of a school bus under a circumstance listed in A.R.S. § 28-1381(A);
 - g. Under A.R.S. §§ 28-3301 through 28-3322, having a commercial driver license canceled, suspended, revoked, or denied; or
 - h. Having a verified positive result to any controlled substance or alcohol test required by subsections (C)(1), (2), or (3), at any time.
 - 2. Any conviction, violation, warrant, or other misconduct described in this Section shall be considered, whether or not the school bus driver was operating a school bus at the time of the conviction, violation, warrant, or other misconduct.
 - 3. An applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended may request a hearing within 30 days from the date of receipt of the notice of the denial, cancellation, or suspension. The hearing shall be conducted according to the procedures contained in A.R.S. Title 41, Chapter 6, Article 10.
 - 4. The Department shall inform an applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended of the amount of time that must elapse before the applicant or the school bus driver may reapply for certification. The Department shall include this information in the notice of denial, cancellation, or suspension and the notice of final order, if any, served on the applicant or school bus driver. In determining the amount of time that must elapse before reapplication, the Department shall consider:
 - a. The seriousness of the offense leading to denial, cancellation, or suspension;
 - b. The frequency with which the offense occurred; and
 - c. The amount of time required to correct the offense.
- L. If a school bus driver is terminated from or leaves employment, the employer shall provide written notice to the Department within 30 days of the termination or leaving. If a school bus driver transfers employment from one employer to a second employer, within 14 days of the transfer the second employer shall provide written notice to the Department of the:
 - 1. School bus driver's name,
 - 2. School bus driver's certification number,
 - 3. Name of the transferring employer, and
 - 4. Effective date of the transfer.

R13-13-103. Qualification of Classroom and Behind-the-wheel Instructors

A. To be qualified as a classroom instructor, an individual shall:

1. Submit to the Department through the employer, the following two letters:
 - a. A letter from, signed, and dated by the individual that states the individual's:
 - i. Name, home address, and home phone number;
 - ii. Social Security number;
 - iii. Date of birth;
 - iv. Current employer's name, address, and phone number;
 - v. Dates of all previous letters submitted under this subsection; and
 - b. A letter from the current employer recommending that the individual be considered as a classroom instructor; and
2. Pass a written examination standardized by the Department:
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in R13-13-102(F)(1).
 - b. Each question has a value of two points. To pass the examination, an individual shall receive a score that equals or exceeds 90% of the total possible score.
 - c. If an individual taking the written examination is unable to read or speak English, the employer shall arrange to have the examination administered orally in the language with which the individual is most familiar.
 - d. If an individual does not pass the examination, the individual may take a second examination that is different from the first examination.
 - e. If an individual fails to pass the second examination, the individual may receive further consideration by submitting again the letters required by subsection (A)(1) and taking the written examination required by this subsection.
 - f. The employer shall submit each individual's examination score to the Department within seven days from the date of the examination.

B. To remain qualified as a classroom instructor, a classroom instructor shall teach a minimum of 12 hours of classroom or refresher training every 24 months from the date the classroom instructor is first recognized by the Department as qualified.

C. To be qualified as a behind-the-wheel instructor, an individual shall:

1. Be certified continuously as a school bus driver in Arizona for the 12 months immediately before submitting the letters described in subsection (C)(2) and be employed as a certified school bus driver at the time of qualification as a behind-the-wheel instructor;
2. Submit to the Department through the employer, the following two letters:
 - a. A letter from, signed, and dated by the individual that states the individual's:
 - i. Name, home address, and home phone number;
 - ii. Social Security number;
 - iii. Commercial driver license number;
 - iv. Current employer's name, address, and phone number;

- v. Dates of all previous letters submitted under this subsection; and
- b. A letter from the current employer recommending that the individual be considered as a behind-the-wheel instructor; and
- 3. Pass a written examination standardized by the Department.
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in R13-13-102(F)(1).
 - b. Each question has a value of two points. To pass the examination, an individual shall receive a score that equals or exceeds 80% of the total possible score.
 - c. If an individual is unable to read or speak English, the employer shall arrange to have the examination administered orally in the language with which the individual is most familiar.
 - d. If an individual does not pass the examination, the individual may take a second examination that is different from the first examination.
 - e. If an individual fails to pass the second examination, the individual may receive further consideration by submitting again the letters required by subsection (C)(2) and taking the written examination required by this subsection.
 - f. The employer shall submit each individual's examination score to the Department within seven days from the date of the examination.
- D. To remain qualified as a behind-the-wheel instructor, a behind-the-wheel instructor shall maintain certification as a school bus driver in this state and teach a minimum of 12 hours of behind-the-wheel training every 24 months from the date the behind-the-wheel instructor is first recognized by the Department as qualified.
- E. Records
 - 1. The employer shall maintain the following records for each classroom and behind-the-wheel instructor for 24 months from the date the instructor is first recognized by the Department as qualified.
 - a. Letter submitted under subsection (A)(1)(a) or (C)(2)(a),
 - b. Letter of recommendation submitted under subsection (A)(1)(b) or (C)(2)(b),
and
 - c. Examination score.
 - 2. The Department shall maintain the documents required under R13-13-102(F)(5) and (I)(4) for 24 months.
- F. The Department shall not recognize an individual as qualified to be a classroom or behind-the-wheel instructor if the individual:
 - 1. Fails to meet or comply with the requirements of this Article;
 - 2. Is convicted of or subject to an outstanding warrant for a felony;
 - 3. Is convicted of or subject to an outstanding warrant for a misdemeanor reasonably related to the occupation of a school bus driver, including:
 - a. Civil traffic violation (A.R.S. § 28-1591 et seq.);
 - b. Driving under the influence (A.R.S. § 28-1381 et seq.);
 - c. Any sexual offense (A.R.S. § 13-1401 et seq.);
 - d. Any abuse of a child (A.R.S. § 13-3623); or

- e. Use, sale, or possession of a controlled substance (A.R.S. § 13-3401 et seq.);
 - 4. Provides false, incomplete, or misleading information to the Department;
 - 5. Drives or is in actual physical control of a school bus under a circumstance listed in A.R.S. § 28-1381(A); or
 - 6. Under A.R.S. §§ 28-3301 through 28-3322, has a commercial driver's license canceled, suspended, revoked, or denied.
- G.** If a classroom or behind-the-wheel instructor is terminated from or leaves employment, the employer shall provide written notice to the Department within 30 days of the termination or leaving. If a classroom or behind-the-wheel instructor transfers employment from one employer to a second employer, within seven days of the transfer the second employer shall provide written notice to the Department of the:
- 1. Name of the classroom or behind-the-wheel instructor,
 - 2. Identification number of the classroom or behind-the-wheel instructor,
 - 3. Name of the transferring employer, and
 - 4. Effective date of the transfer.

R13-13-104. Minimum Standards for School Bus Operation

A. A school bus driver shall perform operations checks of a school bus as required by R13-13-108.

B. Loading or unloading of passengers:

1. As of February 16, 1996, an eight-lamp system as described in R13-13-107(17) shall be installed on a school bus before it is introduced into Arizona. When preparing to stop a school bus on a street or highway, the school bus driver shall activate the alternately flashing amber lamps of an eight-lamp system or the alternately flashing red lamps of a four-lamp system for a minimum distance of 100 feet, in accordance with A.R.S. § 28-930(B). Whenever the school bus is stopped on a street or highway to load or unload passengers, the school bus driver shall deactivate the alternately flashing amber lamps and activate the alternately flashing red lamps of an eight-lamp system, and extend the stop arm and open the service door.
2. When a school bus driver stops the school bus to load or unload passengers, the school bus driver shall set the parking brake and place the transmission in neutral.
3. The distance between stops for the purpose of loading or unloading passengers shall be no less than 600 feet, unless the school determines that more frequent stops are necessary for safety. The school bus driver shall stop the school bus as near the right edge of the traveled portion of the street or highway as possible.
4. A school bus driver shall not load or unload passengers on the traffic side of the bus.
5. When a school bus driver loads or unloads passengers who must cross a street or highway at a location other than an intersection, the passengers shall cross at least 10 feet in front of the front bumper of the school bus. The school bus driver shall not permit passengers who must cross a street or highway to be unloaded from the school bus until all traffic to the front and rear of the school bus is stopped. The school bus driver shall not move the school bus until all passengers have crossed the street or highway.
6. In intersections that use lighted traffic control signals, a school bus driver shall load or unload passengers no closer than 100 feet of the traffic control signal so the passengers may cross with the traffic control signal, either before or after the school bus proceeds.
7. In intersections without lighted traffic control signals, a school bus driver shall load or unload passengers no closer than 50 feet of the intersection so the passengers may cross at the intersection, either before or after the school bus proceeds.
8. A school bus driver shall not stop a school bus on an interstate highway for the purpose of loading or unloading passengers, except that:
 - a. A school bus stop may be established on a frontage road that parallels an interstate highway if no passenger is allowed to cross a divided highway.
 - b. A school bus may stop in a safety rest area as defined by A.R.S. § 28-7901(8) that is part of or adjacent to an interstate highway.
9. A school bus driver shall load or unload passengers on school grounds only in an

- area designated by the school and marked with a sign as a school bus loading area.
10. During loading or unloading of passengers at a designated school bus loading area at a school, the school shall restrict the loading area to school buses, passengers, and school employees assisting in the loading or unloading of passengers.
 11. A school shall allow passengers in a designated school bus loading area only when the passengers are being loaded on or unloaded from a school bus.
 12. A school shall designate all school bus loading areas at locations that prevent backing of the school bus.
 13. In areas at a school not designated as a school bus loading area, a school bus driver shall not back upon or adjacent to the school grounds unless an individual authorized by the school bus driver directs the backing procedure while standing at the rear of the school bus in a position visible to the school bus driver. This provision does not apply to a school bus garage or school bus storage area where passengers are not allowed.
 14. Immediately before a school bus driver engages in backing a school bus, the school bus driver shall sound the horn to warn motorists and pedestrians of the backing procedure. This provision does not apply if the school bus is equipped with an alarm that operates automatically when the school bus is backing.
 15. In addition to the requirements for railroad grade crossings contained in A.R.S. § 28-853, a school bus driver shall comply with the following:
 - a. Use hazard warning lights as described in A.R.S. § 28-947(D) within a minimum of 100 feet of a railroad grade crossing to warn motorists of an intended stop.
 - b. Shut off any radio, compact-disc player, and other source of sound within 50 feet of a railroad grade crossing.
 - c. Stop the school bus, with or without passengers aboard, at a railroad grade crossing when traffic at the railroad grade crossing is not directed by a police officer.
 - d. While stopped at a railroad grade crossing at which traffic is not directed by a police officer, activate the noise suppression switch, completely open the service door and the window to the left of the driver and, by hearing and sight, determine that it is safe to cross. Before proceeding, close the service door. De-activate the noise suppression switch after crossing the tracks.
 - e. Do not stop to load or unload passengers within 200 feet of a railroad grade crossing. This provision does not prohibit stops at a railroad station or on a highway that parallels the railroad tracks.
 16. When a school bus driver loads a wheelchair passenger on a school bus, the school bus driver shall secure both the wheelchair and the wheelchair passenger using the systems described in R13-13-105(E).
- C. An employer shall not allow or require a school bus driver to drive a school bus nor shall a school bus driver drive a school bus:
1. For more than 10 hours after having been off-duty for a minimum of eight consecutive hours;
 2. For any period after having been on-duty for 15 hours after having been off-duty

- for a minimum of eight consecutive hours;
3. After having been on-duty 60 hours in any seven consecutive days if the employer does not operate school buses for seven consecutive days; or
 4. After having been on-duty 70 hours in any eight consecutive days if the employer operates school buses every day of the week.

D. Other requirements:

1. A school bus driver shall wear a seat belt whenever the school bus is in motion.
2. While operating a school bus, a school bus driver shall wear closed-toe, closed-heel shoes that will not interfere with driving the school bus safely or performing other duties of the school bus driver.
3. A school bus driver shall comply with all state traffic laws while operating a school bus except that the school bus driver shall not exceed 65 miles per hour or the posted speed limit, whichever is less, when operating the school bus on an interstate highway.
4. Any person boarding or attempting to board a school bus, whether or not a passenger, shall comply with all instructions given by a school bus driver. If a passenger or a non-passenger boards or attempts to board a school bus and refuses to comply with the school bus driver's instructions, the school bus driver may seek emergency assistance to remove the passenger or non-passenger from the school bus, or prevent the passenger or non-passenger from boarding.
5. All passengers shall sit with their backs against the seat backs, their legs facing towards the front of the school bus, and all parts of their bodies clear of all aisles whenever the school bus is in motion.
6. A school bus driver shall not transport in a school bus more passengers than the rated capacity stated by the school bus manufacturer.
7. A school bus driver shall close the service doors of a school bus before operating the school bus. The service doors shall remain closed whenever the school bus is in motion.
8. A school bus driver shall not place the transmission in neutral or coast with the clutch disengaged on a downhill grade.
9. The driver of a school bus equipped with a two-speed axle shall not shift the axle while descending any hill posted with grade warning signs.
10. A school bus driver shall ensure that a school bus is not fueled in a closed building, while the school bus engine is running or while passengers are on board.
11. A school bus driver or passenger shall not use tobacco in any form on a school bus.
12. A school bus driver shall not carry on a school bus or consume any beverage containing any alcohol while on-duty with the employer or within eight hours before going on-duty with the employer.
13. A school bus driver shall not eat or drink on a school bus unless the school bus is completely stopped.
14. A school bus driver shall not at any time carry on a school bus or use a controlled substance.
15. A passenger shall not carry on a school bus or consume while being transported in a school bus, any beverage containing any alcohol.

16. A passenger shall not carry on a school bus or consume while being transported in a school bus, any dangerous or narcotic drug, as defined in A.R.S. § 13-3401, unless:
 - a. A medical practitioner authorized by the state to write a prescription for the dangerous or narcotic drug has prescribed the dangerous or narcotic drug for the passenger who is carrying or consuming it;
 - b. The school district governing board establishes written policies and procedures regarding the administration of a dangerous or narcotic drug by a trained district employee to a passenger who is being transported in a school bus; and
 - c. The parent or legal guardian of a passenger to whom a dangerous or narcotic drug is administered while being transported in a school bus provides prior written authorization for the dangerous or narcotic drug to be administered to the passenger by a trained district employee.
17. A school bus driver shall not assume responsibility for transporting any medication, whether prescription or over-the-counter, that belongs to a passenger.
18. A school bus driver shall not transport animals, insects, or reptiles in a school bus with the exception of service animals, as defined at A.R.S. § 11-1024(J), which assist disabled passengers.
19. Except for eyeglasses, a passenger or school bus driver shall not carry or transport glass objects on a school bus.
20. A school bus driver or passenger shall not carry on or transport in a school bus an explosive device, gun, knife, or other weapon as defined by school-district policy.
21. A passenger shall not place any part of the passenger's body out of a school bus window or door except when exiting the school bus.
22. When instruments or equipment related to musical or athletic events are transported on a school bus, the school bus driver shall transport them as follows:
 - a. Instruments or equipment shall not occupy seating space if needed for a passenger,
 - b. Instruments or equipment shall not be placed in the school bus driver's compartment or step-well of the school bus,
 - c. Instruments or equipment shall be under the passenger's control at all times or secured in the school bus, and
 - d. Instruments or equipment shall not block an aisle or emergency exit of the school bus at any time.
23. A passenger who carries onto a school bus an object other than an instrument or equipment related to musical or athletic events shall control the object at all times or secure the object in the school bus. If the passenger is not able to control or secure the object in the school bus, the passenger shall not carry the object onto the school bus.
24. A school bus driver shall ensure that all objects inside the school bus are under a passenger's control or secured in a manner that prevents the objects from causing physical injury to others or affecting the safe operation of the school bus.
25. A school bus driver shall not drive a school bus with a trailer or other vehicle attached to the school bus.

26. A school bus driver shall stop the school bus and check the wheels and tires for wear, damage, and inflation after every two continuous hours of driving.
27. All school buses shall have and school bus drivers shall use a two-way voice communication system. The two-way voice communication system shall only be used to assist the school bus driver with passenger transportation.
28. Except as provided in subsection (D)(27), a school bus driver shall not use audio headsets, earphones, earplugs, Bluetooth devices, cellular phones, personal digital assistants, or other interactive wireless devices, whether or not hands-free, when the school bus is in operation.
29. Except when complying with R13-13-108(D), if a school bus driver leaves the driver's compartment, the school bus driver shall set the parking-brake system, place a standard transmission in either first or reverse gear, place an automatic transmission in park or neutral, and turn off the ignition and remove the ignition key from an ignition that uses a key, or set the ignition power-deactivation switch of an ignition that does not use a key.
30. Each time a school bus driver unloads passengers and it appears that no passengers remain on the school bus, the school bus driver shall inspect the interior of the school bus for passengers remaining and objects left on the school bus. If the school bus is equipped with a child alert notification system as described in R13-13-106(6), the school bus driver shall complete all procedures required by the child alert notification system, in addition to the school bus driver's inspection of the interior of the school bus.
31. At least twice during every school year, a school shall conduct an evacuation drill of a school bus at the school that includes every passenger who rides a school bus and is in school on the day of the evacuation drill. At least 14 days before an evacuation drill, a school shall submit to the Department a written notice stating the date, time, and location of the evacuation drill. Each school bus driver shall participate in a minimum of two evacuation drills during every school year. Evacuation drills shall include:
 - a. Practice and instruction in the location, use, and operation of the emergency exits, fire extinguishers, first aid equipment, windows as a means of escape, and communication systems;
 - b. Practice and instruction in when and how to approach, load, unload, and move away from the school bus a minimum of 100 feet;
 - c. Instructions on how weather-related hazards affect emergency procedures; and
 - d. Instructions on the importance of orderly conduct.
32. A white, flashing, strobe lamp as described in R13-13-107(17)(f) may be used only during conditions that produce low visibility or that are hazardous.
33. An owner shall ensure that no lock, except as provided in R13-13-107(10)(h), is installed on any school bus emergency exit or service door.
34. A school bus driver shall ensure that nothing obstructs or interferes with the use of any school bus emergency exit or service door.
35. A school bus driver, passenger, or school administrator shall immediately report to the employer any violation of these rules or state statutes that the school bus

driver, passenger, or school administrator reasonably believes threatens the health, safety, or welfare of a passenger.

E. Reports and recordkeeping:

1. Immediately following any accident involving a school bus, the school bus driver shall report the accident to the employer.
2. Immediately upon receiving notification of any accident involving a school bus, the employer shall notify the Department of the accident by telephone. The employer shall submit written verification of the accident to the Department within 72 hours of the telephone notification.
3. Immediately upon becoming aware of a violation of these rules or state statutes that a reasonable person could conclude caused injury to or threatened the health, safety, or welfare of a passenger, the employer shall notify the Department of the violation by telephone. The employer shall submit a written report of the violation to the Department within 72 hours of the telephone notification.
4. No later than 14 days after an evacuation drill, a school district shall submit to the Department a written report of the evacuation drill identifying the school district, participating school, date, and number of participants.
5. From the date on which a record is created, the employer shall maintain for three years the following written records for each school bus driver:
 - a. On a daily basis, the period of time each school bus driver is on-duty for the employer including the date, each start and quit time, and the total number of hours on-duty for the employer.
 - b. On a daily basis, the total number of hours on-duty for an entity other than the employer during the previous seven days.
6. A school bus driver who performs any compensated work for an entity other than the employer shall provide the employer, in writing, the name and telephone number of the entity and the number of hours the school bus driver works each day for the entity.
7. A school bus driver who receives a citation, whether on-duty or off-duty, shall immediately inform the employer by telephone about the citation and shall submit a copy of the citation to the employer within five days.

R13-13-105. Special Needs Standards

A. General requirements:

1. A school bus introduced to Arizona on or after May 31, 2008 used for transporting disabled passengers shall comply with the minimum standards applicable to school buses and the specifications contained in this Section. A school bus introduced to Arizona before May 31, 2008 used for transporting disabled passengers shall comply with the minimum standards in this Section or shall be maintained in accordance with the manufacturer's original specifications.
2. Any school bus that is used for transporting a passenger who uses a wheelchair shall be equipped with a wheelchair lift.
3. A wheelchair lift shall be located on the side of the bus body opposite the school bus driver. The wheelchair lift shall not be attached to the exterior sides of the school bus and shall be confined within the school bus body when not extended.
4. Any school bus that is used for transporting disabled passengers shall be equipped with a belt cutter that is accessible only to the school bus driver. The belt cutter shall be secured in a location within reach of the school bus driver while belted into the driver's seat. The school bus may be equipped with additional belt cutters. Additional belt cutters shall be accessible only to the school bus driver or adult aides or attendants.

B. Special-service entrance:

1. A school bus used for transporting disabled passengers shall have a special-service entrance of a width and depth to accommodate a wheelchair lift. The special-service entrance shall have a minimum clear opening of 30 inches horizontally to allow for the passage of a wheelchair.
2. The special-service entrance shall be located on the side of the bus opposite the school bus driver and far enough to the rear of the school bus to prevent the special-service entrance door from obstructing the service door when the special-service entrance door is open.
3. A drip molding shall be installed above the special-service entrance to divert water from the special-service entrance.
4. The frame surrounding the special-service entrance shall provide support and strength at least equal to at the conventional service and emergency doors.

C. Special-service entrance doors:

1. A school bus used for transporting passengers in wheelchairs shall provide a special-service entrance door not to exceed 50 inches in width.
2. Two doors may be used for a special-service entrance on a school bus, if the doors are equipped with a positive latching mechanism to prevent accidental opening.
3. The special-service entrance door shall be constructed to open toward the exterior of the school bus. A Type A school bus is exempt from this provision if its special-service entrance door is provided by the school bus chassis manufacturer.
4. The special-service entrance door shall have a fastening device attached to the school bus body to hold the special-service entrance door in an open position.
5. The special-service entrance door shall be weather-sealed by a waterproof

- cushion affixed to the door or door frame.
6. Door materials, panels, and structural strength of a special-service entrance door shall be equivalent to the standards contained in R13-13-107 for a service door and an emergency door. Color, rub rail extensions, if installed, lettering, and all exterior features shall match adjacent sections of the school bus body.
 7. The window in the special-service entrance door shall be made of safety glass, mounted in a waterproof manner that is equal to the mounting of the other windows, and aligned with the side windows of the school bus.
 8. A pressure switch shall be installed in the special-service entrance door frame that will actuate a visible signal located in the school bus driver's compartment when the ignition is in the "on" position to warn the school bus driver when the special-service entrance door is not closed.
 9. A switch shall be installed in the special-service entrance door frame so the wheelchair lift will not operate when the special-service entrance door is closed.

D. Wheelchair lift:

1. A wheelchair lift shall be capable of lifting a minimum load of 800 pounds.
2. When the wheelchair-lift platform is raised to the maximum position, it shall be held in position by the wheelchair lift.
3. Controls shall be provided that enable an individual authorized by the school bus driver to activate the wheelchair lift from either inside or outside the school bus.
4. The wheelchair lift shall be equipped so it may be manually raised or lowered in the event of a power failure to the wheelchair lift.
5. The wheelchair lift shall contain a safety device to prevent the wheelchair-lift platform from falling.
6. The wheelchair lift shall be constructed so it allows the wheelchair-lift platform to rest completely on the ground.
7. All edges of the wheelchair-lift platform shall be designed to restrain the wheelchair and prevent the feet of an individual in the wheelchair from becoming caught during the raising or lowering process.
8. A barrier shall be attached along the outer non-loading edges of the wheelchair-lift platform that will prevent the wheelchair from rolling off the wheelchair-lift platform when the wheelchair-lift platform is placed in any position other than completely extended on ground level.
9. A self-adjusting, skid-resistant plate shall be installed on the loading edge of the wheelchair-lift platform to reduce the incline from the wheelchair-lift platform to ground level. This plate shall be used as a restraining barrier on the loading edge of the wheelchair-lift platform. The wheelchair-lift platform shall be skid-resistant.
10. A school bus may be provided with a battery to be used exclusively to operate the wheelchair lift. If a battery is installed for this purpose, an appropriate size circuit breaker meeting the wheelchair lift manufacturer's specifications shall be installed between the battery and the wheelchair lift motor. The circuit breaker shall be located as close to the power source as possible, but not within the school bus driver's compartment.
11. The wheelchair lift shall be equipped with an adjustable switch that limits the

- electrical power to the wheelchair-lift motor and a bypass valve to prevent pressure from building in the hydraulic system when the wheelchair-lift platform reaches the maximum up or down position.
12. A ramp may be carried on a school bus for use during an occurrence that requires evacuating the school bus. The ramp shall not be stored within the passenger compartment of the school bus.
- E. Wheelchair and wheelchair-passenger securement:**
1. Each wheelchair in a school bus shall be secured in a forward-facing position. Medical equipment and supplies required to accommodate a disabled passenger shall be secured in a school bus by means of alterations approved by the Department in accordance with R13-13-108(G).
 2. Each wheelchair-securement system location in a school bus shall have a minimum clear floor area of 30 inches in width from the interior school bus wall to the aisle and a minimum of 48 inches in length. A wheelchair shall not be placed in a position that prevents passage through the special-service entrance.
 3. Each wheelchair-securement system shall have four full-length tracks, with an L-track four-point tie-down configuration.
 4. The wheelchair-securement system shall provide a minimum of four wheelchair-securement anchorages attached to the school bus floor with a minimum of two anchorages located at the rear of the space designated for a wheelchair and a minimum of two anchorages located at the front of the space.
 5. The wheelchair-securement system shall provide a minimum of one wheelchair-securement device located in each of the rear anchorages and a minimum of one wheelchair-securement device located in each of the front anchorages.
 6. A wheelchair space shall have a minimum of one wheelchair-passenger shoulder restraint anchorage attached to the interior wall of the school bus and a minimum of two wheelchair-passenger restraint anchorages located at the rear of the space.
 7. Each wheelchair space shall have one wheelchair-passenger restraint. A school bus equipped with a wheelchair-passenger restraint shall have the following information available on the school bus:
 - a. A telephone number where information may be obtained about installation, repair, and parts; and
 - b. Instructions regarding use of the restraint, including a diagram showing the proper placement of the wheelchair and positioning of securement devices and occupant restraints, including correct belt angles.
- F. Dome light:** A dome light shall be placed in the interior ceiling of the school bus to illuminate the wheelchair lift area. The dome light shall be activated by a pressure switch located in the special-service entrance door or by a manually operated switch located in the interior of the school bus no more than one foot from the special-service entrance door. This switch shall be used exclusively for the dome light.
- G. Aisles:** All aisles leading to an emergency door from any wheelchair space shall be a minimum of 30 inches in width. The emergency door opening shall be a minimum of 30 inches in width.
- H. Seating arrangements:** All fixed seats in a special-needs school bus shall be forward facing.

- I. Emblems: A school bus used for transporting disabled passengers shall display two International Symbol of Accessibility emblems. One emblem shall be placed below the upper window on the emergency door or below the window on the special-service entrance door, and the second emblem shall be placed below the windshield on the side of the bus or on the bumper opposite the school bus driver. The emblems shall be made of blue, reflective material and be a minimum of 6 inches and a maximum of 12 inches in width and height and shall contain a reflective white wheelchair impression with a minimum of 1/8 inch reflective white border around the outer edges of the emblems.
- J. Types A and B school buses used to transport disabled passengers shall comply with the specifications contained in this Section except:
1. A ramp may be installed in place of a wheelchair lift;
 2. If a ramp is used, it shall be of a strength and rigidity to support a wheelchair, passenger, and an individual attending the wheelchair passenger. The ramp shall be equipped with a barrier on each longitudinal side to prevent the wheelchair from leaving the ramp;
 3. The floor of the ramp shall be covered with nonskid material; and
 4. A ramp shall not be carried in the passenger compartment of a school bus.

R13-13-106. Minimum Standards for School Bus Chassis

The chassis of a school bus introduced to Arizona on or after May 31, 2008 shall meet the requirements of this Section. The chassis of a school bus introduced to Arizona before May 31, 2008 shall meet the requirements of this Section or shall be maintained in accordance with the manufacturer’s original specifications.

1. Air cleaner: An engine intake air cleaner shall be installed in the school bus that meets engine specifications defined by the school bus manufacturer.
2. Axles: The front and rear axles and suspension assemblies shall have a gross axle weight rating consistent with that stated by the chassis manufacturer on a notice located in the school bus driver's compartment.
3. Back-up alarm: If installed, an alarm that emits a warning sound when the school bus is backing shall conform to the following:
 - a. The alarm-signaling device shall be of electronic, solid state design and shall emit an audible sound of a minimum of 97 dB(A) measured at 4 feet, 0° access from the source of the sound.
 - b. The alarm-signaling device shall be wired into the backup light circuits and shall emit sound automatically when the gear shift lever is in “reverse” position.
 - c. The alarm-signaling device shall be attached to the school bus chassis or body behind the rear axle.
4. Brakes:
 - a. A school bus with a manufacturer-designed passenger capacity of 60 or less shall be equipped with a service-brake system that uses compressed air or hydraulic assist.
 - b. A school bus with a manufacturer-designed passenger capacity greater than 60 shall be equipped with a service- brake system that uses compressed air.
 - c. In addition to the service-brake system, a school bus shall be equipped with a parking-brake system to keep the school bus from moving when parked.
 - d. The service brakes in a compressed-air system shall be adjusted using the following criteria:

<u>Type</u>	<u>Outside Diameter of Air Chamber</u>	<u>Brake Adjustment Limit</u>
<u>6</u>	<u>4 1/2 inches</u>	<u>1 1/4 inches</u>
<u>9</u>	<u>5 1/4 inches</u>	<u>1 3/8 inches</u>
<u>12</u>	<u>5 11/16 inches</u>	<u>1 3/8 inches</u>
<u>16</u>	<u>6 3/8 inches</u>	<u>1 3/4 inches</u>
<u>20</u>	<u>6 25/32 inches</u>	<u>1 3/4 inches</u>
<u>24</u>	<u>7 7/32 inches</u>	<u>1 3/4 inches</u>
<u>30</u>	<u>8 3/32 inches</u>	<u>2 inches</u>
<u>36</u>	<u>9 inches</u>	<u>2 1/4 inches</u>

- e. The service brakes in a “long stroke” clamp type brake system shall be

adjusted using the following criteria:

Type	Outside Diameter of Air Chamber	Brake Adjustment Limit
<u>12</u>	<u>5 11/16 inches</u>	<u>1 3/4 inches</u>
<u>16</u>	<u>6 3/8 inches</u>	<u>2 inches</u>
<u>20</u>	<u>6 25/32 inches</u>	<u>2 inches</u>
<u>24</u>	<u>7 7/32 inches</u>	<u>2 inches</u>
<u>24*</u>	<u>7 7/32 inches</u>	<u>2 1/2 inches</u>
<u>30</u>	<u>8 3/32 inches</u>	<u>2 1/2 inches</u>

*For 3" maximum stroke type 24 chambers

- f. The service-brake system in a compressed-air system shall contain an emergency-brake system that will activate when the air loss in the service-brake system reaches 20 to 40 pounds per square inch.
 - g. A school bus using a compressed-air or hydraulic-assist service-brake system shall be equipped with a signal located in the school bus driver's compartment that emits a continuous audible or visible warning to the school bus driver when:
 - i. The air pressure available in a compressed-air braking system is 60 pounds per square inch or less, or
 - ii. There is a loss of fluid flow from the main hydraulic pump or loss of electric source powering the back-up system in a hydraulic-assist system.
 - h. A school bus using a compressed-air service-brake system shall be equipped with one or two illuminated gauges located in the school bus driver's compartment that show the pounds per square inch of compressed air available for the operation of the brake.
 - i. A compressed-air brake system with a dry reservoir shall have a one-way valve that will prevent the loss of compressed air between the dry reservoir and the source of compressed air.
 - j. A brake system with a wet reservoir shall have a valve located at the bottom of the wet reservoir that operates automatically or can be operated remotely or manually to eject the moisture from the reservoir.
 - k. Compressed-air or hydraulic-assist brake lines and booster-assist lines shall be installed in a manner that prevents heat, vibration, and chafing damage.
 - l. The brake systems of Types C and D school buses shall be installed so the chassis components can be visually inspected to detect brake lining wear without removal of any of the chassis components.
5. Front bumper: The front bumper shall be positioned at the forward-most part of the school bus and extend to the outer edges of the school bus.
6. Child alert notification system: A school bus may be equipped with an electronic or mechanical child alert notification system. If a school bus is equipped with a child alert notification system, the device shall be installed in a manner that does not interfere with any other existing operating or electrical component. A child

- alert notification system in a school bus shall not have an override or bypass capability.
7. Clutch: The clutch torque capacity shall be equal to or greater than the engine torque output.
 8. Color: The chassis, including wheels and front bumper, shall be painted black. The hood and fenders shall be painted National School Bus Yellow as described in R13-13-107(6).
 9. Cooling system: A school bus shall be equipped with a cooling system that maintains the engine temperature operating range required to prevent damage to the school bus engine.
 10. Drive shaft: Each section of the drive shaft to the rear driving axle shall be protected by a metal guard around its circumference to reduce the possibility of the drive shaft penetrating through the school bus floor or dropping to the ground.
 11. Electrical system:
 - a. Battery:
 - i. The battery shall have a minimum cold-cranking capacity rating equal to the cranking current required by the engine for 30 seconds at 0° F. and a minimum reserve capacity rating of 120 minutes at 25 amperes.
 - ii. The battery shall have a higher capacity than specified in subsection (11) (a)(i) if optional equipment installed on the school bus requires the higher capacity.
 - iii. Because all batteries are to be secured in a sliding tray in the bus body as required by R13-13-107, chassis manufacturers shall mount batteries temporarily on the chassis frame, except that a van conversion or cutaway front-section chassis may be secured in accordance with the manufacturer's standard configuration. However, in all cases the battery cable provided with the chassis shall have sufficient length to allow some slack, and shall be of sufficient gauge to carry the required amperage.
 - b. Alternator:
 - i. All alternators shall conform to the recommended practices of Standard J180, January 2002 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, which is incorporated by reference and on file with the Department.
 - ii. All Type A-2 and Type B buses with a GVWR of 15,000 pounds or less shall have an alternator with a minimum of 130 amps.
 - iii. All Type A-2 and Type B buses with a GVWR over 15,000 pounds, and all Type C and D buses shall be equipped with a heavy-duty truck or bus-type alternator meeting Standard J180, which is incorporated by reference in subsection (b)(i), having a minimum output rating of 130 amps, and shall produce a minimum current output of 50% of the rating at engine idle speed. The alternator may be either pad-mounted or hinge-mounted.
 - iv. Buses equipped with an electrically powered wheelchair lift or air conditioning may be equipped with a device that monitors the electrical system voltage and advances the engine idle speed when the voltage drops

to, or below, a pre-set level.

v. A belt-driven alternator shall be capable of handling the rated capacity of the alternator with no detrimental effect on any other driven components.

vi. A direct-drive alternator may be installed instead of a belt-driven alternator.

vii. If the school bus is equipped with an air conditioning system, the alternator shall have a minimum charging rate of 160 amperes per hour.

viii. The alternator on a school bus shall contain a regulator to control the voltage to the battery.

c. Wiring:

i. All wiring shall conform to the recommended practices of Standard J1292, October 1981 (no later amendments or editions), published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.

ii. All wiring shall use a standard color or number coding and each chassis shall contain a wiring diagram that details the wiring of the chassis.

iii. The chassis shall be equipped with a connection to provide electrical power to the school bus. The connection shall be located on the chassis cowl or on the engine compartment of a school bus designed without a chassis cowl. The connection shall contain terminals for the main 100 ampere body circuit, tail lamps, right-turn signal, left-turn signal, stop lamps, backup lamps, and instrument panel lights. The instrument panel lights shall have a rheostat control.

12. Engine horsepower: The gross vehicle weight rating of a school bus shall not exceed 185 pounds for each engine horsepower as published by the manufacturer on a notice located on the school bus engine.

13. Exhaust system:

a. The exhaust pipe, muffler, and tailpipe shall be located under the school bus body and attached to the chassis.

b. The tailpipe shall be constructed of a corrosion-resistant tubing material at least equal in strength and durability to 16-gauge steel tubing.

c. The exhaust system on a gasoline-powered chassis shall be insulated from the fuel tank and fuel tank connections by a shield at any point where the exhaust system is 12 inches or less from the fuel tank or fuel tank connections.

14. Frame:

a. A school bus frame shall be of a design and strength capable of supporting the gross vehicle weight of the school bus.

b. A school bus frame shall not be altered for any purpose.

c. Holes in top or bottom flanges of frame rails are not permitted except as provided by the manufacturer. There shall be no welding to the frame rails except by the chassis or body manufacturer or the manufacturer's certified agent.

d. The school bus frame shall not be cracked, loose, sagging, or broken.

e. Brackets securing the cab or the body of the school bus to the frame shall not

- be loose, broken, or missing.
- f. The frame rail flanges shall not be bent, cut, or notched, except as specified by the manufacturer.
 - g. All accessories mounted to the school bus shall be secured as specified by the manufacturer.
 - h. Holes shall not be drilled in the top or bottom rail flanges, except as specified by the manufacturer.
15. Front fenders of a Type C school bus: The outer edges of the front fenders shall be wider than the outer edges of the front tires when the front wheels are in the straight-ahead position.
16. Fuel system:
- a. A school bus shall contain a fuel tank with a minimum 30-gallon capacity, with a minimum dispersion of 25 gallons of fuel to the engine. The fuel tank shall be vented to the outside of the school bus body so fuel spillage will not contact any part of the exhaust system.
 - b. On a Type B, Type C, or Type D school bus, no portion of the fuel system that is located outside of the engine compartment, except the filler tube, shall extend above the top of the chassis frame.
 - c. A fuel filter with replaceable element shall be installed between the fuel tank and engine.
 - d. The fuel line that supplies fuel to the engine shall be located at the top of the fuel tank.
17. Horn: A school bus shall be equipped with at least one horn capable of producing a sound level between 82 and 102 dB(A) when tested according to the Standard J377, March 2001 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
18. Instruments and instrument panel:
- a. The chassis shall be equipped with the following instruments:
 - i. Speedometer;
 - ii. Odometer that will give accrued mileage to seven digits, including tenths of miles;
 - iii. Voltmeter or ammeter;
 - iv. Oil pressure gauge;
 - v. Water temperature gauge;
 - vi. Fuel gauge;
 - vii. Upper beam head lamp indicator;
 - viii. Brake system signal as required by R13-13-106(4)(f);
 - ix. Turn signal indicator; and
 - x. Air pressure or hydraulic gauge.
 - b. The instruments shall be mounted on the instrument panel in the school bus driver's compartment and visible to the school bus driver while seated in the driver's seat.
 - c. The instrument panel shall be equipped with a rheostat switch that controls the illumination to the instrument panel and the gear shift selector indicator.

19. Oil filter: A replaceable element or cartridge-type oil filter shall be provided with a minimum capacity that meets or exceeds the capacity recommended by the manufacturer of the school bus engine.
20. Openings: All openings in the floorboard and in the fire wall between the chassis and passenger compartment shall be sealed.
21. Splash guards:
- a. A school bus shall be equipped with rear fender splash guards constructed of flexible rubberized material.
 - b. The splash guards shall be wide enough to cover the tire tread width, installed close enough to the tire tread surface to control side-throw of road surface material, and extend to within 8 inches of ground level.
22. Steering system:
- a. Power steering is required on all school buses manufactured after January 1, 1984.
 - b. Bracing extending from the center of the steering wheel to the steering wheel ring shall not be cracked or missing.
 - c. The distance of movement of the steering wheel between two points of resistance shall not be greater than the following when measured with the engine running:

<u>Steering wheel diameter</u>	<u>Power steering</u>	<u>Manual steering</u>
<u>16 in. or less</u>	<u>6 3/4 inches</u>	<u>4 1/2 in.</u>
<u>18 in.</u>	<u>7 1/8 inches</u>	<u>4 3/4 in.</u>
<u>20 in.</u>	<u>7 7/8 inches</u>	<u>5 1/4 in.</u>
<u>22 in.</u>	<u>8 5/8 inches</u>	<u>5 3/4 in.</u>

- d. There shall be clearance of at least 2 inches between the steering wheel and any object in the driver's compartment.
 - e. A non-adjustable steering column shall be fastened in a fixed position. An adjustable steering column shall be equipped with a locking mechanism.
 - f. The steering gear housing shall not have loose or missing mounting bolts. There shall not be cracks in the gear housing or its mounting brackets.
 - g. The connecting arm on the steering gear power source shall not be loose.
 - h. The steering wheel shall turn freely in both directions.
 - i. The steering system shall have a means for lubrication of all wear-points.
23. Suspension:
- a. Shock absorbers:
 - i. A school bus shall be equipped with front and rear double-acting shock absorbers. Replacements to shock absorbers shall be made according to the specifications of the manufacturer's part number as stamped on the shock absorber.
 - ii. If a school bus is manufactured with tandem rear axles, rear shock absorbers are not required.
 - b. Suspension system:

- i. Capacity of suspension assemblies shall be commensurate with the chassis manufacturer's gross vehicle weight rating.
- ii. If leaf-type rear springs are used, they shall be a progressive rate or multi-stage design.

24. Tires and wheels:

- a. Tires and wheels shall have an accumulated load rating at least equal to the gross vehicle weight rating.
- b. Dual rear tires shall be provided on all school buses that have a gross vehicle weight rating of more than 10,000 pounds.
- c. Each tire on a particular axle shall be the same size.
- d. All tires on a school bus shall be bias or all tires on a school bus shall be radial and shall not differ more than one size between front and rear axles.
- e. On a Type C or D school bus, a spare tire, if present, shall be in a carrier mounted outside the passenger compartment.

25. Transmission: The school bus transmission shall have no fewer than three forward speeds and one reverse speed.

26. Turning radius:

- a. A chassis with a wheelbase of 264 inches or less shall have a right and left turning radius of not more than 42 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.
- b. A chassis with a wheelbase of more than 264 inches shall have a right and left turning radius of not more than 44 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.

27. Weight:

- a. The gross vehicle weight of a school bus shall not exceed the chassis manufacturer's gross vehicle weight rating for the chassis as recorded on a notice located in the school bus driver's compartment.
- b. To calculate the gross vehicle weight of a school bus, add the chassis weight, the school bus body weight, the school bus driver's weight, and the total seated passenger weight.
 - i. For the purpose of calculation, the school bus driver's weight is 150 pounds.
 - ii. For the purpose of calculation, the passenger weight is 120 pounds per seated passenger.
- c. The weight distribution of a school bus on a level surface that is fully loaded according to the gross vehicle weight rating shall not exceed the front axle gross weight rating or rear axle gross weight rating as recorded on a notice located in the school bus driver's compartment.

R13-13-107. Minimum Standards for School Bus Body

The body of a school bus introduced to Arizona on or after May 31, 2008 shall meet the requirements of this Section. The body of a school bus introduced to Arizona before May 31, 2008 shall meet the requirements of this Section or shall be maintained in accordance with the manufacturer's original specifications.

1. Air conditioning system: The school bus may be installed with an air conditioning system. If installed, the air conditioning system shall:
 - a. Be of a mechanical vapor compression refrigeration type;
 - b. Be manufactured to conform to the requirements of Standard J639, June 2005 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department;
 - c. Have sufficient power for simultaneous cooling, circulating, and dehumidifying the air;
 - d. Be provided with refrigerant that is nontoxic, nonflammable, and non-explosive;
 - e. Have all power and grounding installed according to the manufacturer's specifications; and
 - f. Have exhaust system exit from the rear of the vehicle, and extend to, but not more than 2 inches beyond the outer edge of the rear bumper.
2. Aisle:
 - a. The center aisle of a school bus shall have a clearance of not less than 12 inches at the bottom of the seat cushion, increasing to 15 inches at the top of the seat backs.
 - b. Aisles to side emergency doors shall have a minimum clearance of 12 inches which may be achieved by using flip-up type seats.
3. Auxiliary fan:
 - a. An auxiliary fan, if installed, shall be placed in a location that does not obstruct the school bus driver's view of any mirror located on the school bus.
 - b. An auxiliary fan, if installed, shall have a 6-inch nominal diameter, with the fan blades covered by a protective cage.
 - c. Each installed auxiliary fan shall be controlled by a switch that is independent of any other electrical system.
4. Battery:
 - a. A battery shall be secured to a slide-out or swing-out tray in a vented compartment in the school bus body, so the battery is accessible to the outside for servicing. If the battery compartment has a door that is not removable, the door shall be secured by a fastening device when the door is in a closed position. If the battery compartment has a removable cover, the cover shall be secured by a fastening device when the cover is in place.
 - b. The word "Battery" shall be printed in unshaded black letters that are no more than 2 inches in height on the battery-compartment door or cover or immediately above the battery-compartment door or cover.
 - c. Buses with a battery located under the engine hood are exempt from these

provisions.

5. Belt cutter: A school bus with passenger seat belts shall be equipped with a belt cutter having a full width handgrip and a protected, replaceable or non-corrodible blade. The belt cutter shall be mounted in a location accessible to the seated driver, and in an easily detachable manner. The belt cutter shall be accessible only to the school bus driver.

6. Color:

a. A school bus body shall be painted National School Bus Yellow according to the following specifications and tolerances:

<u>Description</u>	<u>Reflectance</u>	<u>Chromaticity</u>	
		<u>X</u>	<u>Y</u>
<u>Centroid</u>	<u>41.5%</u>	<u>.5139</u>	<u>.4434</u>
<u>V+ Light Limit</u>	<u>42.9%</u>	<u>.5139</u>	<u>.4427</u>
<u>V- Dark Limit</u>	<u>39.8%</u>	<u>.5133</u>	<u>.4422</u>
<u>H+ Green Limit</u>	<u>41.6%</u>	<u>.5123</u>	<u>.4368</u>
<u>H- Red Limit</u>	<u>41.7%</u>	<u>.5168</u>	<u>.4489</u>
<u>C+ Vivid Limit</u>	<u>41.5%</u>	<u>.5188</u>	<u>.4457</u>
<u>C- Weak Limit</u>	<u>41.5%</u>	<u>.5095</u>	<u>.4405</u>

b. The bumpers, lamp hoods, lettering, and rub rails on a school bus body shall be black.

7. Crossing control arm:

a. A school bus may be equipped with a crossing control arm. If installed, all components and all connections of the crossing control arm shall:

i. Meet the requirements set forth in Standard J1133, November 2004 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department;

ii. Be mounted on the right side of the front bumper;

iii. When opened, extend in a line parallel to the body side and aligned with the right side wheel;

iv. Be weatherproofed;

v. Incorporate system connectors (electrical, vacuum, or air) at the gate and be easily removable to allow for towing of the school bus;

vi. Be constructed of non-corrodible or nonferrous material, or treated in accordance with the school bus body sheet metal specification;

vii. Have no sharp edges or projections that could cause injury or be a hazard to students;

viii. Be rounded at the end of the crossing control arm;

ix. Extend approximately 70 inches (measured from the bumper at the arm assembly attachment point) when in the extended position;

x. Not extend past the end of the bumper when in the stowed position;

xi. Extend simultaneously with the stop signal arm, activated by the stop signal arm control; and

xii. Include a device attached to the bumper near the end of the arm to automatically retain the arm while in the stowed position. The device shall not interfere with the normal operations of the crossing control arm.

b. An automatic recycling interrupt switch may be installed for temporarily disabling the crossing control arm.

8. Defrosters:

a. Defrosting and defogging equipment shall direct a flow of heated air onto the windshield, the window to the left of the driver, and the glass in the viewing area directly to the right of the driver to eliminate frost, fog, and snow.

b. The defrosting system shall conform to Standards J381 September 2000 (no later amendments or editions) and J382, September 2000 (no later amendments or editions), both published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001 incorporated by reference and on file with the Department.

c. An auxiliary fan shall not to be used in place of a defrosting and defogging system.

d. A portable heater shall not be used in place of a defrosting or defogging system.

9. Electrical wiring:

a. All electrical wiring on a school bus shall conform to the standards contained in Standard J1292, October 1981 (no later amendments or editions), published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001 and incorporated by reference and on file with the Department.

b. Electrical wiring that is coded by color shall be coded as follows:

- i. Left Rear Directional Light: Yellow
- ii. Right Rear Directional Light: Dark Green
- iii. Stoplights: Red
- iv. Back-up Lights: Blue
- v. Taillights: Brown
- vi. Ground: White
- vii. Ignition Feed, Primary Feed: Black

c. Circuits: Electrical wiring circuits shall be protected by a fuse, circuit breaker, or Field Effect Transistor and shall be coded by number or color on an electrical wiring diagram located in the driver's compartment or the electrical access panel door. There shall be at least seven circuits as follows:

- i. Head, tail, stop, and instrument panel lamps;
- ii. Clearance and step-well lamps;
- iii. Dome lamps;
- iv. Ignition and emergency door signal;
- v. Turn signal lamps;
- vi. Alternately flashing signal lamps; and
- vii. Heaters and defrosters.

d. All electrical wires passing through metal openings shall be protected by a non-metal grommet.

- e. Electrical wires not enclosed within the school bus body shall be fastened at intervals of not more than 18 inches.
10. Emergency exits: A door, push-out window, or roof hatch used as an emergency exit shall conform to the following:
- a. On the inside and outside of a school bus, the words “EMERGENCY EXIT” or “EMERGENCY DOOR” shall be printed in black, unshaded letters at least 2 inches high above an emergency door or push-out window and at least 1 inch high on a roof hatch.
 - b. Each emergency exit shall open toward the exterior of the school bus and shall be labeled within 6 inches of the interior release mechanism with black lettering at least 3/8 of an inch high instructing how the exit is to be opened.
 - c. On a Type A school bus with double rear doors used as emergency exits, the rear doors shall be secured with upper, center, and lower latches to the door frame.
 - d. The upper portion of each door used as an emergency exit shall be equipped with a window made of safety glass with an area not less than 400 square inches. A door located in the rear end of the school bus used as an emergency exit shall also contain a lower window panel of safety glass of not less than 350 square inches. A Type A school bus that contains double rear doors used as emergency exits is exempt from this provision.
 - e. There shall be no steps on the outside of the school bus leading to an emergency exit.
 - f. A header pad filled with a material to protect against injury shall be attached to the top edge of the frame of a door used as an emergency exit. The header pad shall be a minimum of 3 inches wide and 1 inch thick and extend the full width of the door opening.
 - g. Each emergency exit shall be equipped with a latch that opens from the inside of the school bus and is connected to an electrical buzzer audible in the driver’s compartment that actuates when the latch is being released.
 - h. Except for interlock/barrel bolt devices, if a lock is installed on an emergency exit, the lock shall be secured only by using a key and shall deactivate the ignition system of the school bus when locked.
11. Emergency equipment:
- a. All emergency equipment shall be mounted in the driver’s compartment or adjacent to either side of the service entrance and shall be readily accessible. If the emergency equipment is mounted within a closed compartment, the compartment shall be clearly labeled as containing the emergency equipment.
 - b. Fire extinguisher:
 - i. A school bus shall be equipped with a minimum of one 5-pound pressurized, dry, chemical fire extinguisher of a type rated not less than 2A-10-BC by the Underwriter’s Laboratories, Inc., as described by the National Fire Protection Association, Inc., One Batterymarch Park, Quincy, MA 02269, in NFPA 10: Standard for Portable Fire Extinguishers, published in 2006 (no later amendments or editions), incorporated by reference and on file with the Department.

- b. Each school bus owned by a school or a private company shall display either the name of the school and school number, if any, or the name of the private company on each exterior side of the school bus between the rub rails at the center line and seat cushion levels in black unshaded letters that are at least 5 inches in height. Additionally, a school bus owned by a private company that displays the name of the school and school number as described above, may display the company's name on each exterior side of the school bus below the floor line in black unshaded letters that are a maximum of 2 inches in height.
 - c. An identification number assigned to a school bus by an owner shall be placed on the front and rear bumpers of the school bus and on each exterior side of the school bus below the floor line rub rail and forward of the centerline of the school bus. The identification number on each bumper shall be National School Bus Yellow. The identification number on each exterior side shall be black. Each identification number shall be a minimum of 5 inches in height.
 - d. In addition to an identification number, a school bus may be identified by an emblem placed on the loading side of the front bumper or the exterior wall of the loading side below the floor line rub rail and forward of the center line of the school bus, or both. The emblem shall be painted or decaled on or attached to a magnetic backing.
 - e. In addition to an identification number, a school bus may display a route identification sign. If displayed, the route identification sign shall:
 - i. Be installed with a heavy duty Velcro, magnetic, screw-type or similar fixture;
 - ii. Be a minimum of 5 inches in height; and
 - iii. Be located on a flat surface of the bus body, excluding glass.
16. Interior: If the ceiling is constructed with overlapping panels, the first panel placed in the ceiling shall be overlapped by the following panel and each panel shall consecutively overlap to the rear end of the school bus. Exposed edges in the interior of the school bus shall be beaded, hemmed, flanged, or rounded to eliminate sharp edges.
17. Lamps and signals:
- a. All lamps on the exterior of a school bus shall conform to the provisions contained in 49 CFR 393.9 et seq. of the Federal Motor Carrier Safety Regulations, October, 2006 (no later amendments or editions) published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department.
 - b. Interior lamps shall be provided that illuminate the center aisle and step well.
 - c. Alternately flashing signal lamps:
 - i. When a school bus is equipped with a four-lamp system, the system shall consist of two red alternately flashing signal lamps located one on the left and one on the right above the rear windows of the school bus and two red alternately flashing signal lamps located one on the left and one on the right above the windshield.
 - ii. When a school bus is equipped with an eight-lamp system, the four red

- alternately flashing signal lamps shall be installed as described in subsection (14)(c)(i) and the four amber alternately flashing signal lamps shall be installed as follows: one amber alternately flashing signal lamp shall be located adjacent to each red alternately flashing signal lamp, at the same level, but closer to the vertical centerline of the school bus. The system of red and amber alternately flashing signal lamps shall be wired so the amber alternately flashing signal lamps are activated manually and the red alternately flashing signal lamps are activated automatically or manually.
- iii. Except for LED lamps, each alternately flashing signal lamp shall be covered by a lamp hood.
- d. Turn signal and stop lamps:
- i. Except as provided in subsections (17)(d)(iii) and (17)(d)(iv), all school buses shall be equipped with amber side-mounted turn signals. The turn signal lamp on the left side of the bus may be mounted rearward of the stop signal arm and the turn signal lamp on the right side may be mounted rearward of the entrance door.
- ii. Except on Type A school buses, a school bus body shall be equipped with rear turn signal lamps that are at least 7 inches in diameter, or if the lamp shape is other than round, a minimum of 38 square inches of illuminated area. The lens area of the rear turn signal lamps on Type A school buses shall be at least 21 square inches. The rear turn signal lamps shall be connected to the hazard warning switch located in the driver's compartment to allow the school bus driver to activate simultaneous flashing of turn signal lamps when needed as a traffic hazard warning. The rear turn signal lamps shall be located to the far left and right sides of the flat surface of the rear of the school bus body and below the rear window.
- iii. A Type C school bus may have a double-faced turn signal lamp that is visible from the front and rear of the school bus and mounted on the tops or sides of both front fenders or may have a turn signal lamp mounted on the left and right sides of the grill and may have a turn signal lamp mounted on each side of the school bus body between the window line and the second rub rail and forward of the vertical centerline.
- iv. A Type D school bus may have a turn signal lamp mounted at the front of the school bus body above each head lamp and may have a turn signal lamp mounted on each side of the school bus body between the window line and second rub rails and forward of the vertical centerline of the school bus.
- v. A 7 inch diameter stop lamp, or if the lamp shape is other than round, a stop lamp with a minimum of 38 square inches of illuminated area shall be located toward the centerline and adjacent to each of the rear turn signal lamps.
- e. Backup lamps: A school bus shall be equipped with two backup lamps with clear lenses, located one on the right and one on the left rear panels below the rear windows.

- f. White flashing strobe lamp: If used on a school bus, a strobe lamp shall have a single clear lens that emits light 360 degrees around its vertical axis and shall be located on the longitudinal centerline of the school bus roof 1/3 to 1/2 of the distance forward from the rear of the school bus body unless this placement restricts the view of the strobe lamp.
 - i. If the view of the strobe lamp is restricted when the strobe lamp is located 1/3 to 1/2 of the distance forward from the rear of the school bus body, the strobe lamp may be mounted immediately to the rear of the roof hatch.
 - ii. The strobe lamp shall be controlled by a manual switch located in the driver's compartment.
 - iii. A pilot lamp shall be located in the driver's compartment to show the school bus driver that the strobe lamp is activated.
18. Mirrors:
- a. Interior mirror: The interior mirror shall be made of either laminated glass or glass bonded to a backing that will retain the glass in the event of breakage. The interior mirror in Types B, C, and D school buses shall be a minimum of 6 inches in height and 30 inches in length surrounded by a frame with rounded corners. The interior mirror in Type A buses shall be a minimum of 6 inches in height and 16 inches in length.
 - b. Exterior mirrors: A school bus shall comply with the requirements contained in 49 CFR 571.111, October 2006 (no later amendments or editions), published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department.
19. Noise suppression switch: A school bus shall be equipped with a manual noise suppression switch. Identification shall be provided on or adjacent to the switch, in order to clearly state its purpose and distinguish it from other controls. This switch shall be an on-off type that deactivates body equipment that produces noise, including, at least, the AM-FM radio, heaters, air conditioners, fans, and defrosters. This switch shall not deactivate safety systems, such as windshield wipers or lighting systems.
20. Overall length: The overall length of a school bus shall not exceed 45 feet including accessories.
21. Overall width: The overall width of a school bus shall not exceed 102 inches excluding mirrors.
22. Rear bumper:
- a. The rear bumper shall be made of a minimum of 3/16 inch thick pressed steel that is a minimum of 8 inches in total height.
 - b. The rear bumper shall be wrapped around the back corners of the bus and shall extend toward the front of the school bus for at least 12 inches as measured from the rear-most point of the school bus body at the floor line.
 - c. The rear bumper shall be attached to the chassis frame and braced to support the rear corners of the bumper.
 - d. The rear bumper shall extend at least 1 inch beyond the rear-most part of the school bus body as measured at the floor line.

- e. The rear bumper shall not be equipped with footholds or handles.
 - f. A Type A school bus equipped with the chassis manufacturer's rear bumper is exempt from subsections (22)(a) through (22)(c).
23. Restraining barrier:
- a. The restraining barrier shall be a minimum of 38 inches high as measured from the interior floor of the school bus to the top of the restraining barrier.
 - b. The restraining barrier shall be the same width as the seat directly behind the restraining barrier.
24. Rub rails:
- a. There shall be no fewer than two rub rails located on a school bus as follows:
 - i. One rub rail shall be located on each side of the school bus approximately at seat cushion level and shall extend from the rear post of the service door frame completely around the school bus body, excluding the emergency door, to the front post of the school bus driver's window.
 - ii. One rub rail shall be located on each side of the school bus approximately at the floor line and shall extend from the rear post of the service door frame to the rear corner post of the school bus body and from the front post of the school bus driver's window to the rear corner post on the driver's side
 - b. Rub rails are not required on emergency doors, special-service entrance door, access panels and compartment doors, and wheel well openings.
 - c. Each rub rail shall be attached on the outside of the school bus body at each structural post in the school bus body.
 - d. Each rub rail shall be a minimum of 4 inches in width and constructed of corrugated or ribbed 16-gauge steel.
25. Seat belt for school bus driver: A seat belt for the school bus driver shall be installed in the driver's compartment. The seat belt shall be equipped with a retractor on each side of the school bus driver's seat to keep the seat belt retracted and off the floor when not in use.
26. Seats:
- a. Each seat shall have a minimum depth of 15 inches measured from the front of the seat cushion to the seat back.
 - b. Each seat shall be a minimum of 38 inches in height measured from the interior floor of the school bus to the top of the back cushion.
 - c. Seat spacing shall meet the requirements of 49 CFR 571.222, October 2006 (no later amendments or editions), published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D. C. 20402-9328, incorporated by reference and on file with the Department. Seat spacing shall not be less than 24 inches between the front of a seat back cushion to the back surface of the cushion on the preceding seat. Seat spacing shall be measured at cushion height, at the center of the seat, on a plane parallel to the center line of the bus. The seat upholstery may be placed against the seat cushion padding, but without compressing the padding, before measurement is taken.
 - d. The school bus driver's seat shall be adjustable, without the use of tools, both

vertically and horizontally for a minimum of 4 inches. Seats with vertical adjustments are not required on Types A and B school buses.

27. Service door:

- a. The service door shall be located on the right side of the school bus opposite the school bus driver and within direct view of the school bus driver when seated in the school bus driver's seat. Types A and B school buses are exempt from this provision.
- b. The service door shall have a minimum horizontal opening of 24 inches and a minimum vertical opening of 68 inches. Type A school buses shall have a service door with a minimum opening of 1200 square inches.
- c. Windows in the upper and lower panels of the service door shall be made of safety glass. The bottom of each lower window panel shall be no more than 10 inches from the top surface of the lower step of the service entrance. The top of each upper window panel shall be no more than 6 inches below the top of the service door. Type A buses are exempt from this provision.
- d. To protect passengers' fingers, a flexible rubber material shall be attached by number 10 3/4 inch metal screws to the opening and closing edges of the service door. Type A school buses are exempt from this provision.
- e. The service door shall open towards the exterior of the school bus. A Type A school bus is exempt from this provision if the service door is provided by the school bus chassis manufacturer.
- f. A header pad, filled with a material to protect against injury, shall be attached to the top edge of the frame of the service door. The header pad shall be at least 3 inches wide and 1 inch thick and extend the full width of the service entrance.
- g. A Type A school bus with the chassis manufacturer's standard service entrance is exempt from subsections (27)(a) through (27)(d).

28. Steps:

- a. The risers of the steps in the service entrance shall be equal. When plywood is laid over the steel floor of the school bus, the height of the top step may be increased by the thickness of the plywood.
- b. The first step at the service entrance shall be no less than 10 inches and no more than 16 inches from the ground.
- c. Steps shall be enclosed in the school bus body.
- d. Steps shall not extend beyond the side of the school bus body.
- e. A handrail not less than 10 inches in length shall be provided inside the doorway.

29. Step treads:

- a. All steps, including the floor-line platform area, shall be covered with ribbed or non-skid floor-covering material that is mounted on a metal plate.
- b. The metal back of the step tread shall be a minimum 24-gauge cold rolled steel and shall be permanently bonded to the ribbed or non-skid material.
- c. If ribbed material is used, the ribbed design shall run from the risers toward the service entrance. Each step tread shall have a 1 1/2 inch white nosing.

30. Stirrup steps: There shall be a handle and at least one folding stirrup step or

recessed foothold located on each side of the front of a school bus for accessibility for cleaning the windshield and lamps. Type A school buses are exempt from this provision.

31. Stop signal arm:

- a. School buses shall be equipped with a stop signal arm on the left side of the school bus body that extends 90° from the school bus body when opened.
- b. The stop signal arm shall be either air or electrically driven, and meet the requirements of Standard J1133, November 2004 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
- c. The stop signal arm shall be an 18-inch octagon, constructed of a red material that reflects light, with the word “STOP” printed on both sides in white letters not less than 5 inches high. Additionally, the word “STOP” may be illuminated by a light-emitting diode system on both sides of the stop signal arm.

32. Sun shield: An interior adjustable transparent sun shield or visor not less than 6 inches x 30 inches with a finished edge shall be installed over the windshield in the driver’s compartment. School buses with a gross vehicle weight rating of 10,000 pounds or less are exempt from this provision.

33. Tailpipe:

- a. The tailpipe shall extend to, but not more than 2 inches beyond, the outer edge of the rear bumper;
- b. The tailpipe shall exit in the rear of the vehicle behind the rear drive axle, and shall be placed according to the manufacturer’s specifications; and
- c. The tailpipe shall not exit beneath any fuel filler location or beneath any emergency door.

34. Undercoating:

- a. The entire underside of the school bus body, including floor sections, cross member and below-floor-line side panels, shall be coated with rust-proofing material for which the material manufacturer has issued to the bus body manufacturer notarized certification that materials meet or exceed all performance and qualitative requirements of paragraph 3.4 of Federal Specification TT-C-520B, Coating Compound, Bituminous, Solvent Type, Underbody (For Motor Vehicles), February 2, 1973 (no later amendments or editions), published by the General Services Administration acting as an agent for the Superintendent of Documents, Washington D.C. 20402, and incorporated by reference and on file with the Department. Modified test procedures shall be used for the following requirements:
 - i. Salt spray resistance – test modified to 5% salt and 1,000 hours,
 - ii. Abrasion resistance, and
 - iii. Fire resistance.
- b. Test panels shall be prepared in accordance with paragraph 4.6.12 of Federal Specification TT-C-520B, with a modified procedure requiring that the test shall be made on a 48-hour air-cured film at a thickness recommended by the

- material manufacturer.
- c. Undercoating is not required if the underside of the school bus is constructed of noncorrosive material.
 - d. The undercoating material shall be applied with suitable airless or conventional spray equipment to the recommended film thickness and shall show no evidence of voids in the cured film.
35. Ventilation: An immovable, non-closing exhaust ventilator shall be installed in the school bus roof.
36. Wheel housing:
- a. The wheel-housing opening shall be large enough to allow for the removal of the tire and wheel.
 - b. The wheel housing shall be constructed of 16-gauge steel or fiberglass of equal strength and sealed to the school bus floor.
 - c. The wheel housing shall not extend more than 12 inches above the floor inside the school bus body and shall not extend into the emergency door opening.
 - d. The wheel housing shall provide clearance for tire chains installed on the tires of the driving wheels.
37. Windows: Each side window in the passenger compartment of a school bus body shall provide an unobstructed opening of at least 190 square inches when the window is open.
38. Windshield washer system: A windshield washer system that provides an application of cleaning solution to the windshield shall be installed.
39. Windshield wipers:
- a. A windshield wiping system with a minimum of two speeds shall be provided.
 - b. The windshield wipers shall be operated by one or more air or electric motors.

R13-13-108. Inspection, Maintenance, and Alterations

- A. A school bus shall be inspected by the Department before the school bus is introduced into Arizona to transport passengers.**
- 1. After inspecting a school bus, the Department shall place a decal that contains a number used by the Department to identify the school bus above the school bus driver's side window in the driver's compartment. This decal shall not be removed from the school bus while it is operated in Arizona except by the Department. Before the school bus is transferred or retired from service, the school bus owner shall contact the Department to have this decal removed.**
 - 2. If the Department finds that no major defect exists on a school bus, the Department shall place a safety inspection decal that contains the month and year of inspection on the right side of the centerline of the windshield of the school bus in a position that does not interfere with the school bus driver's line of vision.**
 - 3. If the Department finds a major defect on the school bus, the Department shall place the school bus out of service. Before the school bus may be placed back into service, the Department shall reinspect the school bus to determine that the major defect has been corrected. If the major defect has been corrected, the Department shall place a safety inspection decal on the school bus in accordance with subsection (A)(2).**
 - 4. If the Department finds a minor defect on a school bus, the Department shall issue an inspection order, but the school bus may be operated to transport passengers while the minor defect is being corrected. A copy of the inspection order shall be returned to the Department within 15 working days from the date of inspection and shall show that the minor defect has been corrected unless, in accordance with the provisions of subsection (A)(5), the school bus owner obtains an extension of time to correct the minor defect.**
 - 5. Upon receipt of a written request from the school bus owner, the Department shall grant one or more extensions of time to correct a minor defect if:**
 - a. The school bus owner submits to the Department written documentation that the:**
 - i. School bus owner's action or inaction did not cause or contribute to the delay in completing the repair;**
 - ii. School bus owner has secured a written estimated expedited delivery or completion date from the provider of the materials or services required to complete the repair; and**
 - iii. School bus owner made reasonable attempts to secure the materials or services, or materials or services of equivalent quality, at a substantially similar price from alternate sources; and**
 - b. The Department determines that an extension of time to correct the minor defect will not increase the probability of an accident involving the school bus or passengers or the risk of injury to the school bus driver or passengers.**
 - 6. Each extension of time shall be for 60 days or less. The Department shall determine the length of each extension of time after giving consideration to the information provided under subsection (A)(5)(a). When the minor defect is**

corrected, the school bus owner shall return to the Department a copy of the inspection order issued by the Department.

7. If a minor defect on a school bus is not corrected within 15 working days or at the end of an extension period, if applicable, the Department shall remove the safety inspection decal and the school bus shall be placed out of service until further inspection by the Department shows that the minor defect is corrected.

B. The Department shall use the following criteria to determine whether a major or minor defect is present on a school bus introduced into Arizona on or after February 16, 1996. For a school bus introduced into Arizona before that date, the Department shall determine whether the school bus is in an unsafe condition by using the following criteria or those at A.A.C. R17-4-612. A defect that causes a school bus introduced into Arizona before February 16, 1996 to be in an unsafe condition shall be deemed a major defect as defined in this Article.

<u>INSPECTION ITEM</u>	<u>MAJOR DEFECT</u>	<u>MINOR DEFECT</u>
<u>Air conditioning system, if installed</u>	<u>Missing hose covers or trim panels</u> <u>Missing air conditioning louvres</u> <u>Loose or missing air conditioning mounting fasteners</u> <u>Refrigerant leaks from evaporators or hoses in the interior of the bus</u> <u>Broken compressor brackets</u> <u>Broken mounting bolts</u> <u>Electrical wiring hanging out of evaporator covers</u> <u>Missing evaporator covers</u> <u>Missing air diffusers</u> <u>Evaporators not secured to ceiling or bulkhead</u>	<u>Broken or loose evaporator covers</u> <u>Unsecured refrigerant hoses</u> <u>Loose, missing or severely cracked belts</u>
<u>Alarm, back-up, if installed</u>		<u>Low volume</u> <u>Not working</u>
<u>Auxiliary fan, if installed</u>	<u>Obstructs school bus driver's view of any mirror</u> <u>Used in place of defrosting or defogging system</u> <u>Not covered by protective cage</u>	<u>Incorrect size</u> <u>Not controlled by independent switch</u>
<u>Battery (Types C and D buses only)</u>	<u>Not mounted according to the manufacturer's instructions</u>	<u>Incorrect or no identification</u>
<u>Belt cutter</u>	<u>Missing</u>	
<u>Body fluid cleanup kit</u>	<u>Absence of body fluid cleanup kit</u> <u>Any item missing from body fluid cleanup kit</u>	

<u>Brakes, compressed air</u>	<u>Inoperative or missing visual or audible low air signal</u> <u>Compressed-air gauge missing</u> <u>Grease or oil leakage into brake system</u> <u>Exposed or damaged ply on any air hose</u> <u>Air capacity less than 90 pounds per square inch at idle speed</u> <u>Wet-reservoir valve missing or inoperative</u> <u>Leaking, cracked, or broken hose or connection</u> <u>Audible air leak</u> <u>Pushrod exceeds limitation</u> <u>Low-air warning system does not activate at 60 psi and remains activated at less than 60 psi</u>	
<u>Brakes, hydraulic-assisted</u>	<u>Inoperative or missing visual or audible signal</u>	
<u>Brakes, emergency-brake system</u>	<u>Inoperative</u> <u>Does not activate when service brake system reaches 20 to 40 pounds psi</u>	
<u>Bumpers</u>	<u>Break or rip</u> <u>Loose bumper</u> <u>Foothold or handle present on rear bumper</u>	<u>Not painted black</u>
<u>Cooling system</u>		<u>Leak in system</u> <u>Fluid level in radiator not full</u>
<u>Crossing control arm, if installed</u>	<u>Has sharp edges or projections that could injure a student</u> <u>Will not retract</u>	<u>Not working</u> <u>Fails to open completely</u>
<u>Defroster</u>	<u>Inoperative</u> <u>Ventilation opening blocked</u>	

<u>Drive shaft</u>	<u>Absence of protective metal guard installed by the manufacturer around the drive shaft to any driving axle</u>	
<u>Dust boots</u>	<u>Missing, torn, split, or loose around floor-mounted gear shift, parking brake handle, or steering column.</u>	
<u>Emergency warning devices</u>	<u>Having fewer than two operable</u>	<u>Missing one</u>
<u>Emergency door</u>	<u>Inoperative latch</u> <u>Broken or missing portion of seal around door</u> <u>Window not of safety glass</u> <u>Inoperative warning device</u> <u>Lock is not the ignition shut-off type</u>	<u>No header pad</u>
<u>Emergency exit</u>	<u>Inoperative warning device or latch on all emergency</u> <u>exits except roof exit</u> <u>Not properly identified</u> <u>Header pad missing or damaged</u> <u>Broken seal around window</u>	<u>Inoperative roof exit</u>
<u>Engine compartment</u>	<u>Inoperative hood latch</u>	<u>Deterioration of hose, belt, or wiring</u> <u>Deterioration of battery hold-down clamp, corrosive acid buildup on terminal</u>
<u>Exhaust system</u>	<u>Exhaust leak</u> <u>Exhaust tailpipe extends more than 2 inches beyond the outer edge of the rear</u> <u>bumper or fails to terminate flush with the outside edge of the school bus body in the rear</u> <u>of the school bus</u>	<u>Exhaust pipe bracket not attached to the chassis and the tailpipe</u> <u>End of tailpipe pinched or bent</u>

<u>Exterior paint</u>		<u>Exposed metal or base primer</u> <u>Incorrect color</u>
<u>Fire extinguisher</u>	<u>Absence of fire extinguisher</u> <u>Not at full charge</u>	<u>Not mounted in required position</u>
<u>First-aid kit</u>	<u>Absence of first-aid kit</u> <u>Three or more items missing from first-aid kit</u>	<u>One or two items missing from first-aid kit</u>
<u>Frame</u>	<u>Crack in frame</u> <u>Cracked, loose, or missing body mount or body-mount bolt</u> <u>Welded repair not performed by body or chassis manufacturer or manufacturer's certified agent</u>	
<u>Fuel system</u>	<u>Fuel tank not mounted to the chassis frame or not vented to outside of engine compartment</u> <u>Fuel system extends above chassis frame (does not apply to filler tube or Type A bus)</u> <u>Fuel tank bracket cracked or broken</u> <u>Leaking tank or fuel line</u> <u>Fuel line attached to bottom of fuel tank</u> <u>Missing or improper fuel cap</u>	
<u>Handrail</u>	<u>Handrail does not pass the inspection procedure described in R13-13-107(13)</u>	
<u>Heating system</u>	<u>Heater missing or inoperative</u> <u>Heater line in interior of school bus not covered by protective shield</u> <u>No shutoff valve</u>	<u>Unsecured heater hose</u> <u>Inadequate heat-producing capacity</u>
<u>Horn</u> <u>(Air or electrical)</u>	<u>Missing or inoperative</u>	

<u>Instrument panel</u>	<u>Missing or inoperative ignition power-deactivation switch if the ignition does not use a key.</u> <u>Any inoperative gauge or switch, except auxiliary fan switch</u> <u>Improper illumination</u>	<u>Inoperative auxiliary fan switch</u>
<u>Interior, aisles</u>	<u>Incorrect clearance</u>	
<u>Interior, seats</u>	<u>Broken, cracked, exposed, or loose seat frame</u> <u>Screw or mounting bolt missing</u>	
<u>Interior, floor covering</u>	<u>Hole</u> <u>Improper material</u> <u>Improperly bonded</u> <u>Loose metal trim</u>	
<u>Lamps, clearance</u>	<u>Inoperative</u> <u>Cracked, broken, or missing lens</u>	<u>Incorrect color</u> <u>Dust behind lens</u>
<u>Lamps, head</u>	<u>Low beam inoperative</u> <u>Not mounted as required by 49 CFR 393.24</u> <u>Both high beams inoperative</u>	<u>One high beam inoperative</u> <u>Inoperative dimmer switch on a bus not operated when head lamps are required</u> <u>Cracked, broken, or missing lens</u>
<u>Lamps, back-up</u>	<u>Inoperative</u>	<u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, interior Over aisle</u>		<u>Inoperative</u> <u>Cracked, broken, or missing lens</u>
<u>Lamps, interior Over step-well</u>	<u>Inoperative</u>	<u>Cracked, broken, or missing lens</u>
<u>Lamps, turn signal</u>	<u>Inoperative</u>	<u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u> <u>Incorrect size</u> <u>Incorrect location</u>

<u>Lamps, strobe, if installed</u>	<u>Pilot or strobe lamp missing or inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Incorrect color</u> <u>Incorrect location</u>	
<u>Lamps, identification</u>		<u>Inoperative</u> <u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, hazard</u>	<u>Inoperative</u>	
<u>Lamps, stop</u>	<u>Both inoperative</u>	<u>One inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, tail</u>	<u>Both inoperative</u>	<u>One inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, side marker</u>		<u>Inoperative</u> <u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, alternately flashing signal</u>	<u>One or more inoperative lamps</u>	<u>Incorrect color</u> <u>Lamp hood missing</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lettering and numbering</u>		<u>Missing any lettering or numbering</u> <u>Incorrect size, color, or location</u> <u>Unauthorized sign, letter, or object</u>

<u>Mirrors, cross-view</u>	<u>Missing</u> <u>Broken or loose mounting</u> <u>Broken or clouded glass</u>	
<u>Mirrors</u>	<u>Interior or exterior mirror missing</u> <u>Loose or broken mounting bracket</u> <u>Crack, break, or flaking of reflective material affixed to back of mirror glass</u> <u>Crack or break of mirror glass</u> <u>Loose or missing mounting bracket bolt or screw</u> <u>Incorrect size</u> <u>Do not meet safety standards contained in 49 CFR 571.111</u>	
<u>Miscellaneous</u>	<u>Object not secured inside the school bus</u> <u>Any item noted by the Department that could cause injury or present a danger to a passenger or school bus driver</u>	<u>Any item noted by the Department that needs to be repaired because it could interfere with the safe operation of the school bus but that is not a major defect</u>
<u>Noise suppression switch</u>	<u>Out of service</u> <u>Malfunctioning</u>	
<u>Parking brake</u>	<u>Inoperative, missing part, or not in proper adjustment</u>	
<u>Restraining barrier</u>	<u>Missing</u> <u>Incorrect size</u> <u>Loose</u>	
<u>Rub rails</u>	<u>Missing more than one</u> <u>Loose or dangling</u>	<u>Missing one</u> <u>Incorrect location</u> <u>Incorrect color</u> <u>Incorrect width</u>

<u>School bus body</u>	<u>Damage resulting in cut or rip to the exterior of school bus body</u> <u>Hole that would allow exhaust gases or dust to enter the passenger compartment</u> <u>Bolt attaching body to chassis loose, broken, or missing</u> <u>Exceeds length or width limitations</u>	<u>Absence of undercoating</u> <u>Loose or missing rivet, screw, or bolt</u>
<u>Seat belt</u>	<u>Absence of driver seat belt or inoperative driver seat belt buckle or retraction system</u> <u>Frayed seat belt material</u>	
<u>Seats</u>	<u>One or more missing</u> <u>Incorrect size or location</u> <u>Driver seat does not meet requirements for adjustment</u> <u>Loose seat cushions</u> <u>Exposed frame</u>	<u>Torn seat cushions</u>
<u>Service door</u>	<u>Incomplete closing of door assembly</u> <u>Does not contain safeguards to prevent accidental opening</u> <u>Window not made of safety glass</u> <u>Broken or cracked window panel</u> <u>Inoperative door control</u> <u>Does not open towards exterior of the school bus</u> <u>Absence of flexible material on outer edge of service door</u> <u>Absence of header pad</u>	

<p><u>Special needs school bus</u></p>	<p><u>Incorrect location or size of special-service entrance</u></p> <p><u>Incorrect size of special-service entrance door</u></p> <p><u>Window not made of safety glass</u></p> <p><u>Inoperative pressure switch</u></p> <p><u>No safety device in wheelchair lift</u></p> <p><u>No restraining barrier on wheelchair-lift platform</u></p> <p><u>Fails to provide wheelchair-securement device or anchorage</u></p> <p><u>Special-service entrance door does not open towards exterior of school bus (except Type A school bus)</u></p> <p><u>Wheelchair lift inoperable</u></p>	<p><u>Drip molding not installed above the special-service entrance</u></p> <p><u>Special-service entrance door not weather-sealed</u></p> <p><u>Incorrect color of door material or panel</u></p> <p><u>Lacks wheelchair emblem</u></p> <p><u>Missing fastening device for special-service entrance door</u></p> <p><u>Dome light missing or inoperative</u></p>
<p><u>Splash guards</u></p>		<p><u>Bottom edge of guard is more than 8 inches above the ground</u></p> <p><u>Does not cover entire width of single or dual tire</u></p> <p><u>Missing splash guard</u></p>
<p><u>Steering</u></p>	<p><u>Distance of movement not within parameters of R13-13-106(22)(c)</u></p> <p><u>Steering wheel does not move freely when turning the wheel</u></p> <p><u>Missing or cracked steering-wheel ring or bracing from center of steering wheel to steering-wheel ring</u></p> <p><u>Steering column not in a fixed position or locking mechanism missing or inoperative on adjustable steering column</u></p> <p><u>Steering column mounting bracket cracked or missing</u></p> <p><u>Loose or missing mounting bolt in steering gear housing</u></p> <p><u>Loose connecting arm on steering gear power source</u></p>	<p><u>Leakage of lubricant</u></p> <p><u>Power-steering belt cracked, frayed, or slipping</u></p> <p><u>Fluid does not fill power steering reservoir to the full level on the dipstick</u></p>

<u>Steps</u>	<u>Loose or missing grab handle in step-well</u> <u>Missing stirrup step or handle</u>	<u>Incorrect distance between steps</u> <u>Incorrect floor covering</u>
<u>Stop signal arm</u>	<u>Any stop arm inoperative</u> <u>Air leak</u> <u>If equipped with a light-emitting diode system, one or more lights missing</u> <u>Missing any stop arm</u>	<u>Incorrect lettering or color on stop signal arm</u> <u>Incorrect size of stop signal arm</u>
<u>Sun shield or visor (if required)</u>	<u>Broken, cracked, or missing</u>	<u>Not transparent</u>
<u>Suspension</u>	<u>Broken, damaged, or missing suspension part</u> <u>U-bolt loose, broken, cracked, or missing</u>	<u>Leaking shock absorber</u>

<u>Tires</u>	<u>Tires on same axle not of the same size</u> <u>Combination of bias and radial tires</u> <u>Tires vary more than one size between axles</u> <u>Tires not correct size for gross vehicle weight rating of school bus</u> <u>Single rear tire on school bus with gross vehicle weight rating of more than 10,000 pounds</u> <u>Regrooved, recapped, or retreaded tire mounted on a front wheel</u> <u>Tread groove depth less than 4/32 of an inch, measured in a tread groove on a tire on a front wheel</u> <u>Tire is mounted or inflated so it comes in contact with any part of the school bus or other tire</u> <u>Tread groove depth less than 2/32 of an inch, measured in a tread groove on a tire on a rear wheel</u> <u>Bump, knot, or bulge present on any tire</u> <u>Sidewall is cut, worn, or damaged to the extent that ply cord is exposed</u> <u>Separation of tread from tire casing</u> <u>Exposed ply or belting on any tire</u> <u>Flat tire or audible leak from a tire on any wheel</u> <u>If present, spare tire on Type C or D school bus not mounted outside passenger compartment</u>	
<u>Ventilation</u>	<u>Non-closing exhaust ventilator missing</u>	
<u>Wheel housing</u>	<u>Incorrect size or construction of wheel housing or opening</u>	

<u>Wheels</u>	<u>Not correct size for gross vehicle weight rating of school bus</u> <u>Loose or missing lug nut</u> <u>Broken stud bolt</u> <u>Crack or welded repair in wheel assembly</u>	<u>Not painted black</u>
<u>Windows</u>	<u>Not of safety glass</u> <u>Opening too small</u> <u>Cracked or broken</u> <u>Placement of non-transparent material</u> <u>Inoperative latch</u>	
<u>Windshield</u>	<u>Placement of non-transparent material</u> <u>Crack, chip, or pitting that interferes with the school bus driver's vision</u>	<u>Crack, chip or pitting that does not interfere with the school bus driver's vision</u>
<u>Windshield washer system</u>	<u>Missing</u>	<u>Low or no cleaning solution</u>
<u>Windshield wipers</u>	<u>Inoperative or missing wiper on school bus driver's side</u> <u>Inoperative or missing wiper on side opposite the school bus driver</u>	<u>Inoperative speed control</u> <u>Split or hardened wiper blade</u>
<u>Wiring</u>	<u>Incorrect color or number coding</u> <u>Wiring circuit not protected by fuse or circuit breaker</u> <u>One or more non-metal grommets missing</u> <u>Electrical wires outside the school bus body improperly secured</u>	

C. A school bus shall be inspected annually, according to a schedule established by the Department and the standards contained in subsections (A) and (B) and this section.

1. If the Department finds a major defect, the Department shall remove the current safety inspection decal and replace with a new safety inspection decal only after the major defect is repaired.
2. If the Department finds a minor defect, the Department shall remove the current safety inspection decal and replace with a new safety inspection decal and allow the school bus owner to make repairs in accordance with the provisions at

R13-13-108(A)(4) through (A)(7).

D. A school bus driver shall perform the following operations checks and tasks on the school bus:

1. Before a school bus is operated for the first time each day, conduct a pre-trip operations check of the school bus to determine that the following are operational and are not damaged:
 - a. All lamps, including alternately flashing, back-up, clearance, hazard, head, identification, interior, side marker, stop, tail, turn signal, and strobe lamps, if any, and emergency warning devices;
 - b. Tires, wheels, and wheel fasteners;
 - c. Service door;
 - d. Steps and step wells;
 - e. Emergency exits and signals;
 - f. Emergency doors and signals;
 - g. Wheelchair lift and wheelchair lift dome lamp;
 - h. Wheelchair-securement devices;
 - i. Wheelchair-securement anchorages;
 - j. Special-service entrance door;
 - k. Special-service entrance door signal;
 - l. Windows;
 - m. Windshield;
 - n. Windshield wipers;
 - o. Instrument panel and gauges;
 - p. Service brakes;
 - q. Service brake warning devices;
 - r. Parking brake;
 - s. Bumpers;
 - t. Seats and seat frames;
 - u. Floor coverings;
 - v. School bus body;
 - w. Engine fluid levels;
 - x. Engine compartment steering components;
 - y. Stop arm;
 - z. Horn;
 - aa. Mirrors;
 - bb. Engine fluid gauges;
 - cc. Noise suppression switch;
 - dd. Child alert notification system, if installed;
 - ee. Crossing control arm, if installed; and
 - ff. Air conditioning system, if installed.
2. Each time a pre-trip operations check of a school bus is conducted, check all emergency equipment to determine that the emergency equipment complies with the standards at R13-13-107(11) and R13-13-110.
3. Each time a school bus is operated subsequent to the first time the school bus is operated each day, conduct a walk-around operations check to determine whether

- there is an obvious engine fluid leak and the following are operational and are not damaged:
- a. All lamps listed in subsection (D)(1)(a);
 - b. Tires, wheels, and wheel fasteners;
 - c. Bumpers;
 - d. School bus body;
 - e. Windows;
 - f. Stop arm; and
 - g. Windshield.
4. Once daily, sweep and clean the interior of the school bus.
 5. After completing each operations check, the school bus driver shall complete the portions of a written monthly operations check report that provide the following information:
 - a. Date and time of the operations check;
 - b. Name of the school bus driver conducting the operations check;
 - c. Name of the employer;
 - d. Number assigned to the school bus by the school bus owner and painted on the outside of the school bus body; and
 - e. Indication of whether an item is operational, inoperative, or damaged.
 6. A school bus driver who performs an operations check and finds any item listed in subsections (D)(1) through (D)(3) inoperative or damaged shall immediately complete and submit a written repair order to the school bus owner through the employer.
 - a. The school bus owner shall use the standards contained in subsection (B) to determine whether an item reported on a repair order as inoperative or damaged is a major or minor defect.
 - b. If the school bus owner finds that a major defect exists, the school bus owner shall place the school bus out of service until the major defect is repaired.
 - c. If the school bus owner finds that a minor defect exists, the school bus may be used to transport passengers, but the school bus owner shall repair the defect in accordance with the provisions at R13-13-108(A)(4) through(A)(7). Time in which to make the minor repair shall be calculated from the date of the written repair order.
 7. After a school bus makes its final trip on the last day the school bus is driven in a particular month the school bus driver operating the school bus shall submit the written monthly operations check report to the school bus owner through the employer.
- E. In addition to the operations checks described in subsection (D), a school bus owner shall systematically inspect, repair, and maintain, or cause to be systematically inspected, repaired, and maintained, all parts of a school bus chassis and body described in Sections R13-13-106 and R13-13-107 and any other parts and accessories that may affect safe operation of the school bus. The school bus owner shall ensure that the maintenance of a school bus and repair of major defects is done by:
1. An ASE-certified technician,

2. An individual working under the supervision of an ASE-certified master school bus technician,
3. An individual with at least one year of participation in a school bus manufacturer-sponsored or commercial vehicle maintenance training program, or
4. An individual with at least one year of experience as a school bus mechanic.

F. Records

1. A school bus owner shall maintain the following records in a separate file for each school bus for as long as the school bus is in operation in Arizona:
 - a. Number assigned to the school bus by the school bus owner,
 - b. Name of the school bus body manufacturer,
 - c. Name of the school bus chassis manufacturer,
 - d. Identification number of the school bus located in the driver's compartment,
 - e. Year the school bus body was assembled upon the school bus chassis, and
 - f. Size of the tires placed on the school bus.
2. A school bus owner shall maintain all records of initial inspection, subsequent inspections, and repairs and maintenance procedures performed on the school bus for three years from the date of inspection, repair, or maintenance. The school bus owner shall ensure that all records of repairs and maintenance procedures include verification from the owner of the business responsible for the repairs and maintenance procedures that the individual who actually performs the repairs and maintenance procedures is qualified under subsection (E).
3. If a school bus is sold, the school bus owner shall transfer the records required by subsections (F)(1) and (F)(2) to the purchaser.
4. A school bus owner shall maintain monthly operations check reports for three months from the date of the report.

G. Alterations

1. Before a school bus owner alters a school bus, the school bus owner shall submit a request in writing to the Department describing the proposed alteration and the reason for the proposal.
2. Within 60 days of receiving a request for alteration, the Department shall inform the school bus owner in writing whether the request has been approved or denied. The Department shall base its decision to approve or deny on an assessment of whether the proposed alteration affects the operations of a school bus, complies with the statutes and rules applicable to school buses, or affects the health, safety, or welfare of any individual.

R13-13-109. Time-frames for Making Certification Determinations

- A.** For certification as a school bus driver, the time-frames required by A.R.S. § 41-1072 et seq. are:
1. Overall time-frame: 60 days
 2. Administrative completeness review time-frame: 45 days
 3. Substantive review time-frame: 15 days
- B.** An administratively complete application for certification as a school bus driver consists of all the information and documents listed in R13-13-102(A).
- C.** An administrative completeness review time-frame, as described in A.R.S. § 41-1072(1) and listed in subsection (A)(2), begins on the date the Department receives an application.
1. If the application is not administratively complete when received, the Department shall send a notice of deficiency to the applicant. The deficiency notice shall state the documents and information needed to complete the application.
 2. Within 120 days from the postmark date of the deficiency notice, the applicant shall submit to the Department the missing documents and information. The time-frame for the Department to finish the administrative completeness review is suspended from the postmark date of the deficiency notice until the date the Department receives the missing documents and information.
 3. If the applicant fails to provide the missing documents and information within the time provided, the Department shall close the applicant's file. An applicant whose file is closed and who wants to be certified shall apply again under R13-13-102.
 4. If the application is administratively complete, the Department shall send a written notice of administrative completeness to the applicant.
- D.** A substantive review time-frame, as described in A.R.S. § 41-1072(3) and listed in subsection (A)(3), begins on the postmark date of the notice of administrative completeness.
1. During the substantive review time-frame, the Department may make one comprehensive written request for additional information.
 2. The applicant shall submit to the Department the additional information identified in the request for additional information within 20 days from the postmark date of the request for additional information. The time-frame for the Department to finish the substantive review of the application is suspended from the postmark date of the request for additional information until the Department receives the additional information.
 3. Unless an applicant requests that the Department deny certification within the 20-day period in subsection (D)(2), the Department shall close the file of an applicant who fails to submit the additional information within the 20 days provided. An applicant whose file is closed and who wants to be certified shall apply again under R13-13-102.
 4. When the substantive review is complete, the Department shall inform the applicant in writing of its decision whether to certify the applicant.
 - a. The Department shall deny certification if it determines that the applicant

does not meet all substantive criteria for certification required by statute and rule. An applicant who is denied certification may appeal the Department's decision under A.R.S. § 41-1092 et seq. and any rules made under A.R.S. § 41-1092.01(C)(4).

- b. The Department shall grant certification if it determines that the applicant meets all substantive criteria for certification required by statute and rule.

R13-13-110. First-aid Equipment

No later than 180 days after the effective date of these rules, a school bus in Arizona shall meet the requirements of this Section.

1. First-aid and body-fluid cleanup kits shall be mounted in a school bus in accordance with R13-13-107(11)(a).
2. First-aid kit: A school bus shall be equipped with a removable first-aid kit that has a weatherproofing seal around the lid to prevent moisture or dust from entering the first-aid kit, is clearly labeled as a first-aid kit, and contains the following:
 - a. Two - 1 inch x 2 1/2 inch yards adhesive tape rolls,
 - b. 24 - Sterile gauze pads 3 inches x 3 inches,
 - c. Eight - 2 inch adhesive bandages,
 - d. 10 - 3 inch adhesive bandages,
 - e. Two - 2 inch x 6 inch sterile gauze roller bandages,
 - f. Four - Triangular bandages approximately 40 inches x 36 inches x 54 inches with two safety pins,
 - g. Three - Sterile gauze pads at least 24 inches x 24 inches,
 - h. Three - Sterile eye pads,
 - i. One - Rounded-end scissors,
 - j. One - Pair of non-latex gloves, and
 - k. One - Mouth-to-mouth airway.
3. Body fluid or bloodborne-pathogen cleanup kit: A school bus shall be equipped with a removable body-fluid or bloodborne-pathogen cleanup kit that is sealed, clearly labeled as a body-fluid or bloodborne-pathogen cleanup kit, and contains the following:
 - a. One - Pouch of solidifier with chlorine,
 - b. One - Pick-up scoop with scraper,
 - c. One - Pair of non-latex gloves,
 - d. Two - Disinfectant hand wipes (antimicrobial),
 - e. Two - Plastic disposal bags with ties (biohazard),
 - f. Two - Germicidal towelettes effective against human immunodeficiency virus and tuberculosis,
 - g. Two - Paper crepe towels, and
 - h. One - Easy to follow instructions.

**ARTICLE 2. MINIMUM STANDARDS FOR SCHOOL BUSES OPERATED ON
ALTERNATIVE FUEL**

R13-13-201. Minimum Standards for Compressed Natural Gas Fuel Systems

A. In addition to the definitions in R13-13-101, in this Article, unless otherwise specified:

“AGA” means the American Gas Association.

“ANSI” means the American National Standards Institute.

“Angle of departure” means the area above an imaginary line that extends from the bottom outside edge of the rear bumper on a vehicle to the point at which a tire on the vehicle’s rear drive axle touches the ground.

“Appurtenance” means an item connected to an opening of a natural-gas pressure vessel to make the natural-gas pressure vessel gas-tight. This includes pressure relief devices, shutoff, backflow, excess-flow, and internal valves, liquid-level and pressure gauges, and plugs.

“Approved” means acceptable to the Department.

“ASE” means National Institute of Automotive Service Excellence.

“Bracket” means rubber-lined, hoop and cradle mounting hardware supplied or approved by a pressure-vessel manufacturer to hold a natural-gas pressure vessel in a rack.

“CNG” means compressed natural gas, a combustible mixture of hydro-carbon gases and vapors, principally methane, that is reduced in volume by pressure for use as a vehicular fuel.

“Fuel-distribution assembly” means a device that regulates the flow of fuel from a natural-gas pressure vessel to a vehicle engine.

“Fuel line” means a pipe, tubing, or hose, and all related fittings through which natural gas passes on a vehicle.

“Installer” means a person who converts a school bus from the use of gasoline to the use of CNG by attaching a natural-gas fuel system to the school bus after the school bus is manufactured.

“Listed” means included in a publication of an approved organization that is concerned with product evaluation, conducts periodic inspection of equipment or material, and includes equipment or material in the approved organization’s publication only if the equipment or material complies with appropriate standards or performs in a specified manner.

“NFPA” means the National Fire Protection Association, which is located at 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101, and which is accessible at (617) 770-3000 and www.nfpa.org.

“NGV-1” means specific standards set by the American National Standards Institute

and American Gas Association for the refueling connection device of a natural-gas vehicle.

“NGV-2” means specific standards set by the American National Standards Institute and American Gas Association for a vehicle-on-board natural-gas pressure vessel.

“Natural gas” means a combustible mixture of hydrocarbon gases and vapors, principally methane.

“Natural-gas fuel system” means a group of items including a pressure vessel and all attached valves, piping, and appurtenances that form a network for distributing natural gas to a vehicle engine.

“Operating pressure” means the internal force that a manufacturer intends for a natural-gas pressure vessel to achieve during normal operation of the vehicle to which the natural-gas pressure vessel is attached.

“Out-of-service” means not compliant with these rules, NFPA 52, or manufacturer's instructions for installation, maintenance, or repair.

“Owner” means a private business, school, or school district that owns a school bus.

“PSI” means pound per square inch.

“Pressure-relief device” means a mechanism that is installed in a natural-gas pressure vessel or integrated with a valve, that is operated by temperature, pressure, or both, and that releases the CNG in the natural-gas pressure vessel in specific emergency conditions. A pressure-relief device for a U.S. Department of Transportation or Canada Transport natural-gas pressure vessel also includes a mechanism capable of protecting a partially charged natural-gas pressure vessel.

“Pressure vessel” means a cylinder that is part of a natural-gas fuel system and that is constructed, inspected, and maintained in accordance with U.S. Department of Transportation or Canada Transport regulations or ANSI/AGA NGV2, Basic Requirements for Compressed Natural Gas Vehicle (CNGV) Fuel Containers, or CSA B51, Boiler, Pressure Vessel and Pressure Piping Code.

“Pressure-vessel valve” means a mechanical device connected directly to a natural-gas pressure vessel opening that regulates the flow of CNG from the natural-gas pressure vessel to the vehicle engine.

“Rack” means a metal structure that surrounds a natural-gas pressure vessel mounted on a vehicle and is secured to the vehicle frame by a method capable of withstanding a static up, down, left, right, forward, or backward force of eight times the weight of the fully pressurized natural-gas pressure vessel.

“UL” means the Underwriters' Laboratory, Inc.

B. Applicability and enforcement date of this Section

1. This Section applies to school buses that are manufactured to use only gasoline or diesel fuel and are converted to use CNG, in whole or in part.
2. The Department shall enforce this Section beginning 180 days after it is filed with the Office of the Secretary of State. After the beginning enforcement date, a

- school bus that is manufactured to use only gasoline or diesel fuel and is converted to use CNG, in whole or in part, shall meet the requirements of this Section when the school bus is introduced into Arizona or when the school bus is converted to natural-gas power. A school bus introduced into Arizona and powered in whole or in part by CNG before the beginning enforcement date of this Section shall meet the requirements of this Section or those at A.A.C. R17-4-611.
3. After the beginning enforcement date of this Section, the Department shall not approve a school bus manufactured to use only gasoline or diesel fuel and converted to use CNG, in whole or in part, unless the natural-gas fuel system meets the requirements of this Section.

C. Insurance

1. An owner shall not contract with an installer unless the installer has insurance coverage provided by a comprehensive general liability broad form insurance policy that is approved by the Department. The insurance policy shall include coverage for liability resulting from:
 - a. Completed installation operations,
 - b. Harm that arises on the installer's premises, and
 - c. Breach of contract by the installer.
2. In addition to the liability coverage described in subsection (C)(1), an owner shall ensure that either:
 - a. The installer has insurance coverage for liability resulting from harm that arises from subcontracted work performed by an independent contractor, or
 - b. An independent contractor who performs work for the installer under an agreement has an insurance policy that provides coverage for liability resulting from harm caused by the independent contractor's work.
3. An owner shall not contract with an installer unless the installer has an insurance policy that provides at least \$1 million liability coverage per occurrence both for bodily injury and for property damage.
4. An owner shall not contract with an installer unless the issuer of the installer's insurance policies described in subsections (C)(1) through (C)(3) names the Department as an additional insured on each policy and keeps the Department informed of any change in the status of each policy.
5. An owner shall obtain the Department's approval of the installer's insurance policy by submitting proof of the insurance described in subsections (C)(1) through (C)(3) to the Department before entering a contractual agreement with the installer for the installation of a natural-gas fuel system on a school bus.
6. If an owner acts as an installer, the owner shall maintain the insurance required by this Section.
7. The Department shall approve an installer's insurance policy, proof of which is submitted by an owner in accordance with subsection (C)(5), if the policy conforms to the requirements in subsections (C)(1) through (C)(3). The Department shall send written notice of its decision to approve or disapprove the installer's insurance policy to the owner within 15 days from receipt of the proof of insurance.

D. General requirements for installing a natural-gas fuel system

1. Converting a school bus to use of CNG, whether in whole or in part, is not an alteration as defined in R13-13-101.
2. Unless specifically provided otherwise in this Section, when installing a natural-gas fuel system, an installer shall use parts and equipment and perform work in a manner that meets or exceeds the standards of NFPA 52, Standard for Compressed Natural Gas (CNG) Vehicular Fuel Systems, 1995 (and no later editions or amendments), Quincy, MA, which is incorporated by this reference and on file with the Department and the Office of the Secretary of State.
3. An installer shall use only UL-listed or AGA-approved carburetor equipment when installing a natural-gas fuel system on a school bus.
4. An installer shall meet or exceed the recommended guidelines provided by the manufacturers of all parts of a natural-gas fuel system when installing the natural-gas fuel system on a school bus.
5. An installer shall ensure that installation of a natural-gas fuel system on a school bus is performed by an individual who has proof of training provided by the manufacturer of the natural-gas fuel system or ASE alternative fuels certification.
6. If a school bus is converted from the use of gasoline or diesel fuel to the dedicated use of CNG, the installer shall remove the gasoline or diesel-fuel tank and accompanying gasoline or diesel-fuel system parts from the school bus.

E. Natural-gas pressure vessel: An installer shall use only a natural-gas pressure vessel that is certified by its manufacturer as meeting or exceeding the NGV2 standards and as being U.S. Department of Transportation or ANSI listed. An installer shall use the natural-gas pressure vessel manufacturer's recommended bracket.

F. Installing a natural-gas pressure vessel

1. An installer shall securely attach a rack to the frame of a school bus in the following manner:
 - a. By drilling no holes in the school bus frame that exceed the manufacturer's requirements; and
 - b. By using no welding on and applying no heat to the school bus frame.
2. When installing a natural-gas fuel system on a school bus, an installer shall locate the natural-gas pressure vessel and its appurtenances on the vehicle frame as follows:
 - a. Below the driver's or passengers' compartment;
 - b. So no part protrudes:
 - i. In front of the front axle,
 - ii. Beyond the outside face of the rear bumper, or
 - iii. Beyond the sides of the school bus;
 - c. Inside a rack; and
 - d. So the minimum clearance between the road and the lowest part of the natural-gas pressure vessel and its rack on a school bus loaded to its gross vehicle weight rating, is:
 - i. No fewer than 7 inches (17.5 mm) for a school bus with a wheel base fewer than or equal to 127 inches (323 mm); or
 - ii. No fewer than 9 inches (22.5 mm) for a school bus with a wheel base

greater than 127 inches (323 mm).

3. If the natural-gas pressure vessel and its appurtenances are located behind the rear axle of the school bus, in addition to the requirements in subsection (F)(3), an installer shall locate the natural-gas pressure vessel as follows:
 - a. Below the floor line, and
 - b. Above the school bus' angle of departure.

G. Protecting a natural-gas pressure vessel. To protect a natural-gas pressure vessel and its appurtenances from damage, an installer shall:

1. Surround the natural-gas pressure vessel with a stone guard on all sides that are not protected by the natural barriers of the vehicle. The stone guard shall not be attached to the natural-gas pressure vessel. If the stone guard protects a valve, it shall be made of at least 16-gauge steel. If the stone guard does not protect a valve, it shall be made of at least 3/16-in. mesh with openings no greater than 1 in.;
2. Place a resilient, non-absorbent gasket between the natural-gas pressure vessel and its brackets in a manner that prevents the brackets from directly contacting the natural-gas pressure vessel;
3. Ensure that the weight of the natural-gas pressure vessel is not supported, in whole or in part, by an appurtenance; and
4. Place a shield between, but not attached to, the natural-gas pressure vessel and the vehicle exhaust system if the natural-gas pressure vessel or the fuel lines are located fewer than 8 inches from the exhaust system. The shield shall be constructed of at least 18-gauge metal.

H. Safety and check valves: An installer shall equip a natural-gas fuel system with:

1. Either an automatic fuel supply shut-off valve that is placed between the pressure vessel fuel-pressure regulator and the fuel distribution assembly and activated by engine vacuum or oil pressure, or an electronic fuel injector; and
2. Either a manual or automatically controlled shut-off valve that enables the natural-gas pressure vessel to be isolated from the remainder of the natural-gas fuel system. If a manual shut-off valve is used, it shall:
 - a. Have no more than 90° rotation from the opened to the closed position;
 - b. Have a red valve handle;
 - c. Be placed in an accessible location; and
 - d. Have "ESV" printed on the school bus at the access location to the manual shut-off valve, in 2-in. to 4-in., unshaded, red letters.

I. Installation of fuel lines. An installer shall:

1. Use fuel lines constructed of seamless stainless steel that has been tested and certified by the manufacturer to an operating pressure of 3600 PSI with a 4:1 safety factor;
2. Mount and brace fuel lines to the vehicle frame in a manner that minimizes vibration;
3. Secure fuel lines to the vehicle frame at least every 24 inches with rubber-lined fasteners;
4. Protect fuel lines that pass through any structural member with rubber grommets, bulkhead fittings, or both;

- 5. Cause fuel lines that run to the engine to follow the main frame channel; and
- 6. Install an access door that is at least 70 square inches if access to the fill receptacle and fuel pressure gauge is through the school bus body. The words "CNG Fill" shall be printed on the school bus body, immediately above the access door, in 2-in. to 4-in., unshaded letters.
- J.** Installation of Venting System. An installer shall ensure that in addition to meeting the requirements in NFPA 52, all vent exits are aimed toward the ground.

R13-13-202. Inspection and Maintenance of Compressed Natural Gas Fuel Systems

- A.** This Section applies to all school buses that are powered, in whole or in part, by CNG and are introduced into Arizona after the beginning enforcement date of these rules.
- B.** An owner shall not use a school bus equipped with a natural-gas fuel system to transport passengers until the natural-gas fuel system is inspected and approved by the Department. An owner shall notify the Department when the owner obtains a school bus that needs to be inspected for compliance with these rules.
- C.** After the initial inspection conducted by the Department, an owner shall ensure that a school bus equipped with a natural-gas fuel system is inspected annually and under the following special circumstances:
1. When the school bus is involved in an accident;
 2. When the natural-gas pressure vessel may have been damaged;
 3. When natural gas is smelled;
 4. When there is an unexpected loss of gas pressure, rattling, or other indication of looseness; or
 5. When the natural-gas pressure vessel is changed.
- D.** An owner shall ensure that an annual or special-circumstances inspection is conducted by the Department or an individual who has proof of training provided by the manufacturer of the natural-gas fuel system or ASE alternative-fuel certification.
- E.** An owner shall ensure that every inspection of a school bus equipped with a natural-gas fuel system assesses whether the natural-gas fuel system meets the safety standards in 13 A.A.C. 13, and NFPA 52. This assessment shall include:
1. Leak-testing the natural-gas fuel system in compliance with NFPA 52 guidelines;
 2. Verifying that the pressure vessel is designed for storage of CNG;
 3. Verifying that the service life of the natural-gas pressure vessel has not expired;
 4. Verifying that the natural-gas pressure vessel is certified by its manufacturer as meeting or exceeding the NGV2 standards and as being U.S. Department of Transportation or ANSI listed;
 5. Verifying that all parts of the natural-gas fuel system are properly listed or approved; and
 6. Verifying that all parts of the natural-gas fuel system are installed in accordance with the manufacturer's instructions.
- F.** An owner shall ensure that an individual who conducts an inspection of a school bus equipped with a natural-gas fuel system completes a Compressed Natural Gas Safety Inspection Form, which is available from the Department, and certifies that the school bus meets all safety standards in 13 A.A.C. 13, and NFPA 52.
- G.** If it is necessary to condemn a natural-gas pressure vessel, the owner shall:
1. Return the condemned natural-gas pressure vessel to its manufacturer; and
 2. Obtain a certificate from the manufacturer that states ownership of the natural-gas pressure vessel is transferred from the owner to the manufacturer.
- H.** An owner shall maintain each completed Compressed Natural Gas Safety Inspection Form in a separate file for each school bus for the service life of the school bus. If a school bus is transferred from one owner to another, the first owner shall transfer the

completed inspection forms to the second owner.

- I.** An owner shall make the inspection forms maintained under subsection (H) available for review by the Department.

VIEW DOCUMENT

28-3228. School bus drivers; requirements; rules; cancellation

A. A person shall not operate a school bus transporting school children unless the person possesses the appropriate license class for the size of school bus being operated that is issued by the department of transportation, a bus endorsement that is issued by the department of transportation and a school bus certificate that is issued by the department of public safety.

B. To be certified as a school bus driver a person shall do both of the following:

1. Meet and maintain the minimum standards prescribed by this section and rules adopted by the department of public safety in consultation with the school bus advisory council established by section 28-3053.

2. Complete an initial instructional course on school bus driver safety and training including behind the wheel training.

C. The department of public safety in consultation with the school bus advisory council established by section 28-3053 shall adopt rules that establish minimum standards for the certification of school bus drivers. In cooperation with local school districts, the department of public safety shall provide for school bus driver safety and training courses. The standards established shall:

1. Include requirements concerning moral character, knowledge of school bus operation, pupil and motor vehicle safety, physical impairments that might affect the applicant's ability to safely operate a school bus or that might endanger the health or safety of school bus passengers, knowledge of first aid, establishment of school bus safety and training courses, a refresher course to be completed on at least a biennial basis and other matters as the department of public safety and the school bus advisory council established by section 28-3053 prescribe for the protection of the public.

2. Require tests to detect the presence of alcohol or the use of a drug in violation of title 13, chapter 34 that may adversely affect the ability of the applicant to safely operate a school bus.

3. Authorize the performance of hearing tests with or without the use of a hearing aid as provided in 49 Code of Federal Regulations section 391.41.

D. Each person who applies for a school bus driver certificate shall have a valid fingerprint clearance card that is issued pursuant to title 41, chapter 12, article 3.1 and shall submit an identity verified fingerprint card as described in section 15-106 that the department of public safety shall use to process the fingerprint clearance card as outlined in section 15-106.

E. A person who is issued a school bus driver certificate shall maintain a valid identity verified fingerprint clearance card for the duration of any school bus driver certification period.

F. The department of public safety shall suspend a school bus driver certificate if the fingerprint clearance card is invalid, suspended, canceled or revoked.

G. The department of public safety shall issue a school bus driver certificate to an applicant who meets the requirements of this

section. The certificate is valid if the applicant maintains the minimum standards established by this section.

H. The department of public safety may cancel the certificate if the person's license to drive is suspended, canceled, revoked or disqualified. The department of public safety shall cancel the certificate if the person fails to maintain the minimum standards established pursuant to this section. A person whose application for a certificate is refused or whose certificate is canceled for failure to meet or maintain the minimum standards may request and receive a hearing from the department of public safety.

I. The department of public safety shall enforce the rules adopted pursuant to this section.

© 2017 Arizona State Legislature. All Rights Reserved

41-1713. Powers and duties of director; authentication of records

A. The director of the department shall:

1. Be the administrative head of the department.
2. Subject to the merit system rules, appoint, suspend, demote, promote or dismiss all other classified employees of the department on the recommendation of their respective division superintendent. The director shall determine and furnish the law enforcement merit system council established by section 41-1830.11 with a table of organization. The superintendent of each division shall serve at the concurrent pleasure of the director and the governor.
3. Except as provided in sections 12-119, 41-1304 and 41-1304.05, employ officers and other personnel as the director deems necessary for the protection and security of the state buildings and grounds in the governmental mall described in section 41-1362, state office buildings in Tucson and persons who are on any of those properties. Department officers may make arrests and issue citations for crimes or traffic offenses and for any violation of a rule adopted under section 41-796. For the purposes of this paragraph, security does not mean security services related to building operation and maintenance functions provided by the department of administration.
4. Make rules necessary for the operation of the department.
5. Annually submit a report of the work of the department to the governor and the legislature, or more often if requested by the governor or the legislature.
6. Appoint a deputy director with the approval of the governor.
7. Adopt an official seal that contains the words "department of public safety" encircling the seal of this state as part of its design.
8. Investigate, on receipt, credible evidence that a licensee or registrant has been arrested for, charged with or convicted of an offense that would preclude the person from holding a license or registration certificate issued pursuant to title 32, chapter 26.
9. Cooperate with the Arizona-Mexico commission in the governor's office and with researchers at universities in this state to collect data and conduct projects in the United States and Mexico on issues that are within the scope of the department's duties and that relate to quality of life, trade and economic development in this state in a manner that will help the Arizona-Mexico commission to assess and enhance the economic competitiveness of this state and of the Arizona-Mexico region.
10. Adopt and administer the breath, blood or other bodily substances test rules pursuant to title 28, chapter 4.
11. Develop procedures to exchange information with the department of transportation for any purpose related to sections 28-1324, 28-1325, 28-1326, 28-1462 and 28-3318.
12. Collaborate with the state forester in presentations to legislative committees on issues associated with wildfire prevention, suppression and emergency management as provided by section 37-1302, subsection B.

B. The director may:

1. Issue commissions to officers of the department.
2. Request the cooperation of the utilities, communication media and public and private agencies and any sheriff or other peace officer in any county or municipality, within the limits of their respective jurisdictions when necessary, to aid and assist in the performance of any duty imposed by this chapter.

3. Cooperate with any public or private agency or person to receive or give necessary assistance and may contract for such assistance subject to legislative appropriation controls.
4. Utilize the advice of the board and cooperate with sheriffs, local police and peace officers within the state for the prevention and discovery of crimes, the apprehension of criminals and the promotion of public safety.
5. Acquire in the name of the state, either in fee or lesser estate or interest, all real or any personal property that the director considers necessary for the department's use, by purchase, donation, dedication, exchange or other lawful means. All acquisitions of personal property pursuant to this paragraph shall be made as prescribed in chapter 23 of this title unless otherwise provided by law.
6. Dispose of any property, real or personal, or any right, title or interest in the property, when the director determines that the property is no longer needed or necessary for the department's use. Disposition of personal property shall be as prescribed in chapter 23 of this title. The real property shall be sold by public auction or competitive bidding after notice published in a daily newspaper of general circulation, not less than three times, two weeks before the sale and subject to the approval of the director of the department of administration. When real property is sold, it shall not be sold for less than the appraised value as established by a competent real estate appraiser. Any monies derived from the disposal of real or personal property shall be deposited, pursuant to sections 35-146 and 35-147, in the Arizona highway patrol fund as authorized by section 41-1752, subsection B, paragraph 6.
7. Sell, lend or lease personal property directly to any state, county or local law enforcement agency. Personal property may be sold or leased at a predetermined price without competitive bidding. Any state, county or local law enforcement agency receiving personal property may not resell or lease the property to any person or organization except for educational purposes.
8. Dispose of surplus property by transferring the property to the department of administration for disposition to another state budget unit or political subdivision if the state budget unit or political subdivision is not a law enforcement agency.
9. Lease or rent personal property directly to any state law enforcement officer for the purpose of traffic safety, traffic control or other law enforcement related activity.
10. Sell for one dollar, without public bidding, the department issued handgun or shotgun to a department officer on duty related retirement pursuant to title 38, chapter 5, article 4. Any monies derived from the sale of the handgun or shotgun to the retiring department officer shall be deposited, pursuant to sections 35-146 and 35-147, in the Arizona highway patrol fund as authorized by section 41-1752, subsection B, paragraph 6.
11. Conduct state criminal history records checks for the purpose of updating and verifying the status of current licensees or registrants who have a license or certificate issued pursuant to title 32, chapter 26. The director shall investigate, on receipt, credible evidence that a licensee or registrant has been arrested for, charged with or convicted of an offense that would preclude the person from holding a registration certificate issued pursuant to title 32, chapter 26.
12. Grant a maximum of two thousand eighty hours of industrial injury leave to any sworn department employee who is injured in the course of the employee's duty, any civilian department employee who is injured in the course of performing or assisting in law enforcement or hazardous duties or any civilian department employee who was injured as a sworn department employee rehired after August 9, 2001 and would have been eligible pursuant to this paragraph and whose work-related injury prevents the employee from performing the normal duties of that employee's classification. This industrial injury leave is in addition to any vacation or sick leave earned or granted to the employee and does not affect the employee's eligibility for any other benefits, including workers' compensation. The employee is not eligible for payment pursuant to section 38-615 of industrial injury leave that is granted pursuant to this paragraph. Subject to approval by the law enforcement merit system council, the director shall adopt rules and procedures regarding industrial injury leave hours granted pursuant to this paragraph.

13. Sell at current replacement cost, without public bidding, the department issued badge of authority to an officer of the department on the officer's promotion or separation from the department. Any monies derived from the sale of the badge to an officer shall be deposited, pursuant to sections 35-146 and 35-147, in the department of public safety administration fund to offset replacement costs.

C. The director and any employees of the department that the director designates in writing may use the seal adopted pursuant to subsection A, paragraph 7 of this section to fully authenticate any department records and copies of these records. These authenticated records or authenticated copies of records shall be judicially noticed and shall be received in evidence by the courts of this state without any further proof of their authenticity.

DEPARTMENT OF PUBLIC SAFETY

Title 13, Chapter 13, Article 1, School Bus Minimum Standards

Amend: R13-13-106

GOVERNOR'S REGULATORY REVIEW COUNCIL

STAFF MEMORANDUM - EXPEDITED RULEMAKING

MEETING DATE: July 10, 2018

AGENDA ITEM: E-3

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: June 19, 2018

SUBJECT: DEPARTMENT OF PUBLIC SAFETY (R-18-0701)
Title 13, Chapter 13, Article 1, School Bus Minimum Standards

Amend: R13-13-106

SUMMARY OF THE RULEMAKING

This expedited rulemaking, from the Department of Public Safety (Department or DPS), seeks to amend one rule in A.A.C Title 13, Chapter 13, related to minimum standards for school buses.

Under Section 106, school buses are currently required to be equipped with, at minimum, a 30 gallon fuel tank. Due to advances in vehicle engineering, school bus manufacturers are equipping newer bus models with smaller, more efficient fuel tanks. The Department notes that it cannot identify any necessary, safety related justification for the rule. Accordingly, the Department proposes in this rulemaking to eliminate the 30-gallon minimum requirement.

The Department indicates that the use of expedited rulemaking is justified, as the rulemaking decreases the cost of regulatory compliance by allowing school districts to purchase the newer models and increase fuel efficiency. The Governor's Office provided an exemption from the moratorium on November 30, 2017.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

Yes. The Department cites to A.R.S. § 41-1713(A)(4) as general authority for the rules, which states "the Department shall make rules necessary for operation of the Department." In addition, A.R.S. § 28-900(B)(1) provides that school bus rules "may include minimum standards for the design and equipment of school buses."

2. Do the rules establish a new fee or contain a fee increase?

No. The rules do not establish a new fee or contain a fee increase.

3. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

No. The Department indicates that it has not received any public comments on the rulemaking.

4. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

No. No changes have been made between the Notice of Proposed Expedited Rulemaking and the Notice of Final Expedited Rulemaking.

5. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

No. The Department indicates that there is no corresponding federal law.

6. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

Yes. The Department indicates that, under A.R.S. § 41-1037(A)(3), general inspection of individual school buses is not technically feasible and thus requires individual authorization.

7. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

No. The Department did not review or rely upon any study for this rulemaking.

8. Conclusion

If approved, the rulemaking will become effective immediately upon filing with the Secretary of State. Council staff recommends approval of the rulemaking.

ARIZONA DEPARTMENT OF PUBLIC SAFETY

2102 WEST ENCANTO BLVD. P.O. BOX 6638 PHOENIX, ARIZONA 85005-6638 (602) 223-2000

"Courteous Vigilance"

DOUGLAS A. DUCEY FRANK L. MILSTEAD
Governor Director

April 23, 2018

Ms. Nicole Ong Colyer, Chair
The Governor's Regulatory Review Council
100 N 15th Ave, Ste 402
Phoenix, AZ 85007

Dear Ms. Ong Colyer,

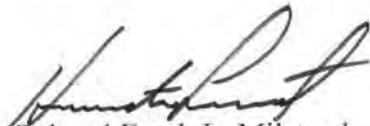

The Department of Public Safety submits a Notice of Final Expedited Rulemaking for Arizona Administrative Code Title 13, *Public Safety*, Chapter 13, *Department of Public Safety–School Buses*, Article 1, Rule 106 for review and approval by the council. The following information is provided pursuant to R1-6-201:

1. Close of Record Date: The rulemaking record was closed on April 13, 2018 at 5:00 p.m., pursuant to the *Notice of Proposed Expedited Rulemaking* following a period for public comment and an oral proceeding. The proposed notice was posted to the Department's website on March 9, 2018. The oral proceeding was held on April 13, 2018; there were no attendees from the public and no written comments received by the close of the rulemaking record.
2. Relation to Five-Year Review Report: This rulemaking is not related to a five-year review report.
3. Establishment of new fees: This rulemaking does not establish new fees.
4. Establishment of fee increase: The rulemaking does not establish a fee increase.
5. Request for immediate effective date under A.R.S. § 41-1032: An immediate effective date is not requested.
6. Evaluations of studies related to the rulemaking: No external studies related to the rulemaking were evaluated.
7. Necessity of Full-time Employees: The rulemaking does not require an increase in full-time employees to implement the rules.

8. List of Documents:

- a. Signed cover letter.
- b. Notice of Final Expedited Rulemaking including the Preamble and rule text.
- c. Governor's Office rulemaking waiver approval.
- d. School Bus Advisory Council meeting agenda and minutes.
- e. Authorizing statutes.

Sincerely,

Colonel Frank L. Milstead
Director

E-mail: llarson@azdps.gov

6. An agency's justification and reason why the rule should be made, amended, repealed, or renumbered, to include an explanation about the rulemaking:

The agency is conducting an expedited rulemaking pursuant to A.R.S. § 41-1027(A)(6); where the rulemaking does not increase the cost of regulatory compliance, increase a fee or reduce procedural rights of persons regulated and amends or repeals rules that are outdated, redundant or otherwise no longer necessary for the operation of state government.

R13-13-106(16)(a) requires amendment to remove an unnecessary regulatory burden which does not have an identifiable correlation to school bus safety and is limiting economic opportunity.

Presently, the rule requires a school bus to be equipped with a 30-gallon fuel tank.

Advancements in vehicle engineering have resulted in vehicles with smaller fuel capacity tanks having the same or greater functional fuel range as older vehicles with larger fuel capacity tanks. Due to this improved fuel efficiency, some vehicle manufacturers are reducing the fuel tank capacity below 30 gallons on certain school bus models. If this rule is not amended, school districts will not be able to purchase these new, more fuel-efficient models, resulting in a lost opportunity for fuel savings by the school districts and a lost economic opportunity for the school bus dealers. The Department is not able to identify a necessary, safety-related justification for maintaining the 30-gallon requirement.

In accordance with A.R.S. § 28-900, the Department consulted with the Arizona School Bus Advisory Council on March 6, 2018 where the council voted and approved the proposed expedited rulemaking.

The Department received a rulemaking waiver from Mr. Tim Roemer, Public Safety Policy Advisor to Governor Ducey on November 30, 2017.

7. A reference to any study relevant to the rule that the agency reviewed and proposes to either rely on or not rely on in its evaluation of or justification for the rule, where the

public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

The Department did not rely on any study in its evaluation of or justification for the rule.

8. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rule will diminish a previous grant of authority of a political subdivision of this state:

The rulemaking does not diminish a previous grant of authority of a political subdivision of this state.

9. A summary of the economic, small business, and consumer impact:

Pursuant to A.R.S. § 41-1027, the expedited rulemaking process is exempt from this requirement.

10. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

There were no changes made to the rule between the proposed expedited rulemaking and the final expedited rulemaking.

11. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

The Department consulted with the School Bus Advisory Council on March 6, 2018 pursuant to A.R.S. § 28-900. The council had no substantive comments relevant to this rulemaking and during the open public comment portion of the agenda no public member from the audience spoke on the rulemaking. The council voted and approved of the rulemaking as presented in the *Notice of Proposed Expedited Rulemaking* at the March 6 meeting.

The Department held an open public comment meeting on April 13, 2018 as stated in the *Proposed Notice of Expedited Rulemaking*; there were no public attendees. There were no written comments received by the close of the rulemaking record on April 13, 2018 at 5:00p.m. as stated in the *Proposed Notice of Expedited Rulemaking*.

12. All agency's shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following

questions:

- a. Whether the rule requires a permit, whether a general permit is used, and if not, the reason why a general permit is not used:**

The rule does not require a permit, but requires each individual school bus to meet the minimum safety standards. School buses are individually inspected by the Department for safety compliance; therefore a general inspection is not possible.

- b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law, and if so, citation to the statutory authority to exceed the requirements of federal law:**

There is no applicable federal law.

- c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:**

No person submitted an analysis to the Department comparing the rule's business competitiveness impact.

- 13. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:**

There are no incorporated by reference materials to this rulemaking.

- 14. Whether the rule previously made, amended, or repealed as an emergency rule. If so, cite the notice published in the *Register* as specified in R1-4-409(A). Also, the agency shall state where the text was changed between the emergency and the final rulemaking packages:**

The rule was not previously made, amended, or repealed as an emergency rule.

- 15. The full text of the rules follows:**

TITLE 13. PUBLIC SAFETY
CHAPTER 13. DEPARTMENT OF PUBLIC SAFETY - SCHOOL BUSES
ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

Section

R13-13-106 Minimum Standards for School Bus Chassis

ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

R13-13-106. Minimum Standards for School Bus Chassis

The chassis of a school bus introduced to Arizona on or after May 31, 2008 shall meet the requirements of this Section. The chassis of a school bus introduced to Arizona before May 31, 2008 shall meet the requirements of this Section or shall be maintained in accordance with the manufacturer’s original specifications.

1. Air cleaner: An engine intake air cleaner shall be installed in the school bus that meets engine specifications defined by the school bus manufacturer.
2. Axles: The front and rear axles and suspension assemblies shall have a gross axle weight rating consistent with that stated by the chassis manufacturer on a notice located in the school bus driver's compartment.
3. Back-up alarm: If installed, an alarm that emits a warning sound when the school bus is backing shall conform to the following:
 - a. The alarm-signaling device shall be of electronic, solid state design and shall emit an audible sound of a minimum of 97 dB(A) measured at 4 feet, 0° access from the source of the sound.
 - b. The alarm-signaling device shall be wired into the backup light circuits and shall emit sound automatically when the gear shift lever is in “reverse” position.
 - c. The alarm-signaling device shall be attached to the school bus chassis or body behind the rear axle.
4. Brakes:
 - a. A school bus with a manufacturer-designed passenger capacity of 60 or less shall be equipped with a service-brake system that uses compressed air or hydraulic assist.
 - b. A school bus with a manufacturer-designed passenger capacity greater than 60 shall be equipped with a service- brake system that uses compressed air.
 - c. In addition to the service-brake system, a school bus shall be equipped with a parking-brake system to keep the school bus from moving when parked.
 - d. The service brakes in a compressed-air system shall be adjusted using the following criteria:

Type	Outside Diameter of Air Chamber	Brake Adjustmen t Limit
6	4 1/2 inches	1 1/4 inches
9	5 1/4 inches	1 3/8 inches
12	5 11/16 inches	1 3/8 inches
16	6 3/8 inches	1 3/4 inches
20	6 25/32 inches	1 3/4 inches
24	7 7/32 inches	1 3/4 inches
30	8 3/32 inches	2 inches
36	9 inches	2 1/4 inches

- e. The service brakes in a “long stroke” clamp type brake system shall be adjusted using the following criteria:

Type	Outside Diameter of Air Chamber	Stroke	Brake Adjustment Limit
12	5 inches	11/16	1 3/4 inches
16	6 3/8 inches		2 inches
20	6 inches	25/32	2 inches
24	7 7/32 inches		2 inches
24*	7 7/32 inches		2 1/2 inches
30	8 3/32 inches		2 1/2 inches

*For 3" maximum stroke type 24 chambers

- f. The service-brake system in a compressed-air system shall contain an emergency-brake system that will activate when the air loss in the service-brake system reaches 20 to 40 pounds per square inch.
- g. A school bus using a compressed-air or hydraulic-assist service-brake system shall be equipped with a signal located in the school bus driver's compartment that emits a continuous audible or visible warning to the school bus driver when:
- The air pressure available in a compressed-air braking system is 60 pounds per square inch or less, or
 - There is a loss of fluid flow from the main hydraulic pump or loss of electric source powering the back-up system in a hydraulic-assist system.
- h. A school bus using a compressed-air service-brake system shall be equipped with one or two illuminated gauges located in the school bus driver's compartment that show the pounds per square inch of compressed air available for the operation of the brake.
- i. A compressed-air brake system with a dry reservoir shall have a one-way valve that will prevent the loss of compressed air between the dry reservoir and the source of compressed air.
- j. A brake system with a wet reservoir shall have a valve located at the bottom of the wet reservoir that operates automatically or can be operated remotely or manually to eject the moisture from the reservoir.
- k. Compressed-air or hydraulic-assist brake lines and booster-assist lines shall be installed in a manner that prevents heat, vibration, and chafing damage.
- l. The brake systems of Types C and D school buses shall be installed so the chassis components can be visually inspected to detect brake lining wear without removal of any of the chassis components.
5. Front bumper: The front bumper shall be positioned at the forward-most part of the school bus and extend to the outer edges of the school bus.

6. Child alert notification system: A school bus may be equipped with an electronic or mechanical child alert notification system. If a school bus is equipped with a child alert notification system, the device shall be installed in a manner that does not interfere with any other existing operating or electrical component. A child alert notification system in a school bus shall not have an override or bypass capability.
7. Clutch: The clutch torque capacity shall be equal to or greater than the engine torque output.
8. Color: The chassis, including wheels and front bumper, shall be painted black. The hood and fenders shall be painted National School Bus Yellow as described in R13-13-107(6).
9. Cooling system: A school bus shall be equipped with a cooling system that maintains the engine temperature operating range required to prevent damage to the school bus engine.
10. Drive shaft: Each section of the drive shaft to the rear driving axle shall be protected by a metal guard around its circumference to reduce the possibility of the drive shaft penetrating through the school bus floor or dropping to the ground.
11. Electrical system:
 - a. Battery:
 - i. The battery shall have a minimum cold-cranking capacity rating equal to the cranking current required by the engine for 30 seconds at 0° F. and a minimum reserve capacity rating of 120 minutes at 25 amperes.
 - ii. The battery shall have a higher capacity than specified in subsection (11)(a)(i) if optional equipment installed on the school bus requires the higher capacity.
 - iii. Because all batteries are to be secured in a sliding tray in the bus body as required by R13-13-107, chassis manufacturers shall mount batteries temporarily on the chassis frame, except that a van conversion or cutaway front-section chassis may be secured in accordance with the manufacturer's standard configuration. However, in all cases the battery cable provided with the chassis shall have sufficient length to allow some slack, and shall be of sufficient gauge to carry the required amperage.
 - b. Alternator:
 - i. All alternators shall conform to the recommended practices of Standard J180, January 2002 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, which is incorporated by reference and on file with the Department.
 - ii. All Type A-2 and Type B buses with a GVWR of 15,000 pounds or less shall have an alternator with a minimum of 130 amps.
 - iii. All Type A-2 and Type B buses with a GVWR over 15,000 pounds, and all Type C and D buses shall be equipped with a heavy-duty truck or bus-type alternator meeting Standard J180, which is incorporated by reference in subsection (b)(i), having a minimum output rating of 130 amps, and shall produce a minimum current output of 50% of the rating at engine idle speed. The alternator may be either pad-mounted or hinge-mounted.
 - iv. Buses equipped with an electrically powered wheelchair lift or air conditioning may be equipped with a device that monitors the electrical system voltage and advances the engine idle speed when the voltage drops to, or below, a pre-set level.

- v. A belt-driven alternator shall be capable of handling the rated capacity of the alternator with no detrimental effect on any other driven components.
 - vi. A direct-drive alternator may be installed instead of a belt-driven alternator.
 - vii. If the school bus is equipped with an air conditioning system, the alternator shall have a minimum charging rate of 160 amperes per hour.
 - viii. The alternator on a school bus shall contain a regulator to control the voltage to the battery.
- c. Wiring:
- i. All wiring shall conform to the recommended practices of Standard J1292, October 1981 (no later amendments or editions), published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
 - ii. All wiring shall use a standard color or number coding and each chassis shall contain a wiring diagram that details the wiring of the chassis.
 - iii. The chassis shall be equipped with a connection to provide electrical power to the school bus. The connection shall be located on the chassis cowl or on the engine compartment of a school bus designed without a chassis cowl. The connection shall contain terminals for the main 100 ampere body circuit, tail lamps, right-turn signal, left-turn signal, stop lamps, backup lamps, and instrument panel lights. The instrument panel lights shall have a rheostat control.
12. Engine horsepower: The gross vehicle weight rating of a school bus shall not exceed 185 pounds for each engine horsepower as published by the manufacturer on a notice located on the school bus engine.
13. Exhaust system:
- a. The exhaust pipe, muffler, and tailpipe shall be located under the school bus body and attached to the chassis.
 - b. The tailpipe shall be constructed of a corrosion-resistant tubing material at least equal in strength and durability to 16-gauge steel tubing.
 - c. The exhaust system on a gasoline-powered chassis shall be insulated from the fuel tank and fuel tank connections by a shield at any point where the exhaust system is 12 inches or less from the fuel tank or fuel tank connections.
14. Frame:
- a. A school bus frame shall be of a design and strength capable of supporting the gross vehicle weight of the school bus.
 - b. A school bus frame shall not be altered for any purpose.
 - c. Holes in top or bottom flanges of frame rails are not permitted except as provided by the manufacturer. There shall be no welding to the frame rails except by the chassis or body manufacturer or the manufacturer's certified agent.
 - d. The school bus frame shall not be cracked, loose, sagging, or broken.
 - e. Brackets securing the cab or the body of the school bus to the frame shall not be loose, broken, or missing.
 - f. The frame rail flanges shall not be bent, cut, or notched, except as specified by the manufacturer.
 - g. All accessories mounted to the school bus shall be secured as specified by the manufacturer.

- h. Holes shall not be drilled in the top or bottom rail flanges, except as specified by the manufacturer.
- 15. Front fenders of a Type C school bus: The outer edges of the front fenders shall be wider than the outer edges of the front tires when the front wheels are in the straight-ahead position.
- 16. Fuel system:
 - a. ~~A school bus shall contain a fuel tank with a minimum 30-gallon capacity, with a minimum dispersion of 25 gallons of fuel to the engine.~~ The fuel tank shall be vented to the outside of the school bus body so fuel spillage will not contact any part of the exhaust system.
 - b. On a Type B, Type C, or Type D school bus, no portion of the fuel system that is located outside of the engine compartment, except the filler tube, shall extend above the top of the chassis frame.
 - c. A fuel filter with replaceable element shall be installed between the fuel tank and engine.
 - d. The fuel line that supplies fuel to the engine shall be located at the top of the fuel tank.
- 17. Horn: A school bus shall be equipped with at least one horn capable of producing a sound level between 82 and 102 dB(A) when tested according to the Standard J377, March 2001 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
- 18. Instruments and instrument panel:
 - a. The chassis shall be equipped with the following instruments:
 - i. Speedometer;
 - ii. Odometer that will give accrued mileage to seven digits, including tenths of miles;
 - iii. Voltmeter or ammeter;
 - iv. Oil pressure gauge;
 - v. Water temperature gauge;
 - vi. Fuel gauge;
 - vii. Upper beam head lamp indicator;
 - viii. Brake system signal as required by R13-13-106(4)(f);
 - ix. Turn signal indicator; and
 - x. Air pressure or hydraulic gauge.
 - b. The instruments shall be mounted on the instrument panel in the school bus driver's compartment and visible to the school bus driver while seated in the driver's seat.
 - c. The instrument panel shall be equipped with a rheostat switch that controls the illumination to the instrument panel and the gear shift selector indicator.
- 19. Oil filter: A replaceable element or cartridge-type oil filter shall be provided with a minimum capacity that meets or exceeds the capacity recommended by the manufacturer of the school bus engine.
- 20. Openings: All openings in the floorboard and in the fire wall between the chassis and passenger compartment shall be sealed.
- 21. Splash guards:

- a. A school bus shall be equipped with rear fender splash guards constructed of flexible rubberized material.
- b. The splash guards shall be wide enough to cover the tire tread width, installed close enough to the tire tread surface to control side-throw of road surface material, and extend to within 8 inches of ground level.

22. Steering system:

- a. Power steering is required on all school buses manufactured after January 1, 1984.
- b. Bracing extending from the center of the steering wheel to the steering wheel ring shall not be cracked or missing.
- c. The distance of movement of the steering wheel between two points of resistance shall not be greater than the following when measured with the engine running:

Steering wheel diameter	Power steering	Manual steering
16 in. or less	6 inches	3/4 4 1/2 in.
18 in.	7 inches	1/8 4 3/4 in.
20 in.	7 inches	7/8 5 1/4 in.
22 in.	8 inches	5/8 5 3/4 in.

- d. There shall be clearance of at least 2 inches between the steering wheel and any object in the driver's compartment.
- e. A non-adjustable steering column shall be fastened in a fixed position. An adjustable steering column shall be equipped with a locking mechanism.
- f. The steering gear housing shall not have loose or missing mounting bolts. There shall not be cracks in the gear housing or its mounting brackets.
- g. The connecting arm on the steering gear power source shall not be loose.
- h. The steering wheel shall turn freely in both directions.
- i. The steering system shall have a means for lubrication of all wear-points.

23. Suspension:

- a. Shock absorbers:
 - i. A school bus shall be equipped with front and rear double-acting shock absorbers. Replacements to shock absorbers shall be made according to the specifications of the manufacturer's part number as stamped on the shock absorber.
 - ii. If a school bus is manufactured with tandem rear axles, rear shock absorbers are not required.
- b. Suspension system:
 - i. Capacity of suspension assemblies shall be commensurate with the chassis manufacturer's gross vehicle weight rating.
 - ii. If leaf-type rear springs are used, they shall be a progressive rate or multi-stage design.

24. Tires and wheels:
 - a. Tires and wheels shall have an accumulated load rating at least equal to the gross vehicle weight rating.
 - b. Dual rear tires shall be provided on all school buses that have a gross vehicle weight rating of more than 10,000 pounds.
 - c. Each tire on a particular axle shall be the same size.
 - d. All tires on a school bus shall be bias or all tires on a school bus shall be radial and shall not differ more than one size between front and rear axles.
 - e. On a Type C or D school bus, a spare tire, if present, shall be in a carrier mounted outside the passenger compartment.
25. Transmission: The school bus transmission shall have no fewer than three forward speeds and one reverse speed.
26. Turning radius:
 - a. A chassis with a wheelbase of 264 inches or less shall have a right and left turning radius of not more than 42 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.
 - b. A chassis with a wheelbase of more than 264 inches shall have a right and left turning radius of not more than 44 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.
27. Weight:
 - a. The gross vehicle weight of a school bus shall not exceed the chassis manufacturer's gross vehicle weight rating for the chassis as recorded on a notice located in the school bus driver's compartment.
 - b. To calculate the gross vehicle weight of a school bus, add the chassis weight, the school bus body weight, the school bus driver's weight, and the total seated passenger weight.
 - i. For the purpose of calculation, the school bus driver's weight is 150 pounds.
 - ii. For the purpose of calculation, the passenger weight is 120 pounds per seated passenger.
 - c. The weight distribution of a school bus on a level surface that is fully loaded according to the gross vehicle weight rating shall not exceed the front axle gross weight rating or rear axle gross weight rating as recorded on a notice located in the school bus driver's compartment.

- R13-13-202. Inspection and Maintenance of Compressed Natural Gas Fuel Systems

ARTICLE 1. SCHOOL BUS MINIMUM STANDARDS

R13-13-101. Definitions

In this Chapter, unless otherwise specified:

“Accident” means any unexpected occurrence involving a moving or non-moving school bus that results in any bodily injury or fatality to a passenger or non-passenger, damage to personal or real property outside the school bus, or damage to the school bus that affects the integrity of the school bus or results in a major defect as described in R13-13-108(B).

“Alternately flashing signal lamps” means a system of red or red and amber lamps that are mounted horizontally to both the front and rear of the school bus body and used to inform the public that the school bus is preparing to stop or has stopped to load or unload passengers. Alternately flashing signal lamps can be either a four-lamp system as described in R13-13-107(17)(c)(i) or an eight-lamp system as described in R13-13-9-107(c)(ii).

“Alteration” means any addition, modification, or removal of any equipment or

component after a school bus is inspected by the Department, which may affect the operations of the school bus; compliance with the statutes or rules applicable to school buses; or the health, safety, or welfare of any individual.

“Applicant” means an individual who submits an application to the Department to obtain a certificate to operate a school bus.

“ASE” means National Institute of Automotive Service Excellence.

“Auxiliary fan” means a device mounted inside the school bus body used to supplement the heating, defrosting, or air-conditioning systems by circulating air in the school bus.

“Behind-the-wheel instructor” means an individual qualified under R13-13-103 to provide behind-the-wheel training to applicants.

“Behind-the-wheel training” means the complete physical control of a school bus by an applicant while accompanied by and under direct observation of a behind-the-wheel instructor.

“Belt cutter” means a hand-held instrument containing a blade used to sever a seat belt or a wheelchair-securement device.

“Certificate” means a written authorization issued by the Department to operate a school bus in Arizona.

“Chassis” means the part of a school bus that consists of all base components, including the frame, front and rear suspension, exhaust system, brakes, engine, engine hood or cover, transmission, front and rear axles, front fenders, drive train and shaft, fuel system, engine air intake and filter, clutch and accelerator pedals, steering wheel, tires, heating and cooling system, battery, and controls and instruments to operate the school bus.

“Chassis cowl” means those parts of a Type C school bus that are located in front of the cowl and attached before a school bus manufacturer adds the school bus body.

“Citation” has the same meaning as at A.R.S. § 28-1872.

“Classroom instructor” means an individual qualified under R13-13-103 to provide classroom training to:

Applicants to operate a school bus,

Individuals becoming qualified to teach classroom training,

Individuals becoming qualified to teach techniques of behind-the-wheel training,

or

School bus drivers taking refresher training.

“Classroom training” means the courses required by the Department of an applicant before the applicant is certified or of an individual seeking qualification as a classroom or behind-the-wheel instructor.

“Commercial driver license” has the same meaning as at A.R.S. § 28-3001.

“Controlled substances and alcohol testing” means a determination of an applicant's

or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, and alcohol prescribed by 49 CFR 382, October 2006 (no later amendments or editions), and conducted in accordance with the procedures at 49 CFR 40, October 2006 (no later amendments or editions), both published by the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department; and a determination of an applicant's or school bus driver's use of marijuana, cocaine, phencyclidine, opiates, amphetamines, barbiturates, benzodiazepines, methadone, and propoxyphene as required by these rules and conducted in accordance with a procedure that is generally accepted in the scientific community to be accurate and reliable.

“Cowl” means the portion of the chassis in a Type C school bus that separates the school bus engine from the school bus driver’s compartment.

“Cutaway van” means a chassis to which a completed driver's compartment is attached before a school bus manufacturer adds a school bus body.

“dB(A)” means decibels A scale, a term denoting that noise level has been adjusted to duplicate human hearing.

“Driver’s compartment” means the part of a school bus body that is separated from the passenger compartment by a barrier and contains the controls and instruments for the operation of the school bus.

“Emergency-brake system” means mechanical components used to slow or stop a school bus after a failure of the service-brake system.

“Emergency exit” means an opening in a school bus, including a door, push-out window, or roof hatch, used to unload passengers in the event of an occurrence that requires immediate evacuation of the school bus.

“Employer” means a private business or school district that hires applicants and certified school bus drivers to operate school buses.

“Frame” means the structural foundation upon which a school bus chassis is constructed.

“Frontage road” means a street that parallels an interstate highway and furnishes access to streets and property that would otherwise be unreachable from the interstate highway.

“Gross vehicle weight rating” means the value specified by the manufacturer as the maximum total loaded weight of a school bus, calculated in accordance with R13-13-106(27).

“Health care professional” means:

A physician licensed to practice medicine under A.R.S. § 32-1401 et seq., osteopathy under A.R.S. § 32-1800 et seq., or chiropractic under A.R.S. § 32-900 et seq.;

A physician licensed to practice medicine, osteopathy, or chiropractic in a state

contiguous to Arizona;

A physician employed by the United States government and licensed by a state or territory of the United States;

A physician assistant licensed under A.R.S. § 32-2501 et seq.; or

A registered nurse practitioner licensed under A.R.S. § 32-1601 et seq.

“Highway” has the same meaning as at A.R.S. § 28-101.

“Identification” means the signs, lettering, or numbers placed on the interior or exterior of a school bus body, including the glass areas, but does not include the lettering, numbers, or logos of a manufacturer or distributor of the manufacturer's product.

“Ignition power-deactivation switch” means a device that when set causes the engine of a motor vehicle to stop operating if the transmission is placed into gear or the parking-brake system is released.

“Interstate highway” means the designation given by the federal government to the system of highways connecting two or more states of the United States.

“Lamp” means a device that is covered by a lens and used to produce artificial light.

“Major defect” means a condition that exists to the interior or exterior of a school bus that causes the Department or owner to place the school bus out of service while the defect is being corrected.

“Manufacturer” means an entity engaged in the manufacturing or assembling of a school bus chassis, school bus body, or school bus chassis and body.

“Medical practitioner” has the same meaning as at A.R.S. § 32-1901.

“Minor defect” means a condition that exists to the interior or exterior of a school bus that is not a major defect and allows the school bus to remain in operation while the defect is being corrected.

“Off-duty” means the time a school bus driver is not on-duty.

“On-duty” means the period between the time a school bus driver begins to work for the employer or is required to be ready to work for the employer until the time the school bus driver is relieved from work and all responsibility for performing work for the employer. The time on-duty is used only to determine when a school bus driver must be provided time off-duty. Time on-duty may be compensated by the employer or an entity other than the employer or may be uncompensated. On-duty includes:

All time at an employer's place of business, waiting to be dispatched;

All time performing an operations check of a school bus in accordance with R13-13-108, or servicing or conditioning a school bus;

All time driving a school bus, including loading or unloading the school bus, and remaining in readiness to drive a school bus;

All time, at the direction of the employer, travelling but not driving a school bus or assuming any other responsibility to the employer. If the school bus driver is

afforded at least eight consecutive hours off-duty upon arrival at the school bus driver's destination after travelling but not driving a school bus or assuming any other responsibility to the employer, the school bus driver shall be considered off-duty for the entire period travelling but not driving the school bus or assuming any other responsibility to the employer;

All time repairing, obtaining assistance, or remaining in attendance upon a disabled school bus;

All time preparing required reports and records;

All time providing a breath or urine sample, including travel time to and from the collection site, to comply with the testing requirements of this Chapter;

All time performing any other work for the employer; and

All time performing any compensated work for any entity other than the employer.

“Out of service” means a school bus cannot be used to transport passengers.

“Owner” means the public or governmental agency or institution or private company in whose name a school bus is titled.

“Parking-brake system” means mechanical components used to prevent the movement of a school bus while loading or unloading a passenger or when the school bus is parked.

“Passenger” means an individual who rides in a school bus but does not participate in the operation of the school bus.

“Passenger compartment” means that part of the school bus body that is separated from the school bus driver's compartment by a barrier and holds the passengers to be transported.

“Physical examination” means an evaluation of an applicant's or school bus driver's medical status performed by a health care professional according to this Article.

“Physical examination form” means the Arizona Department of Transportation, Motor Vehicle Division, Medical Examination Report, which is used to record the results of a physical examination and may be obtained from the Department or Arizona Department of Transportation, Motor Vehicle Division.

“Physical performance test” means an evaluation of an applicant's or school bus driver's reflexes, agility, and strength performed according to this Article.

“Physical performance test form” means the document used to record the results of a physical performance test and may be obtained from the Department.

“Push-out window” means safety glass enclosed in a frame on a school bus that moves to the outside of the school bus when force is applied to the window from inside the school bus.

“Refresher training” means the courses required by the Department of each school bus driver to maintain certification as a school bus driver in Arizona.

“Restraining barrier” means a structure located in front of any school bus seat that

restricts the forward motion of a passenger.

“Rub rail” means a horizontal steel bar attached to the outside of a school bus body used to reinforce the sides of the school bus.

“Safety glass” has the same meaning as at A.R.S. § 28-959(F).

“School” means a school as defined by A.R.S. § 15-101(19), accommodation school as defined by A.R.S. § 15-101(1), charter school as defined by A.R.S. § 15-101(3), or private school as defined by A.R.S. § 15-101(18).

“School bus” has the same meaning as at A.R.S. § 28-101.

“School bus body” means a structure assembled upon a chassis designed to carry a school bus driver and passengers.

“School bus driver” means an individual who is certified by the Department as meeting the requirements at A.R.S. § 28- 3228 and R13-13-102 to operate a school bus in Arizona.

“School district” has the same meaning as at A.R.S. § 15-101 (20).

“Service-brake system” means mechanical components used to slow or stop a school bus.

“Service door” means a metal structure used to close the opening of a service entrance.

“Service entrance” means an opening in a school bus used to load or unload passengers.

“Special needs school bus” means a school bus that is designed to transport disabled passengers, some of whom may use a wheelchair, and is constructed with a service entrance and a special-service entrance.

“Special-service entrance” means an opening in a school bus that accommodates a wheelchair lift for the loading or unloading of a passenger who uses a wheelchair.

“Special-service entrance door” means a metal structure used to close the opening of a special-service entrance.

“Street” has the same meaning as at A.R.S. § 28-101.

“Traffic control signal” has the same meaning as at A.R.S. § 28-601.

“Training” means the instruction, courses, classes, or workshops provided by the Department or the employer that are required to obtain or maintain certification as a school bus driver or qualification as a classroom or behind-the-wheel instructor, or qualification to administer the physical performance test in Arizona.

“Transport” or “transporting” means a school bus driver sets a school bus in motion to carry passengers or objects authorized by the school district to be carried in a school bus.

“Type A school bus” means a conversion bus constructed utilizing a cutaway front section vehicle with a left side driver's door. This definition includes two

classifications: Type A-1, with a Gross Vehicle Weight Rating (GVWR) of 14,500 pounds or less; and Type A-2, with a GVWR greater than 14,500 pounds and less than or equal to 21,500 pounds.

“Type B school bus” means a school bus constructed utilizing a stripped chassis. The entrance door is behind the front wheels. This definition includes two classifications: Type B-1, with a GVWR of 10,000 pounds or less, and Type B-2, with a GVWR greater than 10,000 pounds.

“Type C school bus,” also known as a conventional style school bus, means a school bus constructed utilizing a chassis with a hood and front fender assembly. The entrance door is behind the front wheels. A Type C school bus may have a cutaway truck chassis or truck chassis with cab with or without a left side door and with a GVWR greater than 21,500 pounds.

“Type D school bus,” also known as a rear engine or front engine transit-style school bus, means a school bus constructed utilizing a stripped chassis. The entrance door is ahead of the front wheels.

“Van” means a covered or enclosed truck.

“Wheelchair” means a mobility aid consisting of a frame, seat, and three or four wheels, which is used to support and carry a disabled passenger.

“Wheelchair lift” means an electric hydraulic mechanism and platform in a school bus used to raise and lower a passenger in a wheelchair.

“Wheelchair-lift platform” means a horizontal surface upon which a wheelchair sits while being raised or lowered.

“Wheelchair-passenger restraint” means a combination of a pelvic and an upper torso restraint, including buckles and fasteners, designed to secure a passenger in a wheelchair within a school bus.

“Wheelchair-passenger restraint anchorage” means equipment for fastening wheelchair-passenger restraints to the interior of a school bus.

“Wheelchair-securement anchorage” means equipment for fastening a wheelchair-securement device to a school bus floor.

“Wheelchair-securement device” means a strap or webbing, including buckles and fasteners, used for fastening a wheelchair to a wheelchair-securement anchorage.

“Wheelchair-securement system” means components used to fasten a wheelchair to the interior of a school bus, including a wheelchair-securement anchorage and a wheelchair-securement device.

R13-13-102. Certification of School Bus Drivers

A. Certification requirements: An individual shall not operate a school bus in Arizona without being certified by the Department. An applicant for certification shall:

1. Be a minimum of 18 years of age;
2. Submit all of the following to the Department through the employer:
 - a. A completed fingerprint card and fingerprint card processing fee;
 - b. An application signed and dated by the applicant that states the applicant's:
 - i. Name, home address, and home phone number;
 - ii. Any alias ever used by the applicant;
 - iii. Social Security number;
 - iv. Date of birth;
 - v. Arizona commercial driver license number;
 - vi. Date of previous application for certification, if any;
 - vii. Intended employer's name;
 - viii. Convictions for a felony or misdemeanor, if any, in this state or any other state; and
 - ix. Total points accumulated against the applicant's driving record during the two years immediately preceding the date of application using the point system contained in A.A.C. R17-4-404;
 - c. Completed physical examination form, completed physical performance test form, and results of controlled substances testing; and
 - d. A verification made under penalty of perjury that all submitted information is true and complete;
3. Possess a current Arizona commercial driver license under A.R.S. § 28- 3101;
4. Possess any Arizona driver license endorsement required under A.R.S. § 28-3103;
5. Meet the driving record requirements listed in this Article; and
6. Complete the training requirements listed in this Article.

B. Physical examination

1. An applicant or school bus driver shall submit to a physical examination that is conducted by a health care professional in accordance with the physical examination form. An applicant or school bus driver is qualified to be certified as a school bus driver only if the health care professional conducts the physical examination in accordance with the physical examination form and concludes that the applicant or school bus driver has no condition that would interfere with the applicant's or school bus driver's ability to:
 - a. Operate a school bus safely,
 - b. Evacuate a school bus during an emergency or during a drill required under R13-13-104(D), and
 - c. Perform the operations checks required under R13-13-108(D).
2. An applicant or school bus driver who is insulin dependent shall obtain the waiver described in A.A.C. R17-5-208.
3. An applicant shall submit the completed physical examination form and, if applicable, a copy of the waiver required under subsection (B)(2), to the

- Department through the employer.
4. The initial physical examination of an applicant, conducted in accordance with the physical examination form, expires 24 months from the date of the physical examination unless a shorter time is specified by the health care professional who administers the physical examination. A school bus driver shall submit to a physical examination before the expiration date of the previous physical examination and send the completed physical examination form to the Department through the employer before the end of the month in which the previous physical examination expires.
 5. If a health care professional determines that further testing of an applicant or school bus driver is needed by an ophthalmologist or optometrist, the health care professional shall refer the applicant or school bus driver to:
 - a. An ophthalmologist licensed under A.R.S. § 32-1401 et seq.,
 - b. An optometrist licensed under A.R.S. § 32-1701 et seq.,
 - c. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by a state contiguous to Arizona, or
 - d. An ophthalmologist licensed to practice ophthalmology or optometrist licensed to practice optometry by any state or territory of the United States and employed by the United States government.
 6. In addition to the physical examinations required by this Article, the Department or the employer may require a physical examination of an applicant or school bus driver for an impairment that would affect the ability to perform the activities listed in subsection (B)(1). The Department or employer shall base its decision to require an additional physical examination upon consideration of the appearance or actions of the applicant or school bus driver or of medical information received by the Department regarding the applicant or school bus driver. The applicant or school bus driver shall submit results of a physical examination conducted under this subsection to the Department through the employer within 30 days of the date of the physical examination.
- C. Controlled substances and alcohol testing
1. An applicant or school bus driver shall submit to alcohol and controlled substances testing as required by A.R.S. § 28-3228(C)(2) and as prescribed by this Article and 49 CFR 382 October 2006 (no later amendments or editions). The testing shall be conducted in accordance with the procedures at 49 CFR 40 October 2006 (no later amendments or editions), both published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department, except for the changes in 49 CFR 40 and 49 CFR 382 listed in subsections (C)(1)(a) through (C)(1)(i).
 - a. 49 CFR 40.3
 - i. “Employee,” means an applicant or a school bus driver as defined at R13-13-101.
 - ii. “Employer” has the same meaning as at R13-13-101.
 - b. 49 CFR 382.107
 - i. “Commercial motor vehicle” has the same meaning as at A.R.S. §

- 28-3001(3).
- ii. "Driver" means a school bus driver as defined at R13-13-101.
 - iii. "Employer" has the same meaning as at R13-13-101.
 - iv. "Performing a safety-sensitive function" means any time during which a school bus driver is on-duty except when the school bus driver is being compensated by an entity other than the employer.
 - v. "Safety-sensitive function" means any activity for which a school bus driver is on-duty except when the school bus driver is performing an activity for and being compensated by an entity other than the employer.
- c. 49 CFR 382.207. In both sentences, the word "four" is changed to "eight."
 - d. 49 CFR 382.301(b), (c), and (d): Delete these subsections.
 - e. 49 CFR 382.303(a) and (b): Change the word "occurrence" to "accident," as defined in R13-13-101, and delete the words "operating on a public road in commerce."
 - f. 49 CFR 382.303(a)(1) and (b)(1): Delete the words ", if the accident involved the loss of human life"
 - g. 49 CFR 382.303(a)(2) and (b)(2): Delete the words ", if the accident involved:"
 - h. 49 CFR 382.303(a)(2)(i) and (ii) and (b)(2)(i) and (ii): Delete these subsections.
 - i. 49 CFR 382.303(c): In the table, in the column headed "Test must be performed by employer," change "No" to "Yes."
- 2. In addition to the testing required by 49 CFR 382, an applicant shall submit to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 - 3. In addition to the testing required by 49 CFR 382, a school bus driver shall submit annually to testing for the use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene by a procedure that is generally accepted in the scientific community to be accurate and reliable.
 - 4. The employer shall ensure that a school bus driver is tested for use of marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, or propoxyphene or alcohol when required to do so by these rules or when requested by the Department.
 - 5. The employer shall submit any and all negative results of testing done under subsection (C) to the Department within 30 days of the date of testing or within 12 months of the school bus driver's previous test, whichever is sooner, by providing the Department a copy of the report submitted to the employer by the entity that conducted the testing.
 - 6. The employer shall immediately notify the Department by telephone of any and all positive results of testing done under subsection (C) and shall submit to the Department within five days a copy of the report submitted to the employer by the entity that conducted the testing.
- D. Physical performance test

1. An applicant shall pass a physical performance test that consists of the following eight standards:
 - a. Climbing and descending the steps of a school bus three times in 30 seconds;
 - b. Alternately activating the throttle and the service-brake system of a school bus 10 times in 10 seconds;
 - c. Depressing and holding the clutch, if applicable, and service-brake system of a school bus for three seconds, five consecutive times;
 - d. Opening and closing a manually operated service door three times without stopping. If the school bus has an automatic service door, operate the manual override of the service door;
 - e. Operating at least two hand controls, one on each side of the steering wheel, within eight seconds while maintaining control of a moving school bus;
 - f. Starting in a seat-belted position, exit a school bus from the rear-most floor-level emergency exit within 20 seconds;
 - g. Carrying or dragging a 125-pound object 30 feet in 30 seconds; and
 - h. Lowering a 30-pound object from a floor-level emergency exit to the ground and lifting the same object from the ground to the school bus floor.
2. A school bus driver who is certified on the effective date of this subsection shall pass the physical performance test within one year from the effective date of this subsection.
3. A school bus driver shall pass the physical performance test again no later than 24 months after previously passing the physical performance test.
4. An applicant or school bus driver who fails the physical performance test may take the test again after 24 hours. An applicant or school bus driver may take the physical performance test no more than three times in 90 days. If an applicant fails the physical performance test on the third attempt, the Department shall not further consider the applicant for certification unless the applicant complies again with the requirements of this Section.
5. The employer shall ensure that a school bus driver who fails the physical performance test does not operate a school bus until the school bus driver passes the physical performance test.
6. If a school bus driver takes and fails the physical performance test three times, the Department shall cancel the school bus driver's certification.
7. An employer shall ensure that the physical performance test is administered by a person who has completed Department-authorized training, using the largest type of school bus that an applicant or school bus driver may be required to operate.
8. A person who administers the physical performance test shall either pass or fail the applicant or school bus driver taking the test, complete the physical performance test form, and submit the completed form to the Department and the employer within seven days of the physical performance test.

E. Driving record

1. During the 24 months before the date of application or during any 24-month period while certified as a school bus driver, an applicant or school bus driver shall not accumulate eight or more points against a driving record in this state using the point system contained in A.A.C. R17-4-404.

2. During the 10 years before the date of application, an applicant shall not have repeatedly received citations for violation of traffic law.

F. Training requirements of a school bus driver

1. Before being certified by the Department as a school bus driver, an applicant shall complete a minimum of 14 hours of classroom training in the following:
 - a. State and federal traffic laws,
 - b. Behind-the-wheel driving operations,
 - c. School bus driver's responsibilities to passengers and school,
 - d. Inspections and operations checks,
 - e. Records and reports,
 - f. Special needs transportation, and
 - g. Accidents and emergencies.
2. An employer shall ensure that classroom training is taught by a classroom instructor who is qualified under R13-13-103.
3. At least seven days before classroom training, the classroom instructor shall notify the Department in writing of the date, time, and location of classroom training. The classroom instructor shall notify the Department by any means available at least 24 hours before the date, time, or location of classroom training is changed or canceled.
4. After completion of classroom training, the classroom instructor shall administer to the applicant a written examination standardized by the Department.
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in subsection (F)(1).
 - b. Each question has a value of two points. To pass the examination an applicant shall receive a score that equals or exceeds 80% of the total possible score.
 - c. If an applicant is unable to read or speak English, the employer shall arrange to have the examination administered orally to the applicant in the language with which the applicant is most familiar.
 - d. If an applicant does not pass the examination on the first attempt, the applicant may take an examination two more times within 12 months of the first attempt. A different examination shall be administered to an applicant who is taking an examination for the second or third time. The period between examinations shall be a minimum of 24 hours. If the applicant fails the examination on the third attempt, the applicant shall be considered further only if the applicant complies again with the requirements in this Section.
5. The classroom instructor shall submit the following information in a written report to the Department and the employer within seven days from the date of the conclusion of a classroom training course:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each applicant's name, and

- by a nationally recognized organization such as the American Heart Association, American Red Cross, National Safety Council, American Safety and Health Institute, or Arizona Bureau of Mines; by an emergency medical technician licensed in Arizona; or by an agency of the U.S. government.
3. An applicant shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card issued to the applicant or other written documentation as proof of completion of the first-aid and cardiopulmonary resuscitation training.
 4. A school bus driver shall renew first-aid and cardiopulmonary resuscitation training before expiration of the current training. Renewal instruction shall be provided by an individual described in subsection (G)(2). The school bus driver shall submit to the Department, through the employer, a copy of the front and back of the first-aid card and cardiopulmonary resuscitation card or other written documentation as proof of renewal of training.
- H.** The Department shall process an application for certification as a school bus driver under R13-13-109.
- I.** Refresher training
1. A school bus driver shall have refresher training no later than 24 months following completion of the training required by subsection (F). Refresher training shall consist of a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1).
 2. After completing the first refresher training, the school bus driver shall complete a minimum of 6 1/2 hours of classroom training in the topics listed in subsection (F)(1) every 24 months following the last refresher training.
 3. An employer shall ensure that refresher training is taught by a classroom instructor who is qualified under R13-13-103.
 4. A classroom instructor shall teach refresher training and shall submit the following information in a written report to the Department and the employer within seven days from completion of the refresher training:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of training,
 - d. Location of training,
 - e. Number of hours of training taught by the classroom instructor,
 - f. Each school bus driver's name, and
 - g. Each school bus driver's certification number.
 5. In addition to the report required under subsection (I)(4), the classroom instructor shall maintain and submit to the employer within seven days from the conclusion of a refresher training course, a refresher-training course log that includes:
 - a. Instructor's name,
 - b. Instructor's identification number,
 - c. Date of the refresher training course,
 - d. Name and certification number of each school bus driver attending the refresher training course,
 - e. Subject matter taught in each hour, and

f. Which hours of refresher training were attended by each school bus driver.

J. Records

1. The employer shall maintain qualification and training records of an applicant who is certified and of a school bus driver who terminates employment, and qualification records of an applicant who is denied certification, for 24 months from the date of certification, termination of employment, or denial of certification.
2. The employer shall maintain records of testing required under subsection (C) in accordance with 49 CFR 382.401, October 2006 (no later amendments or editions), published at the U. S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference, and on file with the Department. In this subsection, "controlled substances," as used in 49 CFR 382.401, means marijuana, cocaine, opiates, amphetamines, phencyclidine, benzodiazepines, barbiturates, methadone, and propoxyphene.
3. The employer shall transfer the records of a school bus driver to a subsequent employer upon written request by the subsequent employer or school bus driver.
4. Qualification records include:
 - a. Application,
 - b. Driving record,
 - c. Copy of physical examination form, and
 - d. Physical performance test form.
5. Training records include:
 - a. A copy of the classroom-training course log required under subsection (F)(6) that shows the applicant's attendance,
 - b. A copy of the refresher-training course log required under subsection (I)(5) that shows the school bus driver's attendance,
 - c. The classroom training examination score,
 - d. The applicant's behind-the-wheel training log,
 - e. The Proof of Completion of Behind-the-wheel Training and Driving Test form,
 - f. A copy of the first-aid card and cardiopulmonary resuscitation card or other written documentation of completion of first-aid and cardiopulmonary resuscitation training, and
 - g. A copy of the school bus driver certification card issued by the Department.

K. Denial, cancellation, or suspension of certificate

1. Based on an assessment of the totality of the circumstances, the Department may deny a certificate to an applicant or may cancel or suspend a certificate of a school bus driver for:
 - a. Failing to meet or comply with the requirements of this Article;
 - b. Being convicted of or subject to an outstanding warrant for any felony;
 - c. Being convicted of or subject to an outstanding warrant for any misdemeanor reasonably related to the occupation of a school bus driver including, but not limited to:
 - i. Citation for any moving motor vehicle violation, including but not limited

- to, violations of A.R.S. § 28-1591 et seq.;
 - ii. Driving under the influence (A.R.S. § 28-1381 et seq.);
 - iii. Any sexual offense (A.R.S. § 13-1401 et seq.);
 - iv. Any abuse of a child (A.R.S. § 13-3623); or
 - v. Use, sale, or possession of a controlled substance (A.R.S. § 13-3401 et seq.).
 - d. Demonstrating behavior that endangers the educational welfare or personal safety of students, teachers, or school bus drivers or other co-workers;
 - e. Providing false, incomplete, or misleading information to the Department;
 - f. Driving or being in actual physical control of a school bus under a circumstance listed in A.R.S. § 28-1381(A);
 - g. Under A.R.S. §§ 28-3301 through 28-3322, having a commercial driver license canceled, suspended, revoked, or denied; or
 - h. Having a verified positive result to any controlled substance or alcohol test required by subsections (C)(1), (2), or (3), at any time.
 - 2. Any conviction, violation, warrant, or other misconduct described in this Section shall be considered, whether or not the school bus driver was operating a school bus at the time of the conviction, violation, warrant, or other misconduct.
 - 3. An applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended may request a hearing within 30 days from the date of receipt of the notice of the denial, cancellation, or suspension. The hearing shall be conducted according to the procedures contained in A.R.S. Title 41, Chapter 6, Article 10.
 - 4. The Department shall inform an applicant who is denied a certificate or a school bus driver whose certificate is canceled or suspended of the amount of time that must elapse before the applicant or the school bus driver may reapply for certification. The Department shall include this information in the notice of denial, cancellation, or suspension and the notice of final order, if any, served on the applicant or school bus driver. In determining the amount of time that must elapse before reapplication, the Department shall consider:
 - a. The seriousness of the offense leading to denial, cancellation, or suspension;
 - b. The frequency with which the offense occurred; and
 - c. The amount of time required to correct the offense.
- L. If a school bus driver is terminated from or leaves employment, the employer shall provide written notice to the Department within 30 days of the termination or leaving. If a school bus driver transfers employment from one employer to a second employer, within 14 days of the transfer the second employer shall provide written notice to the Department of the:
 - 1. School bus driver's name,
 - 2. School bus driver's certification number,
 - 3. Name of the transferring employer, and
 - 4. Effective date of the transfer.

R13-13-103. Qualification of Classroom and Behind-the-wheel Instructors

A. To be qualified as a classroom instructor, an individual shall:

1. Submit to the Department through the employer, the following two letters:
 - a. A letter from, signed, and dated by the individual that states the individual's:
 - i. Name, home address, and home phone number;
 - ii. Social Security number;
 - iii. Date of birth;
 - iv. Current employer's name, address, and phone number;
 - v. Dates of all previous letters submitted under this subsection; and
 - b. A letter from the current employer recommending that the individual be considered as a classroom instructor; and
2. Pass a written examination standardized by the Department:
 - a. The written examination shall consist of a combination of 50 true or false, multiple choice, and fill-in-the-blank questions. The examination questions shall cover the topics listed in R13-13-102(F)(1).
 - b. Each question has a value of two points. To pass the examination, an individual shall receive a score that equals or exceeds 90% of the total possible score.
 - c. If an individual taking the written examination is unable to read or speak English, the employer shall arrange to have the examination administered orally in the language with which the individual is most familiar.
 - d. If an individual does not pass the examination, the individual may take a second examination that is different from the first examination.
 - e. If an individual fails to pass the second examination, the individual may receive further consideration by submitting again the letters required by subsection (A)(1) and taking the written examination required by this subsection.
 - f. The employer shall submit each individual's examination score to the Department within seven days from the date of the examination.

B. To remain qualified as a classroom instructor, a classroom instructor shall teach a minimum of 12 hours of classroom or refresher training every 24 months from the date the classroom instructor is first recognized by the Department as qualified.

C. To be qualified as a behind-the-wheel instructor, an individual shall:

1. Be certified continuously as a school bus driver in Arizona for the 12 months immediately before submitting the letters described in subsection (C)(2) and be employed as a certified school bus driver at the time of qualification as a behind-the-wheel instructor;
2. Submit to the Department through the employer, the following two letters:
 - a. A letter from, signed, and dated by the individual that states the individual's:
 - i. Name, home address, and home phone number;
 - ii. Social Security number;
 - iii. Commercial driver license number;
 - iv. Current employer's name, address, and phone number;

- e. Use, sale, or possession of a controlled substance (A.R.S. § 13-3401 et seq.);
 - 4. Provides false, incomplete, or misleading information to the Department;
 - 5. Drives or is in actual physical control of a school bus under a circumstance listed in A.R.S. § 28-1381(A); or
 - 6. Under A.R.S. §§ 28-3301 through 28-3322, has a commercial driver's license canceled, suspended, revoked, or denied.
- G.** If a classroom or behind-the-wheel instructor is terminated from or leaves employment, the employer shall provide written notice to the Department within 30 days of the termination or leaving. If a classroom or behind-the-wheel instructor transfers employment from one employer to a second employer, within seven days of the transfer the second employer shall provide written notice to the Department of the:
- 1. Name of the classroom or behind-the-wheel instructor,
 - 2. Identification number of the classroom or behind-the-wheel instructor,
 - 3. Name of the transferring employer, and
 - 4. Effective date of the transfer.

R13-13-104. Minimum Standards for School Bus Operation

A. A school bus driver shall perform operations checks of a school bus as required by R13-13-108.

B. Loading or unloading of passengers:

1. As of February 16, 1996, an eight-lamp system as described in R13-13-107(17) shall be installed on a school bus before it is introduced into Arizona. When preparing to stop a school bus on a street or highway, the school bus driver shall activate the alternately flashing amber lamps of an eight-lamp system or the alternately flashing red lamps of a four-lamp system for a minimum distance of 100 feet, in accordance with A.R.S. § 28-930(B). Whenever the school bus is stopped on a street or highway to load or unload passengers, the school bus driver shall deactivate the alternately flashing amber lamps and activate the alternately flashing red lamps of an eight-lamp system, and extend the stop arm and open the service door.
2. When a school bus driver stops the school bus to load or unload passengers, the school bus driver shall set the parking brake and place the transmission in neutral.
3. The distance between stops for the purpose of loading or unloading passengers shall be no less than 600 feet, unless the school determines that more frequent stops are necessary for safety. The school bus driver shall stop the school bus as near the right edge of the traveled portion of the street or highway as possible.
4. A school bus driver shall not load or unload passengers on the traffic side of the bus.
5. When a school bus driver loads or unloads passengers who must cross a street or highway at a location other than an intersection, the passengers shall cross at least 10 feet in front of the front bumper of the school bus. The school bus driver shall not permit passengers who must cross a street or highway to be unloaded from the school bus until all traffic to the front and rear of the school bus is stopped. The school bus driver shall not move the school bus until all passengers have crossed the street or highway.
6. In intersections that use lighted traffic control signals, a school bus driver shall load or unload passengers no closer than 100 feet of the traffic control signal so the passengers may cross with the traffic control signal, either before or after the school bus proceeds.
7. In intersections without lighted traffic control signals, a school bus driver shall load or unload passengers no closer than 50 feet of the intersection so the passengers may cross at the intersection, either before or after the school bus proceeds.
8. A school bus driver shall not stop a school bus on an interstate highway for the purpose of loading or unloading passengers, except that:
 - a. A school bus stop may be established on a frontage road that parallels an interstate highway if no passenger is allowed to cross a divided highway.
 - b. A school bus may stop in a safety rest area as defined by A.R.S. § 28-7901(8) that is part of or adjacent to an interstate highway.
9. A school bus driver shall load or unload passengers on school grounds only in an

- area designated by the school and marked with a sign as a school bus loading area.
10. During loading or unloading of passengers at a designated school bus loading area at a school, the school shall restrict the loading area to school buses, passengers, and school employees assisting in the loading or unloading of passengers.
 11. A school shall allow passengers in a designated school bus loading area only when the passengers are being loaded on or unloaded from a school bus.
 12. A school shall designate all school bus loading areas at locations that prevent backing of the school bus.
 13. In areas at a school not designated as a school bus loading area, a school bus driver shall not back upon or adjacent to the school grounds unless an individual authorized by the school bus driver directs the backing procedure while standing at the rear of the school bus in a position visible to the school bus driver. This provision does not apply to a school bus garage or school bus storage area where passengers are not allowed.
 14. Immediately before a school bus driver engages in backing a school bus, the school bus driver shall sound the horn to warn motorists and pedestrians of the backing procedure. This provision does not apply if the school bus is equipped with an alarm that operates automatically when the school bus is backing.
 15. In addition to the requirements for railroad grade crossings contained in A.R.S. § 28-853, a school bus driver shall comply with the following:
 - a. Use hazard warning lights as described in A.R.S. § 28-947(D) within a minimum of 100 feet of a railroad grade crossing to warn motorists of an intended stop.
 - b. Shut off any radio, compact-disc player, and other source of sound within 50 feet of a railroad grade crossing.
 - c. Stop the school bus, with or without passengers aboard, at a railroad grade crossing when traffic at the railroad grade crossing is not directed by a police officer.
 - d. While stopped at a railroad grade crossing at which traffic is not directed by a police officer, activate the noise suppression switch, completely open the service door and the window to the left of the driver and, by hearing and sight, determine that it is safe to cross. Before proceeding, close the service door. De-activate the noise suppression switch after crossing the tracks.
 - e. Do not stop to load or unload passengers within 200 feet of a railroad grade crossing. This provision does not prohibit stops at a railroad station or on a highway that parallels the railroad tracks.
 16. When a school bus driver loads a wheelchair passenger on a school bus, the school bus driver shall secure both the wheelchair and the wheelchair passenger using the systems described in R13-13-105(E).
- C. An employer shall not allow or require a school bus driver to drive a school bus nor shall a school bus driver drive a school bus:
1. For more than 10 hours after having been off-duty for a minimum of eight consecutive hours;
 2. For any period after having been on-duty for 15 hours after having been off-duty

- for a minimum of eight consecutive hours;
3. After having been on-duty 60 hours in any seven consecutive days if the employer does not operate school buses for seven consecutive days; or
 4. After having been on-duty 70 hours in any eight consecutive days if the employer operates school buses every day of the week.

D. Other requirements:

1. A school bus driver shall wear a seat belt whenever the school bus is in motion.
2. While operating a school bus, a school bus driver shall wear closed-toe, closed-heel shoes that will not interfere with driving the school bus safely or performing other duties of the school bus driver.
3. A school bus driver shall comply with all state traffic laws while operating a school bus except that the school bus driver shall not exceed 65 miles per hour or the posted speed limit, whichever is less, when operating the school bus on an interstate highway.
4. Any person boarding or attempting to board a school bus, whether or not a passenger, shall comply with all instructions given by a school bus driver. If a passenger or a non-passenger boards or attempts to board a school bus and refuses to comply with the school bus driver's instructions, the school bus driver may seek emergency assistance to remove the passenger or non-passenger from the school bus, or prevent the passenger or non-passenger from boarding.
5. All passengers shall sit with their backs against the seat backs, their legs facing towards the front of the school bus, and all parts of their bodies clear of all aisles whenever the school bus is in motion.
6. A school bus driver shall not transport in a school bus more passengers than the rated capacity stated by the school bus manufacturer.
7. A school bus driver shall close the service doors of a school bus before operating the school bus. The service doors shall remain closed whenever the school bus is in motion.
8. A school bus driver shall not place the transmission in neutral or coast with the clutch disengaged on a downhill grade.
9. The driver of a school bus equipped with a two-speed axle shall not shift the axle while descending any hill posted with grade warning signs.
10. A school bus driver shall ensure that a school bus is not fueled in a closed building, while the school bus engine is running or while passengers are on board.
11. A school bus driver or passenger shall not use tobacco in any form on a school bus.
12. A school bus driver shall not carry on a school bus or consume any beverage containing any alcohol while on-duty with the employer or within eight hours before going on-duty with the employer.
13. A school bus driver shall not eat or drink on a school bus unless the school bus is completely stopped.
14. A school bus driver shall not at any time carry on a school bus or use a controlled substance.
15. A passenger shall not carry on a school bus or consume while being transported in a school bus, any beverage containing any alcohol.

16. A passenger shall not carry on a school bus or consume while being transported in a school bus, any dangerous or narcotic drug, as defined in A.R.S. § 13-3401, unless:
 - a. A medical practitioner authorized by the state to write a prescription for the dangerous or narcotic drug has prescribed the dangerous or narcotic drug for the passenger who is carrying or consuming it;
 - b. The school district governing board establishes written policies and procedures regarding the administration of a dangerous or narcotic drug by a trained district employee to a passenger who is being transported in a school bus; and
 - c. The parent or legal guardian of a passenger to whom a dangerous or narcotic drug is administered while being transported in a school bus provides prior written authorization for the dangerous or narcotic drug to be administered to the passenger by a trained district employee.
17. A school bus driver shall not assume responsibility for transporting any medication, whether prescription or over-the-counter, that belongs to a passenger.
18. A school bus driver shall not transport animals, insects, or reptiles in a school bus with the exception of service animals, as defined at A.R.S. § 11-1024(J), which assist disabled passengers.
19. Except for eyeglasses, a passenger or school bus driver shall not carry or transport glass objects on a school bus.
20. A school bus driver or passenger shall not carry on or transport in a school bus an explosive device, gun, knife, or other weapon as defined by school-district policy.
21. A passenger shall not place any part of the passenger's body out of a school bus window or door except when exiting the school bus.
22. When instruments or equipment related to musical or athletic events are transported on a school bus, the school bus driver shall transport them as follows:
 - a. Instruments or equipment shall not occupy seating space if needed for a passenger,
 - b. Instruments or equipment shall not be placed in the school bus driver's compartment or step-well of the school bus,
 - c. Instruments or equipment shall be under the passenger's control at all times or secured in the school bus, and
 - d. Instruments or equipment shall not block an aisle or emergency exit of the school bus at any time.
23. A passenger who carries onto a school bus an object other than an instrument or equipment related to musical or athletic events shall control the object at all times or secure the object in the school bus. If the passenger is not able to control or secure the object in the school bus, the passenger shall not carry the object onto the school bus.
24. A school bus driver shall ensure that all objects inside the school bus are under a passenger's control or secured in a manner that prevents the objects from causing physical injury to others or affecting the safe operation of the school bus.
25. A school bus driver shall not drive a school bus with a trailer or other vehicle attached to the school bus.

26. A school bus driver shall stop the school bus and check the wheels and tires for wear, damage, and inflation after every two continuous hours of driving.
27. All school buses shall have and school bus drivers shall use a two-way voice communication system. The two-way voice communication system shall only be used to assist the school bus driver with passenger transportation.
28. Except as provided in subsection (D)(27), a school bus driver shall not use audio headsets, earphones, earplugs, Bluetooth devices, cellular phones, personal digital assistants, or other interactive wireless devices, whether or not hands-free, when the school bus is in operation.
29. Except when complying with R13-13-108(D), if a school bus driver leaves the driver's compartment, the school bus driver shall set the parking-brake system, place a standard transmission in either first or reverse gear, place an automatic transmission in park or neutral, and turn off the ignition and remove the ignition key from an ignition that uses a key, or set the ignition power-deactivation switch of an ignition that does not use a key.
30. Each time a school bus driver unloads passengers and it appears that no passengers remain on the school bus, the school bus driver shall inspect the interior of the school bus for passengers remaining and objects left on the school bus. If the school bus is equipped with a child alert notification system as described in R13-13-106(6), the school bus driver shall complete all procedures required by the child alert notification system, in addition to the school bus driver's inspection of the interior of the school bus.
31. At least twice during every school year, a school shall conduct an evacuation drill of a school bus at the school that includes every passenger who rides a school bus and is in school on the day of the evacuation drill. At least 14 days before an evacuation drill, a school shall submit to the Department a written notice stating the date, time, and location of the evacuation drill. Each school bus driver shall participate in a minimum of two evacuation drills during every school year. Evacuation drills shall include:
 - a. Practice and instruction in the location, use, and operation of the emergency exits, fire extinguishers, first aid equipment, windows as a means of escape, and communication systems;
 - b. Practice and instruction in when and how to approach, load, unload, and move away from the school bus a minimum of 100 feet;
 - c. Instructions on how weather-related hazards affect emergency procedures; and
 - d. Instructions on the importance of orderly conduct.
32. A white, flashing, strobe lamp as described in R13-13-107(17)(f) may be used only during conditions that produce low visibility or that are hazardous.
33. An owner shall ensure that no lock, except as provided in R13-13-107(10)(h), is installed on any school bus emergency exit or service door.
34. A school bus driver shall ensure that nothing obstructs or interferes with the use of any school bus emergency exit or service door.
35. A school bus driver, passenger, or school administrator shall immediately report to the employer any violation of these rules or state statutes that the school bus

driver, passenger, or school administrator reasonably believes threatens the health, safety, or welfare of a passenger.

E. Reports and recordkeeping:

1. Immediately following any accident involving a school bus, the school bus driver shall report the accident to the employer.
2. Immediately upon receiving notification of any accident involving a school bus, the employer shall notify the Department of the accident by telephone. The employer shall submit written verification of the accident to the Department within 72 hours of the telephone notification.
3. Immediately upon becoming aware of a violation of these rules or state statutes that a reasonable person could conclude caused injury to or threatened the health, safety, or welfare of a passenger, the employer shall notify the Department of the violation by telephone. The employer shall submit a written report of the violation to the Department within 72 hours of the telephone notification.
4. No later than 14 days after an evacuation drill, a school district shall submit to the Department a written report of the evacuation drill identifying the school district, participating school, date, and number of participants.
5. From the date on which a record is created, the employer shall maintain for three years the following written records for each school bus driver:
 - a. On a daily basis, the period of time each school bus driver is on-duty for the employer including the date, each start and quit time, and the total number of hours on-duty for the employer.
 - b. On a daily basis, the total number of hours on-duty for an entity other than the employer during the previous seven days.
6. A school bus driver who performs any compensated work for an entity other than the employer shall provide the employer, in writing, the name and telephone number of the entity and the number of hours the school bus driver works each day for the entity.
7. A school bus driver who receives a citation, whether on-duty or off-duty, shall immediately inform the employer by telephone about the citation and shall submit a copy of the citation to the employer within five days.

R13-13-105. Special Needs Standards

A. General requirements:

1. A school bus introduced to Arizona on or after May 31, 2008 used for transporting disabled passengers shall comply with the minimum standards applicable to school buses and the specifications contained in this Section. A school bus introduced to Arizona before May 31, 2008 used for transporting disabled passengers shall comply with the minimum standards in this Section or shall be maintained in accordance with the manufacturer's original specifications.
2. Any school bus that is used for transporting a passenger who uses a wheelchair shall be equipped with a wheelchair lift.
3. A wheelchair lift shall be located on the side of the bus body opposite the school bus driver. The wheelchair lift shall not be attached to the exterior sides of the school bus and shall be confined within the school bus body when not extended.
4. Any school bus that is used for transporting disabled passengers shall be equipped with a belt cutter that is accessible only to the school bus driver. The belt cutter shall be secured in a location within reach of the school bus driver while belted into the driver's seat. The school bus may be equipped with additional belt cutters. Additional belt cutters shall be accessible only to the school bus driver or adult aides or attendants.

B. Special-service entrance:

1. A school bus used for transporting disabled passengers shall have a special-service entrance of a width and depth to accommodate a wheelchair lift. The special-service entrance shall have a minimum clear opening of 30 inches horizontally to allow for the passage of a wheelchair.
2. The special-service entrance shall be located on the side of the bus opposite the school bus driver and far enough to the rear of the school bus to prevent the special-service entrance door from obstructing the service door when the special-service entrance door is open.
3. A drip molding shall be installed above the special-service entrance to divert water from the special-service entrance.
4. The frame surrounding the special-service entrance shall provide support and strength at least equal to at the conventional service and emergency doors.

C. Special-service entrance doors:

1. A school bus used for transporting passengers in wheelchairs shall provide a special-service entrance door not to exceed 50 inches in width.
2. Two doors may be used for a special-service entrance on a school bus, if the doors are equipped with a positive latching mechanism to prevent accidental opening.
3. The special-service entrance door shall be constructed to open toward the exterior of the school bus. A Type A school bus is exempt from this provision if its special-service entrance door is provided by the school bus chassis manufacturer.
4. The special-service entrance door shall have a fastening device attached to the school bus body to hold the special-service entrance door in an open position.
5. The special-service entrance door shall be weather-sealed by a waterproof

- cushion affixed to the door or door frame.
6. Door materials, panels, and structural strength of a special-service entrance door shall be equivalent to the standards contained in R13-13-107 for a service door and an emergency door. Color, rub rail extensions, if installed, lettering, and all exterior features shall match adjacent sections of the school bus body.
 7. The window in the special-service entrance door shall be made of safety glass, mounted in a waterproof manner that is equal to the mounting of the other windows, and aligned with the side windows of the school bus.
 8. A pressure switch shall be installed in the special-service entrance door frame that will actuate a visible signal located in the school bus driver's compartment when the ignition is in the "on" position to warn the school bus driver when the special-service entrance door is not closed.
 9. A switch shall be installed in the special-service entrance door frame so the wheelchair lift will not operate when the special-service entrance door is closed.

D. Wheelchair lift:

1. A wheelchair lift shall be capable of lifting a minimum load of 800 pounds.
2. When the wheelchair-lift platform is raised to the maximum position, it shall be held in position by the wheelchair lift.
3. Controls shall be provided that enable an individual authorized by the school bus driver to activate the wheelchair lift from either inside or outside the school bus.
4. The wheelchair lift shall be equipped so it may be manually raised or lowered in the event of a power failure to the wheelchair lift.
5. The wheelchair lift shall contain a safety device to prevent the wheelchair-lift platform from falling.
6. The wheelchair lift shall be constructed so it allows the wheelchair-lift platform to rest completely on the ground.
7. All edges of the wheelchair-lift platform shall be designed to restrain the wheelchair and prevent the feet of an individual in the wheelchair from becoming caught during the raising or lowering process.
8. A barrier shall be attached along the outer non-loading edges of the wheelchair-lift platform that will prevent the wheelchair from rolling off the wheelchair-lift platform when the wheelchair-lift platform is placed in any position other than completely extended on ground level.
9. A self-adjusting, skid-resistant plate shall be installed on the loading edge of the wheelchair-lift platform to reduce the incline from the wheelchair-lift platform to ground level. This plate shall be used as a restraining barrier on the loading edge of the wheelchair-lift platform. The wheelchair-lift platform shall be skid-resistant.
10. A school bus may be provided with a battery to be used exclusively to operate the wheelchair lift. If a battery is installed for this purpose, an appropriate size circuit breaker meeting the wheelchair lift manufacturer's specifications shall be installed between the battery and the wheelchair lift motor. The circuit breaker shall be located as close to the power source as possible, but not within the school bus driver's compartment.
11. The wheelchair lift shall be equipped with an adjustable switch that limits the

- electrical power to the wheelchair-lift motor and a bypass valve to prevent pressure from building in the hydraulic system when the wheelchair-lift platform reaches the maximum up or down position.
12. A ramp may be carried on a school bus for use during an occurrence that requires evacuating the school bus. The ramp shall not be stored within the passenger compartment of the school bus.
- E. Wheelchair and wheelchair-passenger securement:**
1. Each wheelchair in a school bus shall be secured in a forward-facing position. Medical equipment and supplies required to accommodate a disabled passenger shall be secured in a school bus by means of alterations approved by the Department in accordance with R13-13-108(G).
 2. Each wheelchair-securement system location in a school bus shall have a minimum clear floor area of 30 inches in width from the interior school bus wall to the aisle and a minimum of 48 inches in length. A wheelchair shall not be placed in a position that prevents passage through the special-service entrance.
 3. Each wheelchair-securement system shall have four full-length tracks, with an L-track four-point tie-down configuration.
 4. The wheelchair-securement system shall provide a minimum of four wheelchair-securement anchorages attached to the school bus floor with a minimum of two anchorages located at the rear of the space designated for a wheelchair and a minimum of two anchorages located at the front of the space.
 5. The wheelchair-securement system shall provide a minimum of one wheelchair-securement device located in each of the rear anchorages and a minimum of one wheelchair-securement device located in each of the front anchorages.
 6. A wheelchair space shall have a minimum of one wheelchair-passenger shoulder restraint anchorage attached to the interior wall of the school bus and a minimum of two wheelchair-passenger restraint anchorages located at the rear of the space.
 7. Each wheelchair space shall have one wheelchair-passenger restraint. A school bus equipped with a wheelchair-passenger restraint shall have the following information available on the school bus:
 - a. A telephone number where information may be obtained about installation, repair, and parts; and
 - b. Instructions regarding use of the restraint, including a diagram showing the proper placement of the wheelchair and positioning of securement devices and occupant restraints, including correct belt angles.
- F. Dome light:** A dome light shall be placed in the interior ceiling of the school bus to illuminate the wheelchair lift area. The dome light shall be activated by a pressure switch located in the special-service entrance door or by a manually operated switch located in the interior of the school bus no more than one foot from the special-service entrance door. This switch shall be used exclusively for the dome light.
- G. Aisles:** All aisles leading to an emergency door from any wheelchair space shall be a minimum of 30 inches in width. The emergency door opening shall be a minimum of 30 inches in width.
- H. Seating arrangements:** All fixed seats in a special-needs school bus shall be forward facing.

- I. Emblems: A school bus used for transporting disabled passengers shall display two International Symbol of Accessibility emblems. One emblem shall be placed below the upper window on the emergency door or below the window on the special-service entrance door, and the second emblem shall be placed below the windshield on the side of the bus or on the bumper opposite the school bus driver. The emblems shall be made of blue, reflective material and be a minimum of 6 inches and a maximum of 12 inches in width and height and shall contain a reflective white wheelchair impression with a minimum of 1/8 inch reflective white border around the outer edges of the emblems.
- J. Types A and B school buses used to transport disabled passengers shall comply with the specifications contained in this Section except:
1. A ramp may be installed in place of a wheelchair lift;
 2. If a ramp is used, it shall be of a strength and rigidity to support a wheelchair, passenger, and an individual attending the wheelchair passenger. The ramp shall be equipped with a barrier on each longitudinal side to prevent the wheelchair from leaving the ramp;
 3. The floor of the ramp shall be covered with nonskid material; and
 4. A ramp shall not be carried in the passenger compartment of a school bus.

R13-13-106. Minimum Standards for School Bus Chassis

The chassis of a school bus introduced to Arizona on or after May 31, 2008 shall meet the requirements of this Section. The chassis of a school bus introduced to Arizona before May 31, 2008 shall meet the requirements of this Section or shall be maintained in accordance with the manufacturer’s original specifications.

1. Air cleaner: An engine intake air cleaner shall be installed in the school bus that meets engine specifications defined by the school bus manufacturer.
2. Axles: The front and rear axles and suspension assemblies shall have a gross axle weight rating consistent with that stated by the chassis manufacturer on a notice located in the school bus driver's compartment.
3. Back-up alarm: If installed, an alarm that emits a warning sound when the school bus is backing shall conform to the following:
 - a. The alarm-signaling device shall be of electronic, solid state design and shall emit an audible sound of a minimum of 97 dB(A) measured at 4 feet, 0° access from the source of the sound.
 - b. The alarm-signaling device shall be wired into the backup light circuits and shall emit sound automatically when the gear shift lever is in “reverse” position.
 - c. The alarm-signaling device shall be attached to the school bus chassis or body behind the rear axle.
4. Brakes:
 - a. A school bus with a manufacturer-designed passenger capacity of 60 or less shall be equipped with a service-brake system that uses compressed air or hydraulic assist.
 - b. A school bus with a manufacturer-designed passenger capacity greater than 60 shall be equipped with a service- brake system that uses compressed air.
 - c. In addition to the service-brake system, a school bus shall be equipped with a parking-brake system to keep the school bus from moving when parked.
 - d. The service brakes in a compressed-air system shall be adjusted using the following criteria:

<u>Type</u>	<u>Outside Diameter of Air Chamber</u>	<u>Brake Adjustment Limit</u>
<u>6</u>	<u>4 1/2 inches</u>	<u>1 1/4 inches</u>
<u>9</u>	<u>5 1/4 inches</u>	<u>1 3/8 inches</u>
<u>12</u>	<u>5 11/16 inches</u>	<u>1 3/8 inches</u>
<u>16</u>	<u>6 3/8 inches</u>	<u>1 3/4 inches</u>
<u>20</u>	<u>6 25/32 inches</u>	<u>1 3/4 inches</u>
<u>24</u>	<u>7 7/32 inches</u>	<u>1 3/4 inches</u>
<u>30</u>	<u>8 3/32 inches</u>	<u>2 inches</u>
<u>36</u>	<u>9 inches</u>	<u>2 1/4 inches</u>

- e. The service brakes in a “long stroke” clamp type brake system shall be

adjusted using the following criteria:

Type	Outside Diameter of Air Chamber	Brake Adjustment Limit
<u>12</u>	<u>5 11/16 inches</u>	<u>1 3/4 inches</u>
<u>16</u>	<u>6 3/8 inches</u>	<u>2 inches</u>
<u>20</u>	<u>6 25/32 inches</u>	<u>2 inches</u>
<u>24</u>	<u>7 7/32 inches</u>	<u>2 inches</u>
<u>24*</u>	<u>7 7/32 inches</u>	<u>2 1/2 inches</u>
<u>30</u>	<u>8 3/32 inches</u>	<u>2 1/2 inches</u>
<u>*For 3" maximum stroke type 24 chambers</u>		

- f. The service-brake system in a compressed-air system shall contain an emergency-brake system that will activate when the air loss in the service-brake system reaches 20 to 40 pounds per square inch.
- g. A school bus using a compressed-air or hydraulic-assist service-brake system shall be equipped with a signal located in the school bus driver's compartment that emits a continuous audible or visible warning to the school bus driver when:
 - i. The air pressure available in a compressed-air braking system is 60 pounds per square inch or less, or
 - ii. There is a loss of fluid flow from the main hydraulic pump or loss of electric source powering the back-up system in a hydraulic-assist system.
- h. A school bus using a compressed-air service-brake system shall be equipped with one or two illuminated gauges located in the school bus driver's compartment that show the pounds per square inch of compressed air available for the operation of the brake.
- i. A compressed-air brake system with a dry reservoir shall have a one-way valve that will prevent the loss of compressed air between the dry reservoir and the source of compressed air.
- j. A brake system with a wet reservoir shall have a valve located at the bottom of the wet reservoir that operates automatically or can be operated remotely or manually to eject the moisture from the reservoir.
- k. Compressed-air or hydraulic-assist brake lines and booster-assist lines shall be installed in a manner that prevents heat, vibration, and chafing damage.
- l. The brake systems of Types C and D school buses shall be installed so the chassis components can be visually inspected to detect brake lining wear without removal of any of the chassis components.
- 5. Front bumper: The front bumper shall be positioned at the forward-most part of the school bus and extend to the outer edges of the school bus.
- 6. Child alert notification system: A school bus may be equipped with an electronic or mechanical child alert notification system. If a school bus is equipped with a child alert notification system, the device shall be installed in a manner that does not interfere with any other existing operating or electrical component. A child

- alert notification system in a school bus shall not have an override or bypass capability.
7. Clutch: The clutch torque capacity shall be equal to or greater than the engine torque output.
 8. Color: The chassis, including wheels and front bumper, shall be painted black. The hood and fenders shall be painted National School Bus Yellow as described in R13-13-107(6).
 9. Cooling system: A school bus shall be equipped with a cooling system that maintains the engine temperature operating range required to prevent damage to the school bus engine.
 10. Drive shaft: Each section of the drive shaft to the rear driving axle shall be protected by a metal guard around its circumference to reduce the possibility of the drive shaft penetrating through the school bus floor or dropping to the ground.
 11. Electrical system:
 - a. Battery:
 - i. The battery shall have a minimum cold-cranking capacity rating equal to the cranking current required by the engine for 30 seconds at 0° F. and a minimum reserve capacity rating of 120 minutes at 25 amperes.
 - ii. The battery shall have a higher capacity than specified in subsection (11) (a)(i) if optional equipment installed on the school bus requires the higher capacity.
 - iii. Because all batteries are to be secured in a sliding tray in the bus body as required by R13-13-107, chassis manufacturers shall mount batteries temporarily on the chassis frame, except that a van conversion or cutaway front-section chassis may be secured in accordance with the manufacturer's standard configuration. However, in all cases the battery cable provided with the chassis shall have sufficient length to allow some slack, and shall be of sufficient gauge to carry the required amperage.
 - b. Alternator:
 - i. All alternators shall conform to the recommended practices of Standard J180, January 2002 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, which is incorporated by reference and on file with the Department.
 - ii. All Type A-2 and Type B buses with a GVWR of 15,000 pounds or less shall have an alternator with a minimum of 130 amps.
 - iii. All Type A-2 and Type B buses with a GVWR over 15,000 pounds, and all Type C and D buses shall be equipped with a heavy-duty truck or bus-type alternator meeting Standard J180, which is incorporated by reference in subsection (b)(i), having a minimum output rating of 130 amps, and shall produce a minimum current output of 50% of the rating at engine idle speed. The alternator may be either pad-mounted or hinge-mounted.
 - iv. Buses equipped with an electrically powered wheelchair lift or air conditioning may be equipped with a device that monitors the electrical system voltage and advances the engine idle speed when the voltage drops

to, or below, a pre-set level.

v. A belt-driven alternator shall be capable of handling the rated capacity of the alternator with no detrimental effect on any other driven components.

vi. A direct-drive alternator may be installed instead of a belt-driven alternator.

vii. If the school bus is equipped with an air conditioning system, the alternator shall have a minimum charging rate of 160 amperes per hour.

viii. The alternator on a school bus shall contain a regulator to control the voltage to the battery.

c. Wiring:

i. All wiring shall conform to the recommended practices of Standard J1292, October 1981 (no later amendments or editions), published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.

ii. All wiring shall use a standard color or number coding and each chassis shall contain a wiring diagram that details the wiring of the chassis.

iii. The chassis shall be equipped with a connection to provide electrical power to the school bus. The connection shall be located on the chassis cowl or on the engine compartment of a school bus designed without a chassis cowl. The connection shall contain terminals for the main 100 ampere body circuit, tail lamps, right-turn signal, left-turn signal, stop lamps, backup lamps, and instrument panel lights. The instrument panel lights shall have a rheostat control.

12. Engine horsepower: The gross vehicle weight rating of a school bus shall not exceed 185 pounds for each engine horsepower as published by the manufacturer on a notice located on the school bus engine.

13. Exhaust system:

a. The exhaust pipe, muffler, and tailpipe shall be located under the school bus body and attached to the chassis.

b. The tailpipe shall be constructed of a corrosion-resistant tubing material at least equal in strength and durability to 16-gauge steel tubing.

c. The exhaust system on a gasoline-powered chassis shall be insulated from the fuel tank and fuel tank connections by a shield at any point where the exhaust system is 12 inches or less from the fuel tank or fuel tank connections.

14. Frame:

a. A school bus frame shall be of a design and strength capable of supporting the gross vehicle weight of the school bus.

b. A school bus frame shall not be altered for any purpose.

c. Holes in top or bottom flanges of frame rails are not permitted except as provided by the manufacturer. There shall be no welding to the frame rails except by the chassis or body manufacturer or the manufacturer's certified agent.

d. The school bus frame shall not be cracked, loose, sagging, or broken.

e. Brackets securing the cab or the body of the school bus to the frame shall not

- be loose, broken, or missing.
- f. The frame rail flanges shall not be bent, cut, or notched, except as specified by the manufacturer.
 - g. All accessories mounted to the school bus shall be secured as specified by the manufacturer.
 - h. Holes shall not be drilled in the top or bottom rail flanges, except as specified by the manufacturer.
15. Front fenders of a Type C school bus: The outer edges of the front fenders shall be wider than the outer edges of the front tires when the front wheels are in the straight-ahead position.
16. Fuel system:
- a. A school bus shall contain a fuel tank with a minimum 30-gallon capacity, with a minimum dispersion of 25 gallons of fuel to the engine. The fuel tank shall be vented to the outside of the school bus body so fuel spillage will not contact any part of the exhaust system.
 - b. On a Type B, Type C, or Type D school bus, no portion of the fuel system that is located outside of the engine compartment, except the filler tube, shall extend above the top of the chassis frame.
 - c. A fuel filter with replaceable element shall be installed between the fuel tank and engine.
 - d. The fuel line that supplies fuel to the engine shall be located at the top of the fuel tank.
17. Horn: A school bus shall be equipped with at least one horn capable of producing a sound level between 82 and 102 dB(A) when tested according to the Standard J377, March 2001 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
18. Instruments and instrument panel:
- a. The chassis shall be equipped with the following instruments:
 - i. Speedometer;
 - ii. Odometer that will give accrued mileage to seven digits, including tenths of miles;
 - iii. Voltmeter or ammeter;
 - iv. Oil pressure gauge;
 - v. Water temperature gauge;
 - vi. Fuel gauge;
 - vii. Upper beam head lamp indicator;
 - viii. Brake system signal as required by R13-13-106(4)(f);
 - ix. Turn signal indicator; and
 - x. Air pressure or hydraulic gauge.
 - b. The instruments shall be mounted on the instrument panel in the school bus driver's compartment and visible to the school bus driver while seated in the driver's seat.
 - c. The instrument panel shall be equipped with a rheostat switch that controls the illumination to the instrument panel and the gear shift selector indicator.

19. Oil filter: A replaceable element or cartridge-type oil filter shall be provided with a minimum capacity that meets or exceeds the capacity recommended by the manufacturer of the school bus engine.
20. Openings: All openings in the floorboard and in the fire wall between the chassis and passenger compartment shall be sealed.
21. Splash guards:
- a. A school bus shall be equipped with rear fender splash guards constructed of flexible rubberized material.
 - b. The splash guards shall be wide enough to cover the tire tread width, installed close enough to the tire tread surface to control side-throw of road surface material, and extend to within 8 inches of ground level.
22. Steering system:
- a. Power steering is required on all school buses manufactured after January 1, 1984.
 - b. Bracing extending from the center of the steering wheel to the steering wheel ring shall not be cracked or missing.
 - c. The distance of movement of the steering wheel between two points of resistance shall not be greater than the following when measured with the engine running:

<u>Steering wheel diameter</u>	<u>Power steering</u>	<u>Manual steering</u>
<u>16 in. or less</u>	<u>6 3/4 inches</u>	<u>4 1/2 in.</u>
<u>18 in.</u>	<u>7 1/8 inches</u>	<u>4 3/4 in.</u>
<u>20 in.</u>	<u>7 7/8 inches</u>	<u>5 1/4 in.</u>
<u>22 in.</u>	<u>8 5/8 inches</u>	<u>5 3/4 in.</u>

- d. There shall be clearance of at least 2 inches between the steering wheel and any object in the driver's compartment.
 - e. A non-adjustable steering column shall be fastened in a fixed position. An adjustable steering column shall be equipped with a locking mechanism.
 - f. The steering gear housing shall not have loose or missing mounting bolts. There shall not be cracks in the gear housing or its mounting brackets.
 - g. The connecting arm on the steering gear power source shall not be loose.
 - h. The steering wheel shall turn freely in both directions.
 - i. The steering system shall have a means for lubrication of all wear-points.
23. Suspension:
- a. Shock absorbers:
 - i. A school bus shall be equipped with front and rear double-acting shock absorbers. Replacements to shock absorbers shall be made according to the specifications of the manufacturer's part number as stamped on the shock absorber.
 - ii. If a school bus is manufactured with tandem rear axles, rear shock absorbers are not required.
 - b. Suspension system:

- i. Capacity of suspension assemblies shall be commensurate with the chassis manufacturer's gross vehicle weight rating.
- ii. If leaf-type rear springs are used, they shall be a progressive rate or multi-stage design.

24. Tires and wheels:

- a. Tires and wheels shall have an accumulated load rating at least equal to the gross vehicle weight rating.
- b. Dual rear tires shall be provided on all school buses that have a gross vehicle weight rating of more than 10,000 pounds.
- c. Each tire on a particular axle shall be the same size.
- d. All tires on a school bus shall be bias or all tires on a school bus shall be radial and shall not differ more than one size between front and rear axles.
- e. On a Type C or D school bus, a spare tire, if present, shall be in a carrier mounted outside the passenger compartment.

25. Transmission: The school bus transmission shall have no fewer than three forward speeds and one reverse speed.

26. Turning radius:

- a. A chassis with a wheelbase of 264 inches or less shall have a right and left turning radius of not more than 42 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.
- b. A chassis with a wheelbase of more than 264 inches shall have a right and left turning radius of not more than 44 1/2 feet, as measured to the edge of the front tire at the outside of a circle as the school bus moves within the circle.

27. Weight:

- a. The gross vehicle weight of a school bus shall not exceed the chassis manufacturer's gross vehicle weight rating for the chassis as recorded on a notice located in the school bus driver's compartment.
- b. To calculate the gross vehicle weight of a school bus, add the chassis weight, the school bus body weight, the school bus driver's weight, and the total seated passenger weight.
 - i. For the purpose of calculation, the school bus driver's weight is 150 pounds.
 - ii. For the purpose of calculation, the passenger weight is 120 pounds per seated passenger.
- c. The weight distribution of a school bus on a level surface that is fully loaded according to the gross vehicle weight rating shall not exceed the front axle gross weight rating or rear axle gross weight rating as recorded on a notice located in the school bus driver's compartment.

R13-13-107. Minimum Standards for School Bus Body

The body of a school bus introduced to Arizona on or after May 31, 2008 shall meet the requirements of this Section. The body of a school bus introduced to Arizona before May 31, 2008 shall meet the requirements of this Section or shall be maintained in accordance with the manufacturer's original specifications.

1. Air conditioning system: The school bus may be installed with an air conditioning system. If installed, the air conditioning system shall:
 - a. Be of a mechanical vapor compression refrigeration type;
 - b. Be manufactured to conform to the requirements of Standard J639, June 2005 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department;
 - c. Have sufficient power for simultaneous cooling, circulating, and dehumidifying the air;
 - d. Be provided with refrigerant that is nontoxic, nonflammable, and non-explosive;
 - e. Have all power and grounding installed according to the manufacturer's specifications; and
 - f. Have exhaust system exit from the rear of the vehicle, and extend to, but not more than 2 inches beyond the outer edge of the rear bumper.
2. Aisle:
 - a. The center aisle of a school bus shall have a clearance of not less than 12 inches at the bottom of the seat cushion, increasing to 15 inches at the top of the seat backs.
 - b. Aisles to side emergency doors shall have a minimum clearance of 12 inches which may be achieved by using flip-up type seats.
3. Auxiliary fan:
 - a. An auxiliary fan, if installed, shall be placed in a location that does not obstruct the school bus driver's view of any mirror located on the school bus.
 - b. An auxiliary fan, if installed, shall have a 6-inch nominal diameter, with the fan blades covered by a protective cage.
 - c. Each installed auxiliary fan shall be controlled by a switch that is independent of any other electrical system.
4. Battery:
 - a. A battery shall be secured to a slide-out or swing-out tray in a vented compartment in the school bus body, so the battery is accessible to the outside for servicing. If the battery compartment has a door that is not removable, the door shall be secured by a fastening device when the door is in a closed position. If the battery compartment has a removable cover, the cover shall be secured by a fastening device when the cover is in place.
 - b. The word "Battery" shall be printed in unshaded black letters that are no more than 2 inches in height on the battery-compartment door or cover or immediately above the battery-compartment door or cover.
 - c. Buses with a battery located under the engine hood are exempt from these

provisions.

5. Belt cutter: A school bus with passenger seat belts shall be equipped with a belt cutter having a full width handgrip and a protected, replaceable or non-corrodible blade. The belt cutter shall be mounted in a location accessible to the seated driver, and in an easily detachable manner. The belt cutter shall be accessible only to the school bus driver.

6. Color:

a. A school bus body shall be painted National School Bus Yellow according to the following specifications and tolerances:

<u>Description</u>	<u>Reflectance</u>	<u>Chromaticity</u>	
		<u>X</u>	<u>Y</u>
<u>Centroid</u>	<u>41.5%</u>	<u>.5139</u>	<u>.4434</u>
<u>V+ Light Limit</u>	<u>42.9%</u>	<u>.5139</u>	<u>.4427</u>
<u>V- Dark Limit</u>	<u>39.8%</u>	<u>.5133</u>	<u>.4422</u>
<u>H+ Green Limit</u>	<u>41.6%</u>	<u>.5123</u>	<u>.4368</u>
<u>H- Red Limit</u>	<u>41.7%</u>	<u>.5168</u>	<u>.4489</u>
<u>C+ Vivid Limit</u>	<u>41.5%</u>	<u>.5188</u>	<u>.4457</u>
<u>C- Weak Limit</u>	<u>41.5%</u>	<u>.5095</u>	<u>.4405</u>

b. The bumpers, lamp hoods, lettering, and rub rails on a school bus body shall be black.

7. Crossing control arm:

a. A school bus may be equipped with a crossing control arm. If installed, all components and all connections of the crossing control arm shall:

i. Meet the requirements set forth in Standard J1133, November 2004 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department;

ii. Be mounted on the right side of the front bumper;

iii. When opened, extend in a line parallel to the body side and aligned with the right side wheel;

iv. Be weatherproofed;

v. Incorporate system connectors (electrical, vacuum, or air) at the gate and be easily removable to allow for towing of the school bus;

vi. Be constructed of non-corrodible or nonferrous material, or treated in accordance with the school bus body sheet metal specification;

vii. Have no sharp edges or projections that could cause injury or be a hazard to students;

viii. Be rounded at the end of the crossing control arm;

ix. Extend approximately 70 inches (measured from the bumper at the arm assembly attachment point) when in the extended position;

x. Not extend past the end of the bumper when in the stowed position;

xi. Extend simultaneously with the stop signal arm, activated by the stop signal arm control; and

xii. Include a device attached to the bumper near the end of the arm to automatically retain the arm while in the stowed position. The device shall not interfere with the normal operations of the crossing control arm.

b. An automatic recycling interrupt switch may be installed for temporarily disabling the crossing control arm.

8. Defrosters:

a. Defrosting and defogging equipment shall direct a flow of heated air onto the windshield, the window to the left of the driver, and the glass in the viewing area directly to the right of the driver to eliminate frost, fog, and snow.

b. The defrosting system shall conform to Standards J381 September 2000 (no later amendments or editions) and J382, September 2000 (no later amendments or editions), both published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001 incorporated by reference and on file with the Department.

c. An auxiliary fan shall not to be used in place of a defrosting and defogging system.

d. A portable heater shall not be used in place of a defrosting or defogging system.

9. Electrical wiring:

a. All electrical wiring on a school bus shall conform to the standards contained in Standard J1292, October 1981 (no later amendments or editions), published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001 and incorporated by reference and on file with the Department.

b. Electrical wiring that is coded by color shall be coded as follows:

- i. Left Rear Directional Light: Yellow
- ii. Right Rear Directional Light: Dark Green
- iii. Stoplights: Red
- iv. Back-up Lights: Blue
- v. Taillights: Brown
- vi. Ground: White
- vii. Ignition Feed, Primary Feed: Black

c. Circuits: Electrical wiring circuits shall be protected by a fuse, circuit breaker, or Field Effect Transistor and shall be coded by number or color on an electrical wiring diagram located in the driver's compartment or the electrical access panel door. There shall be at least seven circuits as follows:

- i. Head, tail, stop, and instrument panel lamps;
- ii. Clearance and step-well lamps;
- iii. Dome lamps;
- iv. Ignition and emergency door signal;
- v. Turn signal lamps;
- vi. Alternately flashing signal lamps; and
- vii. Heaters and defrosters.

d. All electrical wires passing through metal openings shall be protected by a non-metal grommet.

- e. Electrical wires not enclosed within the school bus body shall be fastened at intervals of not more than 18 inches.
- 10. Emergency exits: A door, push-out window, or roof hatch used as an emergency exit shall conform to the following:
 - a. On the inside and outside of a school bus, the words “EMERGENCY EXIT” or “EMERGENCY DOOR” shall be printed in black, unshaded letters at least 2 inches high above an emergency door or push-out window and at least 1 inch high on a roof hatch.
 - b. Each emergency exit shall open toward the exterior of the school bus and shall be labeled within 6 inches of the interior release mechanism with black lettering at least 3/8 of an inch high instructing how the exit is to be opened.
 - c. On a Type A school bus with double rear doors used as emergency exits, the rear doors shall be secured with upper, center, and lower latches to the door frame.
 - d. The upper portion of each door used as an emergency exit shall be equipped with a window made of safety glass with an area not less than 400 square inches. A door located in the rear end of the school bus used as an emergency exit shall also contain a lower window panel of safety glass of not less than 350 square inches. A Type A school bus that contains double rear doors used as emergency exits is exempt from this provision.
 - e. There shall be no steps on the outside of the school bus leading to an emergency exit.
 - f. A header pad filled with a material to protect against injury shall be attached to the top edge of the frame of a door used as an emergency exit. The header pad shall be a minimum of 3 inches wide and 1 inch thick and extend the full width of the door opening.
 - g. Each emergency exit shall be equipped with a latch that opens from the inside of the school bus and is connected to an electrical buzzer audible in the driver’s compartment that actuates when the latch is being released.
 - h. Except for interlock/barrel bolt devices, if a lock is installed on an emergency exit, the lock shall be secured only by using a key and shall deactivate the ignition system of the school bus when locked.
- 11. Emergency equipment:
 - a. All emergency equipment shall be mounted in the driver’s compartment or adjacent to either side of the service entrance and shall be readily accessible. If the emergency equipment is mounted within a closed compartment, the compartment shall be clearly labeled as containing the emergency equipment.
 - b. Fire extinguisher:
 - i. A school bus shall be equipped with a minimum of one 5-pound pressurized, dry, chemical fire extinguisher of a type rated not less than 2A-10-BC by the Underwriter’s Laboratories, Inc., as described by the National Fire Protection Association, Inc., One Batterymarch Park, Quincy, MA 02269, in NFPA 10: Standard for Portable Fire Extinguishers, published in 2006 (no later amendments or editions), incorporated by reference and on file with the Department.

- b. Each school bus owned by a school or a private company shall display either the name of the school and school number, if any, or the name of the private company on each exterior side of the school bus between the rub rails at the center line and seat cushion levels in black unshaded letters that are at least 5 inches in height. Additionally, a school bus owned by a private company that displays the name of the school and school number as described above, may display the company's name on each exterior side of the school bus below the floor line in black unshaded letters that are a maximum of 2 inches in height.
 - c. An identification number assigned to a school bus by an owner shall be placed on the front and rear bumpers of the school bus and on each exterior side of the school bus below the floor line rub rail and forward of the centerline of the school bus. The identification number on each bumper shall be National School Bus Yellow. The identification number on each exterior side shall be black. Each identification number shall be a minimum of 5 inches in height.
 - d. In addition to an identification number, a school bus may be identified by an emblem placed on the loading side of the front bumper or the exterior wall of the loading side below the floor line rub rail and forward of the center line of the school bus, or both. The emblem shall be painted or decaled on or attached to a magnetic backing.
 - e. In addition to an identification number, a school bus may display a route identification sign. If displayed, the route identification sign shall:
 - i. Be installed with a heavy duty Velcro, magnetic, screw-type or similar fixture;
 - ii. Be a minimum of 5 inches in height; and
 - iii. Be located on a flat surface of the bus body, excluding glass.
16. Interior: If the ceiling is constructed with overlapping panels, the first panel placed in the ceiling shall be overlapped by the following panel and each panel shall consecutively overlap to the rear end of the school bus. Exposed edges in the interior of the school bus shall be beaded, hemmed, flanged, or rounded to eliminate sharp edges.
17. Lamps and signals:
- a. All lamps on the exterior of a school bus shall conform to the provisions contained in 49 CFR 393.9 et seq. of the Federal Motor Carrier Safety Regulations, October, 2006 (no later amendments or editions) published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D.C. 20402-9328, incorporated by reference and on file with the Department.
 - b. Interior lamps shall be provided that illuminate the center aisle and step well.
 - c. Alternately flashing signal lamps:
 - i. When a school bus is equipped with a four-lamp system, the system shall consist of two red alternately flashing signal lamps located one on the left and one on the right above the rear windows of the school bus and two red alternately flashing signal lamps located one on the left and one on the right above the windshield.
 - ii. When a school bus is equipped with an eight-lamp system, the four red

- alternately flashing signal lamps shall be installed as described in subsection (14)(c)(i) and the four amber alternately flashing signal lamps shall be installed as follows: one amber alternately flashing signal lamp shall be located adjacent to each red alternately flashing signal lamp, at the same level, but closer to the vertical centerline of the school bus. The system of red and amber alternately flashing signal lamps shall be wired so the amber alternately flashing signal lamps are activated manually and the red alternately flashing signal lamps are activated automatically or manually.
- iii. Except for LED lamps, each alternately flashing signal lamp shall be covered by a lamp hood.
- d. Turn signal and stop lamps:
- i. Except as provided in subsections (17)(d)(iii) and (17)(d)(iv), all school buses shall be equipped with amber side-mounted turn signals. The turn signal lamp on the left side of the bus may be mounted rearward of the stop signal arm and the turn signal lamp on the right side may be mounted rearward of the entrance door.
- ii. Except on Type A school buses, a school bus body shall be equipped with rear turn signal lamps that are at least 7 inches in diameter, or if the lamp shape is other than round, a minimum of 38 square inches of illuminated area. The lens area of the rear turn signal lamps on Type A school buses shall be at least 21 square inches. The rear turn signal lamps shall be connected to the hazard warning switch located in the driver's compartment to allow the school bus driver to activate simultaneous flashing of turn signal lamps when needed as a traffic hazard warning. The rear turn signal lamps shall be located to the far left and right sides of the flat surface of the rear of the school bus body and below the rear window.
- iii. A Type C school bus may have a double-faced turn signal lamp that is visible from the front and rear of the school bus and mounted on the tops or sides of both front fenders or may have a turn signal lamp mounted on the left and right sides of the grill and may have a turn signal lamp mounted on each side of the school bus body between the window line and the second rub rail and forward of the vertical centerline.
- iv. A Type D school bus may have a turn signal lamp mounted at the front of the school bus body above each head lamp and may have a turn signal lamp mounted on each side of the school bus body between the window line and second rub rails and forward of the vertical centerline of the school bus.
- v. A 7 inch diameter stop lamp, or if the lamp shape is other than round, a stop lamp with a minimum of 38 square inches of illuminated area shall be located toward the centerline and adjacent to each of the rear turn signal lamps.
- e. Backup lamps: A school bus shall be equipped with two backup lamps with clear lenses, located one on the right and one on the left rear panels below the rear windows.

- e. The rear bumper shall not be equipped with footholds or handles.
 - f. A Type A school bus equipped with the chassis manufacturer's rear bumper is exempt from subsections (22)(a) through (22)(c).
23. Restraining barrier:
- a. The restraining barrier shall be a minimum of 38 inches high as measured from the interior floor of the school bus to the top of the restraining barrier.
 - b. The restraining barrier shall be the same width as the seat directly behind the restraining barrier.
24. Rub rails:
- a. There shall be no fewer than two rub rails located on a school bus as follows:
 - i. One rub rail shall be located on each side of the school bus approximately at seat cushion level and shall extend from the rear post of the service door frame completely around the school bus body, excluding the emergency door, to the front post of the school bus driver's window.
 - ii. One rub rail shall be located on each side of the school bus approximately at the floor line and shall extend from the rear post of the service door frame to the rear corner post of the school bus body and from the front post of the school bus driver's window to the rear corner post on the driver's side
 - b. Rub rails are not required on emergency doors, special-service entrance door, access panels and compartment doors, and wheel well openings.
 - c. Each rub rail shall be attached on the outside of the school bus body at each structural post in the school bus body.
 - d. Each rub rail shall be a minimum of 4 inches in width and constructed of corrugated or ribbed 16-gauge steel.
25. Seat belt for school bus driver: A seat belt for the school bus driver shall be installed in the driver's compartment. The seat belt shall be equipped with a retractor on each side of the school bus driver's seat to keep the seat belt retracted and off the floor when not in use.
26. Seats:
- a. Each seat shall have a minimum depth of 15 inches measured from the front of the seat cushion to the seat back.
 - b. Each seat shall be a minimum of 38 inches in height measured from the interior floor of the school bus to the top of the back cushion.
 - c. Seat spacing shall meet the requirements of 49 CFR 571.222, October 2006 (no later amendments or editions), published at the U.S. Government Printing Office, Superintendent of Documents, Mail Stop: SSOP, Washington, D. C. 20402-9328, incorporated by reference and on file with the Department. Seat spacing shall not be less than 24 inches between the front of a seat back cushion to the back surface of the cushion on the preceding seat. Seat spacing shall be measured at cushion height, at the center of the seat, on a plane parallel to the center line of the bus. The seat upholstery may be placed against the seat cushion padding, but without compressing the padding, before measurement is taken.
 - d. The school bus driver's seat shall be adjustable, without the use of tools, both

vertically and horizontally for a minimum of 4 inches. Seats with vertical adjustments are not required on Types A and B school buses.

27. Service door:

- a. The service door shall be located on the right side of the school bus opposite the school bus driver and within direct view of the school bus driver when seated in the school bus driver's seat. Types A and B school buses are exempt from this provision.
- b. The service door shall have a minimum horizontal opening of 24 inches and a minimum vertical opening of 68 inches. Type A school buses shall have a service door with a minimum opening of 1200 square inches.
- c. Windows in the upper and lower panels of the service door shall be made of safety glass. The bottom of each lower window panel shall be no more than 10 inches from the top surface of the lower step of the service entrance. The top of each upper window panel shall be no more than 6 inches below the top of the service door. Type A buses are exempt from this provision.
- d. To protect passengers' fingers, a flexible rubber material shall be attached by number 10 3/4 inch metal screws to the opening and closing edges of the service door. Type A school buses are exempt from this provision.
- e. The service door shall open towards the exterior of the school bus. A Type A school bus is exempt from this provision if the service door is provided by the school bus chassis manufacturer.
- f. A header pad, filled with a material to protect against injury, shall be attached to the top edge of the frame of the service door. The header pad shall be at least 3 inches wide and 1 inch thick and extend the full width of the service entrance.
- g. A Type A school bus with the chassis manufacturer's standard service entrance is exempt from subsections (27)(a) through (27)(d).

28. Steps:

- a. The risers of the steps in the service entrance shall be equal. When plywood is laid over the steel floor of the school bus, the height of the top step may be increased by the thickness of the plywood.
- b. The first step at the service entrance shall be no less than 10 inches and no more than 16 inches from the ground.
- c. Steps shall be enclosed in the school bus body.
- d. Steps shall not extend beyond the side of the school bus body.
- e. A handrail not less than 10 inches in length shall be provided inside the doorway.

29. Step treads:

- a. All steps, including the floor-line platform area, shall be covered with ribbed or non-skid floor-covering material that is mounted on a metal plate.
- b. The metal back of the step tread shall be a minimum 24-gauge cold rolled steel and shall be permanently bonded to the ribbed or non-skid material.
- c. If ribbed material is used, the ribbed design shall run from the risers toward the service entrance. Each step tread shall have a 1 1/2 inch white nosing.

30. Stirrup steps: There shall be a handle and at least one folding stirrup step or

recessed foothold located on each side of the front of a school bus for accessibility for cleaning the windshield and lamps. Type A school buses are exempt from this provision.

31. Stop signal arm:

- a. School buses shall be equipped with a stop signal arm on the left side of the school bus body that extends 90° from the school bus body when opened.
- b. The stop signal arm shall be either air or electrically driven, and meet the requirements of Standard J1133, November 2004 (no later amendments or editions) published by the Society of Automotive Engineers, Inc., 400 Commonwealth Drive, Warrendale, PA 15096-0001, incorporated by reference and on file with the Department.
- c. The stop signal arm shall be an 18-inch octagon, constructed of a red material that reflects light, with the word “STOP” printed on both sides in white letters not less than 5 inches high. Additionally, the word “STOP” may be illuminated by a light-emitting diode system on both sides of the stop signal arm.

32. Sun shield: An interior adjustable transparent sun shield or visor not less than 6 inches x 30 inches with a finished edge shall be installed over the windshield in the driver’s compartment. School buses with a gross vehicle weight rating of 10,000 pounds or less are exempt from this provision.

33. Tailpipe:

- a. The tailpipe shall extend to, but not more than 2 inches beyond, the outer edge of the rear bumper;
- b. The tailpipe shall exit in the rear of the vehicle behind the rear drive axle, and shall be placed according to the manufacturer’s specifications; and
- c. The tailpipe shall not exit beneath any fuel filler location or beneath any emergency door.

34. Undercoating:

- a. The entire underside of the school bus body, including floor sections, cross member and below-floor-line side panels, shall be coated with rust-proofing material for which the material manufacturer has issued to the bus body manufacturer notarized certification that materials meet or exceed all performance and qualitative requirements of paragraph 3.4 of Federal Specification TT-C-520B, Coating Compound, Bituminous, Solvent Type, Underbody (For Motor Vehicles), February 2, 1973 (no later amendments or editions), published by the General Services Administration acting as an agent for the Superintendent of Documents, Washington D.C. 20402, and incorporated by reference and on file with the Department. Modified test procedures shall be used for the following requirements:
 - i. Salt spray resistance – test modified to 5% salt and 1,000 hours,
 - ii. Abrasion resistance, and
 - iii. Fire resistance.
- b. Test panels shall be prepared in accordance with paragraph 4.6.12 of Federal Specification TT-C-520B, with a modified procedure requiring that the test shall be made on a 48-hour air-cured film at a thickness recommended by the

- material manufacturer.
- c. Undercoating is not required if the underside of the school bus is constructed of noncorrosive material.
 - d. The undercoating material shall be applied with suitable airless or conventional spray equipment to the recommended film thickness and shall show no evidence of voids in the cured film.
35. Ventilation: An immovable, non-closing exhaust ventilator shall be installed in the school bus roof.
36. Wheel housing:
- a. The wheel-housing opening shall be large enough to allow for the removal of the tire and wheel.
 - b. The wheel housing shall be constructed of 16-gauge steel or fiberglass of equal strength and sealed to the school bus floor.
 - c. The wheel housing shall not extend more than 12 inches above the floor inside the school bus body and shall not extend into the emergency door opening.
 - d. The wheel housing shall provide clearance for tire chains installed on the tires of the driving wheels.
37. Windows: Each side window in the passenger compartment of a school bus body shall provide an unobstructed opening of at least 190 square inches when the window is open.
38. Windshield washer system: A windshield washer system that provides an application of cleaning solution to the windshield shall be installed.
39. Windshield wipers:
- a. A windshield wiping system with a minimum of two speeds shall be provided.
 - b. The windshield wipers shall be operated by one or more air or electric motors.

R13-13-108. Inspection, Maintenance, and Alterations

- A. A school bus shall be inspected by the Department before the school bus is introduced into Arizona to transport passengers.**
- 1. After inspecting a school bus, the Department shall place a decal that contains a number used by the Department to identify the school bus above the school bus driver's side window in the driver's compartment. This decal shall not be removed from the school bus while it is operated in Arizona except by the Department. Before the school bus is transferred or retired from service, the school bus owner shall contact the Department to have this decal removed.**
 - 2. If the Department finds that no major defect exists on a school bus, the Department shall place a safety inspection decal that contains the month and year of inspection on the right side of the centerline of the windshield of the school bus in a position that does not interfere with the school bus driver's line of vision.**
 - 3. If the Department finds a major defect on the school bus, the Department shall place the school bus out of service. Before the school bus may be placed back into service, the Department shall reinspect the school bus to determine that the major defect has been corrected. If the major defect has been corrected, the Department shall place a safety inspection decal on the school bus in accordance with subsection (A)(2).**
 - 4. If the Department finds a minor defect on a school bus, the Department shall issue an inspection order, but the school bus may be operated to transport passengers while the minor defect is being corrected. A copy of the inspection order shall be returned to the Department within 15 working days from the date of inspection and shall show that the minor defect has been corrected unless, in accordance with the provisions of subsection (A)(5), the school bus owner obtains an extension of time to correct the minor defect.**
 - 5. Upon receipt of a written request from the school bus owner, the Department shall grant one or more extensions of time to correct a minor defect if:**
 - a. The school bus owner submits to the Department written documentation that the:**
 - i. School bus owner's action or inaction did not cause or contribute to the delay in completing the repair;**
 - ii. School bus owner has secured a written estimated expedited delivery or completion date from the provider of the materials or services required to complete the repair; and**
 - iii. School bus owner made reasonable attempts to secure the materials or services, or materials or services of equivalent quality, at a substantially similar price from alternate sources; and**
 - b. The Department determines that an extension of time to correct the minor defect will not increase the probability of an accident involving the school bus or passengers or the risk of injury to the school bus driver or passengers.**
 - 6. Each extension of time shall be for 60 days or less. The Department shall determine the length of each extension of time after giving consideration to the information provided under subsection (A)(5)(a). When the minor defect is**

corrected, the school bus owner shall return to the Department a copy of the inspection order issued by the Department.

7. If a minor defect on a school bus is not corrected within 15 working days or at the end of an extension period, if applicable, the Department shall remove the safety inspection decal and the school bus shall be placed out of service until further inspection by the Department shows that the minor defect is corrected.

B. The Department shall use the following criteria to determine whether a major or minor defect is present on a school bus introduced into Arizona on or after February 16, 1996. For a school bus introduced into Arizona before that date, the Department shall determine whether the school bus is in an unsafe condition by using the following criteria or those at A.A.C. R17-4-612. A defect that causes a school bus introduced into Arizona before February 16, 1996 to be in an unsafe condition shall be deemed a major defect as defined in this Article.

<u>INSPECTION ITEM</u>	<u>MAJOR DEFECT</u>	<u>MINOR DEFECT</u>
<u>Air conditioning system, if installed</u>	<u>Missing hose covers or trim panels</u> <u>Missing air conditioning louvres</u> <u>Loose or missing air conditioning mounting fasteners</u> <u>Refrigerant leaks from evaporators or hoses in the interior of the bus</u> <u>Broken compressor brackets</u> <u>Broken mounting bolts</u> <u>Electrical wiring hanging out of evaporator covers</u> <u>Missing evaporator covers</u> <u>Missing air diffusers</u> <u>Evaporators not secured to ceiling or bulkhead</u>	<u>Broken or loose evaporator covers</u> <u>Unsecured refrigerant hoses</u> <u>Loose, missing or severely cracked belts</u>
<u>Alarm, back-up, if installed</u>		<u>Low volume</u> <u>Not working</u>
<u>Auxiliary fan, if installed</u>	<u>Obstructs school bus driver's view of any mirror</u> <u>Used in place of defrosting or defogging system</u> <u>Not covered by protective cage</u>	<u>Incorrect size</u> <u>Not controlled by independent switch</u>
<u>Battery (Types C and D buses only)</u>	<u>Not mounted according to the manufacturer's instructions</u>	<u>Incorrect or no identification</u>
<u>Belt cutter</u>	<u>Missing</u>	
<u>Body fluid cleanup kit</u>	<u>Absence of body fluid cleanup kit</u> <u>Any item missing from body fluid cleanup kit</u>	

<u>Brakes, compressed air</u>	<u>Inoperative or missing visual or audible low air signal</u> <u>Compressed-air gauge missing</u> <u>Grease or oil leakage into brake system</u> <u>Exposed or damaged ply on any air hose</u> <u>Air capacity less than 90 pounds per square inch at idle speed</u> <u>Wet-reservoir valve missing or inoperative</u> <u>Leaking, cracked, or broken hose or connection</u> <u>Audible air leak</u> <u>Pushrod exceeds limitation</u> <u>Low-air warning system does not activate at 60 psi and remains activated at less than 60 psi</u>	
<u>Brakes, hydraulic-assisted</u>	<u>Inoperative or missing visual or audible signal</u>	
<u>Brakes, emergency-brake system</u>	<u>Inoperative</u> <u>Does not activate when service brake system reaches 20 to 40 pounds psi</u>	
<u>Bumpers</u>	<u>Break or rip</u> <u>Loose bumper</u> <u>Foothold or handle present on rear bumper</u>	<u>Not painted black</u>
<u>Cooling system</u>		<u>Leak in system</u> <u>Fluid level in radiator not full</u>
<u>Crossing control arm, if installed</u>	<u>Has sharp edges or projections that could injure a student</u> <u>Will not retract</u>	<u>Not working</u> <u>Fails to open completely</u>
<u>Defroster</u>	<u>Inoperative</u> <u>Ventilation opening blocked</u>	

<u>Drive shaft</u>	<u>Absence of protective metal guard installed by the manufacturer around the drive shaft to any driving axle</u>	
<u>Dust boots</u>	<u>Missing, torn, split, or loose around floor-mounted gear shift, parking brake handle, or steering column.</u>	
<u>Emergency warning devices</u>	<u>Having fewer than two operable</u>	<u>Missing one</u>
<u>Emergency door</u>	<u>Inoperative latch</u> <u>Broken or missing portion of seal around door</u> <u>Window not of safety glass</u> <u>Inoperative warning device</u> <u>Lock is not the ignition shut-off type</u>	<u>No header pad</u>
<u>Emergency exit</u>	<u>Inoperative warning device or latch on all emergency</u> <u>exits except roof exit</u> <u>Not properly identified</u> <u>Header pad missing or damaged</u> <u>Broken seal around window</u>	<u>Inoperative roof exit</u>
<u>Engine compartment</u>	<u>Inoperative hood latch</u>	<u>Deterioration of hose, belt, or wiring</u> <u>Deterioration of battery hold-down clamp, corrosive acid buildup on terminal</u>
<u>Exhaust system</u>	<u>Exhaust leak</u> <u>Exhaust tailpipe extends more than 2 inches beyond the outer edge of the rear</u> <u>bumper or fails to terminate flush with the outside edge of the school bus body in the rear</u> <u>of the school bus</u>	<u>Exhaust pipe bracket not attached to the chassis and the tailpipe</u> <u>End of tailpipe pinched or bent</u>

<u>Exterior paint</u>		<u>Exposed metal or base primer</u> <u>Incorrect color</u>
<u>Fire extinguisher</u>	<u>Absence of fire extinguisher</u> <u>Not at full charge</u>	<u>Not mounted in required position</u>
<u>First-aid kit</u>	<u>Absence of first-aid kit</u> <u>Three or more items missing from first-aid kit</u>	<u>One or two items missing from first-aid kit</u>
<u>Frame</u>	<u>Crack in frame</u> <u>Cracked, loose, or missing body mount or body-mount bolt</u> <u>Welded repair not performed by body or chassis manufacturer or manufacturer's certified agent</u>	
<u>Fuel system</u>	<u>Fuel tank not mounted to the chassis frame or not vented to outside of engine compartment</u> <u>Fuel system extends above chassis frame (does not apply to filler tube or Type A bus)</u> <u>Fuel tank bracket cracked or broken</u> <u>Leaking tank or fuel line</u> <u>Fuel line attached to bottom of fuel tank</u> <u>Missing or improper fuel cap</u>	
<u>Handrail</u>	<u>Handrail does not pass the inspection procedure described in R13-13-107(13)</u>	
<u>Heating system</u>	<u>Heater missing or inoperative</u> <u>Heater line in interior of school bus not covered by protective shield</u> <u>No shutoff valve</u>	<u>Unsecured heater hose</u> <u>Inadequate heat-producing capacity</u>
<u>Horn</u> <u>(Air or electrical)</u>	<u>Missing or inoperative</u>	

<u>Instrument panel</u>	<u>Missing or inoperative ignition power-deactivation switch if the ignition does not use a key.</u> <u>Any inoperative gauge or switch, except auxiliary fan switch</u> <u>Improper illumination</u>	<u>Inoperative auxiliary fan switch</u>
<u>Interior, aisles</u>	<u>Incorrect clearance</u>	
<u>Interior, seats</u>	<u>Broken, cracked, exposed, or loose seat frame</u> <u>Screw or mounting bolt missing</u>	
<u>Interior, floor covering</u>	<u>Hole</u> <u>Improper material</u> <u>Improperly bonded</u> <u>Loose metal trim</u>	
<u>Lamps, clearance</u>	<u>Inoperative</u> <u>Cracked, broken, or missing lens</u>	<u>Incorrect color</u> <u>Dust behind lens</u>
<u>Lamps, head</u>	<u>Low beam inoperative</u> <u>Not mounted as required by 49 CFR 393.24</u> <u>Both high beams inoperative</u>	<u>One high beam inoperative</u> <u>Inoperative dimmer switch on a bus not operated when head lamps are required</u> <u>Cracked, broken, or missing lens</u>
<u>Lamps, back-up</u>	<u>Inoperative</u>	<u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, interior Over aisle</u>		<u>Inoperative</u> <u>Cracked, broken, or missing lens</u>
<u>Lamps, interior Over step-well</u>	<u>Inoperative</u>	<u>Cracked, broken, or missing lens</u>
<u>Lamps, turn signal</u>	<u>Inoperative</u>	<u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u> <u>Incorrect size</u> <u>Incorrect location</u>

<u>Lamps, strobe, if installed</u>	<u>Pilot or strobe lamp missing or inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Incorrect color</u> <u>Incorrect location</u>	
<u>Lamps, identification</u>		<u>Inoperative</u> <u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, hazard</u>	<u>Inoperative</u>	
<u>Lamps, stop</u>	<u>Both inoperative</u>	<u>One inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, tail</u>	<u>Both inoperative</u>	<u>One inoperative</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, side marker</u>		<u>Inoperative</u> <u>Incorrect color</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lamps, alternately flashing signal</u>	<u>One or more inoperative lamps</u>	<u>Incorrect color</u> <u>Lamp hood missing</u> <u>Cracked, broken, or missing lens</u> <u>Dust behind lens</u>
<u>Lettering and numbering</u>		<u>Missing any lettering or numbering</u> <u>Incorrect size, color, or location</u> <u>Unauthorized sign, letter, or object</u>

<u>Mirrors, cross-view</u>	<u>Missing</u> <u>Broken or loose mounting</u> <u>Broken or clouded glass</u>	
<u>Mirrors</u>	<u>Interior or exterior mirror missing</u> <u>Loose or broken mounting bracket</u> <u>Crack, break, or flaking of reflective material affixed to back of mirror glass</u> <u>Crack or break of mirror glass</u> <u>Loose or missing mounting bracket bolt or screw</u> <u>Incorrect size</u> <u>Do not meet safety standards contained in 49 CFR 571.111</u>	
<u>Miscellaneous</u>	<u>Object not secured inside the school bus</u> <u>Any item noted by the Department that could cause injury or present a danger to a passenger or school bus driver</u>	<u>Any item noted by the Department that needs to be repaired because it could interfere with the safe operation of the school bus but that is not a major defect</u>
<u>Noise suppression switch</u>	<u>Out of service</u> <u>Malfunctioning</u>	
<u>Parking brake</u>	<u>Inoperative, missing part, or not in proper adjustment</u>	
<u>Restraining barrier</u>	<u>Missing</u> <u>Incorrect size</u> <u>Loose</u>	
<u>Rub rails</u>	<u>Missing more than one</u> <u>Loose or dangling</u>	<u>Missing one</u> <u>Incorrect location</u> <u>Incorrect color</u> <u>Incorrect width</u>

<u>School bus body</u>	<u>Damage resulting in cut or rip to the exterior of school bus body</u> <u>Hole that would allow exhaust gases or dust to enter the passenger compartment</u> <u>Bolt attaching body to chassis loose, broken, or missing</u> <u>Exceeds length or width limitations</u>	<u>Absence of undercoating</u> <u>Loose or missing rivet, screw, or bolt</u>
<u>Seat belt</u>	<u>Absence of driver seat belt or inoperative driver seat belt buckle or retraction system</u> <u>Frayed seat belt material</u>	
<u>Seats</u>	<u>One or more missing</u> <u>Incorrect size or location</u> <u>Driver seat does not meet requirements for adjustment</u> <u>Loose seat cushions</u> <u>Exposed frame</u>	<u>Torn seat cushions</u>
<u>Service door</u>	<u>Incomplete closing of door assembly</u> <u>Does not contain safeguards to prevent accidental opening</u> <u>Window not made of safety glass</u> <u>Broken or cracked window panel</u> <u>Inoperative door control</u> <u>Does not open towards exterior of the school bus</u> <u>Absence of flexible material on outer edge of service door</u> <u>Absence of header pad</u>	

<p><u>Special needs school bus</u></p>	<p><u>Incorrect location or size of special-service entrance</u></p> <p><u>Incorrect size of special-service entrance door</u></p> <p><u>Window not made of safety glass</u></p> <p><u>Inoperative pressure switch</u></p> <p><u>No safety device in wheelchair lift</u></p> <p><u>No restraining barrier on wheelchair-lift platform</u></p> <p><u>Fails to provide wheelchair-securement device or anchorage</u></p> <p><u>Special-service entrance door does not open towards exterior of school bus (except Type A school bus)</u></p> <p><u>Wheelchair lift inoperable</u></p>	<p><u>Drip molding not installed above the special-service entrance</u></p> <p><u>Special-service entrance door not weather-sealed</u></p> <p><u>Incorrect color of door material or panel</u></p> <p><u>Lacks wheelchair emblem</u></p> <p><u>Missing fastening device for special-service entrance door</u></p> <p><u>Dome light missing or inoperative</u></p>
<p><u>Splash guards</u></p>		<p><u>Bottom edge of guard is more than 8 inches above the ground</u></p> <p><u>Does not cover entire width of single or dual tire</u></p> <p><u>Missing splash guard</u></p>
<p><u>Steering</u></p>	<p><u>Distance of movement not within parameters of R13-13-106(22)(c)</u></p> <p><u>Steering wheel does not move freely when turning the wheel</u></p> <p><u>Missing or cracked steering-wheel ring or bracing from center of steering wheel to steering-wheel ring</u></p> <p><u>Steering column not in a fixed position or locking mechanism missing or inoperative on adjustable steering column</u></p> <p><u>Steering column mounting bracket cracked or missing</u></p> <p><u>Loose or missing mounting bolt in steering gear housing</u></p> <p><u>Loose connecting arm on steering gear power source</u></p>	<p><u>Leakage of lubricant</u></p> <p><u>Power-steering belt cracked, frayed, or slipping</u></p> <p><u>Fluid does not fill power steering reservoir to the full level on the dipstick</u></p>

<u>Steps</u>	<u>Loose or missing grab handle in step-well</u> <u>Missing stirrup step or handle</u>	<u>Incorrect distance between steps</u> <u>Incorrect floor covering</u>
<u>Stop signal arm</u>	<u>Any stop arm inoperative</u> <u>Air leak</u> <u>If equipped with a light-emitting diode system, one or more lights missing</u> <u>Missing any stop arm</u>	<u>Incorrect lettering or color on stop signal arm</u> <u>Incorrect size of stop signal arm</u>
<u>Sun shield or visor (if required)</u>	<u>Broken, cracked, or missing</u>	<u>Not transparent</u>
<u>Suspension</u>	<u>Broken, damaged, or missing suspension part</u> <u>U-bolt loose, broken, cracked, or missing</u>	<u>Leaking shock absorber</u>

<u>Tires</u>	<u>Tires on same axle not of the same size</u> <u>Combination of bias and radial tires</u> <u>Tires vary more than one size between axles</u> <u>Tires not correct size for gross vehicle weight rating of school bus</u> <u>Single rear tire on school bus with gross vehicle weight rating of more than 10,000 pounds</u> <u>Regrooved, recapped, or retreaded tire mounted on a front wheel</u> <u>Tread groove depth less than 4/32 of an inch, measured in a tread groove on a tire on a front wheel</u> <u>Tire is mounted or inflated so it comes in contact with any part of the school bus or other tire</u> <u>Tread groove depth less than 2/32 of an inch, measured in a tread groove on a tire on a rear wheel</u> <u>Bump, knot, or bulge present on any tire</u> <u>Sidewall is cut, worn, or damaged to the extent that ply cord is exposed</u> <u>Separation of tread from tire casing</u> <u>Exposed ply or belting on any tire</u> <u>Flat tire or audible leak from a tire on any wheel</u> <u>If present, spare tire on Type C or D school bus not mounted outside passenger compartment</u>	
<u>Ventilation</u>	<u>Non-closing exhaust ventilator missing</u>	
<u>Wheel housing</u>	<u>Incorrect size or construction of wheel housing or opening</u>	

<u>Wheels</u>	<u>Not correct size for gross vehicle weight rating of school bus</u> <u>Loose or missing lug nut</u> <u>Broken stud bolt</u> <u>Crack or welded repair in wheel assembly</u>	<u>Not painted black</u>
<u>Windows</u>	<u>Not of safety glass</u> <u>Opening too small</u> <u>Cracked or broken</u> <u>Placement of non-transparent material</u> <u>Inoperative latch</u>	
<u>Windshield</u>	<u>Placement of non-transparent material</u> <u>Crack, chip, or pitting that interferes with the school bus driver's vision</u>	<u>Crack, chip or pitting that does not interfere with the school bus driver's vision</u>
<u>Windshield washer system</u>	<u>Missing</u>	<u>Low or no cleaning solution</u>
<u>Windshield wipers</u>	<u>Inoperative or missing wiper on school bus driver's side</u> <u>Inoperative or missing wiper on side opposite the school bus driver</u>	<u>Inoperative speed control</u> <u>Split or hardened wiper blade</u>
<u>Wiring</u>	<u>Incorrect color or number coding</u> <u>Wiring circuit not protected by fuse or circuit breaker</u> <u>One or more non-metal grommets missing</u> <u>Electrical wires outside the school bus body improperly secured</u>	

C. A school bus shall be inspected annually, according to a schedule established by the Department and the standards contained in subsections (A) and (B) and this section.

1. If the Department finds a major defect, the Department shall remove the current safety inspection decal and replace with a new safety inspection decal only after the major defect is repaired.
2. If the Department finds a minor defect, the Department shall remove the current safety inspection decal and replace with a new safety inspection decal and allow the school bus owner to make repairs in accordance with the provisions at

R13-13-108(A)(4) through (A)(7).

D. A school bus driver shall perform the following operations checks and tasks on the school bus:

1. Before a school bus is operated for the first time each day, conduct a pre-trip operations check of the school bus to determine that the following are operational and are not damaged:
 - a. All lamps, including alternately flashing, back-up, clearance, hazard, head, identification, interior, side marker, stop, tail, turn signal, and strobe lamps, if any, and emergency warning devices;
 - b. Tires, wheels, and wheel fasteners;
 - c. Service door;
 - d. Steps and step wells;
 - e. Emergency exits and signals;
 - f. Emergency doors and signals;
 - g. Wheelchair lift and wheelchair lift dome lamp;
 - h. Wheelchair-securement devices;
 - i. Wheelchair-securement anchorages;
 - j. Special-service entrance door;
 - k. Special-service entrance door signal;
 - l. Windows;
 - m. Windshield;
 - n. Windshield wipers;
 - o. Instrument panel and gauges;
 - p. Service brakes;
 - q. Service brake warning devices;
 - r. Parking brake;
 - s. Bumpers;
 - t. Seats and seat frames;
 - u. Floor coverings;
 - v. School bus body;
 - w. Engine fluid levels;
 - x. Engine compartment steering components;
 - y. Stop arm;
 - z. Horn;
 - aa. Mirrors;
 - bb. Engine fluid gauges;
 - cc. Noise suppression switch;
 - dd. Child alert notification system, if installed;
 - ee. Crossing control arm, if installed; and
 - ff. Air conditioning system, if installed.
2. Each time a pre-trip operations check of a school bus is conducted, check all emergency equipment to determine that the emergency equipment complies with the standards at R13-13-107(11) and R13-13-110.
3. Each time a school bus is operated subsequent to the first time the school bus is operated each day, conduct a walk-around operations check to determine whether

- there is an obvious engine fluid leak and the following are operational and are not damaged:
- a. All lamps listed in subsection (D)(1)(a);
 - b. Tires, wheels, and wheel fasteners;
 - c. Bumpers;
 - d. School bus body;
 - e. Windows;
 - f. Stop arm; and
 - g. Windshield.
4. Once daily, sweep and clean the interior of the school bus.
 5. After completing each operations check, the school bus driver shall complete the portions of a written monthly operations check report that provide the following information:
 - a. Date and time of the operations check;
 - b. Name of the school bus driver conducting the operations check;
 - c. Name of the employer;
 - d. Number assigned to the school bus by the school bus owner and painted on the outside of the school bus body; and
 - e. Indication of whether an item is operational, inoperative, or damaged.
 6. A school bus driver who performs an operations check and finds any item listed in subsections (D)(1) through (D)(3) inoperative or damaged shall immediately complete and submit a written repair order to the school bus owner through the employer.
 - a. The school bus owner shall use the standards contained in subsection (B) to determine whether an item reported on a repair order as inoperative or damaged is a major or minor defect.
 - b. If the school bus owner finds that a major defect exists, the school bus owner shall place the school bus out of service until the major defect is repaired.
 - c. If the school bus owner finds that a minor defect exists, the school bus may be used to transport passengers, but the school bus owner shall repair the defect in accordance with the provisions at R13-13-108(A)(4) through(A)(7). Time in which to make the minor repair shall be calculated from the date of the written repair order.
 7. After a school bus makes its final trip on the last day the school bus is driven in a particular month the school bus driver operating the school bus shall submit the written monthly operations check report to the school bus owner through the employer.
- E. In addition to the operations checks described in subsection (D), a school bus owner shall systematically inspect, repair, and maintain, or cause to be systematically inspected, repaired, and maintained, all parts of a school bus chassis and body described in Sections R13-13-106 and R13-13-107 and any other parts and accessories that may affect safe operation of the school bus. The school bus owner shall ensure that the maintenance of a school bus and repair of major defects is done by:
1. An ASE-certified technician,

2. An individual working under the supervision of an ASE-certified master school bus technician,
3. An individual with at least one year of participation in a school bus manufacturer-sponsored or commercial vehicle maintenance training program, or
4. An individual with at least one year of experience as a school bus mechanic.

F. Records

1. A school bus owner shall maintain the following records in a separate file for each school bus for as long as the school bus is in operation in Arizona:
 - a. Number assigned to the school bus by the school bus owner,
 - b. Name of the school bus body manufacturer,
 - c. Name of the school bus chassis manufacturer,
 - d. Identification number of the school bus located in the driver's compartment,
 - e. Year the school bus body was assembled upon the school bus chassis, and
 - f. Size of the tires placed on the school bus.
2. A school bus owner shall maintain all records of initial inspection, subsequent inspections, and repairs and maintenance procedures performed on the school bus for three years from the date of inspection, repair, or maintenance. The school bus owner shall ensure that all records of repairs and maintenance procedures include verification from the owner of the business responsible for the repairs and maintenance procedures that the individual who actually performs the repairs and maintenance procedures is qualified under subsection (E).
3. If a school bus is sold, the school bus owner shall transfer the records required by subsections (F)(1) and (F)(2) to the purchaser.
4. A school bus owner shall maintain monthly operations check reports for three months from the date of the report.

G. Alterations

1. Before a school bus owner alters a school bus, the school bus owner shall submit a request in writing to the Department describing the proposed alteration and the reason for the proposal.
2. Within 60 days of receiving a request for alteration, the Department shall inform the school bus owner in writing whether the request has been approved or denied. The Department shall base its decision to approve or deny on an assessment of whether the proposed alteration affects the operations of a school bus, complies with the statutes and rules applicable to school buses, or affects the health, safety, or welfare of any individual.

R13-13-109. Time-frames for Making Certification Determinations

- A.** For certification as a school bus driver, the time-frames required by A.R.S. § 41-1072 et seq. are:
1. Overall time-frame: 60 days
 2. Administrative completeness review time-frame: 45 days
 3. Substantive review time-frame: 15 days
- B.** An administratively complete application for certification as a school bus driver consists of all the information and documents listed in R13-13-102(A).
- C.** An administrative completeness review time-frame, as described in A.R.S. § 41-1072(1) and listed in subsection (A)(2), begins on the date the Department receives an application.
1. If the application is not administratively complete when received, the Department shall send a notice of deficiency to the applicant. The deficiency notice shall state the documents and information needed to complete the application.
 2. Within 120 days from the postmark date of the deficiency notice, the applicant shall submit to the Department the missing documents and information. The time-frame for the Department to finish the administrative completeness review is suspended from the postmark date of the deficiency notice until the date the Department receives the missing documents and information.
 3. If the applicant fails to provide the missing documents and information within the time provided, the Department shall close the applicant's file. An applicant whose file is closed and who wants to be certified shall apply again under R13-13-102.
 4. If the application is administratively complete, the Department shall send a written notice of administrative completeness to the applicant.
- D.** A substantive review time-frame, as described in A.R.S. § 41-1072(3) and listed in subsection (A)(3), begins on the postmark date of the notice of administrative completeness.
1. During the substantive review time-frame, the Department may make one comprehensive written request for additional information.
 2. The applicant shall submit to the Department the additional information identified in the request for additional information within 20 days from the postmark date of the request for additional information. The time-frame for the Department to finish the substantive review of the application is suspended from the postmark date of the request for additional information until the Department receives the additional information.
 3. Unless an applicant requests that the Department deny certification within the 20-day period in subsection (D)(2), the Department shall close the file of an applicant who fails to submit the additional information within the 20 days provided. An applicant whose file is closed and who wants to be certified shall apply again under R13-13-102.
 4. When the substantive review is complete, the Department shall inform the applicant in writing of its decision whether to certify the applicant.
 - a. The Department shall deny certification if it determines that the applicant

does not meet all substantive criteria for certification required by statute and rule. An applicant who is denied certification may appeal the Department's decision under A.R.S. § 41-1092 et seq. and any rules made under A.R.S. § 41-1092.01(C)(4).

- b. The Department shall grant certification if it determines that the applicant meets all substantive criteria for certification required by statute and rule.

R13-13-110. First-aid Equipment

No later than 180 days after the effective date of these rules, a school bus in Arizona shall meet the requirements of this Section.

1. First-aid and body-fluid cleanup kits shall be mounted in a school bus in accordance with R13-13-107(11)(a).
2. First-aid kit: A school bus shall be equipped with a removable first-aid kit that has a weatherproofing seal around the lid to prevent moisture or dust from entering the first-aid kit, is clearly labeled as a first-aid kit, and contains the following:
 - a. Two - 1 inch x 2 1/2 inch yards adhesive tape rolls,
 - b. 24 - Sterile gauze pads 3 inches x 3 inches,
 - c. Eight - 2 inch adhesive bandages,
 - d. 10 - 3 inch adhesive bandages,
 - e. Two - 2 inch x 6 inch sterile gauze roller bandages,
 - f. Four - Triangular bandages approximately 40 inches x 36 inches x 54 inches with two safety pins,
 - g. Three - Sterile gauze pads at least 24 inches x 24 inches,
 - h. Three - Sterile eye pads,
 - i. One - Rounded-end scissors,
 - j. One - Pair of non-latex gloves, and
 - k. One - Mouth-to-mouth airway.
3. Body fluid or bloodborne-pathogen cleanup kit: A school bus shall be equipped with a removable body-fluid or bloodborne-pathogen cleanup kit that is sealed, clearly labeled as a body-fluid or bloodborne-pathogen cleanup kit, and contains the following:
 - a. One - Pouch of solidifier with chlorine,
 - b. One - Pick-up scoop with scraper,
 - c. One - Pair of non-latex gloves,
 - d. Two - Disinfectant hand wipes (antimicrobial),
 - e. Two - Plastic disposal bags with ties (biohazard),
 - f. Two - Germicidal towelettes effective against human immunodeficiency virus and tuberculosis,
 - g. Two - Paper crepe towels, and
 - h. One - Easy to follow instructions.

**ARTICLE 2. MINIMUM STANDARDS FOR SCHOOL BUSES OPERATED ON
ALTERNATIVE FUEL**

R13-13-201. Minimum Standards for Compressed Natural Gas Fuel Systems

A. In addition to the definitions in R13-13-101, in this Article, unless otherwise specified:

“AGA” means the American Gas Association.

“ANSI” means the American National Standards Institute.

“Angle of departure” means the area above an imaginary line that extends from the bottom outside edge of the rear bumper on a vehicle to the point at which a tire on the vehicle's rear drive axle touches the ground.

“Appurtenance” means an item connected to an opening of a natural-gas pressure vessel to make the natural-gas pressure vessel gas-tight. This includes pressure relief devices, shutoff, backflow, excess-flow, and internal valves, liquid-level and pressure gauges, and plugs.

“Approved” means acceptable to the Department.

“ASE” means National Institute of Automotive Service Excellence.

“Bracket” means rubber-lined, hoop and cradle mounting hardware supplied or approved by a pressure-vessel manufacturer to hold a natural-gas pressure vessel in a rack.

“CNG” means compressed natural gas, a combustible mixture of hydro-carbon gases and vapors, principally methane, that is reduced in volume by pressure for use as a vehicular fuel.

“Fuel-distribution assembly” means a device that regulates the flow of fuel from a natural-gas pressure vessel to a vehicle engine.

“Fuel line” means a pipe, tubing, or hose, and all related fittings through which natural gas passes on a vehicle.

“Installer” means a person who converts a school bus from the use of gasoline to the use of CNG by attaching a natural-gas fuel system to the school bus after the school bus is manufactured.

“Listed” means included in a publication of an approved organization that is concerned with product evaluation, conducts periodic inspection of equipment or material, and includes equipment or material in the approved organization's publication only if the equipment or material complies with appropriate standards or performs in a specified manner.

“NFPA” means the National Fire Protection Association, which is located at 1 Batterymarch Park, P.O. Box 9101, Quincy, MA 02269-9101, and which is accessible at (617) 770-3000 and www.nfpa.org.

“NGV-1” means specific standards set by the American National Standards Institute

and American Gas Association for the refueling connection device of a natural-gas vehicle.

“NGV-2” means specific standards set by the American National Standards Institute and American Gas Association for a vehicle-on-board natural-gas pressure vessel.

“Natural gas” means a combustible mixture of hydrocarbon gases and vapors, principally methane.

“Natural-gas fuel system” means a group of items including a pressure vessel and all attached valves, piping, and appurtenances that form a network for distributing natural gas to a vehicle engine.

“Operating pressure” means the internal force that a manufacturer intends for a natural-gas pressure vessel to achieve during normal operation of the vehicle to which the natural-gas pressure vessel is attached.

“Out-of-service” means not compliant with these rules, NFPA 52, or manufacturer's instructions for installation, maintenance, or repair.

“Owner” means a private business, school, or school district that owns a school bus.

“PSI” means pound per square inch.

“Pressure-relief device” means a mechanism that is installed in a natural-gas pressure vessel or integrated with a valve, that is operated by temperature, pressure, or both, and that releases the CNG in the natural-gas pressure vessel in specific emergency conditions. A pressure-relief device for a U.S. Department of Transportation or Canada Transport natural-gas pressure vessel also includes a mechanism capable of protecting a partially charged natural-gas pressure vessel.

“Pressure vessel” means a cylinder that is part of a natural-gas fuel system and that is constructed, inspected, and maintained in accordance with U.S. Department of Transportation or Canada Transport regulations or ANSI/AGA NGV2, Basic Requirements for Compressed Natural Gas Vehicle (CNGV) Fuel Containers, or CSA B51, Boiler, Pressure Vessel and Pressure Piping Code.

“Pressure-vessel valve” means a mechanical device connected directly to a natural-gas pressure vessel opening that regulates the flow of CNG from the natural-gas pressure vessel to the vehicle engine.

“Rack” means a metal structure that surrounds a natural-gas pressure vessel mounted on a vehicle and is secured to the vehicle frame by a method capable of withstanding a static up, down, left, right, forward, or backward force of eight times the weight of the fully pressurized natural-gas pressure vessel.

“UL” means the Underwriters' Laboratory, Inc.

B. Applicability and enforcement date of this Section

1. This Section applies to school buses that are manufactured to use only gasoline or diesel fuel and are converted to use CNG, in whole or in part.
2. The Department shall enforce this Section beginning 180 days after it is filed with the Office of the Secretary of State. After the beginning enforcement date, a

- school bus that is manufactured to use only gasoline or diesel fuel and is converted to use CNG, in whole or in part, shall meet the requirements of this Section when the school bus is introduced into Arizona or when the school bus is converted to natural-gas power. A school bus introduced into Arizona and powered in whole or in part by CNG before the beginning enforcement date of this Section shall meet the requirements of this Section or those at A.A.C. R17-4-611.
3. After the beginning enforcement date of this Section, the Department shall not approve a school bus manufactured to use only gasoline or diesel fuel and converted to use CNG, in whole or in part, unless the natural-gas fuel system meets the requirements of this Section.

C. Insurance

1. An owner shall not contract with an installer unless the installer has insurance coverage provided by a comprehensive general liability broad form insurance policy that is approved by the Department. The insurance policy shall include coverage for liability resulting from:
 - a. Completed installation operations,
 - b. Harm that arises on the installer's premises, and
 - c. Breach of contract by the installer.
2. In addition to the liability coverage described in subsection (C)(1), an owner shall ensure that either:
 - a. The installer has insurance coverage for liability resulting from harm that arises from subcontracted work performed by an independent contractor, or
 - b. An independent contractor who performs work for the installer under an agreement has an insurance policy that provides coverage for liability resulting from harm caused by the independent contractor's work.
3. An owner shall not contract with an installer unless the installer has an insurance policy that provides at least \$1 million liability coverage per occurrence both for bodily injury and for property damage.
4. An owner shall not contract with an installer unless the issuer of the installer's insurance policies described in subsections (C)(1) through (C)(3) names the Department as an additional insured on each policy and keeps the Department informed of any change in the status of each policy.
5. An owner shall obtain the Department's approval of the installer's insurance policy by submitting proof of the insurance described in subsections (C)(1) through (C)(3) to the Department before entering a contractual agreement with the installer for the installation of a natural-gas fuel system on a school bus.
6. If an owner acts as an installer, the owner shall maintain the insurance required by this Section.
7. The Department shall approve an installer's insurance policy, proof of which is submitted by an owner in accordance with subsection (C)(5), if the policy conforms to the requirements in subsections (C)(1) through (C)(3). The Department shall send written notice of its decision to approve or disapprove the installer's insurance policy to the owner within 15 days from receipt of the proof of insurance.

D. General requirements for installing a natural-gas fuel system

1. Converting a school bus to use of CNG, whether in whole or in part, is not an alteration as defined in R13-13-101.
2. Unless specifically provided otherwise in this Section, when installing a natural-gas fuel system, an installer shall use parts and equipment and perform work in a manner that meets or exceeds the standards of NFPA 52, Standard for Compressed Natural Gas (CNG) Vehicular Fuel Systems, 1995 (and no later editions or amendments), Quincy, MA, which is incorporated by this reference and on file with the Department and the Office of the Secretary of State.
3. An installer shall use only UL-listed or AGA-approved carburetor equipment when installing a natural-gas fuel system on a school bus.
4. An installer shall meet or exceed the recommended guidelines provided by the manufacturers of all parts of a natural-gas fuel system when installing the natural-gas fuel system on a school bus.
5. An installer shall ensure that installation of a natural-gas fuel system on a school bus is performed by an individual who has proof of training provided by the manufacturer of the natural-gas fuel system or ASE alternative fuels certification.
6. If a school bus is converted from the use of gasoline or diesel fuel to the dedicated use of CNG, the installer shall remove the gasoline or diesel-fuel tank and accompanying gasoline or diesel-fuel system parts from the school bus.

E. Natural-gas pressure vessel: An installer shall use only a natural-gas pressure vessel that is certified by its manufacturer as meeting or exceeding the NGV2 standards and as being U.S. Department of Transportation or ANSI listed. An installer shall use the natural-gas pressure vessel manufacturer's recommended bracket.

F. Installing a natural-gas pressure vessel

1. An installer shall securely attach a rack to the frame of a school bus in the following manner:
 - a. By drilling no holes in the school bus frame that exceed the manufacturer's requirements; and
 - b. By using no welding on and applying no heat to the school bus frame.
2. When installing a natural-gas fuel system on a school bus, an installer shall locate the natural-gas pressure vessel and its appurtenances on the vehicle frame as follows:
 - a. Below the driver's or passengers' compartment;
 - b. So no part protrudes:
 - i. In front of the front axle,
 - ii. Beyond the outside face of the rear bumper, or
 - iii. Beyond the sides of the school bus;
 - c. Inside a rack; and
 - d. So the minimum clearance between the road and the lowest part of the natural-gas pressure vessel and its rack on a school bus loaded to its gross vehicle weight rating, is:
 - i. No fewer than 7 inches (17.5 mm) for a school bus with a wheel base fewer than or equal to 127 inches (323 mm); or
 - ii. No fewer than 9 inches (22.5 mm) for a school bus with a wheel base

greater than 127 inches (323 mm).

3. If the natural-gas pressure vessel and its appurtenances are located behind the rear axle of the school bus, in addition to the requirements in subsection (F)(3), an installer shall locate the natural-gas pressure vessel as follows:
 - a. Below the floor line, and
 - b. Above the school bus' angle of departure.

G. Protecting a natural-gas pressure vessel. To protect a natural-gas pressure vessel and its appurtenances from damage, an installer shall:

1. Surround the natural-gas pressure vessel with a stone guard on all sides that are not protected by the natural barriers of the vehicle. The stone guard shall not be attached to the natural-gas pressure vessel. If the stone guard protects a valve, it shall be made of at least 16-gauge steel. If the stone guard does not protect a valve, it shall be made of at least 3/16-in. mesh with openings no greater than 1 in.;
2. Place a resilient, non-absorbent gasket between the natural-gas pressure vessel and its brackets in a manner that prevents the brackets from directly contacting the natural-gas pressure vessel;
3. Ensure that the weight of the natural-gas pressure vessel is not supported, in whole or in part, by an appurtenance; and
4. Place a shield between, but not attached to, the natural-gas pressure vessel and the vehicle exhaust system if the natural-gas pressure vessel or the fuel lines are located fewer than 8 inches from the exhaust system. The shield shall be constructed of at least 18-gauge metal.

H. Safety and check valves: An installer shall equip a natural-gas fuel system with:

1. Either an automatic fuel supply shut-off valve that is placed between the pressure vessel fuel-pressure regulator and the fuel distribution assembly and activated by engine vacuum or oil pressure, or an electronic fuel injector; and
2. Either a manual or automatically controlled shut-off valve that enables the natural-gas pressure vessel to be isolated from the remainder of the natural-gas fuel system. If a manual shut-off valve is used, it shall:
 - a. Have no more than 90° rotation from the opened to the closed position;
 - b. Have a red valve handle;
 - c. Be placed in an accessible location; and
 - d. Have "ESV" printed on the school bus at the access location to the manual shut-off valve, in 2-in. to 4-in., unshaded, red letters.

I. Installation of fuel lines. An installer shall:

1. Use fuel lines constructed of seamless stainless steel that has been tested and certified by the manufacturer to an operating pressure of 3600 PSI with a 4:1 safety factor;
2. Mount and brace fuel lines to the vehicle frame in a manner that minimizes vibration;
3. Secure fuel lines to the vehicle frame at least every 24 inches with rubber-lined fasteners;
4. Protect fuel lines that pass through any structural member with rubber grommets, bulkhead fittings, or both;

- 5. Cause fuel lines that run to the engine to follow the main frame channel; and
- 6. Install an access door that is at least 70 square inches if access to the fill receptacle and fuel pressure gauge is through the school bus body. The words "CNG Fill" shall be printed on the school bus body, immediately above the access door, in 2-in. to 4-in., unshaded letters.
- J.** Installation of Venting System. An installer shall ensure that in addition to meeting the requirements in NFPA 52, all vent exits are aimed toward the ground.

R13-13-202. Inspection and Maintenance of Compressed Natural Gas Fuel Systems

- A.** This Section applies to all school buses that are powered, in whole or in part, by CNG and are introduced into Arizona after the beginning enforcement date of these rules.
- B.** An owner shall not use a school bus equipped with a natural-gas fuel system to transport passengers until the natural-gas fuel system is inspected and approved by the Department. An owner shall notify the Department when the owner obtains a school bus that needs to be inspected for compliance with these rules.
- C.** After the initial inspection conducted by the Department, an owner shall ensure that a school bus equipped with a natural-gas fuel system is inspected annually and under the following special circumstances:
1. When the school bus is involved in an accident;
 2. When the natural-gas pressure vessel may have been damaged;
 3. When natural gas is smelled;
 4. When there is an unexpected loss of gas pressure, rattling, or other indication of looseness; or
 5. When the natural-gas pressure vessel is changed.
- D.** An owner shall ensure that an annual or special-circumstances inspection is conducted by the Department or an individual who has proof of training provided by the manufacturer of the natural-gas fuel system or ASE alternative-fuel certification.
- E.** An owner shall ensure that every inspection of a school bus equipped with a natural-gas fuel system assesses whether the natural-gas fuel system meets the safety standards in 13 A.A.C. 13, and NFPA 52. This assessment shall include:
1. Leak-testing the natural-gas fuel system in compliance with NFPA 52 guidelines;
 2. Verifying that the pressure vessel is designed for storage of CNG;
 3. Verifying that the service life of the natural-gas pressure vessel has not expired;
 4. Verifying that the natural-gas pressure vessel is certified by its manufacturer as meeting or exceeding the NGV2 standards and as being U.S. Department of Transportation or ANSI listed;
 5. Verifying that all parts of the natural-gas fuel system are properly listed or approved; and
 6. Verifying that all parts of the natural-gas fuel system are installed in accordance with the manufacturer's instructions.
- F.** An owner shall ensure that an individual who conducts an inspection of a school bus equipped with a natural-gas fuel system completes a Compressed Natural Gas Safety Inspection Form, which is available from the Department, and certifies that the school bus meets all safety standards in 13 A.A.C. 13, and NFPA 52.
- G.** If it is necessary to condemn a natural-gas pressure vessel, the owner shall:
1. Return the condemned natural-gas pressure vessel to its manufacturer; and
 2. Obtain a certificate from the manufacturer that states ownership of the natural-gas pressure vessel is transferred from the owner to the manufacturer.
- H.** An owner shall maintain each completed Compressed Natural Gas Safety Inspection Form in a separate file for each school bus for the service life of the school bus. If a school bus is transferred from one owner to another, the first owner shall transfer the

completed inspection forms to the second owner.

- I. An owner shall make the inspection forms maintained under subsection (H) available for review by the Department.

VIEW DOCUMENT

28-3228. School bus drivers; requirements; rules; cancellation

A. A person shall not operate a school bus transporting school children unless the person possesses the appropriate license class for the size of school bus being operated that is issued by the department of transportation, a bus endorsement that is issued by the department of transportation and a school bus certificate that is issued by the department of public safety.

B. To be certified as a school bus driver a person shall do both of the following:

1. Meet and maintain the minimum standards prescribed by this section and rules adopted by the department of public safety in consultation with the school bus advisory council established by section 28-3053.

2. Complete an initial instructional course on school bus driver safety and training including behind the wheel training.

C. The department of public safety in consultation with the school bus advisory council established by section 28-3053 shall adopt rules that establish minimum standards for the certification of school bus drivers. In cooperation with local school districts, the department of public safety shall provide for school bus driver safety and training courses. The standards established shall:

1. Include requirements concerning moral character, knowledge of school bus operation, pupil and motor vehicle safety, physical impairments that might affect the applicant's ability to safely operate a school bus or that might endanger the health or safety of school bus passengers, knowledge of first aid, establishment of school bus safety and training courses, a refresher course to be completed on at least a biennial basis and other matters as the department of public safety and the school bus advisory council established by section 28-3053 prescribe for the protection of the public.

2. Require tests to detect the presence of alcohol or the use of a drug in violation of title 13, chapter 34 that may adversely affect the ability of the applicant to safely operate a school bus.

3. Authorize the performance of hearing tests with or without the use of a hearing aid as provided in 49 Code of Federal Regulations section 391.41.

D. Each person who applies for a school bus driver certificate shall have a valid fingerprint clearance card that is issued pursuant to title 41, chapter 12, article 3.1 and shall submit an identity verified fingerprint card as described in section 15-106 that the department of public safety shall use to process the fingerprint clearance card as outlined in section 15-106.

E. A person who is issued a school bus driver certificate shall maintain a valid identity verified fingerprint clearance card for the duration of any school bus driver certification period.

F. The department of public safety shall suspend a school bus driver certificate if the fingerprint clearance card is invalid, suspended, canceled or revoked.

G. The department of public safety shall issue a school bus driver certificate to an applicant who meets the requirements of this

section. The certificate is valid if the applicant maintains the minimum standards established by this section.

H. The department of public safety may cancel the certificate if the person's license to drive is suspended, canceled, revoked or disqualified. The department of public safety shall cancel the certificate if the person fails to maintain the minimum standards established pursuant to this section. A person whose application for a certificate is refused or whose certificate is canceled for failure to meet or maintain the minimum standards may request and receive a hearing from the department of public safety.

I. The department of public safety shall enforce the rules adopted pursuant to this section.

© 2017 Arizona State Legislature. All Rights Reserved

41-1713. Powers and duties of director; authentication of records

A. The director of the department shall:

1. Be the administrative head of the department.
2. Subject to the merit system rules, appoint, suspend, demote, promote or dismiss all other classified employees of the department on the recommendation of their respective division superintendent. The director shall determine and furnish the law enforcement merit system council established by section 41-1830.11 with a table of organization. The superintendent of each division shall serve at the concurrent pleasure of the director and the governor.
3. Except as provided in sections 12-119, 41-1304 and 41-1304.05, employ officers and other personnel as the director deems necessary for the protection and security of the state buildings and grounds in the governmental mall described in section 41-1362, state office buildings in Tucson and persons who are on any of those properties. Department officers may make arrests and issue citations for crimes or traffic offenses and for any violation of a rule adopted under section 41-796. For the purposes of this paragraph, security does not mean security services related to building operation and maintenance functions provided by the department of administration.
4. Make rules necessary for the operation of the department.
5. Annually submit a report of the work of the department to the governor and the legislature, or more often if requested by the governor or the legislature.
6. Appoint a deputy director with the approval of the governor.
7. Adopt an official seal that contains the words "department of public safety" encircling the seal of this state as part of its design.
8. Investigate, on receipt, credible evidence that a licensee or registrant has been arrested for, charged with or convicted of an offense that would preclude the person from holding a license or registration certificate issued pursuant to title 32, chapter 26.
9. Cooperate with the Arizona-Mexico commission in the governor's office and with researchers at universities in this state to collect data and conduct projects in the United States and Mexico on issues that are within the scope of the department's duties and that relate to quality of life, trade and economic development in this state in a manner that will help the Arizona-Mexico commission to assess and enhance the economic competitiveness of this state and of the Arizona-Mexico region.
10. Adopt and administer the breath, blood or other bodily substances test rules pursuant to title 28, chapter 4.
11. Develop procedures to exchange information with the department of transportation for any purpose related to sections 28-1324, 28-1325, 28-1326, 28-1462 and 28-3318.
12. Collaborate with the state forester in presentations to legislative committees on issues associated with wildfire prevention, suppression and emergency management as provided by section 37-1302, subsection B.

B. The director may:

1. Issue commissions to officers of the department.
2. Request the cooperation of the utilities, communication media and public and private agencies and any sheriff or other peace officer in any county or municipality, within the limits of their respective jurisdictions when necessary, to aid and assist in the performance of any duty imposed by this chapter.

3. Cooperate with any public or private agency or person to receive or give necessary assistance and may contract for such assistance subject to legislative appropriation controls.
4. Utilize the advice of the board and cooperate with sheriffs, local police and peace officers within the state for the prevention and discovery of crimes, the apprehension of criminals and the promotion of public safety.
5. Acquire in the name of the state, either in fee or lesser estate or interest, all real or any personal property that the director considers necessary for the department's use, by purchase, donation, dedication, exchange or other lawful means. All acquisitions of personal property pursuant to this paragraph shall be made as prescribed in chapter 23 of this title unless otherwise provided by law.
6. Dispose of any property, real or personal, or any right, title or interest in the property, when the director determines that the property is no longer needed or necessary for the department's use. Disposition of personal property shall be as prescribed in chapter 23 of this title. The real property shall be sold by public auction or competitive bidding after notice published in a daily newspaper of general circulation, not less than three times, two weeks before the sale and subject to the approval of the director of the department of administration. When real property is sold, it shall not be sold for less than the appraised value as established by a competent real estate appraiser. Any monies derived from the disposal of real or personal property shall be deposited, pursuant to sections 35-146 and 35-147, in the Arizona highway patrol fund as authorized by section 41-1752, subsection B, paragraph 6.
7. Sell, lend or lease personal property directly to any state, county or local law enforcement agency. Personal property may be sold or leased at a predetermined price without competitive bidding. Any state, county or local law enforcement agency receiving personal property may not resell or lease the property to any person or organization except for educational purposes.
8. Dispose of surplus property by transferring the property to the department of administration for disposition to another state budget unit or political subdivision if the state budget unit or political subdivision is not a law enforcement agency.
9. Lease or rent personal property directly to any state law enforcement officer for the purpose of traffic safety, traffic control or other law enforcement related activity.
10. Sell for one dollar, without public bidding, the department issued handgun or shotgun to a department officer on duty related retirement pursuant to title 38, chapter 5, article 4. Any monies derived from the sale of the handgun or shotgun to the retiring department officer shall be deposited, pursuant to sections 35-146 and 35-147, in the Arizona highway patrol fund as authorized by section 41-1752, subsection B, paragraph 6.
11. Conduct state criminal history records checks for the purpose of updating and verifying the status of current licensees or registrants who have a license or certificate issued pursuant to title 32, chapter 26. The director shall investigate, on receipt, credible evidence that a licensee or registrant has been arrested for, charged with or convicted of an offense that would preclude the person from holding a registration certificate issued pursuant to title 32, chapter 26.
12. Grant a maximum of two thousand eighty hours of industrial injury leave to any sworn department employee who is injured in the course of the employee's duty, any civilian department employee who is injured in the course of performing or assisting in law enforcement or hazardous duties or any civilian department employee who was injured as a sworn department employee rehired after August 9, 2001 and would have been eligible pursuant to this paragraph and whose work-related injury prevents the employee from performing the normal duties of that employee's classification. This industrial injury leave is in addition to any vacation or sick leave earned or granted to the employee and does not affect the employee's eligibility for any other benefits, including workers' compensation. The employee is not eligible for payment pursuant to section 38-615 of industrial injury leave that is granted pursuant to this paragraph. Subject to approval by the law enforcement merit system council, the director shall adopt rules and procedures regarding industrial injury leave hours granted pursuant to this paragraph.

13. Sell at current replacement cost, without public bidding, the department issued badge of authority to an officer of the department on the officer's promotion or separation from the department. Any monies derived from the sale of the badge to an officer shall be deposited, pursuant to sections 35-146 and 35-147, in the department of public safety administration fund to offset replacement costs.

C. The director and any employees of the department that the director designates in writing may use the seal adopted pursuant to subsection A, paragraph 7 of this section to fully authenticate any department records and copies of these records. These authenticated records or authenticated copies of records shall be judicially noticed and shall be received in evidence by the courts of this state without any further proof of their authenticity.

INDUSTRIAL COMMISSION

Title 20, Chapter 5, Article 1, Workers' Compensation Practice and Procedure; Article 13,
Treatment Guidelines

Amend: R20-5-106; R20-5-1301; R20-5-1302; R20-5-1303; R20-5-1309; R20-5-1310;
R20-5-1311

GOVERNOR'S REGULATORY REVIEW COUNCIL

STAFF MEMORANDUM - REGULAR RULEMAKING

MEETING DATE: July 10, 2018

AGENDA ITEM: E-4

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: June 19, 2018

SUBJECT: INDUSTRIAL COMMISSION (R-18-0704)
Title 20, Chapter 5, Article 1, Workers' Compensation Practice and Procedure;
Article 13, Treatment Guidelines

Amend: R20-5-106; R20-5-1301; R20-5-1302; R20-5-1303; R20-5-1309;
R20-5-1310; R20-5-1311

This rulemaking, from the Industrial Commission of Arizona (Commission), seeks to amend seven rules in A.A.C. Title 20, Chapter 5 related to treatment guidelines. The rules in Article 13 were promulgated in response to 2012 legislation requiring the Commission to “develop and implement a process for the use of evidence-based treatment guidelines, where appropriate, to treat injured workers.” See A.R.S. § 23-1062.03. The Commission adopted the Work Loss Data Institute's *Official Disability Guidelines – Treatment in Workers Compensation (Official Disability Guidelines)* as the standard reference for evidence-based medicine while limiting applicability of the *Official Disability Guidelines* to the management of chronic pain and the use of opioids for all stages of pain management.

The 2017 legislation required the Commission to review, by December 31, 2017, options for streamlining the authorization process within the treatment guidelines. At its December 14, 2017 public meeting, the Commission voted to develop and mandate the use of a Medical Treatment Preauthorization Form with accompanying instructions, and to reduce the time period within which a payer must respond to requests for preauthorization or reconsideration from ten business days to seven business days. At its December 21, 2017 public meeting, the Commission took formal action to modify the applicability of the *Official Disability Guidelines* to all body parts and conditions as of October 1, 2018.

The Governor's Office provided an exception from the rulemaking moratorium on February 13, 2018.

Proposed Action

- Section 106 - **Commission Forms:** Amendments describe and mandate the use of the Medical Treatment Preauthorization Form.
- Section 1301 - **Adoption and Applicability of the Article:** Amendments reflect the Commission's decision to make the *Official Disability Guidelines* applicable to all body parts and conditions.
- Section 1302 - **Definitions:** Definitions are modified to reflect changes to other rules in Article 13.
- Section 1303 - **Provider Request for Preauthorization:** Subsection (B) is modified to mandate the use of the Medical Treatment Preauthorization Form.
- Section 1309 - **Payer Decision on Request for Preauthorization:** Amendments require a payer who receives a deficient request for preauthorization to, within seven business days of receiving and identifying the deficient request, either: (1) act on the deficient request by using the Medical Treatment Preauthorization Form; or (2) notify the provider making the request that a request for preauthorization must be submitted on the Medical Treatment Preauthorization Form.
- Section 1310 - **Payer Reconsideration on Request for Preauthorization:** In addition to clarifying changes, subsection (E), which provides requirements for a payer's written decision on a request for reconsideration, is being repealed.
- Section 1311 - **Administrative Review by Commission:** Amendments reflect the Commission's decision to make the *Official Disability Guidelines* applicable to all body parts and conditions and to mandate the use of the Medical Treatment Preauthorization Form.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

Yes. The Commission cites to both general and specific authority for the rules. Of particular significance is A.R.S. § 23-107(A)(1), under which the Commission "has full power, jurisdiction and authority to [f]ormulate and adopt rules and regulations for effecting the purposes of this article [A.R.S. Title 23, Chapter 1, Article 1, Industrial Commission]."

2. Do the rules establish a new fee or contain a fee increase?

No. The rules do not establish a new fee or contain a fee increase.

3. Summary of the agency's economic impact analysis:

In this rulemaking, the Commission is promulgating rules that will implement evidence-based treatment guidelines for injured workers in the workers' compensation system. This complies with directives from the Arizona Legislature. The Commission notes that the changes to the rules will improve medical outcomes for injured workers and decrease processing times for claims. In FY 2016, 91,504 Workers' Compensation Claims were filed in Arizona. This is a rate of 3,636 claims per 100,000 workers.

4. Has the agency analyzed the costs and benefits of the rulemaking and determined that the rules impose the least burden and costs to those who are regulated?

The Commission concludes that this rulemaking is required by legislative directives. This rulemaking will decrease the administrative burden associated with workers' compensation claims for all stakeholders. Any costs are minimal. The benefits outweigh the costs.

5. What are the economic impacts on stakeholders?

Key stakeholders are the Commission, the Arizona Department of Administration-Risk Management Division, political subdivisions that participate in the workers' compensation system, insurance carriers, medical providers, injured employees, and any businesses that participate in the workers' compensation system.

The Commission will benefit from this rulemaking because it reduces the administrative burden associated with workers' compensation claims. The rulemaking also utilizes current evidence-based medicine through the Official Disability Guidelines.

The Division, political subdivisions that participate in the worker's compensation system, and businesses that participate in the workers' compensation system will bear some costs associated with adapting to the new rules. The Commission notes that these entities will also benefit from the rulemaking because it will significantly reduce the amount of administrative burden required for injured employees to seek treatment. Reducing administrative delays will reduce the amount of wasted time for employers, both public and private.

Insurance carriers, medical providers, and injured workers will benefit from this rulemaking because it reduces their administrative burden when providing treatment for workers through the workers' compensation system. Reducing the administrative burden for these stakeholders could improve medical outcomes for injured workers.

6. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

Yes. The Commission indicates that it received two public comments on the rulemaking, both on behalf of CopperPoint Insurance Companies, expressing support for the rulemaking.

7. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

No. Only non-substantive technical changes were made between the Notice of Proposed Rulemaking and the Notice of Final Rulemaking.

8. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

No. Federal law is not applicable to the subject matter of the rules.

9. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

No. The rules do not require a permit or license.

10. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

Yes. The Commission indicates that it has not reviewed and is not relying upon any study in its evaluation of, or justification for, the subject rulemaking. The Commission notes that it did consider various study materials prior to entering into the rulemaking, which are available at <https://www.azica.gov/official-disability-guidelines-study-materials-and-public-comments>.

11. Conclusion

The Commission is requesting a delayed effective date of October 1, 2018. Council staff recommends approval of the rulemaking.

THE INDUSTRIAL COMMISSION OF ARIZONA
OFFICE OF THE DIRECTOR

DALE L. SCHULTZ, CHAIRMAN

Phoenix, Arizona 85007

RE: Request for Approval of Rulemaking: A.A.C. Title 20, Chapter 5, Articles 1
("Workers' Compensation Practice and Procedure") and 13 ("Treatment Guidelines")
Rulemaking

Dear Ms. Colyer:

The Industrial Commission of Arizona (the "Commission") requests that the Governor's Regulatory Review Council (the "Council") approve the above-referenced rulemaking. Pursuant to A.A.C. R1-6-201(A)(1), the Commission provides the following information:

a. The close of record date.

April 16, 2018.

b. Whether the rulemaking activity relates to a five-year review report and, if applicable, the date the report was approved by the Council.

The subject rulemaking activity does not relate to a five-year review report.

c. Whether the rule establishes a new fee and, if it does, citation of the statute expressly authorizing the new fee.

The subject rulemaking does not establish a new fee.

d. Whether the rule contains a fee increase.

The subject rulemaking does not contain a fee increase.

e. Whether an immediate effective date is requested for the rule under A.R.S. § 41-1032.

The Commission is not requesting an immediate effective date.

- f. A certification that the preamble discloses a reference to any study relevant to the rule that the agency reviewed and either did or did not rely on in the agency's evaluation of or justification for the rule.**

The Commission did not rely on a study for justification of the subject rulemaking.

- g. If one or more full-time employees are necessary to implement and enforce the rule, a certification that the preparer of the economic, small business, and consumer impact statement has notified the Joint Legislative Budget Committee of the number of new full-time employees necessary to implement and enforce the rule.**

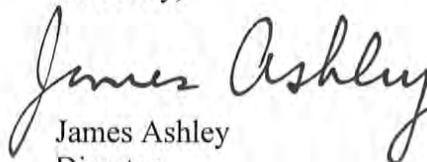

The Commission does not anticipate that it will be necessary to hire any new full-time employees to implement or enforce the subject rulemaking.

- h. A list of all documents enclosed.**

Governor's Office Approval of Rulemaking
Notice of Final Rulemaking
Economic Impact Statement
Written Comments Received by the Commission Concerning the Subject Rulemaking
A Transcript of Oral Comments Received
General and Specific Statutes Authorizing Rulemaking

Thank you for your consideration. Should you have any questions regarding the amendments, please contact Jason Porter, Chief Legal Counsel, at 602-542-5781.

Sincerely,

James Ashley
Director

NOTICE OF FINAL RULEMAKING
TITLE 20. COMMERCE, FINANCIAL INSTITUTIONS, AND INSURANCE
CHAPTER 5. INDUSTRIAL COMMISSION OF ARIZONA

PREAMBLE

<u>1. Article, Part, or Section Affected (as applicable)</u>	<u>Rulemaking Action</u>
R20-5-106	Amend
R20-5-1301	Amend
R20-5-1302	Amend
R20-5-1303	Amend
R20-5-1309	Amend
R20-5-1310	Amend
R20-5-1311	Amend

2. Citations to the agency's statutory rulemaking authority to include both the authorizing statute (general) and the implementing statute (specific):

Authorizing statutes: A.R.S. §§ 23-107(A)(1); 23-921(B)

Implementing statutes: A.R.S. § 23-1062.03; Laws 2017, Ch. 287, § 5

3. The effective date of the rules:

a. If the agency selected a date earlier than the 60 day effective date as specified in A.R.S. § 41-1032(A), include the earlier date and state the reason or reasons the agency selected the earlier effective date as provided in A.R.S. § 41-1032(A)(1) through (5):

Not applicable

b. If the agency selected a date later than the 60 day effective date as specified in A.R.S. § 41-1032(A), include the later date and state the reason or reasons the agency selected the later effective date as provided in A.R.S. § 41-1032(B):

The Industrial Commission of Arizona (the "Commission") selected October 1, 2018, as the effective date for the subject rulemaking. As discussed in Item 6, the Commission took formal action on December 21, 2017, to modify the applicability of the *Official Disability Guidelines*, but delayed implementation until October 1, 2018. The delayed implementation date was intended to provide impacted stakeholders with sufficient time to prepare for the expanded applicability of the *Official Disability Guidelines*. The Commission selected October 1, 2018, as the effective date for the subject rulemaking so that the rule changes pertaining to streamlining the authorization process will take effect on the same date as the expanded applicability of the *Official Disability Guidelines*. Good cause exists for the selected effective date and the public interest will not be harmed by the selected date.

4. Citations to all related notices published in the *Register* as specified in R1-1-409(A) that pertain to the record of the final rulemaking package:

Notice of Rulemaking Docket Opening: 24 A.A.R. 578, March 16, 2018

Notice of Proposed Rulemaking: 24 A.A.R. 565, March 16, 2018

5. The agency's contact person who can answer questions about the rulemaking:

Phoenix, Arizona 85007

Telephone: (602) 542-5781

Fax: (602) 542-6783

E-mail: jason.porter@azica.gov

6. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, to include an explanation about the rulemaking:

In 2012, the Arizona Legislature directed the Commission to "develop and implement a process for the use of evidence-based treatment guidelines, where appropriate, to treat injured workers." *See* A.R.S. § 23-1062.03. With significant stakeholder input, the Commission promulgated twelve rules, published in Title 20, Chapter 5, Article 13 of the Arizona Administrative Code ("Article 13" or the "Treatment Guidelines"). Among other things, the Treatment Guidelines: (1) prescribe the use of evidence-based treatment guidelines as a tool to support clinical decision making and quality health care delivery to injured workers within Arizona's workers' compensation system; (2) adopted Work Loss Data Institute's *Official Disability Guidelines – Treatment in Workers Compensation* (the "*Official Disability Guidelines*") as the standard reference for evidence-based medicine; (3) until further action of the Commission, limited the applicability of the *Official Disability Guidelines* to the management of chronic pain and the use of opioids for all stages of pain management; (4) outlined an administrative process for the Commission to modify the applicability of the *Official Disability Guidelines*; (5) outlined a noncompulsory process for a medical provider or injured worker to seek preauthorization from a payer for medical services or treatment; (6) established an administrative review process to help resolve disputes between medical providers, injured workers, and payers; and (7) outlined procedures for bringing unresolved disputes to the Commission for administrative hearing.

Streamlining the Treatment Guidelines' Authorization Process

In 2017, the Arizona Legislature (in Laws 2017, Ch. 287, § 5) directed the Commission to "review and determine a process for streamlining the authorization process for treatment that is within the evidence-based treatment guidelines." The Legislature required the Commission to complete the review process on or before December 31, 2017.

Consequently, on June 29, 2017, the Commission directed its Medical Resource Office to: (1) conduct a review of the existing authorization process under the Treatment Guidelines; and (2) make a recommendation to the Commission regarding "streamlining the authorization process for treatment that is within the evidence-based treatment guidelines." Stakeholders were provided opportunities to offer suggestions and comments regarding streamlining the authorization process, including during a public hearing conducted on August 17, 2017. At its December 14, 2017 public meeting, the Commission completed its review of the existing authorization process. Based upon suggestions submitted by interested stakeholders, the Commission approved the following methods for streamlining the Article 13 authorization process:

1. Develop and mandate the use of a Medical Treatment Preauthorization Form with accompanying instructions; and
2. Reduce the time period within which a payer must respond to requests for preauthorization or reconsideration from ten business days to seven business days.

Modifying the Applicability of the Official Disability Guidelines

In addition to efforts to streamline the Treatment Guidelines, the Commission carefully studied the propriety of modifying the applicability of the *Official Disability Guidelines* pursuant to A.R.S. § 23-1062.03 and A.A.C. R20-5-1301(C). Under A.A.C. R20-5-1301(B), absent further action of the Commission, the *Official Disability Guidelines* only applied to the management of chronic pain and the use of opioids for all stages of pain management. Under R20-5-1301(C), however, the Commission was authorized to "modify or change the applicability of the guidelines" if the Commission determined that modification or changing the applicability of the guidelines would: (1) improve medical treatment for injured workers; (2) make treatment and claims processing more efficient and cost effective; and (3) the guidelines adequately cover the relevant body parts or conditions.

On June 29, 2017, the Commission directed its Medical Resource Office to conduct an investigation and study regarding the three modification criteria. Consistent with the procedural requirements of R20-5-1301(C), the Commission publicly posted study materials and provided an opportunity for public comment. The Commission conducted a public hearing on November 30, 2017.

On December 21, 2017, following an evaluation of the study materials and stakeholder feedback, the Commission determined (at a public Commission meeting) that modifying the applicability of the *Official Disability Guidelines* to cover all body parts and conditions would improve medical treatment for injured workers and would make treatment and claims processing more efficient and cost effective. In addition, based upon written reviews received from board-certified physicians in Arizona (representing various specialties), the Commission determined that the *Official Disability Guidelines* adequately cover all body parts and conditions. Based on these determinations, the Commission took formal action to modify the applicability of the *Official Disability Guidelines* to all body parts and conditions, effective October 1, 2018.

The subject rulemaking described herein formalizes the Commission's actions, outlined above, and includes the following:

- Amends R20-5-106 ("Commission Forms") to describe and mandate the use of the Medical Treatment Preauthorization Form.
- Amends R20-5-1301 ("Adoption and Applicability of the Article") and R20-5-1311 ("Administrative Review by Commission") to reflect the Commission's December 21, 2017 decision to modify the applicability of the *Official Disability Guidelines* to apply to all body parts and conditions and to state applicable effective dates. (Note: This rulemaking is non-substantive, as the Commission already completed the substantive process for modifying the applicability of the *Official Disability Guidelines* under R20-5-1301(C).)
- Amends R20-5-1303 ("Provider Request for Preauthorization"); R20-5-1309 ("Payer Decision on Request for Preauthorization"); R20-5-1310 ("Payer Reconsideration on Request for Preauthorization"); and R20-5-1311 ("Administrative Review by Commission") to: (1) mandate the use of the Medical Treatment Preauthorization Form; (2) reduce the time period for a payer to respond to a request for preauthorization or reconsideration from ten business days to seven business days; (3) remove pre-existing requirements for a request for preauthorization, a decision on a request for preauthorization, a decision on a request for reconsideration, and a request for administrative review; and (4) provide that a payer's decision on a request for preauthorization or reconsideration may be provided to the injured worker's authorized representative.
- Amends R20-5-1309 ("Provider Decision on Request for Preauthorization") to require that a payer who receives a deficient request for preauthorization – either because it is incomplete or not submitted using the Medical Treatment Preauthorization Form – must, within seven business days of receiving and identifying the deficient request, either: (1) act on the deficient request by using the Medical Treatment Preauthorization Form; or (2) notify the provider making the request that a request for preauthorization must be submitted on the Medical Treatment Preauthorization Form.
- Various non-substantive amendments.

7. A reference to any study relevant to the rule that the agency reviewed and either relied on or did not rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

Modifying the Applicability of the *Official Disability Guidelines*

The subject rulemaking is merely intended to update Article 13 to reflect the formal action taken by the Commission on December 21, 2017, pursuant to A.A.C. R20-5-1301(C). Consequently, the Commission has not reviewed and is not relying upon any study in its evaluation of or justification for the subject rulemaking as it related to modifying the applicability to the *Official Disability Guidelines*.

As concerns the Commission's December 21, 2017 action, the Commission considered various study materials prior to completing the regulatory process for modifying the applicability of the *Official*

Disability Guidelines. The study materials considered by the Commission during the administrative process are available at <https://www.azica.gov/official-disability-guidelines-study-materials-and-public-comments>. The study materials are also available for inspection or reproduction at the Industrial Commission of Arizona, Medical Resource Office, 800 West Washington Street, Phoenix, Arizona 85007.

Streamlining the Treatment Guidelines' Authorization Process

The Commission has not reviewed and is not relying upon any study in its evaluation of or justification for the subject rulemaking relating to streamlining the Treatment Guidelines' authorization process.

8. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state:

Not applicable

9. A summary of the economic, small business, and consumer impact:

Modifying the Applicability of the Official Disability Guidelines

The amendments related to modification of the applicability of the *Official Disability Guidelines* are non-substantive, as the rulemaking is merely intended to update Article 13 to reflect the formal action previously taken by the Commission pursuant to A.A.C. R20-5-1301(C). Therefore, the subject rulemaking related to modification of the applicability of the *Official Disability Guidelines* creates no economic, small business, or consumer impact beyond that already created by Article 13 and the Commission's formal action taken on December 21, 2017.

Streamlining the Treatment Guidelines' Authorization Process

The Commission anticipates that the amendments related to streamlining the authorization process contained in Article 13 will have some impact on participants in the workers' compensation system. Participants include injured employees who receive medical treatment and/or services related to an industrial injury, medical providers who treat injured workers, and payers (insurance carriers, self-insured employers, and the Commission's Special Fund) who administer workers' compensation claims. Although participants in the workers' compensation system are already subject to the Treatment Guidelines, the subject rulemaking will:

- Mandate the use of the “Medical Treatment Preauthorization Form” when a medical provider seeks preauthorization for medical treatment or services;
- Reduce the time period for a payer to respond to a request for preauthorization or reconsideration from ten business days to seven business days; and
- Require a payer who receives an incomplete request for preauthorization or a request for preauthorization that is not submitted on the Medical Treatment Preauthorization Form to, within seven business days of receiving and identifying the deficient request, either: (1) act on the deficient request by using the Medical Treatment Preauthorization Form; or (2) notify

the provider making the request that a request for preauthorization must be submitted on the Medical Treatment Preauthorization Form.

The Commission anticipates that the amendments will streamline the authorization process, reduce delays in providing employees with reasonably-required medical treatment, improve the processing of workers' compensation claims, and reduce litigation time and costs.

10. A description of any changes between the proposed rulemaking, to include supplemental notices, and the final rulemaking:

All references in the amendments to "pre-authorization" or "Pre-Authorization" were changed to "preauthorization" or "Preauthorization." These changes are non-substantive and were made for consistency and because the term "preauthorization" is defined in the Treatment Guidelines. *See* A.A.C. R20-5-1302.

11. An agency's summary of the public or stakeholder comments made about the rulemaking and the agency response to the comments:

One written comment was submitted by Mark A. Kendall (Associate General Counsel) on behalf of CopperPoint Insurance Companies. Mr. Kendall expressed full support for the subject rulemaking, noting that it is responsive to stakeholder concerns and the product of a comprehensive review process by the Commission. He specifically noted that the subject rulemaking: (1) is reasonable, balanced, concise, and "efficient with regard to carrying out [statutory] mandates"; (2) will "make the authorization process easier and quicker for providers, payers, and the Commission"; (3) "should result in [a] speedier and more efficient process"; and (4) "is consistent with legislative intent."

One oral comment was made by Gale Vogler (Director) on behalf of CopperPoint Insurance Companies. Like Mr. Kendall, Ms. Vogler expressed full support for the subject rulemaking, noting that it "will make the authorization process easier for all involved parties" and "is consistent with legislative intent."

12. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

Not applicable

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

The subject rulemaking does not require issuance of a regulatory permit or license.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

Not applicable. The subject rulemaking does not implicate federal law.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

No analysis was submitted.

13. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rule:

None

14. Whether the rule was previously made, amended or repealed as an emergency rule. If so, cite the notice published in the *Register* as specified in R1-1-409(A). Also, the agency shall state where the text was changed between the emergency and the final rulemaking packages:

Not applicable

15. The full text of the rules follows:

ARTICLE 1. WORKERS' COMPENSATION PRACTICE AND PROCEDURE

R20-5-106. Commission Forms

- A. The following forms shall be used when applicable:
1. Employer's report of industrial injury (form 101) shall contain:
 - a. Employee, employer, and carrier identification;
 - b. Description of employment;
 - c. Description of accident and injury;
 - d. Description of medical treatment received by employee;
 - e. Employee's wage data;
 - f. Date, signature, and title of employer or the employer's representative; and
 - g. Statement doubting the validity of the claim, if the employer doubts the validity of the claim.
 2. The physician's portion of the worker's and physician's report of injury (form 102) shall contain:
 - a. Name and address of physician;
 - b. Information regarding preexisting conditions;
 - c. Information regarding the industrial injury, treatment, and prognosis;
 - d. Statement authorizing the attachment of a medical report that contains the information required in form 102; and
 - e. Physician's signature and date.
 3. Notice of supportive medical benefits (form 103) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Description of authorized medical benefits;
 - c. Date the notice is mailed;
 - d. Name and telephone number of the individual issuing the notice; and
 - e. Statement regarding reopening and appeal rights including filing requirements.
 4. Notice of claim status (form 104) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Status of the claim;
 - c. Date the notice is mailed;
 - d. Name and telephone number of the individual issuing the notice; and
 - e. Statement of a party's hearing and appeal rights including filing requirements.
 5. Notice of suspension of benefits (form 105) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Effective date of the suspension;
 - c. Reasons for the suspension;
 - d. Date the notice is mailed;
 - e. Name and telephone number of the individual issuing the notice; and

- f. Statement of a party's hearing and appeal rights including filing requirements.
6. Notice of permanent disability or death benefits (form 106) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Applicable statutory authority under which compensation is paid;
 - c. Disability and compensation information;
 - d. Date the notice is mailed;
 - e. Name and telephone number of the individual issuing the notice; and
 - f. Statement regarding hearing and appeal rights including filing requirements.
 7. Notice of permanent disability and request for determination of benefits (form 107) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Type of disability;
 - c. Applicable statutory authority for designated disability;
 - d. Designation of dependents where death is involved;
 - e. Designation of advanced payments and amount of the advance;
 - f. Date the notice is mailed; and
 - g. Name and telephone number of the individual issuing the notice.
 8. Carrier's recommended average monthly wage calculation (form 108) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history;
 - c. Designation of dependents; and
 - d. Carrier's calculations for the recommended average monthly wage and the basis for the calculation.
 9. Notice of permanent compensation payment plan (form 111) shall contain:
 - a. Employee, employer, and carrier identification;
 - b. Amount of permanent compensation and description of payment plan;
 - c. Name of the responsible entity contracted by the carrier to administer the payment plan;
 - d. Statement that the carrier remains the responsible party for payment;
 - e. Statement regarding supportive care and reopening rights;
 - f. Date the notice is mailed; and
 - g. Name and telephone number of the individual issuing the notice.
 10. Report of insurance coverage (form 0006) shall contain:
 - a. Name and address of the carrier;
 - b. Legal name of entity that the carrier insures;
 - c. All other insured names or subsidiary entities under which the carrier's insured does business in Arizona;
 - d. Address of all insured entities with insurance policy information for each address; and
 - e. Employer Identification Number (EIN), Taxpayer Identification Number (TIN), or Federal

Identification Number (FIN) assigned to each insured person or entity.

11. Report of significant work exposure to bodily fluids or other infectious material shall contain:
 - a. The requirements set forth in A.R.S. §§ 23-1043.02(B), 23-1043.03(B), and 23-1043.04(B);
 - b. Employee identification,
 - c. Employer identification,
 - d. Source of exposure person identification (if known),
 - e. Details of the exposure including:
 - i. Date of exposure,
 - ii. Time of exposure,
 - iii. Place of exposure,
 - iv. How exposure occurred,
 - v. Type of bodily fluid or fluids,
 - vi. Source of bodily fluid or fluids,
 - vii. Part or parts of body exposed to bodily fluid or fluids,
 - viii. Presence of break or rupture in skin or mucous membrane, and
 - ix. Witnesses (if known), and
 - f. Dated signature of employee or the employee's authorized representative.

12. The medical treatment preauthorization form (MRO-1.1) shall contain five sections, as follows:

- a. Section I (Provider Request for Preauthorization) shall contain:
 - i. Injured employee identification, including name, date of injury, date of birth, and payer claim number (if known);
 - ii. Provider identification, including name, phone number, provider medical specialty, preferred method of contact, and contact information;
 - iii. Payer identification, including name and contact information (i.e., mailing address, fax number, or e-mail address);
 - iv. Information regarding requested medical treatment and/or services, including:
 1. Applicable diagnosis and/or ICD codes;
 2. A detailed statement of the treatment or services requested;
 3. Applicable Current Procedural Terminology (CPT) codes and/or National Drug Codes (NDC);
 4. Type of request (i.e., routine or urgent); and
 5. An indication as to whether the provider has attached documentation to support the medical necessity and appropriateness of the requested treatment and/or services; and
 - v. Dated signature or electronic signature of provider or provider's authorized representative.
- b. Section II (Payer Decision on Request for Preauthorization) shall contain:
 - i. Payer's preferred method of contact and contact information;

- ii. Date request for preauthorization is received;
 - iii. The Commission claim number;
 - iv. The payer's decision (i.e., approved, partial denial, denied, request for preauthorization incomplete, or IME requested);
 - v. An indication as to whether the payer has attached a statement of what treatment and/or services have been authorized, including, if applicable, a partial authorization, and, if the request for preauthorization is denied, in whole or in part, a statement of explanation that includes the medical reason supporting the payer's decision; and
 - vi. Dated signature or electronic signature of payer or payer's authorized representative.
- c. Section III (Provider or Employee Request for Reconsideration of Payer Decision) shall contain:
- i. An indication as to whether the provider or injured employee has attached a statement of the specific reasons and justifications to support the request for reconsideration;
 - ii. An indication as to whether the provider or injured employee has attached documentation to support the medical necessity and appropriateness of the requested treatment and/or services, if not previously provided; and
 - iii. Dated signature or electronic signature of provider, provider's authorized representative, injured employee, or injured employee's authorized representative.
- d. Section IV (Payer Decision on Request for Reconsideration) shall contain:
- i. Date request for reconsideration received;
 - ii. The payer's decision (e.g., approved, partial denial, denied, or IME requested);
 - iii. An indication as to whether the payer has attached a statement of what has been authorized, including if applicable, a partial authorization, and, if the request for preauthorization is denied, in whole or in part, a statement of explanation that includes the medical reason supporting the payer's decision; and
 - iv. Dated signature or electronic signature of payer or payer's authorized representative.
- e. Section V (Provider or Employee Request for Administrative Peer Review) shall contain:
- i. An indication of the basis for the request for administrative peer review (e.g., payer non-response, denial (in whole or in part) of requested treatment or services, the payer's decision on the request for preauthorization denied treatment or services that are subject to R20-5-1304(B));
 - ii. An indication as to whether the provider or injured employee has attached copies of relevant medical records and, if applicable, documentation related to the payer's non-response;
 - iii. An indication as to whether the provider or injured employee has attached all documentation and statements previously attached to Sections I-IV; and
 - iv. Dated signature or electronic signature of provider, provider's authorized representative, injured employee, or injured employee's authorized representative.

B. The following forms may be used:

1. The workers' portion of the worker's and physician's report of injury (form 102) requests:
 - a. Employee, employer, insurance carrier, and physician identification;
 - b. Description of the accident, including date of injury; and
 - c. Date and signature of the employee or the employee's authorized representative.
2. Worker's report of injury (form 407) requests:
 - a. Employee and employer identification,
 - b. Job title,
 - c. Employment description,
 - d. Employee's wage data,
 - e. Date of injury,
 - f. Accident and injury descriptions,
 - g. Medical treatment information,
 - h. Information concerning prior injuries of the employee,
 - i. Disability income, and
 - j. Date and signature of the employee or the employee's authorized representative.
3. Worker's annual report of income (form 110-A) requests:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history for the preceding 12 months;
 - c. Date and signature of the employee or the employee's authorized representative attesting to the truthfulness of the employment and wage information; and
 - d. Statement that failure to submit an annual report of income may result in a suspension of benefits by the carrier or self-insured employer.
4. Notice of intent to suspend (form 110-B) requests:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history for the preceding 12 months;
 - c. Date and signature of the employee or the employee's authorized representative attesting to the truthfulness of the employment and wage information;
 - d. Statement that failure to submit an annual report within 30 days of the date of the notice shall result in a suspension of benefits by the carrier or self-insured employer.
5. Request for hearing requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Identification of the award, notice, order, or determination protested and reason(s) for the protest;
 - d. Estimated length of time for hearing and city or town in which hearing is requested;
 - e. Name and address of any witness for whom a subpoena is requested; and
 - f. Date and signature of party or the party's authorized representative.

6. Petition to reopen requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Identification or description of the new, additional, or previously undiscovered temporary or permanent disability or medical condition justifying the reopening of the claim; and
 - d. Employee's medical and employment history.
7. Petition for rearrangement or readjustment of compensation requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Income and employment history;
 - d. Medical history; and
 - e. Statement of the basis for the increase or decrease in earning capacity.
8. Claim for dependent's benefits-fatality form requests:
 - a. Identification of dependent filing claim;
 - b. Identification of deceased;
 - c. Date of death;
 - d. Date of injury, if different than date of death;
 - e. Name and address of employer at time of deceased's death;
 - f. Statement of cause of death;
 - g. Names and addresses of health care providers rendering treatment to deceased in two years before death;
 - h. Conditions treated by health care providers in the two years before deceased's death;
 - i. If claim is for spousal benefits, the form requests:
 - i. Name, address, and date of birth of spouse;
 - ii. Copy of marriage certificate;
 - iii. Date and place of marriage to deceased;
 - iv. History of prior marriages of deceased and deceased's spouse, including copies of divorce decrees; and
 - v. Statement of living arrangements at time of deceased's death, including reason for living apart at time of death, if applicable;
 - j. If claim is for a dependent child, the form requests:
 - i. Name, date of birth, and address of child at time of deceased's death;
 - ii. List of children in care and custody of current spouse; and
 - iii. Statement of whether unborn child is expected and date expected;
 - k. If claim is for dependent other than a child, the form requests:
 - i. Name and address of other dependent,

- ii. Relationship of other dependent to deceased, and
 - iii. Statement of the nature and extent of dependency; and
 - l. Date, telephone number, and signature of dependent or authorized representative of dependent.
9. Request to leave the state form requests:
- a. Employee, insurance carrier, and claim identification;
 - b. Reason for requesting to leave Arizona;
 - c. Dates leaving and returning to Arizona;
 - d. Out-of-state address;
 - e. Name and telephone number of attending physician; and
 - f. Date and signature of the employee or the employee's authorized representative.
10. Request to change doctors form requests:
- a. Employee, insurance carrier, and claim identification;
 - b. Reason for requesting change of doctor;
 - c. Name and phone number of claimant's current doctor;
 - d. Name and phone number of doctor claimant requests to change to; and
 - e. Date and signature of the employee or the employee's authorized representative.
11. Complaint of bad faith and unfair claim processing practices requests:
- a. Employee, employer, and insurance carrier identification;
 - b. Description of the alleged bad faith or unfair claim processing practices;
 - c. Date of the complaint; and
 - d. Name, address, and telephone number of the person signing the complaint.
12. Certification of employer's drug and alcohol testing policy requests:
- a. Employer's certification as described under A.R.S. § 23-1021(F),
 - b. Name and federal identification number of the employer, and
 - c. Name of all subsidiaries and locations of the employer.
- C. Optional use of a form described in subsection (B) does not affect any requirement under the Act or this Article.
- D. Forms or format for the forms described in this Section are available from the Commission.
- E. Forms prescribed under this Section shall not be changed, amended, or otherwise altered without the prior written approval of the Commission.

ARTICLE 13. TREATMENT GUIDELINES

R20-5-1301. Adoption and Applicability of the Article

- A. The Industrial Commission of Arizona (Commission) has adopted the Work Loss Data Institute's *Official Disability Guidelines – Treatment in Workers Compensation* (ODG) as the standard reference for evidence-based medicine used in treating injured workers within the context of Arizona's workers' compensation system. By adopting and referencing the most recent edition (at the time of treatment), and

continuously updated Official Disability Guidelines, the Commission can ensure the latest available medical evidence is used in making medical treatment decisions for injured workers.

- B. Until further action of the Commission, the guidelines shall apply to ~~the management of chronic pain and the use of opioids for all stages of pain management~~. For purposes of this process, ~~chronic pain shall be defined by the guidelines~~ all body parts and conditions.
- C. The Commission may modify or change the applicability of the guidelines as described in subsection (B) if the Commission determines that modification or changing the applicability of the guidelines will: 1) improve medical treatment for injured workers, 2) make treatment and claims processing more efficient and cost effective, and 3) if the Commission's modification expands the applicability of the guidelines, the guidelines adequately cover the relevant body parts or conditions. Before taking action to modify or change the applicability of the guidelines, the Commission shall provide an opportunity for public comment and hold a public hearing. A decision of the Commission under this subsection shall be made by a majority vote of a quorum of Commission members present at a public meeting.
- D. Action taken by the Commission to modify or change the applicability of the guidelines under subsection (C) shall be published in the minutes of the Commission meeting when such action was taken. The minutes of this action shall be published on the Commission's website and shall be available from the Commission upon request.
- E. The guidelines shall apply prospectively. Recommendations provided in the guidelines related to the management of chronic pain and the use of opioids for all stages of pain management shall apply to medical treatment or services occurring on or after October 1, 2016 ~~the effective date of this Article~~. For purposes of this process, chronic pain shall be defined by the guidelines. Recommendations provided in the guidelines related to all other body parts and conditions shall apply to medical treatment or services occurring on or after October 1, 2018.
- F. This Article applies to all claims filed with the Commission.
- G. This Article only applies to medical treatment and services for body parts and conditions that have been accepted as compensable.
- H. The guidelines are to be used as a tool to support clinical decision making and quality health care delivery to injured employees. The guidelines set forth care that is generally considered reasonable and are presumed correct if the guidelines provide recommendations related to the requested treatment or service. This is a rebuttable presumption and reasonable medical care may include deviations from the guidelines. To support a request to deviate from the guidelines, the provider must produce documentation and justification that demonstrates by a preponderance of credible medical evidence a medical basis for departing from the guidelines. Credible medical evidence may include clinical expertise and judgment.
- I. The Commission shall provide administrative review and oversight of this Article.

R20-5-1302. Definitions

In this Article and R20-5-106(A)(12), unless the context otherwise requires:

"Act" means the Arizona Workers' Compensation Act, A.R.S. Title 23, ~~Ch. Chapter 6, Articles 1 through 11.~~

"Active Practice" means performing patient care for a minimum of eight hours per week in one of the five preceding years.

"Administrative Law Judge" or "ALJ" means a hearing officer appointed under A.R.S. § 23-108.02.

"Administrative Review" means a process that includes a peer review for preauthorization of a request for medical treatment or services conducted pursuant to R20-5-1311~~that has been denied or partially denied by a payer.~~ The administrative review process will be managed by the Medical Resource Office (MRO) at the Industrial Commission of Arizona.

"American Board of Medical Specialties" means the organization that develops a uniform system for specialty boards to administer examinations for certification of physicians within specific medicine specialties.

"American Osteopathic Association" means the organization that develops a uniform system for specialty boards to administer examinations for certification of osteopathic physicians within specific osteopathic medicine specialties.

"Applicability" means the body parts and medical conditions that are covered under this Article and authorized by the Commission under R20-5-1301(B) and (C).

"Claim" means the workers' compensation claim filed by the injured employee under the Act.

"Contractor" means an independent peer review organization accredited by URAC.

"Fast Track ALJ Dispute Resolution Program" or "fast track process" means the voluntary dispute resolution process set forth in R20-5-1312(B).

"International Classification of Diseases Code" or "ICD Code" means a set of medical diagnostic codes that creates a universal language for reporting diseases and injury.

"International Classification of Diseases" or "ICD" means an official list of categories of diseases, physical and mental, that is issued and maintained by the World Health Organization.

"IME" means an independent medical examination scheduled under R20-5-114.

"Injured Employee" means a person defined in A.R.S. § 23-901 whose claim has been accepted for workers' compensation benefits.

"Medical File Review Opinions" means a formal examination of patient data and medical records for the purpose of determining the need for medical treatment, services or both.

"Payer" means an insurance carrier defined under A.R.S. § 23-901, a self-insured employer defined in R20-5-102, a third-party administrator, and the Special Fund of the Industrial Commission of Arizona.

"Peer Review" means an independent medical review conducted by an individual meeting the requirements of R20-5-1311(I).

"Preauthorization" means at the written request prescribed by R20-5-1303 from a provider to a payer requesting approval to provide medical treatment or services to an injured employee.

"Provider" means a physician as defined in R20-5-102.

"Reconsideration" means a written request to the payer or identified review organization by an injured employee or medical provider to reconsider a previous payer decision to deny medical treatment or services and that identifies the specific justification to support the request.

"Third-Party Administrator" or "TPA" means an organization that processes insurance or employee benefit claims for a separate entity.

"Treatment Guidelines" or "guidelines" means medical treatment guidelines that are used as a tool to support clinical decision making and quality health care delivery to injured employees.

"URAC" refers to URAC, a non-profit organization formerly known as the Utilization Review Accreditation Commission.

R20-5-1303. Provider Request for Preauthorization

- A. No preauthorization is required under the Act to ensure payment for reasonably required medical treatment or services. While preauthorization is not required under the Act, a provider may seek preauthorization as provided in this subsection.
- B. A provider shall submit a request for preauthorization in writing using Section I (Provider Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12). A provider shall attach documentation to a request for preauthorization that supports the medical necessity and appropriateness of the treatment or services requested, such as office notes and diagnostic reports, which shall include the following information:
1. Patient information (including date of injury, date of birth, and payer claim number);
 2. Diagnosis and ICD code;
 3. Date of request;
 4. Type of request – Initial, Routine, Urgent, or Life Threatening;
 5. A statement of the treatment or services requested. Where appropriate, information about quantity, strength, duration and frequency of the treatment or services should be included. Use of the applicable codes should also be included and will facilitate the process; and
 6. Documentation, if not already provided, that supports the medical necessity and appropriateness of the treatment or services requested, such as office notes and diagnostic reports.
- C. A provider may submit the request for preauthorization by mail, electronically or by fax.

R20-5-1309. Payer Decision on Request for Preauthorization

- A. Except as provided in ~~subsection~~subsections (C) or (D), a payer shall communicate to the provider its decision on a request for preauthorization no later than ~~107~~ business days after the request is received. ~~This~~The decision shall be issued in writing using Section II (Payer Decision on Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12). A payer shall attach to the decision a statement of what has been authorized, including, if applicable, a partial authorization, and, if the request for preauthorization is denied, in whole or in part, a statement of explanation that includes the medical reason supporting the payer's decision~~comply with the requirements set forth in subsection (H). For~~

- purposes of this Section, the ~~107~~ business days begin to run the day after the payer receives the request.
- B. If a payer fails to communicate to a provider its decision on request for preauthorization within ~~107~~ business days, then the payer's failure to take action is deemed a "no response" and the provider or injured employee may submit a request for administrative review directly to the Commission as provided in R20-5-1311.
- C. If a payer receives a request for preauthorization not submitted on Section I (Provider Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12) or an incomplete request for preauthorization using Section I (Provider Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12) that fails to meet the requirements of R20-5-1303, the payer ~~may~~shall, in its discretion:
1. No later than 7 business days after the request is received and identified, Actact on the incomplete request for preauthorization pursuant to subsection (A); or
 2. No later than ~~107~~ business days after the request is received and identified, notify the provider in writing that the request for preauthorization is incomplete or, if applicable, that a request for preauthorization must be submitted on Section I (Provider Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12).
- D. If, no later than ~~107~~ business days after a request for preauthorization has been received, a payer provides written notice to the provider that an IME has been requested under R20-5-114 using Section II (Payer Decision on Request for Preauthorization) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12), then the payer's decision on a request for preauthorization shall be issued no later than ~~107~~ business days after the final IME report has been received by the payer. The payer shall provide a copy of the final IME report to the provider upon receipt of the IME report.
- E. Unless the payer decision was supported by an IME or otherwise falls within subsection R20-5-1304(B), an injured employee or provider may seek reconsideration of a payer decision by submitting a written request to the payer (or review organization identified by the payer) using Section III (Provider or Employee Request for Reconsideration) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12). ~~A provider shall attach to a request for reconsideration a statement of~~ that states the specific reasons and justifications to support the request. If not previously provided, the injured employee or provider shall ~~include~~attach supporting medical documentation with ~~their~~the ~~written~~ request for reconsideration.
- F. An injured employee may seek review of a payer decision that is supported by an IME by requesting an investigation under A.R.S. § 23-1061(J).
- G. Unless the decision was supported by an IME, an injured employee or provider may seek review of a payer decision issued under R20-5-1304(B) by requesting administrative review by the Commission as provided in R20-5-1311.
- H. ~~A payer shall include the following information in its written decision to approve or deny, in whole or in part, the request for preauthorization to provide treatment or services:~~
1. ~~The date on which the request for preauthorization was received;~~

2. Patient information, including date of injury, date of birth, payer claim number and Commission claim number;
3. The date on which an IME was completed, if applicable;
4. A statement of what has been authorized, including if applicable, a partial authorization;
5. A statement of explanation if the request for preauthorization is denied, in whole or in part, which should include the medical reason supporting the payer's decision;
6. A statement of the process under which a provider or injured employee may request reconsideration or review of the payer's denial, in whole or in part, of a request for preauthorization, which shall include the following information;

a. For a decision that is issued without obtaining an IME that is not subject to R20-5-1304(B):

"If you wish to request reconsideration of the decision regarding your request for preauthorization to provide treatment or services, you must send a written request for reconsideration to:

Name of Payer or Review Organization Identified by

Payer Commission Address

Phone

Fax

E-mail

You must include the specific reason and justification to support your request. Please include additional supporting medical documentation if not previously provided."

b. For a decision that is supported by an IME:

"If you wish review of the decision regarding your request for preauthorization to provide treatment or services, then the injured employee is required to file a request for investigation under A.R.S. § 23-1061(J)."

c. For a decision that is issued without obtaining an IME that is subject to R20-5-1304(B):

"If you disagree with this decision and wish to request review by the Industrial Commission of Arizona, then you may submit a request for administrative review under R20-5-1311 to:

Industrial Commission of Arizona

Attn: Medical Resource Office

Commission Address

Commission Telephone Number

The provider shall file this request promptly and include the following information: patient information, including name, address, payer claim number, Commission claim number, and date of injury; diagnosis or ICD code; employer, insurance carrier or TPA information; provider information; information pertaining to request for treatment, including the justification for treatment; applicable treatment guideline or guidelines; denial of treatment by payer; copies of relevant medical information or records; and whether the request for medical treatment or services

~~involves a request for urgent care or a life-threatening condition."~~

~~F.H.~~ A payer shall provide a copy of its written decision to deny treatment or services to the injured employee or, if represented, to the injured employee's authorized representative.

R20-5-1310. Payer Reconsideration on Request for Preauthorization

- A. Except as provided in subsection (C), a payer shall communicate to the provider its decision on a request for reconsideration no later than ~~107~~ business days after the request is received. This decision shall be issued in writing using Section IV (Payer Decision on Request for Reconsideration) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12). A payer shall attach to the decision a statement of what has been authorized, including, if applicable, a partial authorization, and, if the request for preauthorization is denied, in whole or in part, a statement of explanation that includes the medical reason supporting the payer's decision ~~comply with the requirements set forth in subsection (E).~~ For purposes of this subsection, the ~~107~~ business days begin to run the day after the payer receives the request for reconsideration.
- B. If a payer fails to respond to a request for reconsideration within ~~107~~ business days, the provider or injured employee may submit a request for administrative review directly to the Commission as provided in R20-5-1311.
- C. If, no later than ~~107~~ business days after a request for reconsideration has been received, a payer provides written notice to the provider that an IME has been requested under R20-5-114 using Section IV (Payer Decision on Request for Reconsideration) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12), then the payer's decision on a request for reconsideration shall be issued no later than ~~107~~ business days after the final IME report has been received by the payer. The payer shall provide a copy of the final IME report to the provider upon receipt of the report.
- D. Commission Review of Payer Reconsideration Decision:
1. An injured employee or provider may seek review of a payer reconsideration decision by requesting an administrative review by the Commission as provided in R20-5-1311 unless the payer decision was supported by an IME.
 2. An injured employee may seek review of a payer reconsideration decision that is supported by an IME by requesting an investigation under A.R.S. § 23-1061(J).
- E. ~~A payer shall include the following information in its written decision to approve or deny, in whole or in part, a request for reconsideration of a denial of preauthorization:~~
- ~~1. The date on which the request for reconsideration was received;~~
 - ~~2. Patient information, including date of injury, date of birth, payer claim number and Commission claim number;~~
 - ~~3. The date on which an IME was completed, if applicable;~~
 - ~~4. A statement of what has been authorized including, if applicable, a partial authorization;~~
 - ~~5. A statement of explanation if the request for treatment is denied, in whole or in part; and~~

6. A statement of the process under which a provider or injured employee may request Commission review of the payer's denial, in whole or in part, of a request for preauthorization, which shall include the following information:

a. For a reconsideration decision that is issued without obtaining an IME:

"If you disagree with this reconsideration decision and wish to request review by the Commission, then you may submit a request for administrative review under R20-5-1311 to:

Industrial Commission of Arizona

Attn: Medical Resource Office

Commission Address

Commission Telephone Number:

The provider shall file this request promptly and include the following information: patient information, including name, address, payer claim number, Commission claim number, and date of injury; diagnosis or ICD code; employer, insurance carrier or TPA information; provider information; information pertaining to request for treatment, including the justification for treatment; applicable treatment guideline and denial of treatment by payer; copies of relevant medical information or records; copies of relevant documentation related to the payer reconsideration decision; and whether the request for medical treatment or services involves a request for urgent care or a life-threatening condition."

b. For reconsideration of a decision that is supported by an IME:

"If you disagree with this reconsideration decision and wish review by the Commission, then the injured employee is required to file a request for investigation under A.R.S. § 23-1061(J)."

~~F.E.~~ A payer shall provide a copy of its written reconsideration decision to deny treatment or services to the injured employee or, if represented, to the injured employee's authorized representative.

R20-5-1311. Administrative Review by Commission

A. ~~Until Absent~~ further action of the Commission under R20-5-1301(C), administrative review under this Article is ~~limited to~~ available for requests for medical treatment or services related to ~~the management of chronic pain and the use of opioids for all stages of pain management~~ all body parts and conditions.

B. A request for administrative review shall be in writing using Section V (Provider or Employee Request for Administrative Peer Review) of the Medical Treatment Preauthorization Form approved by the Commission under R20-5-106(A)(12). A request for administrative review must attach copies of relevant medical information or records and copies of all documentation related to the payer's decision or non-response. A request for administrative review must be ~~and~~ submitted to the Commission by mail, electronically or by fax. The request shall include the following information:

1. Identifying information of the injured employee and claim, including the injured employee's name, address, commission claim number, and date of injury;

2. Diagnosis and ICD code;

- ~~3. Identifying information of the employer, insurance carrier or TPA;~~
 - ~~4. Identifying information of the provider;~~
 - ~~5. Information pertaining to request for treatment, such as the justification for treatment, applicable treatment guideline and, if applicable, the payer's denial of treatment;~~
 - ~~6. Copies of relevant medical information or records;~~
 - ~~7. Copies of documentation related to the payer's decision or non-response; and~~
 - ~~8. Whether the request for medical treatment or services involves a request for urgent care or a life-threatening condition.~~
- C. Upon receipt of a request for administrative review, the Commission shall determine whether the administrative review is available under this Article.
 1. If administrative review is not available, then no later than three business days after receiving a request for administrative review, the Commission shall send notice to the injured employee and payer that administrative review is not available.
 2. If administrative review is available, then no later than three business days after receiving the request, the Commission shall send notice to the payer that a request for administrative review has been received and provide information on how to participate in the process.
 - D. The administrative review conducted under this Section shall apply the guidelines as described in this Article and include a peer review performed by an individual meeting the requirements of subsection (I). The peer review shall consist of a records review and, when possible as described in subsection (I)(5), a conversation between the provider and individual conducting the peer review.
 - E. The Commission may enter into an agreement with one or more contractors, who shall be URAC accredited, to provide the review described in subsection (D).
 - F. The payer shall pay for the costs of the peer review conducted by the contractor.
 - G. To assist in its review, the Commission or its contractor may request or receive additional information and documentation from the provider, injured employee or payer, who shall cooperate and provide the Commission or its contractor with any necessary medical information, including information pertaining to the payer's decision.
 - H. Before the Commission or its contractor issues a determination denying the request for treatment or services, a good faith effort shall be made to conduct a peer review with the provider requesting authorization to perform the treatment or services.
 - I. The individual conducting the peer review shall:
 1. Hold an active, unrestricted license or certification to practice medicine or a health profession and be involved in the active practice of medicine or a health profession during the five preceding years. For purposes of this subsection, "active practice" means performing patient care for a minimum of eight hours per week in one of the five preceding years;
 2. Be licensed in Arizona, unless the Commission or its contractor is unable to find such an individual, in

which case the peer review may be conducted by an individual who is licensed in another state of the United States and who meets the other requirements of this subsection;

3. For a review of a request from an allopathic or osteopathic physician, nurse practitioner, physician assistant, or other mid-level provider, hold a current certification from the American Board of Medical Specialties or the American Osteopathic Association in the area or areas appropriate to the condition, procedure or treatment under review;

4. Be in the same profession and the same specialty or subspecialty as typically performs or prescribes the medical procedure or treatment requested; and

5. Make a good faith effort to contact the provider requesting the preauthorization. This good faith effort shall include making telephone contact during the provider's normal business hours and offering to schedule the peer review at a time convenient for the provider.

J. A provider may bill the payer for time spent participating in a peer review under this Section.

K. The Commission or its contractor shall issue a written determination of its administrative review that contains the name and title of the person that performed the administrative review, and includes the following information:

1. Whether the request for treatment or services is authorized or denied, in whole or in part;
2. The information reviewed;
3. The principle reason for the decision; and
4. The clinical basis and rationale for the decision.

L. An interested party dissatisfied with the administrative review determination may request that the dispute be referred to the Commission's Administrative Law Judge Division for hearing. This request for hearing shall:

1. Be in writing;
2. Filed no later than 10 business days after the administrative review determination is issued; and
3. State whether the party requests to participate in the Fast Track ALJ Dispute Resolution Program by stipulation, or declines to participate in the Fast Track ALJ Dispute Resolution Program.

M. If a timely request for hearing is filed, the administrative review determination is deemed null and void and shall serve no evidentiary purpose.

N. The information provided by the parties under this Section and the determination issued by the Commission shall become a part of the Commission claims file for the injured employee.

Subject: CopperPoint's written comments regarding Proposed Rulemaking (Streamlining Authorization Process/Expansion of Applicability of ODG)
Date: Wednesday, April 04, 2018 2:51:04 PM
Attachments: [image001.png](#)

The following email is being sent on behalf of Mark Kendall:

Mr. Porter,

Copperpoint Mutual Insurance Company ("Copperpoint") appreciates the opportunity to provide public comments on proposed rulemaking related to 1) streamlining the treatment guideline's authorization process, and 2) expanding the applicability of the Official Disability Guidelines ("ODG") to all body parts and conditions. Copperpoint supports the policy considerations undergirding these proposed rules and the proposed rulemaking intended to provide regulatory structure to these changes.

Rulemaking aimed at streamlining the process for authorizing treatment is both responsive to stakeholder concerns regarding this process and is consistent with Section 5 of SB 1332 passed by the Arizona Legislature in 2017. Upon passage of SB 1332, the Commission engaged in a comprehensive review process that included analysis of existing procedures and recommendations for streamlining these processes. During this review, stakeholders were given the opportunity to offer suggestions and comments as to how to best streamline the authorization process. This review culminated in a public meeting in December of 2017, wherein the Commission adopted certain suggestions for improving this process.

On the merits, these measures are both reasonable and balanced. Mandating the use of a standardized Medical Treatment Pre-Authorization Form is reasonably anticipated to make the authorization process easier and quicker for providers, payers, and the Commission. It will address concerns related to incomplete information and will improve payers' ability to identify requests for treatment that might be delivered in less conspicuous documentation (medical reports, etc.). Correspondingly, mandated use of the form justifies a diminution in the number of days a payer has to take action on a request for treatment (10 business days to 7 business days). Taken together, these provisions complement one another and should result in a speedier and more efficient process.

CopperPoint similarly supports rulemaking expanding applicability of the ODG to all conditions and body parts. This rulemaking is consistent with the legislative intent of A.R.S. § 23-1062.03 (passed in 2012) directing use of evidence based treatment guidelines in workers' compensation. This expansion follows an extended trial period wherein the ODG was applicable only to treatment of chronic pain and the use of opioids to treat pain. This trial period was appropriate in order to allow all interested parties to become familiar with the

ODG. However, it is time to move forward with expansion of the guidelines. The proposed rulemaking is both concise and clear in effectuating this change. Further, it should be noted that the delayed implementation to October 1, 2018 should give all interested parties additional time to adjust to these changes.

CopperPoint supports the rulemaking proposed to help implement both the streamlining of the authorization process and the expansion of applicability of the ODG. This rulemaking is occurring as part of an ongoing process that has been characterized by ample opportunity for stakeholder input. Further, the proposed rules themselves are both appropriate and efficient with respect to carrying out these mandates. CopperPoint appreciates being included in the ongoing stakeholder process.

Thank you,

Mark A. Kendall

Associate General Counsel

20
21

My name is Jason Porter. I am the Chief Legal Counsel for the Industrial Commission, and with me is Jackie Kurth, the Manager of the Medical Resource Office. The Proposed Rulemaking seeks to formalize Commission actions that were taken during Calendar Year 2017.

09:02:59

22
23
24
25

We now welcome you to present your oral comments regarding the Proposed Rulemaking. Those wishing to speak may do so by filling out a speaker slip, which are also available just outside the door. I will call each speaker,

1 who will have approximately five minutes to speak, although
2 we do have few numbers, so if you would like to take more
3 time than that, you are certainly welcome to. I do have one
4 speaker slip, so if anyone else would like to speak, you can
5 bring up a speaker slip.

6 Our first speaker will be Gale Vogler, Director at
7 Copperpoint Insurance Company.

09:03:32

8 MR. VOGLER: Good morning, and thanks for giving us
9 the opportunity to speak. Copperpoint Mutual Insurance
10 Company appreciates the opportunity to provide public
11 comments on the Proposed Rulemaking related to streamlining
12 the Treatment Guidelines Authorization Process as well as
13 expanding the applicability of ODG to all body parts and
14 conditions.

09:03:55

15 Copperpoint supports the proposed rules and
16 rulemaking intended to provide regulatory structure.
17 Mandating the standardized treatment preauthorization forms
18 is reasonable, and we anticipate that it will make the
19 authorization process easier for all involved parties. We
20 support the reduction in response time from 10 days to 7 days
21 in conjunction with the use of the mandated form.

09:04:27

22 Copperpoint also supports the expansion of ODG to
23 all conditions and body parts. This rulemaking is consistent
24 with legislative intent passed back in 2012. The expansion
25 of ODG follows an extended trial period when ODG was applied

1 to only chronic pain and opioid use. The trial period has
2 allowed, in our opinion, all parties ample time to become
3 familiar with that process, and in closing, we support the
4 process.

5 MR. PORTER: Thank you very much for your comments.

09:05:00

6 With that, I have no other speaker slips. If anyone
7 else would like to speak, you are welcome to fill out a
8 speaker slip. If there is no one else, we are going to wait
9 approximately 10 to 15 minutes just to see if anyone else
10 decides to attend the meeting.

11 (Off the record.)

09:17:04

12 MR. PORTER: Do we have anyone else that would like
13 to comment?

14 All right. Well, then this will conclude the oral
15 proceeding regarding the Industrial Commission's Notice of
16 Proposed Rulemaking published in the Arizona Register on
17 March 16, 2018.

18 As a reminder for those present, although the oral
19 proceeding has concluded, written comments on the Proposed
20 Rulemaking will be accepted through the close of business
21 today. Thank you very much.

22 (WHEREUPON, the proceedings concluded at
23 9:17 a.m.)

CR No. 50534

ECONOMIC, SMALL BUSINESS, AND CONSUMER IMPACT STATEMENT

TITLE 20. COMMERCE, FINANCIAL INSTITUTIONS, AND INSURANCE

CHAPTER 5. INDUSTRIAL COMMISSION OF ARIZONA

**ARTICLE 1. WORKERS' COMPENSATION PRACTICE AND
PROCEDURE; ARTICLE 13. TREATMENT GUIDELINES**

1. Identification of the proposed rulemaking:

In 2012, the Arizona Legislature directed the Industrial Commission of Arizona (the "Commission") to "develop and implement a process for the use of evidence-based treatment guidelines, where appropriate, to treat injured workers." See A.R.S. § 23-1062.03. With significant stakeholder input, the Commission promulgated twelve rules, published in Title 20, Chapter 5, Article 13 of the Arizona Administrative Code ("Article 13" or the "Treatment Guidelines"). Among other things, the Treatment Guidelines: (1) prescribe the use of evidence-based treatment guidelines as a tool to support clinical decision making and quality health care delivery to injured workers within Arizona's workers' compensation system; (2) adopted Work Loss Data Institute's *Official Disability Guidelines – Treatment in Workers Compensation* (the "*Official Disability Guidelines*") as the standard reference for evidence-based medicine; (3) until further action of the Commission, limited the applicability of the *Official Disability Guidelines* to the management of chronic pain and the use of opioids for all stages of pain management; (4) outlined an administrative process for the Commission to modify the applicability of the *Official Disability Guidelines*; (5) outlined a noncompulsory process for a medical provider or injured worker to seek preauthorization from a payer for medical services or treatment; (6) established an administrative review process to help resolve disputes between medical providers, injured workers, and payers; and (7) outlined procedures for bringing unresolved disputes to the Commission for administrative hearing.

Streamlining the Treatment Guidelines' Authorization Process

In 2017, the Arizona Legislature (in Laws 2017, Ch. 287, § 5) directed the Commission to "review and determine a process for streamlining the authorization process for treatment that is within the evidence-based treatment guidelines." The Legislature required the Commission to complete the review process on or before December 31, 2017.

Consequently, on June 29, 2017, the Commission directed its Medical Resource Office to: (1) conduct a review of the existing authorization process under the Treatment Guidelines; and (2) make a recommendation to the Commission regarding “streamlining the authorization process for treatment that is within the evidence-based treatment guidelines.” Stakeholders were provided opportunities to offer suggestions and comments regarding streamlining the authorization process, including during a public hearing conducted on August 17, 2017. At its December 14, 2017 public meeting, the Commission completed its review of the existing authorization process. Based upon suggestions submitted by interested stakeholders, the Commission approved the following methods for streamlining the Article 13 authorization process:

1. Develop and mandate the use of a Medical Treatment Preauthorization Form with accompanying instructions; and
2. Reduce the time period within which a payer must respond to requests for preauthorization or reconsideration from ten business days to seven business days.

Modifying the Applicability of the *Official Disability Guidelines*

In addition to efforts to streamline the Treatment Guidelines, the Commission carefully studied the propriety of modifying the applicability of the *Official Disability Guidelines* pursuant to A.R.S. § 23-1062.03 and A.A.C. R20-5-1301(C). Under A.A.C. R20-5-1301(B), absent further action of the Commission, the *Official Disability Guidelines* only applied to the management of chronic pain and the use of opioids for all stages of pain management. Under R20-5-1301(C), however, the Commission was authorized to “modify or change the applicability of the guidelines” if the Commission determined that modification or changing the applicability of the guidelines would: (1) improve medical treatment for injured workers; (2) make treatment and claims processing more efficient and cost effective; and (3) the guidelines adequately cover the relevant body parts or conditions.

On June 29, 2017, the Commission directed its Medical Resource Office to conduct an investigation and study regarding the three modification criteria. Consistent with the procedural requirements of R20-5-1301(C), the Commission publicly posted study materials and provided an opportunity for public comment. The Commission conducted a public hearing on November 30, 2017.

On December 21, 2017, following an evaluation of the study materials and stakeholder feedback, the Commission determined (at a public Commission meeting) that modifying the applicability of the *Official Disability Guidelines* to cover all body parts and conditions would improve medical treatment for injured workers and would make treatment and claims processing more efficient and cost effective. In addition, based upon written reviews received from board-certified physicians in Arizona (representing various specialties), the Commission determined that the *Official Disability Guidelines* adequately cover all body parts and conditions. Based on these determinations, the Commission took formal action to modify the applicability of the *Official Disability Guidelines* to all body parts and conditions, effective October 1, 2018.

The subject rulemaking described herein formalizes the Commission's actions, outlined above, and includes the following:

- Amends R20-5-106 (“Commission Forms”) to describe and mandate the use of the Medical Treatment Preauthorization Form.
- Amends R20-5-1301 (“Adoption and Applicability of the Article”) and R20-5-1311 (“Administrative Review by Commission”) to reflect the Commission’s December 21, 2017 decision to modify the applicability of the *Official Disability Guidelines* to apply to all body parts and conditions and to state applicable effective dates. (Note: This rulemaking is non- substantive, as the Commission already completed the substantive process for modifying the applicability of the Official Disability Guidelines under R20-5-1301(C).)
- Amends R20-5-1303 (“Provider Request for Preauthorization”); R20-5-1309 (“Payer Decision on Request for Preauthorization”); R20-5-1310 (“Payer Reconsideration on Request for Preauthorization”); and R20-5-1311 (“Administrative Review by Commission”) to: (1) mandate the use of the Medical Treatment Preauthorization Form; (2) reduce the time period for a payer to respond to a request for preauthorization or reconsideration from ten business days to seven business days; (3) remove pre-existing requirements for a request for preauthorization, a decision on a request for preauthorization, a decision on a request for reconsideration, and a request for administrative review; and (4) provide that a payer’s decision on a request for preauthorization or reconsideration may be

provided to the injured worker’s authorized representative.

- Amends R20-5-1309 (“Provider Decision on Request for Preauthorization”) to require that a payer who receives a deficient request for preauthorization – either because it is incomplete or not submitted using the Medical Treatment Preauthorization Form – must, within seven business days of receiving and identifying the deficient request, either: (1) act on the deficient request by using the Medical Treatment Preauthorization Form; or (2) notify the provider making the request that a request for preauthorization must be submitted on the Medical Treatment Preauthorization Form.

2. Identification of the persons who will be directly affected by, bear the costs of, or directly benefit from the proposed rulemaking:

Modifying the Applicability of the *Official Disability Guidelines*

The amendments related to modification of the applicability of the *Official Disability Guidelines* are non-substantive, as the rulemaking is merely intended to update Article 13 to reflect formal action taken by the Commission pursuant to A.A.C. R20-5-1301(C). Therefore, the subject rulemaking related to modification of the applicability of the *Official Disability Guidelines* creates no economic, small business, or consumer impact beyond that already created by Article 13 and the Commission’s formal action taken on December 21, 2017.

Streamlining the Treatment Guidelines’ Authorization Process

The Commission anticipates that the amendments related to streamlining the authorization process contained in Article 13 will impact participants in the workers’ compensation system. Participants include injured employees who receive medical treatment and/or services related to industrial injuries, medical providers who treat injured workers, and payers (insurance carriers, self-insured employers, and the Commission’s Special Fund) who administer workers’ compensation claims. Although participants in the workers’ compensation system are already subject to the Treatment Guidelines, the subject rulemaking includes the following:

- Mandates the use of the “Medical Treatment Preauthorization Form” (the “Form”) when a medical provider seeks preauthorization for medical treatment or services. Although preauthorization *is not required* under the Treatment Guidelines, *see*

A.A.C. R20-5-1303(A), a medical provider choosing to seek preauthorization will be required to use the Form, which will include fields for all necessary information. The Commission anticipates that the mandated Form will: (1) make it faster and easier for medical providers/injured employees to seek preauthorization, reconsideration, and/or Commission review; (2) streamline the preauthorization process by reducing the volume of deficient requests for preauthorization, reconsideration, or Commission review; (3) make it easier for payers to identify, and promptly act upon, requests for preauthorization and reconsideration; and (4) reduce unnecessary delays in providing injured employees with reasonably-required medical treatment.

- Reduces the time period for a payer to respond to a request for preauthorization or reconsideration from ten business days to seven business days. Although the condensed time period will require payers to process requests for preauthorization and reconsideration in a quicker manner (three days faster), the Commission anticipates that the condensed time period will: (1) reduce unnecessary delays in providing injured employees with reasonably-required medical treatment; and (2) streamline the preauthorization process by permitting interested parties to progress through the authorization process in an accelerated manner.
- Requires a payer who receives an incomplete request for preauthorization or a request for preauthorization that is not submitted on the Medical Treatment Preauthorization Form to, within seven business days of receiving and identifying the deficient request, either: (1) act on the deficient request by using the Medical Treatment Preauthorization Form; or (2) notify the provider making the request that a request for preauthorization must be submitted on the Medical Treatment Preauthorization Form. This amendment will offer payers necessary flexibility in acting upon deficient requests for preauthorization, while preventing deficient requests from being disregarded. The Commission anticipates that the amendment will ultimately: (1) reduce the volume of deficient requests for preauthorization; (2) reduce unnecessary delays in providing injured employees with reasonably-required medical treatment; and (3) improve the processing of workers' compensation claims.

In summary, the Commission anticipates that the amendments will primarily benefit participants in Arizona's workers' compensation system by streamlining the authorization process, reducing delays in providing injured employees with reasonably-required medical treatment, improving the processing of workers' compensation claims, and reducing litigation time and costs. The subject rulemaking will not result in any costs to injured employees.

3. A cost benefit analysis of the following:

- (a) Costs and benefits to state agencies directly affected by the rulemaking, including the number of new full-time employees at the implementing agency required to implement and enforce the proposed rule:

Modifying the Applicability of the *Official Disability Guidelines*

The amendments related to modification of the applicability of the *Official Disability Guidelines* are non-substantive, as the rulemaking is merely intended to update Article 13 to reflect formal action taken by the Commission pursuant to A.A.C. R20-5-1301(C). Therefore, the subject rulemaking related to modification of the applicability of the *Official Disability Guidelines* imposes no costs or benefits on state agencies beyond that already created by Article 13 and the Commission's formal action taken on December 21, 2017.

Streamlining the Treatment Guidelines' Authorization Process

As a self-insuring payer in Arizona's workers' compensation system, the State of Arizona (through the Arizona Department of Administration-Risk Management Division) will be subject to the costs and benefits of the rulemaking. *See supra* Section 2. Although the costs to the State of Arizona (through the Arizona Department of Administration-Risk Management Division) will not be significant, the Commission anticipates that the amendments will streamline the authorization process for medical services for state employees, reduce delays in providing state employees with reasonably-required medical treatment, improve the state's processing of workers' compensation claims, and reduce litigation time and costs. The Commission does not anticipate that the Arizona Department of Administration-Risk Management Division will need to hire any new full-time employees to implement the subject rulemaking.

(b) Costs and benefits to political subdivisions directly affected by the rulemaking; and

The proposed rulemaking directly applies to self-insuring political subdivisions. For further discussion regarding the anticipated costs and benefits to self-insuring payers in Arizona's workers' compensation system, *see supra* Sections 2 & 3(a).

(c) Costs and benefits to businesses directly affected by the rulemaking:

The proposed rulemaking directly applies to participants in the workers' compensation system, including medical providers who treat injured workers and payers (insurance carriers, self-insured employers, and the Commission's Special Fund) who administer workers' compensation claims. For further discussion regarding the anticipated costs and benefits to participants in Arizona's workers' compensation system, including medical providers or payers, *see supra* Section 2.

4. Impact on private and public employment in businesses, agencies and political subdivisions:

The Commission does not anticipate that the subject rulemaking will have any direct impact on private and public employment in businesses, agencies, and political subdivisions.

5. Impact on small businesses:

(a) Identification of the small businesses subject to the rulemaking:

The proposed rulemaking applies to all participants in the workers' compensation system, including medical providers who treat injured workers and payers (insurance carriers, self-insured employers, and the Commission's Special Fund) who administer workers' compensation claims. Although a small subset of these participants may operate small businesses, the subject rulemaking does not target small businesses.

(b) Administrative and other costs required for compliance with the rulemaking:

The proposed rulemaking is not intended to impose new obligations, costs, or time constraints on small businesses. Instead, the proposed rules are intended to streamline the Treatment Guidelines' preauthorization process for all participants. *See supra* Section 2.

(c) Description of the methods that may be used to reduce the impact on small businesses:

The proposed rulemaking is not intended to impose new obligations, costs, or time constraints on small businesses. Instead, the proposed rules are intended to streamline the Treatment Guidelines' preauthorization process for all participants. *See supra* Section 2.

(d) Cost and benefit to private persons and consumers who are directly affected by proposed rulemaking:

See supra Section 2 (discussing anticipated costs and benefits to participants in Arizona's workers' compensation system).

6. Probable effect on state revenues:

The Commission does not anticipate that the proposed rules will have any direct effect on state revenues.

7. Less intrusive or less costly alternative methods considered:

Because the subject rulemaking will primarily benefit participants in Arizona's workers' compensation system, the Commission did not consider less costly alternative methods. *See supra* Section 2.

8. Data on which the rule is based:

Modifying the Applicability of the Official Disability Guidelines

The subject rulemaking related to the *Official Disability Guidelines* is merely intended to update Article 13 to reflect the formal action taken by the Commission on December 21, 2017, pursuant to A.A.C. R20-5-1301(C). Consequently, the Commission has not reviewed and is not relying upon any data or study in its evaluation of or justification for the subject rulemaking as it related to modifying the applicability to the *Official Disability Guidelines*.

As concerns the Commission's December 21, 2017 action, the Commission considered various study materials prior to completing the regulatory process for modifying the applicability of the Official Disability Guidelines. The study materials considered by the Commission during the administrative process are available at <https://www.azica.gov/official-disability-guidelines-study-materials-and-public-comments>. The study materials are also available for inspection or reproduction at the Industrial Commission of Arizona, Medical Resource Office, 800 West Washington Street, Phoenix, Arizona 85007.

Streamlining the Treatment Guidelines' Authorization Process

The Commission has not reviewed and is not relying upon any data or study in its evaluation of or justification for the subject rulemaking relating to streamlining the Treatment Guidelines' authorization process.

Industrial Commission of Arizona

- D. A person upon whom a motion to join is filed under this Article may file a response to the motion within 10 days after the motion is filed.
- E. The Commission shall not consider a discovery motion unless the moving party attaches a separate statement to the discovery motion certifying that after good faith efforts to do so, the moving party has been unable to satisfactorily resolve the matter giving rise to the discovery motion with the opposing party.

Historical Note

Former Rule 5. Amended effective March 1, 1987, filed February 26, 1987 (Supp. 87-1). R20-5-105 recodified from R4-13-105 (Supp. 95-1). Section repealed; new Section made by final rulemaking at 7 A.A.R. 3966 and 7 A.A.R. 4995, effective August 17, 2001 (Supp. 01-3).

R20-5-106. Commission Forms**A.** The following forms shall be used when applicable:

1. Employer's report of industrial injury (form 101) shall contain:
 - a. Employee, employer, and carrier identification;
 - b. Description of employment;
 - c. Description of accident and injury;
 - d. Description of medical treatment received by employee;
 - e. Employee's wage data;
 - f. Date, signature, and title of employer or the employer's representative; and
 - g. Statement doubting the validity of the claim, if the employer doubts the validity of the claim.
2. The physician's portion of the worker's and physician's report of injury (form 102) shall contain:
 - a. Name and address of physician;
 - b. Information regarding preexisting conditions;
 - c. Information regarding the industrial injury, treatment, and prognosis;
 - d. Statement authorizing the attachment of a medical report that contains the information required in form 102; and
 - e. Physician's signature and date.
3. Notice of supportive medical benefits (form 103) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Description of authorized medical benefits;
 - c. Date the notice is mailed;
 - d. Name and telephone number of the individual issuing the notice; and
 - e. Statement regarding reopening and appeal rights including filing requirements.
4. Notice of claim status (form 104) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Status of the claim;
 - c. Date the notice is mailed;
 - d. Name and telephone number of the individual issuing the notice; and
 - e. Statement of a party's hearing and appeal rights including filing requirements.
5. Notice of suspension of benefits (form 105) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Effective date of the suspension;
 - c. Reasons for the suspension;
 - d. Date the notice is mailed;
 - e. Name and telephone number of the individual issuing the notice; and
6. Notice of permanent disability or death benefits (form 106) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Applicable statutory authority under which compensation is paid;
 - c. Disability and compensation information;
 - d. Date the notice is mailed;
 - e. Name and telephone number of the individual issuing the notice; and
 - f. Statement regarding hearing and appeal rights including filing requirements.
7. Notice of permanent disability and request for determination of benefits (form 107) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Type of disability;
 - c. Applicable statutory authority for designated disability;
 - d. Designation of dependents where death is involved;
 - e. Designation of advanced payments and amount of the advance;
 - f. Date the notice is mailed; and
 - g. Name and telephone number of the individual issuing the notice.
8. Carrier's recommended average monthly wage calculation (form 108) shall contain:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history;
 - c. Designation of dependents; and
 - d. Carrier's calculations for the recommended average monthly wage and the basis for the calculation.
9. Notice of permanent compensation payment plan (form 111) shall contain:
 - a. Employee, employer, and carrier identification;
 - b. Amount of permanent compensation and description of payment plan;
 - c. Name of the responsible entity contracted by the carrier to administer the payment plan;
 - d. Statement that the carrier remains the responsible party for payment;
 - e. Statement regarding supportive care and reopening rights;
 - f. Date the notice is mailed; and
 - g. Name and telephone number of the individual issuing the notice.
10. Report of insurance coverage (form 0006) shall contain:
 - a. Name and address of the carrier;
 - b. Legal name of entity that the carrier insures;
 - c. All other insured names or subsidiary entities under which the carrier's insured does business in Arizona;
 - d. Address of all insured entities with insurance policy information for each address; and
 - e. Employer Identification Number (EIN), Taxpayer Identification Number (TIN), or Federal Identification Number (FIN) assigned to each insured person or entity.
11. Report of significant work exposure to bodily fluids or other infectious material shall contain:
 - a. The requirements set forth in A.R.S. §§ 23-1043.02(B), 23-1043.03(B), and 23-1043.04(B);
 - b. Employee identification,
 - c. Employer identification,

Industrial Commission of Arizona

- d. Source of exposure person identification (if known),
 - e. Details of the exposure including:
 - i. Date of exposure,
 - ii. Time of exposure,
 - iii. Place of exposure,
 - iv. How exposure occurred,
 - v. Type of bodily fluid or fluids,
 - vi. Source of bodily fluid or fluids,
 - vii. Part or parts of body exposed to bodily fluid or fluids,
 - viii. Presence of break or rupture in skin or mucous membrane, and
 - ix. Witnesses (if known), and
 - f. Dated signature of employee or the employee's authorized representative.
- B.** The following forms may be used:
1. The workers' portion of the worker's and physician's report of injury (form 102) requests:
 - a. Employee, employer, insurance carrier, and physician identification;
 - b. Description of the accident, including date of injury; and
 - c. Date and signature of the employee or the employee's authorized representative.
 2. Worker's report of injury (form 407) requests:
 - a. Employee and employer identification,
 - b. Job title,
 - c. Employment description,
 - d. Employee's wage data,
 - e. Date of injury,
 - f. Accident and injury descriptions,
 - g. Medical treatment information,
 - h. Information concerning prior injuries of the employee,
 - i. Disability income, and
 - j. Date and signature of the employee or the employee's authorized representative.
 3. Worker's annual report of income (form 110-A) requests:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history for the preceding 12 months;
 - c. Date and signature of the employee or the employee's authorized representative attesting to the truthfulness of the employment and wage information; and
 - d. Statement that failure to submit an annual report of income may result in a suspension of benefits by the carrier or self-insured employer.
 4. Notice of intent to suspend (form 110-B) requests:
 - a. Employee, employer, insurance carrier, and claim identification;
 - b. Employment and wage history for the preceding 12 months;
 - c. Date and signature of the employee or the employee's authorized representative attesting to the truthfulness of the employment and wage information;
 - d. Statement that failure to submit an annual report within 30 days of the date of the notice shall result in a suspension of benefits by the carrier or self-insured employer.
 5. Request for hearing requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Identification of the award, notice, order, or determination protested and reason(s) for the protest;
 - d. Estimated length of time for hearing and city or town in which hearing is requested;
 - e. Name and address of any witness for whom a subpoena is requested; and
 - f. Date and signature of party or the party's authorized representative.
 6. Petition to reopen requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Identification or description of the new, additional, or previously undiscovered temporary or permanent disability or medical condition justifying the reopening of the claim; and
 - d. Employee's medical and employment history.
 7. Petition for rearrangement or readjustment of compensation requests:
 - a. Names of the employee, employer, and insurance carrier;
 - b. Claim identification;
 - c. Income and employment history;
 - d. Medical history; and
 - e. Statement of the basis for the increase or decrease in earning capacity.
 8. Claim for dependent's benefits-fatality form requests:
 - a. Identification of dependent filing claim;
 - b. Identification of deceased;
 - c. Date of death;
 - d. Date of injury, if different than date of death;
 - e. Name and address of employer at time of deceased's death;
 - f. Statement of cause of death;
 - g. Names and addresses of health care providers rendering treatment to deceased in two years before death;
 - h. Conditions treated by health care providers in the two years before deceased's death;
 - i. If claim is for spousal benefits, the form requests:
 - i. Name, address, and date of birth of spouse;
 - ii. Copy of marriage certificate;
 - iii. Date and place of marriage to deceased;
 - iv. History of prior marriages of deceased and deceased's spouse, including copies of divorce decrees; and
 - v. Statement of living arrangements at time of deceased's death, including reason for living apart at time of death, if applicable;
 - j. If claim is for a dependent child, the form requests:
 - i. Name, date of birth, and address of child at time of deceased's death;
 - ii. List of children in care and custody of current spouse; and
 - iii. Statement of whether unborn child is expected and date expected;
 - k. If claim is for dependent other than a child, the form requests:
 - i. Name and address of other dependent,
 - ii. Relationship of other dependent to deceased, and
 - iii. Statement of the nature and extent of dependency; and
 - l. Date, telephone number, and signature of dependent or authorized representative of dependent.
 9. Request to leave the state form requests:

Industrial Commission of Arizona

- a. Employee, insurance carrier, and claim identification;
 - b. Reason for requesting to leave Arizona;
 - c. Dates leaving and returning to Arizona;
 - d. Out-of-state address;
 - e. Name and telephone number of attending physician; and
 - f. Date and signature of the employee or the employee's authorized representative.
10. Request to change doctors form requests:
- a. Employee, insurance carrier, and claim identification;
 - b. Reason for requesting change of doctor;
 - c. Name and phone number of claimant's current doctor;
 - d. Name and phone number of doctor claimant requests to change to; and
 - e. Date and signature of the employee or the employee's authorized representative.
11. Complaint of bad faith and unfair claim processing practices requests:
- a. Employee, employer, and insurance carrier identification;
 - b. Description of the alleged bad faith or unfair claim processing practices;
 - c. Date of the complaint; and
 - d. Name, address, and telephone number of the person signing the complaint.
12. Certification of employer's drug and alcohol testing policy requests:
- a. Employer's certification as described under A.R.S. § 23-1021(F),
 - b. Name and federal identification number of the employer, and
 - c. Name of all subsidiaries and locations of the employer.
- C. Optional use of a form described in subsection (B) does not affect any requirement under the Act or this Article.
- D. Forms or format for the forms described in this Section are available from the Commission.
- E. Forms prescribed under this Section shall not be changed, amended, or otherwise altered without the prior written approval of the Commission.

Historical Note

Former Rule 6. Amended effective March 1, 1987, filed February 26, 1987 (Supp. 87-1). Amended effective August 28, 1992 (Supp. 92-3). R20-5-106 recodified from R4-13-106 (Supp. 95-1). Amended by final rulemaking at 7 A.A.R. 3966 and 7 A.A.R. 4995, effective August 17, 2001 (Supp. 01-3). Amended by final rulemaking at 15 A.A.R. 991, effective June 2, 2009 (Supp. 09-2).

R20-5-107. Manner of Completion of Forms and Documents

- A. An individual completing a form or document shall fill out the form or document legibly in ink or by typewriter.
- B. A party or a party's authorized representative shall sign any form or document that is required by the Act, this Article, or other law to be signed.
- C. Unless otherwise provided in this Article, if a party is required to sign a form or document, the Commission shall not accept a typewritten name or stamped signature.
- D. If, within the time period prescribed by law, a party files an incomplete form or document, or files an instrument other than a form or document when a form or document is required, the Commission shall serve notice to the party that the form or

document fails to comply with this Section. The Commission deems the report or document timely filed if the party files a properly completed and signed form or document within 14 days after the Commission serves the notice described in this subsection.

Historical Note

Former Rule 7. Amended effective March 1, 1987, filed February 26, 1987 (Supp. 87-1). R20-5-107 recodified from R4-13-107 (Supp. 95-1). Amended by final rulemaking at 7 A.A.R. 3966 and 7 A.A.R. 4995, effective August 17, 2001 (Supp. 01-3).

R20-5-108. Confidentiality of a Commission Claims File; Reproduction and Inspection of a Commission Claims File

- A. Except as provided in this Section, a claims file maintained by the Commission is private and confidential and the Commission shall not make the claims file available for inspection and copying. For purposes of this Section, "claims file" means the official record maintained by the Commission for a claimant's industrial injury including the worker's report of injury, employer's report of injury, worker and physician's report of injury, and all other reports, records, instruments, videotapes, audiotapes, transcripts, and other matters scanned or otherwise placed into the file.
- B. Except as provided in subsections (D) and (E), the Commission shall make a Commission claims file relating to a current or prior claim of a claimant available for inspection and copying by any party to any proceeding currently or previously before the Commission involving the same claimant.
- C. Except as provided in subsections (D) and (E), the Commission shall not make a Commission claims file available to a non-party for inspection and copying unless the Commission receives a court order or written authorization signed by the affected claimant or the affected claimant's authorized representative.
- D. The Commission shall make a transcript contained in a Commission claims file available for inspection and copying if:
 1. The person requesting to inspect and copy the transcript is a person authorized under subsections (B) or (C); and
 2. The transcript concerns a hearing related to a claim that is not in litigation.
- E. The Commission shall make a transcript contained in a Commission claims file available only for inspection if:
 1. The person requesting to inspect and copy the transcript is a person authorized under subsections (B) or (C); and
 2. The transcript concerns a hearing related to a claim currently in litigation.
- F. The Commission shall provide copies at a charge of \$.25 per page.
- G. A Commission claims file shall not be removed from a Commission office unless in the custody of an authorized representative of the Commission.

Historical Note

Former Rule 8. Amended effective March 1, 1987, filed February 26, 1987 (Supp. 87-1). Amended effective August 28, 1992 (Supp. 92-3). R20-5-108 recodified from R4-13-108 (Supp. 95-1). Amended by final rulemaking at 7 A.A.R. 3966 and 7 A.A.R. 4995, effective August 17, 2001 (Supp. 01-3).

R20-5-109. Admission into Evidence of Documents Contained in a Commission Claims File

- A. If a party or an administrative law judge considers a document contained in a Commission claims file, including a transcript of a prior proceeding, necessary or appropriate for hearing purposes, the administrative law judge shall receive a copy of

effective July 17, 2007 for 180 days (Supp. 07-3). New Section made by final rulemaking at 13 A.A.R. 4315, effective January 13, 2008 (Supp. 07-4).

R20-5-1220. Small Employer Request for Exception to Recordkeeping Requirements

- A. In this Section, unless context otherwise requires, “small employer” means a corporation, proprietorship, partnership, joint venture, limited liability company, trust, or association that has less than \$500,000 in gross annual revenue.
- B. A small employer, or any category of small employer that is unreasonably burdened by the recordkeeping requirements of the Act and this Article may file a written petition for exception with the Department requesting relief from certain recordkeeping requirements under this Article. The petition shall:
1. State the reasons for the request for relief;
 2. State an alternate manner or method of making, keeping, and preserving records that will enable the Department to determine hours worked and wages paid; and
 3. Include the signature of the employer or an authorized representative of the employer.
- C. Subject to any conditions or limitations necessary to ensure fulfillment of the purpose and intent of Act, the Department may grant a petition for exception if it finds that:
1. The small employer, or category of small employer is unreasonably burdened by the recordkeeping requirements of the Act and this Article; and
 2. The relief requested and alternative proposed will not hinder the Department’s enforcement of the Act and this Article.
- D. For good cause, the Department may rescind a prior order granting relief under this Section.
- E. Relief under this Section is effective upon the Department’s written authorization.

Historical Note

New Section made by emergency rulemaking at 13 A.A.R. 473, effective January 25, 2007 for 180 days (Supp. 07-1). Emergency renewed at 13 A.A.R. 2785, effective July 17, 2007 for 180 days (Supp. 07-3). New Section made by final rulemaking at 13 A.A.R. 4315, effective January 13, 2008 (Supp. 07-4).

ARTICLE 13. TREATMENT GUIDELINES

R20-5-1301. Adoption and Applicability of the Article

- A. The Industrial Commission of Arizona (Commission) has adopted the Work Loss Data Institute’s *Official Disability Guidelines – Treatment in Workers Compensation (ODG)* as the standard reference for evidence-based medicine used in treating injured workers within the context of Arizona’s workers’ compensation system. By adopting and referencing the most recent edition (at the time of treatment), and continuously updated *Official Disability Guidelines*, the Commission can ensure the latest available medical evidence is used in making medical treatment decisions for injured workers.
- B. Until further action of the Commission, the guidelines shall apply to the management of chronic pain and the use of opioids for all stages of pain management. For purposes of this process, chronic pain shall be defined by the guidelines.
- C. The Commission may modify or change the applicability of the guidelines as described in subsection (B) if the Commission determines that modification or changing the applicability of the guidelines will: 1) improve medical treatment for injured workers, 2) make treatment and claims processing more efficient and cost effective, and 3) the guidelines adequately cover the body parts or conditions. Before taking action to modify or change the applicability of the guidelines,

the Commission shall provide an opportunity for public comment and hold a public hearing. A decision of the Commission under this subsection shall be made by a majority vote of a quorum of Commission members present at a public meeting.

- D. Action taken by the Commission to modify or change the applicability of the guidelines under subsection (C) shall be published in the minutes of the Commission meeting when such action was taken. The minutes of this action shall be published on the Commission’s website and shall be available from the Commission upon request.
- E. The guidelines shall apply prospectively. Recommendations provided in the guidelines shall apply to medical treatment or services occurring on or after the effective date of this Article.
- F. This Article applies to all claims filed with the Commission.
- G. This Article only applies to medical treatment and services for body parts and conditions that have been accepted as compensable.
- H. The guidelines are to be used as a tool to support clinical decision making and quality health care delivery to injured employees. The guidelines set forth care that is generally considered reasonable and are presumed correct if the guidelines provide recommendations related to the requested treatment or service. This is a rebuttable presumption and reasonable medical care may include deviations from the guidelines. To support a request to deviate from the guidelines, the provider must produce documentation and justification that demonstrates by a preponderance of credible medical evidence a medical basis for departing from the guidelines. Credible medical evidence may include clinical expertise and judgment.
- I. The Commission shall provide administrative review and oversight of this Article.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1302. Definitions

In this Article, unless the context otherwise requires:

“Act” means the Arizona Workers’ Compensation Act, A.R.S. Title 23, Ch. 6, Articles 1 through 11.

“Active Practice” means performing patient care for a minimum of eight hours per week in one of the five preceding years.

“Administrative Law Judge” or “ALJ” means a hearing officer appointed under A.R.S. § 23-108.02.

“Administrative Review” means a process that includes a peer review for preauthorization of a request for medical treatment or services that has been denied or partially denied by a payer. The administrative review process will be managed by the Medical Resource Office (MRO) at the Industrial Commission of Arizona.

“American Board of Medical Specialties” means the organization that develops a uniform system for specialty boards to administer examinations for certification of physicians within specific medicine specialties.

“American Osteopathic Association” means the organization that develops a uniform system for specialty boards to administer examinations for certification of osteopathic physicians within specific osteopathic medicine specialties.

“Applicability” means the medical conditions that are covered under this Article and authorized by the Commission under R20-5-1301(B) and (C).

Industrial Commission of Arizona

“Claim” means the workers’ compensation claim filed by the injured employee under the Act.

“Contractor” means an independent peer review organization accredited by URAC.

“Fast Track ALJ Dispute Resolution Program” or “fast track process” means the voluntary dispute resolution process set forth in R20-5-1312(B).

“International Classification of Diseases Code” or “ICD Code” means a set of medical diagnostic codes that creates a universal language for reporting diseases and injury.

“International Classification of Diseases” or “ICD” means an official list of categories of diseases, physical and mental, that is issued and maintained by the World Health Organization.

“IME” means an independent medical examination scheduled under R20-5-114.

“Injured Employee” means a person defined in A.R.S. § 23-901 whose claim has been accepted for workers’ compensation benefits.

“Medical File Review Opinions” means a formal examination of patient data and medical records for the purpose of determining the need for medical treatment, services or both.

“Payer” means an insurance carrier defined under A.R.S. § 23-901, a self-insured employer defined in R20-5-102, a third-party administrator, and the Special Fund of the Industrial Commission of Arizona.

“Peer Review” means an independent medical review conducted by an individual meeting the requirements of R20-5-1311(I).

“Preauthorization” means a request from a provider to a payer requesting approval to provide medical treatment or services to an injured employee.

“Provider” means a physician as defined in R20-5-102.

“Reconsideration” means a written request to the payer or identified review organization by an injured employee or medical provider to reconsider a previous payer decision to deny medical treatment or services and that identifies the specific justification to support the request.

“Third-Party Administrator” or “TPA” means an organization that processes insurance or employee benefit claims for a separate entity.

“Treatment Guidelines” or “guidelines” means medical treatment guidelines that are used as a tool to support clinical decision making and quality health care delivery to injured employees.

“URAC” refers to URAC, a non-profit organization formerly known as the Utilization Review Accreditation Commission.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1303. Provider Request for Preauthorization

- A. No preauthorization is required under the Act to ensure payment for reasonably required medical treatment or services. While preauthorization is not required under the Act, a provider may seek preauthorization as provided in this subsection.
- B. A provider shall submit a request for preauthorization in writing, which shall include the following information:
 1. Patient information (including date of injury, date of birth, and payer claim number);

2. Diagnosis and ICD code;
 3. Date of request;
 4. Type of request - Initial, Routine, Urgent, or Life Threatening;
 5. A statement of the treatment or services requested. Where appropriate, information about quantity, strength, duration and frequency of the treatment or services should be included. Use of the applicable codes should also be included and will facilitate the process; and
 6. Documentation, if not already provided, that supports the medical necessity and appropriateness of the treatment or services requested, such as office notes and diagnostic reports.
- C. A provider may submit the request by mail, electronically or by fax.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1304. Payer Denial of Request for Preauthorization

- A. A payer shall not deny a request for preauthorization solely because the guidelines do not address the requested treatment or services.
- B. A payer shall not deny a request for preauthorization that is supported by the guidelines, unless the payer can rebut the presumption of reasonableness and correctness with a medical or psychological opinion establishing by a preponderance of the evidence that there is a contraindication or significant medical or psychological reason not to authorize the requested treatment or services. Upon request by the provider or injured employee, a denial of preauthorization in this situation shall be processed as an immediate referral to the Commission for administrative review as provided in R20-5-1311 unless the payer obtains an IME in support of its denial. If the payer obtains an IME which serves as the basis for the denial, then review of the payer’s decision shall be processed as a request for investigation under A.R.S. § 23-1061(J) if filed by the injured employee.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1305. Payer Denial of Payment for Provided Treatment or Services

- A. A payer shall not deny payment for provided treatment or services solely because the guidelines do not address the requested treatment or services.
- B. A payer shall not deny payment for provided treatment or services supported by the guidelines, unless the payer can rebut the presumption of reasonableness and correctness with a medical or psychological opinion establishing by a preponderance of the evidence that there is a medical contraindication or significant medical or psychological reason not to pay for the treatment or services.
- C. A dispute related to a payer’s failure to pay for provided treatment or services may be processed as a request for investigation under A.R.S. § 23-1061(J) if filed by an injured employee.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1306. Payer Reversal of Decision to Deny Treatment or Services

A payer may reverse its decision to deny treatment or services at any time throughout the process described in this Article. In this sit-

uation, the payer's subsequent authorization or agreement to pay for the treatment or services at issue shall end this process.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1307. Payer Decision, In Whole or In Part

A payer may issue a decision approving or denying a request for preauthorization in whole, or in part.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1308. Failure to Comply with Required Time Limits

A payer's failure to comply with the required time limits of this process may be considered unreasonable delay under R20-5-163.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1309. Payer Decision on Request for Preauthorization

- A. Except as provided in subsection (D), a payer shall communicate to the provider its decision on a request for preauthorization no later than 10 business days after the request is received. This decision shall comply with the requirements set forth in subsection (H). For purposes of this Section, the 10 business days begin to run the day after the payer receives the request.
- B. If a payer fails to communicate to a provider its decision on request for preauthorization within 10 business days, then the payer's failure to take action is deemed a "no response" and the provider or injured employee may submit a request for administrative review directly to the Commission as provided in R20-5-1311.
- C. If a payer receives a request for preauthorization that fails to meet the requirements of R20-5-1303, the payer may, in its discretion:
 - 1. Act on the incomplete request for preauthorization; or
 - 2. No later than 10 business days after the request is received, notify the provider that the request for preauthorization is incomplete.
- D. If, no later than 10 business days after a request for preauthorization has been received, a payer provides notice to the provider that an IME has been requested under R20-5-114, then the payer's decision on a request for preauthorization shall be issued no later than 10 business days after the final IME report has been received by the payer. The payer shall provide a copy of the final IME report to the provider upon receipt of the IME report.
- E. Unless the payer decision was supported by an IME or otherwise falls within subsection R20-5-1304(B), an injured employee or provider may seek reconsideration of a payer decision by submitting a written request to the payer (or review organization identified by the payer) that states the specific reasons and justifications to support the request. If not previously provided, the injured employee or provider shall include supporting medical documentation with their written request.
- F. An injured employee may seek review of a payer decision that is supported by an IME by requesting an investigation under A.R.S. § 23-1061(J).
- G. Unless the decision was supported by an IME, an injured employee or provider may seek review of a payer decision issued under R20-5-1304(B) by requesting administrative review by the Commission as provided in R20-5-1311.

- H. A payer shall include the following information in its written decision to approve or deny, in whole or in part, the request for preauthorization to provide treatment or services:
 - 1. The date on which the request for preauthorization was received;
 - 2. Patient information, including date of injury, date of birth, payer claim number and Commission claim number;
 - 3. The date on which an IME was completed, if applicable;
 - 4. A statement of what has been authorized, including if applicable, a partial authorization;
 - 5. A statement of explanation if the request for preauthorization is denied, in whole or in part, which should include the medical reason supporting the payer's decision;
 - 6. A statement of the process under which a provider or injured employee may request reconsideration or review of the payer's denial, in whole or in part, of a request for preauthorization, which shall include the following information:
 - a. For a decision that is issued without obtaining an IME that is not subject to R20-5-1304(B):

"If you wish to request reconsideration of the decision regarding your request for preauthorization to provide treatment or services, you must send a written request for reconsideration to:

Name of Payer or Review Organization Identified by Payer
Commission Address
Phone
Fax
E-mail

You must include the specific reason and justification to support your request. Please include additional supporting medical documentation if not previously provided."
 - b. For a decision that is supported by an IME:

"If you wish review of the decision regarding your request for preauthorization to provide treatment or services, then the injured employee is required to file a request for investigation under A.R.S. § 23-1061(J)."
 - c. For a decision that is issued without obtaining an IME that is subject to R20-5-1304(B):

"If you disagree with this decision and wish to request review by the Industrial Commission of Arizona, then you may submit a request for administrative review under R20-5-1311 to:

Industrial Commission of Arizona
Attn: Medical Resource Office
Commission Address
Commission Telephone Number

The provider shall file this request promptly and include the following information: patient information, including name, address, payer claim number, Commission claim number, and date of injury; diagnosis or ICD code; employer, insurance carrier or TPA information; provider information; information pertaining to request for treatment, including the justification for treatment; applicable treatment guideline or guidelines; denial of treatment by payer; copies of relevant medical information or records; and whether the request for medical treatment or services involves a request for urgent care or a life-threatening condition."
- I. A payer shall provide a copy of its written decision to deny treatment or services to the injured employee.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1310. Payer Reconsideration on Request for Preauthorization

- A.** Except as provided in subsection (C), a payer shall communicate to the provider its decision on a request for reconsideration no later than 10 business days after the request is received. This decision shall comply with the requirements set forth in subsection (E). For purposes of this subsection, the 10 business days begin to run the day after the payer receives the request for reconsideration.
- B.** If a payer fails to respond to a request for reconsideration within 10 business days, the provider or injured employee may submit a request for administrative review directly to the Commission as provided in R20-5-1311.
- C.** If, no later than 10 business days after a request for reconsideration has been received, a payer provides notice to the provider that an IME has been requested under R20-5-114, then the payer's decision on a request for reconsideration shall be issued no later than 10 business days after the final IME report has been received by the payer. The payer shall provide a copy of the final IME report to the provider upon receipt of the report.
- D. Commission Review of Payer Reconsideration Decision:**
1. An injured employee or provider may seek review of a payer reconsideration decision by requesting an administrative review by the Commission as provided in R20-5-1311 unless the payer decision was supported by an IME.
 2. An injured employee may seek review of a payer reconsideration decision that is supported by an IME by requesting an investigation under A.R.S. § 23-1061(J).
- E.** A payer shall include the following information in its written decision to approve or deny, in whole or in part, a request for reconsideration of a denial of preauthorization:
1. The date on which the request for reconsideration was received;
 2. Patient information, including date of injury, date of birth, payer claim number and Commission claim number;
 3. The date on which an IME was completed, if applicable;
 4. A statement of what has been authorized including, if applicable, a partial authorization;
 5. A statement of explanation if the request for treatment is denied, in whole or in part; and
 6. A statement of the process under which a provider or injured employee may request Commission review of the payer's denial, in whole or in part, of a request for preauthorization, which shall include the following information:
 - a. For a reconsideration decision that is issued without obtaining an IME:

“If you disagree with this reconsideration decision and wish to request review by the Commission, then you may submit a request for administrative review under R20-5-1311 to:

Industrial Commission of Arizona
Attn: Medical Resource Office
Commission Address
Commission Telephone Number.

The provider shall file this request promptly and include the following information: patient information, including name, address, payer claim number, Commission claim number, and date of injury; diagnosis or ICD code; employer, insurance carrier or TPA information; provider information; informa-

tion pertaining to request for treatment, including the justification for treatment; applicable treatment guideline and denial of treatment by payer; copies of relevant medical information or records; copies of relevant documentation related to the payer reconsideration decision; and whether the request for medical treatment or services involves a request for urgent care or a life-threatening condition.”

- b.** For reconsideration of a decision that is supported by an IME:

“If you disagree with this reconsideration decision and wish review by the Commission, then the injured employee is required to file a request for investigation under A.R.S. § 23-1061(J).”

- F.** A payer shall provide a copy of its written reconsideration decision to deny treatment or services to the injured employee.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1311. Administrative Review by Commission

- A.** Until further action of the Commission under R20-5-1301(C), administrative review under this Article is limited to requests for medical treatment or services related to the management of chronic pain and the use of opioids for all stages of pain management.
- B.** A request for administrative review shall be in writing and submitted by mail, electronically or by fax. The request shall include the following information:
1. Identifying information of the injured employee and claim, including the injured employee's name, address, commission claim number, and date of injury;
 2. Diagnosis and ICD code;
 3. Identifying information of the employer, insurance carrier or TPA;
 4. Identifying information of the provider;
 5. Information pertaining to request for treatment, such as the justification for treatment, applicable treatment guideline and, if applicable, the payer's denial of treatment;
 6. Copies of relevant medical information or records;
 7. Copies of documentation related to the payer's decision or non-response; and
 8. Whether the request for medical treatment or services involves a request for urgent care or a life-threatening condition.
- C.** Upon receipt of a request for administrative review, the Commission shall determine whether the administrative review is available under this Article.
1. If administrative review is not available, then no later than three business days after receiving a request for administrative review, the Commission shall send notice to the injured employee and payer that administrative review is not available.
 2. If administrative review is available, then no later than three business days after receiving the request, the Commission shall send notice to the payer that a request for administrative review has been received and provide information on how to participate in the process.
- D.** The administrative review conducted under this Section shall apply the guidelines as described in this Article and include a peer review performed by an individual meeting the requirements of subsection (I). The peer review shall consist of a records review and, when possible as described in subsection (I)(5), a conversation between the provider and individual conducting the peer review.

Industrial Commission of Arizona

- E. The Commission may enter into an agreement with one or more contractors, who shall be URAC accredited, to provide the review described in subsection (D).
- F. The payer shall pay for the costs of the peer review conducted by the contractor.
- G. To assist in its review, the Commission or its contractor may request or receive additional information and documentation from the provider, injured employee or payer, who shall cooperate and provide the Commission or its contractor with any necessary medical information, including information pertaining to the payer's decision.
- H. Before the Commission or its contractor issues a determination denying the request for treatment or services, a good faith effort shall be made to conduct a peer review with the provider requesting authorization to perform the treatment or services.
- I. The individual conducting the peer review shall:
1. Hold an active, unrestricted license or certification to practice medicine or a health profession and be involved in the active practice of medicine or a health profession during the five preceding years. For purposes of this subsection, "active practice" means performing patient care for a minimum of eight hours per week in one of the five preceding years;
 2. Be licensed in Arizona, unless the Commission or its contractor is unable to find such an individual, in which case the peer review may be conducted by an individual who is licensed in another state of the United States and who meets the other requirements of this subsection;
 3. For a review of a request from an allopathic or osteopathic physician, nurse practitioner, physician assistant, or other mid-level provider, hold a current certification from the American Board of Medical Specialties or the American Osteopathic Association in the area or areas appropriate to the condition, procedure or treatment under review;
 4. Be in the same profession and the same specialty or subspecialty as typically performs or prescribes the medical procedure or treatment requested; and
 5. Make a good faith effort to contact the provider requesting the preauthorization. This good faith effort shall include making telephone contact during the provider's normal business hours and offering to schedule the peer review at a time convenient for the provider.
- J. A provider may bill the payer for time spent participating in a peer review under this Section.
- K. The Commission or its contractor shall issue a written determination of its administrative review that contains the name and title of the person that performed the administrative review, and includes the following information:
1. Whether the request for treatment or services is authorized or denied, in whole or in part;
 2. The information reviewed;
 3. The principle reason for the decision; and
 4. The clinical basis and rationale for the decision.
- L. An interested party dissatisfied with the administrative review determination may request that the dispute be referred to the Commission's Administrative Law Judge Division for hearing. This request for hearing shall:
1. Be in writing;
 2. Filed no later than 10 business days after the administrative review determination is issued; and
 3. State whether the party requests to participate in the Fast Track ALJ Dispute Resolution Program by stipulation, or declines to participate in the Fast Track ALJ Dispute Resolution Program.
- M. If a timely request for hearing is filed, the administrative review determination is deemed null and void and shall serve no evidentiary purpose.
- N. The information provided by the parties under this Section and the determination issued by the Commission shall become a part of the Commission claims file for the injured employee.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

R20-5-1312. Hearing Process

- A. A referral of a request for hearing under R20-5-1311(L) shall be processed as provided for in the Act unless all parties agree to participate in the fast track process.
- B. The following applies only to the Fast Track ALJ Dispute Resolution Program:
1. Parties must agree to participate in the Fast Track ALJ Dispute Resolution Program with the understanding that a short form decision will be issued.
 2. Review by the presiding ALJ shall be limited to the treatment or service dispute considered at the administrative review under R20-5-1311.
 3. The presiding ALJ shall issue a notice of hearing within 10 business days of the receipt of the fully executed agreement to participate and certificate of readiness.
 4. The hearing shall be held within 30 calendar days from the day that the notice of hearing is issued to the extent practicable.
 5. Discovery is limited to five interrogatories and no depositions are permitted.
 6. The presiding ALJ shall take all lay witness testimony at the time of the hearing and will not hold any further hearings.
 7. The presiding ALJ shall consider documentary medical evidence only; no medical testimony shall be taken.
 8. Medical file review opinions shall be deemed to constitute substantial evidence to support the requested treatment or service.
 9. All documentary evidence shall be submitted no later than 10 business days before the scheduled hearing.
 10. The hearing shall be recorded, but not transcribed, unless one or more of the parties files a request for review under A.R.S. § 23-942 and A.R.S. § 23-943.
 11. The presiding ALJ shall issue a short form decision within five business days after the matter is deemed submitted.

Historical Note

New Section made by final rulemaking at 22 A.A.R. 1730, effective October 1, 2016 (Supp. 16-2).

23-107. General powers

A. The commission has full power, jurisdiction and authority to:

1. Formulate and adopt rules and regulations for effecting the purposes of this article.
2. Administer and enforce all laws for the protection of life, health, safety and welfare of employees in every case and under every law when such duty is not specifically delegated to any other board or officer, and, when such duty is specifically delegated, to counsel, advise and assist in the administration and enforcement of such laws and for such purposes may conduct investigations.
3. Promote the voluntary arbitration, mediation and conciliation of disputes between employers and employees.
4. License and supervise the work of private employment offices, bring together employers seeking employees and working people seeking employment, and make known the opportunities for employment in the state.
5. Collect, collate and publish all statistical and other information relating to employees, employers, employments and places of employment with other appropriate statistics.
6. Act as the regulatory agency insuring that workers' compensation carriers are processing claims in accordance with chapter 6 of this title.
7. Provide nonpublic, confidential or privileged documents, materials or other information to another state, local or federal regulatory agency for the purpose of the legitimate administrative needs of the programs administered by that agency if the recipient agency agrees and warrants that it has the authority to maintain and will maintain the confidentiality and privileged status of the documents, materials or other information.
8. Receive nonpublic documents, materials and other information from another state, local or federal regulatory agency to properly administer programs of the commission. The commission shall maintain as confidential or privileged any document, material or other information that is identified by the exchange agency as confidential or privileged under the laws of the jurisdiction that is the source of the document, material or other information.
9. Enter into agreements that govern the exchange of nonpublic documents, materials and other information that are consistent with paragraphs 7 and 8. The commission may request nondisclosure of information that is identified as privileged or confidential. Any disclosure pursuant to paragraph 7 or 8 or this paragraph is not a waiver of any applicable privilege or claim of confidentiality in the documents, materials or other information.

B. Upon petition by any person that any employment or place of employment is not safe or is injurious to the welfare of any employee, the commission has power and authority, with or without notice, to make investigations necessary to determine the matter complained of.

C. The members of the commission may confer and meet with officers of other states and officers of the United States on matters pertaining to their official duties.

D. Notwithstanding any other law, the commission may protect from public inspection the financial information that is received from a private entity that applies to self-insure or that renews its self-insurance plan pursuant to section 23-961, subsection A if the information is kept confidential by the private entity in its ordinary and regular course of business.

23-921. Administration of chapter

A. The industrial commission of Arizona is charged with the duties of the administration of this chapter, and with the adjudication of claims for compensation arising out of provisions of this chapter and any of its members or assistants so authorized may:

1. Hold hearings at any place within the state or without the state by agreement of the parties.
2. Administer oaths.
3. Issue and serve by the commission's representatives, or by any sheriff, subpoenas for the attendance of witnesses and claimants and the production of reports, papers, contracts, books, accounts, documents and testimony. The commission may require the attendance and testimony of employers, their officers and representatives before any proceeding of the commission, and the production by employees of books, records, papers and documents.
4. Generally provide for the taking of testimony and for the recording of proceedings held in accordance with this chapter.

B. The commission may make and declare all rules and regulations which are reasonably required in the performance of its duties, including but not limited to rules of practice and procedure in connection with hearing and review proceedings. Such rules and regulations may provide for informal prehearing conferences in order to expedite claim adjudication, amicably dispose of controversies, narrow issues and simplify the method of proof at hearings.

C. The commission may incur such expenses as it determines are reasonably necessary to perform its authorized functions, which expenses shall be a charge against the administrative fund.

D. The commission may charge any person with contempt who refuses to comply with any order of the commission, upon application to the superior court. Any person held in contempt may be punished by a fine of not to exceed one thousand dollars.

23-1062.03. Evidence-based medical treatment guidelines

The commission shall develop and implement a process for the use of evidence-based medical treatment guidelines, where appropriate, to treat injured workers no later than December 31, 2014. The commission shall provide a progress report to the governor, the president of the senate and the speaker of the house of representatives describing the status of the development and implementation of this process no later than the end of each calendar year beginning on December 31, 2012, and ending on December 31, 2014. If the commission requires additional time beyond December 31, 2014, to develop and implement this process, then the commission shall include in its 2014 report a projected timetable to complete the process.

CHAPTER 287

SENATE BILL 1332

AN ACT

AMENDING SECTION 23-722.04, ARIZONA REVISED STATUTES; REPEALING SECTION 23-941.01, ARIZONA REVISED STATUTES; AMENDING TITLE 23, CHAPTER 6, ARTICLE 3, ARIZONA REVISED STATUTES, BY ADDING A NEW SECTION 23-941.01; AMENDING SECTION 23-1062, ARIZONA REVISED STATUTES; RELATING TO WORKERS' COMPENSATION.

(TEXT OF BILL BEGINS ON NEXT PAGE)

Be it enacted by the Legislature of the State of Arizona:

Section 1. Section 23-722.04, Arizona Revised Statutes, is amended to read:

23-722.04. Unemployment insurance information; disclosure; violation; classification

A. The department or the office of economic opportunity may disclose unemployment insurance information to the following entities:

1. Any federal, state or local governmental agency in the investigation of fraud relating to public programs or the misuse of public monies.

2. Divisions of the department, including the employment and rehabilitation services administrations, for program and research purposes.

3. The workforce Arizona council for program performance, regional planning and other program and research purposes.

4. The department of education to evaluate adult education program performance and for other primary and adult education program and research purposes.

5. The Arizona board of regents, universities under the jurisdiction of the Arizona board of regents and community college districts to evaluate program performance and for other program and research purposes.

6. The United States department of labor, or its agents, or the United States census bureau, or its agents, as required by law or in connection with the requirements imposed as a result of receiving federal funding.

7. Department contractors or subcontractors, or their agents, for the sole purpose of providing for the processing, storage and transmission of information. □ This disclosure must be consistent with this section.

8. THE INDUSTRIAL COMMISSION OF ARIZONA, DEPARTMENT OF INSURANCE OR ATTORNEY GENERAL FOR USE BY THOSE AGENCIES, OR THEIR AGENTS OR CONTRACTORS, IN THE PREVENTION, INVESTIGATION AND PROSECUTION OF WORKERS' COMPENSATION FRAUD.

B. On the request of one of the entities ~~prescribed~~ **SPECIFIED** in subsection A of this section to the department or the office of economic opportunity, the department or the office of economic opportunity shall disclose unemployment insurance information to the entity pursuant to guidelines established by the workforce

data task force established by section 41-5404 and pursuant to a written data sharing agreement with the requesting entity in a form determined by the workforce data task force pursuant to the laws of this state and applicable federal regulations.□ The department or the office of economic opportunity may disclose the unemployment insurance information only after the requesting entity has demonstrated that the information will be kept confidential, except for those purposes for which the information was provided to the requesting entity, and that the requesting entity has security safeguards in place to prevent the unauthorized disclosure of the information.

C. Except as otherwise allowed by law or as otherwise authorized by agreement between the department of economic security and the United States department of labor, the department of economic security or the office of economic opportunity may not use federal unemployment insurance grant monies to pay for any costs incurred in processing and handling requests for disclosure of unemployment insurance information. The department **OF ECONOMIC SECURITY** and the office of economic opportunity, in consultation with the workforce data task force, shall establish a rate structure that complies with 20 Code of Federal Regulations section 603.8 for costs incurred in processing requests for disclosure of unemployment insurance information.

D. The requesting entity may not make public any unemployment insurance information that identifies an individual or the individual's employer.□ Any unauthorized disclosure, including security breaches, shall be reported to the department and the office of economic opportunity immediately.□ Any person who knowingly discloses confidential unemployment insurance information in violation of this section without prior written authorization from the department or the office of economic opportunity or authorization as otherwise provided by law is guilty of a class 3 misdemeanor.

E. The office of economic opportunity may use unemployment insurance information to perform economic **analysis ANALYSES**, for the development of labor market information and a state workforce evaluation data system and for other program and research purposes.

F. This section does not prohibit disclosure that is required or allowed by federal law.

Sec. 2. **Repeal**

Section **23-941.01**, Arizona Revised Statutes, is repealed.

Sec. 3. Title 23, chapter 6, article 3, Arizona Revised Statutes, is amended by adding a new section 23-941.01, to read:

23-941.01. Settlement of accepted claims; exception; definitions

A. THE INTERESTED PARTIES TO A CLAIM MAY:

1. SETTLE AND RELEASE ALL OR ANY PART OF AN ACCEPTED CLAIM FOR COMPENSATION, BENEFITS, PENALTIES OR INTEREST.

2. IF THE PERIOD OF DISABILITY IS TERMINATED BY THE CARRIER, SPECIAL FUND OR SELF-INSURED EMPLOYER, NEGOTIATE A FULL AND FINAL SETTLEMENT.

B. ANY FULL AND FINAL SETTLEMENT SHALL:

1. BE IN WRITING.

2. BE SIGNED BY THE CARRIER, SPECIAL FUND OR SELF-INSURED EMPLOYER AND THE EMPLOYEE OR THE EMPLOYEE'S AUTHORIZED REPRESENTATIVE.

3. ACKNOWLEDGE THAT THE EMPLOYEE HAD THE OPPORTUNITY TO SEEK LEGAL ADVICE AND BE REPRESENTED BY COUNSEL.

4. INCLUDE A DESCRIPTION OF THE EMPLOYEE'S MEDICAL CONDITIONS THAT HAVE BEEN IDENTIFIED AND CONTEMPLATED AT THE TIME OF THE SETTLEMENT AGREEMENT.

C. IF THE EMPLOYEE IS REPRESENTED BY COUNSEL, THE FULL AND FINAL SETTLEMENT SHALL INCLUDE THE FOLLOWING ATTESTATIONS:

1. THE EMPLOYEE UNDERSTANDS THE RIGHTS SETTLED AND RELEASED BY THE AGREEMENT AND WAS REPRESENTED BY COUNSEL.

2. THE EMPLOYEE HAS BEEN PROVIDED INFORMATION FROM THE CARRIER, SPECIAL FUND OR SELF-INSURED EMPLOYER THAT OUTLINES ANY REASONABLE ANTICIPATED FUTURE MEDICAL, SURGICAL AND HOSPITAL BENEFITS RELATING TO THE CLAIM AND THE PROJECTED COST OF THOSE BENEFITS AND THAT PROVIDES AN EXPLANATION OF HOW THOSE PROJECTED COSTS WERE DETERMINED.

3. THE EMPLOYEE UNDERSTANDS THAT MONIES RECEIVED FOR FUTURE MEDICAL TREATMENT ASSOCIATED WITH THE INDUSTRIAL INJURY SHOULD BE SET ASIDE TO ENSURE THAT THE COSTS OF SUCH TREATMENT WILL BE PAID.

4. THE PARTIES HAVE CONSIDERED AND TAKEN REASONABLE STEPS TO PROTECT ANY INTERESTS OF MEDICARE, MEDICAID, THE INDIAN HEALTH SERVICE AND THE UNITED STATES DEPARTMENT OF VETERANS AFFAIRS, INCLUDING ESTABLISHING A MEDICARE SAVINGS ACCOUNT IF NECESSARY.□

5. THE PARTIES HAVE CONDUCTED A SEARCH FOR AND TAKEN REASONABLE STEPS TO SATISFY ANY IDENTIFIED MEDICAL LIENS.

D. IF THE EMPLOYEE IS NOT REPRESENTED BY COUNSEL, THE EMPLOYEE SHALL APPEAR BEFORE AN ADMINISTRATIVE LAW JUDGE AND THE ADMINISTRATIVE LAW JUDGE SHALL MAKE SPECIFIC FACTUAL FINDINGS REGARDING WHETHER THE REQUIREMENTS OF SUBSECTION B AND SUBSECTION C, PARAGRAPHS 2, 3, 4 AND 5 OF THIS SECTION ARE SATISFIED. THE ADMINISTRATIVE LAW JUDGE MAY NOT APPROVE THE SETTLEMENT IF THE REQUIREMENTS OF SUBSECTION B OF THIS SECTION ARE NOT MET OR IF THE SETTLEMENT IS NOT DEEMED FAIR AND REASONABLE TO THE EMPLOYEE.

E. A FULL AND FINAL SETTLEMENT IS NOT VALID AND ENFORCEABLE UNLESS THE FULL AND FINAL SETTLEMENT IS APPROVED BY THE COMMISSION. WHEN DETERMINING WHETHER TO APPROVE A SETTLEMENT, THE COMMISSION SHALL CONSIDER WHETHER THE SETTLEMENT IS IN THE BEST INTERESTS OF THE EMPLOYEE BASED ON THE FOLLOWING CRITERIA:

- 1. WHETHER THE EMPLOYEE'S INJURIES ARE STABILIZED.**
- 2. THE PERMANENCY OF THE EMPLOYEE'S INJURIES.**

F. A LUMP SUM SETTLEMENT PAYMENT SHALL BE MADE TO THE EMPLOYEE WITHIN FIFTEEN DAYS AFTER THE AWARD APPROVING THE SETTLEMENT BECOMES FINAL.

G. THE CARRIER, SPECIAL FUND OR SELF-INSURED EMPLOYER SHALL NOTIFY THE ATTENDING PHYSICIAN OF THE APPROVAL OF A FULL AND FINAL SETTLEMENT IF THE FULL AND FINAL SETTLEMENT TERMINATES THE EMPLOYEE'S ENTITLEMENT TO MEDICAL BENEFITS. UNLESS MEDICAL BENEFITS RENDERED BEFORE THE APPROVAL DATE OF THE FULL AND FINAL SETTLEMENT ARE SUBJECT TO A DISPUTE OR PAYMENT FOR THE TREATMENT WAS INCLUDED IN THE FULL AND FINAL SETTLEMENT AGREEMENT, THE CARRIER, SPECIAL FUND OR SELF-INSURED EMPLOYER REMAINS RESPONSIBLE FOR PAYMENT FOR THE TREATMENT NOT COVERED BY THE FULL AND FINAL SETTLEMENT AGREEMENT AS PROVIDED BY THIS CHAPTER.

H. NOTWITHSTANDING SUBSECTION A OF THIS SECTION, A FULL AND FINAL SETTLEMENT MAY NOT BE NEGOTIATED TO SETTLE ISSUES RESULTING IN TOTAL AND PERMANENT DISABILITY PURSUANT TO SECTION 23-1045, SUBSECTIONS C AND D.

I. A FULL AND FINAL SETTLEMENT AGREEMENT MAY NOT INCLUDE THE SETTLEMENT OF CLAIMS UNRELATED TO THE CLAIM FOR COMPENSATION, BENEFITS, PENALTIES AND INTEREST.

J. THIS SECTION DOES NOT APPLY TO THE SETTLEMENT OF CLAIMS THAT HAVE BEEN DENIED.

K. FOR THE PURPOSES OF THIS SECTION:

1. "FULL AND FINAL SETTLEMENT" MEANS A SETTLEMENT IN WHICH THE INJURED EMPLOYEE OR, IF THE INJURED EMPLOYEE IS DECEASED, THE EMPLOYEE'S ESTATE, SURVIVING SPOUSE OR DEPENDENT WAIVES ANY FUTURE ENTITLEMENT TO BENEFITS ON THE CLAIM AND ANY FUTURE RIGHT TO CHANGE THE CLAIM PURSUANT TO SECTION 23-1044, SUBSECTION F OR REOPEN THE CLAIM PURSUANT TO SECTION 23-1061, SUBSECTION H.

2. "SPECIAL FUND" MEANS THE SPECIAL FUND ESTABLISHED BY SECTION 23-1065.

Sec. 4. Section 23-1062, Arizona Revised Statutes, is amended to read:

23-1062. Medical, surgical, hospital benefits; translation services; travel expenses; commencement of compensation; method of compensation

A. Promptly, on notice to the employer, every injured employee shall receive medical, surgical and hospital benefits or other treatment, nursing, medicine, surgical supplies, crutches and other apparatus, including artificial members, reasonably required at the time of the injury, and during the period of disability. Such benefits shall be termed "medical, surgical and hospital benefits".¹

B. Medical, surgical and hospital benefits include translation services, if needed.□ A carrier, self-insurance pool or employer that does not direct care pursuant to section 23-1070 may choose the translator if the translator is certified by an outside agency and is not an employee of the carrier, self-insurance pool or employer. If the carrier, self-insurance pool or employer is unable to locate a certified translator for the particular language or dialect needed, the parties may agree on a translator who is not a certified translator.

C. COMPENSATION FOR MEDICAL, SURGICAL AND HOSPITAL BENEFITS SHALL INCLUDE REIMBURSEMENT FOR REASONABLE TRAVEL EXPENSES IF THE EMPLOYEE MUST TRAVEL MORE THAN TWENTY-FIVE MILES FROM THE EMPLOYEE'S PLACE OF RESIDENCE TO OBTAIN MEDICAL CARE FOR THE INJURY.

↪ D. The first installment of compensation is to be paid no later than the twenty-first day after written notification by the commission to the carrier of the filing of a claim unless the right to compensation is denied. Thereafter, compensation shall be paid at least once each two weeks during the period of temporary total disability and at least monthly thereafter. Compensation shall not be paid for the first seven days after the

injury. If the incapacity extends beyond the period of seven days, compensation shall begin on the eighth day after the injury, but if the disability continues for one week beyond such seven days, compensation shall be computed from the date of the injury.

~~D.~~ E. Compensation shall be made by negotiable instrument, payable immediately on demand or, at the election of the employee and if offered by the employer or carrier, by another commonly accepted method for transferring money by banking institutions, including electronic fund transfers to the employee's account or a prepaid debit card account that is established for the purpose of making direct electronic payment to the employee.

Sec. 5. Industrial commission of Arizona; review of authorization process; delayed repeal

A. On or before December 31, 2017, the industrial commission of Arizona shall review and determine a process for streamlining the authorization process for treatment that is within the evidence-based medical treatment guidelines.

B. This section is repealed from and after June 30, 2018.

Sec. 6. Effective date

Section 23-941.01, as repealed by this act, and section 23-941.01, as added by this act, are effective from and after October 31, 2017.

APPROVED BY THE GOVERNOR MAY 8, 2017.

FILED IN THE OFFICE OF THE SECRETARY OF STATE MAY 8, 2017.

GOVERNOR'S REGULATORY REVIEW COUNCIL

STAFF MEMORANDUM – EXPEDITED RULEMAKING

MEETING DATE: July 10, 2018

AGENDA ITEM: E-5

TO: Members of the Governor's Regulatory Review Council (Council)

FROM: Council Staff

DATE: June 19, 2018

SUBJECT: DEPARTMENT OF HEALTH SERVICES

Title 9, Chapter 7, Article 1, General Provisions; Article 3, Radioactive Material Licensing; Article 4, Standards for Protection against Ionizing Radiation; Article 6, Use of X-Rays in the Healing Arts; Article 7, Medical Uses of Radioactive Material; Article 10, Notices, Instructions, and Reports to Radiation Workers, Inspections; Article 15, Transportation; Article 19, Physical Protection for Category 1 and Category 2 Quantities of Radioactive Material

Amend: R9-7-102, R9-7-103, R9-7-302, R9-7-303, R9-7-304, R9-7-305, R9-7-306, R9-7-311, R9-7-313, R9-7-323, R9-7-408, R9-7-415, R9-7-417, R9-7-418, R9-7-419, R9-7-448, R9-7-451, Appendix C, R9-7-611.01, R9-7-613, R9-7-710, R9-7-711, R9-7-719, R9-7-721, Exhibit A, R9-7-1006, R9-7-1507, R9-7-1508, R9-7-1510, R9-7-1512, R9-7-1515, R9-7-1927, R9-7-1943, R9-7-1975, R9-7-1977, R9-7-19101

SUMMARY OF THE RULEMAKING

This expedited rulemaking, from the Arizona Department of Health Services (Department), seeks to amend 34 rules, one appendix, and one exhibit in A.A.C. Title 9, Chapter 7. The Department states that the purpose of the rulemaking is to remain in compliance with the U.S. Nuclear Regulatory Commission and to reduce the administrative burden of the rules by clarifying the existing language in the rules, correcting cross-references, and making the rules easier to understand.

The Department indicates that the use of the expedited rulemaking process is justified by A.R.S. § 41-1027 because the rulemaking does not increase the cost of regulatory compliance or any fees, or reduce procedural rights of regulated persons, and either adopts or incorporates by

reference federal statutes and regulations. This rulemaking also implements the course of action proposed in a five-year review report to be heard by the Council on the same day.

Proposed Action

- The Department seeks to amend R9-7-102 to clarify, remove, and add definitions relating to radioactive materials,
- The Department also seeks to fix cross-references, clarify language, and update errors.
- The Department seeks to amend the Articles in an effort to stay in compliance with the U.S. Nuclear Regulatory Commission, which periodically issues changes as the Regulation Toolbox: Review Summary Sheets for Regulation Amendments (RATS IDs). The Department seeks to incorporate these changes to remain in compliance.

1. Are the rules legal, consistent with legislative intent, and within the agency's statutory authority?

Yes. The Department cites to both general and specific authority, including A.R.S. § 30-654(B)(5) which authorizes the Department to “adopt rules deemed necessary.”

2. Do the rules establish a new fee or contain a fee increase?

No. The rules do not establish a new fee or contain a fee increase.

3. Does the agency adequately address the comments on the proposed rules and any supplemental proposals?

No. The Department indicates that it has not received any public comments on the rulemaking.

4. Are the final rules a substantial change, considered as a whole, from the proposed rules and any supplemental proposals?

No. The only change that was made between the Notice of Proposed Expedited Rulemaking and the Notice of Final Expedited Rulemaking was a typographical error.

5. Are the rules more stringent than corresponding federal law and, if so, is there statutory authority to exceed the requirements of federal law?

No. The rules are not more stringent than corresponding federal law.

6. Do the rules require a permit or license and, if so, does the agency comply with A.R.S. § 41-1037?

The Department indicates that it is authorized to issue licenses and registrations for sources of ionizing radiation and those persons using these sources pursuant to A.R.S. Title 30,

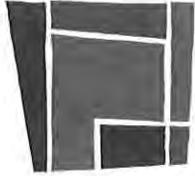

Chapter 2, Article 2, as amended by Laws 2017, Ch. 313. This licensing and registration must be compatible with requirements in the Agreement. The rules refer to permits both general and specific. The general permit applies to certain levels of radioactive material, and specific permits are issued by rule for quantities and uses that are specific to the user and their training or scope of practice.

7. Does the preamble disclose a reference to any study relevant to the rules that the agency reviewed and either did or did not rely upon?

No. The Department indicates that it did not rely on any study for this rulemaking.

8. Conclusion

If approved, this expedited rulemaking will become effective immediately upon filing with the Secretary of State. See A.R.S. § 41-1027(H). Council staff recommends approval of the expedited rulemaking.

ARIZONA DEPARTMENT OF HEALTH SERVICES

POLICY & INTERGOVERNMENTAL AFFAIRS

May 16, 2018

Nicole O. Colyer, Esq., Chair
Governor's Regulatory Review Council
Arizona Department of Administration
100 N. 15th Avenue, Suite 305
Phoenix, AZ 85007

RE: 9 A.A.C. 7 Department of Health Services – Radiation Control

Dear Ms. Colyer:

Enclosed is the administrative rule identified above which I am submitting, as the Designee of the Director of the Department of Health Services, for approval by the Governor's Regulatory Review Council (Council) under A.R.S. §§ 41-1027 and 41-1052.

The following information is provided for your use in reviewing the enclosed rule package pursuant to A.R.S. § 41-1052 and A.A.C. R1-6-202:

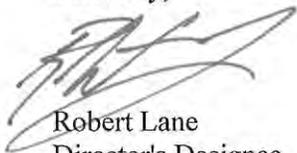

1. The close of record:
The close of record was May 11, 2018. Submission of the rule is within the 120 days allowed for Final Expedited Rulemaking.
2. Explanation of how the expedited rule meets the criteria in A.R.S. § 41-1027(A):
The rulemaking does not increase the cost of regulatory compliance, increase a fee, or reduce procedural rights of persons regulated. The rulemaking adopts without material change federal regulations related to the control of radioactive material in a manner that is consistent with Arizona's agreement with the U.S. Nuclear Regulatory Commission. In addition, the rulemaking removes obsolete or confusing requirements and clarifies current requirements.
3. Whether the rulemaking relates to a five-year-review report and, if applicable, the date the report was approved by the Council:
The rulemaking for 9 A.A.C. 7 relates in part to a five-year-review report for Article 3 that is scheduled to be reviewed for the July 10, 2018 Council meeting.
4. A list of all items enclosed:
 - a. Notice of Final Expedited Rulemaking, including the Preamble, Table of Contents, and text of the rule
 - b. Statutory authority
 - c. Current rule

Douglas A. Ducey | Governor Cara M. Christ, MD, MS | Director

The Department is requesting that the rules be heard at the Council meeting on July 10, 2018.

I certify that the Preamble of this rulemaking discloses a reference to any study relevant to the rule that the Department reviewed and either did or did not rely on in its evaluation of or justification for the rule.

Sincerely,

A handwritten signature in black ink, appearing to be 'RL', written over a horizontal line.

Robert Lane
Director's Designee

R9-7-19101	Amend

2. Citations to the agency’s statutory authority for the rulemaking to include the authorizing statute (general) and the implementing statute (specific):

Authorizing Statutes: A.R.S. §§ 30-654(B)(5) and 36-136(G)

Implementing Statutes: A.R.S. §§ 30-654, 30-656, 30-657, 30-671 through 30-672.01, 30-681 through 30-689, and 30-721

3. The effective date of the rules:

The rule is effective the day the Notice of Final Expedited Rulemaking is filed with the Office of the Secretary of State.

4. Citations to all related notices published in the Register that pertain to the record of the final expedited rulemaking:

Notice of Rulemaking Docket Opening: 24 A.A.R. 793, April 13, 2018

Notice of Proposed Expedited Rulemaking: 24 A.A.R. 1325, May 4, 2018

Notice of Recodification: 24 A.A.R. 813, April 20, 2018

5. The agency’s contact person who can answer questions about the rulemaking:

Name: Colby Bower, Assistant Director
Address: Department of Health Services
Public Health Licensing Services
150 N. 18th Ave., Suite 510
Phoenix, AZ 85007
Telephone: (602) 542-6383
Fax: (602) 364-4808
E-mail: Colby.Bower@azdhs.gov
or

Name: Robert Lane, Chief
Address: Arizona Department of Health Services
Office of Administrative Counsel and Rules
150 N. 18th Avenue, Suite 200
Phoenix, AZ 85007
Telephone: (602) 542-1020
Fax: (602) 364-1150
E-mail: Robert.Lane@azdhs.gov

6. An agency's justification and reason why a rule should be made, amended, repealed or renumbered, under A.R.S. § 41-1027, to include an explanation about the rulemaking:

Arizona Revised Statutes (A.R.S.) § 30-654(B)(5), as revised by Laws 2017, Ch. 313, requires the Arizona Department of Health Services (Department) to make rules deemed necessary to administer A.R.S. Title 30, Chapter 4, Control of Ionizing Radiation. The Department recently recodified rules adopted in A.A.C. Title 12, Chapter 1 to implement the requirements in A.R.S. Title 30, Chapter 4 into A.A.C. Title 9, Chapter 7.

Arizona is an Agreement State by the Document negotiated between the United States Atomic Energy Commission (now U.S. Nuclear Regulatory Commission) and the Governor of Arizona in March of 1967 under A.R.S. § 30-656. In order to remain in compliance with the Agreement, Arizona must adopt regulations related to the control of radioactive material in a manner that is consistent with federal regulations. The U.S. Nuclear Regulatory Commission periodically issues changes, denoted as Regulation Toolbox: Review Summary Sheets for Regulation Amendments (RATS IDs), that are

required to be incorporated by Agreement States. Several RATS IDs have not yet been incorporated into Arizona's rules related to the control of radioactive material. The Department is now revising the newly recodified rules in A.A.C. Title 9, Chapter 7, by expedited rulemaking, to conform to the RATS IDs under 10 CFR Chapter I. The Department is also making other changes to reduce the administrative burden of the rules by clarifying existing language in the rules, correcting cross-references, and making the rules easier to understand.

The Department believes that these changes are consistent with the purpose of A.R.S. § 41-1027 in that this rulemaking does not increase the cost of regulatory compliance, does not increase a fee, or reduce a procedural right of regulated persons, and either adopts or incorporates by reference, without material change, federal statutes and regulations, or clarifies language of a rule without changing its effect.

7. A reference to any study relevant to the rule that the agency reviewed and proposes either to rely on or not to rely on in its evaluation of or justification for the rule, where the public may obtain or review each study, all data underlying each study, and any analysis of each study and other supporting material:

The Department did not review or rely on any study for this rulemaking.

8. A showing of good cause why the rulemaking is necessary to promote a statewide interest if the rulemaking will diminish a previous grant of authority of a political subdivision of this state.

Not applicable

9. A summary of the economic, small business, and consumer impact:

Under A.R.S. § 41-1055(D)(2), the Department is not required to provide an economic, small business, and consumer impact statement.

10. A description of any changes between the proposed expedited rulemaking, including supplemental notices, and the final expedited rulemaking:

Between when the proposed expedited rulemaking was posted by the Department on April 11, 2018 and when the Notice was published, the Department corrected a typographical error in R9-7-613. This correction is also part of the final expedited rulemaking.

11. Agency's summary of the public or stakeholder comments or objections made about the rulemaking and the agency response to the comments:

The Department did not receive public or stakeholder comments about the rulemaking.

12. All agencies shall list other matters prescribed by statute applicable to the specific agency or to any specific rule or class of rules. Additionally, an agency subject to Council review under A.R.S. §§ 41-1052 and 41-1055 shall respond to the following questions:

a. Whether the rule requires a permit, whether a general permit is used and if not, the reasons why a general permit is not used:

According to A.R.S. Title 30, Chapter 4, Article 2, as amended by Laws 2017, Ch. 313, the Department is authorized to issue licenses and registrations for sources of ionizing radiation and those persons using these sources. This licensing and registration must be compatible with requirements in the Agreement. The rules refer to permits both general and specific. The general permit applies to certain levels of radioactive material, and specific permits are issued by rule for quantities and uses that are specific to the user and their training or scope of practice.

b. Whether a federal law is applicable to the subject of the rule, whether the rule is more stringent than federal law and if so, citation to the statutory authority to exceed the requirements of federal law:

The rules are not more stringent than federal law.

c. Whether a person submitted an analysis to the agency that compares the rule's impact of the competitiveness of business in this state to the impact on business in other states:

No such analysis was submitted.

13. A list of any incorporated by reference material as specified in A.R.S. § 41-1028 and its location in the rules:

In the rules being revised as part of this rulemaking, there are many incorporations by reference that are not being changed. These are listed below with the relevant rule

Section:

R9-7-102:

10 CFR 35.50(a) or (c)(1) and 10 CFR 35.59 (January 1, 2010)

10 CFR 71, Appendix A, Table A-1 (January 1, 2013)

10 CFR 71, Subpart D (January 1, 2010)

10 CFR 71.4 (January 1, 2013)

10 CFR 71.75 (January 1, 2013)

21 CFR 1020.40 (April 1, 2013)
40 CFR 190 and 191 (July 1, 2013)
49 CFR 107, 171 through 180 (October 1, 2013)
49 CFR 173.403 (October 1, 2012)

R9-7-103:

39 CFR 111.1 (July 1, 2007)
49 CFR 107.109, 107.111, 107.113, 171.2, 171.3, 172.200, 173.1, 173.3, 173.4,
173.401, 175.3, 175.10, 176.3, 176.5, 176.11, 176.24, 176.27, and 177.801
(October 1, 2007)

R9-7-304:

10 CFR 30.3 (January 1, 2013)

R9-7-306:

10 CFR 31.5(b), (c), and (d) (January 1, 2013)
10 CFR 32.57 (January 1, 2013)
10 CFR 70.39 (January 1, 2013)
10 CFR 110 (January 1, 2013)
10 CFR 32.21 (January 1, 2013)
10 CFR 110 (January 1, 2013)

R9-7-311:

10 CFR 30.32(j) (January 1, 2013)
10 CFR 32.72 (January 1, 2013)
10 CFR 31.5(c)(13)(i) (January 1, 2013)
10 CFR 32.52 (January 1, 2013)
10 CFR 32.53 through 32.56 (January 1, 2015)
10 CFR 32.57, 32.58, 32.59, and 70.39 (January 1, 2015)
10 CFR 32.61 and 32.62 (January 1, 2015)
10 CFR 32.74 (January 1, 2015)
10 CFR 32.201 (January 1, 2013)

R9-7-323:

10 CFR 30.35, 40.36, and 70.25 (January 1, 2015)
10 CFR 30.36(g)(1), 40.42(g)(1), and 70.38(g)(1) (January 1, 2015)
10 CFR 30.36(i), 40.42(i), and 70.38(i) (January 1, 2015)
10 CFR 30.36(j), 40.42(j), and 70.38(j) (January 1, 2015)

R9-7-418:

NIST Handbook 150 (March 1994)

NIST Handbook 150-4 (August 1994)

R9-7-1507:

10 CFR 71, Subpart H (January 1, 2008)

R9-7-1508:

49 CFR 172.202 and 172.203(d) (October 1, 2007)

R9-7-1510:

10 CFR 71, Subparts A, G, and H (January 1, 2010)

10 CFR 71.22, (January 1, 2010)

10 CFR 71.43(g) (January 1, 2010)

10 CFR 71.45 (January 1, 2010)

10 CFR 71.47 (January 1, 2010)

10 CFR 71.71 and 71.73 (January 1, 2010)

10 CFR 71.4, revised January 1, 2010

10 CFR 71.85(c) (January 1, 2010)

49 CFR 173 and 178 (October 1, 2010)

49 CFR 173.403 (October 1, 2010)

49 CFR 173.443 (October 1, 2010)

R9-7-1512:

10 CFR 71.97 (January 1, 2015)

R9-7-1515:

10 CFR 71.14(a) (January 1, 2008)

R9-7-1927:

10 CFR 37.7 (January 1, 2015)

10 CFR part 73 (January 1, 2015)

In R9-7-1510(B)(1)(a) and (b), the citations to the incorporated 10 CFR 71.85(c) (January 1, 2010) and 49 CFR 173.403 (October 1, 2010) are being removed. In R9-7-1510(D)(1), the citation to 49 CFR 171.12 (October 1, 2010) is being corrected to 49 CFR 171.23 (October 1, 2010).

14. Whether the rule was previously made, amended, or repealed as an emergency rules. If so, cite the notice published in the Register as specified in R1-1-409(A). Also, the agency shall state where the text was changed between the emergency and

the final rulemaking packages:

The rule was not previously made as an emergency rule.

15. The full text of the rule follows:

TITLE 9. HEALTH SERVICES
CHAPTER 7. RADIATION CONTROL

ARTICLE 1. GENERAL PROVISIONS

Section

- R9-7-102. Definitions
- R9-7-103. Exemptions

ARTICLE 3. RADIOACTIVE MATERIAL LICENSING

Section

- R9-7-302. Source Material; Exemptions
- R9-7-303. Radioactive Material Other Than Source Material; Exemptions
- R9-7-304. License Types
- R9-7-305. General Licenses – Source Material
- R9-7-306. General License – Radioactive Material Other Than Source Material
- R9-7-311. Special Requirements for a Specific License to Manufacture, Assemble, Repair, or Distribute Commodities, Products, or Devices that Contain Radioactive Material
- R9-7-313. Specific Terms and Conditions
- R9-7-323. Financial Assurance and Recordkeeping for Decommissioning

ARTICLE 4. STANDARDS FOR PROTECTION AGAINST IONIZING RADIATION

Section

- R9-7-408. Occupational Dose Limits for Adults
- R9-7-415. Dose Equivalent to an Embryo or Fetus
- R9-7-417. Testing for Leakage or Contamination of Sealed Sources
- R9-7-418. Surveys and Monitoring
- R9-7-419. Conditions Requiring Individual Monitoring of External and Internal Occupational Dose
- R9-7-448. Additional Reporting
- R9-7-451. Termination of a Radioactive Material License or a Licensed Activity

Appendix C. Quantities of Licensed or Registered Material Requiring Labeling

ARTICLE 6. USE OF X-RAYS IN THE HEALING ARTS

Section

- R9-7-611.01. Electronic Brachytherapy to Deliver Interstitial and ~~Intracavity~~ Intracavitary Therapeutic Radiation Dosage
- R9-7-613. Veterinary Medicine Radiographic Systems

ARTICLE 7. MEDICAL USES OF RADIOACTIVE MATERIAL

Section

- R9-7-710. Radiation Safety Officer Training
- R9-7-711. Authorized Medical Physicist Training
- R9-7-719. Training for Uptake, Dilution, and Excretion Studies
- R9-7-721. Training for Imaging and Localization Studies Not Requiring a Written Directive
- Exhibit A. Medical Use Groups

**ARTICLE 10. NOTICES, INSTRUCTIONS, AND REPORTS TO RADIATION
WORKERS; INSPECTIONS**

Section

- R9-7-1006. Consultation with Workers During Inspections

ARTICLE 15. TRANSPORTATION

Section

- R9-7-1507. Packaging Quality Assurance
- R9-7-1508. Advance Notification of Nuclear Waste Transportation
- R9-7-1510. Packaging
- R9-7-1512. Advance Notification of Shipment of Irradiated Reactor Fuel and Nuclear Waste
- R9-7-1515. Exemption for Low-level Radioactive Materials

**ARTICLE 19. PHYSICAL PROTECTION OF CATEGORY 1 AND CATEGORY 2
QUANTITIES OF RADIOACTIVE MATERIAL**

Section

- R9-7-1927. Requirements for Criminal History Records Checks of Individuals Granted Unescorted Access to Category 1 or Category 2 Quantities of Radioactive Material
- R9-7-1943. General Security Program Requirements
- R9-7-1975. Preplanning and Coordination of Shipment of Category 1 or Category 2 Quantities of Radioactive Material
- R9-7-1977. Advance Notification of Shipment of Category 1 Quantities of Radioactive
- R9-7-19101. Form of Records

ARTICLE 1. GENERAL PROVISIONS

R9-7-102. Definitions

Terms defined in A.R.S. § 30-651 have the same meanings when used in this Chapter, unless the context otherwise requires. Additional subject-specific definitions are used in other Articles.

“A1” means the maximum activity of special form radioactive material permitted in a type A package. These values are either listed in 10 CFR 71, Appendix A, Table A-1, or may be derived in accordance with the procedures prescribed in 10 CFR 71, Appendix A, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“A2” means the maximum activity of radioactive material, other than special form radioactive material, low specific activity (LSA) material, and surface contaminated object (SCO) material, permitted in a Type A package. These values are either listed in 10 CFR 71, Appendix A, Table A-1, or may be derived in accordance with the procedure prescribed in 10 CFR 71, Appendix A, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“Absorbed dose” means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

“Accelerator” means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of 1 MeV. For purposes of this definition, “particle accelerator” is an equivalent term.

“Accelerator produced material” means any material made radioactive by irradiating it in a particle accelerator.

“Act” means A.R.S. Title 30, Chapter 4.

“Activity” means the rate of disintegration, transformation, or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).

“Adult” means an individual 18 or more years of age.

“Agreement State” means any state with which the United States Nuclear Regulatory Commission has entered into an effective agreement under Section 274(b) of the Atomic Energy Act of 1954, as amended (73 Stat. 689). “Nonagreement State” means any other

state.

“Airborne radioactive material” means any radioactive material dispersed in the air in the form of aerosols, dusts, fumes, mists, vapors, or gases.

“Airborne radioactivity area” means a room, enclosure, or area in which airborne radioactive materials, composed wholly or partly of licensed radioactive material, exist in concentrations:

In excess of the derived air concentrations (DACs) specified in Appendix B, Table I of Article 4 of these rules; or

That an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

“ALARA” means as low as is reasonably achievable, making every reasonable effort to maintain exposures to radiation as far below the dose limits in these rules as is practical, consistent with the purpose for which the licensed or registered activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.

“Analytical x-ray equipment” means equipment used for x-ray diffraction or x-ray-induced fluorescence analysis.

“Analytical x-ray system” means a group of components utilizing x-rays to determine the elemental composition or to examine the microstructure of materials.

“Annual” means done or performed yearly. For purposes of Chapter 1, any required activity done or performed within plus or minus two weeks of the annual due date is considered done or performed in a timely manner.

“Approved individual” means an individual whom the licensee has determined to be trustworthy and reliable for unescorted access in accordance with subpart B of this part and who has completed the training required by 10 CFR 37.43(c).

“Authorized medical physicist” means an individual who meets the requirements in R9-7-711; or is identified as an authorized medical physicist or teletherapy physicist on:

A specific medical use license issued by the Department, the NRC, or another Agreement State;

A medical use permit issued by a NRC master material licensee;
A permit issued by the Department, the NRC, or another Agreement State broad scope medical use licensee; or
A permit issued by a NRC master material license broad scope medical use permittee.

“Authorized nuclear pharmacist” means a pharmacist who meets the requirements in R9-7-712; or is ~~identified as an authorized nuclear pharmacist on~~:

A Identified as an authorized nuclear pharmacist on a specific license issued by the Department, the NRC, or another Agreement State that authorizes medical use or the practice of nuclear pharmacy;

A Identified as an authorized nuclear pharmacist on a permit issued by a NRC master material licensee that authorizes medical use or the practice of nuclear pharmacy;

A Identified as an authorized nuclear pharmacist on a permit issued by the Department, the NRC, or another Agreement State broad scope medical use licensee that authorizes medical use or the practice of nuclear pharmacy; or

A Identified as an authorized nuclear pharmacist on a permit issued by a NRC master material license broad scope medical use permittee that authorizes medical use or the practice of nuclear pharmacy; or

~~Is identified~~ Identified as an authorized nuclear pharmacist by a commercial nuclear pharmacy that has been authorized to identify authorized nuclear pharmacists; or

~~Is designated~~ Designated as an authorized nuclear pharmacist in accordance with R9-7-311(G).

“Authorized user” means a physician, dentist, or podiatrist who meets the requirements in R9-7-719, R9-7-723, R9-7-727, R9-7-728, or R9-7-744; or is identified as an authorized user on:

The Department, NRC, or another Agreement State license that authorizes the medical use of radioactive material;

A permit issued by a NRC master material licensee that is authorized to permit the medical use of radioactive material;

A permit issued by the Department, the NRC, or another Agreement State specific licensee of broad scope that is authorized to permit the medical use of

radioactive material; or

A permit issued by a NRC master material license broad scope permittee that is authorized to permit the medical use of radioactive material.

“Background investigation” means an assessment of an individual’s prior actions and experience conducted by a licensee or applicant, to support the determination of the individual’s trustworthiness and reliability in accordance with 10 CFR 37.25.

“Background radiation” means radiation from cosmic sources; not technologically enhanced naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents, such as Chernobyl, that contribute to background radiation and are not under the control of a licensee. “Background radiation” does not include sources of radiation regulated by the Department.

“Becquerel” (Bq) means the International System (SI) unit for activity and is equal to 1 disintegration per second (dps or tps).

“Bioassay” means the determination of kinds, quantities, or concentrations, and in some cases, the locations of radioactive material in the human body, whether by direct measurement, in vivo counting, or by analysis and evaluation of materials excreted or removed from the human body. For purposes of these rules, “radiobioassay” is an equivalent term.

“Brachytherapy” means a method of radiation therapy in which an encapsulated source or group of sources is utilized to deliver beta or gamma radiation at a distance of up to a few centimeters, by surface, intracavitary or interstitial application.

“Byproduct material” means:

Any radioactive material, except special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material;

The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium or thorium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute “byproduct material” within this definition;

Any discrete source of radium-226 that is produced, extracted, or converted after

extraction, for use for a commercial, medical, or research activity; or any material that, has been made radioactive by use of a particle accelerator; and is produced, extracted, or converted after extraction, for use for a commercial, medical, or research activity; and

Any discrete source of naturally occurring radioactive material, other than source material, that the NRC, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate federal agency, determines would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security and; before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical, or research activity.

“Calendar quarter” means not less than 12 consecutive weeks nor more than 14 consecutive weeks. The first calendar quarter of each year shall begin in January and subsequent calendar quarters shall be so arranged such that no day is included in more than one calendar quarter and no day in any one year is omitted from inclusion within a calendar quarter. A licensee or registrant shall not change the method of determining calendar quarters for purposes of this Chapter except at the beginning of a calendar year.

“Calibration” means the determination of:

The response or reading of an instrument relative to a series of known radiation values over the range of the instrument, or

The strength of a source of radiation relative to a standard.

“Carrier” means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.

“Certifiable cabinet x-ray system” means an existing uncertified x-ray system that meets or has been modified to meet the certification requirements specified in 21 CFR 1020.40, revised April 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“Certificate holder” means a person who has been issued a certificate of compliance or other package approval by the Department or NRC.

“Certificate of Compliance” (CoC) means the certificate issued by the NRC under 10 CFR 71, Subpart D, (Revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.),

which authorizes the design of a package for the transportation of radioactive material. “Certified cabinet x-ray system” means an x-ray system that has been certified in accordance with 21 CFR 1010.2, as being manufactured and assembled on or after April 10, 1975, in accordance with the provisions of 21 CFR 1020.40, both sections revised April 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“CFR” means Code of Federal Regulations.

“Chelating agent” means amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid, and polycarboxylic acids.

“Civil penalty” means the monetary fine which may be imposed on licensees by the Department, pursuant to A.R.S. § 30-687, for violations of the Act, this Chapter, or license conditions.

“Collective dose” means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

“Committed dose equivalent” (HT,50) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

“Committed effective dose equivalent” (HE,50) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues ($HE,50 = \sum w_T HT,50$).

“Consortium” means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radioactive drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution or a federal facility or a medical facility.

“Contamination” means the presence of a radioactive substance on a surface in quantities in excess of 0.4 Bq/cm² (1×10^{-5} μCi/cm²) for beta and gamma emitters and low toxicity alpha emitters, or 0.04 Bq/cm² (1×10^{-6} μCi/cm²) for all other alpha emitters.

“Fixed contamination” means contamination that cannot be removed from a surface during normal conditions of transport.

“Non-fixed contamination” means contamination that can be removed from a

surface during normal conditions of transport.

“Criticality Safety Index (CSI)” means the dimensionless number (rounded up to the next tenth) assigned to and placed on the label of a fissile material package, to designate the degree of control of accumulation of packages, overpacks or freight containers containing fissile material during transportation. Determination of the criticality safety index is described in 10 CFR 71.22, 10 CFR 71.23, and 10 CFR 71.59. The criticality safety index for an overpack, freight container, consignment or conveyance containing fissile material packages is the arithmetic sum of the criticality safety indices of all the fissile material packages contained within the overpack, freight container, consignment or conveyance.

“Curie” means a unit of quantity of radioactivity. One curie (Ci) is that quantity of radioactive material which decays at the rate of $3.7E + 10^{10}$ transformations per second (tps).

“Current license or registration” means a license or registration issued by the Department and for which the licensee has paid the license or registration fee for the current year according to R9-7-1304.

“Deep-dose equivalent” (Hd), which applies to external whole body exposure, is the dose equivalent at a tissue depth of 1 centimeter (1000 mg/cm^2).

“Depleted uranium” means the source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.

“Discrete source” means a radionuclide that has been processed so that its concentration within a material has been purposely increased for use for commercial, medical, or research activities.

“Dose” is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, “radiation dose” is an equivalent term.

“Dose equivalent” (HT) means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

“Dose limits” means the permissible upper bound of radiation doses established in accordance with these rules. For purposes of these rules, “limits” is an equivalent term.

“Dosimeter” (See “Individual monitoring device”)

“Effective dose equivalent” (HE) means the sum of the products of the dose equivalent to each organ or tissue (HT) and the weighting factor (wT) applicable to each of the body organs or tissues that are irradiated ($HE = \sum wTHT$).

“Effluent release” means any disposal or release of radioactive material into the ambient atmosphere, soil, or any surface or subsurface body of water.

“Embryo/fetus” means the developing human organism from conception until the time of birth.

“Enclosed beam x-ray system” means an analytical x-ray system constructed in such a way that access to the interior of the enclosure housing the x-ray source during operation is precluded except through bypassing of interlocks or other safety devices to perform maintenance or servicing.

“Enclosed radiography” means industrial radiography conducted by using cabinet radiography or shielded room radiography.

“Cabinet radiography” means industrial radiography conducted by using an x-ray machine in an enclosure not designed for human admittance and which is so shielded that every location on the exterior meets the conditions for an “unrestricted area.”

“Shielded room radiography” means industrial radiography conducted using an x-ray machine in an enclosure designed for human admittance and which is so shielded that every location of the exterior meets the conditions for an “unrestricted area.”

“Entrance or access point” means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

“Exhibit” for purposes of these rules, is equivalent in meaning to the word “Schedule” as found in previously issued rules, current license conditions, and regulation guide.

“Explosive material” means any chemical compound, mixture, or device which produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.

“Exposure” means:

Being subjected to ionizing radiation or radioactive materials.

The quotient of dQ by dm where “ dQ ” is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass “ dm ” are completely stopped in air. The special unit of exposure is the roentgen (R).

“Exposure rate” means the exposure per unit of time.

“External dose” means that portion of the dose equivalent received from any source of radiation outside the body.

“Extremity” means ~~the shoulder girdle to the phalanges and the lower two thirds of the femur to the phalanges~~ hand, elbow, arm below the elbow, foot, knee, and leg below the knee.

“Fail-safe characteristics” means a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.

“FDA” means the United States Food and Drug Administration.

“Field radiography” means industrial radiography, utilizing a portable or mobile x-ray system, which is not conducted in a shielded enclosure.

“Field station” means a facility where radioactive sources may be stored or used and from which equipment is dispatched to temporary job sites.

“Former U.S. Atomic Energy Commission (AEC) or U.S. Nuclear Regulatory Commission (NRC) licensed facilities” means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.

“Generally applicable environmental radiation standards” means standards issued by the U.S. Environmental Protection Agency (EPA), 40 CFR 190 and 191, revised July 1, 2013, incorporated by reference, and available under R9-7-101, under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material. This incorporated material contains no future editions or amendments.

“Gray” (Gy) means the International System (SI) unit of absorbed dose and is equal to 1 joule per kilogram. One gray equals 100 rad.

“Hazardous waste” means those wastes designated as hazardous in A.R.S. § 49-921(5).

“Healing arts” means the practice of medicine, dentistry, osteopathy, podiatry, chiropractic, and veterinary medicine.

“Health care institution” means every place, institution, or building which provides facilities for medical services or other health-related services, not including private clinics or offices which do not provide overnight patient care.

“High radiation area” means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of 1 mSv (0.1 rem) in one hour at 30 centimeters from the radiation source or 30 centimeters from any surface that the radiation penetrates.

“Human use” means the internal or external administration of radiation or radioactive materials to human beings.

“Impound” means to abate a radiological hazard. Actions which may be taken by the Department in impounding a source of radiation include seizing the source of radiation, controlling access to an area, and preventing a radiation machine from being utilized.

“Indian ~~tribe~~ Tribe” means an Indian or Alaska native ~~tribe~~ Tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian ~~tribe~~ Tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a.

“Individual” means any human being.

“Individual monitoring” means the assessment of:

Dose equivalent

By the use of individual monitoring devices, or

By the use of survey data, or

Committed effective dose equivalent

By bioassay; or

By determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours. (See the definition of DAC-hours in Article 4).

“Individual monitoring device” means a device designed to be worn by a single individual for the assessment of dose equivalent. For purposes of this Chapter, “dosimeter” and “personnel dosimeter,” are equivalent terms. Examples of individual monitoring devices are film badges, thermoluminescence dosimeters (TLDs), pocket ionization chambers, optical stimulation devices, and personal (“lapel”) air sampling

devices.

“Individual monitoring equipment” means one or more individual monitoring devices.

For purposes of this Chapter, “personnel monitoring equipment” is an equivalent term.

“Industrial radiography” means the examination of the macroscopic structure of materials by non-destructive methods utilizing sources of ionizing radiation.

“Injection tool” means a device used for controlled subsurface injection of radioactive tracer material.

“Inspection” means an examination or observation by a representative of the Department, including but not limited to tests, surveys, and monitoring to determine compliance with rules, orders, requirements and conditions of the License or certificate of registration.

“Interlock” means a device arranged or connected such that the occurrence of an event or condition is required before a second event or condition can occur or continue to occur.

“Internal dose” means that portion of the dose equivalent received from radioactive material taken into the body.

“Irradiate” means to expose to radiation.

“Laser” (light amplification by the stimulated emission of radiation) means any device which can produce or amplify electromagnetic radiation with ~~wave lengths~~ wavelengths in the range of 180 nanometers to 1 millimeter primarily by the process of controlled stimulated emission.

“Lens dose equivalent” (LDE) means the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeters (300 mg/cm²).

“License” means the grant of authority, issued pursuant to Articles 3 and 14 of this Chapter and A.R.S. §§ 30-671, 30-672, and 30-721 et seq., to acquire, possess, transfer, and use sources of radiation. The types of licenses issued by the Department are described in R9-7-1302.

“Licensed material” means radioactive material received, possessed, used, transferred, or disposed of under a general or specific license issued by the Department.

“Licensed practitioner” means a person licensed or otherwise authorized by law to practice medicine, dentistry, osteopathy, chiropractic, podiatry, or naturopathy in this state.

“Licensee” means any person who is licensed by the Department under this Chapter to acquire, possess, transfer, or use sources of radiation.

“Licensing State” means any state having regulations equivalent to this Chapter relating

to, and an effective program for the regulation of, naturally occurring and accelerator-produced radioactive material (NARM).

“Limits” (See “Dose limits”)

“Local components” means those parts of an analytical x-ray system that are struck by x-rays, including radiation source housings, port and shutter assemblies, collimator, sample holders, cameras, goniometer, detectors and shielding but not including power supplies, transformers, amplifiers, readout devices, and control panels.

“Logging supervisor” means the individual who provides personal supervision of the utilization of sources of radiation at the well site.

“Logging tool” means a device used subsurface to perform well logging.

“Lost or missing licensed or registered source of radiation” means licensed or registered source of radiation the location of which is unknown. Included are licensed radioactive material or a registered radiation source that has been shipped but has not reached its planned destination and whose location cannot be readily traced or ascertained in the transportation system.

“Low-level waste” means waste material which contains radioactive nuclides in concentrations or quantities which exceed applicable standards for unrestricted release but does not include:

High-level waste, such as irradiated reactor fuel, liquid waste from reprocessing irradiated reactor fuel, or solids into which any such liquid waste has been converted;
Waste material containing transuranic elements with contamination levels greater than 10 nanocuries per gram (370 kilobecquerels per kilogram) of waste material;
The tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content.

“Low Specific Activity (LSA) material” means radioactive material with limited specific activity which is nonfissile or is excepted under 10 CFR 71.15, and which satisfies the descriptions and limits set forth in the following section. Shielding materials surrounding the LSA material may not be considered in determining the estimated average specific activity of the package contents. The LSA material must be in one of three groups:

- (1) LSA—I.
 - (i) Uranium and thorium ores, concentrates of uranium and thorium ores, and other ores containing naturally occurring radionuclides that are intended to be processed for the use of these

radionuclides;

- (ii) Natural uranium, depleted uranium, natural thorium or their compounds or mixtures, provided they are unirradiated and in solid or liquid form;
 - (iii) Radioactive material other than fissile material, for which the A2 value is unlimited; or
 - (iv) Other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 30 times the value for exempt material activity concentration determined in accordance with appendix A.
- (2) LSA—II.
- (i) Water with tritium concentration up to 0.8 TBq/liter (20.0 Ci/liter); or
 - (ii) Other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 10^{-4} A2/g for solids and gases, and 10^{-5} A2/g for liquids.
- (3) LSA—III. Solids (e.g., consolidated wastes, activated materials), excluding powders, that satisfy the requirements of 10 CFR 71.77, in which:
- (i) The radioactive material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.);
 - (ii) The radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that even under loss of packaging, the loss of radioactive material per package by leaching, when placed in water for 7 days will not exceed 0.1 A2; and
 - (iii) The estimated average specific activity of the solid, excluding any shielding material, does not exceed 2×10^{-3} A2/g.

“Major processor” means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material or exceeding four

times Type B quantities as sealed sources but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. Type A and B quantities are defined in 10 CFR 71.4, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“Medical dose” means a radiation dose intentionally delivered to an individual for medical examination, diagnosis, or treatment.

“Member of the public” means any individual except when that individual is receiving an occupational dose.

“MeV” means Mega Electron Volt which equals 1 million volts (10⁶ eV).

“Mineral logging” means any well logging performed in a borehole drilled for the purpose of exploration for minerals other than oil or gas.

“Minor” means an individual less than 18 years of age.

“Monitoring” means the measurement of radiation, ~~radio-active~~ radioactive material concentrations, surface area activities, or quantities of radioactive material, and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, “radiation monitoring” and “radiation protection monitoring” are equivalent terms.

“Multiplier” means a letter representing a number. The use of a multiplier is based on the code given below:

<i>Prefix</i>	<i>Multiplier</i>	<i>Value</i>
	<i>Symbol</i>	
eka	E	10 ¹⁸
peta	P	10 ¹⁵
tera	T	10 ¹²
giga	G	10 ⁹
mega	M	10 ⁶
kilo	k	10 ³
milli	m	10 ⁻³
micro	u	10 ⁻⁶
nano	n	10 ⁻⁹
pico	p	10 ⁻¹²
femto	f	10 ⁻¹⁵

“NARM” means any naturally occurring or accelerator-produced radioactive material. It does not include byproduct, source, or special nuclear material. This term should not be confused with “NORM” which is defined as naturally occurring radioactive material.

“Normal operating procedures” means the entire set of instructions necessary to accomplish the intended use of the source of radiation. These procedures shall include, but are not limited to, sample insertion and manipulation, equipment alignment, routine maintenance by the licensee, and data recording procedures which are related to radiation safety.

“Natural radioactivity” means the radioactivity of naturally occurring radioactive substances.

“NRC” means Nuclear Regulatory Commission, the U.S. Nuclear Regulatory Commission, or its duly authorized representatives.

“NRC Document Control Desk” means the Nuclear Regulatory Document Control Desk. ATTN: Document Control Desk, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

“Nuclear waste” means any highway route controlled quantity (defined in 49 CFR 173.403, revised October 1, 2012, incorporated by reference, and available under R9-7-101; this incorporated material contains no future editions or amendments) of source, byproduct, or special nuclear material required to be in NRC-approved packaging while transported to, through, or across state boundaries to a disposal site, or to a collection point for transport to a disposal site. Additional requirements associated with transportation of radioactive material can be found in Article 15.

“Occupational dose” means the dose received by an individual in the course of employment in which the individual’s assigned duties involve exposure to sources of radiation, whether in the possession of a licensee, registrant, or other person.

Occupational dose does not include a dose received from background radiation, medical administration of radiation to the individual, exposure to an individual who has been administered radioactive material and released in accordance with R9-7-717, voluntary participation in a medical research program, or as a member of the public.

“Open beam system” means an analytical x-ray system in which an individual could place some body part in the primary beam path during normal operation.

“Package” means the packaging together with its radioactive contents as presented for transport.

“Particle accelerator” (See “Accelerator”)

“Permanent radiographic installation” means a fixed, shielded installation or structure designed or intended for industrial radiography and in which industrial radiography is regularly performed.

“Personnel dosimeter” (See “Individual monitoring device”)

“Personnel monitoring equipment” (See “Individual monitoring device”)

“Personal supervision” means supervision in which the supervising individual is physically present at the site where sources of radiation and associated equipment are being used, watching the performance of the supervised individual and in such proximity that immediate assistance can be given if required.

“PET” (See Positron Emission Tomography (PET))

“Pharmacist” means an individual licensed by this state to compound and dispense drugs, prescriptions, and poisons.

“Physician” means an individual licensed pursuant to A.R.S. Title 32, Chapters 13 or 17.

“Positron Emission Tomography (PET)” means an imaging technique using radionuclides to produce high resolution images of the body’s biological functions.

“Positron Emission Tomography radionuclide production facility” means a facility operating a cyclotron or accelerator for the purpose of producing PET radionuclides.

“Preceptor” means an individual who provides, directs, or verifies training and experience required for an individual to become an authorized user, an authorized medical physicist, an authorized nuclear pharmacist, or a Radiation Safety Officer.

“Primary beam” means radiation which passes through an aperture of the source housing by a direct path from the x-ray tube or a radioactive source located in the radiation source housing.

“Public dose” means the dose received by a member of the public from radiation from radioactive material released by a licensee or registrant, or exposure to a source of radiation used in a licensed or registered operation. It does not include an occupational dose or a dose received from background radiation, medical administration of radiation to the individual, exposure to an individual who has been administered radioactive material and released in accordance with R9-7-717, or voluntary participation in a medical research program.

“Pyrophoric liquid” means any liquid that ignites spontaneously in dry or moist air at or below 130° F (54.4° C).

“Pyrophoric solid” means any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently that it creates a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.

“Qualified expert” means an individual certified in the appropriate field by the American Board of Radiology or the American Board of Health Physics, or having equivalent qualifications that provide the knowledge and training to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs; or an individual certified in Therapeutic Radiological Physics or X-ray and Radium Physics by the American Board of Radiology, or having equivalent qualifications that provide training and experience in the clinical applications of radiation physics to radiation therapy, to calibrate radiation therapy equipment. The detailed requirements for a particular qualified expert may be provided in the respective Articles of this Chapter. For clarification purposes, a qualified expert is not always an authorized medical physicist; however, an authorized medical physicist is included within the definition of “qualified expert.”

“Quality Factor” (Q) means the modifying factor, listed in Tables I and II of this Article, that is used to derive dose equivalent from absorbed dose.

“Quarter” (See “Calendar quarter”)

“Rad” means the special unit of absorbed dose. One rad equals 100 ergs per gram, or 0.01 gray.

“Radiation” means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. For purposes of these rules, this term is synonymous with ionizing radiation. Equivalent terminology for non-ionizing radiation is defined in Article 14.

“Radiation area” means any area accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates.

“Radiation dose” (See “Dose”)

“Radiation machine” means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.

“Radiation Safety Officer” (RSO) means the individual and who for license conditions: Meets the requirements in 10 CFR 35.50(a) or (c)(1) and 10 CFR 35.59, (revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.); or is identified as a Radiation Safety Officer on a specific medical use license issued by the NRC or an Agreement State; or a medical use permit issued by a NRC master material licensee; Or, who, for registration conditions, is designated by the registrant as the individual who has the knowledge, authority, and responsibility to apply appropriate radiation protection principles to ensure radiation safety and compliance with the Act, this Chapter and any registration conditions.

“Radiation Safety Officer” (RSO) means the individual and who for license conditions: Meets the requirements of R9-7-407, and for a medical license meets the training requirements of R9-7-710 or is identified as a Radiation Safety Officer on a specific medical use license issued by the Department, the NRC, or another Agreement State; or a medical use permit issued by a NRC master material licensee; Or, who meets the requirements in R9-7-512 on a specific industrial license issued by the Department, the NRC, or another Agreement State; or an industrial use permit issued by a NRC master material licensee; Or, who, for registration conditions, is designated by the registrant as the individual who has the knowledge, authority, and responsibility to apply appropriate radiation protection principles to ensure radiation safety and compliance with the Act, this Chapter and any registration conditions.

“Radioactive marker” means radioactive material placed subsurface or on a structure intended for subsurface use for the purpose of depth determination or direction orientation.

“Radioactive material” means any solid, liquid, or gas which emits radiation spontaneously.

“Radioactivity” means emission of electromagnetic energy or particles or both during the transformation of unstable atomic nuclei.

“Radiographer” means any individual who performs or personally supervises industrial

radiographic operations and who is responsible to the licensee or registrant for assuring compliance with the requirements of this Chapter and all conditions of the license or certificate of registration.

“Radiographer’s assistant” means any individual who, under the personal supervision of a radiographer, uses sources of radiation, radiographic exposure devices, related handling tools, or survey instruments in industrial radiography.

“Registrant” means any person who is registered with the Department and is legally obligated to register with the Department pursuant to these rules and the Act.

“Registration” is the process by which a person becomes a registrant pursuant to Article 2 or 14 of this Chapter. With the exception of registration of persons who install or service radiation machines, the types of registrations issued by the Department are described in R9-7-1302.

“Regulations of the U.S. Department of Transportation” means the federal regulations in 49 CFR 107, 171 through 180, revised October 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

“Rem” means the special unit of dose equivalent (see “Dose equivalent”). The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem - 0.01 sievert).

“Research and Development” means exploration, experimentation, or the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes. Research and Development does not include the internal or external administration of radiation or radioactive material to human beings.

“Restricted area” means any area where the licensee or registrant controls access for purposes of protecting individuals from exposure to radiation and radioactive material. A restricted area does not include any areas used for residential quarters, although a room or separate rooms in a residential building may be set apart as a restricted area.

“Roentgen” (R) means the special unit of exposure and is equal to the quantity of x or gamma radiation which causes ionization in air equal to 258 microcoulomb per kilogram (see “Exposure”).

“Safety system” means any device, program, or administrative control designed to ensure

radiation safety.

“Sealed source” means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.

“Sealed Source and Device Registry” means the national registry that contains all the registration certificates, generated by both the NRC and the Agreement States, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for each source or device.

“Shallow dose equivalent” (HS), which applies to the external exposure of the skin of the whole body or the skin of an extremity, is taken as the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm²).

“Shielded position” means the location within a radiographic exposure device or storage container which, by manufacturer’s design, is the proper location for storage of the sealed source.

“Sievert” means the SI unit of dose equivalent (see “Dose equivalent”). The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rem).

“Site boundary” means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee or registrant.

“Source changer” means a device designed and used for replacement of sealed sources in radiographic exposure devices, including those also used for transporting and storage of sealed sources.

“Source holder” means a housing or assembly into which a radioactive source is placed for the purpose of facilitating the handling and use of the source in well-logging operations.

“Source material” means:

Uranium or thorium, or any combination of uranium or thorium, in any physical or chemical form; or

Ores that contain by weight 1/20 of 1 percent (0.05 percent) or more of uranium, thorium, or any combination of uranium and thorium.

Source material does not include special nuclear material.

“Source material milling” means any activity that results in the production of byproduct

material as defined by the second subsection under the definition of “Byproduct material.”

“Source of radiation” or “source” means any radioactive material or any device or equipment emitting, or capable of producing, radiation.

“Special form radioactive material” means radioactive material that satisfies all of the following conditions:

It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

The piece or capsule has at least one dimension not less than 5 millimeters (0.2 inch); and

It satisfies the test requirements specified in 10 CFR 71.75, revised January 1, 2013, incorporated by reference, available under R9-7-101. This incorporated material contains no future editions or amendments. A special form encapsulation designed in accordance with the U.S. Nuclear Regulatory Commission requirements in effect on June 30, 1983, and constructed prior to July 1, 1985, may continue to be used. A special form encapsulation ~~constructed after June 30, 1985, shall meet requirements of this definition applicable at the time of its construction~~ designed in accordance with the requirements of 10 CFR 71.4 in effect on March 31, 1996 (see 10 CFR part 71, revised as of January 1, 1996), and constructed before April 1, 1998; and special form material that was successfully tested before September 10, 2015 in accordance with the requirements of 10 CFR 71.75(d) in effect before September 10, 2015 may continue to be used. Any other special form encapsulation must meet the specifications of this definition.

“Special nuclear material in quantities not sufficient to form a critical mass” means Uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; Uranium-233 in quantities not exceeding 200 grams; Plutonium in quantities not exceeding 200 grams; or any combination of them in accordance with the following formula: for each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed one. For example, the following quantities in combination would not exceed the limitation and are within the formula:

$$\frac{XgmsU235}{350} + \frac{YgmsU233}{200} + \frac{ZgmsPu}{200} \leq 1$$

“Storage area” means any location, facility, or vehicle which is used to store, transport, or secure a radiographic exposure device, storage container, sealed source, or other source of radiation when it is not in use.

“Storage container” means a device in which sealed sources are transported or stored.

“Subsurface tracer study” means the release of a substance tagged with radioactive material for the purpose of tracing the movement or position of the tagged substance in the well-bore or adjacent formation.

“Survey” means an evaluation of the production, use, release, disposal, or presence of sources of radiation or any combination thereof under a specific set of conditions to determine actual or potential radiation hazards. Such evaluations include, but are not limited to, tests, physical examination and measurements of levels of radiation or concentration of radioactive material present.

“TEDE” (See “Total Effective Dose Equivalent”)

“Teletherapy” means therapeutic irradiation in which the source of radiation is at a distance from the body.

“Temporary job site” means any location where sources of radiation are used other than the specified locations listed on a license document. Storage of sources of radiation at a temporary jobsite shall not exceed six months unless the Department has granted an amendment authorizing storage at that jobsite.

“Test” means the process of verifying compliance with an applicable rule, order, or license condition.

“These rules” means all Articles of 9 A.A.C. 7.

“Total Effective Dose Equivalent” (TEDE) means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

“Total Organ Dose Equivalent” (TODE) means the sum of the deep-dose equivalent and the committed dose equivalent to the organ receiving the highest dose. Determination of TODE is described in R9-7-411.

“Tribal official” means the highest ranking individual that represents Tribal leadership, such as the Chief, President, or Tribal Council leadership.

“Unrefined and unprocessed ore” means ore in its natural form prior to any processing, such as grinding, roasting, beneficiating, or refining. Processing does not include sieving or encapsulation of ore or preparation of samples for laboratory analysis.

“Unrestricted area” means any area access to which is not controlled by the licensee for purposes of protection of individuals from exposure to radiation and radioactive material. Any area used for residential quarters is an unrestricted area.

“Uranium - natural, depleted, enriched.”

- (1) Natural uranium means uranium (which may be chemically separated) with the naturally occurring distribution of uranium isotopes (approximately 0.711 weight percent uranium-235, and the remainder by weight essentially uranium-238).
- (2) Depleted uranium means uranium containing less uranium-235 than the naturally occurring distribution of uranium isotopes.
- (3) Enriched uranium means uranium containing more uranium-235 than the naturally occurring distribution of uranium isotopes.

“U.S. Department of Energy” means the Department of Energy established by P.L. 95-91, August 4, 1977, 91 Stat. 565, 42 U.S.C. 7101 et seq., to the extent that the Department of Energy exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers, and components; and transferred to the U.S. Energy Research and Development Administration and to the administrator of that agency under sections 104(b), (c), and (d) of the Energy Reorganization Act of 1974 (P.L. 93-438, October 11, 1974, 88 Stat. 1233 at 1237, 42 U.S.C. 5814, effective January 19, 1975) and retransferred to the Secretary of Energy under Section 301(a) of the Department of Energy Organization Act (P.L. 95-91, August 4, 1977, 91 Stat. 565 at 577-578, 42 U.S.C. 7151, effective October 1, 1977).

“Very high radiation area” means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving an absorbed dose that exceeds 5 grays (500 rads) in one hour at one meter from a radiation source or one meter from any surface that the radiation penetrates.

“Waste” (See “Low-level waste”)

“Waste handling licensees” means persons licensed to receive and store radioactive wastes prior to disposal and persons licensed to dispose of radioactive waste.

“Week” means seven consecutive days starting on Sunday.

“Well-bore” means a drilled hole in which wireline service operations and subsurface tracer studies are performed.

“Well-logging” means the lowering and raising of measuring devices or tools which may contain sources of radiation into well-bores or cavities for the purpose of obtaining information about the well and adjacent formations.

“Whole body” means, for purposes of external exposure, head, trunk including male gonads, arms above the elbow, or legs above the knee.

“Wireline” means an armored cable containing one or more electrical conductors which is used to lower and raise logging tools in the well-bore.

“Wireline service operation” means any evaluation or mechanical service which is performed in the well-bore using devices on a wireline.

“Worker” means any individual engaged in work under a license or registration issued by the Department and controlled by employment or contract with a licensee or registrant.

“WL” means working level, any combination of short-lived radon daughters in 1 liter of air that will result in the ultimate emission of $1.3E + 5$ MeV of potential alpha particle energy. The short-lived radon daughters are – for radon-222: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon-220: polonium-216, lead-212, bismuth-212, and polonium-212.

“WLM” means working level month, an exposure to one working level for 170 hours (2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month).

“Workload” means the degree of use of an x-ray or gamma-ray source per unit time.

“Year” means the period of time beginning in January used to determine compliance with the provisions of these rules. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

R9-7-103. Exemptions

- A. Common and contract carriers, freight forwarders, and warehousemen who are subject to 49 CFR 107.109, 107.111, 107.113, 171.2, 171.3, 172.200, 173.1, 173.3, 173.4, 173.401, 175.3, 175.10, 176.3, 176.5, 176.11, 176.24, 176.27, and 177.801, revised October 1, 2007, of the U.S. Department of Transportation, or 39 CFR 111.1 of the U.S. Postal Service, revised July 1, 2007, incorporated by

reference, and available under R9-7-101, and who if need be, store radioactive material, for periods of less than 72 hours, in the regular course of their carriage for another, are exempt from this Chapter. The incorporated materials above contain no future editions or amendments.

- B.** Any U.S. Department of Energy contractor or subcontractor and any U.S. Nuclear Regulatory Commission contractor or subcontractor of the following categories operating within this state are exempt from this Chapter to the extent that such contractor or subcontractor under the contract receives, possesses, uses, transfers, or acquires sources of radiation:
1. Prime contractors performing work for the Department of Energy at U.S. Government-owned or controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation;
 2. Prime contractors of the Department of Energy performing research or development, manufacture, storage, testing or transportation of nuclear weapons or components thereof;
 3. Prime contractors of the Department of Energy using or operating nuclear reactors or other nuclear devices in a United States Government-owned vehicle or vessel; and
 4. Any other prime contractor or subcontractor of the Department of Energy or of the Nuclear Regulatory Commission when the state and the Nuclear Regulatory Commission jointly determine:
 - a. That the exemption of the prime contractor or subcontractor is authorized by law; and
 - b. That under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety.
- C.** Any licensee who delivers to a carrier for transport any package which contains radioactive material having a specific activity of 74 kBq/kg (2 nanocuries per gram) or less, is exempt from the provisions of this Chapter with respect to that package.
- D.** Any physician licensed by a State to dispense drugs in the practice of medicine is exempt from 10 CFR 71.5 with respect to transport by the physician of licensed

material for use in the practice of medicine. However, any physician operating under this exemption must be licensed under 10 CFR part 35 and/or R9-7-703.

ARTICLE 3. RADIOACTIVE MATERIAL LICENSING

R9-7-302. Source Material; Exemptions

- A. Any person is exempt from this Article to the extent the person receives, possesses, uses, delivers or transfers source material in any chemical mixture, compound, solution, or alloy in which the source material is by weight less than 1/20th of 1 percent (0.0005) of the mixture, compound, solution, or alloy.
- B. Any person is exempt from this Article to the extent the person receives, possesses, uses, or transfers unrefined and unprocessed ore containing source material, provided that, the person does not refine or process the ore except as authorized in a specific license.
- C. Any person is exempt from this Article if the person receives, possesses, uses, or transfers:
 - 1. Any quantities of thorium contained in:
 - a. Incandescent gas mantles;
 - b. Vacuum tubes;
 - c. Welding rods;
 - d. Electric lamps for illuminating purposes provided that each lamp does not contain more than 50 milligrams of thorium;
 - e. Germicidal lamps, sunlamps, and lamps for outdoor or industrial lighting, provided that each lamp does not contain more than 2 grams of thorium;
 - f. Rare earth metals, compounds, mixtures, or products containing not more than 0.25 percent by weight thorium, uranium, or any combination of thorium and uranium; or
 - g. Individual neutron dosimeters, provided that each dosimeter does not contain more than 50 milligrams of thorium;
 - 2. Source material contained in the following products:
 - a. Glazed ceramic tableware manufactured before August 27, 2013, provided that the glaze contains not more than 20 percent source material by weight;
 - b. Glassware containing not more than 2 percent by weight source material, glass enamel, and glass enamel frit containing not more than 10 percent

- source material by weight, but not including commercially manufactured glass brick, pane glass, ceramic tile or other glass, glass enamel or ceramic used in construction; or
- c. Piezoelectric ceramic containing not more than 2 percent source material by weight;
3. Photographic film, negatives, and prints containing uranium or thorium;
 4. Any finished product or part fabricated of, or containing, tungsten-thorium or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed 4 percent by weight and that the exemption contained in this subsection does not authorize the chemical, physical, or metallurgical treatment or processing of the finished product or part;
 5. Uranium contained in counterweights installed in aircraft, rockets, projectiles, and missiles, or stored or handled in connection with installation or removal of counterweights, provided that:
 - a. The counterweights are manufactured in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, authorizing distribution by the licensee according to 10 CFR 40;
 - b. Each counterweight has been impressed with the following legend clearly legible through any plating or other covering: “DEPLETED URANIUM”;
 - c. Each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: “UNAUTHORIZED ALTERATIONS PROHIBITED”; and
 - d. The exemption contained in this item does not authorize the chemical, physical, or metallurgical treatment or processing of any counterweight other than repair or restoration of any plating or other covering; and
 - e. The requirements specified in subsections (C)(5)(b) and (c) do not apply to counterweights manufactured prior to December 31, 1969; provided, that these counterweights are impressed with the legend, “CAUTION – RADIOACTIVE MATERIAL – URANIUM.”
 6. Natural or depleted uranium metal used as shielding and constituting part of any shipping container; provided that:
 - a. The shipping container is conspicuously and legibly impressed with the

legend “CAUTION – RADIOACTIVE SHIELDING – URANIUM,” and

- b. The uranium metal is encased in mild steel or equally fire resistant metal with minimum wall thickness of 1/8 inch (3.2 mm).
7. Thorium contained in finished optical lenses, provided that each lens does not contain more than 30 percent of thorium by weight, and that the exemption contained in this item does not authorize either:
 - a. The shaping, grinding, or polishing of a thoriated lens or manufacturing processes other than the assembly of a thoriated lens into optical systems and devices without any alteration of the lens; or
 - b. The receipt, possession, use, or transfer of thorium contained in contact lenses, spectacles, or the eyepieces of binoculars or other optical instruments;
 8. Uranium contained in detector heads of fire detection units, provided that each detector head contains not more than 5 nanocuries (185 Bq) of uranium; or
 9. Thorium contained in any finished aircraft engine part containing nickel-thoria alloy, provided that:
 - a. The thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium dioxide), and
 - b. The thorium content in the nickel-thoria alloy does not exceed 4 percent by weight.
- D.** The exemptions in subsection (C) do not authorize the manufacture of any of the products described.

R9-7-303. Radioactive Material Other Than Source Material; Exemptions

A. Exempt concentrations

1. Except as provided in subsection (A)(3) and (A)(4), any person is exempt from this Article if the person receives, possesses, uses, transfers, owns, or acquires products or materials containing radioactive material in concentrations not in excess of those listed in Exhibit A.
2. This Section shall not be deemed to authorize the import of radioactive material or products containing radioactive material.
3. A manufacturer, processor, or producer of a product or material is exempt from the requirements for a license issued under R9-7-311(A) or the requirements of this Article to the extent that this person transfers radioactive material contained

in a product or material in concentrations not in excess of those specified in Exhibit A of this Article and introduced into the product or material by a licensee holding a specific license issued by the NRC expressly authorizing such introduction. This exemption does not apply to the transfer of radioactive material contained in any food, beverage, cosmetic, drug, or other commodity or product designed for ingestion or inhalation by, or application to, a human being.

4. A person shall not introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under subsection (A)(1) or equivalent Regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State, except in accordance with a license issued under 10 CFR 32.11.

B. Exempt items

1. Except for persons who apply radioactive material to, or persons who incorporate radioactive material into the following products, or persons who initially transfer for sale or distribution the following products, a person is exempt from this Chapter to the extent that the person receives, possesses, uses, transfers, owns, or acquires the following products:
 - a. Timepieces, hands, or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified levels of radiation:
 - i. 925 megabecquerels (25 millicuries) of tritium per timepiece;
 - ii. 185 megabecquerels (5 millicuries) of tritium per hand;
 - iii. 555 megabecquerels (15 millicuries) of tritium per dial (bezels when used shall be considered part of the dial);
 - iv. 3.7 megabecquerels (100 microcuries) of promethium-147 per watch or 7.4 megabecquerels (200 microcuries) of promethium-147 per any other timepiece;
 - v. 740 kBq (20 microcuries) of promethium-147 per watch hand or 1.48 megabecquerels (40 microcuries) of promethium-147 per other timepiece hand;
 - vi. 2.22 megabecquerels (60 microcuries) of promethium-147 per watch dial or 4.44 MBq (120 microcuries) of promethium-147 per other timepiece dial (bezels, when used, shall be considered

- part of the dial);
- vii. The levels of radiation from hands and dials containing promethium-147 shall not exceed, when measured through 50 milligrams per square centimeter of absorber:
 - (1) For wrist watches, 1.0 μ Gy (0.1 millirad) per hour at 10 centimeters from any surface of the watch;
 - (2) For pocket watches, (0.1 millirad) per hour at 1 centimeter from any surface;
 - (3) For any other timepiece, 2.0 μ Gy (0.2 millirad) per hour at 10 centimeters from any surface;
 - viii. 37 kBq (1 microcurie) of radium-226 per timepiece in intact timepieces manufactured prior to November 30, 2007;
- b. Static elimination devices which contain, as a sealed source or sources, radioactive material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device.
 - i. Ion generating tubes designed for ionization of air that contain, as a sealed source or sources, radioactive material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device or of a total of not more than 1.85 GBq (50 mCi) of hydrogen-3 (tritium) per device.
 - ii. Such devices authorized before October 23, 2012 for use under the general license then provided in R9-7-306 and equivalent regulations of the NRC or Agreement State and manufactured, tested, and labeled by the manufacturer in accordance with the specifications contained in a specific license issued by the NRC.
 - c. Balances of precision containing not more than 37 megabecquerels (1 millicurie) of tritium per balance or not more than 18.5 megabecquerels (0.5 millicurie) of tritium per balance part manufactured before December 17, 2007;
 - d. Marine compasses containing not more than 27.75 gigabecquerels (750 millicuries) of tritium gas and other marine navigational instruments containing not more than 9.25 gigabecquerels (250 millicuries) of tritium gas manufactured before December 17, 2007;

- e. Ionization chamber smoke detectors containing not more than 37 kBq (1 microcurie) of americium-241 per detector in the form of a foil and designed to protect life and property from fires;
- f. Electron tubes: Provided that each tube does not contain more than one of the following specified quantities of radioactive material:
 - i. 5.55 GBq (150 millicuries) of tritium per microwave receiver protector tube or 370 megabecquerels (10 millicuries) of tritium per any other electron tube;
 - ii. 37 kBq (1 microcurie) of cobalt 60;
 - iii. 185 kBq (5 microcuries) of nickel 63;
 - iv. 1.11 megabecquerels (30 microcuries) of krypton 85;
 - v. 185 kBq (5 microcuries) of cesium 137;
 - vi. 1.11 megabecquerels (30 microcuries) of promethium-147;
 - vii. And provided further, that the level of radiation due to radioactive material contained in each electron tube does not exceed 10 μ Gy (1 millirad) per hour at 1 centimeter from any surface when measured through 7 milligrams per square centimeter of absorber. The term “electron tubes” includes spark gap tubes, power tubes, gas tubes, including glow lamps, receiving tubes, microwave tubes, indicator tubes, pick-up tubes, radiation detection tubes, and any other completely sealed tube that is designed to conduct or control electrical current;
- g. Ionizing radiation measuring instruments containing, for purposes of internal calibration or standardization, one or more sources of radioactive material provided that:
 - i. Each source contains no more than one exempt quantity set forth in Exhibit B of this Article; and
 - ii. Each instrument contains no more than 10 exempt quantities. For the purposes of this subsection, an instrument’s source or sources may contain either one type or different types of radionuclide and an individual exempt quantity may be composed of fractional parts of one or more of the exempt quantities in Exhibit B of this Article, provided the sum of the fractions do

- not exceed unity;
 - iii. For the purposes of subsection (B)(1)(h) only, 185 kBq (50 nanocurie) of americium-241 is considered an exempt quantity under Exhibit B of this Article;
 - h. Any person who desires to apply radioactive material to, or to incorporate radioactive material into, the products exempted in subsection (B)(1)(a), or who desires to initially transfer for sale or distribution such products containing radioactive material, should apply for a specific license pursuant to R9-7-311 of this Article, which license states that the product may be distributed by the licensee to persons exempt from the rules pursuant ~~R9-7-303(A)(1)~~ to subsection (A)(1).
- 2. Self-luminous products containing tritium, krypton-85, or promethium-147:
 - a. Except for persons who manufacture, process, initially transfer for sale or distribution, or produce self-luminous products containing tritium, krypton-85, or promethium-147, and except as provided in ~~paragraph (e) of this subsection (B)(2)(c)~~, a person is exempt from this Chapter if the person receives, possesses, uses, owns, transfers or acquires tritium, krypton-85 or promethium-147 in self-luminous products manufactured, processed, produced, imported, initially transferred for sale or distribution, or transferred under a specific license issued by the U.S. Nuclear Regulatory Commission and described in 10 CFR 32.22, and the license authorizes the transfer of the products to persons who are exempt from regulatory requirements.
 - b. Any person who desires to manufacture, process, or produce, or initially transfer for sale or distribution self-luminous products containing tritium, ~~krypton85~~ krypton-85, or promethium-147 for use under ~~paragraph (a) of this subsection~~ subsection (B)(2)(a), should apply for a license:
 - i. Under 10 CFR 32 and for a certificate of registration in accordance with 10 CFR 32.210, and
 - ii. As described in R9-7-311.
 - e. ~~The exemption in paragraph (a) of this subsection does not apply to tritium, krypton 85, or promethium 147 used in products for primarily frivolous purposes or in toys or adornments.~~

- ~~d.c.~~ A person is exempt from this Chapter if the person receives, possesses, uses, or transfers articles containing less than 3.7 kBq (100 nanocuries) of radium-226, manufactured prior to October 1, 1978.
3. Gas and aerosol detectors containing ~~radioactive~~ byproduct material
- a. Except for persons who manufacture, process, initially transfer for sale or distribution, or produce gas and aerosol detectors containing radioactive material, a person is exempt from this Chapter if the person receives, possesses, uses, transfers, owns, or acquires radioactive material in gas and aerosol detectors designed to protect life or property from fires and airborne hazards, provided that detectors containing radioactive material shall be manufactured, imported, or transferred according to a specific license issued by the U.S. Nuclear Regulatory Commission and described in 10 CFR 32.26, or equivalent regulations of an Agreement or Licensing State, this exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007 in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, or equivalent regulations of an Agreement or Licensing State and the license authorizes the transfer of the detectors to persons who are exempt from regulatory requirements.
- b. ~~Any person who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products for use under paragraph (a) of this subsection, should apply for a license described in R9-7-311.~~ Gas and aerosol detectors previously manufactured and distributed to general licensees in accordance with a specific license issued by an Agreement State are exempt under subsection (B)(3)(a), provided that the device is labeled in accordance with the specific license authorizing distribution of the general licensed device, and that the detectors meet the requirements of the regulations of the U.S. Nuclear Regulatory Commission.
- c. ~~Gas and aerosol detectors previously manufactured and distributed to general licensees in accordance with a specific license issued by an Agreement State are exempt under subsection (B)(4)(a), provided that the device is labeled in accordance with the specific license authorizing~~

~~distribution of the general licensed device, and that the detectors meet the requirements of the regulations of the U.S. Nuclear Regulatory Commission.~~ Any person who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products for use under subsection (B)(3)(a), should apply for a license under 10 CFR 32.26 and for a certificate of registration in accordance with 10 CFR 32.210.

4. Certain industrial devices

- a. Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued under R9-7-311 of this Article, which license authorizes the initial transfer of the device for use under this section. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.
- b. Any person who desires to manufacture, process, produce, or initially transfer, for sale or distribution, industrial devices containing byproduct material for use under ~~paragraph (1) of this subsection (B)(4)(a),~~ shall apply for a license described in R9-7-311 and for a certificate of registration in accordance with 10 CFR 32.210.

C. Exempt quantities

1. Except as provided in subsections (C)(2), (3), and (7), a person is exempt from this Chapter if the person receives, possesses, uses, transfers, owns, or acquires radioactive material in individual quantities each of which does not exceed the applicable quantity set forth in Exhibit B of this Article.

2. This subsection does not authorize the production, packaging, or repackaging or transfer of radioactive material for purposes of commercial distribution, or the incorporation of radioactive material into products intended for commercial distribution.
3. Except as specified in this subsection, a person shall not, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in Exhibit B of this Article, knowing or having reason to believe the described quantities of radioactive material will be transferred to persons exempt under subsection (C) or equivalent regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State. A person may transfer radioactive material for commercial distribution under a specific license issued by the U.S. Nuclear Regulatory Commission under 10 CFR 32.18 which license states that the radioactive material may be transferred by the licensee to persons exempt under this subsection or the equivalent regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State.
4. Sources containing exempt quantities of radioactive material shall not be bundled or placed in close proximity for the purpose of using the radiation from the combined sources in place of a single source, containing a licensable quantity of radioactive material.
5. Possession and use of bundled or combined sources containing exempt quantities of radioactive material in unregistered devices by persons exempt from licensing is prohibited.
6. Any person, who possesses radioactive material received or acquired before September 25, 1971, under the general license issued under R9-7-311(A) of this Article or similar general license of an Agreement State or the NRC, is exempt from the requirements for a license issued under R9-7-311(A) of this Article to the extent that this person possesses, uses, transfers, or owns radioactive material.
7. No person may, for purposes of producing an increased radiation level, combine quantities of radioactive material covered by the exemption described in subsection (C)(6) so that the aggregate quantity exceeds the limits set forth in Exhibit B, except for radioactive material combined within a device placed in use before May 3, 1999, or as otherwise permitted by the rules in this Section.

R9-7-304. License Types

- A.** Activities requiring license. Except as provided in 10 CFR 30.3 (revised January 1, 2013, incorporated by reference, and available under R9-7-101; this incorporated material contains no future editions or amendments), ~~this Section~~ in subsection (B)(1), and for persons exempt as provided in R9-7-302 and R9-7-303 of this Article, no person shall manufacture, produce, transfer, receive, acquire, own, possess, or use byproduct material except as authorized in a specific or general license issued in accordance with the regulations in this chapter and in accordance with 10 CFR 30.3.
- B.** Licenses for radioactive materials are of two types: general and specific.
1. A general license is provided by rule, grants authority to a person for certain activities involving radioactive material, and is effective without the filing of an application with the Department or the issuance of a licensing document to a particular person. However, registration with the Department may be required by the particular general license.
 2. The Department issues a specific license to a named person who has filed an application for a license under the applicable provision of this Chapter. A specific licensee is subject to all of the applicable rules in this Chapter and any limitation contained in the license document.

R9-7-305. General Licenses – Source Material

- A.** This subsection grants a general license that authorizes commercial and industrial firms; research, educational, and medical institutions; and state and local government agencies to use, and transfer not more than 6.8 kg (15 pounds) of source material at any one time for research, development, educational, commercial, or operational purposes. A person authorized under this subsection shall not receive more than 68.2 kg (150 pounds) of source material in one calendar year.
- B.** A person who receives, possesses, uses, or transfers source material under a general license granted under subsection (A) is exempt from the provisions of 9 A.A.C. 7, Article 4 and Article 10, provided the receipt, possession, use, or transfer is within the terms of the general license. This exemption does not apply to any person who is also in possession of source material under a specific license issued under this Article.
- C.** This subsection grants a general license that authorizes a person to receive acquire, possess, use, or transfer depleted uranium contained in industrial products and devices provided:
1. The depleted uranium is contained in the industrial product or device for the

purpose of providing a concentrated mass in a small volume of the product or device;

2. The industrial products or devices have been manufactured or initially transferred in accordance with a specific license governed by ~~R9-7-311(M)~~ R9-7-311(J), or a specific license issued by the U.S. Nuclear Regulatory Commission or an Agreement State that authorizes manufacture of the products or devices for distribution to persons generally licensed by the U.S. Nuclear Regulatory Commission or an Agreement State;
 3. The person files an ARRA 23 “Registration Certificate -- Use of Depleted Uranium Under General License” with the Department. The person shall provide the information requested on the certificate and listed in Exhibit E. The person shall submit the information within 30 days after first receipt or acquisition of the depleted uranium, returning the completed registration certificate to the Department. The person shall report in writing to the Department any change in information originally submitted to the Department on ARRA 23. The person shall submit the change report within 30 days after the effective date of the described change.
- D.** A person who receives, acquires, possesses, or uses depleted uranium according to the general license provided under subsection (C) shall:
1. Not introduce depleted uranium, in any form, into a chemical, physical, or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;
 2. Not abandon the depleted uranium;
 3. Transfer the depleted uranium as prescribed in R9-7-318. If the transferee receives the depleted uranium under a general license established by subsection (C), the transferor shall furnish the transferee with a copy of this Section and a copy of the registration certificate. If the transferee receives the depleted uranium under a general license governed by a regulation of the U.S. Nuclear Regulatory Commission or an Agreement State that is equivalent to subsection (C), the transferor shall furnish the transferee a copy of the equivalent rule and a copy of the registration certificate, accompanied by a letter explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or an Agreement State under requirements substantially similar to those in this Section;

4. Within 30 days of any transfer, report in writing to the Department the name and address of the person receiving the depleted uranium; and
 5. Not export depleted uranium except under a license issued by the U.S. Nuclear Regulatory Commission in accordance with 10 CFR 110.
- E.** A person who receives, acquires, possesses, uses, or transfers depleted uranium in accordance with a general license granted under subsection (C) is exempt from the requirements of 9 A.A.C. 7, Articles 4 and 10 with respect to the depleted uranium covered by that general license.

R9-7-306. General License - Radioactive Material Other Than Source Material

- A.** Certain measuring, gauging or controlling devices and certain devices for producing light or an ionized atmosphere.
1. This subsection grants a general license to a commercial or industrial firm; a research, educational or medical institution; an individual conducting business; or a state or local government agency to receive, acquire, possess, use, or transfer radioactive material contained in devices designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere, according to the provisions of 10 CFR 31.5(b), (c), and (d), (Revised January 1, 2013, incorporated by reference, and available under R9-7-101. The incorporated material contains no future editions or amendments.
 2. A general licensee shall receive a device from one of the specific licensees described in this Section or through a transfer made under subsection (A)(4)(k).
 3. A general license in subsection (A)(1) applies only to radioactive material contained in devices that have been manufactured or initially transferred and labeled in accordance with the requirements contained in:
 - a. A specific license issued under R9-7-311(A), or
 - b. An equivalent specific license issued by the NRC or another Agreement State.
 - c. An equivalent specific license issued by a State with rules or regulations comparable to this Section.
 4. A person who acquires, receives, possesses, uses, or transfers radioactive material in a device licensed under subsection (A)(1) or through a transfer made

under subsection (A)(4)(h), shall:

- a. Ensure that all labels and safety statements affixed to a device at the time of receipt and bearing a statement that removal of the label is prohibited are maintained and not removed, and comply with all instructions and precautions on the labels.
- b. Ensure that the device is tested for leakage of radioactive material and proper operation of the on-off mechanism and indicator, if any, at no longer than six-month intervals or at other intervals as specified on the label.
 - i. A general licensee need not test a device that contains only krypton for leakage of radioactive material; and
 - ii. A general licensee need not test a device for leakage of radioactive material if the device contains only tritium, not more than 3.7 megabecquerels (100 microcuries) of other beta and/or gamma emitting material, or 370 kilobecquerels (10 microcuries) of alpha emitting material, or the device is held in storage, in the original shipping container, before initial installation.
- c. Ensure that the tests required by subsection (A)(4)(b) and other testing, installation, servicing, and removal from installation involving the radioactive material or its shielding or containment, are performed:
 - i. In accordance with the device label instructions, or
 - ii. By a person holding a specific license under R9-7-311(A) or in accordance with the provisions of a specific license issued by the NRC or an Agreement State which authorizes distribution of devices to persons generally licensed by the NRC or an Agreement State.
- d. Maintain records of compliance with the requirements in subsections (A)(4)(b) and (c) that show the results of tests; the dates that required activities were performed, and the names of persons performing required activities involving radioactive material from the installation and its shielding or containment. The records shall be maintained for three years from the date of the recorded event or until transfer or disposal of the device.

- e. Immediately suspend operation of a device if there is a failure of, or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on-off mechanism or indicator, or upon the detection of 185 becquerel (0.005 microcurie) or more of removable radioactive material.
 - i. A general licensee shall not operate the device until it has been repaired by the manufacturer or another person holding a specific license to repair this type of device that was issued by the Department under R9-7-311(A), the NRC, or an Agreement State which authorizes distribution of devices to persons generally licensed by the NRC or an Agreement State.
 - ii. If necessary the general licensee shall dispose of the device and any radioactive material from the device by transfer to a person authorized by a specific license to receive the radioactive material in the device or as otherwise approved by the Department.
 - iii. Within 30 days of an event governed by subsection (A)(4)(e) the general licensee shall furnish a report that contains a brief description of the event and the remedial action taken and, in the case of detection of 185 Becquerel (0.005 microcurie) or more of removable radioactive material or failure of or damage to a source likely to result in contamination of the general licensee's facility or the surrounding area, if applicable, a plan for ensuring that the general licensee's facility and surrounding area, if applicable, are acceptable for unrestricted use. The radiological criteria for unrestricted use in R9-7-452 may be used to prepare the plan, as determined by the Department, on a case-by-case basis.
- f. Not abandon a device that contains radioactive material.
- g. Not export a device that contains radioactive material except in accordance with 10 CFR 110, revised January 1, 2013, incorporated by reference, and available under R9-7-101. The incorporated material contains no future editions or amendments.

- h. Transfer or dispose of a device that contains radioactive material only by export as authorized in subsection (A)(4)(g), transfer to another general licensee as authorized in subsection (A)(4)(k) or a person who is authorized to receive the device by a specific license issued by the Department, the NRC, or an Agreement State, or collection as waste if authorized by equivalent regulations of an Agreement State, or the NRC, or as otherwise approved under subsection (A)(4)(j).
- i. Within 30 days after the transfer or export of a device to a specific licensee, furnish a report to the Department. The report shall:
 - i. Identify the device by manufacturer's (or initial transferor's) name, model number, and serial number;
 - ii. Provide the name, address, and license number of the person receiving the device (license number not applicable if exported); and
 - iii. Provide the date of transfer or export.
- j. Obtain written Department approval before transferring a device to any other specific licensee that is not authorized in accordance with subsection (A)(4)(h).
- k. Transfer a device to another general licensee only:
 - i. If the device remains in use at a particular location. The transferor shall provide the transferee with a copy of this Section, a copy of R9-7-443, R9-7-445, and R9-7-448 and any safety documents identified on the device label. Within 30 days of the transfer, the transferor shall report to the Department the manufacturer's (or initial transferor's) name; the model number and the serial number of the device transferred; the transferee's name and mailing address for the location of use; and the name, title, and telephone number of the responsible individual appointed by the transferee in accordance with subsection (A)(4)(n); or
 - ii. If the device is held in storage in the original shipping container at its intended location of use before initial use by a general licensee, and by a person that is not a party to the transaction.

- l. Comply with the provisions of R9-7-443, R9-7-444, R9-7-445, R9-7-447, and R9-7-448 for reporting and notification of radiation incidents, theft or loss of licensed material, and is exempt from the other requirements of 9 A.A.C 7, Articles 4 and 10.
- m. Respond to written requests from the Department to provide information relating to the general license within 30 days from the date on the request, or a longer time period specified in the request. If the general licensee cannot provide the requested information within the specified time period, the general licensee shall request a longer period to supply the information before expiration of the time period, providing the Department with a written justification for the request.
- n. Appoint an individual responsible for knowledge of applicable laws and possessing the authority to take actions required to comply with applicable radiation safety laws. The general licensee, through this individual, shall ensure the day-to-day compliance with applicable radiation safety laws. This provision does not relieve the general licensee of responsibility.
- o. Register, in accordance with subsections (A)(4)(p) and (q), any device that contains at least 370 megabecquerels (10 millicuries) of cesium-137, 3.7 megabecquerels (0.1 millicuries) of strontium-90, 37 megabecquerels (1 millicurie) of cobalt-60, or 37 megabecquerels (1 millicurie) of americium-241 or any other transuranic (i.e., element with atomic number greater than uranium (92)), based on the activity indicated on the label. Each address for a location of use, as described under subsection (A)(4)(q)(iv), represents a separate general licensee and requires a separate registration and fee.
- p. Register each device annually with the Department and pay the fee required by R9-7-1306, Category D4, if in possession of a device that meets the criteria in subsection (A)(4)(o). The general licensee shall register by verifying, correcting, and adding to the information provided in a request for registration received from the Department. The registration information shall be submitted to the Department within 30 days from the date on the request for registration. In addition, a general

- licensee holding devices meeting the criteria of subsection (A)(4)(o) is subject to the bankruptcy notification requirements in R9-7-313(D).
- q. In registering a device, furnish the following information and any other registration information specifically requested by the Department:
- i. Name and mailing address of the general licensee;
 - ii. Information about each device, including the manufacturer (or initial transferor), model number, serial number, radioisotope, and activity (as indicated on the label);
 - iii. Name, title, and telephone number of the responsible individual appointed by the general licensee under subsection (A)(4)(n);
 - iv. Address or location at which each device is used and stored. For a portable device, the address of the primary place of storage;
 - v. Certification by the responsible individual that the information concerning each device has been verified through a physical inventory and review of label information; and
 - vi. Certification by the responsible individual that the individual is aware of the requirements of the general license.
- r. Report a change in mailing address for the location of use or a change in the name of the general licensee to the Department within 30 days of the effective date of the change. For a portable device, a report of address change is only required for a change in the device's primary place of storage.
- s. Not use a device if the device has not been used for a period of two years. If a device with shutters is not being used, the general licensee shall ensure that the shutters are locked in the closed position. The testing required by subsection (A)(4)(b) need not be performed during a period of storage. However, if a device is put back into service or transferred to another person, and has not been tested during the required test interval, the general licensee shall ensure that the device is tested for leakage before use or transfer and that the shutter is tested before use. A device kept in standby for future use is excluded from the two-year time limit in this subsection if the general licensee performs a quarterly physical inventory regarding the standby devices.

5. A person that is generally licensed by an Agreement State with respect to a device that meets the criteria in subsection (A)(4)(o) is exempt from registration requirements if the device is used in an area subject to Department jurisdiction for a period less than 180 days in any calendar year. The Department does not request registration information from a general licensee if the device is exempted from licensing requirements in subsection (A)(4)(o).
6. The general license granted under subsection (A)(1) is subject to the provisions of 9 A.A.C. 7, Articles 1, 3, 12, and 15, and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689.
7. The general license in subsection (A)(1) does not authorize the manufacture or import of devices containing byproduct material.

B. Luminous safety devices for aircraft

1. This subsection grants a general license that authorizes a person to own, receive, acquire, possess, and use tritium or promethium-147 contained in luminous safety devices for use in aircraft, provided that each device contains not more than 370 gigabecquerels (10 curies) of tritium or 11.1 gigabecquerels (300 millicuries) of promethium-147; and each device has been manufactured, assembled, initially transferred, or imported according to a specific license issued by the U.S. Nuclear Regulatory Commission, or each device has been manufactured or assembled according to the specifications contained in a specific license issued to the manufacturer or assembler of the device by the Department or any Agreement State or Licensing State in accordance with licensing requirements equivalent to those in 10 CFR 32.53.
2. A person who owns, receives, acquires, possesses, or uses a luminous safety device according to the general license granted in subsection (B)(1) is:
 - a. Exempt from the requirements of 9 A.A.C. 7, Article 4 and Article 10 except that the person shall comply with the reporting and notification provisions of R9-7-443, R9-7-444, R9-7-445, R9-7-447, and R9-7-448;
 - b. Not authorized to manufacture, assemble, repair, or import a luminous safety device that contains tritium or promethium-147;
 - c. Not authorized to export luminous safety devices containing tritium or promethium-147;
 - d. Not authorized to own, receive, acquire, possess, or use radioactive

material contained in instrument dials; and

- e. Subject to the provisions of 9 A.A.C. 7, Articles 1, 3, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689.

C. This subsection grants a general license that authorizes a person who holds a specific license to own, receive, possess, use, and transfer radioactive material if the Department issues the license; or special nuclear material if the NRC issues the license. For americium-241, radium-226, and plutonium contained in calibration or reference sources, this subsection grants a general license in accordance with the provisions of subsections (C)(1), (2), and (3). For plutonium, ownership is included in the licensed activities.

- 1. This subsection grants a general license for calibration or reference sources that have been manufactured according to the specifications contained in a specific license issued to the manufacturer or importer of the sources by the U.S. Nuclear Regulatory Commission under 10 CFR 32.57 or 10 CFR 70.39. This general license also governs calibration or reference sources that have been manufactured according to specifications contained in a specific license issued to the manufacturer by the Department, an Agreement State, or a Licensing State, according to licensing requirements equivalent to those contained in 10 CFR 32.57 or 10 CFR 70.39, revised January 1, 2013, incorporated by reference, and available under R9-7-101. The incorporated material contains no future editions or amendments.
- 2. A general license granted under subsection (C) or (C)(1) is subject to the provisions of 9 A.A.C. 7, Articles 1, 3, 4, 10, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689. In addition, a person who owns, receives, acquires, possesses, uses, or transfers one or more calibration or reference sources under a general license granted under subsection (C) or (C)(1) shall:
 - a. Not possess at any one time, at any location of storage or use, more than 185 kBq (5 microcuries) of americium-241, plutonium, or radium-226 in calibration or reference sources;
 - b. Not receive, possess, use, or transfer a calibration or reference source unless the source, or the storage container, bears a label that includes one of the following statements, as applicable, or a substantially similar

statement that contains the same information:

- i. The receipt, possession, use and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of the U.S. Nuclear Regulatory Commission or a state with which the Commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label. CAUTION – RADIOACTIVE MATERIAL – THIS SOURCE CONTAINS (name of the appropriate material) – DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

Name of manufacturer or importer

- ii. The receipt, possession, use and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of any Licensing State. Do not remove this label. CAUTION – RADIOACTIVE MATERIAL – THIS SOURCE CONTAINS RADIUM-226. DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

Name of manufacturer or importer

- c. Not transfer, abandon, or dispose of a calibration or reference source except by transfer to a person authorized to receive the source by a license from the Department, the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State;
 - d. Store a calibration or reference source, except when the source is being used, in a closed container designed, constructed, and approved for containment of americium-241, plutonium, or radium-226 which might otherwise escape during storage; and
 - e. Not use a calibration or reference source for any purpose other than the calibration of radiation detectors or the standardization of other sources.
- 3. The general license granted under subsection (C) or (C)(1) does not authorize the manufacture or import of calibration or reference sources that contain americium-241, plutonium, or radium-226.
 - 4. The general license granted under subsections (C) or (C)(1) does not authorize

the manufacture or export of calibration or reference sources that contain americium-241, plutonium, or radium-226.

- D.** This subsection grants a general license that authorizes a person to receive, possess, use, transfer, own, or acquire carbon-14 urea capsules, which contain one microcurie of carbon-14 urea for “in vivo” human diagnostic use:
1. Except as provided in subsections (D)(2) and (3), a physician is exempt from the requirements for a specific license, provided that each carbon-14 urea capsule for “in vivo” diagnostic use contains no more than 1 microcurie.
 2. A physician who desires to use the capsules for research involving human subjects shall obtain a specific license issued according to the specific licensing requirements in this Article.
 3. A physician who desires to manufacture, prepare, process, produce, package, repackage, or transfer carbon-14 urea capsules for commercial distribution shall obtain a specific license from the Department, issued according to the requirements in 10 CFR 32.21, (Revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.)
 4. Nothing in this subsection relieves physicians from complying with applicable FDA and other federal and state requirements governing receipt, administration, and use of drugs.
- E.** This subsection grants a general license that authorizes any physician, clinical laboratory, or hospital to use radioactive material for certain “in vitro” clinical or laboratory testing.
1. The general licensee is authorized to receive, acquire, possess, transfer, or use, for any of the following stated tests, the following radioactive materials in prepackaged units:
 - a. Iodine-125, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or radiation from such material, to human beings or animals.
 - b. Iodine-131, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.

- c. Carbon-14, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - d. Hydrogen-3 (tritium), in units not exceeding 1.85 megabecquerel (50 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - e. Iron-59, in units not exceeding 740 kilobecquerel (20 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - f. Cobalt-57 or selenium-75, in units not exceeding 370 kilobecquerels (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - g. Mock iodine-125 reference or calibration sources, in units not exceeding 1.85 kBq (50 nanocurie) of iodine-129 and 185 becquerel (5 nanocurie) of americium-241 each, for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
2. A person shall not acquire, receive, possess, use, or transfer radioactive material according to the general license established by this subsection until the person has filed with the Department ARRA-9, “Certificate -- “In Vitro” Testing with Radioactive Material Under General License,” provided the information listed in Exhibit E, and received a validated copy of ARRA-9, which indicates the assigned certification number. The physician, clinical laboratory, or hospital shall furnish on ARRA-9 the following information:
- a. Name, telephone number, and address of the physician, clinical laboratory, or hospital; and
 - b. A statement that the physician, clinical laboratory, or hospital has radiation measuring instruments to carry out “in vitro” clinical or laboratory tests with radioactive material and that tests will be performed

only by personnel competent to use the instruments and handle the radioactive material.

3. A person who receives, acquires, possesses, or uses radioactive material according to the general license granted under this subsection shall:
 - a. Not possess at any one time, in storage or use, a combined total of not more than 7.4 megabecquerels (200 microcuries) of iodine-125, iodine-131, iron-59, cobalt-57, or selenium-75 in excess of 7.4 megabecquerels (200 microcuries), or acquire or use in any one calendar month more than 18.5 megabecquerels (500 microcuries) of these radionuclides.
 - b. Store the radioactive material, until used, in the original shipping container or in a container that provides equivalent radiation protection.
 - c. Use the radioactive material only for the uses authorized by subsection (E).
 - d. Not transfer radioactive material to a person who is not authorized to receive it according to a license issued by the Department, the U.S. Nuclear Regulatory Commission, or any Agreement State or Licensing State, or in any manner other than in an unopened, labeled shipping container received from the supplier.
 - e. Not dispose of a mock iodine-125 reference or calibration source described subsection (E)(1) except as authorized by R9-7-434.
 - f. Package or prepackage a unit bearing a durable, clearly visible label: identifying the radioactive contents as to chemical form and radionuclide, and indicating that the amount of radioactivity does not exceed 0.37 megabecquerel (10 microcuries) of iodine-131, iodine-125, selenium-75, or carbon-14; 1.85 megabecquerels (50 microcuries) of hydrogen-3 (tritium); or 0.74 megabecquerel (20 microcuries) of iron-59; or Mock Iodine-125 in units not exceeding 1.85 kilobecquerels (0.05 microcurie) of iodine-129 and 0.185 kilobecquerel (0.005 microcurie) of americium-241 each; or cobalt-57 in units not exceeding 0.37 megabecquerel (10 microcuries).
 - g. Package to display the radiation caution symbol and the words, "Caution, Radioactive Material", and "Not for Internal or External Use in Humans

or Animals.”

4. The general licensee shall not receive, acquire, possess, transfer, or use radioactive material according to subsection (E)(1):
 - a. Except as prepackaged units that are labeled according to the provisions of a specific license issued by the U.S. Nuclear Regulatory Commission, or any Agreement State that authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3 (tritium), iron-59, cobalt-57, selenium-75, or mock iodine-125 for distribution to persons generally licensed under subsection (E) or its equivalent federal law; and
 - b. Unless one of the following statements, or a substantially similar statement that contains the same information, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure that accompanies the package:
 - i. This radioactive material may be acquired, received, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from such material, to human beings or animals. The acquisition, receipt, possession, use, and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

Name of manufacturer
 - ii. This radioactive material shall be acquired, received, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from such material, to human beings or animals. The receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of a Licensing State.

Name of manufacturer

5. A physician, clinical laboratory or hospital that possesses or uses radioactive material under a general license granted by subsection (E):
 - a. Shall report to the Department in writing, any change in the information furnished on the ARRA-9. The report shall be furnished within 30 days after the effective date of the change; and
 - b. Is exempt from the requirements of 9 A.A.C. 7, Article 4 and Article 10 with respect to radioactive material covered by the general license, except that a person using mock iodine-125 sources, described in subsection (E)(1)(g), shall comply with the provisions of R9-7-434, R9-7-443, and R9-7-444 of this Chapter.
 6. For the purposes of subsection (E), a licensed veterinary care facility is considered a “clinical laboratory.”
- F.** This subsection grants a general license that authorizes a person to own, receive, acquire, possess, use, and transfer strontium-90, contained in ice detection devices, provided each device contains not more than 1.85 megabecquerels (50 microcuries) of strontium-90 and each device has been manufactured or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission or each device has been manufactured according to the specifications contained in a specific license issued by the Department or any Agreement State to the manufacturer of the device under licensing requirements equivalent to those in 10 CFR 32.61. A person who receives, owns, acquires, possesses, uses, or transfers strontium-90 contained in ice detection devices under a general license in accordance with subsection (F):
1. Shall, upon occurrence of visually observable damage, such as a bend or crack or discoloration from overheating, discontinue use of the device until it has been inspected, tested for leakage, and repaired by a person who holds a specific license from the U.S. Nuclear Regulatory Commission or an Agreement State to manufacture or service ice detection devices; or dispose of the device according to the provisions of R9-7-434;
 2. Shall assure that each label, affixed to the device at the time of receipt, which bears a statement that prohibits removal of the labels, maintained on the device; and
 3. Is exempt from the requirements of 9 A.A.C. 7, Article 4 and Article 10, except

that the user of an ice detection device shall comply with the provisions of R9-7-434, R9-7-443, and R9-7-444.

4. Shall not manufacture, assemble, disassemble, repair, or import an ice detection device that contains strontium-90.
 5. Is subject to the provisions of 9 A.A.C. 7, Articles 1, 3, 12, and 15, and A.R.S. §§ 30-654(B), 30-657(A) and (B), 30-681, and 30-685 through 30-689.
- G.** This subsection grants a general license that authorizes a person to acquire, receive, possess, use, or transfer, in accordance with the provisions of subsections (H) and (I), radium-226 contained in the following products manufactured prior to November 30, 2007.
1. Antiquities originally intended for use by the general public. For the purposes of this ~~paragraph~~ subsection, antiquities mean products originally intended for use by the general public and distributed in the late 19th and early 20th centuries, such as radium emanator jars, revigators, radium water jars, radon generators, refrigerator cards, radium bath salts, and healing pads.
 2. Intact timepieces containing greater than 0.037 megabecquerel (1 microcurie), nonintact timepieces, and timepiece hands and dials no longer installed in timepieces.
 3. Luminous items installed in air, marine, or land vehicles.
 4. All other luminous products, provided that no more than 100 items are used or stored at the same location at any one time.
 5. Small radium sources containing no more than 0.037 megabecquerel (1 microcurie) of radium-226. For the purposes of this ~~paragraph~~ subsection, “small radium sources” means discrete survey instrument check sources, sources contained in radiation measuring instruments, sources used in educational demonstrations (such as cloud chambers and spinthariscopes), electron tubes, lightning rods, ionization sources, static eliminators, or as designated by the NRC.
- H.** Persons who acquire, receive, possess, use, or transfer byproduct material under the general license issued in subsection (G) are exempt from the provisions 9 A.A.C. 7, Articles 1, 3, 4, 7, 10, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689, to the extent that the receipt, possession, use, or transfer of byproduct material is within the terms of the general license; provided,

however, that this exemption shall not be deemed to apply to any such person specifically licensed under this chapter. Any person who acquires, receives, possesses, uses, or transfers byproduct material in accordance with the general license in subsection (G):

1. Shall notify the Department should there be any indication of possible damage to the product so that it appears it could result in a loss of the radioactive material. A report containing a brief description of the event, and the remedial action taken, must be furnished to the Department within 30 days.
 2. Shall not abandon products containing radium-226. The product, and any radioactive material from the product, may only be disposed of according to Article 4 or by transfer to a person authorized by a specific license to receive the radium-226 in the product or as otherwise approved by the Department.
 3. Shall not export products containing radium-226 except in accordance with 10 CFR 110 revised January 1, 2013, incorporated by reference, and available under R9-7-101. The incorporated material contains no future editions or amendments.
 4. Shall dispose of products containing radium-226 at a disposal facility authorized to dispose of radioactive material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005, by transfer to a person authorized to receive radium-226 by a specific license issued under Article 3, equivalent regulations of an Agreement State, or the NRC.
 5. Shall respond to written requests from the Department to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the Department Director a written justification for the request.
- I. The general license in subsection (G) does not authorize the manufacture, assembly, disassembly, repair, or import of products containing radium-226, except that timepieces may be disassembled and repaired.

R9-7-311. Special Requirements for a Specific License to Manufacture, Assemble, Repair, or Distribute Commodities, Products, or Devices that Contain Radioactive Material

- A. Licensing the manufacture and distribution of devices to persons generally licensed under

R9-7-306(A).

1. The Department shall grant a specific license to manufacture or distribute each device that contains radioactive material, excluding special nuclear material, to persons generally licensed under R9-7-306(A) or equivalent regulations of the U.S. NRC, an Agreement State, or the Licensing State if:
 - a. The applicant satisfies the requirements of R9-7-309;
 - b. The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions, and potential hazards of the device to provide reasonable assurance that:
 - i. The device can be safely operated by persons not having training in radiological protection;
 - ii. Under ordinary conditions of handling, storage, and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device, and it is unlikely that any person will receive a dose in excess of 10 percent of the limits specified in R9-7-408; and
 - iii. Under accident conditions (such as fire and explosion) associated with handling, storage, and use of the device, it is unlikely that any person would receive an external radiation dose or dose commitment in excess of the following organ doses:
 - (1) Whole body; head and trunk; active blood-forming organs; gonads; or lens of eye: 150 mSv (15 rem)
 - (2) Hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than 1 square centimeter; 2 Sv (200 rem)
 - (3) Other organs: 500 mSv (50 rem)
 - c. Each device bears a durable, legible, clearly visible label or labels that contain in a clearly identified and separate statement:
 - i. Instructions and precautions necessary to assure safe installation, operating, and servicing of the device (documents such as operating and service manuals may be identified in the label and used to provide this information);

- ii. The requirement, or lack of requirement, for leak testing, or for testing any on-off mechanism and indicator, including the maximum time interval for the testing, and the identification of radioactive material by isotope, quantity of radioactivity, and date of determination of the quantity; and
- iii. The information called for in one of the following statements in the same or substantially similar form:

The receipt, possession, use, and transfer of this device, Model _____, Serial No. _____, are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or a state with which the Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited.

CAUTION – RADIOACTIVE MATERIAL

(name of manufacturer or distributor)

The receipt, possession, use and transfer of this device, Model _____, Serial No. _____, are subject to a general license or the equivalent, and the regulations of a Licensing State. This label shall be maintained on the device in a legible condition.

Removal of this label is prohibited.

CAUTION – RADIOACTIVE MATERIAL

(name of manufacturer or distributor)

- d. The model, serial number, and name of manufacturer or distributor may be omitted from the label if the information location is specified in labeling affixed to the device;
- e. Each device with a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label that provides the device model number and serial number, the isotope and quantity, the words, “Caution-Radioactive Material,” the radiation symbol described in R9-7-428, and the name of the manufacturer or

- initial distributor; and
- f. Each device meets the criteria in 10 CFR 31.5(c)(13)(i) (revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments) and bears a permanent (e.g., embossed, etched, stamped, or engraved) label affixed to the source housing, if separable, or the device if the source housing is not separable, that includes the words, "Caution-Radioactive Material," and, if practicable, the radiation symbol described in R9-7-428.
 - g. The device has been registered in the Sealed Source and Device Registry.
2. In the event the applicant desires that the device undergo mandatory testing at intervals longer than six months, either for proper operation of the on-off mechanism and indicator, if any, or for leakage of radioactive material or for both, the application shall contain sufficient information to demonstrate that the longer interval is justified by performance characteristics of the device or similar devices and by design features which have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the on-off mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the Department shall consider information which includes, but is not limited to:
 - a. Primary containment (source capsule),
 - b. Protection of primary containment,
 - c. Method of sealing containment,
 - d. Containment construction materials,
 - e. Form of contained radioactive material,
 - f. Maximum temperature withstood during prototype tests,
 - g. Maximum pressure withstood during prototype tests,
 - h. Maximum quantity of contained radioactive material,
 - i. Radiotoxicity of contained radioactive material, and
 - j. Operating experience with identical devices or similarly designed and constructed devices.
 3. In the event the applicant desires that the general licensee under R9-7-306(A), or under equivalent regulations of the NRC or an Agreement State or Licensing

State, be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the on-off mechanism and indicator, or remove the device from installation, the application shall include written instructions to be followed by the general licensee, estimated calendar quarter doses associated with the activity or activities, and bases for the estimates. The submitted information shall demonstrate that performance of the activity or activities by an individual untrained in radiological protection, in addition to other handling, storage, and use of devices under the general license, is unlikely to cause that individual to receive a dose in excess of 10 percent of the limits specified in R9-7-408.

4. A licensee authorized under subsection (A) to distribute a device to a generally licensed person shall provide, if a device that contains radioactive material is to be transferred for use under the general license granted in R9-7-306(A), the name of each person that is licensed under R9-7-311(A) and the information specified in this subsection for each person to whom a device will be transferred. The licensee shall provide this information before the device may be transferred. In the case of transfer through another person, the licensee shall provide the listed information to the intended user before initial transfer to the other person.
 - a. The licensee shall provide:
 - i. A copy of the general license, issued under R9-7-306(A),
 - ii. A copy of R9-7-443 and R9-7-445,
 - iii. A list of the services that can only be performed by a specific licensee,
 - iv. Information on authorized disposal options, including estimated costs of disposal, and
 - v. A list of civil penalties for improper disposal.
 - b. The licensee shall:
 - i. Report on a quarterly basis to the responsible Agreement State or NRC all transfers of devices to persons for use under a general license in accordance with 10 CFR 32.52, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

- ii. Maintain all information concerning transfers and receipts of devices that supports the reports required by subsection ~~(A)(4)(b)~~ (A)(4)(b)(i).
 - iii. Maintain records required by subsection ~~(A)(4)(b)~~ (A)(4)(b)(i) for a period of three years following the date of the recorded event.
- 5. If radioactive material is to be transferred in a device for use under an equivalent general license of the NRC or another Agreement State, each person that is licensed under R9-7-304(B) shall provide the information specified in this subsection to each person to whom a device will be transferred. The licensee shall provide this information before the device is transferred. In the case of transfer through another person, the licensee shall provide the listed information to the intended user before initial transfer to the other person. The licensee shall provide:
 - a. A copy of the Agreement State's requirements that are equivalent to R9-7-306(A), ~~and A.R.S. §§ 30-657~~, R9-7-443, and R9-7-445, and to A.R.S. § 30-657. If a copy of NRC regulations is provided to a prospective general licensee in lieu of the Agreement State's requirements, the licensee shall explain in writing that use of the device is regulated by the Agreement State. If certain requirements do not apply to a particular device, the licensee may omit the requirement from the material provided;
 - b. A list of the services that can only be performed by a specific licensee;
 - c. Information on authorized disposal options, including estimated costs of disposal; and
 - d. The name, title, address, and telephone number of the individual at the Agreement State regulatory agency who can provide additional information.
- 6. A licensee may propose to the Department an alternate method of informing the customer.
- 7. If a licensee has notified the Department of bankruptcy under R9-7-313(E) or is terminating under R9-7-319, the licensee shall provide, upon request, to the Department, the NRC, or another Agreement State, records of the disposition as

required under A.R.S. § 30-657.

8. A licensee authorized to transfer a device to a generally licensed person, shall comply with the following requirements:
 - a. The person licensed under subsection (A) shall report all transfers of devices to persons for use under a general license obtained under R9-7-306(A), and all receipts of devices from persons licensed under R9-7-306(A) to the Department, the NRC, or other affected Agreement State. The report shall be submitted on a quarterly basis, in a clear and legible form, and contain the following information:
 - i. The identity of each general licensee by name and mailing address for the location of use. If there is no mailing address for the location of use, the person licensed under subsection (A) shall submit an alternate address for the general licensee, along with information on the actual location of use;
 - ii. The name, title, and telephone number of a person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the applicable laws;
 - iii. The date of transfer;
 - iv. The type, model number, and serial number of the device transferred; and
 - v. The quantity and type of radioactive material contained in the device.
 - b. If one or more intermediaries will temporarily possess the device at the intended place of use before its possession by the intended user, the report shall include the information required of the general licensee in subsection (A)(4) for both the intended user and each intermediary, clearly identifying the intended user and each intermediary.
 - c. For devices received from a general licensee, licensed under R9-7-306(A), the report shall include:
 - i. The identity of the general licensee by name and address;
 - ii. The type, model number, and serial number of the device received;
 - iii. The date of receipt; and

- iv. In the case of a device not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.
 - d. If the person licensed under subsection (A) makes a change to a device possessed by a general licensee so that the label must be changed to update required information, the report shall identify the general licensee, the device, and the changes to information on the device label.
 - e. The report shall cover a calendar quarter, be filed within 30 days of the end of each calendar quarter, and clearly indicate the period covered by the report.
 - f. The report shall clearly identify the person licensed under subsection (A) submitting the report and include the license number of the license.
 - g. If no transfers are made to or from persons generally licensed under R9-7-306(A) during a reporting period, the person licensed under subsection (A) shall submit a report indicating the lack of activity.
 - 9. The licensee shall maintain records of all transfers for Department inspection. Records shall be maintained for three years after termination of the license to manufacture the generally licensed devices regulated under R9-7-306(A).
- B.** The Department shall grant a specific license to manufacture, assemble, repair, or initially transfer luminous safety devices that contain tritium or promethium-147 for use in aircraft, for distribution to persons generally licensed under R9-7-306(B), if the applicant satisfies:
- 1. The general requirements specified in R9-7-309; and
 - 2. The requirements of 10 CFR 32.53 through 32.56 revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- C.** The Department shall grant a specific license to manufacture or initially transfer calibration or reference sources that contain americium-241, radium-226, or plutonium for distribution to persons generally licensed under R9-7-306(C) if the applicant satisfies:
- 1. The general requirements of R9-7-309; and
 - 2. The requirements of 10 CFR 32.57, 32.58, 32.59, and 70.39, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- D.** The Department shall grant a specific license to distribute radioactive material for use by

a physician under the general license in R9-7-306(D) if:

1. The general requirements of R9-7-309; and
2. The requirements of 10 CFR 32.57, 32.58, 32.59, and 70.39, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

E. The Department shall grant for a specific license to manufacture or distribute radioactive material for use under the general license of R9-7-306(E) if:

1. The applicant satisfies the general requirements specified in R9-7-309.
2. The radioactive material is to be prepared for distribution in prepackaged units of:
 - a. Iodine-125 in units not exceeding 370 kBq (10 microcuries) each;
 - b. Iodine-131 in units not exceeding 370 kBq (10 microcuries) each;
 - c. Carbon-14 in units not exceeding 370 kBq (10 microcuries) each;
 - d. Hydrogen-3 (tritium) in units not exceeding 1.85 MBq (50 microcuries) each;
 - e. Iron-59 in units not exceeding 740 kBq (20 microcuries) each;
 - f. Cobalt-57 or selenium-75 in units not exceeding 370 kilobecquerels (10 microcuries) each;
 - g. Mock iodine-125 in units not exceeding 1.85 kBq (50 nanocuries) of iodine-129 and 185 Bq (5 nanocuries) of americium-241 each.
3. Each prepackaged unit bears a durable, clearly visible label:
 - a. Identifying the radioactive contents as to chemical form and radionuclide and indicating that the amount of radioactivity does not exceed 370 kilobecquerels (10 microcuries) of iodine-125, iodine-131, cobalt-57, selenium-75, or carbon-14; 1.85 megabecquerels (50 microcuries) of hydrogen-3 (tritium); 740 kilobecquerels (20 microcuries) of iron-59; or mock iodine-125 in units not exceeding 1.85 kilobecquerels (0.05 microcurie) of iodine-129 and 185 becquerels (0.005 microcurie) of americium-241 each; and
 - b. Displaying the radiation caution symbol described in R9-7-428, the words, "CAUTION, RADIOACTIVE MATERIAL," and the phrase "Not for Internal or External Use in Humans or Animals."
4. One of the following statements, or a substantially similar statement that contains

the information called for in the following statements appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure that accompanies the package:

- a. This radioactive material may be received, acquired, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from the radioactive material, to human beings or animals. Its receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

Name of Manufacturer

- b. This radioactive drug may be received, acquired, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from the radioactive material, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of a Licensing State.

Name of Manufacturer

5. The label affixed to the unit, or the leaflet or brochure that accompanies the package, contains adequate information about the precautions to be observed in handling and storing the specified radioactive material. In the case of the mock iodine-125 reference or calibration source, the information accompanying the source must also contain directions to the licensee regarding the waste disposal requirements set out in R9-7-434.
- F.** The Department shall grant for a specific license to manufacture and distribute ice detection devices to persons generally licensed under R9-7-306(F) if the applicant satisfies:
1. The general requirements of R9-7-309; and

2. The criteria of 10 CFR 32.61 and 32.62, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- G.** The Department shall grant a specific license to manufacture, prepare, or transfer for commercial distribution radioactive drugs that contain radioactive material for use by a person authorized in accordance with Article 7 of this Chapter, if the applicant meets all of the requirements in 10 CFR 30.32(j) or 10 CFR 32.72, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
1. Authorization under this Section to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to medical use licensees in its consortium does not relieve the licensee from complying with applicable FDA, other federal, and state requirements governing radioactive drugs.
 2. Each licensee authorized under this Section to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall:
 - a. Satisfy the labeling requirements in R9-7-431 for each PET radioactive drug transport radiation shield and each syringe, vial, or other container used to hold a PET radioactive drug intended for noncommercial distribution to members of its consortium.
 - b. Possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in R9-7-449.
 3. A licensee that is a pharmacy authorized under this Section to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall require that any individual who prepares PET radioactive drugs be an:
 - a. Authorized nuclear pharmacist that meets the requirements in R9-7-712,
or
 - b. Individual under the supervision of an authorized nuclear pharmacist as specified in R9-7-706.
 4. A pharmacy, authorized under this Section to produce PET radioactive drugs for

noncommercial transfer to medical use licensees in its consortium that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of R9-7-712.

- H.** The Department shall grant a specific license to manufacture and distribute generators or reagent kits that contain radioactive material for preparation of radiopharmaceuticals by persons licensed according to 9 A.A.C. 7, Article 7 if:
1. The applicant satisfies the general requirements of R9-7-309;
 2. The applicant submits evidence that:
 - a. The generator or reagent kit is to be manufactured, labeled and packaged according to the Federal Food, Drug, and Cosmetic Act or the Public Health Service Act, a new drug application (NDA) approved by the Food and Drug Administration (FDA), a biologic product license issued by FDA, or a “Notice of Claimed Investigational Exemption for a New Drug” (IND) that has been accepted by the FDA; or
 - b. The manufacture and distribution of the generator or reagent kit are not subject to the Federal Food, Drug, and Cosmetic Act and the Public Health Service Act.
 3. The applicant submits information on the radionuclide; chemical and physical form, packaging including maximum activity per package, and shielding provided by the packaging of the radioactive material contained in the generator or reagent kit;
 4. The label affixed to the generator or reagent kit contains information on the radionuclide, including quantity, and date of assay; and
 5. The label affixed to the generator or reagent kit, or the leaflet or brochure that accompanies the generator or reagent kit, contains:
 - a. Adequate information, from a radiation safety ~~stand point~~ standpoint, on the procedures to be followed and the equipment and shielding to be used in eluting the generator or processing radioactive material with the reagent kit; and
 - b. A statement that this generator or reagent kit (as appropriate) is approved for use by persons licensed by the Department under 9 A.A.C. 7, Article 7 or equivalent licenses of the U.S. Nuclear Regulatory Commission or an Agreement State or Licensing State. The labels, leaflets or brochures

required by this subsection supplement the labeling required by FDA and they may be separate from or, with the approval of FDA, combined with the labeling required by FDA.

- I. The Department shall grant a specific license to manufacture and distribute sources and devices that contain radioactive material to a person licensed in accordance with Article 7 of this Chapter for use as a calibration, transmission, or reference source or for medical purposes, if the applicant meets all of the requirements in 10 CFR 32.74, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- J. Requirements for license to manufacture and distribute industrial products containing depleted uranium for mass volume applications.
 - 1. The Department shall grant a specific license to manufacture industrial products and devices that contain depleted uranium for use under R9-7-305(C) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State if:
 - a. The applicant satisfies the general requirements in R9-7-309;
 - b. The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, proposed uses, and potential hazards of the industrial product or device to provide reasonable assurance that possession, use, or transfer of the depleted uranium in the product or device is not likely to cause any individual to receive a radiation dose in excess of 10 percent of the limits specified in R9-7-408.
 - c. The applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.
 - 2. In the case of an industrial product or device whose unique benefits are questionable, the Department shall approve an application for a specific license under this subsection only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.

3. The Department may deny any application for a specific license under this subsection if the end use or uses of the industrial product or device cannot be reasonably foreseen.
4. Each person licensed under subsection (J)(1) shall:
 - a. Maintain the level of quality control required by the license in the manufacture of the industrial product or device and the installation of the depleted uranium into the product or device;
 - b. Label or mark each unit to:
 - i. Identify the manufacturer of the product or device, the number of the license under which the product or device was manufactured or initially transferred, the fact that the product or device contains depleted uranium, and the quantity of depleted uranium in each product or device; and
 - ii. State that the receipt, possession, use, and transfer of the product or device are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or an Agreement State;
 - c. Assure that the depleted uranium, before being installed in each product or device, has been impressed with the following legend, clearly legible through any plating or other covering: “Depleted Uranium”;
 - d. Furnish a copy of the general license contained in R9-7-305(C) and a copy of ARRA-23 to each person to whom depleted uranium in a product or device is transferred for use under a general license contained in R9-7-305(C); or
 - e. Furnish a copy of the general license contained in the U.S. Nuclear Regulatory Commission’s or Agreement State’s regulation equivalent to R9-7-305(C) and a copy of the U.S. Nuclear Regulatory Commission’s or Agreement State’s certificate, or alternatively, furnish a copy of the general license contained in R9-7-305(C) and a copy of ARRA-23 to each person to whom depleted uranium in a product or device is transferred for use under a general license of the U.S. Nuclear Regulatory Commission or an Agreement State, with a document explaining that use of the product or device is regulated by the U.S.

- Nuclear Regulatory Commission or an Agreement State under requirements substantially the same as those in R9-7-305(C);
- f. Report to the Department all transfers of industrial products or devices to persons for use under the general license in R9-7-305(C). The report shall identify each general licensee by name and address, an individual by name or position who serves as the point of contact person for the general licensee, the type and model number of device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which a product or device is transferred to the generally licensed person. If no transfers have been made to persons generally licensed under R9-7-305(C) during the reporting period, the report shall so indicate;
- i. Report to the U.S. Nuclear Regulatory Commission all transfers of industrial products or devices to persons for use under the U.S. Nuclear Regulatory Commission general license in 10 CFR 40.25; or
- ii. Report to the responsible state agency all transfers of devices manufactured and distributed under subsection (J)(4)(f) for use under a general license in that state's regulations equivalent to R9-7-305(C);
- iii. The report required in subsection (J)(4)(f)(i) or (ii) shall identify each general licensee by name and address, an individual by name or position who serves as the contact person for the general licensee, the type and model number of the device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which a product or device is transferred to the generally licensed person;
- iv. If no transfers have been made to U.S. Nuclear Regulatory Commission licensees during the reporting period, this information shall be reported to the U.S. Nuclear Regulatory Commission;

- v. If no transfers have been made to general licensees within a particular Agreement State during the reporting period, this information shall be reported to the responsible Agreement state agency; and
- vi. Keep records showing the name, address, and contact person for each general licensee to whom depleted uranium in industrial products or devices is transferred for use under a general license provided in R9-7-305(C) or equivalent regulations of the U.S. Nuclear Regulatory Commission or of an Agreement State. The records shall be maintained for a period of three years and show the date of each transfer, the quantity of depleted uranium in each product or device transferred, and compliance with the reporting requirements of this Section.

- K.** A licensee who manufactures nationally tracked sources, as defined in Article 4, shall:
 - 1. Serialize the sources in accordance with 10 CFR 32.201, revised January 1, 2013, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments; and
 - 2. Report manufacturing activities in accordance with R9-7-454.

R9-7-313. Specific Terms and Conditions

- A.** Each license issued under this Article is subject to all provisions of A.R.S. Title 30, Chapter 4 and to all rules, regulations, and orders of the Department.
- B.** A licensee shall not transfer, assign, or in any manner dispose of a license issued or granted under this Article or a right to possess or utilize radioactive material granted by any license issued under this Article unless the Department finds that the transfer is consistent with the Department's statutes and rules, and gives its consent in writing. An application for transfer of license must include:
 - 1. The identity, technical and financial qualifications of the proposed transferee; and
 - 2. Financial assurance for decommissioning information required by R9-7-323.
- C.** Each person licensed by the Department under this Article shall confine the use and possession of the material licensed to the locations and purposes authorized in the license.
- D.** Each license issued pursuant to the rules in Articles 3, 5, 7, and 15 of this Chapter shall be deemed to contain the provisions set forth in the Act, whether or not these provisions are expressly set forth in the license.

- E.** The Department may incorporate, in any license issued pursuant to the rules in this Chapter, at the time of issuance, or thereafter by appropriate rule, regulation or order, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of byproduct material as it deems appropriate or necessary in order to:
1. Promote the common defense and security;
 2. Protect health or to minimize danger to life or property;
 3. Protect restricted data; or
 4. Require such reports and the keeping of such records, and to provide for such inspections of activities under the license as may be necessary or appropriate to effectuate the purposes of the Act and rules thereunder.
- F.** Licensees required to submit emergency plans in accordance with R9-7-322 shall follow the emergency plan approved by the Department. The licensee may change the approved plan without Department approval only if the changes do not reduce the commitment of the plan. The licensee shall furnish the change to the Department and to affected offsite response organizations within six months after the change is made. Proposed changes that reduce, or potentially reduce, the commitment of the approved emergency plan may not be implemented without prior application to and prior approval by the Department.
- G.** Each person licensed under this Section and each general licensee that is required to register under R9-7-306(A)(4)(o) shall notify the Department in writing if the licensee decides to permanently discontinue any or all activities involving materials authorized under the license. A specific licensee or general licensee shall notify the Department, in writing:
1. Immediately following the filing of a petition for bankruptcy under any Chapter of Title 11 of the United States Code if the petition for bankruptcy is by or against:
 - a. The licensee;
 - b. An entity (as defined in the bankruptcy code) controlling the licensee or listing the license or licensee as property of the estate; or
 - c. An affiliate (as defined in the bankruptcy code) of the licensee.
 2. Providing the following information:
 - a. The bankruptcy court in which the petition for bankruptcy was filed, and
 - b. The bankruptcy case title and number, and
 - c. The date the petition was filed.
- H.** Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from

strontium-82/rubidium-82 generators shall test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with R9-7-720. The licensee shall record the results of each test and retain each record for three years after the record is made.

I. Inalienability of Licenses

1. No license issued or granted pursuant to the regulations in this part shall be transferred, assigned or in any manner disposed of, either voluntarily or involuntarily, directly or indirectly, through transfer of control of any license to any person, unless the Department, after securing full information, finds that the transfer is in accordance with the provisions of this act and gives its consent in writing.
2. An application for transfer of license must include:
 - a. The identity, technical and financial qualifications of the proposed transferee;
and
 - b. Financial assurance for decommissioning information required by R9-7-323, 10 CFR 40.3 and 10 CFR 70.25.

R9-7-323. Financial Assurance and Recordkeeping for Decommissioning

A. For purposes of terminating specific licensed activities:

1. “Decommissioning” means to remove a radioactive material use facility safely from service and to reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the radioactive material use license.
2. “Byproduct material” as used in 10 CFR 30, means “radioactive material” which is defined in A.R.S. § 30-651.
3. “Facility” means the entire site of radioactive material use, or any separate building or outdoor area where it is used.
4. “Appendix B to Part 30” as used in 10 CFR 30, means Appendix E in 9 A.A.C. 7, Article 4.
5. “Financial security” means having a net worth of not less than \$10,000.

B. When applying, each non-government applicant for a specific license that authorizes the possession and use of radioactive material, and each non-government holder of a license to possess and use radioactive material issued before the effective date of this Section, shall submit to the Department a decommissioning funding plan or certification of

financial security, as required in A.R.S. § 30-672(H). A licensee required to meet the requirements in subsection (C) is exempt from the requirements in this subsection.

C. When applying, each applicant for a specific license that authorizes the possession and use of radioactive material, and each holder of a license to possess and use radioactive material issued before the effective date of this Section, shall submit to the Department a decommissioning funding plan or certification of financial assurance that meets the requirements in 10 CFR 30.35, 40.36, and 70.25, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments. Each decommissioning funding plan shall be submitted to the Department for review and approval and shall contain:

- ~~1.~~ A a detailed cost estimate for decommissioning, in an amount reflecting:
 - ~~a.1.~~ The cost of an independent contractor to perform all decommissioning activities;
 - ~~b.2.~~ The cost of meeting the R9-7-452(B) criteria for unrestricted use, provided that, if the applicant or licensee can demonstrate its ability to meet the provisions of ~~R9-7-453(C)~~ R9-7-452(C), the cost estimate may be based on meeting the ~~R9-7-453(C)~~ R9-7-452(C) criteria;
 - ~~c.3.~~ The volume of onsite subsurface material containing residual radioactivity that will require remediation to meet the criteria for license termination; ~~and~~
 - ~~d.4.~~ An adequate contingency factor. The ability to meet the provisions of this Section, for which the cost estimate may be based on meeting the criteria specified in this Section; and
- 5. An adequate contingency factor, including:
 - ~~2.a.~~ Identification of and justification for using the key assumptions contained in the DCE;
 - ~~3.b.~~ A description of the method of assuring funds for decommissioning including means for adjusting cost estimates and associated funding levels periodically over the life of the facility;
 - ~~4.c.~~ A certification by the licensee that financial assurance for decommissioning has been provided in the amount of the cost estimate for decommissioning; and
 - ~~5.d.~~ An original signed copy of the financial instrument obtained to satisfy the requirements of subsection (F) unless a previously submitted and accepted financial instrument continues to cover the cost estimate for

decommissioning).

- D.** Each licensee required to provide financial assurance for decommissioning a radioactive material facility under this Section shall maintain records of information important to the safe and effective decommissioning of the facility in an identified location until the license is terminated by the Department. The licensee shall maintain the following records during the decommissioning process:
1. Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, and site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. The licensee shall keep records identifying the involved radionuclides and associated quantities, forms, and concentrations.
 2. As-built drawings showing modifications of structures and equipment in restricted areas where radioactive materials are used and stored, and locations of possible inaccessible contamination. If drawings are not available, the licensee shall provide appropriate records describing each location of possible contamination.
 3. Records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.
- E.** Decommissioning procedures:
1. Upon expiration or termination of principal activities a licensee shall notify the Department in writing whether the licensee is discontinuing licensed activities. The licensee shall begin decommissioning its facility within 60 days after the Department receives notice of the decision to permanently terminate principal activities, or within 12 months after receipt of notice, submit to the Department a decommissioning plan, as prescribed in 10 CFR 30.36(g)(1), 40.42(g)(1), and 70.38(g)(1), revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments. The licensee shall begin decommissioning upon approval of the plan if the license has expired or no licensed activities have been conducted at the licensee's facility for a period of 24 months.

2. In addition to the notification requirements in subsection (E)(1), the licensee shall maintain in effect all decommissioning financial assurances required by this Section. The financial assurances shall be increased or may be decreased as appropriate to cover the cost estimate established for decommissioning in subsection (E)(1). The licensee may reduce the amount of the financial assurance following approval of the decommissioning plan, provided the radiological hazard is decreasing and the licensee has the approval of the Department.
 3. The Department shall extend the time periods established in subsection (E)(1) if a new time period is in the best interest of public health and safety.
 - a. The licensee shall submit a request for an extension no later than 30 days after the Department receives the notice required in subsection (E)(1).
 - b. If a licensee has requested an extension, the licensee is not required to commence decommissioning activities required in subsection (E)(1), until the Department has made a determination on the request submitted to the Department under subsection (E)(3)(a).
 4. Except as provided in subsection (E)(5), the licensee shall complete decommissioning of a facility as soon as practicable but no later than 24 months following the initiation of decommissioning; and except as provided in subsection (E)(5), when decommissioning involves the entire facility, the licensee shall request license termination as soon as practicable but no later than 24 months following initiation of decommissioning.
 5. The Department shall approve a request for an alternate schedule for completion of decommissioning and license termination if the Department determines that the alternative is warranted by consideration of the conditions specified in 10 CFR 30.36(i), 40.42(i), and 70.38(i), revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
 6. As a final step in decommissioning, the licensee shall meet the requirements specified in 10 CFR 30.36(j), 40.42(j), and 70.38(j), revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- F.** Each person licensed under this Article shall keep records of information important to the decommissioning of a facility in an identified location until the site is released for

unrestricted use. Before licensed activities are transferred or assigned in accordance with R9-7-318, licensees shall transfer all records described in ~~this paragraph~~ subsections (F)(1) through (F)(4) to the new licensee. In this case, the new licensee will be responsible for maintaining these records until the license is terminated. If records important to the decommissioning of a facility are kept for other purposes, reference to these records and their locations may be used. Information the Department considers important to decommissioning consists of:

1. Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, or site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. These records must include any known information on identification of involved nuclides, quantities, forms, and concentrations.
2. As-built drawings and modifications of structures and equipment in restricted areas where radioactive materials are used and/or stored, and of locations of possible inaccessible contamination such as buried pipes which may be subject to contamination. If required drawings are referenced, each relevant document need not be indexed individually. If drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations.
3. Except for areas containing depleted uranium used only for shielding or as penetrators in unused munitions, a list contained in a single document and updated every 2 years, of the following:
 - a. All areas designated and formerly designated as restricted areas as defined under R9-7-102;
 - b. All areas outside of restricted areas that require documentation under ~~R9-7-323(F)(1)~~ subsection (F)(1);
 - c. All areas outside of restricted areas where current and previous wastes have been buried as documented under R9-7-441; and
 - d. All areas outside of restricted areas that contain material such that, if the license expired, the licensee would be required to either decontaminate the area to meet the criteria for decommissioning in R9-7-451 or

R9-7-452; or apply for approval for disposal under R9-7-435.

4. Records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.
- G.** In providing financial assurance under this section, each licensee shall use the financial assurance funds only for decommissioning activities and each licensee shall monitor the balance of funds held to account for market variations. The licensee shall replenish the funds, and report such actions to the Department, as follows:
1. If, at the end of a calendar quarter, the fund balance is below the amount necessary to cover the cost of decommissioning, but is not below 75 percent of the cost, the licensee shall increase the balance to cover the cost, and shall do so within 30 days after the end of the calendar quarter.
 2. If, at any time, the fund balance falls below 75 percent of the amount necessary to cover the cost of decommissioning, the licensee shall increase the balance to cover the cost, and shall do so within 30 days of the occurrence.
 3. Within 30 days of taking the actions required by subsection (G)(1) or (G)(2), the licensee shall provide a written report of such actions to the Director of the Department, and state the new balance of the fund.
- H.** The financial instrument must include the licensee's name, license number, and docket number, and the name, address, and other contact information of the issuer, and, if a trust is used, the trustee. When any of the foregoing information changes, the licensee must, within 30 days, submit financial instruments to the Department reflecting such changes. The financial instrument submitted must be a signed original or signed original duplicate, except where a copy of the signed original is specifically permitted. Financial assurance for decommissioning must be provided by one or more of the following methods:
1. Prepayment. Prepayment is the deposit before the start of operation into an account segregated from licensee assets and outside the licensee's administrative control of cash or liquid assets such that the amount of funds would be sufficient to pay decommissioning costs. Prepayment must be made into a trust account, and the trustee and the trust must be acceptable to the Department.
 2. A surety method, insurance, or other guarantee method. These methods guarantee that decommissioning costs will be paid. A surety method may be in the form of a surety bond, or letter of credit. A parent company guarantee of funds for

decommissioning costs based on a financial test may be used if the guarantee and test are approved by the Department. For commercial corporations that issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs based on a financial test may be used if the guarantee and test are approved by the Department. For commercial companies that do not issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs may be used if the guarantee and test are approved by the Department. For nonprofit entities, such as colleges, universities, and nonprofit hospitals, a guarantee of funds by the applicant or licensee may be used if the guarantee and test are approved by the Department. Except for an external sinking fund, a parent company guarantee or a guarantee by the applicant or licensee may not be used in combination with any other financial methods used to satisfy the requirements of this section. A guarantee by the applicant or licensee may not be used in any situation where the applicant or licensee has a parent company holding majority control of the voting stock of the company. Any surety method or insurance used to provide financial assurance for decommissioning must contain the following conditions:

- a. The surety method or insurance must be open-ended or, if written for a specified term, such as five years, must be renewed automatically unless 90 days or more prior to the renewal date, the issuer notifies the Department, the beneficiary, and the licensee of its intention not to renew. The surety method or insurance must also provide that the full face-value amount be paid to the beneficiary automatically prior to the expiration without proof of forfeiture if the licensee fails to provide a replacement acceptable to the Department within 30 days after receipt of notification of cancellation.
- b. The surety method or insurance must be payable to a trust established for decommissioning costs. The trustee and trust must be acceptable to the Department. An acceptable trustee includes an appropriate State or Federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.
- c. The surety method or insurance must remain in effect until the Department

has terminated the license.

3. An external sinking fund in which deposits are made at least annually, coupled with a surety method, insurance, or other guarantee method, the value of which may reduce by the amount being accumulated in the sinking fund. An external sinking fund is a fund established and maintained by setting aside funds periodically in an account segregated from licensee assets and outside the licensee's administrative control in which the total amount of funds would be sufficient to pay decommissioning costs at the time termination of operation is expected. An external sinking fund must be in the form of a trust. If the other guarantee method is used, no surety or insurance may be combined with the external sinking fund. The surety, insurance, or other guarantee provisions must be as stated in subsection (H)(2).
4. In the case of Federal, State, or local government licensees, a statement of intent containing a cost estimate for decommissioning, and indicating that funds for decommissioning will be obtained when necessary.
5. When a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity.

ARTICLE 4. STANDARDS FOR PROTECTION AGAINST IONIZING RADIATION

R9-7-408. Occupational Dose Limits for Adults

- A.** Each licensee or registrant shall control the occupational dose to individual adults, except for planned special exposures required in R9-7-413, to the following dose limits:
1. An annual limit, which is the more limiting of:
 - a. The total effective dose equivalent being equal to 0.05 Sv (5 rem): or
 - b. The sum of the deep-dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 0.5 Sv (50 rem).
 2. The annual limits to the lens of the eye, to the skin, and to the extremities which are:
 - a. A lens dose equivalent of 0.15 Sv (15 rem), and
 - b. A shallow dose equivalent of 0.5 Sv (50 rem) to the skin of the whole body or to the skin of any extremity.
- B.** Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime. See R9-7-413.
- C.** The assigned deep-dose equivalent and shallow-dose equivalent are, for the portion of the body receiving the highest exposure, determined as follows:
1. The deep-dose equivalent, lens dose equivalent, and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable.
 2. If a protective apron is worn and monitoring is conducted as specified in R9-7-419(B), the effective dose equivalent for external radiation shall be determined as follows:
 - a. If only one individual monitoring device is used and it is located at the neck outside the protective apron, and the reported dose exceeds 25% of

the limit specified in ~~R9-7-408(A)~~ subsection (A), the reported deep-dose equivalent value multiplied by 0.3 is the effective dose equivalent for external radiation; or

- b. When individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation is assigned the value of the sum of the deep-dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep-dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.
3. When the external exposure is determined by measurement with an external personal monitoring device, the deep-dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the Department. The assigned deep-dose equivalent shall be determined for the part of the body that receives the highest exposure. The assigned shallow-dose equivalent is the dose averaged over the contiguous 10 square centimeters of skin that receives the highest exposure. The deep-dose equivalent, lens-dose equivalent, and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable.
- D.** Derived air concentration (DAC) and annual limit on intake (ALI) values are presented in Table I of Appendix B and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits.
 - E.** Notwithstanding the annual dose limits, the licensee shall limit the soluble Uranium intake by an individual to 10 milligrams in a week in consideration of chemical toxicity. See footnote 3 of Appendix B.
 - F.** The licensee or registrant shall reduce the dose that an individual may receive in the current year by the amount of occupational dose received while employed occupationally as a radiation worker by all previous employers. See R9-7-412.

R9-7-415. Dose Equivalent to an Embryo or Fetus

- A. A licensee or registrant shall ensure that the dose equivalent to an embryo or fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman, does not exceed 5 mSv (0.5 rem). Records shall be maintained according to ~~R9-7-419(D)(4) and (5)~~ R9-7-419(E)(4) and (5).
- B. The licensee or registrant shall make efforts to avoid substantial variation above a uniform monthly exposure rate to a declared pregnant woman to satisfy the limit in subsection (A).
- C. For purposes of this Section, the dose equivalent to the embryo or fetus is the sum of:
 1. The deep-dose equivalent to the declared pregnant woman; and
 2. The dose equivalent to the embryo or fetus resulting from radionuclides in the embryo or fetus and radionuclides in the declared pregnant woman.
- D. If the dose equivalent to the embryo or fetus is found to have exceeded 5 mSv (0.5 rem) or is within 0.5 mSv (0.05 rem) of this dose by the time the woman declares the pregnancy to the licensee or registrant, the licensee or registrant shall be deemed to be in compliance with subsection (A) if the additional dose equivalent to the embryo or fetus does not exceed 0.5 mSv (0.05 rem) during the remainder of the pregnancy.

R9-7-417. Testing for Leakage or Contamination of Sealed Sources

- A. A licensee in possession of any sealed source shall ensure that:
 1. Each sealed source, except as specified in subsection (B), is tested for leakage or contamination and the test results are received before the sealed source is put into use unless the licensee has a certificate from the transferor indicating that the sealed source was tested within six months before transfer to the licensee or registrant.
 2. Each sealed source that is not designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed six months or at alternative intervals approved by the Department, after evaluation of information specified by ~~R9-7-311(D)(2) and (D)(3)~~, R9-7-311(D)(2) or equivalent information specified by an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission.
 3. Each sealed source that is designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed three months or at alternative intervals approved by the Department, after evaluation of information specified by ~~R9-7-311(D)(2) and (D)(3)~~, R9-7-311(D)(2) or equivalent information specified

by an Agreement State, a Licensing State, or the Nuclear Regulatory Commission.

4. Each sealed source suspected of damage or leakage is tested for leakage or contamination before further use.
 5. Tests for leakage for all sealed sources, except brachytherapy sources manufactured to contain radium, are capable of detecting the presence of 185 Bq (0.005 μ Ci) of radioactive material on a test sample. The person conducting the test shall take test samples from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which contamination could accumulate. For a sealed source contained in a device, the person conducting the test shall obtain test samples when the source is in the "off" position.
 6. The test for leakage from brachytherapy sources containing radium is capable of detecting an absolute leakage rate of 37 Bq (0.001 μ Ci) of Radon-222 in a 24-hour period when the collection efficiency for Radon-222 and its daughters has been determined with respect to collection method, volume, and time.
 7. Tests for contamination from radium daughters are taken on the interior surface of brachytherapy source storage containers and are capable of detecting the presence of 185 Bq (0.005 μ Ci) of a radium daughter which has a half-life greater than four days.
- B.** A licensee need not perform tests for leakage or contamination on the following sealed sources:
1. Sealed sources containing only radioactive material with a half-life of less than 30 days;
 2. Sealed sources containing only radioactive material as a gas;
 3. Sealed sources containing 3.7 MBq (100 μ Ci) or less of beta or photon-emitting material or 370 kBq (10 μ Ci) or less of alpha-emitting material;
 4. Sealed sources containing only Hydrogen-3;
 5. Seeds of Iridium-192 encased in nylon ribbon; and
 6. Sealed sources, except teletherapy and ~~brachytherapy~~ brachytherapy sources, which are stored, not being used, and identified as in storage. The licensee shall test each sealed source for leakage or contamination and receive the test results before any use or transfer unless it has been tested for leakage or contamination

within six months before the date of use or transfer.

- C. Persons specifically authorized by the Department, an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission shall perform tests for leakage or contamination from sealed sources.
- D. A licensee shall maintain for Department inspection test results in units of becquerel or microcurie.
- E. The following is considered evidence that a sealed source is leaking:
 - 1. The presence of 185 Bq (0.005 μ Ci) or more of removable contamination on any test sample.
 - 2. Leakage of 37 Bq (0.001 μ Ci) of Radon-222 per 24 hours for brachytherapy sources manufactured to contain radium.
 - 3. The presence of removable contamination resulting from the decay of 185 Bq (0.005 μ Ci) or more of radium.
- F. A licensee shall immediately withdraw a leaking sealed source from use and shall take action to prevent the spread of contamination. The leaking sealed source shall be repaired or disposed of in accordance with this Article.
- G. A licensee shall file a report with the Department within five days if the test for leakage or contamination indicates a sealed source is leaking or contaminated. The report shall include the equipment involved, the test results, and the corrective action taken.
- H. A licensee shall maintain records of the tests for leakage required in subsection (A) for three years after the records are made.

R9-7-418. Surveys and Monitoring

- A. Each licensee or registrant shall make, or cause to be made, surveys if surveys are:
 - 1. Necessary for the licensee or registrant to comply with Article 4, and
 - 2. Reasonable under the circumstances to evaluate:
 - a. The magnitude and extent of radiation levels, and
 - b. Concentrations or quantities of residual radioactivity, and
 - c. The potential radiological hazards of the radiation levels and residual radioactivity detected.
- B. All personnel dosimeters, except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to any extremity, that require processing to determine the radiation dose and that are used by licensees and registrants to comply with R9-7-408, with other applicable provisions of these rules, or with conditions

specified in a license or registration shall be processed and evaluated by a dosimetry processor:

1. Holding current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology, according to NVLAP procedures published March 1994 as NIST Handbook 150, and NIST Handbook 150-4, published August 1994, which is incorporated by reference, published by the U.S. Government Printing Office, Washington D.C. 20402-9325, and on file with the Department. The material incorporated by reference contains no future editions or amendments; ~~and~~
2. Approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored; and
3. Film badges must be replaced at periods not to exceed one month; other personnel dosimeters processed and evaluated by an accredited NVLAP processor must be replaced at periods not to exceed three months.

C. The licensee or registrant shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device and that personnel monitoring devices are issued to, and used by only the individual to whom the monitoring device has been first issued during any reporting period.

D. A licensee shall ensure that survey instruments and personnel dosimeters that are used to make quantitative measurements are calibrated in accordance with R9-7-449.

E. Records.

1. Each licensee or registrant shall maintain records showing the results of surveys required by this Section and R9-7-433(B). The licensee or registrant shall retain these records for three years after the record is made.
2. The licensee or registrant shall retain each of the following records for three years after the Department terminates the license or registration:
 - a. Records of the survey results used to determine the dose from external sources of radiation, in the absence of or in combination with individual monitoring data, and provide an assessment of individual dose equivalents;
 - b. Records of the results of measurements and calculations used to determine

- individual intakes of radioactive material and to assess an internal dose;
- c. Records showing the results of air sampling, surveys, and bioassays required according to R9-7-425(A)(3)(a) and (b); ~~and~~
 - d. Records of the measurement and calculation results used to evaluate the release of radioactive effluents to the environment; and
 - e. Notwithstanding subsection (A) of this part, records from surveys describing the location and amount of subsurface residual radioactivity identified at the site must be kept with records important for decommissioning, and such records must be retained in accordance with R9-7-323, as applicable.

R9-7-419. Conditions Requiring Individual Monitoring of External and Internal Occupational Dose

- A. Each licensee or registrant shall monitor exposures from sources of radiation at levels sufficient to demonstrate compliance with the occupational dose limits of this Article.
- B. At minimum each licensee or registrant shall supply and require the use of individual monitoring devices by the following personnel:
 - 1. Adults likely to receive, in one year, an intake in excess of 10% of the applicable ALI in Table I, Columns 1 and 2, of Appendix B;
 - 2. Minors and declared pregnant women likely to receive, in one year, a committed effective dose equivalent in excess of 0.5 mSv (0.05 rem);
 - 3. Adults likely to receive, in one year from radiation sources external to the body, a dose in excess of 10 percent of the limits in R9-7-408(A);
 - 4. Minors likely to receive, in one year, from radiation sources external to the body, a deep dose equivalent in excess of 1 mSv (0.1 rem), a lens dose equivalent in excess of 1.5 mSv (0.15 rem), or a shallow dose equivalent to the skin or to the extremities in excess of 5 mSv (0.5 rem);
 - 5. Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of 1 mSv (0.1 rem) (Note: All of the occupational doses in R9-7-408 continue to be applicable to the declared pregnant worker as long as the embryo/fetus dose limit is not exceeded.); ~~and~~
 - 6. Individuals entering a high or very high radiation area;
 - 7. Individuals operating mobile x-ray equipment, ~~except dental intraoral systems, as~~

described in R9-7-608;

8. Individuals holding animals for diagnostic x-ray procedures, as described in R9-7-613;
 9. Individuals servicing enclosed beam x-ray systems with bypassed interlocks, as described in R9-7-803;
 10. Individuals operating open beam fluoroscopic systems and ancillary personnel working in the room when the fluoroscopic system is in use, except when relieved of this requirement by registration condition;
 11. Individuals performing well logging, as described in Article 17; ~~and~~
 12. Individuals, wearing a finger or wrist individual monitoring device, during the operation of an open-beam or hand held analytical x-ray system or equipment with no safety devices as described in R9-7-806(C) and (F); ~~and~~
 13. Individuals, wearing a finger or wrist individual monitoring device, performing repairs that require the presence of a primary beam of the analytical x-ray system or equipment, as described in R9-7-806(C) and (F).
- C.** Each licensee shall monitor the occupational intake of radioactive material by and assess the committed effective dose equivalent to:
1. Adults likely to receive, in one year, an intake in excess of 10 percent of the applicable ALI in Table 1, Columns 1 and 2, of Appendix B;
 2. Minors likely to receive, in one year, a committed effective dose equivalent in excess of 1 mSv (0.1 rem); and
 3. Declared pregnant women likely to receive, during the entire pregnancy, a committed effective dose equivalent in excess of 1 mSv (0.1 rem).
- D.** Each licensee or registrant shall require that all individual monitoring devices be located on individuals according to the following requirements:
1. An individual monitoring device, used to obtain the dose equivalent to an embryo or fetus of a declared pregnant woman according to R9-7-415, shall be located under the protective apron at the waist. A qualified expert shall be consulted to determine the dose equivalent to the embryo or fetus if this individual monitoring device has a monthly reported dose equivalent value that exceeds 0.5 millisieverts (50 millirem). For purposes of this subsection, the value for determining the dose equivalent to an embryo or fetus under R9-7-415(C), for occupational exposure to radiation from medical fluoroscopic equipment, is the

value reported by the individual monitoring device worn at the waist underneath the protective apron, which has been corrected for the particular individual and the work environment by a qualified expert.

2. An individual monitoring device used for lens dose equivalent shall be located at the neck or an unshielded location closer to the eye, outside the protective apron.
3. If only one individual monitoring device is used to determine the effective dose equivalent for external radiation, according to R9-7-408(C)(2)(a), the device shall be located at the neck outside the protective apron. If a second individual monitoring device is used for the same purpose, it shall be located under the protective apron at the waist. A second individual monitoring device is required for a declared pregnant woman.
4. An individual, wearing an extremity personnel monitoring device, during the operation of an open-beam or hand-held analytical x-ray system with no safety devices or an individual performing repairs in the presence of a primary beam of the analytical x-ray system or equipment, as described in R9-7-806(C) and (F), shall wear the device on the individual's finger or wrist.

E. Records.

1. Each licensee or registrant shall maintain records of doses received by all individuals for whom monitoring is required according to this Section, and records of doses received during planned special exposures, accidents, and emergency conditions. Assessments of dose equivalent and records made using units in effect before January 1, 1994, need not be changed. These records shall include, when applicable:
 - a. The deep-dose equivalent to the whole body, lens dose equivalent, shallow-dose equivalent to the skin, and shallow-dose equivalent to the extremities;
 - b. The estimated intake of radionuclides;
 - c. The committed effective dose equivalent assigned to the intake of radionuclides;
 - d. The specific information used to assess the committed effective dose equivalent according to R9-7-411(A) and (C), and when required R9-7-419;
 - e. The total effective dose equivalent when required by R9-7-409; and

- f. The total of the deep-dose equivalent and the committed dose to the organ receiving the highest total dose;
2. The licensee or registrant shall make entries of the records specified in subsection (D)(1), at intervals not to exceed one year;
3. The licensee or registrant shall maintain at the inspection site the records specified in subsection (D)(1), ~~on Department Form Z (available from the Department), in accordance with the instructions for Department Form Z, or~~ in a clear and legible method ~~which~~ that contains all the information required by this subsection;
4. The licensee or registrant shall maintain the records of dose to an embryo or fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file but may be maintained separately from the dose records; and
5. The licensee or registrant shall retain each required form or record for three years after the Department terminates each pertinent license or registration requiring the record.

R9-7-448. Additional Reporting

- A. Each licensee shall notify the Department as soon as possible, but not later than four hours after the discovery of an event, and take immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed the limits specified in this Chapter or releases of licensed material that could exceed the limits specified in this Chapter. For purposes of this Section, event means a radiation accident involving a fire, explosion, gas release, or similar occurrence.
- B. Each licensee shall notify the Department within 24 hours after discovering any of the following events involving licensed material:
 1. A contamination event that:
 - a. Requires that anyone having access to the contaminated area be restricted for more than 24 hours by the imposition of additional radiological controls to prohibit entry into the area; and
 - b. Involves a quantity of radioactive material greater than five times the lowest annual limit on intake specified in Appendix B of this Article; and
 - c. Results in access to the contaminated area being restricted for a reason other than to allow radionuclides with a half-life of less than 24 hours to decay prior to decontamination.

2. An event in which equipment is disabled or fails to function as designed when:
 - a. The equipment is part of a system designed to prevent releases exceeding the limits specified in this Chapter, to prevent exposures to radiation and radioactive materials exceeding limits specified in this Chapter, or to mitigate the consequences of an accident; and
 - b. The equipment performs a safety function; and
 - c. No redundant equipment is available and operable to perform the required safety function.
 3. An event that requires urgent medical treatment of an individual with radioactive contamination on the individual's clothing or body.
 4. A fire or explosion damaging any licensed material or any device, container, or equipment containing licensed material when:
 - a. The quantity of material involved is greater than five times the lowest annual limit on intake specified in Appendix B of this Article, and
 - b. The damage affects the integrity of the licensed material or its container.
- C. Each licensee shall make reports required by subsections (A) and (B) above by telephone to the Department. To the extent that the information is available at the time of notification, the information provided in these reports shall include:
1. The callers's name, official title, and call back telephone number;
 2. A description of the event, including date and time;
 3. The exact location of the event;
 4. The isotopes, quantities, and chemical and physical form of the licensed material involved; and
 5. Any personnel radiation exposure data available.
- D. Each licensee who makes a report required by subsection (A) or (B) shall submit to the Department a written follow-up report within 30 days of the initial report. Written reports prepared as required by other rules may be submitted to fulfill this requirement if the reports contain all of the required information in this subsection. The report shall include the following:
1. A description of the event, including the probable cause and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned;
 2. The exact location of the event;
 3. The isotopes, quantities, and chemical and physical form of the licensed material

involved;

4. Date and time of the event;
5. Corrective actions taken or planned and the results of any evaluations or assessments;
and
6. The extent of personnel exposure to radiation or to radioactive materials without identification of each exposed individual by name.

E. Each licensee that makes a report required by subsection (A) or (B) shall submit a written follow-up report to the Department within 60 days after the initial report.

R9-7-451. Termination of a Radioactive Material License or a Licensed Activity

- A.** As the final step before terminating a radioactive material use program licensed under R9-7-312, the licensee shall:
1. Certify to the Department the disposition of all licensed material, including accumulated wastes, by submitting a complete description of a disposal plan with signed receipts from all licensed persons receiving the licensed material; and
 2. Conduct a radiation survey of the premises where the licensed activities were carried out to demonstrate that the premises are suitable for release in accordance with the criteria for decommissioning in R9-7-452 and submit to the Department a report of the results of this survey, unless the licensee demonstrates in some other manner acceptable to the Department that the premises are suitable for release in accordance with the criteria for decommissioning in R9-7-452.
- B.** Before terminating a licensed program, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in any unsealed form, shall forward the following records to the Department:
1. Records of disposal of the licensed material required by R9-7-435, R9-7-436, R9-7-437, and R9-7-438; and
 2. Records required by ~~R9-7-418(D)(2)(d)~~ R9-7-418.
- C.** If a licensed activity is transferred or assigned in accordance with subsection (E), each licensee authorized to possess radioactive material with a half-life greater than 120 days, in any unsealed form, shall transfer the following records to the new licensee and the new licensee shall maintain these records until the license is terminated:
1. Records of disposal of licensed material required by R9-7-435, R9-7-436, R9-7-437, and R9-7-438; and
 2. Records required by ~~R9-7-418(D)(2)(d)~~ R9-7-418.

- D.** Before the Department terminates a license, each licensee shall forward the records required by subsection (E) to the Department.
- E.** A person licensed under R9-7-312 shall maintain required records regarding decommissioning of a facility in a location identified on the license until the Department releases the site for unrestricted use. Before transfer or assignment of licensed activities, a licensee shall transfer all records required by this Section to the transferee. If records relating to facility decommissioning are kept for other purposes, the transferee shall refer to these records and provide their location on the transferee's application for a license. The transferee shall maintain the records until the Department terminates the transferee's new license. The new licensee shall maintain the following decommissioning records for Department review:
1. Records of spills or other occurrences involving the spread of contamination in and around the facility, equipment, or site. The licensee shall maintain a record of any instance when contamination remains after cleanup procedures or there is a reasonable likelihood that a contaminant has spread to an inaccessible area, as in the case of possible seepage into porous material such as concrete. These records shall include any known information that identifies any radionuclide involved and its quantity, form, and concentration.
 2. As-built drawings showing modifications of structures and equipment in restricted areas where radioactive materials are used or stored, and locations of possible inaccessible contamination, such as buried pipes. If as-built drawings are referenced, the licensee need not index each relevant document individually. If drawings are not available, the licensee shall provide records with known information concerning these areas and locations, as prescribed in subsection (E) (1).
 3. Except for areas that contain depleted uranium used only for shielding or as penetrators in unused munitions, a list, contained in a single document and updated every two years, of the following:
 - a. Any area designated or formerly designated as a restricted area as defined under R9-7-102;
 - b. Any area outside of a restricted area for which documentation is required under subsection (B)(1);
 - c. Any area outside of a restricted area where wastes have been buried;

- d. Any area outside of a restricted area that contains regulated radioactive material that will require the licensee to either decontaminate the area for decommissioning under R9-7-452 or obtain disposal approval under R9-7-435; and
 - e. Any restricted area where wastes have been buried.
4. Records of the cost estimate performed for the decommissioning funding plan or the amount certified by the Department for decommissioning and the method for assuring funding, if either a funding plan or certification is used.

APPENDIX C.**QUANTITIES¹ OF LICENSED OR REGISTERED MATERIAL
REQUIRING LABELING**

Radionuclide	Quantity (μCi)

Any alpha-emitting radionuclide not	

listed above or mixtures of alpha emitters of unknown composition	0.001
Any radionuclide other than alpha-emitting radionuclides not listed above, or mixtures of beta emitters of unknown composition	0.01

* To convert μCi to kBq , multiply the μCi value by 37.

NOTE: ~~For purposes of R9-7-428(E), R9-7-432(A), and R9-7-443(A) where~~ Where there is involved a combination of radionuclides in known amounts, the limit for the combination shall be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed "1" -- that is, unity.

¹ The quantities listed above were derived by taking 1/10 of the most restrictive ALI listed in Table I, Columns 1 and 2, of Appendix B to Article 4, rounding to the nearest factor of 10, and constraining the values listed between 37 Bq and 37 MBq (0.001 and 1,000 μCi). Values of 3.7 MBq (100 μCi) have been assigned for radionuclides having a radioactive half-life in excess of $E+9$ years, except rhenium, 37 MBq (1,000 μCi), to take into account their low specific activity.

ARTICLE 6. USE OF X-RAYS IN THE HEALING ARTS

R9-7-611.01. Electronic Brachytherapy to Deliver Interstitial and ~~Intracavity~~ Intracavitary Therapeutic Radiation Dosage

- A.** Electronic brachytherapy devices used to deliver interstitial and ~~intracavity~~ intracavitary therapeutic radiation dosage shall be subject to the requirements of this Section, and unless otherwise specified in this Section shall be exempt from the requirements of R9-7-611.
1. An electronic brachytherapy device that does not meet the requirements of this Section shall not be used for irradiation of patients; and
 2. An electronic brachytherapy device shall only be utilized for human use applications specifically approved by the U.S. Food and Drug Administration (FDA), unless participating in a research study approved by the registrant's Institutional Review Board (IRB).
- B.** Each facility location authorized to use an electronic brachytherapy device in accordance with this Section shall possess appropriately calibrated portable monitoring equipment. At a minimum, such equipment shall include a portable survey instrument capable of measuring dose rates over the range 10 μ Sv (1 mrem) per hour to 10 mSv (1000 mrem) per hour. The survey instrument shall be capable of measuring as low as 10 μ Sv (1 mrem) per hour in the energy range of the electronic brachytherapy unit for which the survey instrument is to be used. Published correction factors utilized in conjunction with the instrument's readings may be used to achieve sensitivity. The survey instrument or instruments shall be operable and calibrated before first use, at intervals not to exceed 12 months, and after survey instrument repairs.
- C.** Facility Design Requirements for Electronic Brachytherapy Devices. In addition to shielding adequate to meet requirements of R9-7-603(C), the treatment room shall meet the following design requirements:
1. If applicable, provision shall be made to prevent simultaneous operation of more than one therapeutic radiation machine in a treatment room.
 2. Access to the treatment room shall be controlled by a door at each entrance.
 3. Each treatment room shall have provisions to permit continuous oral communication and visual observation of the patient from the treatment control

panel during irradiation. The electronic brachytherapy device shall not be used for patient irradiation unless the patient can be observed.

4. For electronic brachytherapy devices capable of operating below 150 kVp, radiation shielding for the staff in the treatment room may be available, either as a portable shield or as localized shielded material around the treatment site or both, in lieu of the requirements for room shielding. The shielding shall meet the requirements of R9-7-603(C).
 5. For electronic brachytherapy devices capable of operating at or greater than 150 kVp, the facility must meet the requirements of R9-7-611(B)(4).
- D.** Control Panel Functions. The control panel, in addition to the displays required by other provisions in this Section, shall:
1. Provide an indication of whether electrical power is available at the control panel and if activation of the electronic brachytherapy source is possible;
 2. Provide an indication of whether x-rays are being produced;
 3. Provide a means for indicating electronic brachytherapy source potential and current;
 4. Provide the means for terminating an exposure at any time; and
 5. Include an access control (locking) device that will prevent unauthorized use of the electronic brachytherapy device.
- E.** Timer. A suitable irradiation control device (timer) shall be provided to terminate the irradiation after a pre-set time interval or integrated charge on a dosimeter-based monitor.
1. A timer shall be provided at the treatment control panel. The timer shall indicate the planned setting and the time elapsed or remaining;
 2. The timer shall not permit an exposure if set at zero;
 3. The timer shall be a cumulative device that activates with an indication of "BEAM-ON" that retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;
 4. The timer shall terminate irradiation when a pre-selected time has elapsed, if any dose monitoring system has not previously terminated irradiation.
 5. The timer shall permit setting of exposure times as short as 0.1 second; and
 6. The timer shall be accurate to within one percent of the selected value or 0.1 second, whichever is greater.

F. Qualified Medical Physicist Support.

1. The services of a Qualified Medical Physicist shall be required in facilities having electronic brachytherapy devices. The Qualified Medical Physicist shall be responsible for:
 - a. Evaluation of the output from the electronic brachytherapy source;
 - b. Generation of the necessary dosimetric information;
 - c. Supervision and review of treatment calculations prior to initial treatment of any treatment site;
 - d. Establishing the periodic and day-of-use quality assurance checks and reviewing the data from those checks as required in subsection (J);
 - e. Consultation with the authorized user in treatment planning, as needed; and
 - f. Performing calculations/assessments regarding patient treatments that may constitute a medical event.
2. If the Qualified Medical Physicist is not a full-time employee of the registrant, then the operating procedures required by subsection (G) shall also specifically address how the Qualified Medical Physicist is to be contacted for problems or emergencies, as well as the specific actions, if any, to be taken until the Qualified Medical Physicist can be contacted.

G. Operating Procedures.

1. Only individuals approved by the authorized user, Radiation Safety Officer, or Qualified Medical Physicist shall be present in the treatment room during treatment;
2. Electronic brachytherapy devices shall not be made available for medical use unless the requirements of subsections (A), (H), and (I) have been met;
3. The electronic brachytherapy device shall be inoperable, either by hardware or password, when unattended by qualified staff or service personnel;
4. During operation, the electronic brachytherapy device operator shall monitor the position of all persons in the treatment room, and all persons entering the treatment room, to prevent entering persons from unshielded exposure from the treatment beam;
5. If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used;

6. Written procedures shall be developed, implemented, and maintained for responding to an abnormal situation. These procedures shall include:
 - a. Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions; and
 - b. The names and telephone numbers of the authorized users, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally.
7. A copy of the current operating and emergency procedures shall be physically located at the electronic brachytherapy device control console;
8. Instructions shall be maintained with the electronic brachytherapy device control console to inform the operator of the names and telephone numbers of the authorized users, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally; and
9. The Radiation Safety Officer, or the Radiation Safety Officer's designee, and an authorized user shall be notified immediately if the patient has a medical emergency, suffers injury or dies. The Radiation Safety Officer or the Qualified Medical Physicist shall inform the manufacturer of the event.

H. Safety Precautions for Electronic Brachytherapy Devices.

1. Any person in the treatment room, other than the person being treated, shall wear personnel monitoring devices;
2. An authorized user and a Qualified Medical Physicist shall be physically present during the initiation of all new patient treatments involving the electronic brachytherapy device;
3. After the first treatment one of the following individuals shall be physically present during continuation of all patient treatments involving the electronic brachytherapy device:
 - a. A Qualified Medical Physicist, or
 - b. An authorized user, or
 - c. A certified therapy technologist (CTT) certified by the Arizona Medical Radiologic Technology Board of Examiners, under the direct supervision of an authorized user, who has been trained in the operation and emergency response for the electronic brachytherapy device;
4. When shielding is required by subsection (C)(4), surveys shall be conducted to

ensure that the requirements of R9-7-408, R9-7-414, and R9-7-416 are met. Alternatively, a Qualified Medical Physicist shall designate shield locations sufficient to meet the requirements of R9-7-603(C) and R9-7-607(C) for any individual, other than the patient, in the treatment room; and

5. All personnel in the treatment room are required to remain behind shielding during treatment. A Qualified Medical Physicist shall approve any deviation from this requirement and shall designate alternative radiation safety protocols, compatible with patient safety, to provide an equivalent degree of protection.

I. Electronic Brachytherapy Source Calibration Measurements.

1. Calibration of the electronic brachytherapy source output shall be performed by, or under the direct supervision of, a Qualified Medical Physicist. If the control console is integral to the electronic brachytherapy device, the required procedures shall be kept where the operator is located during electronic brachytherapy device operation;
2. Calibration of the electronic brachytherapy source output shall be made for each electronic brachytherapy source, or after any repair affecting the x-ray beam generation, or when indicated by the electronic brachytherapy source quality assurance checks;
3. Calibration of the electronic brachytherapy source output shall utilize a dosimetry system appropriate for the energy output of the unit and calibrated by the National Institute for Standards and Technology (NIST) or by an American Association of Physicists in Medicine (AAPM) Accredited Dosimetry Calibration Laboratory (ADCL). The calibration shall have been performed within the previous 24 months and after any servicing that may have affected system calibration;
4. Calibration of the electronic brachytherapy source output shall include, as applicable, determination of:
 - a. The output within two percent of the expected value, if applicable, or determination of the output if there is no expected value;
 - b. Timer accuracy and linearity over the typical range of use;
 - c. Proper operation of back-up exposure control devices;
 - d. Evaluation that the relative dose distribution about the source is within five percent of that expected; and

- e. Source positioning accuracy to within one millimeter within the applicator;
5. Calibration of the x-ray source output required shall be in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of a calibration protocol published by a national professional association, the manufacturer's calibration protocol shall be followed.
 6. The registrant shall maintain a record of each calibration in an auditable form for the duration of the registration. The record shall include: the date of the calibration; the manufacturer's name, model number and serial number for the electronic brachytherapy device and a unique identifier for its electronic instrument or instruments brachytherapy source; the model numbers and serial numbers of the instrument or instruments used to calibrate the electronic brachytherapy device; and the name and signature of the Qualified Medical Physicist responsible for performing the calibration.
- J. Periodic and Day-of-Use Quality Assurance Checks for Electronic Brachytherapy Devices.**
1. Quality assurance checks shall be performed on each electronic brachytherapy device:
 - a. At the beginning of each day of use;
 - b. Each time the device is moved to a new room or site; and
 - c. After each x-ray tube installation.
 2. The registrant shall perform periodic quality assurance checks required in accordance with procedures established by the Qualified Medical Physicist;
 3. To satisfy the requirements of this subsection, radiation output quality assurance checks shall include at a minimum:
 - a. Verification that output of the electronic brachytherapy source falls within three percent of expected values, as appropriate for the device, as determined by:
 - i. Output as a function of time, or
 - ii. Output as a function of setting on a monitor chamber.
 - b. Verification of the consistency of the dose distribution to within three percent (or the manufacturer's or Qualified Medical Physicist's

- documented recommendation not to exceed five percent), observed at the source calibration required by subsection (I); and
- c. Validation of the operation of positioning methods to ensure that the treatment dose exposes the intended location within one millimeter; and
4. The registrant shall use a dosimetry system that has been intercompared within the previous 12 months with the dosimetry system described in this Section to make the quality assurance checks required in subsection (J)(3);
 5. The registrant shall review the results of each radiation output quality assurance check to ensure that:
 - a. An authorized user and Qualified Medical Physicist is immediately notified if any parameter is not within its acceptable tolerance, and the electronic brachytherapy device is not used until the Qualified Medical Physicist has determined that all parameters are within their acceptable tolerances;
 - b. If all radiation output quality assurance check parameters appear to be within their acceptable range, the acceptable quality assurance checklist shall be reviewed and signed by either the authorized user or Qualified Medical Physicist prior to the next patient use of the unit. In addition, the Qualified Medical Physicist shall review and sign the results of each radiation output quality assurance check at intervals not to exceed 30 days.
 6. To satisfy the requirements of subsection (J)(1), safety device quality assurance checks shall, at a minimum, assure:
 - a. Proper operation of radiation exposure indicator lights on the electronic brachytherapy device and on the control console;
 - b. Proper operation of viewing and intercom systems in each electronic brachytherapy facility, if applicable;
 - c. Proper operation of radiation monitors, if applicable;
 - d. The integrity of all cables, catheters or parts of the device that carry high voltages; and
 - e. Connecting guide tubes, transfer tubes, transfer-tube-applicator interfaces, and treatment spacers are free from any defects that interfere with proper operation.

7. If the results of the safety device quality assurance checks required in subsection (J)(6) indicate the malfunction of any system, a registrant shall secure the control console in the OFF position and not use the electronic brachytherapy device except as may be necessary to repair, replace, or check the malfunctioning system.
 8. The registrant shall maintain a record of each quality assurance check required by this Section in a legible form for three years.
 - a. The record shall include the date of the quality assurance check; the manufacturer's name, model number and serial number for the electronic brachytherapy device; the name and signature of the individual who performed the periodic quality assurance check and the name and signature of the Qualified Medical Physicist who reviewed the quality assurance check;
 - b. For radiation output quality assurance checks required by subsection (J) (3), the record shall also include the unique identifier for the electronic brachytherapy source and the manufacturer's name; model number and serial number for the instrument or instruments used to measure the radiation output of the electronic brachytherapy device.
- K.** Therapy-related Computer Systems. The registrant shall perform acceptance testing on the treatment planning system of electronic brachytherapy-related computer systems in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of an acceptance testing protocol published by a national professional association, the manufacturer's acceptance testing protocol shall be followed.
1. Acceptance testing shall be performed by, or under the direct supervision of a Qualified Medical Physicist. At a minimum, the acceptance testing shall include, as applicable, verification of:
 - a. The source-specific input parameters required by the dose calculation algorithm;
 - b. The accuracy of dose, dwell time, and treatment time calculations at representative points;
 - c. The accuracy of isodose plots and graphic displays;
 - d. The accuracy of the software used to determine radiation source

positions from radiographic images; and

e. If the treatment planning system is different from the treatment delivery system, the accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

2. The position indicators in the applicator shall be compared to the actual position of the source or planned dwell positions, as appropriate, at the time of commissioning.

3. Prior to each patient treatment regimen, the parameters for the treatment shall be evaluated for correctness and approved by the authorized user and the Qualified Medical Physicist through means independent of that used for the determination of the parameters.

L. Training for e-brachytherapy Authorized Users.

1. The registrant for any therapeutic radiation machine subject to this Section shall require the authorized user to be a physician who is:

~~a.~~ ~~certified~~ Certified in:

~~a.i.~~ Radiation oncology or therapeutic radiology by the American Board of Radiology or radiology (combined diagnostic and therapeutic radiology program) by the American Board of Radiology prior to 1976; or

~~b.ii.~~ Radiation oncology by the American Osteopathic Board of Radiology; or

~~c.iii.~~ Radiology, with specialization in radiotherapy, as a British “Fellow of the Faculty of Radiology” or “Fellow of the Royal College of Radiology”; or

~~d.iv.~~ Therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; or

~~2.b.~~ ~~Is in~~ In the active practice of therapeutic radiology, and has completed 200 hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy unit, 500 hours of supervised work experience, and a minimum of three years of supervised clinical experience.

~~a.2.~~ To satisfy the requirement in subsection (L)(1)(b) for:

- a. ~~instruction~~ Instruction, the classroom and laboratory training shall include:
- i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of ionization radiation; and
 - iv. Radiation biology;
- b. ~~To satisfy the requirement for supervised~~ Supervised work experience, training shall be under the supervision of an authorized user and shall include:
- i. Review of the full calibration measurements and periodic quality assurance checks;
 - ii. Evaluation of prepared treatment plans and calculation of treatment times or patient treatment settings or both;
 - iii. Using administrative controls to prevent medical events as described in R9-7-444;
 - iv. Implementing emergency procedures to be followed in the event of the abnormal operation of an external beam radiation therapy unit or console; and
 - v. Checking and using radiation survey meters; and
- c. ~~To satisfy the requirement for a~~ A period of supervised clinical experience, training shall include one year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user. The supervised clinical experience shall include:
- i. Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and any limitations or contraindications or both;
 - ii. Selecting proper dose and how it is to be administered;
 - iii. Calculating the therapeutic radiation machine doses and

collaborating with the authorized user in the review of patients' progress and consideration of the need to modify originally prescribed doses or treatment plans as warranted by patients' reaction to radiation or both; and

iv. Post-administration follow-up and review of case histories.

3. A physician shall not act as an authorized user until such time as the physician's training has been reviewed and approved by the Department.

3.4. Notwithstanding the requirements of ~~this subsection~~ subsections (L)(1) through (L)(3), the registrant for any therapeutic radiation machine subject to this Section may also submit the training of the prospective authorized user physician for Department review on a case-by-case basis if the training includes substantially equivalent training as that listed in ~~subsection (L)(2)~~ subsections (L)(1)(b) and (L)(2) and the training includes dosimetry calculation training and experience.

~~4. A physician shall not act as an authorized user until such time as the physician's training has been reviewed and approved by the Department.~~

M. Training for Qualified Medical Physicist. The registrant for any therapeutic radiation machine subject to this Section shall require the Qualified Medical Physicist to:

1. Be certified with the Department, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units; and
2. Be certified by the American Board of Radiology in:
 - a. Therapeutic radiological physics; or
 - b. Roentgen-ray and gamma-ray physics; or
 - c. X-ray and radium physics; or
 - d. Radiological physics; or
3. Be certified by the American Board of Medical Physics in Radiation Oncology Physics; or
4. Be certified by the Canadian College of Physicists in Medicine; or
5. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university, and have completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of a Qualified Medical Physicist at a medical institution. This training and work experience shall be conducted in clinical radiation facilities that provide high-

energy external beam radiation therapy (photons and electrons with energies greater than or equal to one MV/one MeV). To meet this requirement, the individual shall have performed the tasks listed in this subsection under the supervision of a Qualified Medical Physicist during the year of work experience.

N. Qualifications of Operators.

Individuals who will be operating a therapeutic radiation machine for medical use shall be certified by the Department as a CTT by the Arizona Medical Radiologic Technology Board of Examiners.

O. Additional training requirements.

1. A registrant shall provide instruction, initially and at least annually, to all individuals who operate the electronic brachytherapy device, as appropriate to the individual's assigned duties, in the operating procedures identified in subsection (G). If the interval between patients exceeds one year, retraining of the individuals shall be provided.
2. In addition to the requirements of subsection (L) for therapeutic radiation machine authorized users and subsection (M) for Qualified Medical Physicists, these individuals shall also receive device-specific instruction initially from the manufacturer, and annually from either the manufacturer or other qualified trainer. The training shall be of a duration recommended by a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of any training protocol recommended by a national professional association, the manufacturer's training protocol shall be followed. The training shall include, but not be limited to:
 - a. Device-specific radiation safety requirements;
 - b. Device operation;
 - c. Clinical use for the types of use approved by the FDA;
 - d. Emergency procedures, including an emergency drill; and
 - e. The registrant's quality assurance program.
3. A registrant shall retain a record of individuals receiving ~~manufacturers~~ manufacturer's instruction for three years. The record shall include a list of the topics covered, the date of the instruction, the name or names of the attendee or attendees, and the name or names of the individual or individuals who provided the instruction.

- P.** Mobile Electronic Brachytherapy Service. A registrant providing mobile electronic brachytherapy service shall, at a minimum:
1. Check all survey instruments before medical use at each address of use or on each day of use, whichever is more restrictive;
 2. Account for the electronic brachytherapy x-ray tube in the electronic brachytherapy device before departure from the client's address; and
 3. Perform, at each location on each day of use, all of the required quality assurance checks specified in this Section to assure proper operation of the device.
- Q.** Medical events shall be reported to the Department. For purposes of this Section "medical event" means a therapeutic radiation dose from a machine:
1. Delivered to the wrong patient;
 2. Delivered using the wrong mode of treatment;
 3. Delivered to the wrong treatment site; or
 4. Delivered in one week to the correct patient, using the correct mode, to the correct therapy site, but greater than 130 percent of the prescribed weekly dose;
- or
- R.** A therapeutic radiation dose from a machine with errors in the calibration, time of exposure, or treatment geometry that result in a calculated total treatment dose differing from the final, prescribed total treatment dose by more than 20 percent, except for treatments given in 1 to 3 fractions, in which case a difference of more than 10 percent constitutes a medical event.
- S.** Reports of therapy medical events:
1. Within 24 hours after discovery of a medical event, a registrant shall notify the Department by telephone by speaking to a Department staff member. The registrant shall also notify the referring physician of the affected patient and the patient or a responsible relative or guardian, unless the referring physician personally informs the registrant either that he or she will inform the patient, or that in his or her medical judgment, telling the patient or the patient's responsible relative or guardian would be harmful to one or the other, respectively. If the Department staff member, referring physician, or the patient's responsible relative or guardian cannot be reached within 24 hours, the registrant shall notify them as soon as practicable. The registrant shall not delay medical care for the patient because of notification problems.

2. Within 15 days following the verbal notification to the Department, the registrant shall report, in writing, to the Department and individuals notified under subsection (S)(1). The written report shall include the registrant's name, the referring physician's name, a brief description of the event, the effect on the patient, the action taken to prevent recurrence, whether the registrant informed the patient or the patient's responsible relative or guardian, and if not, why not. The report shall not include the patient's name or other information that could lead to identification of the patient.
3. Each registrant shall maintain records of all medical events for Department inspection. The records shall:
 - a. Contain the names of all individuals involved in the event, including:
 - i. The physician,
 - ii. The allied health personnel,
 - iii. The patient,
 - iv. The patient's referring physician,
 - v. The patient's identification number if one has been assigned,
 - vi. A brief description of the event,
 - vii. The effect on the patient, and
 - viii. The action taken to prevent recurrence.
 - b. Be maintained for three years beyond the termination date of the affected registration.

R9-7-613. Veterinary Medicine Radiographic Systems

- A. Equipment. A registrant shall ensure that:
 1. ~~Before January 2, 1996, the~~ The total filtration permanently in the useful beam is not less than 1.5 millimeters aluminum-equivalent for equipment operating at up to 70 kVp and 2.0 millimeters aluminum-equivalent for equipment operating in excess of 70 kVp;
 2. A device is provided to terminate the exposure after a preset time or exposure;
 3. Each radiographic system has a "dead-man" exposure switch with an electrical cord of sufficient length to allow the operator to stand at least 1.82 meters (six feet) away from the useful beam during x-ray exposures.
- B. Procedures: A registrant shall ensure that:
 1. Unless required to restrain an animal, the operator stands at least 1.82 meters (6

- feet) away from the useful beam and the animal during a radiographic exposure;
2. An individual other than the operator is not in the x-ray room or area while an exposure is being made, unless the individual's assistance is required;
 3. If possible, an animal is held in position during an x-ray exposure using mechanical supporting or restraining devices;
 4. An individual holding an animal during an x-ray exposure is:
 - a. Wearing protective gloves and an apron of not less than 0.5 millimeter lead equivalent or positioned behind a whole-body protective barrier;
 - b. Wearing required personnel monitoring devices; and
 - c. Positioned so that no part of the person's body, except hands and arms, will be struck by the useful beam;
 5. If an individual holds or supports an animal or a film during an x-ray exposure, the name of the individual is recorded in an x-ray log that contains the animal's name, the type of x-ray procedure, the number of exposures, and the date of the procedure; and
 6. As a condition of employment an individual is not required to routinely hold or support animals, or hold film during radiation exposures.

ARTICLE 7. MEDICAL USES OF RADIOACTIVE MATERIAL

R9-7-710. Radiation Safety Officer Training

- A. A licensee shall require an individual fulfilling the responsibilities of the radiation safety officer, described in R9-7-705, to be an individual who:
1. Is certified by a specialty board whose certification process includes all of the requirements in subsection (A)(2) and whose certification has been recognized by the Department, the NRC, or an Agreement State. To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Meet the following minimum requirements:
 - i. Hold a bachelor's or graduate degree from an accredited college or university in physical science or engineering or biological science with a minimum of 20 college credits in physical science;
 - ii. Have five or more years of professional experience in health physics (graduate training may be substituted for no more than two years of the required experience) including at least three years in applied health physics; and
 - iii. Pass an examination administered by diplomates of the specialty board, which evaluates knowledge and competence in radiation physics and instrumentation, radiation protection, mathematics pertaining to the use and measurement of radioactivity, radiation biology, and radiation dosimetry; or
 - b. Meet the following minimum requirements:
 - i. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
 - ii. Have two years of full-time practical training and/or supervised experience in medical physics;
 - (1) Under the supervision of a medical physicist who is certified in medical physics by a specialty board

recognized by the Commission or an Agreement State;

or

(2) In clinical nuclear medicine facilities providing diagnostic and/or therapeutic services under the direction of physicians who meet the requirements for authorized users qualified under section ~~R9-7-710(B)~~ subsection (B), R9-7-721, or R9-7-723;

iii. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical diagnostic radiological or nuclear medicine physics and in radiation safety; or

2. Has completed a structured educational program consisting of both:

a. 200 hours of didactic and laboratory training in the following areas:

i. Radiation physics and instrumentation;

ii. Radiation protection;

iii. Mathematics pertaining to the use and measurement of radioactivity;

iv. Radiation biology; and

v. Radiation dosimetry; and

b. One year of full-time radiation safety experience under the supervision of the individual identified as the radiation safety officer on a Department, a NRC, or an Agreement State license or permit issued by a NRC master material licensee that authorizes similar type(s) of use(s) of radioactive material involving the following:

i. Shipping, receiving, and performing related radiation surveys;

ii. Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and instruments used to measure radionuclides;

iii. Securing and controlling radioactive material;

iv. Using administrative controls to avoid mistakes in the administration of radioactive material;

v. Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures;

- vi. Using emergency procedures to control radioactive material; and
 - vii. Disposing of radioactive material; or
 - c. Has obtained written certification, signed by a preceptor radiation safety officer, that the individual has satisfactorily completed the requirements in subsection (A)(2)(a) and (A)(2)(b) and has achieved a level of radiation safety knowledge sufficient to function independently as a radiation safety officer for a medical use licensee; or
 - 3. Is an authorized user, authorized medical physicist, or authorized nuclear pharmacist identified on the licensee's license and has experience with the radiation safety aspects of similar types of use of radioactive material for which the individual has radiation safety officer responsibilities.
- B. Exceptions.**
- 1. An individual identified as a radiation safety officer on a Department, a NRC, or an Agreement State license or a permit issued by the NRC or an Agreement State broad scope licensee or master material license permit or by a master material license permittee of broad scope before the effective date of these rules need not comply with the training requirements in subsections (A)(1) through (A)(3).
 - 2. A physician, dentist, or podiatrist identified as an authorized user for the medical use of radioactive material on a license issued by the Department, the NRC, or an Agreement State, a permit issued by a NRC master material licensee, a permit issued by the Department, the NRC, or an Agreement State broad scope licensee, or a permit issued by a NRC master material license broad scope permittee before the effective date of these rules need not comply with the training requirements in this Article.
- C.** The training and experience required in this Section shall be obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
- D.** Individuals who, under subsection (B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Department licenses for the same uses for which these individuals are authorized.

R9-7-711. Authorized Medical Physicist Training

- A.** A licensee shall require an authorized medical physicist to be an individual who:

1. Is certified by a specialty board whose certification process includes all of the training and experience requirements in subsection (A)(3)(b) and (A)(3)(c) and whose certification has been recognized by the Department, the NRC, or an Agreement State; or
2. Training requirements.
 - a. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
 - b. Have two years of full-time practical training and/or supervised experience in medical physics:
 - i. Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the NRC or an Agreement State; or
 - ii. In clinical radiation facilities providing high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services under the direction of physicians who meet the requirements for authorized users in R9-7-710, R9-7-719, R9-7-721, R9-7-723, R9-7-727, R9-7-728, or R9-7-744; and
 - c. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical radiation therapy, radiation safety, calibration, quality assurance, and treatment planning for external beam therapy, brachytherapy, and stereotactic radiosurgery; or
3. Training requirements alternative.
 - a. Holds a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university; and has completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of an individual who meets the requirements for an authorized medical physicist for the type(s) of use for which the individual is seeking authorization. This training and work experience must be conducted in clinical radiation facilities that provide high-

energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services and must include:

- i. Performing sealed source leak tests and inventories;
 - ii. Performing decay corrections;
 - iii. Performing full calibration and periodic spot checks of external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and
 - iv. Conducting radiation surveys around external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and
- b. Has obtained written attestation that the individual has satisfactorily completed the requirements in ~~subsection (A)(3)(e) and (A)(2)(a) and (A)(2)(b) and (A)(3)(e)~~ both subsections (A)(2) and (A)(3)(c), or in both subsections (A)(3)(a) and (A)(3)(c); and has achieved a level of competency sufficient to function independently as an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status. The written attestation must be signed by a preceptor authorized medical physicist who meets the requirements in section, or equivalent Agreement State requirements for an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status; and
- c. Has training for the type(s) of use for which authorization is sought that includes hands-on device operation, safety procedures, clinical use, and the operation of a treatment planning system. This training requirement may be satisfied by satisfactorily completing either a training program provided by the vendor or by training supervised by an authorized medical physicist authorized for the type(s) of use for which the individual is seeking authorization.

B. Exceptions. An individual identified as a teletherapy or medical physicist on a Department, a NRC, or an Agreement State license or a permit issued by the NRC or an Agreement State broad scope licensee or master material license permit or by a master

material license permittee of broad scope before the effective date of these rules need not comply with the training requirements in subsection (A).

- C. The training and experience required in this Section shall be obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
- D. Individuals who, under subsection (B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Department licenses for the same uses for which these individuals are authorized.

R9-7-719. Training for Uptake, Dilution, and Excretion Studies

- A. Except as provided in R9-7-710, the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Group 100 to be a physician who:
 - 1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(3). To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Complete 60 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies as described in subsection (A)(3); and
 - b. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
 - 2. Is an authorized user under R9-7-721, R9-7-723, the NRC, or equivalent Agreement State requirements; or
 - 3. Has completed 60 hours of training and experience, including a minimum of eight hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies. The training and experience must include:
 - a. Classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of

- radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
 - b. Work experience, under the supervision of an authorized user who meets the requirements in this Article, NRC, or equivalent Agreement State requirements, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - ii. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - iii. Calculating, measuring, and safely preparing patient or human research subject dosages;
 - iv. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - v. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
 - vi. Administering dosages of radioactive drugs to patients or human research subjects; and
 - c. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements of ~~R9-7-710~~, R9-7-719, R9-7-721, or R9-7-723, the NRC, or equivalent Agreement State requirements; that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(3) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under Exhibit A of this Article.
- B.** The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
- C.** Individuals who, under R9-7-710(B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Department licenses for the same uses for which these individuals are authorized.

R9-7-721. Training for Imaging and Localization Studies Not Requiring a Written Directive

- ~~A.~~ Except as provided in R9-7-710, the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Group 200 to be a physician who:
1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection ~~(A)(3)~~ (3). To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Complete 700 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for imaging and localization studies as described in subsection (3); and
 - b. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
 2. Is an authorized user under ~~this Chapter and~~ R9-7-723, the NRC, or equivalent Agreement State requirements; or
 3. Has completed 700 hours of training and experience, including a minimum of 80 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for imaging and localization studies. The training and experience must include:
 - a. Classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
 - b. Work experience, under the supervision of an authorized user who meets the requirements in R9-7-710, R9-7-721, or R9-7-723 and ~~R9-7-721(A)(3)(b)(vii)~~, in subsection (3)(b)(vii); the requirements of the NRC; or equivalent Agreement State requirements, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely

- and performing the related radiation surveys;
- ii. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
- iii. Calculating, measuring, and safely preparing patient or human research subject dosages;
- iv. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
- v. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
- vi. Administering dosages of radioactive drugs to patients or human research subjects; and
- vii. Eluting generator systems appropriate for preparation of radioactive drugs for imaging and localization studies, measuring and testing the elate for radionuclide purity, and processing the elate with reagent kits to prepare labeled radioactive drugs; and,
- c. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements as an authorized user for Exhibit A group 200 nuclides, NRC, or equivalent Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection ~~(A)(1) or (A)(3)~~ (1) or (3) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under Exhibit A of this Article.

B. ~~The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.~~

Exhibit A. Medical Use Groups

Group 100

Included is the use of any unsealed radioactive material for use in uptake, dilution, or excretion studies and not requiring a written directive: The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R9-7-703(C)(2)(a), or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R9-7-703 or equivalent NRC or an Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R9-7-712, a physician who is an authorized user and who meets the requirements specified in R9-7-721, or R9-7-723 and ~~R9-7-721(A)(3)(b)(vii)~~ R9-7-721(3)(b)(vii), or an individual under the supervision of either as specified in R9-7-706; or
3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with a Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

Group 200

Included is the use of any unsealed radioactive material for use in imaging and localization not requiring a written directive. PET radiopharmaceuticals may be used if the licensee meets the requirements in R9-7-716. The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R9-7-703(C)(2)(a), or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R9-7-703 or an equivalent NRC or ~~an~~ Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R9-7-712, a physician who is an authorized user and who meets the requirements specified in R9-7-721, or R9-7-723 and ~~R9-7-721(A)(3)(b)(vii)~~

R9-7-721(3)(b)(vii), or an individual under the supervision of either as specified in R9-7-706; or

3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with a Radioactive Drug Research Committee- approved application or an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

Group 300

Included is the use of any unsealed radioactive material for medical use (radiopharmaceutical) for which a written directive is required. The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R9-7-703(C)(2)(a) or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R9-7-703 or equivalent NRC or an Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R9-7-712, a physician who is an authorized user and who meets the requirements specified in R9-7-721 or R9-7-723, or an individual under the supervision of either as specified in R9-7-706; or
3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA.

Group 400

Included is the use of any brachytherapy source for therapeutic medical use that is manufactured in accordance with R9-7-703(C)(2)(b) and:

1. Approved for therapeutic use in the Sealed Source and Device Registry; or
2. Part of a research protocol that is approved for therapeutic use under an active Investigational Device Exemption (IDE) application accepted by the FDA, and

meets the requirements of R9-7-709.

Group 500

Included is the use of any sealed source that is manufactured in accordance with R9-7-703(C)(2)(b), and is approved for diagnostic use in the Sealed Source and Device Registry.

Group 600

Included is the use of sealed sources in photon emitting remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units that are manufactured in accordance with R9-7-703(C)(2)(b) and:

1. Approved for therapeutic use in the Sealed Source and Device Registry; or
2. Part of a research protocol that is approved for therapeutic use under an active Investigational Device Exemption (IDE) application accepted by the FDA and meets the requirements of R9-7-709.

Group 1000

A licensee may use radioactive material or a radiation source approved for medical use which is not specifically addressed in ~~R9-7-309(A)(4)~~ R9-7-309(4) if:

1. The applicant or licensee has submitted the information required by this Article; and
2. The applicant or licensee has received written approval from the Department in a license or license amendment and uses the material in accordance with the rules and specific conditions the Department considers necessary for the medical use of the material.

**ARTICLE 10. NOTICES, INSTRUCTIONS, AND REPORTS TO RADIATION
WORKERS; INSPECTIONS**

R9-7-1006. Consultation with Workers During Inspections

- A.** A licensee or registrant shall afford Department inspectors talking to a licensee or registrant representative the opportunity to consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of Department rules, licenses, and registrations to the extent the inspectors deem consultation necessary for conducting an effective and thorough inspection.
- B.** During the course of an inspection, any worker may privately bring to the attention of the inspectors, either orally or in writing, any past or present condition which the worker has reason to believe may have contributed to or caused any violation of the Act, these rules, or a license or registration condition, or any unnecessary exposure of an individual to radiation from licensed radioactive material or a registered radiation machine under the licensee's or registrant's control. If this notification is in writing, the worker shall comply with the requirements of R9-7-1007(A).
- C.** The provisions of ~~R9-7-1006(B)~~ subsection (B) shall not be interpreted as authorization to disregard instructions required by R9-7-1003.

ARTICLE 15. TRANSPORTATION

R9-7-1507. Packaging Quality Assurance

- A.** A licensee that transports radioactive material in the course of business or delivers radioactive material to a carrier for transport in a package for which a license, certificate of compliance, applicant for a certificate of compliance, or other approval has been issued by the Nuclear Regulatory Commission, or meets the applicable criteria (10 CFR 71, Subpart H, revised January 1, 2008, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.), shall establish, maintain, and execute the quality assurance program specified in 10 CFR 71, Subpart H.
- B.** In addition to the requirements in subsection (A) for a quality assurance program, a licensee shall verify by procedures such as checking or inspection, that deficiencies or defective material or equipment relative to the shipment of packages containing radioactive material are promptly identified and corrected.
- C.** Before the first use of any Type B packaging, a licensee shall obtain approval of its quality assurance program by the Department.
- D.** A licensee shall maintain sufficient written records to demonstrate compliance with the quality assurance program. Records of quality assurance pertaining to the use of a Type B package for shipment of radioactive material shall be maintained for three years after the package is used for a shipment.

R9-7-1508. Advance Notification of Nuclear Waste Transportation

- A.** Prior to the transport of any nuclear waste, as defined in Article 1, outside of the confines of the licensee's facility or other place of use or storage, or prior to the delivery of any nuclear waste to a carrier for transport, each licensee shall provide advance notification of such transport to the Department.
- B.** Each advance notification required in subsection (A) above shall contain the following information:
 - 1. The name, address, and telephone number of the shipper, carrier, and receiver of the shipment;
 - 2. A description of the nuclear waste contained in the shipment as required by 49 CFR 172.202 and 172.203(d) (Revised October 1, 2007, incorporated by

reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);

3. The point of origin of the shipment and the seven-day period during which departure of the shipment will occur;
 4. The seven-day period during which arrival of the shipment at state boundaries will occur;
 5. The destination of the shipment, and the seven-day period during which arrival of the shipment will occur; and
 6. A point of contact with a telephone number for current shipment information.
- C.** The licensee shall make the notification required by subsection (A) in writing to the Department. A notification delivered by mail must be postmarked at least seven days before the beginning of the seven-day period during which departure of the shipment is estimated to occur. The licensee shall maintain a copy of the notification for one year.
- D.** The licensee shall notify the Department of any changes in shipment plans, including cancellations, rerouting, or rescheduling, provided pursuant to subsection (A). Such notification shall be by telephoning the Department. The licensee shall maintain for one year a record of the name of the individual contacted.
- E.** After June 11, 2013, each licensee shall provide advance notification to the Tribal official of participating Tribes referenced in paragraph (c)(3)(iii) of 10 CFR 71.97, or the official's designee, of the shipment of licensed material, within or across the boundary of the Tribe's reservation, before the transport, or delivery to a carrier, for transport, of licensed material outside the confines of the licensee's plant or other place of use or storage.

R9-7-1510. Packaging

- A.** A general license is issued to any licensee to transport, or to deliver to a carrier for transport, licensed material in a package for which a license, certificate of compliance, or other approval has been issued by the NRC.
1. This general license applies only to a licensee that has a quality assurance program approved by the Department as satisfying R9-7-1507;
 2. This general license applies only to a licensee that:
 - a. Has a copy of the license, certificate of compliance, or other approval of the package, and has the drawings and other documents referenced in the approval relating to the use and maintenance of the packaging and to the

- actions to be taken before shipment;
- b. Complies with the terms and conditions of the license, certificate, or other approval, as applicable, and the applicable requirements of this Article; ~~and~~
 - c. Before the licensee's first use of the package, submits in writing to the Department and to ATTN: Document Control Desk, Director, Division of Spent Fuel Storage and Transportation, Office of Nuclear Material Safety and Safeguards, using an appropriate method listed in 10 CFR 71.1(a), the licensee's name, license number, and the package identification number specified in the package approval;
 - d. Each certificate holder shall maintain, for a period of three years after the life of the packaging to which they apply. Records identifying the packaging by model number, serial number and date of manufacture;
 - e. The licensee, certificate holder, and an applicant for a CoC, shall make available to the Commission for inspection, upon reasonable notice, all records required by this part. Records are only valid if stamped, initialed, or signed and dated by authorized personnel, or otherwise authenticated;
and
 - f. The licensee, certificate holder, and an applicant for a CoC shall maintain sufficient written records to furnish evidence of the quality of packaging. The records to be maintained include results of the determinations required by 10 CFR 71.85; design, fabrication, and assembly records; results of reviews, inspections, tests, and audits; results of monitoring work performance and materials analyses; and results of maintenance, modification, and repair activities. Inspection, test, and audit records must identify the inspector or data recorder, the type of observation, the results, the acceptability, and the action taken in connection with any deficiencies noted. These records must be retained for three years after the life of the packaging to which they apply.
3. This general license applies only when the package approval authorizes use of the package under this general license.
4. For a Type B or fissile material package, the design of which was approved by NRC before April 1, 1996, the general license is subject to the additional

restrictions of subsection (B).

B. Type B packages.

1. ~~A Type B package previously approved by NRC but not designated as B(U) or B(M) in the identification number of the NRC Certificate of Compliance, may be used under the general license of subsection (A) with the following additional conditions:~~
 - a. ~~Fabrication of the packaging is satisfactorily completed by August 31, 1986, as demonstrated by application of its model number in accordance with 10 CFR 71.85(c) (Revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);~~
 - b. ~~A package that is used for a shipment to a location outside the United States is subject to multilateral approval, as defined in 49 CFR 173.403 (Revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.); and~~
 - c. ~~A serial number that uniquely identifies each package which conforms to the approved design and is assigned to, and legibly and durably marked on, the outside of each package.~~
 - d. ~~The licensee shall ascertain that there are no cracks, pinholes, uncontrolled voids, or other defects that could significantly reduce the effectiveness of the packaging;~~
 - e. ~~Where the maximum normal operating pressure will exceed 35 kPa (5 lbf/in²) gauge, the licensee shall test the containment system at an internal pressure at least 50 percent higher than the maximum normal operating pressure, to verify the capability of that system to maintain its structural integrity at that pressure; and~~
1. Before the first use of any packaging for the shipment of licensed material, refer to 10 CFR 71.85 (a), (b) and (c).
2. A Type B(U) package, a Type B(M) package, a low specific activity (LSA) material package or a fissile material package, previously approved by the NRC but without the “-85” designation in the identification number of the NRC certificate of compliance, may be used under the general license of subsection

- (A) with the following additional conditions:
- a. Fabrication of the packaging is satisfactorily completed by April 1, 1999 as demonstrated by application of its model number in accordance with 10 CFR 71.85(c) (Revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);
 - b. A package that is used for a shipment to a location outside the United States is subject to multilateral approval as defined in 49 CFR 173.403 (Revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.); and
 - c. A serial number which uniquely identifies each package which conforms to the approved design and is assigned to, and legibly and durably marked on, the outside of each package.
3. A licensee may modify the design and authorized contents of a Type B package, or a fissile material package, previously approved by NRC, provided:
- a. The modifications of a Type B package are not significant with respect to the design, operating characteristics, or safe performance of the containment system, when the package is subjected to the tests specified in 10 CFR 71.71 and 71.73 (Revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);
 - b. The modifications of a fissile material package are not significant, with respect to the prevention of criticality, when the package is subjected to the tests specified in 10 CFR 71.71 and 71.73 (Revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.); and
 - c. The modifications to the package satisfy the requirements of this Section.
4. The NRC will revise the package identification number to designate previously approved package designs as B(U), B(M), AF, BF, or A as applicable, and with the identification number suffix “-85” after receipt of an application demonstrating that the design meets the requirements of this Section.
5. For purposes of this Section, package types are defined in 10 CFR 71.4, revised

January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.

- C. A general license is issued to any licensee of the Department to transport fissile material, or to deliver to a carrier for transport, licensed material in a specification container for fissile material or for a Type B quantity of radioactive material as specified in 49 CFR 173 and 178 (Revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.), if the following requirements are met:
1. The licensee shall maintain a quality assurance program approved by the Department as satisfying R9-7-1507.
 2. The licensee shall:
 - a. Maintain a copy of the specification; and
 - b. Comply with the terms and conditions of the specification and the applicable requirements in 10 CFR 71, Subparts A, G, and H, revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
 3. The licensee may not use the specification container for a shipment to a location outside the United States, except by multilateral approval, as defined in 49 CFR 173.403, revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
 4. The general license applies only when a package's contents:
 - a. Contain no more than a Type A quantity of radioactive material; and
 - b. Contain less than 500 total grams of beryllium, graphite, or hydrogenous material enriched in deuterium.
 5. The general license applies only to packages containing fissile material that are labeled with a CSI which:
 - a. Has been determined in accordance with subsection (E);
 - b. Has a value less than or equal to 10; and
 - c. For a shipment of multiple packages containing fissile material, the sum of the CSIs must be less than or equal to 50 (for shipment on a nonexclusive use conveyance) and less than or equal to 100 (for shipment on an exclusive use conveyance).

6. The CSI value must meet the following requirements:
 - a. The value for the CSI must be greater than or equal to the number calculated by the following equation: $CSI=10[(\text{grams of } ^{235}\text{U}/X) + (\text{grams of } ^{235}\text{U}/Y) + \text{grams of } ^{235}\text{U}/Z]$;
 - b. The calculated CSI must be rounded up to the first decimal place;
 - c. The values of X, Y, and Z used in the CSI equation must be taken from Tables 71–1 or 71–2 as appropriate located in 10 CFR 71.22, (revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);
 - d. If Table 71–2 is used to obtain the value of X, then the values for the terms in the equation for uranium-233 and plutonium must be assumed to be zero; and
 - e. Table 71–1 values for X, Y, and Z must be used to determine the CSI if:
 - i. Uranium-233 is present in the package;
 - ii. The mass of plutonium exceeds 1 percent of the mass of uranium-235;
 - iii. The uranium is of unknown uranium-235 enrichment or greater than 24 weight percent enrichment; or
 - iv. Substances having a moderating effectiveness (i.e., an average hydrogen density greater than H₂O) (e.g., certain hydrocarbon oils or plastics) are present in any form, except as polyethylene used for packing or wrapping.

D. Foreign packaging.

1. A general license is issued to any licensee of the Department to transport, or to deliver to a carrier for transport, licensed material in a package the design of which has been approved in a foreign national competent authority certificate that has been revalidated by the Federal Department of Transportation as meeting the applicable requirements of ~~49 CFR 171.12~~ 49 CFR 171.23, revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
2. Except as otherwise provided in this Section, the general license applies only to a licensee who has a quality assurance program approved by the Department as

satisfying the applicable provisions of R9-7-1507.

3. This general license applies only to:
 - a. Shipments made to or from locations outside the United States.
 - b. A licensee that:
 - i. Has a copy of the applicable certificate, the revalidation, and the drawings and other documents referenced in the certificate, relating to the use and maintenance of the packaging and to the actions to be taken before shipment; and
 - ii. Complies with the terms and conditions of the certificate and revalidation, and with the applicable requirements in 10 CFR 71, Subparts A, G, and H, revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments. ~~With respect to the quality assurance provisions of Subpart H of the regulations, the licensee is exempt from design, construction, and fabrication requirements.~~

~~**E.** Assumptions as to unknown properties. When the isotopic abundance, mass, concentration, degree of irradiation, degree of moderation, or other pertinent property of fissile material in any package is not known, the licensee shall package the fissile material as if the unknown properties have credible values that will cause the maximum neutron multiplication.~~

F.E. Routine determination before each shipment of licensed material shall ensure that the package with its contents satisfies the applicable requirements of this Article and of the license. The licensee shall determine that:

1. The package is proper for the contents to be shipped;
2. The package is in unimpaired physical condition except for superficial defects such as marks or dents;
3. Each closure device of the packaging, including any required gasket, is properly installed and secured and free of defects;
4. Any system for containing liquid is adequately sealed and has adequate space or other specified provision for expansion of the liquid;
5. Any pressure relief device is operable and set in accordance with written procedures;

6. The package has been loaded and closed in accordance with written procedures;
7. For fissile material, any moderator or neutron absorber, if required, is present and in proper condition;
8. Any structural part of the package that could be used to lift or tie down the package during transport is rendered inoperable for that purpose, unless it satisfies the design requirements of 10 CFR 71.45 (revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);
9. The level of non-fixed (removable) radioactive contamination on the external surfaces of each package offered for shipment is as low as reasonably achievable, and within the limits specified in DOT regulations in 49 CFR 173.443 (revised October 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.);
10. External radiation levels around the package and around the vehicle, if applicable, will not exceed the limits specified in 10 CFR 71.47 (revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.), at any time during transportation; and
11. Accessible package surface temperatures will not exceed the limits specified in 10 CFR 71.43(g) (revised January 1, 2010, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.), at any time during transportation.

F. Fissile material meeting the requirements of at least one of the conditions in subsections (F)(1) through (F)(6) are exempt from classification as fissile material and from the fissile material package standards of 10 CFR 71.55 and 71.59, but are subject to all other requirements of this part, except as noted.

1. Individual package containing 2 grams or less fissile material.
2. Individual or bulk packaging containing 15 grams or less of fissile material provided the package has at least 200 grams of solid nonfissile material for every gram of fissile material. Lead, beryllium, graphite, and hydrogenous material enriched in deuterium may be present in the package but must not be included in determining the required mass for solid nonfissile material.
3. Low concentrations of solid fissile material commingled with solid nonfissile

material, provided that:

- a. There is at least 2000 grams of solid nonfissile material for every gram of fissile material;
 - b. There is no more than 180 grams of fissile material distributed within 360 kg of contiguous nonfissile material; and
 - c. Lead, beryllium, graphite, and hydrogenous material enriched in deuterium may be present in the package but must not be included in determining the required mass of solid nonfissile material.
4. Uranium enriched in uranium-235 to a maximum of 1 percent by weight, and with total plutonium and uranium-233 content of up to 1 percent of the mass of uranium-235, provided that the mass of any beryllium, graphite, and hydrogenous material enriched in deuterium constitutes less than 5 percent of the uranium mass, and that the fissile material is distributed homogeneously and does not form a lattice arrangement within the package.
 5. Liquid solutions of uranyl nitrate enriched in uranium-235 to a maximum of 2 percent by mass, with a total plutonium and uranium-233 content not exceeding 0.002 percent of the mass of uranium, and with a minimum nitrogen to uranium atomic ratio (N/U) of 2. The material must be contained in at least a DOT Type A package.
 6. Packages containing, individually, a total plutonium mass of not more than 1000 grams, of which not more than 20 percent by mass may consist of plutonium-239, plutonium-241, or any combination of these radionuclides.

R9-7-1512. Advance Notification of Shipment of Irradiated Reactor Fuel and Nuclear Waste

- A.** A licensee shall provide advance notification to the Governor, or the Director of the Department, of the shipment of licensed material as specified in 10 CFR 71.97, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- B.** After June 11, 2013, each licensee shall provide advance notification to the Tribal official of participating Tribes referenced in paragraph (c)(3)(iii) of 10 CFR 71.97, or the Tribal official's designee, of the shipment of licensed material, within or across the boundary of the Tribe's reservation, before the transport, or delivery to a carrier, for transport, of licensed material outside the confines of the licensee's plant or other place of use or

storage.

- C.** Advance notification is also required under this section for the shipment of licensed material, other than irradiated fuel, meeting the following three conditions:
1. The licensed material is required by this part to be in Type B packaging for transportation;
 2. The licensed material is being transported to or across a State boundary en route to a disposal facility or to a collection point for transport to a disposal facility; and
 3. The quantity of licensed material in a single package exceeds the least of the following:
 - a. 3000 times the A1 value of the radionuclides as specified in appendix A, Table A-1 for special form radioactive material;
 - b. 3000 times the A2 value of the radionuclides as specified in appendix A, Table A-1 for normal form radioactive material; or
 - c. 1000 TBq (27,000 Ci).
- D.** Procedures for submitting advance notification. (1) The notification must be made in writing to:
1. The office of each appropriate governor or governor's designee;
 2. The office of each appropriate Tribal official or Tribal official's designee; and
 3. The Director, Division of Security Policy, Office of Nuclear Security and Incident Response.

R9-7-1515. Exemption for Low-level Radioactive Materials

- A.** A licensee is exempt from all the requirements of 10 CFR 71 with respect to shipment or carriage of the low-level materials listed in 10 CFR 71.14(a), revised January 1, 2008, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments.
- B.** Natural material and ores containing naturally occurring radionuclides that are either in their natural state, or have only been processed for purposes other than for the extraction of the radionuclides, and which are not intended to be processed for the use of these radionuclides, provided the activity concentration of the material does not exceed 10 times the applicable radionuclide activity concentration values specified in appendix A, Table A-2, or Table A-3 of this part.
- C.** Materials for which the activity concentration is not greater than the activity

concentration values specified in appendix A, Table A-2, or Table A-3 of this part, or for which the consignment activity is not greater than the limit for an exempt consignment found in appendix A, Table A-2, or Table A-3 of 10 CFR 71 Appendix A.

- D.** Non-radioactive solid objects with radioactive substances present on any surfaces in quantities not in excess of the levels cited in the definition of contamination in 10 CFR 71.4.

**ARTICLE 19. PHYSICAL PROTECTION OF CATEGORY 1 AND CATEGORY 2
QUANTITIES OF RADIOACTIVE MATERIAL**

R9-7-1927. Requirements for Criminal History Records Checks of Individuals Granted Unescorted Access to Category 1 or Category 2 Quantities of Radioactive Material

A. General performance objective and requirements:

1. Except for those individuals listed in R9-7-1929 and those individuals grandfathered under R9-7-1925(B), each licensee subject to the provisions of this Article shall fingerprint each individual who is to be permitted unescorted access to category 1 or category 2 quantities of radioactive material. Licensees shall transmit all collected fingerprints to the Department for transmission to the FBI. The licensee shall use the information received from the FBI as part of the required background investigation to determine whether to grant or deny further unescorted access to category 1 or category 2 quantities of radioactive materials for that individual.
2. The licensee shall notify each affected individual that his or her fingerprints will be used to secure a review of his or her criminal history record, and shall inform him or her of the procedures for revising the record or adding explanations to the record.
3. Fingerprinting is not required if a licensee is reinstating an individual's unescorted access authorization to category 1 or category 2 quantities of radioactive materials if:
 - a. The individual returns to the same facility that granted unescorted access authorization within 365 days of the termination of his or her unescorted access authorization; and
 - b. The previous access was terminated under favorable conditions.
4. Fingerprints do not need to be taken if an individual who is an employee of a licensee, contractor, manufacturer, or supplier has been granted unescorted access to category 1 or category 2 quantities of radioactive material, access to safeguards information, or safeguards information-modified handling by another

licensee, based upon a background investigation conducted under this Article, the Fingerprint Orders, or 10 CFR part 73, revised January 1, 2015, incorporated by reference, and available under R9-7-101. This incorporated material contains no future editions or amendments. An existing criminal history records check file may be transferred to the licensee asked to grant unescorted access in accordance with the provisions of R9-7-1931(C).

5. Licensees shall use the information obtained as part of a criminal history records check solely for the purpose of determining an individual's suitability for unescorted access authorization to category 1 or category 2 quantities of radioactive materials, access to safeguards information, or safeguards information-modified handling.

B. Prohibitions:

1. Licensees may not base a final determination to deny an individual unescorted access authorization to category 1 or category 2 quantities of radioactive material solely on the basis of information received from the FBI involving:
 - a. An arrest more than 1 year old for which there is no information of the disposition of the case; or
 - b. An arrest that resulted in dismissal of the charge or an acquittal.
2. Licensees may not use information received from a criminal history records check obtained under this section in a manner that would infringe upon the rights of any individual under the First Amendment to the Constitution of the United States, nor shall licensees use the information in any way that would discriminate among individuals on the basis of race, religion, national origin, gender, or age.

C. Procedures for processing of fingerprint checks:

1. For the purpose of complying with this Article, licensees shall use an appropriate method listed in 10 CFR 37.7, revised January 1, 2015, incorporated by reference, available under R9-7-101, and containing no future editions or amendments; to submit to the U.S. Nuclear Regulatory Commission, Director, Division of Facilities and Security, 11545 Rockville Pike, ATTN: Criminal History Program/Mail Stop TWB-05 B32M, Rockville, Maryland 20852, one completed, legible standard fingerprint card (Form FD-258, ORIMDNRCOOOZ), electronic fingerprint scan or, where practicable, other fingerprint record for each individual requiring unescorted access to category 1

or category 2 quantities of radioactive material. Copies of these forms may be obtained by writing the ~~Office of Information Services~~ Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, by calling 1-630-829-9565, or by email to FORMS.Resource@nrc.gov. Guidance on submitting electronic fingerprints can be found at <http://www.nrc.gov/site-help/e-submittals.html>.

2. Fees for the processing of fingerprint checks are due upon application. Licensees shall submit payment with the application for the processing of fingerprints through corporate check, certified check, cashier's check, money order, or electronic payment, made payable to "U.S. NRC." (For guidance on making electronic payments, contact the Security Branch, Division of Facilities and Security at 301-492-3531.) Combined payment for multiple applications is acceptable. The Commission publishes the amount of the fingerprint check application fee on the NRC's public website. (To find the current fee amount, go to the Electronic Submittals page at <http://www.nrc.gov/site-help/e-submittals.html> and see the link for the Criminal History Program under Electronic Submission Systems.)
3. The U.S. Nuclear Regulatory Commission will forward to the submitting licensee all data received from the FBI as a result of the licensee's application(s) for criminal history records checks.

R9-7-1943. General Security Program Requirements

A. Security plan:

1. Each licensee identified in R9-7-1941(A) shall develop a written security plan specific to its facilities and operations. The purpose of the security plan is to establish the licensee's overall security strategy to ensure the integrated and effective functioning of the security program required by this Article. The security plan shall, at a minimum:
 - a. Describe the measures and strategies used to implement the requirements of this Article; and
 - b. Identify the security resources, equipment, and technology used to satisfy the requirements of this Article.
2. The security plan shall be reviewed and approved by the individual with overall responsibility for the security program.

3. A licensee shall revise its security plan as necessary to ensure the effective implementation of Department requirements. The licensee shall ensure that:
 - a. The revision has been reviewed and approved by the individual with overall responsibility for the security program; and
 - b. The affected individuals are instructed on the revised plan before the changes are implemented.
 4. The licensee shall retain a copy of the current security plan as a record for 3 years after the security plan is no longer required. If any portion of the plan is superseded, the licensee shall retain the superseded material for 3 years after the record is superseded.
- B.** Implementing procedures:
1. The licensee shall develop and maintain written procedures that document how the requirements of this Article and the security plan will be met.
 2. The implementing procedures and revisions to these procedures shall be approved in writing by the individual with overall responsibility for the security program.
 3. The licensee shall retain a copy of the current procedure as a record for 3 years after the procedure is no longer needed. Superseded portions of the procedure shall be retained for 3 years after the record is superseded.
- C.** Training:
1. Each licensee shall conduct training to ensure that those individuals implementing the security program possess and maintain the knowledge, skills, and abilities to carry out their assigned duties and responsibilities effectively. The training shall include instruction in:
 - a. The licensee's security program and procedures to secure category 1 or category 2 quantities of radioactive material, and in the purposes and functions of the security measures employed;
 - b. The responsibility to report promptly to the licensee any condition that causes or may cause a violation of Department requirements;
 - c. The responsibility of the licensee to report promptly to the local law enforcement agency and licensee any actual or attempted theft, sabotage, or diversion of category 1 or category 2 quantities of radioactive material; and

- d. The appropriate response to security alarms.
2. In determining those individuals who shall be trained on the security program, the licensee shall consider each individual's assigned activities during authorized use and response to potential situations involving actual or attempted theft, diversion, or sabotage of category 1 or category 2 quantities of radioactive material. The extent of the training shall be commensurate with the individual's potential involvement in the security of category 1 or category 2 quantities of radioactive material.
3. Refresher training shall be provided at a frequency not to exceed 12 months and when significant changes have been made to the security program. This training shall include:
 - a. Review of the training requirements of subsection (c) and any changes made to the security program since the last training;
 - b. Reports on any relevant security issues, problems, and lessons learned;
 - c. Relevant results of Department inspections; and
 - d. Relevant results of the licensee's program review and testing and maintenance.
4. The licensee shall maintain records of the initial and refresher training for 3 years from the date of the training. The training records shall include dates of the training, topics covered, a list of licensee personnel in attendance, and related information.

D. Protection of information:

1. Licensees authorized to possess category 1 or category 2 quantities of radioactive material shall limit access to and unauthorized disclosure of their security plan, implementing procedures, and the list of individuals that have been approved for unescorted access.
2. Efforts to limit access shall include the development, implementation, and maintenance of written policies and procedures for controlling access to, and for proper handling and protection against unauthorized disclosure of, the security plan and implementing procedures.
3. Before granting an individual access to the security plan or implementing procedures, licensees shall:
 - a. Evaluate an individual's need to know the security plan or implementing

- procedures; and
- b. If the individual has not been authorized for unescorted access to category 1 or category 2 quantities of radioactive material, safeguards information, or safeguards information-modified handling, the licensee shall complete a background investigation to determine the individual's trustworthiness and reliability. A trustworthiness and reliability determination shall be conducted by the reviewing official and shall include the background investigation elements contained in R9-7-1925(A)(2) through (A)(7).
4. Licensees need not subject the following individuals to the background investigation elements for protection of information:
 - a. The categories of individuals listed in R9-7-1929(A); or
 - b. Security service provider employees, provided written verification that the employee has been determined to be trustworthy and reliable, by the required background investigation in R9-7-1925(A)(2) through (A)(7), has been provided by the security service provider.
 5. The licensee shall document the basis for concluding that an individual is trustworthy and reliable and should be granted access to the security plan or implementing procedures.
 6. Licensees shall maintain a list of persons currently approved for access to the security plan or implementing procedures. When a licensee determines that a person no longer needs access to the security plan or implementing procedures or no longer meets the access authorization requirements for access to the information, the licensee shall remove the person from the approved list as soon as possible, but no later than 7 working days, and take prompt measures to ensure that the individual is unable to obtain the security plan or implementing procedures.
 7. When not in use, the licensee shall store its security plan and implementing procedures in a manner to prevent unauthorized access. Information stored in non-removable electronic form shall be password protected.
 8. The licensee shall retain as a record for 3 years after the document is no longer needed:
 - a. A copy of the information protection procedures; and

- b. The list of individuals approved for access to the security plan or implementing procedures.
- 9. State officials, State employees, and other individuals, whether or not licensees of the Commission or an Agreement State, who receive schedule information of the kind specified in subsection (D)(1) shall protect that information against unauthorized disclosure as specified in subsection (D)(2).

R9-7-1975. Preplanning and Coordination of Shipment of Category 1 or Category 2 Quantities of Radioactive Material

- A. Each licensee that plans to transport, or deliver to a carrier for transport, licensed material that is a category 1 quantity of radioactive material outside the confines of the licensee's facility or other place of use or storage shall:
 - 1. Preplan and coordinate shipment arrival and departure times with the receiving licensee;
 - 2. Preplan and coordinate shipment information with the governor or the governor's designee of any State through which the shipment will pass to:
 - a. Discuss the State's intention to provide law enforcement escorts; and
 - b. Identify safe havens; and
 - 3. Document the preplanning and coordination activities.
- B. Each licensee that plans to transport, or deliver to a carrier for transport, licensed material that is a category 2 quantity of radioactive material outside the confines of the licensee's facility or other place of use or storage shall coordinate the shipment no-later-than arrival time and the expected shipment arrival with the receiving licensee. The licensee shall document the coordination activities.
- C. Each licensee who receives a shipment of a category 2 quantity of radioactive material shall confirm receipt of the shipment with the originator. If the shipment has not arrived by the no-later-than arrival time, the receiving licensee shall notify the originator.
- D. Each licensee, who transports or plans to transport a shipment of a category 2 quantity of radioactive material, and determines that the shipment will arrive after the no-later-than arrival time provided pursuant to ~~paragraph~~ subsection (B), shall promptly notify the receiving licensee of the new no-later-than arrival time.
- E. The licensee shall retain a copy of the documentation for preplanning and coordination and any revision thereof, as a record for 3 years.

R9-7-1977. Advance Notification of Shipment of Category 1 Quantities of Radioactive

Material

~~As specified in subsections (A) and (B), each~~ Each licensee shall provide advance notification to the Department and the governor of a State, or the governor's designee, of the shipment of licensed material in a category 1 quantity, through or across the boundary of the State, before the transport, or delivery to a carrier for transport of the licensed material outside the confines of the licensee's facility or other place of use or storage.

1. Procedures for submitting advance notification:
 - a. The notification shall be made to the Department and to the office of each appropriate governor or governor's designee. The contact information, including telephone and mailing addresses, of governors and governors' designees, ~~and participating Tribes~~ is available on the NRC's website at <http://nrc-stp.ornl.gov/special/designee.pdf> <https://scp.nrc.gov/special/designee.pdf>. A list of the contact information is also available upon request from the Director, Division of Material Safety, State, Tribal, and Rulemaking Programs, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. Notifications to the Department shall be to the Department Director or their designee. The notification to the Department may be made by email to ram@azdhs.gov or by fax to (602) 437-0705.
 - b. A notification delivered by mail shall be postmarked at least 7 days before transport of the shipment commences at the shipping facility.
 - c. A notification delivered by any means other than mail shall reach the Department at least 4 days before the transport of the shipment commences and shall reach the office of the governor or the governor's designee at least 4 days before transport of a shipment within or through the State.
2. Information to be furnished in advance notification of shipment:

Each advance notification of shipment of category 1 quantities of radioactive material shall contain the following information, if available at the time of notification:

 - a. The name, address, and telephone number of the shipper, carrier, and receiver of the category 1 radioactive material;

- b. The license numbers of the shipper and receiver;
 - c. A description of the radioactive material contained in the shipment, including the radionuclides and quantity;
 - d. The point of origin of the shipment and the estimated time and date that shipment will commence;
 - e. The estimated time and date that the shipment is expected to enter each State along the route;
 - f. The estimated time and date of arrival of the shipment at the destination; and
 - g. A point of contact, with a telephone number, for current shipment information.
3. Revision notice:
- a. The licensee shall provide any information not previously available at the time of the initial notification, as soon as the information becomes available but not later than commencement of the shipment, to the governor of the State or the governor's designee and to the Department Director at the contact information available in R9-7-1907.
 - b. A licensee shall promptly notify the governor of the state or the governor's designee of any changes to the information provided in accordance with subsections (B) and (C)(1). The licensee shall also immediately notify the Department Director at the contact information available in R9-7-1907 of any such changes.
4. Cancellation notice:
- Each licensee who cancels a shipment for which advance notification has been sent shall send a cancellation notice to the governor of each State or to the governor's designee previously notified and to the Department Director at the contact information available in R9-7-1907. The licensee shall send the cancellation notice before the shipment would have commenced or as soon thereafter as possible. The licensee shall state in the notice that it is a cancellation and identify the advance notification that is being cancelled.
5. Records:
- The licensee shall retain a copy of the advance notification and any revision and cancellation notices as a record for 3 years.

6. Protection of information:
State officials, State employees, and other individuals, whether or not licensees of the Department, the NRC, or an Agreement State, who receive schedule information of the kind specified ~~R9-7-1977(B)~~ in this Section shall protect that information against unauthorized disclosure as specified in R9-7-1943(D) of this Article.

R9-7-19101. Form of Records

- A.** Each record required by this Article shall be legible throughout the retention period specified by each Department rule. The record may be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records such as letters, drawings, and specifications, shall include all pertinent information such as stamps, initials, and signatures. The licensee shall maintain adequate safeguards against tampering with and loss of records.
- B.** The licensee who transferred the material shall retain each record of the transfer of source or byproduct material until the Department terminates each license that authorizes the activity that is subject to the recordkeeping requirement.

Replacement Check List

For rules filed within the
1st Quarter
January 1 - March 31, 2016

THE ARIZONA ADMINISTRATIVE CODE

Within the stated calendar quarter, this Chapter contains all rules made, amended, repealed, renumbered, and recodified; or rules that have expired or were terminated due to an agency being eliminated under sunset law. These rules were either certified by the Governor's Regulatory Review Council or the Attorney General's Office; or exempt from the rulemaking process, and filed with the Office of the Secretary of State. Refer to the historical notes for more information. Please note that some rules you are about to remove may still be in effect after the publication date of this Supplement. Therefore, all superseded material should be retained in a separate binder and archived for future reference.

Title 12. Natural Resources

Chapter 1. Radiation Regulatory Agency

Supplement Release Quarter: 16-1

Sections, Parts, Exhibits, Tables or Appendices modified

R12-1-102, R12-1-303, R12-1-306, R12-1-308, R12-1-311, R12-1-313, R12-1-320, R12-1-323, R12-1-418, R12-1-452, R12-1-503, R12-1-703, R12-1-1302, R12-1-1512, R12-1-1901 through R12-1-1999, R12-1-19100 through R12-1-19109, Appendix A, Table 1

The agency's contact person who can answer questions about rules in Supp. 16-1:

Arizona Radiation Regulatory Agency
Name: Jerry W. Perkins
Address: 4814 S. 40th St., Phoenix, AZ 85040
Telephone: (602) 255-4833
Fax: (602) 437-0705
Email: jperkins@azrra.gov
Website: www.azrra.gov

Disclaimer: Please be advised the person listed is the contact of record as submitted in the rulemaking package for this supplement. The contact and other information may have changed and is provided as a public courtesy.

PUBLISHER
Arizona Department of State
Office of the Secretary of State, Public Services Division

PREFACE

Under Arizona law, the Department of State, Office of the Secretary of State (Office), accepts state agency rule filings and is the publisher of Arizona rules. The Office of the Secretary of State does not interpret or enforce rules in the Administrative Code. Questions about rules should be directed to the state agency responsible for the promulgation of the rule.

Scott Cancelosi, Director
PUBLIC SERVICES DIVISION
March 31, 2016

RULES

A.R.S. § 41-1001(17) states: “‘Rule’ means an agency statement of general applicability that implements, interprets, or prescribes law or policy, or describes the procedures or practice requirements of an agency.”

THE ADMINISTRATIVE CODE

The Arizona Administrative Code is where the official rules of the state of Arizona are published. The Code is the official codification of rules that govern state agencies, boards, and commissions. Virtually everything in your life is affected in some way by rules published in the Arizona Administrative Code, from the quality of air you breathe to the licensing of your dentist. This chapter is one of more than 230 in the Code compiled in 21 Titles.

ADMINISTRATIVE CODE SUPPLEMENTS

Rules filed by an agency to be published in the Administrative Code are updated quarterly. Supplement release dates are printed on the footers of each chapter:

First Quarter: January 1 - March 31
Second Quarter: April 1 - June 30
Third Quarter: July 1 - September 30
Fourth Quarter: October 1 - December 31

For example, the first supplement for the first quarter of 2016 is cited as Supp. 16-1.

HOW TO USE THE CODE

Rules may be in effect before a supplement is released by the Office. Therefore, the user should refer to issues of the Arizona Administrative Register for recent updates to rule Sections.

ARTICLES AND SECTIONS

Rules in chapters are divided into Articles, then Sections. The “R” stands for “rule” with a sequential numbering and lettering system separated into subsections.

HISTORICAL NOTES AND EFFECTIVE DATES

Historical notes inform the user when the last time a Section was updated in the Administrative Code. Be aware, since the Office publishes each quarter by entire chapters, not all Sections are updated by an agency in a supplement release. Many times just one Section or a few Sections may be updated in the entire chapter.

ARIZONA REVISED STATUTE REFERENCES

The Arizona Revised Statutes (A.R.S.) are available online at the Legislature’s website, www.azleg.gov. An agency’s authority note to make rules are often included at the beginning of a chapter. Other Arizona statutes may be referenced in rule under the A.R.S. acronym.

SESSION LAW REFERENCES

Arizona Session Law references in the introduction of a chapter can be found at the Secretary of State’s website, www.azsos.gov/services/legislative-filings.

EXEMPTIONS FROM THE APA

It is not uncommon for an agency to be exempt to the steps outlined in the rulemaking process as specified in the Arizona Administrative Procedures Act, also known as the APA (Arizona Revised Statutes, Title 41, chapter 6, Articles 1 through 10). Other agencies may be given an exemption to certain provisions of the Act.

An agency’s exemption is written in law from the Arizona State Legislature or under a referendum or initiative passed into law by Arizona voters.

When an agency files an exempt rulemaking package with our Office it specifies the law exemption in what is called the preamble of rulemaking. The preamble is published in the Arizona Administrative Register online at www.azsos.gov/rules, click on the Administrative Register link.

In the Administrative Code the Office includes editor’s notes at the beginning of a chapter indicating that certain rulemaking Sections were made by exempt rulemaking. Exempt rulemaking notes are also included in the historical note at the end of a rulemaking Section.

The Office makes a distinction to certain exemptions because some rules are made without receiving input from stakeholders or the public. Other exemptions may require an agency to propose exempt rules at a public hearing.

EXEMPTIONS AND PAPER COLOR

If you are researching rules and come across rescinded chapters on a different paper color, it is because the agency filed a Notice of Exempt Rulemaking. At one time the office published exempt rules on either blue or green paper. Blue meant the authority of the exemption was given by the Legislature; green meant the authority was determined by a court order. In 2001 the Office discontinued publishing rules using these paper colors.

PERSONAL USE/COMMERCIAL USE

This chapter is posted as a public courtesy online, and is for private use only. Those who wish to use the contents for resale or profit, should contact the Office about Commercial Use fees. For information on commercial use fees review A.R.S. § 39-121.03 and 1 A.A.C. 1., R1-1-113.

Public Services managing rules editor, Rhonda Paschal, assisted with the editing of this chapter.

TITLE 12. NATURAL RESOURCES

CHAPTER 1. RADIATION REGULATORY AGENCY

Authority: A.R.S. § 30-651 et seq.

Editor's Note: This Chapter has rules in Supp. 16-1 that were filed in the Office on February 3, 2016, with an immediate effective date of February 2, 2016, the date approved by the Governor's Regulatory Review Council, in order to remain in federal compliance with Agreement State status as stipulated in A.R.S. § 41-1032(A)(2).

R12-1-1974.	Reserved	271	Appendix A.	Table 1. - Category 1 and Category 2 Radioactive Materials	275

ARTICLE 1. GENERAL PROVISIONS**R12-1-101. Scope and Incorporated Materials**

- A. Except as otherwise specifically provided, this Chapter applies to all persons who receive, possess, use, transfer, own, or acquire any source of radiation.
- B. This Chapter does not apply to any person that is subject to regulation by the Nuclear Regulatory Commission.
- C. State control of source material, byproduct material, and special nuclear material in quantities not sufficient to form a critical mass is subject to the provisions of the agreement between the state and the U.S. Nuclear Regulatory Commission, signed March 30, 1967 and incorporated by reference. This incorporated material contains no later editions or amendments, and together with all other incorporated materials in this Chapter, is available for inspection or copying at the Arizona Radiation Regulatory Agency, 4814 S. 40th St., Phoenix, AZ 85040.
- D. Federal regulations incorporated by reference in this Chapter are available from the U.S. Government Printing Office, P.O. Box 979050, St. Louis, MO 63197-9000 and <http://www.gpo-access.gov/cfr/>.

Historical Note

Former Rule Section A.1; Former Section R12-1-101 repealed, new Section R12-1-101 adopted effective June 30, 1977 (Supp. 77-3). Amended effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-102. Definitions

Terms defined in A.R.S. § 30-651 have the same meanings when used in this Chapter, unless the context otherwise requires. Additional subject-specific definitions are used in other Articles.

“A1” means the maximum activity of special form radioactive material permitted in a type A package. These values are either listed in 10 CFR 71, Appendix A, Table A-1, or may be derived in accordance with the procedures prescribed in 10 CFR 71, Appendix A, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“A2” means the maximum activity of radioactive material, other than special form radioactive material, low specific activity (LSA) material, and surface contaminated object (SCO) material, permitted in a Type A package. These values are either listed in 10 CFR 71, Appendix A, Table A-1, or may be derived in accordance with the procedure prescribed in 10 CFR 71, Appendix A, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“Absorbed dose” means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

“Accelerator” means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in excess of 1 MeV. For purposes of this definition, “particle accelerator” is an equivalent term.

“Accelerator produced material” means any material made radioactive by irradiating it in a particle accelerator.

“Act” means A.R.S. Title 30, Chapter 4.

“Activity” means the rate of disintegration, transformation, or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).

“Adult” means an individual 18 or more years of age.

“Agency,” or “ARRA” means the Arizona Radiation Regulatory Agency.

“Agreement State” means any state with which the United States Nuclear Regulatory Commission has entered into an effective agreement under Section 274(b) of the Atomic Energy Act of 1954, as amended (73 Stat. 689). “Nonagreement State” means any other state.

“Airborne radioactive material” means any radioactive material dispersed in the air in the form of aerosols, dusts, fumes, mists, vapors, or gases.

“Airborne radioactivity area” means a room, enclosure, or area in which airborne radioactive materials, composed wholly or partly of licensed radioactive material, exist in concentrations:

In excess of the derived air concentrations (DACs) specified in Appendix B, Table I of Article 4 of these rules; or

That an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

“ALARA” means as low as is reasonably achievable, making every reasonable effort to maintain exposures to radiation as far below the dose limits in these rules as is practical, consistent with the purpose for which the licensed or registered activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.

“Analytical x-ray equipment” means equipment used for x-ray diffraction or x-ray-induced fluorescence analysis.

“Analytical x-ray system” means a group of components utilizing x-rays to determine the elemental composition or to examine the microstructure of materials.

“Annual” means done or performed yearly. For purposes of Chapter 1 any required activity done or performed within plus or minus two weeks of the annual due date is considered done or performed in a timely manner.

“Authorized medical physicist” means an individual who meets the requirements in R12-1-711; or is identified as an authorized medical physicist or teletherapy physicist on:

A specific medical use license issued by the Agency, NRC, or another Agreement State;

A medical use permit issued by a NRC master material licensee;

A permit issued by an Agency, NRC, or another Agreement State broad scope medical use licensee; or

A permit issued by a NRC master material license broad scope medical use permittee.

Radiation Regulatory Agency

“Authorized nuclear pharmacist” means a pharmacist who meets the requirements in R12-1-712; or is identified as an authorized nuclear pharmacist on:

A specific license issued by an Agency, NRC, or another Agreement State that authorizes medical use or the practice of nuclear pharmacy;

A permit issued by a NRC master material licensee that authorizes medical use or the practice of nuclear pharmacy;

A permit issued by an Agency, NRC, or another Agreement State broad scope medical use licensee that authorizes medical use or the practice of nuclear pharmacy; or

A permit issued by a NRC master material license broad scope medical use permittee that authorizes medical use or the practice of nuclear pharmacy; or

Is identified as an authorized nuclear pharmacist by a commercial nuclear pharmacy that has been authorized to identify authorized nuclear pharmacists; or

Is designated as an authorized nuclear pharmacist in accordance with R12-1-311(G).

“Authorized user” means a physician, dentist, or podiatrist who meets the requirements in R12-1-719, R12-1-723, R12-1-727, R12-1-728, or R12-1-744; or is identified as an authorized user on:

An Agency, NRC, or another Agreement State license that authorizes the medical use of radioactive material;

A permit issued by a NRC master material licensee that is authorized to permit the medical use of radioactive material;

A permit issued by an Agency, NRC, or another Agreement State specific licensee of broad scope that is authorized to permit the medical use of radioactive material; or A permit issued by a NRC master material license broad scope permittee that is authorized to permit the medical use of radioactive material.

“Background radiation” means radiation from cosmic sources; not technologically enhanced naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents, such as Chernobyl, that contribute to background radiation and are not under the control of a licensee. “Background radiation” does not include sources of radiation regulated by the Agency.

“Becquerel” (Bq) means the International System (SI) unit for activity and is equal to 1 disintegration per second (dps or tps).

“Bioassay” means the determination of kinds, quantities, or concentrations, and in some cases, the locations of radioactive material in the human body, whether by direct measurement, in vivo counting, or by analysis and evaluation of materials excreted or removed from the human body. For purposes of these rules, “radiobioassay” is an equivalent term.

“Brachytherapy” means a method of radiation therapy in which an encapsulated source or group of sources is utilized to deliver beta or gamma radiation at a distance of up to a few centimeters, by surface, intracavitary or interstitial application.

“Byproduct material” means:

Any radioactive material, except special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material;

The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium or thorium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute “byproduct material” within this definition;

Any discrete source of radium-226 that is produced, extracted, or converted after extraction, for use for a commercial, medical, or research activity; or any material that, has been made radioactive by use of a particle accelerator; and is produced, extracted, or converted after extraction, for use for a commercial, medical, or research activity; and

Any discrete source of naturally occurring radioactive material, other than source material, that the NRC, in consultation with the Administrator of the Environmental Protection Agency, the Secretary of Energy, the Secretary of Homeland Security, and the head of any other appropriate federal agency, determines would pose a threat similar to the threat posed by a discrete source of radium-226 to the public health and safety or the common defense and security and; before, on, or after August 8, 2005, is extracted or converted after extraction for use in a commercial, medical, or research activity.

“Calendar quarter” means not less than 12 consecutive weeks nor more than 14 consecutive weeks. The first calendar quarter of each year shall begin in January and subsequent calendar quarters shall be so arranged such that no day is included in more than one calendar quarter and no day in any one year is omitted from inclusion within a calendar quarter. A licensee or registrant shall not change the method of determining calendar quarters for purposes of this Chapter except at the beginning of a calendar year.

“Calibration” means the determination of:

The response or reading of an instrument relative to a series of known radiation values over the range of the instrument, or

The strength of a source of radiation relative to a standard.

“Carrier” means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.

“Certifiable cabinet x-ray system” means an existing uncertified x-ray system that meets or has been modified to meet the certification requirements specified in 21 CFR 1020.40, revised April 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“Certificate holder” means a person who has been issued a certificate of compliance or other package approval by the Agency or NRC.

“Certificate of Compliance” (CoC) means the certificate issued by the NRC under 10 CFR 71, Subpart D, (Revised Jan-

Radiation Regulatory Agency

uary 1, 2010, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.), which authorizes the design of a package for the transportation of radioactive material.

“Certified cabinet x-ray system” means an x-ray system that has been certified in accordance with 21 CFR 1010.2, as being manufactured and assembled on or after April 10, 1975, in accordance with the provisions of 21 CFR 1020.40, both sections revised April 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“CFR” means Code of Federal Regulations.

“Chelating agent” means amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid, and polycarboxylic acids.

“Civil penalty” means the monetary fine which may be imposed on licensees by the Agency, pursuant to A.R.S. § 30-687, for violations of the Act, this Chapter, or license conditions.

“Collective dose” means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

“Committed dose equivalent” (HT,50) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

“Committed effective dose equivalent” (HE,50) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues ($HE,50 = S wT,HT,50$).

“Consortium” means an association of medical use licensees and a PET radionuclide production facility in the same geographical area that jointly own or share in the operation and maintenance cost of the PET radionuclide production facility that produces PET radionuclides for use in producing radioactive drugs within the consortium for noncommercial distributions among its associated members for medical use. The PET radionuclide production facility within the consortium must be located at an educational institution or a federal facility or a medical facility.

“Curie” means a unit of quantity of radioactivity. One curie (Ci) is that quantity of radioactive material which decays at the rate of $3.7E + 10^{10}$ transformations per second (tps).

“Current license or registration” means a license or registration issued by the Agency and for which the licensee has paid the license or registration fee for the current year according to R12-1-1304.

“Deep-dose equivalent” (Hd), which applies to external whole body exposure, is the dose equivalent at a tissue depth of 1 centimeter (1000 mg/cm²).

“Depleted uranium” means the source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present. Depleted uranium does not include special nuclear material.

“Discrete source” means a radionuclide that has been processed so that its concentration within a material has been pur-

posely increased for use for commercial, medical, or research activities.

“Dose” is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of these rules, “radiation dose” is an equivalent term.

“Dose equivalent” (HT) means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

“Dose limits” means the permissible upper bound of radiation doses established in accordance with these rules. For purposes of these rules, “limits” is an equivalent term.

“Dosimeter” (See “Individual monitoring device”)

“Effective dose equivalent” (HE) means the sum of the products of the dose equivalent to each organ or tissue (HT) and the weighting factor (wT) applicable to each of the body organs or tissues that are irradiated ($HE = S wTHT$).

“Effluent release” means any disposal or release of radioactive material into the ambient atmosphere, soil, or any surface or subsurface body of water.

“Embryo/fetus” means the developing human organism from conception until the time of birth.

“Enclosed beam x-ray system” means an analytical x-ray system constructed in such a way that access to the interior of the enclosure housing the x-ray source during operation is precluded except through bypassing of interlocks or other safety devices to perform maintenance or servicing.

“Enclosed radiography” means industrial radiography conducted by using cabinet radiography or shielded room radiography.

“Cabinet radiography” means industrial radiography conducted by using an x-ray machine in an enclosure not designed for human admittance and which is so shielded that every location on the exterior meets the conditions for an “unrestricted area.”

“Shielded room radiography” means industrial radiography conducted using an x-ray machine in an enclosure designed for human admittance and which is so shielded that every location of the exterior meets the conditions for an “unrestricted area.”

“Entrance or access point” means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

“Exhibit” for purposes of these rules, is equivalent in meaning to the word “Schedule” as found in previously issued rules, current license conditions, and regulation guide.

“Explosive material” means any chemical compound, mixture, or device which produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.

“Exposure” means:

Being subjected to ionizing radiation or radioactive materials.

Radiation Regulatory Agency

The quotient of dQ by dm where “dQ” is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass “dm” are completely stopped in air. The special unit of exposure is the roentgen (R).

“Exposure rate” means the exposure per unit of time.

“External dose” means that portion of the dose equivalent received from any source of radiation outside the body.

“Extremity” means the shoulder girdle to the phalanges and the lower two-thirds of the femur to the phalanges.

“Fail-safe characteristics” means a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.

“FDA” means the United States Food and Drug Administration.

“Field radiography” means industrial radiography, utilizing a portable or mobile x-ray system, which is not conducted in a shielded enclosure.

“Field station” means a facility where radioactive sources may be stored or used and from which equipment is dispatched to temporary job sites.

“Former U.S. Atomic Energy Commission (AEC) or U.S. Nuclear Regulatory Commission (NRC) licensed facilities” means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.

“Generally applicable environmental radiation standards” means standards issued by the U.S. Environmental Protection Agency (EPA), 40 CFR 190 and 191, revised July 1, 2013, incorporated by reference, and available under R12-1-101, under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material. This incorporated material contains no future editions or amendments.

“Gray” (Gy) means the International System (SI) unit of absorbed dose and is equal to 1 joule per kilogram. One gray equals 100 rad.

“Hazardous waste” means those wastes designated as hazardous in A.R.S. § 49-921(5).

“Healing arts” means the practice of medicine, dentistry, osteopathy, podiatry, chiropractic, and veterinary medicine.

“Health care institution” means every place, institution, or building which provides facilities for medical services or other health-related services, not including private clinics or offices which do not provide overnight patient care.

“High radiation area” means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving a dose equivalent in excess of 1 mSv (0.1 rem) in one hour at 30 centimeters from the radiation source or 30 centimeters from any surface that the radiation penetrates.

“Human use” means the internal or external administration of radiation or radioactive materials to human beings.

“Impound” means to abate a radiological hazard. Actions which may be taken by the Agency in impounding a source of radiation include seizing the source of radiation, controlling access to an area, and preventing a radiation machine from being utilized.

“Indian tribe” means an Indian or Alaska native tribe, band, nation, pueblo, village, or community that the Secretary of the Interior acknowledges to exist as an Indian tribe pursuant to the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 479a.

“Individual” means any human being.

“Individual monitoring” means the assessment of:

Dose equivalent

By the use of individual monitoring devices, or
By the use of survey data, or

Committed effective dose equivalent

By bioassay; or

By determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours. (See the definition of DAC-hours in Article 4).

“Individual monitoring device” means a device designed to be worn by a single individual for the assessment of dose equivalent. For purposes of this Chapter, “dosimeter” and “personnel dosimeter,” are equivalent terms. Examples of individual monitoring devices are film badges, thermoluminescence dosimeters (TLDs), pocket ionization chambers, optical stimulation devices, and personal (“lapel”) air sampling devices.

“Individual monitoring equipment” means one or more individual monitoring devices. For purposes of this Chapter, “personnel monitoring equipment” is an equivalent term.

“Industrial radiography” means the examination of the macroscopic structure of materials by non-destructive methods utilizing sources of ionizing radiation.

“Injection tool” means a device used for controlled subsurface injection of radioactive tracer material.

“Inspection” means an examination or observation by a representative of the Agency, including but not limited to tests, surveys, and monitoring to determine compliance with rules, orders, requirements and conditions of the License or certificate of registration.

“Interlock” means a device arranged or connected such that the occurrence of an event or condition is required before a second event or condition can occur or continue to occur.

“Internal dose” means that portion of the dose equivalent received from radioactive material taken into the body.

“Irradiate” means to expose to radiation.

“Laser” (light amplification by the stimulated emission of radiation) means any device which can produce or amplify electromagnetic radiation with wave lengths in the range of 180 nanometers to 1 millimeter primarily by the process of controlled stimulated emission.

“Lens dose equivalent” (LDE) means the external exposure of the lens of the eye and is taken as the dose equivalent at a tissue depth of 0.3 centimeters (300 mg/cm²).

Radiation Regulatory Agency

“License” means the grant of authority, issued pursuant to Articles 3 and 14 of this Chapter and A.R.S. §§ 30-671, 30-672, and 30-721 et seq., to acquire, possess, transfer, and use sources of radiation. The types of licenses issued by the Agency are described in R12-1-1302.

“Licensed material” means radioactive material received, possessed, used, transferred, or disposed of under a general or specific license issued by the Agency.

“Licensed practitioner” means a person licensed or otherwise authorized by law to practice medicine, dentistry, osteopathy, chiropractic, podiatry, or naturopathy in this state.

“Licensee” means any person who is licensed by the Agency under this Chapter to acquire, possess, transfer, or use sources of radiation.

“Licensing State” means any state having regulations equivalent to this Chapter relating to, and an effective program for the regulation of, naturally occurring and accelerator-produced radioactive material (NARM).

“Limits” (See “Dose limits”)

“Local components” means those parts of an analytical x-ray system that are struck by x-rays, including radiation source housings, port and shutter assemblies, collimator, sample holders, cameras, goniometer, detectors and shielding but not including power supplies, transformers, amplifiers, readout devices, and control panels.

“Logging supervisor” means the individual who provides personal supervision of the utilization of sources of radiation at the well site.

“Logging tool” means a device used subsurface to perform well logging.

“Lost or missing licensed or registered source of radiation” means licensed or registered source of radiation the location of which is unknown. Included are licensed radioactive material or a registered radiation source that has been shipped but has not reached its planned destination and whose location cannot be readily traced or ascertained in the transportation system.

“Low-level waste” means waste material which contains radioactive nuclides in concentrations or quantities which exceed applicable standards for unrestricted release but does not include:

High-level waste, such as irradiated reactor fuel, liquid waste from reprocessing irradiated reactor fuel, or solids into which any such liquid waste has been converted;

Waste material containing transuranic elements with contamination levels greater than 10 nanocuries per gram (370 kilobecquerels per kilogram) of waste material;

The tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content.

“Major processor” means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material or exceeding four times Type B quantities as sealed sources but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs. Type A and B quantities are defined in 10 CFR 71.4, revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“Medical dose” means a radiation dose intentionally delivered to an individual for medical examination, diagnosis, or treatment.

“Member of the public” means any individual except when that individual is receiving an occupational dose.

“MeV” means Mega Electron Volt which equals 1 million volts (106 eV).

“Mineral logging” means any well logging performed in a borehole drilled for the purpose of exploration for minerals other than oil or gas.

“Minor” means an individual less than 18 years of age.

“Monitoring” means the measurement of radiation, radioactive material concentrations, surface area activities, or quantities of radioactive material, and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of these rules, “radiation monitoring” and “radiation protection monitoring” are equivalent terms.

“Multiplier” means a letter representing a number. The use of a multiplier is based on the code given below:

<i>Prefix</i>	<i>Multiplier Symbol</i>	<i>Value</i>
eka	E	10 ¹⁸
peta	P	10 ¹⁵
tera	T	10 ¹²
giga	G	10 ⁹
mega	M	10 ⁶
kilo	k	10 ³
milli	m	10 ⁻³
micro	u	10 ⁻⁶
nano	n	10 ⁻⁹
pico	p	10 ⁻¹²
femto	f	10 ⁻¹⁵
atto	a	10 ⁻¹⁸

“NARM” means any naturally occurring or accelerator-produced radioactive material. It does not include byproduct, source, or special nuclear material. This term should not be confused with “NORM” which is defined as naturally occurring radioactive material.

“Normal operating procedures” means the entire set of instructions necessary to accomplish the intended use of the source of radiation. These procedures shall include, but are not limited to, sample insertion and manipulation, equipment alignment, routine maintenance by the licensee, and data recording procedures which are related to radiation safety.

“Natural radioactivity” means the radioactivity of naturally occurring radioactive substances.

“NRC” means Nuclear Regulatory Commission, the U.S. Nuclear Regulatory Commission, or its duly authorized representatives.

“Nuclear waste” means any highway route controlled quantity (defined in 49 CFR 173.403, revised October 1, 2012, incorporated by reference, and available under R12-1-101; this incorporated material contains no future editions or amendments) of source, byproduct, or special nuclear material required to be in NRC-approved packaging while transported to, through, or across state boundaries to a disposal site, or to a collection

Radiation Regulatory Agency

point for transport to a disposal site. Additional requirements associated with transportation of radioactive material can be found in Article 15.

“Occupational dose” means the dose received by an individual in the course of employment in which the individual’s assigned duties involve exposure to sources of radiation, whether in the possession of a licensee, registrant, or other person. Occupational dose does not include a dose received from background radiation, medical administration of radiation to the individual, exposure to an individual who has been administered radioactive material and released in accordance with R12-1-717, voluntary participation in a medical research program, or as a member of the public.

“Open beam system” means an analytical x-ray system in which an individual could place some body part in the primary beam path during normal operation.

“Package” means the packaging together with its radioactive contents as presented for transport.

“Particle accelerator” (See “Accelerator”)

“Permanent radiographic installation” means a fixed, shielded installation or structure designed or intended for industrial radiography and in which industrial radiography is regularly performed.

“Personnel dosimeter” (See “Individual monitoring device”)

“Personnel monitoring equipment” (See “Individual monitoring device”)

“Personal supervision” means supervision in which the supervising individual is physically present at the site where sources of radiation and associated equipment are being used, watching the performance of the supervised individual and in such proximity that immediate assistance can be given if required.

“PET” (See Positron Emission Tomography (PET))

“Pharmacist” means an individual licensed by this state to compound and dispense drugs, prescriptions, and poisons.

“Physician” means an individual licensed pursuant to A.R.S. Title 32, Chapters 13 or 17.

“Positron Emission Tomography (PET)” means an imaging technique using radionuclides to produce high resolution images of the body’s biological functions.

“Positron Emission Tomography radionuclide production facility” means a facility operating a cyclotron or accelerator for the purpose of producing PET radionuclides.

“Preceptor” means an individual who provides, directs, or verifies training and experience required for an individual to become an authorized user, an authorized medical physicist, an authorized nuclear pharmacist, or a Radiation Safety Officer.

“Primary beam” means radiation which passes through an aperture of the source housing by a direct path from the x-ray tube or a radioactive source located in the radiation source housing.

“Public dose” means the dose received by a member of the public from radiation from radioactive material released by a licensee or registrant, or exposure to a source of radiation used in a licensed or registered operation. It does not include an occupational dose or a dose received from background radiation, medical administration of radiation to the individual, exposure to an individual who has been administered radioac-

tive material and released in accordance with R12-1-717, or voluntary participation in a medical research program.

“Pyrophoric liquid” means any liquid that ignites spontaneously in dry or moist air at or below 130× F (54.4× C).

“Pyrophoric solid” means any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently that it creates a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.

“Qualified expert” means an individual certified in the appropriate field by the American Board of Radiology or the American Board of Health Physics, or having equivalent qualifications that provide the knowledge and training to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs; or an individual certified in Therapeutic Radiological Physics or X-ray and Radium Physics by the American Board of Radiology, or having equivalent qualifications that provide training and experience in the clinical applications of radiation physics to radiation therapy, to calibrate radiation therapy equipment. The detailed requirements for a particular qualified expert may be provided in the respective Articles of this Chapter. For clarification purposes, a qualified expert is not always an authorized medical physicist; however, an authorized medical physicist is included within the definition of “qualified expert.”

“Quality Factor” (Q) means the modifying factor, listed in Tables I and II of this Article, that is used to derive dose equivalent from absorbed dose.

“Quarter” (See “Calendar quarter”)

“Rad” means the special unit of absorbed dose. One rad equals 100 ergs per gram, or 0.01 gray.

“Radiation” means alpha particles, beta particles, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. For purposes of these rules, this term is synonymous with ionizing radiation. Equivalent terminology for non-ionizing radiation is defined in Article 14.

“Radiation area” means any area accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem) in one hour at 30 centimeters from the source of radiation or from any surface that the radiation penetrates.

“Radiation dose” (See “Dose”)

“Radiation machine” means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.

“Radiation Safety Officer” (RSO) means the individual and who for license conditions:

Meets the requirements in 10 CFR 35.50(a) or (c)(1) and 10 CFR 35.59, (revised January 1, 2010, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.); or is identified as a Radiation Safety Officer on a specific medical use license issued by the NRC or an Agreement State; or a medical use permit issued by a NRC master material licensee;

Radiation Regulatory Agency

Or, who, for registration conditions, is designated by the registrant as the individual who has the knowledge, authority, and responsibility to apply appropriate radiation protection principles to ensure radiation safety and compliance with the Act, this Chapter and any registration conditions.

“Radiation Safety Officer” (RSO) means the individual and who for license conditions:

Meets the requirements of R12-1-407, and for a medical license meets the training requirements of R12-1-710 or is identified as a Radiation Safety Officer on a specific medical use license issued by the Agency, NRC, or another Agreement State; or a medical use permit issued by a NRC master material licensee;

Or, who meets the requirements in R12-1-512 on a specific industrial license issued by the Agency, NRC, or another Agreement State; or an industrial use permit issued by a NRC master material licensee;

Or, who, for registration conditions, is designated by the registrant as the individual who has the knowledge, authority, and responsibility to apply appropriate radiation protection principles to ensure radiation safety and compliance with the Act, this Chapter and any registration conditions.

“Radioactive marker” means radioactive material placed subsurface or on a structure intended for subsurface use for the purpose of depth determination or direction orientation.

“Radioactive material” means any solid, liquid, or gas which emits radiation spontaneously.

“Radioactivity” means emission of electromagnetic energy or particles or both during the transformation of unstable atomic nuclei.

“Radiographer” means any individual who performs or personally supervises industrial radiographic operations and who is responsible to the licensee or registrant for assuring compliance with the requirements of this Chapter and all conditions of the license or certificate of registration.

“Radiographer’s assistant” means any individual who, under the personal supervision of a radiographer, uses sources of radiation, radiographic exposure devices, related handling tools, or survey instruments in industrial radiography.

“Registrant” means any person who is registered with the Agency and is legally obligated to register with the Agency pursuant to these rules and the Act.

“Registration” is the process by which a person becomes a registrant pursuant to Article 2 or 14 of this Chapter. With the exception of registration of persons who install or service radiation machines, the types of registrations issued by the Agency are described in R12-1-1302.

“Regulations of the U.S. Department of Transportation” means the federal regulations in 49 CFR 107, 171 through 180, revised October 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

“Rem” means the special unit of dose equivalent (see “Dose equivalent”). The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor (1 rem = 0.01 sievert).

“Research and Development” means exploration, experimentation, or the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes. Research and Development does not include the internal or external administration of radiation or radioactive material to human beings.

“Restricted area” means any area where the licensee or registrant controls access for purposes of protecting individuals from exposure to radiation and radioactive material. A restricted area does not include any areas used for residential quarters, although a room or separate rooms in a residential building may be set apart as a restricted area.

“Roentgen” (R) means the special unit of exposure and is equal to the quantity of x or gamma radiation which causes ionization in air equal to 258 microcoulomb per kilogram (see “Exposure”).

“Safety system” means any device, program, or administrative control designed to ensure radiation safety.

“Sealed source” means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.

“Sealed Source and Device Registry” means the national registry that contains all the registration certificates, generated by both the NRC and the Agreement States, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for each source or device.

“Shallow dose equivalent” (HS), which applies to the external exposure of the skin of the whole body or the skin of an extremity, is taken as the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm²).

“Shielded position” means the location within a radiographic exposure device or storage container which, by manufacturer’s design, is the proper location for storage of the sealed source.

“Sievert” means the SI unit of dose equivalent (see “Dose equivalent”). The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor (1 Sv = 100 rem).

“Site boundary” means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee or registrant.

“Source changer” means a device designed and used for replacement of sealed sources in radiographic exposure devices, including those also used for transporting and storage of sealed sources.

“Source holder” means a housing or assembly into which a radioactive source is placed for the purpose of facilitating the handling and use of the source in well-logging operations.

“Source material” means:

Uranium or thorium, or any combination of uranium or thorium, in any physical or chemical form; or

Ores that contain by weight 1/20 of 1 percent (0.05 percent) or more of uranium, thorium, or any combination of uranium and thorium.

Radiation Regulatory Agency

Source material does not include special nuclear material.

“Source material milling” means any activity that results in the production of byproduct material as defined by the second subsection under the definition of “Byproduct material.”

“Source of radiation” or “source” means any radioactive material or any device or equipment emitting, or capable of producing, radiation.

“Special form radioactive material” means radioactive material that satisfies all of the following conditions:

It is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

The piece or capsule has at least one dimension not less than 5 millimeters (0.2 inch); and

It satisfies the test requirements specified in 10 CFR 71.75, revised January 1, 2013, incorporated by reference, available under R12-1-101. This incorporated material contains no future editions or amendments. A special form encapsulation designed in accordance with the U.S. Nuclear Regulatory Commission requirements in effect on June 30, 1983, and constructed prior to July 1, 1985, may continue to be used. A special form encapsulation constructed after June 30, 1985, shall meet requirements of this definition applicable at the time of its construction.

“Special nuclear material in quantities not sufficient to form a critical mass” means Uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; Uranium-233 in quantities not exceeding 200 grams; Plutonium in quantities not exceeding 200 grams; or any combination of them in accordance with the following formula: for each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed one. For example, the following quantities in combination would not exceed the limitation and are within the formula:

$$\frac{XgmsU235}{350} + \frac{YgmsU233}{200} + \frac{ZgmsPu}{200} \leq 1$$

“Storage area” means any location, facility, or vehicle which is used to store, transport, or secure a radiographic exposure device, storage container, sealed source, or other source of radiation when it is not in use.

“Storage container” means a device in which sealed sources are transported or stored.

“Subsurface tracer study” means the release of a substance tagged with radioactive material for the purpose of tracing the movement or position of the tagged substance in the well-bore or adjacent formation.

“Survey” means an evaluation of the production, use, release, disposal, or presence of sources of radiation or any combination thereof under a specific set of conditions to determine actual or potential radiation hazards. Such evaluations include, but are not limited to, tests, physical examination and measurements of levels of radiation or concentration of radioactive material present.

“TEDE” (See “Total Effective Dose Equivalent”)

“Teletherapy” means therapeutic irradiation in which the source of radiation is at a distance from the body.

“Temporary job site” means any location where sources of radiation are used other than the specified locations listed on a license document. Storage of sources of radiation at a temporary jobsite shall not exceed six months unless the Agency has granted an amendment authorizing storage at that jobsite.

“Test” means the process of verifying compliance with an applicable rule, order, or license condition.

“These rules” means all Articles of 12 A.A.C. 1.

“Total Effective Dose Equivalent” (TEDE) means the sum of the effective dose equivalent (for external exposures) and the committed effective dose equivalent (for internal exposures).

“Total Organ Dose Equivalent” (TODE) means the sum of the deep-dose equivalent and the committed dose equivalent to the organ receiving the highest dose. Determination of TODE is described in R12-1-411.

“Tribal official” means the highest ranking individual that represents Tribal leadership, such as the Chief, President, or Tribal Council leadership.

“Unrefined and unprocessed ore” means ore in its natural form prior to any processing, such as grinding, roasting, beneficiating, or refining.

“Unrestricted area” means any area access to which is not controlled by the licensee for purposes of protection of individuals from exposure to radiation and radioactive material. Any area used for residential quarters is an unrestricted area.

“U.S. Department of Energy” means the Department of Energy established by P.L. 95-91, August 4, 1977, 91 Stat. 565, 42 U.S.C. 7101 et seq., to the extent that the Department exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers, and components; and transferred to the U.S. Energy Research and Development Administration and to the administrator of that agency under sections 104(b), (c), and (d) of the Energy Reorganization Act of 1974 (P.L. 93-438, October 11, 1974, 88 Stat. 1233 at 1237, 42 U.S.C. 5814, effective January 19, 1975) and retransferred to the Secretary of Energy under Section 301(a) of the Department of Energy Organization Act (P.L. 95-91, August 4, 1977, 91 Stat. 565 at 577-578, 42 U.S.C. 7151, effective October 1, 1977).

“Very high radiation area” means an area, accessible to individuals, in which radiation levels from radiation sources external to the body could result in an individual receiving an absorbed dose that exceeds 5 grays (500 rads) in one hour at one meter from a radiation source or one meter from any surface that the radiation penetrates.

“Waste” (See “Low-level waste”)

“Waste handling licensees” means persons licensed to receive and store radioactive wastes prior to disposal and persons licensed to dispose of radioactive waste.

“Week” means seven consecutive days starting on Sunday.

“Well-bore” means a drilled hole in which wireline service operations and subsurface tracer studies are performed.

“Well-logging” means the lowering and raising of measuring devices or tools which may contain sources of radiation into

Radiation Regulatory Agency

well-bores or cavities for the purpose of obtaining information about the well and adjacent formations.

“Whole body” means, for purposes of external exposure, head, trunk including male gonads, arms above the elbow, or legs above the knee.

“Wireline” means an armored cable containing one or more electrical conductors which is used to lower and raise logging tools in the well-bore.

“Wireline service operation” means any evaluation or mechanical service which is performed in the well-bore using devices on a wireline.

“Worker” means any individual engaged in work under a license or registration issued by the Agency and controlled by employment or contract with a licensee or registrant.

“WL” means working level, any combination of short-lived radon daughters in 1 liter of air that will result in the ultimate emission of $1.3E + 5$ MeV of potential alpha particle energy. The short-lived radon daughters are – for radon-222: polonium-218, lead-214, bismuth-214, and polonium-214; and for radon-220: polonium-216, lead-212, bismuth-212, and polonium-212.

“WLM” means working level month, an exposure to one working level for 170 hours (2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month).

“Workload” means the degree of use of an x-ray or gamma-ray source per unit time.

“Year” means the period of time beginning in January used to determine compliance with the provisions of these rules. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

Historical Note

Former Rule Section A.2. Former Section R12-1-102 repealed, new Section R12-1-102 adopted effective June 30, 1977 (Supp. 77-3). Amended effective November 19, 1982 (Supp. 82-6). Amended effective February 25, 1985 (Supp. 85-1). Amended by adding a new paragraph (31), subparagraph (w) and renumbering the former paragraph (31), subparagraphs (w) through (z) accordingly effective November 28, 1986 (Supp. 86-6). Amended by adding a new paragraph (34) and renumbering the former paragraphs (34) through (68) accordingly effective June 26, 1987 (Supp. 87-2). Amended effective April 2, 1990 (Supp. 90-2). Amended effective November 5, 1993 (Supp. 93-4). Amended effective February 18, 1994 (Supp. 94-1). Amended effective August 10, 1994 (Supp. 94-3). Amended effective January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by

final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-103. Exemptions

- A. Common and contract carriers, freight forwarders, and warehousemen who are subject to 49 CFR 107.109, 107.111, 107.113, 171.2, 171.3, 172.200, 173.1, 173.3, 173.4, 173.401, 175.3, 175.10, 176.3, 176.5, 176.11, 176.24, 176.27, and 177.801, revised October 1, 2007, of the U.S. Department of Transportation, or 39 CFR 111.1 of the U.S. Postal Service, revised July 1, 2007, incorporated by reference, and available under R12-1-101, and who if need be, store radioactive material, for periods of less than 72 hours, in the regular course of their carriage for another, are exempt from this Chapter. The incorporated materials above contain no future editions or amendments.
- B. Any U.S. Department of Energy contractor or subcontractor and any U.S. Nuclear Regulatory Commission contractor or subcontractor of the following categories operating within this state are exempt from this Chapter to the extent that such contractor or subcontractor under the contract receives, possesses, uses, transfers, or acquires sources of radiation:
1. Prime contractors performing work for the Department of Energy at U.S. Government-owned or controlled sites, including the transportation of sources of radiation to or from such sites and the performance of contract services during temporary interruptions of such transportation;
 2. Prime contractors of the Department of Energy performing research or development, manufacture, storage, testing or transportation of nuclear weapons or components thereof;
 3. Prime contractors of the Department of Energy using or operating nuclear reactors or other nuclear devices in a United States Government-owned vehicle or vessel; and
 4. Any other prime contractor or subcontractor of the Department of Energy or of the Nuclear Regulatory Commission when the state and the Nuclear Regulatory Commission jointly determine:
 - a. That the exemption of the prime contractor or subcontractor is authorized by law; and
 - b. That under the terms of the contract or subcontract, there is adequate assurance that the work thereunder can be accomplished without undue risk to the public health and safety.
- C. Any licensee who delivers to a carrier for transport any package which contains radioactive material having a specific activity of 74 kBq/kg (2 nanocuries per gram) or less, is exempt from the provisions of this Chapter with respect to that package.

Historical Note

Former Rule Section A.3; Former Section R12-1-103 repealed, new Section R12-1-103 adopted effective June 30, 1977 (Supp. 77-3). Amended effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

Radiation Regulatory Agency

R12-1-104. Prohibited Uses

- A. A person shall not use the following fluoroscopic devices:
 1. Hand-held fluoroscopic screens,
 2. Shoe-fitting fluoroscopic devices.
- B. Except as specifically authorized by law, a person shall not use sources of ionizing radiation for the purpose of screening an individual or inspecting an individual for:
 1. Concealed weapons,
 2. Hazardous materials,
 3. Stolen property, or
 4. Contraband.
- C. Unless there is a medical or dental indication for the exposure and the exposure is prescribed by a licensed practitioner, a person shall not deliberately expose an individual to the useful beam from:
 1. An ionizing radiation machine; or
 2. A non-ionizing radiation source, having a radiation beam known to be harmful to human tissue.

Historical Note

Former Rule Section A.4; Former Section R12-1-104 repealed, new Section R12-1-104 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-104 repealed, new Section R12-1-104 renumbered from R12-1-112 and amended effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-105. Quality Factors for Converting Absorbed Dose to Dose Equivalent

- A. As used in these rules, the quality factors for converting absorbed dose to dose equivalent are shown in Table I.

TABLE I
QUALITY FACTORS AND ABSORBED DOSE
EQUIVALENCIES

TYPE OF RADIATION	Quality Factor (Q)	Absorbed Dose Equal to a Unit Dose Equivalent ^a
X, gamma, or beta radiation and high-speed electrons		1
Alpha particles, multiple-charged particles, fission fragments, and heavy particles of unknown charge	20	0.05
Neutrons of unknown energy	10	0.1
High-energy protons	10	0.1

^aThe absorbed dose in gray is equal to 1 Sv or the absorbed dose in rad is equal to 1 rem.

- B. If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in sievert per hour or rem per hour, 0.01 Sv (1 rem) of neutron radiation of unknown energies may, for purposes of these rules, be assumed to result from a total fluence of 25 million neutrons

per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee or registrant may use the fluence rate per unit dose equivalent or the appropriate Q value from Table II to convert a measured tissue dose in gray or rad to dose equivalent in sievert or rem.

TABLE II
MEAN QUALITY FACTORS, Q, AND FLUENCE PER UNIT DOSE EQUIVALENT FOR MONOENERGETIC NEUTRONS

	Neutron Energy (meV)	Quality Factor (Q)	Fluence per Unit Dose Equivalent ^b (neutrons cm ⁻² r _{cm} ⁻¹)	Fluence per Unit Dose Equivalent ^b (neutrons cm ⁻² S _v ⁻¹)
(thermal)	2.5E-8	2	980E+6	980E+8
	1E-7	2	980E+6	980E+8
	1E-6	2	810E+6	810E+8
	1E-5	2	810E+6	810E+8
	1E-4	2	840E+6	840E+8
	1E-3	2	980E+6	980E+8
	1E-2	2.5	1010E+6	1010E+8
	1E-1	7.5	170E+6	170E+8
	5E-1	11	39E+6	39E+8
	1	11	27E+6	27E+8
	2.5	9	29E+6	29E+8
	5	8	23E+6	23E+8
	7	7	24E+6	24E+8
	10	6.5	24E+6	24E+8
	14	7.5	17E+6	17E+8
	20	8	16E+6	16E+8
	40	7	14E+6	14E+8
	60	5.5	16E+6	16E+8
	1E+2	4	20E+6	20E+8
	2E+2	3.5	19E+6	19E+8
	3E+2	3.5	16E+6	16E+8
	4E+2	3.5	14E+6	14E+8

^a Value of quality factor (Q) at the point where the dose equivalent is maximum in a 30-centimeter diameter cylinder tissue-equivalent phantom.

^b Monoenergetic neutrons incident normally on a 30-centimeter diameter cylinder tissue-equivalent phantom.

Historical Note

Former Rule Section A.5; Former Section R12-1-105 repealed, new Section R12-1-105 adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2). New Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-106. Units of Activity

For purposes of these rules, activity is expressed in the SI unit of becquerel (Bq) or in the special unit of curie (Ci), or their multiples, or disintegrations or transformations per unit of time. The definitions for these units are located in R12-1-102.

Historical Note

Former Rule Section A.6; Former Section R12-1-1-6

Radiation Regulatory Agency

repealed, new Section R12-1-106 adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2). New Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-107. Misconduct

- A.** A licensee, registrant, applicant for a license or certificate of registration, or employee of a licensee, registrant, or applicant; or any contractor (including a supplier or consultant), subcontractor, or employee of a contractor or subcontractor of any licensee or certificate of registration holder who provides to any licensee, registrant, applicant, contractor, or subcontractor, any components, equipment, materials, or other goods or services that relate to a licensee's, registrant's, or applicant's activities in this Chapter, shall not:
1. Knowingly engage in conduct that violates or will result in a violation by a licensee, registrant, or applicant, of any statute, rule, regulation, or order; or any term, condition, or limitation of any license or registration issued by the Agency; or
 2. Knowingly submit to the Agency, or a licensee, registrant, or applicant, or a licensee's, registrant's, or applicant's contractor or subcontractor, information that is incomplete or inaccurate.
- B.** The Board shall impose the applicable civil penalty listed in R12-1-1216 on a person who violates subsection (A)(1) or (A)(2). For this purpose the person is classified as a Division II licensee and the violation is classified as a Severity II violation.
- C.** For the purposes of this Section, "misconduct" means conduct prohibited under subsection (A).
- D.** A person who is not a licensee, registrant, or applicant and knowingly violates a rule for the safe use of radiation sources in 12 A.A.C.1 is subject to the enforcement actions in 12 A.A.C. 1, Article 12.

Historical Note

Former Rule Section A.7; Former Section R12-1-107 repealed, new Section R12-1-107 adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2). New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-108. Repealed**Historical Note**

Former Rule Section A.8; Former Section R12-1-108 repealed, new Section R12-1-108 adopted effective June 30, 1977 (Supp. 77-3). Change of address (Supp. 85-6). Section repealed effective April 2, 1990 (Supp. 90-2).

R12-1-109. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2).

R12-1-110. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2).

R12-1-111. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Section repealed effective April 2, 1990 (Supp. 90-2).

R12-1-112. Renumbered**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-112 renumbered to R12-1-104 effective April 2, 1990 (Supp. 90-2).

Appendix A. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective August 10, 1994 (Supp. 94-3).

Appendix B. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective August 10, 1994 (Supp. 94-3).

ARTICLE 2. REGISTRATION, INSTALLATION, AND SERVICE OF IONIZING RADIATION-PRODUCING MACHINES; AND CERTIFICATION OF MAMMOGRAPHY FACILITIES

R12-1-201. Exemptions

- A.** Electronic equipment that produces X-radiation incidental to its operation for other purposes is exempt from the registration and notification requirements of this Article, provided that an exposure rate, from any accessible surface, averaged over an area of 10 centimeters squared (1.55 inches squared) does not exceed 5 microsieverts (0.5 milliroentgen) per hour at 5 centimeters (2.0 inches).
- B.** The production, testing, or factory servicing of the electronic equipment in subsection (A) is not exempt from the requirements of this Article.
- C.** Radiation machines in storage or in transit to or from storage are exempt from the requirements of this Article.
- D.** Radiation machines rendered incapable of producing radiation are exempt from the requirements of this Article.

Historical Note

Former Rule Section B.3. Former Section R12-1-203 repealed, new Section R12-1-203 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-201 repealed, former Section R12-1-203 renumbered as R12-1-201 and amended effective November 22, 1988 (Supp. 88-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-202. Application for Registration of Ionizing Radiation Producing Machines

- A.** A person shall not use a radiation machine except as authorized in this Article.
- B.** A person possessing a nonexempt radiation machine shall apply for registration of the machine with the Agency within 30 days after its installation. The person applying for registration of a radiation-producing machine shall use the application forms provided by the Agency. The applicant shall provide the information identified in Appendix A of this Article.
- C.** In addition to the application form or forms, the applicant shall remit the appropriate registration or licensing fee in R12-1-1306 and provide other information required by R12-1-208.
- D.** Each applicant that applies for registration of a stationary x-ray system, with the exception of applicants from bone densitometry, cabinet radiography, podiatry, dental, bone mineral analyzer and mammography facilities, shall provide a scale

Radiation Regulatory Agency

drawing of the room in which the x-ray system is located, or provide measurements from the radiation source to the surrounding barrier surfaces. The drawing shall denote the type of materials and the thickness (or lead equivalence) of each barrier of the room (walls, ceilings, floors, doors, windows). The drawing shall also denote the type and frequency of occupancy in adjacent areas, including those above and below the x-ray room of concern (e.g., hallways, offices, parking lots, and lavatories). Estimates of workload shall also be provided with the drawing.

- E. An applicant proposing to use a particle accelerator for medical purposes shall not use the particle accelerator until the Agency inspection required in R12-1-914 has been completed.

Historical Note

Former Rule Section B.4. Former Section R12-1-204 repealed, new Section R12-1-204 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-202 repealed, former Section R12-1-204 renumbered as R12-1-202 and amended effective November 22, 1988 (Supp. 88-4). Amended effective January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1817, effective June 11, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-203. Application for Registration of Servicing and Installation

- A. Each person who is engaged in the business of installing or offering to install radiation machines shall apply for registration. For purposes of this Chapter, install includes selling and servicing, or offering to sell or service, x-ray machines in Arizona.
- B. The applicant shall complete the application for registration on forms that request information required by A.R.S. § 30-672.01, provided by the Agency.

Historical Note

Former Rule Section B.5. Former Section R12-1-205 repealed, new Section R12-1-205 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-205 renumbered as R12-1-203 and amended effective November 22, 1988 (Supp. 88-4). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-204. Issuance of Notice of Registration

- A. Upon determining that the application meets the requirements of the Act and this Article, the Agency shall issue a Notice of Registration.
- B. All radiation machines located at the same facility may be registered using one Notice of Registration.

Historical Note

Former Rule Section B.6. Former Section R12-1-206 repealed, new Section R12-1-206 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-206 renumbered as R12-1-204 and amended effective November 22, 1988 (Supp. 88-4). Amended effective January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2).

R12-1-205. Expiration of Notice of Registration or Certification

- A. Except as provided in subsection (B), a Notice of Registration, issued according to R12-1-204, or a certificate issued accord-

ing to R12-1-208, expires at the end of the day on the expiration date stated in the Notice of Registration or certificate.

- B. If an application for renewal is filed by the registrant or certificate holder not less than 30 days prior to the expiration of the Notice of Registration or certificate, the Notice of Registration or certificate does not expire until a final determination is made by the Agency on the renewal application.

Historical Note

Former Rule Section B.7. Former Section R12-1-207 repealed, new Section R12-1-207 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-207 renumbered as R12-1-205 and amended effective November 22, 1988 (Supp. 88-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-206. Assembly, Installation, Removal from Service, and Transfer

- A. A person who assembles, or installs ionizing radiation machines in this state shall notify the Agency in writing within 15 days of:
1. The name and address of the person possessing the machine that was assembled or installed;
 2. The manufacturer, model, and serial number of each radiation machine with the tube housing model number and serial number, maximum kVp, and maximum mA, assembled or installed; and
 3. The date each machine was assembled or installed, or the first clinical procedure is performed.
- B. Any person who possesses a radiation machine registered by the Agency shall notify the Agency within 15 days of the machine being taken out of service. The written notification shall contain the name and address of the person receiving the machine, if it is sold, leased, or transferred to another person; the manufacturer, model, and serial number of the machine; and the date the machine was taken out of service.
- C. In the case of diagnostic x-ray systems that contain certified components, an assembler shall, within 15 days following completion of the assembly, submit to the Agency a copy of the assembler's report (FDA Report No. 2579) prepared in compliance with requirements in 21 CFR 1020.30(d), revised April 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments. The report shall suffice in lieu of any other report by the assembler, if it contains the information required in subsection (A).
- D. A person shall not make, sell, lease, transfer, lend, assemble, service, or install radiation machines or the supplies used in connection with radiation machines unless the supplies and equipment when properly placed in operation and used, meet the requirements of these rules.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-209 renumbered as Section R12-1-206 and amended effective November 22, 1988 (Supp. 88-4). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

Radiation Regulatory Agency

R12-1-207. Reciprocal Recognition of Out-of-state Radiation Machines

- A. If any radiation machine is to be brought into the state for temporary use, the person proposing to bring the radiation machine into the state shall provide written notice to the Agency at least three working days before the radiation machine is to be used in the state. The notice shall include the type of radiation machine; the nature, duration, and scope of use; and the exact location where the radiation machine is to be used. If, for a specific case, the three working-day period would impose an undue hardship, the person may upon application to the Agency, obtain permission to proceed sooner.
- B. In addition, the owner of the radiation machine and the person possessing the machine while in the state shall:
 - 1. Comply with all applicable rules of the Agency;
 - 2. Upon request, supply the Agency with a copy of the machine's registration and other information regarding the safe operation of the machine while it is in the state; and
 - 3. Upon request, supply the Agency with the work authorization from the Agency, machine registration, operating and emergency procedures, utilization log, survey instrument and associated calibration record, and training records for all users.
- C. A radiation machine shall not be operated within the state on a temporary basis in excess of 180 calendar days per year.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-210 renumbered as Section R12-1-207 and amended effective November 22, 1988 (Supp. 88-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-208. Certification of Mammography Facilities

An applicant seeking certification of a facility according to A.R.S. § 30-672(J) shall:

- 1. Provide evidence with the application that a quality assurance program has been established and is in use under R12-1-614(B)(1) and (2),
- 2. Provide evidence with the application that physicians reading mammographic images have the training and experience required in A.R.S. § 32-2842, and
- 3. Provide evidence with the application that physicians reading mammographic images have met the minimum criteria established by their respective licensing boards, as required in A.R.S. § 32-2842(C).

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective November 22, 1988 (Supp. 88-4). New Section adopted effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Corrected subsection (1) by adding reference to R12-1-614(B)(1) and (2), which was inadvertently omitted in 03-3 rulemaking (Supp. 14-1).

R12-1-209. Notifications

- A. A registrant shall notify the Agency within 30 days of any change to the information contained in the notice of registration or a certificate issued according to R12-1-208.
- B. A person who possesses a radiation machine registered by the Agency shall notify the Agency within 15 days if the machine is discarded or transferred to another person. In the notice, the person shall provide the name and address of the person who

receives the machine, if it is sold, leased, or transferred to another person; the manufacturer, model, and serial number of the machine; and the date the machine was taken out of service.

Historical Note

Adopted effective January 2, 1996 (Supp. 96-1). Section repealed; new Section made by final rulemaking at 11 A.A.R. 61, effective February 5, 2005 (Supp. 04-4).

Appendix A. Application Information

An application shall contain the following information as required in R12-1-202(B), before a registration will be issued. The Agency shall provide an application form to an applicant with a guide, if available, or shall assist the applicant to ensure that only correct information is provided on the application.

Name and mailing address of applicant	Use location
Person responsible for radiation safety program	Telephone number
Type of facility	Facility subtype
Legal structure and ownership	Signature of certifying agent
Radiation machine information	Equipment identifiers
Shielding information	Scale drawing, if applicable
Equipment operator instructions and restrictions	Physicist name and training, if applicable
Classification of professional in charge	
Record of calibration for therapy units	Type of request: amendment, new, or renewal
Protection survey results, if applicable	
Type of industrial radiography program, if applicable	
Radiation Safety Officer name, if applicable	Contact person
Other registration requirements listed in Articles 2, 6, 8, 9, and 11	Appropriate fee listed in Article 13 schedule

Historical Note

Appendix repealed; new Appendix made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

ARRA-4. Repealed

Historical Note

Appendix A, Form ARRA-4 adopted effective November 22, 1988 (Supp. 88-4). Appendix A, Form ARRA-4 repealed, new Form ARRA-4 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4X. Repealed

Historical Note

Form ARRA-4X adopted effective April 17, 1996 (Supp.

Radiation Regulatory Agency

96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4XT. Repealed**Historical Note**

Form ARRA-4XT adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4PAT. Repealed**Historical Note**

Form ARRA-4PAT adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4IG. Repealed**Historical Note**

Form ARRA-4IG adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4IR. Repealed**Historical Note**

Form ARRA-4IR adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4PAR. Repealed**Historical Note**

Form ARRA-PAR adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-4PA. Repealed**Historical Note**

Form ARRA-4PA adopted effective April 17, 1996 (Supp. 96-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

ARRA-13. Repealed**Historical Note**

Form ARRA-13 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1004. Repealed**Historical Note**

Form ARRA-1004 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1005. Repealed**Historical Note**

Form ARRA-1005 adopted effective April 17, 1996

(Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1030. Repealed**Historical Note**

Form ARRA-1030 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1050. Repealed**Historical Note**

Form ARRA-1050 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1070. Repealed**Historical Note**

Form ARRA-1070 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARRA-1090. Repealed**Historical Note**

Form 1090 adopted effective April 17, 1996 (Supp. 96-2). Repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

ARTICLE 3. RADIOACTIVE MATERIAL LICENSING**R12-1-301. Ownership, Control, or Transfer of Radioactive Material**

- A.** In addition to the requirements of this Article, all licensees are subject to the requirements of 12 A.A.C. 1, Article 1, Article 4, and Article 10. Licensees engaged in industrial radiographic operations are subject to the requirements of 12 A.A.C. 1, Article 5; licensees using radioactive material in the practice of medicine are subject to the requirements of 12 A.A.C. 1, Article 7; licensees transporting radioactive material are subject to the requirements contained in 12 A.A.C. 1, Article 15; and licensees using radioactive material in well logging operations are subject to the requirements in 12 A.A.C. 1, Article 17.
- B.** Notwithstanding any other provisions of this Article, any person may own radioactive material, provided that the ownership does not include the actual possession, custody, use, or physical transfer of radioactive material or the manufacture or production of any article that contains radioactive material without the applicable certification, license, or registration.
- C.** A manufacturer, processor, or producer of any equipment, device, commodity, or other product that contains source material or radioactive material whose subsequent possession, use, transfer, or disposal by all other persons is exempt from regulatory requirements may only obtain authority to transfer possession or control of the material from the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555.

Historical Note

Former Rule Section C.1. Former Section R12-1-301 repealed, new Section R12-1-301 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-301 renumbered to R12-1-322, new Section R12-1-301 adopted effective February 18, 1994 (Supp. 94-1). Former Section R12-1-301 repealed; new Section R12-1-301 renumbered from R12-1-302 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

Radiation Regulatory Agency

R12-1-302. Source Material; Exemptions

- A.** Any person is exempt from this Article to the extent the person receives, possesses, uses, delivers or transfers source material in any chemical mixture, compound, solution, or alloy in which the source material is by weight less than 1/20th of 1 percent (0.0005) of the mixture, compound, solution, or alloy.
- B.** Any person is exempt from this Article to the extent the person receives, possesses, uses, or transfers unrefined and unprocessed ore containing source material, provided that, the person does not refine or process the ore except as authorized in a specific license.
- C.** Any person is exempt from this Article if the person receives, possesses, uses, or transfers:
1. Any quantities of thorium contained in:
 - a. Incandescent gas mantles;
 - b. Vacuum tubes;
 - c. Welding rods;
 - d. Electric lamps for illuminating purposes provided that each lamp does not contain more than 50 milligrams of thorium;
 - e. Germicidal lamps, sunlamps, and lamps for outdoor or industrial lighting, provided that each lamp does not contain more than 2 grams of thorium;
 - f. Rare earth metals, compounds, mixtures, or products containing not more than 0.25 percent by weight thorium, uranium, or any combination of thorium and uranium; or
 - g. Individual neutron dosimeters, provided that each dosimeter does not contain more than 50 milligrams of thorium;
 2. Source material contained in the following products:
 - a. Glazed ceramic tableware, provided that the glaze contains not more than 20 percent source material by weight;
 - b. Glassware, glass enamel and glass enamel frit containing not more than 10 percent source material by weight, but not including commercially manufactured glass brick, pane glass, ceramic tile or other glass, glass enamel or ceramic used in construction; or
 - c. Piezoelectric ceramic containing not more than 2 percent source material by weight;
 3. Photographic film, negatives, and prints containing uranium or thorium;
 4. Any finished product or part fabricated of, or containing, tungsten-thorium or magnesium-thorium alloys, provided that the thorium content of the alloy does not exceed 4 percent by weight and that the exemption contained in this subsection does not authorize the chemical, physical, or metallurgical treatment or processing of the finished product or part;
 5. Uranium contained in counterweights installed in aircraft, rockets, projectiles, and missiles, or stored or handled in connection with installation or removal of counterweights, provided that:
 - a. The counterweights are manufactured in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, authorizing distribution by the licensee according to 10 CFR 40;
 - b. Each counterweight has been impressed with the following legend clearly legible through any plating or other covering: "DEPLETED URANIUM";
 - c. Each counterweight is durably and legibly labeled or marked with the identification of the manufacturer and the statement: "UNAUTHORIZED ALTERATIONS PROHIBITED"; and
 - d. The exemption contained in this item does not authorize the chemical, physical, or metallurgical treatment or processing of any counterweight other than repair or restoration of any plating or other covering; and
 - e. The requirements specified in subsections (C)(5)(b) and (c) do not apply to counterweights manufactured prior to December 31, 1969; provided, that these counterweights are impressed with the legend, "CAUTION – RADIOACTIVE MATERIAL – URANIUM."
6. Natural or depleted uranium metal used as shielding and constituting part of any shipping container; provided that:
 - a. The shipping container is conspicuously and legibly impressed with the legend "CAUTION – RADIOACTIVE SHIELDING – URANIUM," and
 - b. The uranium metal is encased in mild steel or equally fire resistant metal with minimum wall thickness of 1/8 inch (3.2 mm).
 7. Thorium contained in finished optical lenses, provided that each lens does not contain more than 30 percent of thorium by weight, and that the exemption contained in this item does not authorize either:
 - a. The shaping, grinding, or polishing of a thoriated lens or manufacturing processes other than the assembly of a thoriated lens into optical systems and devices without any alteration of the lens; or
 - b. The receipt, possession, use, or transfer of thorium contained in contact lenses, spectacles, or the eye-pieces of binoculars or other optical instruments;
 8. Uranium contained in detector heads of fire detection units, provided that each detector head contains not more than 5 nanocuries (185 Bq) of uranium; or
 9. Thorium contained in any finished aircraft engine part containing nickel-thoria alloy, provided that:
 - a. The thorium is dispersed in the nickel-thoria alloy in the form of finely divided thoria (thorium dioxide), and
 - b. The thorium content in the nickel-thoria alloy does not exceed 4 percent by weight.
- D.** The exemptions in subsection (C) do not authorize the manufacture of any of the products described.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Amended subsection (C) effective November 22, 1988 (Supp. 88-4). Former Section R12-1-302 renumbered to R12-1-303, new Section R12-1-302 renumbered from R12-1-301 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-302 renumbered to R12-1-301; new Section R12-1-302 renumbered from R12-1-303 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-303. Radioactive Material Other Than Source Material; Exemptions

- A.** Exempt concentrations
1. Except as provided in subsection (A)(3) and (A)(4), any person is exempt from this Article if the person receives, possesses, uses, transfers, owns, or acquires products or materials containing radioactive material in concentrations not in excess of those listed in Exhibit A.
 2. This Section shall not be deemed to authorize the import of radioactive material or products containing radioactive material.

Radiation Regulatory Agency

3. A manufacturer, processor, or producer of a product or material is exempt from the requirements for a license issued under R12-1-311(A) or the requirements of this Article to the extent that this person transfers radioactive material contained in a product or material in concentrations not in excess of those specified in Exhibit A of this Article and introduced into the product or material by a licensee holding a specific license issued by the NRC expressly authorizing such introduction. This exemption does not apply to the transfer of radioactive material contained in any food, beverage, cosmetic, drug, or other commodity or product designed for ingestion or inhalation by, or application to, a human being.
 4. A person shall not introduce radioactive material into a product or material knowing or having reason to believe that it will be transferred to persons exempt under subsection (A)(1) or equivalent Regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State, except in accordance with a license issued under 10 CFR 32.11.
- B. Exempt items**
1. Except for persons who apply radioactive material to, or persons who incorporate radioactive material into the following products, or persons who initially transfer for sale or distribution the following products, a person is exempt from this Chapter to the extent that the person receives, possesses, uses, transfers, owns, or acquires the following products:
 - a. Timepieces, hands, or dials containing not more than the following specified quantities of radioactive material and not exceeding the following specified levels of radiation:
 - i. 925 megabecquerels (25 millicuries) of tritium per timepiece,
 - ii. 185 megabecquerels (5 millicuries) of tritium per hand,
 - iii. 555 megabecquerels (15 millicuries) of tritium per dial (bezels when used shall be considered part of the dial),
 - iv. 3.7 megabecquerels (100 microcuries) of promethium-147 per watch or 7.4 megabecquerels (200 microcuries) of promethium-147 per any other timepiece,
 - v. 740 kBq (20 microcuries) of promethium-147 per watch hand or 1.48 megabecquerels (40 microcuries) of promethium-147 per other timepiece hand,
 - vi. 2.22 megabecquerels (60 microcuries) of promethium-147 per watch dial or 4.44 MBq (120 microcuries) of promethium-147 per other timepiece dial (bezels, when used, shall be considered part of the dial),
 - vii. The levels of radiation from hands and dials containing promethium-147 shall not exceed, when measured through 50 milligrams per square centimeter of absorber:
 - (1) For wrist watches, 1.0 μ Gy (0.1 millirad) per hour at 10 centimeters from any surface of the watch;
 - (2) For pocket watches, (0.1 millirad) per hour at 1 centimeter from any surface;
 - (3) For any other timepiece, 2.0 μ Gy (0.2 millirad) per hour at 10 centimeters from any surface;
 - viii. 37 kBq (1 microcurie) of radium-226 per timepiece in intact timepieces manufactured prior to November 30, 2007;
 - b. Static elimination devices which contain, as a sealed source or sources, radioactive material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device.
 - i. Ion generating tubes designed for ionization of air that contain, as a sealed source or sources, radioactive material consisting of a total of not more than 18.5 MBq (500 μ Ci) of polonium-210 per device or of a total of not more than 1.85 GBq (50 mCi) of hydrogen-3 (tritium) per device.
 - ii. Such devices authorized before October 23, 2012 for use under the general license then provided in R12-1-306 and equivalent regulations of the NRC or Agreement State and manufactured, tested, and labeled by the manufacturer in accordance with the specifications contained in a specific license issued by the NRC.
 - c. Balances of precision containing not more than 37 megabecquerels (1 millicurie) of tritium per balance or not more than 18.5 megabecquerels (0.5 millicurie) of tritium per balance part manufactured before December 17, 2007;
 - d. Marine compasses containing not more than 27.75 gigabecquerels (750 millicuries) of tritium gas and other marine navigational instruments containing not more than 9.25 gigabecquerels (250 millicuries) of tritium gas manufactured before December 17, 2007;
 - e. Ionization chamber smoke detectors containing not more than 37 kBq (1 microcurie) of americium-241 per detector in the form of a foil and designed to protect life and property from fires;
 - f. Electron tubes: Provided that each tube does not contain more than one of the following specified quantities of radioactive material:
 - i. 5.55 GBq (150 millicuries) of tritium per microwave receiver protector tube or 370 megabecquerels (10 millicuries) of tritium per any other electron tube;
 - ii. 37 kBq (1 microcurie) of cobalt 60;
 - iii. 185 kBq (5 microcuries) of nickel 63;
 - iv. 1.11 megabecquerels (30 microcuries) of krypton 85;
 - v. 185 kBq (5 microcuries) of cesium 137;
 - vi. 1.11 megabecquerels (30 microcuries) of promethium-147;
 - vii. And provided further, that the level of radiation due to radioactive material contained in each electron tube does not exceed 10 μ Gy (1 millirad) per hour at 1 centimeter from any surface when measured through 7 milligrams per square centimeter of absorber. The term "electron tubes" includes spark gap tubes, power tubes, gas tubes, including glow lamps, receiving tubes, microwave tubes, indicator tubes, pick-up tubes, radiation detection tubes, and any other completely sealed tube that is designed to conduct or control electrical current;
 - g. Ionizing radiation measuring instruments containing, for purposes of internal calibration or standard-

Radiation Regulatory Agency

- ization, one or more sources of radioactive material provided that:
- i. Each source contains no more than one exempt quantity set forth in Exhibit B of this Article; and
 - ii. Each instrument contains no more than 10 exempt quantities. For the purposes of this subsection, an instrument's source or sources may contain either one type or different types of radionuclide and an individual exempt quantity may be composed of fractional parts of one or more of the exempt quantities in Exhibit B of this Article, provided the sum of the fractions do not exceed unity;
 - iii. For the purposes of subsection (B)(1)(h) only, 185 kBq (50 nanocurie) of americium-241 is considered an exempt quantity under Exhibit B of this Article;
- h. Any person who desires to apply radioactive material to, or to incorporate radioactive material into, the products exempted in subsection (B)(1)(a), or who desires to initially transfer for sale or distribution such products containing radioactive material, should apply for a specific license pursuant to R12-1-311 of this Article, which license states that the product may be distributed by the licensee to persons exempt from the rules pursuant R12-1-303 (A)(1).
2. Self-luminous products containing tritium, krypton-85, or promethium-147:
 - a. Except for persons who manufacture, process, produce, initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147, and except as provided in paragraph (c) of this subsection, a person is exempt from this Chapter if the person receives, possesses, uses, owns, transfers or acquires tritium, krypton-85 or promethium-147 in self-luminous products manufactured, processed, produced, imported, initially transferred for sale or distribution, or transferred under a specific license issued by the U.S. Nuclear Regulatory Commission and described in 10 CFR 32.22, and the license authorizes the transfer of the products to persons who are exempt from regulatory requirements.
 - b. Any person who desires to manufacture, process, or produce, or initially transfer for sale or distribution self-luminous products containing tritium, krypton-85, or promethium-147 for use under paragraph (a) of this subsection, should apply for a license described in R12-1-311.
 - c. The exemption in paragraph (a) of this subsection does not apply to tritium, krypton-85, or promethium-147 used in products for primarily frivolous purposes or in toys or adornments.
 - d. A person is exempt from this Chapter if the person receives, possesses, uses, or transfers articles containing less than 3.7 kBq (100 nanocuries) of radium-226, manufactured prior to October 1, 1978.
 3. Gas and aerosol detectors containing radioactive material
 - a. Except for persons who manufacture, process, produce, or initially transfer for sale or distribution gas and aerosol detectors containing radioactive material, a person is exempt from this Chapter if the person receives, possesses, uses, transfers, owns, or acquires radioactive material in gas and aerosol detectors designed to protect life or property from fires and airborne hazards, provided that detectors containing radioactive material shall be manufactured, imported, or transferred according to a specific license issued by the U.S. Nuclear Regulatory Commission and described in 10 CFR 32.26, or equivalent regulations of an Agreement or Licensing State, this exemption also covers gas and aerosol detectors manufactured or distributed before November 30, 2007 in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission, or equivalent regulations of an Agreement or Licensing State and the license authorizes the transfer of the detectors to persons who are exempt from regulatory requirements.
 - b. Any person who desires to manufacture, process, or produce gas and aerosol detectors containing byproduct material, or to initially transfer such products for use under paragraph (a) of this subsection, should apply for a license described in R12-1-311.
 - c. Gas and aerosol detectors previously manufactured and distributed to general licensees in accordance with a specific license issued by an Agreement State are exempt under subsection (B)(4)(a), provided that the device is labeled in accordance with the specific license authorizing distribution of the general licensed device, and that the detectors meet the requirements of the regulations of the U.S. Nuclear Regulatory Commission.
 4. Certain industrial devices
 - a. Except for persons who manufacture, process, produce, or initially transfer for sale or distribution industrial devices containing byproduct material designed and manufactured for the purpose of detecting, measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing an ionized atmosphere, any person is exempt from the requirements for a license set forth in this Chapter to the extent that such person receives, possesses, uses, transfers, owns, or acquires byproduct material, in these certain detecting, measuring, gauging, or controlling devices and certain devices for producing an ionized atmosphere, and manufactured, processed, produced, or initially transferred in accordance with a specific license issued under R12-1-311 of this Article, which license authorizes the initial transfer of the device for use under this section. This exemption does not cover sources not incorporated into a device, such as calibration and reference sources.
 - b. Any person who desires to manufacture, process, produce, or initially transfer, for sale or distribution, industrial devices containing byproduct material for use under paragraph (1) of this subsection, shall apply for a license described in R12-1-311.
- C. Exempt quantities
1. Except as provided in subsections (C)(2), (3), and (7), a person is exempt from this Chapter if the person receives, possesses, uses, transfers, owns, or acquires radioactive material in individual quantities each of which does not exceed the applicable quantity set forth in Exhibit B of this Article.
 2. This subsection does not authorize the production, packaging, or repackaging or transfer of radioactive material for purposes of commercial distribution, or the incorpora-

Radiation Regulatory Agency

tion of radioactive material into products intended for commercial distribution.

3. Except as specified in this subsection, a person shall not, for purposes of commercial distribution, transfer radioactive material in the individual quantities set forth in Exhibit B of this Article, knowing or having reason to believe the described quantities of radioactive material will be transferred to persons exempt under subsection (C) or equivalent regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State. A person may transfer radioactive material for commercial distribution under a specific license issued by the U.S. Nuclear Regulatory Commission under 10 CFR 32.18 which license states that the radioactive material may be transferred by the licensee to persons exempt under this subsection or the equivalent regulations of the U.S. Nuclear Regulatory Commission or any Agreement State or Licensing State.
4. Sources containing exempt quantities of radioactive material shall not be bundled or placed in close proximity for the purpose of using the radiation from the combined sources in place of a single source, containing a licensable quantity of radioactive material.
5. Possession and use of bundled or combined sources containing exempt quantities of radioactive material in unregistered devices by persons exempt from licensing is prohibited.
6. Any person, who possesses radioactive material received or acquired before September 25, 1971, under the general license issued under R12-1-311(A) of this Article or similar general license of an Agreement State or the NRC, is exempt from the requirements for a license issued under R12-1-311(A) of this Article to the extent that this person possesses, uses, transfers, or owns radioactive material.
7. No person may, for purposes of producing an increased radiation level, combine quantities of radioactive material covered by the exemption described in subsection (C)(6) so that the aggregate quantity exceeds the limits set forth in Exhibit B, except for radioactive material combined within a device placed in use before May 3, 1999, or as otherwise permitted by the rules in this Section.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-303 renumbered to R12-1-304, new Section R12-1-303 renumbered from R12-1-302 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-303 renumbered to R12-1-302; new Section R12-1-303 renumbered from R12-1-304 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-304. License Types

- A. Activities requiring license. Except as provided in 10 CFR 30.3 (revised January 1, 2013, incorporated by reference, and available under R12-1-101; this incorporated material contains no future editions or amendments) this Section and for persons exempt as provided in R12-1-302 and R12-1-303 of this Article,

no person shall manufacture, produce, transfer, receive, acquire, own, possess, or use byproduct material except as authorized in a specific or general license issued in accordance with the regulations in this chapter and in accordance with 10 CFR 30.3.

- B. Licenses for radioactive materials are of two types: general and specific.
 1. A general license is provided by rule, grants authority to a person for certain activities involving radioactive material, and is effective without the filing of an application with the Agency or the issuance of a licensing document to a particular person. However, registration with the Agency may be required by the particular general license.
 2. The Agency issues a specific license to a named person who has filed an application for a license under the applicable provision of this Chapter. A specific licensee is subject to all of the applicable rules in this Chapter and any limitation contained in the license document.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-304 renumbered to R12-1-305, new Section R12-1-304 renumbered from R12-1-303 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-304 renumbered to R12-1-303; new Section R12-1-304 renumbered from R12-1-305 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-305. General Licenses – Source Material

- A. This subsection grants a general license that authorizes commercial and industrial firms; research, educational, and medical institutions; and state and local government agencies to use, and transfer not more than 6.8 kg (15 pounds) of source material at any one time for research, development, educational, commercial, or operational purposes. A person authorized under this subsection shall not receive more than 68.2 kg (150 pounds) of source material in one calendar year.
- B. A person who receives, possesses, uses, or transfers source material under a general license granted under subsection (A) is exempt from the provisions of 12 A.A.C. 1, Article 4 and Article 10, provided the receipt, possession, use, or transfer is within the terms of the general license. This exemption does not apply to any person who is also in possession of source material under a specific license issued under this Article.
- C. This subsection grants a general license that authorizes a person to receive acquire, possess, use, or transfer depleted uranium contained in industrial products and devices provided:
 1. The depleted uranium is contained in the industrial product or device for the purpose of providing a concentrated mass in a small volume of the product or device;
 2. The industrial products or devices have been manufactured or initially transferred in accordance with a specific license governed by R12-1-311(M), or a specific license issued by the U.S. Nuclear Regulatory Commission or an Agreement State that authorizes manufacture of the products or devices for distribution to persons generally licensed by the U.S. Nuclear Regulatory Commission or an Agreement State;
 3. The person files an ARRA 23 “Registration Certificate -- Use of Depleted Uranium Under General License” with the Agency. The person shall provide the information requested on the certificate and listed in Exhibit E. The

Radiation Regulatory Agency

person shall submit the information within 30 days after first receipt or acquisition of the depleted uranium, returning the completed registration certificate to the Agency. The person shall report in writing to the Agency any change in information originally submitted to the Agency on ARRA 23. The person shall submit the change report within 30 days after the effective date of the described change.

- D.** A person who receives, acquires, possesses, or uses depleted uranium according to the general license provided under subsection (C) shall:
1. Not introduce depleted uranium, in any form, into a chemical, physical, or metallurgical treatment or process, except a treatment or process for repair or restoration of any plating or other covering of the depleted uranium;
 2. Not abandon the depleted uranium;
 3. Transfer the depleted uranium as prescribed in R12-1-318. If the transferee receives the depleted uranium under a general license established by subsection (C), the transferor shall furnish the transferee with a copy of this Section and a copy of the registration certificate. If the transferee receives the depleted uranium under a general license governed by a regulation of the U.S. Nuclear Regulatory Commission or an Agreement State that is equivalent to subsection (C), the transferor shall furnish the transferee a copy of the equivalent rule and a copy of the registration certificate, accompanied by a letter explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or an Agreement State under requirements substantially similar to those in this Section;
 4. Within 30 days of any transfer, report in writing to the Agency the name and address of the person receiving the depleted uranium; and
 5. Not export depleted uranium except under a license issued by the U.S. Nuclear Regulatory Commission in accordance with 10 CFR 110.
- E.** A person who receives, acquires, possesses, uses, or transfers depleted uranium in accordance with a general license granted under subsection (C) is exempt from the requirements of 12 A.A.C. 1, Articles 4 and 10 with respect to the depleted uranium covered by that general license.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-305 renumbered to R12-1-306, new Section R12-1-305 renumbered from R12-1-304 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-305 renumbered to R12-1-304; new Section R12-1-305 renumbered from R12-1-306 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3).

R12-1-306. General License – Radioactive Material Other Than Source Material

- A.** Certain measuring, gauging or controlling devices and certain devices for producing light or an ionized atmosphere.
1. This subsection grants a general license to a commercial or industrial firm; a research, educational or medical institution; an individual conducting business; or a state or local government agency to receive, acquire, possess, use, or transfer radioactive material contained in devices designed and manufactured for the purpose of detecting,

measuring, gauging or controlling thickness, density, level, interface location, radiation, leakage, or qualitative or quantitative chemical composition, or for producing light or an ionized atmosphere, according to the provisions of 10 CFR 31.5(b), (c), and (d), (Revised January 1, 2013, incorporated by reference, and available under R12-1-101. The incorporated material contains no future editions or amendments.

2. A general licensee shall receive a device from one of the specific licensees described in this Section or through a transfer made under subsection (A)(4)(k).
3. A general license in subsection (A)(1) applies only to radioactive material contained in devices that have been manufactured or initially transferred and labeled in accordance with the requirements contained in:
 - a. A specific license issued under R12-1-311(A), or
 - b. An equivalent specific license issued by the NRC or another Agreement State.
 - c. An equivalent specific license issued by a State with rules or regulations comparable to this Section.
4. A person who acquires, receives, possesses, uses, or transfers radioactive material in a device licensed under subsection (A)(1) or through a transfer made under subsection (A)(4)(h), shall:
 - a. Ensure that all labels and safety statements affixed to a device at the time of receipt and bearing a statement that removal of the label is prohibited are maintained and not removed, and comply with all instructions and precautions on the labels.
 - b. Ensure that the device is tested for leakage of radioactive material and proper operation of the on-off mechanism and indicator, if any, at no longer than six-month intervals or at other intervals as specified on the label.
 - i. A general licensee need not test a device that contains only krypton for leakage of radioactive material; and
 - ii. A general licensee need not test a device for leakage of radioactive material if the device contains only tritium, not more than 3.7 megabecquerels (100 microcuries) of other beta and/or gamma emitting material, or 370 kilobecquerels (10 microcuries) of alpha emitting material, or the device is held in storage, in the original shipping container, before initial installation.
 - c. Ensure that the tests required by subsection (A)(4)(b) and other testing, installation, servicing, and removal from installation involving the radioactive material or its shielding or containment, are performed:
 - i. In accordance with the device label instructions, or
 - ii. By a person holding a specific license under R12-1-311(A) or in accordance with the provisions of a specific license issued by the NRC or an Agreement State which authorizes distribution of devices to persons generally licensed by the NRC or an Agreement State.
 - d. Maintain records of compliance with the requirements in subsections (A)(4)(b) and (c) that show the results of tests; the dates that required activities were performed, and the names of persons performing required activities involving radioactive material from the installation and its shielding or containment. The records shall be maintained for three

Radiation Regulatory Agency

- years from the date of the recorded event or until transfer or disposal of the device.
- e. Immediately suspend operation of a device if there is a failure of, or damage to, or any indication of a possible failure of or damage to, the shielding of the radioactive material or the on-off mechanism or indicator, or upon the detection of 185 becquerel (0.005 microcurie) or more of removable radioactive material.
 - i. A general licensee shall not operate the device until it has been repaired by the manufacturer or another person holding a specific license to repair this type of device that was issued by the Agency under R12-1-311(A), the NRC, or an Agreement State which authorizes distribution of devices to persons generally licensed by the NRC or an Agreement State.
 - ii. If necessary the general licensee shall dispose of the device and any radioactive material from the device by transfer to a person authorized by a specific license to receive the radioactive material in the device or as otherwise approved by the Agency.
 - iii. Within 30 days of an event governed by subsection (A)(4)(e) the general licensee shall furnish a report that contains a brief description of the event and the remedial action taken and, in the case of detection of 185 Becquerel (0.005 microcurie) or more of removable radioactive material or failure of or damage to a source likely to result in contamination of the general licensee's facility or the surrounding area, if applicable, a plan for ensuring that the general licensee's facility and surrounding area, if applicable, are acceptable for unrestricted use. The radiological criteria for unrestricted use in R12-1-452 may be used to prepare the plan, as determined by the Agency, on a case-by-case basis.
 - f. Not abandon a device that contains radioactive material.
 - g. Not export a device that contains radioactive material except in accordance with 10 CFR 110, revised January 1, 2013, incorporated by reference, and available under R12-1-101. The incorporated material contains no future editions or amendments.
 - h. Transfer or dispose of a device that contains radioactive material only by export as authorized in subsection (A)(4)(g), transfer to another general licensee as authorized in subsection (A)(4)(k) or a person who is authorized to receive the device by a specific license issued by the Agency, the NRC, or an Agreement State, or collection as waste if authorized by equivalent regulations of an Agreement State, or the NRC, or as otherwise approved under subsection (A)(4)(j).
 - i. Within 30 days after the transfer or export of a device to a specific licensee, furnish a report to the Agency. The report shall:
 - i. Identify the device by manufacturer's (or initial transferor's) name, model number, and serial number;
 - ii. Provide the name, address, and license number of the person receiving the device (license number not applicable if exported); and
 - iii. Provide the date of transfer or export.
 - j. Obtain written Agency approval before transferring a device to any other specific licensee that is not authorized in accordance with subsection (A)(4)(h).
 - k. Transfer a device to another general licensee only:
 - i. If the device remains in use at a particular location. The transferor shall provide the transferee with a copy of this Section, a copy of R12-1-443, R12-1-445, and R12-1-448 and any safety documents identified on the device label. Within 30 days of the transfer, the transferor shall report to the Agency the manufacturer's (or initial transferor's) name; the model number and the serial number of the device transferred; the transferee's name and mailing address for the location of use; and the name, title, and telephone number of the responsible individual appointed by the transferee in accordance with subsection (A)(4)(n); or
 - ii. If the device is held in storage in the original shipping container at its intended location of use before initial use by a general licensee, and by a person that is not a party to the transaction.
 - l. Comply with the provisions of R12-1-443, R12-1-444, R12-1-445, R12-1-447, and R12-1-448 for reporting and notification of radiation incidents, theft or loss of licensed material, and is exempt from the other requirements of 12 A.A.C. 1, Articles 4 and 10.
 - m. Respond to written requests from the Agency to provide information relating to the general license within 30 days from the date on the request, or a longer time period specified in the request. If the general licensee cannot provide the requested information within the specified time period, the general licensee shall request a longer period to supply the information before expiration of the time period, providing the Agency with a written justification for the request.
 - n. Appoint an individual responsible for knowledge of applicable laws and possessing the authority to take actions required to comply with applicable radiation safety laws. The general licensee, through this individual, shall ensure the day-to-day compliance with applicable radiation safety laws. This provision does not relieve the general licensee of responsibility.
 - o. Register, in accordance with subsections (A)(4)(p) and (q), any device that contains at least 370 megabecquerels (10 millicuries) of cesium-137, 3.7 megabecquerels (0.1 millicuries) of strontium-90, 37 megabecquerels (1 millicurie) of cobalt-60, or 37 megabecquerels (1 millicurie) of americium-241 or any other transuranic (i.e., element with atomic number greater than uranium (92)), based on the activity indicated on the label. Each address for a location of use, as described under subsection (A)(4)(q)(iv), represents a separate general licensee and requires a separate registration and fee.
 - p. Register each device annually with the Agency and pay the fee required by R12-1-1306, Category D4, if in possession of a device that meets the criteria in subsection (A)(4)(o). The general licensee shall register by verifying, correcting, and adding to the information provided in a request for registration received from the Agency. The registration information shall be submitted to the Agency within 30 days from the date on the request for registration. In addition,

Radiation Regulatory Agency

tion, a general licensee holding devices meeting the criteria of subsection (A)(4)(o) is subject to the bankruptcy notification requirements in R12-1-313(D).

- q. In registering a device, furnish the following information and any other registration information specifically requested by the Agency:
 - i. Name and mailing address of the general licensee;
 - ii. Information about each device, including the manufacturer (or initial transferor), model number, serial number, radioisotope, and activity (as indicated on the label);
 - iii. Name, title, and telephone number of the responsible individual appointed by the general licensee under subsection (A)(4)(n);
 - iv. Address or location at which each device is used and stored. For a portable device, the address of the primary place of storage;
 - v. Certification by the responsible individual that the information concerning each device has been verified through a physical inventory and review of label information; and
 - vi. Certification by the responsible individual that the individual is aware of the requirements of the general license.
 - r. Report a change in mailing address for the location of use or a change in the name of the general licensee to the Agency within 30 days of the effective date of the change. For a portable device, a report of address change is only required for a change in the device's primary place of storage.
 - s. Not use a device if the device has not been used for a period of two years. If a device with shutters is not being used, the general licensee shall ensure that the shutters are locked in the closed position. The testing required by subsection (A)(4)(b) need not be performed during a period of storage. However, if a device is put back into service or transferred to another person, and has not been tested during the required test interval, the general licensee shall ensure that the device is tested for leakage before use or transfer and that the shutter is tested before use. A device kept in standby for future use is excluded from the two-year time limit in this subsection if the general licensee performs a quarterly physical inventory regarding the standby devices.
5. A person that is generally licensed by an Agreement State with respect to a device that meets the criteria in subsection (A)(4)(o) is exempt from registration requirements if the device is used in an area subject to Agency jurisdiction for a period less than 180 days in any calendar year. The Agency does not request registration information from a general licensee if the device is exempted from licensing requirements in subsection (A)(4)(o).
 6. The general license granted under subsection (A)(1) is subject to the provisions of 12 A.A.C. 1, Articles 1, 3, 12, and 15, and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689.
 7. The general license in subsection (A)(1) does not authorize the manufacture or import of devices containing byproduct material.
- B. Luminous safety devices for aircraft**
1. This subsection grants a general license that authorizes a person to own, receive, acquire, possess, and use tritium or promethium-147 contained in luminous safety devices

for use in aircraft, provided that each device contains not more than 370 gigabecquerels (10 curies) of tritium or 11.1 gigabecquerels (300 millicuries) of promethium-147; and each device has been manufactured, assembled, initially transferred, or imported according to a specific license issued by the U.S. Nuclear Regulatory Commission, or each device has been manufactured or assembled according to the specifications contained in a specific license issued to the manufacturer or assembler of the device by the Agency or any Agreement State or Licensing State in accordance with licensing requirements equivalent to those in 10 CFR 32.53.

2. A person who owns, receives, acquires, possesses, or uses a luminous safety device according to the general license granted in subsection (B)(1) is:
 - a. Exempt from the requirements of 12 A.A.C. 1, Article 4 and Article 10 except that the person shall comply with the reporting and notification provisions of R12-1-443, R12-1-444, R12-1-445, R12-1-447, and R12-1-448;
 - b. Not authorized to manufacture, assemble, repair, or import a luminous safety device that contains tritium or promethium-147;
 - c. Not authorized to export luminous safety devices containing tritium or promethium-147;
 - d. Not authorized to own, receive, acquire, possess, or use radioactive material contained in instrument dials; and
 - e. Subject to the provisions of 12 A.A.C. 1, Articles 1, 3, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689.
- C. This subsection grants a general license that authorizes a person who holds a specific license to own, receive, possess, use, and transfer radioactive material if the Agency issues the license; or special nuclear material if the NRC issues the license. For americium-241, radium-226, and plutonium contained in calibration or reference sources, this subsection grants a general license in accordance with the provisions of subsections (C)(1), (2), and (3). For plutonium, ownership is included in the licensed activities.**
1. This subsection grants a general license for calibration or reference sources that have been manufactured according to the specifications contained in a specific license issued to the manufacturer or importer of the sources by the U.S. Nuclear Regulatory Commission under 10 CFR 32.57 or 10 CFR 70.39. This general license also governs calibration or reference sources that have been manufactured according to specifications contained in a specific license issued to the manufacturer by the Agency, an Agreement State, or a Licensing State, according to licensing requirements equivalent to those contained in 10 CFR 32.57 or 10 CFR 70.39, revised January 1, 2013, incorporated by reference, and available under R12-1-101. The incorporated material contains no future editions or amendments.
 2. A general license granted under subsection (C) or (C)(1) is subject to the provisions of 12 A.A.C. 1, Articles 1, 3, 4, 10, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689. In addition, a person who owns, receives, acquires, possesses, uses, or transfers one or more calibration or reference sources under a general license granted under subsection (C) or (C)(1) shall:
 - a. Not possess at any one time, at any location of storage or use, more than 185 kBq (5 microcuries) of

Radiation Regulatory Agency

- americium-241, plutonium, or radium-226 in calibration or reference sources;
- b. Not receive, possess, use, or transfer a calibration or reference source unless the source, or the storage container, bears a label that includes one of the following statements, as applicable, or a substantially similar statement that contains the same information:
- i. The receipt, possession, use and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of the U.S. Nuclear Regulatory Commission or a state with which the Commission has entered into an agreement for the exercise of regulatory authority. Do not remove this label.

CAUTION – RADIOACTIVE MATERIAL – THIS SOURCE CONTAINS (name of the appropriate material) – DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

Name of manufacturer or importer

- ii. The receipt, possession, use and transfer of this source, Model _____, Serial No. _____, are subject to a general license and the regulations of any Licensing State. Do not remove this label.

CAUTION – RADIOACTIVE MATERIAL – THIS SOURCE CONTAINS RADIUM-226. DO NOT TOUCH RADIOACTIVE PORTION OF THIS SOURCE.

Name of manufacturer or importer

- c. Not transfer, abandon, or dispose of a calibration or reference source except by transfer to a person authorized to receive the source by a license from the Agency, the U.S. Nuclear Regulatory Commission, an Agreement State, or a Licensing State;
- d. Store a calibration or reference source, except when the source is being used, in a closed container designed, constructed, and approved for containment of americium-241, plutonium, or radium-226 which might otherwise escape during storage; and
- e. Not use a calibration or reference source for any purpose other than the calibration of radiation detectors or the standardization of other sources.
3. The general license granted under subsection (C) or (C)(1) does not authorize the manufacture or import of calibration or reference sources that contain americium-241, plutonium, or radium-226.
4. The general license granted under subsections (C) or (C)(1) does not authorize the manufacture or export of calibration or reference sources that contain americium-241, plutonium, or radium-226.
- D.** This subsection grants a general license that authorizes a person to receive, possess, use, transfer, own, or acquire carbon-14 urea capsules, which contain one microcurie of carbon-14 urea for “in vivo” human diagnostic use:
1. Except as provided in subsections (D)(2) and (3), a physician is exempt from the requirements for a specific license, provided that each carbon-14 urea capsule for “in vivo” diagnostic use contains no more than 1 microcurie.
 2. A physician who desires to use the capsules for research involving human subjects shall obtain a specific license issued according to the specific licensing requirements in this Article.
3. A physician who desires to manufacture, prepare, process, produce, package, repackage, or transfer carbon-14 urea capsules for commercial distribution shall obtain a specific license from the Agency, issued according to the requirements in 10 CFR 32.21, (Revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.)
 4. Nothing in this subsection relieves physicians from complying with applicable FDA and other federal and state requirements governing receipt, administration, and use of drugs.
- E.** This subsection grants a general license that authorizes any physician, clinical laboratory, or hospital to use radioactive material for certain “in vitro” clinical or laboratory testing.
1. The general licensee is authorized to receive, acquire, possess, transfer, or use, for any of the following stated tests, the following radioactive materials in prepackaged units:
 - a. Iodine-125, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or radiation from such material, to human beings or animals.
 - b. Iodine-131, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - c. Carbon-14, in units not exceeding 370 kilobecquerel (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - d. Hydrogen-3 (tritium), in units not exceeding 1.85 megabecquerel (50 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - e. Iron-59, in units not exceeding 740 kilobecquerel (20 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - f. Cobalt-57 or selenium-75, in units not exceeding 370 kilobecquerels (10 microcuries) each for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 - g. Mock iodine-125 reference or calibration sources, in units not exceeding 1.85 kBq (50 nanocurie) of iodine-129 and 185 becquerel (5 nanocurie) of americium-241 each, for use in “in vitro” clinical or laboratory tests not involving internal or external administration of radioactive material, or the radiation from such material, to human beings or animals.
 2. A person shall not acquire, receive, possess, use, or transfer radioactive material according to the general license established by this subsection until the person has filed with the Agency ARRA-9, “Certificate -- “In Vitro” Testing with Radioactive Material Under General License,” provided the information listed in Exhibit E, and received a validated copy of ARRA-9, which indicates the assigned certification number. The physician, clinical lab-

Radiation Regulatory Agency

- oratory, or hospital shall furnish on ARRA-9 the following information:
- a. Name, telephone number, and address of the physician, clinical laboratory, or hospital; and
 - b. A statement that the physician, clinical laboratory, or hospital has radiation measuring instruments to carry out "in vitro" clinical or laboratory tests with radioactive material and that tests will be performed only by personnel competent to use the instruments and handle the radioactive material.
3. A person who receives, acquires, possesses, or uses radioactive material according to the general license granted under this subsection shall:
 - a. Not possess at any one time, in storage or use, a combined total of not more than 7.4 megabecquerels (200 microcuries) of iodine-125, iodine-131, iron-59, cobalt-57, or selenium-75 in excess of 7.4 megabecquerels (200 microcuries), or acquire or use in any one calendar month more than 18.5 megabecquerels (500 microcuries) of these radionuclides.
 - b. Store the radioactive material, until used, in the original shipping container or in a container that provides equivalent radiation protection.
 - c. Use the radioactive material only for the uses authorized by subsection (E).
 - d. Not transfer radioactive material to a person who is not authorized to receive it according to a license issued by the Agency, the U.S. Nuclear Regulatory Commission, or any Agreement State or Licensing State, or in any manner other than in an unopened, labeled shipping container received from the supplier.
 - e. Not dispose of a mock iodine-125 reference or calibration source described subsection (E)(1) except as authorized by R12-1-434.
 - f. Package or prepackage a unit bearing a durable, clearly visible label: identifying the radioactive contents as to chemical form and radionuclide, and indicating that the amount of radioactivity does not exceed 0.37 megabecquerel (10 microcuries) of iodine-131, iodine-125, selenium-75, or carbon-14; 1.85 megabecquerels (50 microcuries) of hydrogen-3 (tritium); or 0.74 megabecquerel (20 microcuries) of iron-59; or Mock Iodine-125 in units not exceeding 1.85 kilobecquerels (0.05 microcurie) of iodine-129 and 0.185 kilobecquerel (0.005 microcurie) of americium-241 each; or cobalt-57 in units not exceeding 0.37 megabecquerel (10 microcuries).
 - g. Package to display the radiation caution symbol and the words, "Caution, Radioactive Material", and "Not for Internal or External Use in Humans or Animals."
 4. The general licensee shall not receive, acquire, possess, transfer, or use radioactive material according to subsection (E)(1):
 - a. Except as prepackaged units that are labeled according to the provisions of a specific license issued by the U.S. Nuclear Regulatory Commission, or any Agreement State that authorizes the manufacture and distribution of iodine-125, iodine-131, carbon-14, hydrogen-3 (tritium), iron-59, cobalt-57, selenium-75, or mock iodine-125 for distribution to persons generally licensed under subsection (E) or its equivalent federal law; and
 - b. Unless one of the following statements, or a substantially similar statement that contains the same information, appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure that accompanies the package:
 - i. This radioactive material may be acquired, received, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from such material, to human beings or animals. The acquisition, receipt, possession, use, and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

 Name of manufacturer
 - ii. This radioactive material shall be acquired, received, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from such material, to human beings or animals. The receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of a Licensing State.

 Name of manufacturer
 5. A physician, clinical laboratory or hospital that possesses or uses radioactive material under a general license granted by subsection (E):
 - a. Shall report to the Agency in writing, any change in the information furnished on the ARRA-9. The report shall be furnished within 30 days after the effective date of the change; and
 - b. Is exempt from the requirements of 12 A.A.C. 1, Article 4 and Article 10 with respect to radioactive material covered by the general license, except that a person using mock iodine-125 sources, described in subsection (E)(1)(g), shall comply with the provisions of R12-1-434, R12-1-443, and R12-1-444 of this Chapter.
 6. For the purposes of subsection (E), a licensed veterinary care facility is considered a "clinical laboratory."
- F.** This subsection grants a general license that authorizes a person to own, receive, acquire, possess, use, and transfer strontium-90, contained in ice detection devices, provided each device contains not more than 1.85 megabecquerels (50 microcuries) of strontium-90 and each device has been manufactured or imported in accordance with a specific license issued by the U.S. Nuclear Regulatory Commission or each device has been manufactured according to the specifications contained in a specific license issued by the Agency or any Agreement State to the manufacturer of the device under licensing requirements equivalent to those in 10 CFR 32.61. A person who receives, owns, acquires, possesses, uses, or transfers strontium-90 contained in ice detection devices under a general license in accordance with subsection (F):
1. Shall, upon occurrence of visually observable damage, such as a bend or crack or discoloration from overheating, discontinue use of the device until it has been inspected, tested for leakage, and repaired by a person who holds a specific license from the U.S. Nuclear Regulatory Commission or an Agreement State to manufacture

Radiation Regulatory Agency

- or service ice detection devices; or dispose of the device according to the provisions of R12-1-434;
2. Shall assure that each label, affixed to the device at the time of receipt, which bears a statement that prohibits removal of the labels, maintained on the device; and
 3. Is exempt from the requirements of 12 A.A.C. 1, Article 4 and Article 10, except that the user of an ice detection device shall comply with the provisions of R12-1-434, R12-1-443 and R12-1-444.
 4. Shall not manufacture, assemble, disassemble, repair, or import an ice detection device that contains strontium-90.
 5. Is subject to the provisions of 12 A.A.C. 1, Articles 1, 3, 12, and 15, and A.R.S. §§ 30-654(B), 30-657(A) and (B), 30-681, and 30-685 through 30-689.
- G.** This subsection grants a general license that authorizes a person to acquire, receive, possess, use, or transfer, in accordance with the provisions of subsections (H) and (I), radium-226 contained in the following products manufactured prior to November 30, 2007.
1. Antiquities originally intended for use by the general public. For the purposes of this paragraph, antiquities mean products originally intended for use by the general public and distributed in the late 19th and early 20th centuries, such as radium emanator jars, revigators, radium water jars, radon generators, refrigerator cards, radium bath salts, and healing pads.
 2. Intact timepieces containing greater than 0.037 megabecquerel (1 microcurie), nonintact timepieces, and timepiece hands and dials no longer installed in timepieces.
 3. Luminous items installed in air, marine, or land vehicles.
 4. All other luminous products, provided that no more than 100 items are used or stored at the same location at any one time.
 5. Small radium sources containing no more than 0.037 megabecquerel (1 microcurie) of radium-226. For the purposes of this paragraph, "small radium sources" means discrete survey instrument check sources, sources contained in radiation measuring instruments, sources used in educational demonstrations (such as cloud chambers and spinthariscopes), electron tubes, lightning rods, ionization sources, static eliminators, or as designated by the NRC.
- H.** Persons who acquire, receive, possess, use, or transfer byproduct material under the general license issued in subsection (G) are exempt from the provisions 12 A.A.C. 1, Articles 1, 3, 4, 7, 10, 12, and 15 and A.R.S. §§ 30-654(B)(13), 30-657(A) and (B), 30-681, and 30-685 through 30-689, to the extent that the receipt, possession, use, or transfer of byproduct material is within the terms of the general license; provided, however, that this exemption shall not be deemed to apply to any such person specifically licensed under this chapter. Any person who acquires, receives, possesses, uses, or transfers byproduct material in accordance with the general license in subsection (G):
1. Shall notify the Agency should there be any indication of possible damage to the product so that it appears it could result in a loss of the radioactive material. A report containing a brief description of the event, and the remedial action taken, must be furnished to the Agency within 30 days.
 2. Shall not abandon products containing radium-226. The product, and any radioactive material from the product, may only be disposed of according to Article 4 or by transfer to a person authorized by a specific license to receive the radium-226 in the product or as otherwise approved by the Agency.
 3. Shall not export products containing radium-226 except in accordance with 10 CFR 110 revised January 1, 2013, incorporated by reference, and available under R12-1-101. The incorporated material contains no future editions or amendments.
 4. Shall dispose of products containing radium-226 at a disposal facility authorized to dispose of radioactive material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005, by transfer to a person authorized to receive radium-226 by a specific license issued under Article 3, equivalent regulations of an Agreement State, or the NRC.
 5. Shall respond to written requests from the Agency to provide information relating to the general license within 30 calendar days of the date of the request, or other time specified in the request. If the general licensee cannot provide the requested information within the allotted time, it shall, within that same time period, request a longer period to supply the information by providing the Agency Director a written justification for the request.
- I.** The general license in subsection (G) does not authorize the manufacture, assembly, disassembly, repair, or import of products containing radium-226, except that timepieces may be disassembled and repaired.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-306 renumbered to R12-1-307, new Section R12-1-306 renumbered from R12-1-305 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-306 renumbered to R12-1-305; new Section R12-1-306 renumbered from R12-1-307 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-307. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective December 20, 1985 (Supp. 85-6). Former Section R12-1-307 renumbered to R12-1-308, new Section R12-1-307 renumbered from R12-1-306 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-307 renumbered to R12-1-306; new Section R12-1-307 renumbered from R12-1-308 and repealed by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-308. Filing Application for Specific Licenses

- A.** An applicant for a specific license shall file an Agency application. The applicant shall prepare the application in duplicate, one copy for the Agency and the other for the applicant.
- B.** The Agency may at any time after the filing of the original application, and before the expiration of the license, require further statements in order to enable the Agency to determine whether the application should be granted or denied or whether a license should be modified or revoked.

Radiation Regulatory Agency

- C. Each application shall contain the information specified in Exhibit (E) of this Article and be signed by the applicant, licensee, or person duly authorized to act for the applicant or licensee.
- D. Unless R12-1-1302 precludes combination with a license of another category, an application for a specific license may include a request for a license that authorizes more than one activity.
- E. In the application, the applicant may incorporate by reference information contained in previous applications, statements, or reports filed with the Agency provided the references are clear and specific.
- F. The Agency shall make applications and documents submitted to the Agency available for public inspection, but may withhold any document or part of a document from public inspection if disclosure of its content is not required in the public interest and would adversely affect the interest of a person concerned.
- G. Except as provided in subsections (G)(1), (2), and (3), an application for a specific license to use byproduct material in the form of a sealed source or in a device that contains the sealed source must either identify the source or device by manufacturer and model number as registered with the Agency, NRC, or with an Agreement State, or, for a source or a device containing radium-226 or accelerator-produced radioactive material, with the Agency, NRC, or an Agreement State under 10 CFR 32.210 revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
1. For sources or devices manufactured before October 23, 2012, that are not licensed under R12-1-306, R12-1-310, R12-1-311 or registered with the NRC or with an Agreement State, and for which the applicant is unable to provide all categories of information specified in 10 CFR 32.210(c) the application must include:
 - a. All available information identified in 10 CFR 32.210(c) concerning the source, and, if applicable, the device; and
 - b. Sufficient additional information to demonstrate that there is reasonable assurance that the radiation safety properties of the source or device are adequate to protect health and minimize danger to life and property. Such information must include a description of the source or device, a description of radiation safety features, the intended use and associated operating experience, and the results of a recent leak test.
 2. For sealed sources and devices allowed to be distributed without registration of safety information, the applicant may supply only the manufacturer, model number, and radionuclide and quantity.
 3. If it is not feasible to identify each sealed source and device individually, the applicant may propose constraints on the number and type of sealed sources and devices to be used and the conditions under which they will be used, in lieu of identifying each sealed source and device.
- H. A certificate holder or licensee who no longer manufactures or initially transfers any of the sealed source(s) or device(s) covered by a particular certificate issued with the Agency, NRC, or with an Agreement State shall request inactivation of the registration or license with the Agency, NRC, or with an Agreement State program that the device is currently registered by in accordance with 10 CFR 32.211 revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-308 renumbered to R12-1-309, new Section R12-1-308 renumbered from R12-1-307 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-308 renumbered to R12-1-307; new Section R12-1-308 renumbered from R12-1-309 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-309. General Requirements for Issuance of Specific Licenses

A license application shall be approved if the Agency determines that:

1. The applicant is qualified by reason of training and experience to use the material in question for the purpose requested according to these rules, in a manner that will minimize danger to public health and safety or property;
2. The applicant's proposed equipment, facilities, and procedures are adequate to minimize danger to public health and safety or property;
3. The issuance of the license will not be inimical to the health and safety of the public;
4. The applicant satisfies all applicable special requirements in R12-1-310, R12-1-311, R12-1-322, R12-1-323, 12 A.A.C. 1, Articles 5, 7, and 17; and
5. The applicant demonstrates that a letter has been sent, return receipt requested, to the Mayor's office of the city, town, or, if not within an incorporated community, to the County Board of Supervisors of the county in which the applicant proposes to operate which describes:
 - a. The nature of the proposed activity involving radioactive material; and
 - b. The facility, including use and storage areas.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-309 renumbered to R12-1-310, new Section R12-1-309 renumbered from R12-1-308 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-309 renumbered to R12-1-308; new Section R12-1-309 renumbered from R12-1-310 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-310. Special Requirements for Issuance of Specific Broad Scope Licenses

- A. The Agency shall issue three classes of academic and industrial broad scope licenses, and only a single class A medical broad scope license.
1. The license may authorize the radioactive materials in multi-curie quantities, and may authorize other radioactive materials and forms in addition to those listed in subsection (A)(1)(a). A license is a broad scope class A license if it:
 - a. Contains the exact wording "Any radioactive material with Atomic Number 3 through 83" or "Any radioactive material with Atomic Number 84 through 92" in License Item 6; and
 - b. Contains the word "any" to authorize the chemical or physical form of the materials in License Item 7;

Radiation Regulatory Agency

2. A broad scope class B license is any specific license which authorizes the acquisition, possession, use, and transfer of the radioactive materials specified in Exhibit C of 12 A.A.C. 1, Article 3 in any chemical or physical form and in quantities determined as follows:
 - a. The possession limit, if only one radionuclide is possessed, is the quantity specified for that radionuclide in Exhibit C, Column I; or
 - b. The possession limit for multiple radionuclides is determined as follows: The sum of the ratios for all radionuclides possessed under the license shall not exceed unity (1). The ratio for each radionuclide is determined by dividing the quantity possessed by the applicable quantity in Exhibit C, Column I.
 3. A broad scope class C license is any specific license authorizing the possession and use of the radioactive materials specified in Exhibit C of 12 A.A.C. 1, Article 3 in any chemical or physical form and in quantities determined as follows:
 - a. The possession limit, if only one radionuclide is possessed, is the quantity specified for that radionuclide in Exhibit C, Column II; or
 - b. The possession limit for multiple radionuclides is determined as follows: The sum of the ratios for all radionuclides possessed under the license shall not exceed unity (1). The ratio for each radionuclide is determined by dividing the quantity possessed by the applicable quantity in Exhibit C, Column II.
- B. The Agency shall approve:**
1. An application for a class A broad scope license if:
 - a. The applicant satisfies the general requirements specified in R12-1-309;
 - b. The applicant has engaged in a reasonable number of activities involving the use of radioactive material. For purposes of this subsection, the requirement of "reasonable number of activities" can be satisfied by showing that the applicant has five years of experience in the use of radioactive material. The Agency may accept less than five years of experience if the applicant's qualifications are adequate for the scope of the proposed license; and
 - c. The applicant has established administrative controls and provisions relating to organization, management, procedures, recordkeeping, material control, accounting, and management review that are necessary to assure safe operations, including:
 - i. Establishment of a radiation safety committee composed of a radiation safety officer, a representative of management, and persons trained and experienced in the safe use of radioactive material;
 - ii. Appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and who is available for advice and assistance on radiation safety matters; and
 - iii. Establishment of appropriate administrative procedures to assure:
 - (1) Control of procurement and use of radioactive material;
 - (2) Completion of safety evaluations of proposed uses of radioactive material which take into consideration matters such as the adequacy of facilities and equipment, training and experience of the user, and operating or handling procedures; and
 - (3) Review, approval, and recording by the radiation safety committee of safety evaluations of proposed uses prepared in accordance with this subsection prior to use of the radioactive material.
 2. An application for a class B broad scope license if:
 - a. The applicant satisfies the general requirements specified in R12-1-309; and
 - b. The applicant has established administrative controls and provisions relating to organization, management, procedures, recordkeeping, material control, accounting, and management review that are necessary to assure safe operations, including:
 - i. Appointment of a radiation safety officer who is qualified by training and experience in radiation protection, and available for advice and assistance on radiation safety matters; and
 - ii. Establishment of appropriate administrative procedures to assure:
 - (1) Control of procurement and use of radioactive material;
 - (2) Completion of safety evaluations of proposed uses of radioactive material which take into consideration matters such as the adequacy of facilities and equipment, training and experience of the user, and the operating or handling procedures; and
 - (3) Review, approval, and recording by the radiation safety officer of safety evaluations of proposed uses prepared according to subsection (B)(2)(b)(ii) prior to use of the radioactive material.
 3. An application for a class C broad scope license if:
 - a. The applicant satisfies the general requirements specified in R12-1-309; and
 - b. The applicant submits a statement that radioactive material will be used only by, or under the direct supervision of, individuals who have received:
 - i. A college degree at the bachelor level, or equivalent training and experience, in the physical or biological sciences or in engineering; and
 - ii. At least 40 hours of training and experience in the safe handling of radioactive material, the characteristics of ionizing radiation, units of dose and quantities, radiation detection instrumentation, and biological hazards of exposure to radiation appropriate to the type and forms of radioactive material to be used; and
 - c. The applicant has established administrative controls and provisions relating to procurement of radioactive material, procedures, recordkeeping, material control and accounting, and management review necessary to assure safe operations.
- C. Unless specifically authorized, broad-scope licensees shall not:**
1. Conduct tracer studies in the environment involving direct release of radioactive material;
 2. Acquire, receive, possess, use, own, import, or transfer devices containing 3.7 petabecquerels (100,000 curies) or more of radioactive material in sealed sources used for irradiation of materials;
 3. Conduct activities for which a specific license is issued under R12-1-311, and 12 A.A.C. 1, Articles 5, 7, or 17; or
 4. Add or cause the addition of radioactive material to any food, beverage, cosmetic, drug, or other product designed

Radiation Regulatory Agency

- for ingestion or inhalation by, or application to, a human being.
- D. Radioactive material possessed under the class A broad scope license shall only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety committee.
- E. Radioactive material possessed under the class B broad scope license shall only be used by, or under the direct supervision of, individuals approved by the licensee's radiation safety officer.
- F. Radioactive material possessed under the class C broad scope license shall only be used by, or under the direct supervision of, individuals who satisfy the requirements of R12-1-310(B)(3)(b).
- (2) Hands and forearms; feet and ankles; localized areas of skin averaged over areas no larger than 1 square centimeter; 2 Sv (200 rem)
- (3) Other organs: 500 mSv (50 rem)
- c. Each device bears a durable, legible, clearly visible label or labels that contain in a clearly identified and separate statement:

- i. Instructions and precautions necessary to assure safe installation, operating, and servicing of the device (documents such as operating and service manuals may be identified in the label and used to provide this information);
- ii. The requirement, or lack of requirement, for leak testing, or for testing any on-off mechanism and indicator, including the maximum time interval for the testing, and the identification of radioactive material by isotope, quantity of radioactivity, and date of determination of the quantity; and
- iii. The information called for in one of the following statements in the same or substantially similar form:

The receipt, possession, use, and transfer of this device, Model _____, Serial No. _____, are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or a state with which the Nuclear Regulatory Commission has entered into an agreement for the exercise of regulatory authority. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited.

CAUTION – RADIOACTIVE MATERIAL

(name of manufacturer or distributor)

The receipt, possession, use and transfer of this device, Model _____, Serial No. _____, are subject to a general license or the equivalent, and the regulations of a Licensing State. This label shall be maintained on the device in a legible condition. Removal of this label is prohibited.

CAUTION – RADIOACTIVE MATERIAL

(name of manufacturer or distributor)

- d. The model, serial number, and name of manufacturer or distributor may be omitted from the label if the information location is specified in labeling affixed to the device;
- e. Each device with a separable source housing that provides the primary shielding for the source also bears, on the source housing, a durable label that provides the device model number and serial number, the isotope and quantity, the words, "Caution-Radioactive Material," the radiation symbol described in R12-1-428, and the name of the manufacturer or initial distributor; and
- f. Each device meets the criteria in 10 CFR 31.5(c)(13)(i) (revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments) and bears a permanent (e.g., embossed, etched, stamped, or engraved) label affixed to the source housing, if separable, or the device if the source housing is not separable, that

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Amended effective November 5, 1993 (Supp. 93-4). Former Section R12-1-310 renumbered to R12-1-311, new Section R12-1-310 renumbered from R12-1-309 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-310 renumbered to R12-1-309; new Section R12-1-310 renumbered from R12-1-311 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3).

R12-1-311. Special Requirements for a Specific License to Manufacture, Assemble, Repair, or Distribute Commodities, Products, or Devices that Contain Radioactive Material

- A. Licensing the manufacture and distribution of devices to persons generally licensed under R12-1-306(A).
1. The Agency shall grant a specific license to manufacture or distribute each device that contains radioactive material, excluding special nuclear material, to persons generally licensed under R12-1-306(A) or equivalent regulations of the U.S. NRC, an Agreement State, or the Licensing State if:
- a. The applicant satisfies the requirements of R12-1-309;
- b. The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control, labels, proposed uses, installation, servicing, leak testing, operating and safety instructions, and potential hazards of the device to provide reasonable assurance that:
- i. The device can be safely operated by persons not having training in radiological protection;
- ii. Under ordinary conditions of handling, storage, and use of the device, the radioactive material contained in the device will not be released or inadvertently removed from the device, and it is unlikely that any person will receive a dose in excess of 10 percent of the limits specified in R12-1-408; and
- iii. Under accident conditions (such as fire and explosion) associated with handling, storage, and use of the device, it is unlikely that any person would receive an external radiation dose or dose commitment in excess of the following organ doses:
- (1) Whole body; head and trunk; active blood-forming organs; gonads; or lens of eye: 150 mSv (15 rem)

Radiation Regulatory Agency

- includes the words, "Caution-Radioactive Material," and, if practicable, the radiation symbol described in R12-1-428.
- g. The device has been registered in the Sealed Source and Device Registry.
2. In the event the applicant desires that the device undergo mandatory testing at intervals longer than six months, either for proper operation of the on-off mechanism and indicator, if any, or for leakage of radioactive material or for both, the application shall contain sufficient information to demonstrate that the longer interval is justified by performance characteristics of the device or similar devices and by design features which have a significant bearing on the probability or consequences of leakage of radioactive material from the device or failure of the on-off mechanism and indicator. In determining the acceptable interval for the test for leakage of radioactive material, the Agency shall consider information which includes, but is not limited to:
 - a. Primary containment (source capsule),
 - b. Protection of primary containment,
 - c. Method of sealing containment,
 - d. Containment construction materials,
 - e. Form of contained radioactive material,
 - f. Maximum temperature withstood during prototype tests,
 - g. Maximum pressure withstood during prototype tests,
 - h. Maximum quantity of contained radioactive material,
 - i. Radiotoxicity of contained radioactive material, and
 - j. Operating experience with identical devices or similarly designed and constructed devices.
 3. In the event the applicant desires that the general licensee under R12-1-306(A), or under equivalent regulations of the NRC or an Agreement State or Licensing State, be authorized to install the device, collect the sample to be analyzed by a specific licensee for leakage of radioactive material, service the device, test the on-off mechanism and indicator, or remove the device from installation, the application shall include written instructions to be followed by the general licensee, estimated calendar quarter doses associated with the activity or activities, and bases for the estimates. The submitted information shall demonstrate that performance of the activity or activities by an individual untrained in radiological protection, in addition to other handling, storage, and use of devices under the general license, is unlikely to cause that individual to receive a dose in excess of 10 percent of the limits specified in R12-1-408.
 4. A licensee authorized under subsection (A) to distribute a device to a generally licensed person shall provide, if a device that contains radioactive material is to be transferred for use under the general license granted in R12-1-306(A), the name of each person that is licensed under R12-1-311(A) and the information specified in this subsection for each person to whom a device will be transferred. The licensee shall provide this information before the device may be transferred. In the case of transfer through another person, the licensee shall provide the listed information to the intended user before initial transfer to the other person.
 - a. The licensee shall provide:
 - i. A copy of the general license, issued under R12-1-306(A),
 - ii. A copy of R12-1-443 and R12-1-445,
 - iii. A list of the services that can only be performed by a specific licensee,
 - iv. Information on authorized disposal options, including estimated costs of disposal, and
 - v. A list of civil penalties for improper disposal.
 5. If radioactive material is to be transferred in a device for use under an equivalent general license of the NRC or another Agreement State, each person that is licensed under R12-1-304(B) shall provide the information specified in this subsection to each person to whom a device will be transferred. The licensee shall provide this information before the device is transferred. In the case of transfer through another person, the licensee shall provide the listed information to the intended user before initial transfer to the other person. The licensee shall provide:
 - a. A copy of the Agreement State's requirements that are equivalent to R12-1-306(A), and A.R.S. §§ 30-657, R12-1-443, and R12-1-445. If a copy of NRC regulations is provided to a prospective general licensee in lieu of the Agreement State's requirements, the licensee shall explain in writing that use of the device is regulated by the Agreement State. If certain requirements do not apply to a particular device, the licensee may omit the requirement from the material provided;
 - b. A list of the services that can only be performed by a specific licensee;
 - c. Information on authorized disposal options, including estimated costs of disposal; and
 - d. The name, title, address, and telephone number of the individual at the Agreement State regulatory agency who can provide additional information.
 6. A licensee may propose to the Agency an alternate method of informing the customer.
 7. If a licensee has notified the Agency of bankruptcy under R12-1-313(E) or is terminating under R12-1-319, the licensee shall provide, upon request, to the Agency, the NRC, or another Agreement State, records of the disposition as required under A.R.S. § 30-657.
 8. A licensee authorized to transfer a device to a generally licensed person, shall comply with the following requirements:
 - a. The person licensed under subsection (A) shall report all transfers of devices to persons for use under a general license obtained under R12-1-306(A), and all receipts of devices from persons licensed under R12-1-306(A) to the Agency, NRC, or other affected Agreement State. The report shall be submitted on a quarterly basis, in a clear and legible form, and contain the following information:
 - i. Report on a quarterly basis to the responsible Agreement State or NRC all transfers of devices to persons for use under a general license in accordance with 10 CFR 32.52, revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
 - ii. Maintain all information concerning transfers and receipts of devices that supports the reports required by subsection (A)(4)(b).
 - iii. Maintain records required by subsection (A)(4)(b) for a period of three years following the date of the recorded event.

Radiation Regulatory Agency

- i. The identity of each general licensee by name and mailing address for the location of use. If there is no mailing address for the location of use, the person licensed under subsection (A) shall submit an alternate address for the general licensee, along with information on the actual location of use;
 - ii. The name, title, and telephone number of a person identified by the general licensee as having knowledge of and authority to take required actions to ensure compliance with the applicable laws;
 - iii. The date of transfer;
 - iv. The type, model number, and serial number of the device transferred; and
 - v. The quantity and type of radioactive material contained in the device.
- b. If one or more intermediaries will temporarily possess the device at the intended place of use before its possession by the intended user, the report shall include the information required of the general licensee in subsection (A)(4) for both the intended user and each intermediary, clearly identifying the intended user and each intermediary.
- c. For devices received from a general licensee, licensed under R12-1-306(A), the report shall include:
- i. The identity of the general licensee by name and address;
 - ii. The type, model number, and serial number of the device received;
 - iii. The date of receipt; and
 - iv. In the case of a device not initially transferred by the reporting licensee, the name of the manufacturer or initial transferor.
- d. If the person licensed under subsection (A) makes a change to a device possessed by a general licensee so that the label must be changed to update required information, the report shall identify the general licensee, the device, and the changes to information on the device label.
- e. The report shall cover a calendar quarter, be filed within 30 days of the end of each calendar quarter, and clearly indicate the period covered by the report.
- f. The report shall clearly identify the person licensed under subsection (A) submitting the report and include the license number of the license.
- g. If no transfers are made to or from persons generally licensed under R12-1-306(A) during a reporting period, the person licensed under subsection (A) shall submit a report indicating the lack of activity.
9. The licensee shall maintain records of all transfers for Agency inspection. Records shall be maintained for three years after termination of the license to manufacture the generally licensed devices regulated under R12-1-306(A).
- B.** The Agency shall grant a specific license to manufacture, assemble, repair, or initially transfer luminous safety devices that contain tritium or promethium-147 for use in aircraft, for distribution to persons generally licensed under R12-1-306(B), if the applicant satisfies:
1. The general requirements specified in R12-1-309; and
 2. The requirements of 10 CFR 32.53 through 32.56 revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- C.** The Agency shall grant a specific license to manufacture or initially transfer calibration or reference sources that contain americium-241, radium-226, or plutonium for distribution to persons generally licensed under R12-1-306(C) if the applicant satisfies:
1. The general requirements of R12-1-309; and
 2. The requirements of 10 CFR 32.57, 32.58, 32.59, and 70.39, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- D.** The Agency shall grant a specific license to distribute radioactive material for use by a physician under the general license in R12-1-306(D) if:
1. The general requirements of R12-1-309; and
 2. The requirements of 10 CFR 32.57, 32.58, 32.59, and 70.39, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- E.** The Agency shall grant for a specific license to manufacture or distribute radioactive material for use under the general license of R12-1-306(E) if:
1. The applicant satisfies the general requirements specified in R12-1-309.
 2. The radioactive material is to be prepared for distribution in prepackaged units of:
 - a. Iodine-125 in units not exceeding 370 kBq (10 microcuries) each;
 - b. Iodine-131 in units not exceeding 370 kBq (10 microcuries) each;
 - c. Carbon-14 in units not exceeding 370 kBq (10 microcuries) each;
 - d. Hydrogen-3 (tritium) in units not exceeding 1.85 MBq (50 microcuries) each;
 - e. Iron-59 in units not exceeding 740 kBq (20 microcuries) each;
 - f. Cobalt-57 or selenium-75 in units not exceeding 370 kilobecquerels (10 microcuries) each;
 - g. Mock iodine-125 in units not exceeding 1.85 kBq (50 nanocuries) of iodine-129 and 185 Bq (5 nanocuries) of americium-241 each.
 3. Each prepackaged unit bears a durable, clearly visible label:
 - a. Identifying the radioactive contents as to chemical form and radionuclide and indicating that the amount of radioactivity does not exceed 370 kilobecquerels (10 microcuries) of iodine-125, iodine-131, cobalt-57, selenium-75, or carbon-14; 1.85 megabecquerels (50 microcuries) of hydrogen-3 (tritium); 740 kilobecquerels (20 microcuries) of iron-59; or mock iodine-125 in units not exceeding 1.85 kilobecquerels (0.05 microcurie) of iodine-129 and 185 becquerels (0.005 microcurie) of americium-241 each; and
 - b. Displaying the radiation caution symbol described in R12-1-428, the words, "CAUTION, RADIOACTIVE MATERIAL," and the phrase "Not for Internal or External Use in Humans or Animals."
 4. One of the following statements, or a substantially similar statement that contains the information called for in the following statements appears on a label affixed to each prepackaged unit or appears in a leaflet or brochure that accompanies the package:
 - a. This radioactive material may be received, acquired, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external

Radiation Regulatory Agency

administration of the material, or the radiation from the radioactive material, to human beings or animals. Its receipt, acquisition, possession, use, and transfer are subject to the regulations and a general license of the U.S. Nuclear Regulatory Commission or of a state with which the Commission has entered into an agreement for the exercise of regulatory authority.

Name of Manufacturer

- b. This radioactive drug may be received, acquired, possessed, and used only by physicians, clinical laboratories or hospitals and only for in vitro clinical or laboratory tests not involving internal or external administration of the material, or the radiation from the radioactive material, to human beings or animals. Its receipt, acquisition, possession, use and transfer are subject to the regulations and a general license of a Licensing State.

Name of Manufacturer

5. The label affixed to the unit, or the leaflet or brochure that accompanies the package, contains adequate information about the precautions to be observed in handling and storing the specified radioactive material. In the case of the mock iodine-125 reference or calibration source, the information accompanying the source must also contain directions to the licensee regarding the waste disposal requirements set out in R12-1-434.
- F.** The Agency shall grant for a specific license to manufacture and distribute ice detection devices to persons generally licensed under R12-1-306(F) if the applicant satisfies:
1. The general requirements of R12-1-309; and
 2. The criteria of 10 CFR 32.61 and 32.62, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- G.** The Agency shall grant a specific license to manufacture, prepare, or transfer for commercial distribution radioactive drugs that contain radioactive material for use by a person authorized in accordance with Article 7 of this Chapter, if the applicant meets all of the requirements in 10 CFR 30.32(j) or 10 CFR 32.72, revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
1. Authorization under this Section to produce Positron Emission Tomography (PET) radioactive drugs for noncommercial transfer to medical use licensees in its consortium does not relieve the licensee from complying with applicable FDA, other federal, and state requirements governing radioactive drugs.
 2. Each licensee authorized under this Section to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall:
 - a. Satisfy the labeling requirements in R12-1-431 for each PET radioactive drug transport radiation shield and each syringe, vial, or other container used to hold a PET radioactive drug intended for noncommercial distribution to members of its consortium.
 - b. Possess and use instrumentation to measure the radioactivity of the PET radioactive drugs intended for noncommercial distribution to members of its consortium and meet the procedural, radioactivity measurement, instrument test, instrument check, and instrument adjustment requirements in R12-1-449.
 3. A licensee that is a pharmacy authorized under this Section to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium shall require that any individual who prepares PET radioactive drugs be an:
 - a. Authorized nuclear pharmacist that meets the requirements in § R12-1-712, or
 - b. Individual under the supervision of an authorized nuclear pharmacist as specified in R12-1-706.
 4. A pharmacy, authorized under this Section to produce PET radioactive drugs for noncommercial transfer to medical use licensees in its consortium that allows an individual to work as an authorized nuclear pharmacist, shall meet the requirements of R12-1-712.
- H.** The Agency shall grant a specific license to manufacture and distribute generators or reagent kits that contain radioactive material for preparation of radiopharmaceuticals by persons licensed according to 12 A.A.C. 1, Article 7 if:
1. The applicant satisfies the general requirements of R12-1-309;
 2. The applicant submits evidence that:
 - a. The generator or reagent kit is to be manufactured, labeled and packaged according to the Federal Food, Drug, and Cosmetic Act or the Public Health Service Act, a new drug application (NDA) approved by the Food and Drug Administration (FDA), a biologic product license issued by FDA, or a "Notice of Claimed Investigational Exemption for a New Drug" (IND) that has been accepted by the FDA; or
 - b. The manufacture and distribution of the generator or reagent kit are not subject to the Federal Food, Drug, and Cosmetic Act and the Public Health Service Act.
 3. The applicant submits information on the radionuclide; chemical and physical form, packaging including maximum activity per package, and shielding provided by the packaging of the radioactive material contained in the generator or reagent kit;
 4. The label affixed to the generator or reagent kit contains information on the radionuclide, including quantity, and date of assay; and
 5. The label affixed to the generator or reagent kit, or the leaflet or brochure that accompanies the generator or reagent kit, contains:
 - a. Adequate information, from a radiation safety standpoint, on the procedures to be followed and the equipment and shielding to be used in eluting the generator or processing radioactive material with the reagent kit; and
 - b. A statement that this generator or reagent kit (as appropriate) is approved for use by persons licensed by the Agency under 12 A.A.C. 1, Article 7 or equivalent licenses of the U.S. Nuclear Regulatory Commission or an Agreement State or Licensing State. The labels, leaflets or brochures required by this subsection supplement the labeling required by FDA and they may be separate from or, with the approval of FDA, combined with the labeling required by FDA.
- I.** The Agency shall grant a specific license to manufacture and distribute sources and devices that contain radioactive material to a person licensed in accordance with Article 7 of this Chapter for use as a calibration, transmission, or reference source or for medical purposes, if the applicant meets all of the requirements in 10 CFR 32.74, revised January 1, 2015, incorporated

Radiation Regulatory Agency

by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

- J.** Requirements for license to manufacture and distribute industrial products containing depleted uranium for mass volume applications.
1. The Agency shall grant a specific license to manufacture industrial products and devices that contain depleted uranium for use under R12-1-305(C) or equivalent regulations of the U.S. Nuclear Regulatory Commission or an Agreement State if:
 - a. The applicant satisfies the general requirements in R12-1-309;
 - b. The applicant submits sufficient information relating to the design, manufacture, prototype testing, quality control procedures, labeling or marking, proposed uses, and potential hazards of the industrial product or device to provide reasonable assurance that possession, use, or transfer of the depleted uranium in the product or device is not likely to cause any individual to receive a radiation dose in excess of 10 percent of the limits specified in R12-1-408.
 - c. The applicant submits sufficient information regarding the industrial product or device and the presence of depleted uranium for a mass volume application in the product or device to provide reasonable assurance that unique benefits will accrue to the public because of the usefulness of the product or device.
 2. In the case of an industrial product or device whose unique benefits are questionable, the Agency shall approve an application for a specific license under this subsection only if the product or device is found to combine a high degree of utility and low probability of uncontrolled disposal and dispersal of significant quantities of depleted uranium into the environment.
 3. The Agency may deny any application for a specific license under this subsection if the end use or uses of the industrial product or device cannot be reasonably foreseen.
 4. Each person licensed under subsection (J)(1) shall:
 - a. Maintain the level of quality control required by the license in the manufacture of the industrial product or device and the installation of the depleted uranium into the product or device;
 - b. Label or mark each unit to:
 - i. Identify the manufacturer of the product or device, the number of the license under which the product or device was manufactured or initially transferred, the fact that the product or device contains depleted uranium, and the quantity of depleted uranium in each product or device; and
 - ii. State that the receipt, possession, use, and transfer of the product or device are subject to a general license or the equivalent and the regulations of the U.S. Nuclear Regulatory Commission or an Agreement State;
 - c. Assure that the depleted uranium, before being installed in each product or device, has been impressed with the following legend, clearly legible through any plating or other covering: "Depleted Uranium";
 - d. Furnish a copy of the general license contained in R12-1-305(C) and a copy of ARRA-23 to each person to whom depleted uranium in a product or device is transferred for use under a general license contained in R12-1-305(C); or
 - e. Furnish a copy of the general license contained in the U.S. Nuclear Regulatory Commission's or Agreement State's regulation equivalent to R12-1-305(C) and a copy of the U.S. Nuclear Regulatory Commission's or Agreement State's certificate, or alternatively, furnish a copy of the general license contained in R12-1-305(C) and a copy of ARRA-23 to each person to whom depleted uranium in a product or device is transferred for use under a general license of the U.S. Nuclear Regulatory Commission or an Agreement State, with a document explaining that use of the product or device is regulated by the U.S. Nuclear Regulatory Commission or an Agreement State under requirements substantially the same as those in R12-1-305(C);
 - f. Report to the Agency all transfers of industrial products or devices to persons for use under the general license in R12-1-305(C). The report shall identify each general licensee by name and address, an individual by name or position who serves as the point of contact person for the general licensee, the type and model number of device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which a product or device is transferred to the generally licensed person. If no transfers have been made to persons generally licensed under R12-1-305(C) during the reporting period, the report shall so indicate;
 - i. Report to the U.S. Nuclear Regulatory Commission all transfers of industrial products or devices to persons for use under the U.S. Nuclear Regulatory Commission general license in 10 CFR 40.25; or
 - ii. Report to the responsible state agency all transfers of devices manufactured and distributed under subsection (J)(4)(f) for use under a general license in that state's regulations equivalent to R12-1-305(C);
 - iii. The report required in subsection (J)(4)(f)(i) or (ii) shall identify each general licensee by name and address, an individual by name or position who serves as the contact person for the general licensee, the type and model number of the device transferred, and the quantity of depleted uranium contained in the product or device. The report shall be submitted within 30 days after the end of each calendar quarter in which a product or device is transferred to the generally licensed person;
 - iv. If no transfers have been made to U.S. Nuclear Regulatory Commission licensees during the reporting period, this information shall be reported to the U.S. Nuclear Regulatory Commission;
 - v. If no transfers have been made to general licensees within a particular Agreement State during the reporting period, this information shall be reported to the responsible Agreement state agency; and
 - vi. Keep records showing the name, address, and contact person for each general licensee to whom depleted uranium in industrial products or devices is transferred for use under a general license provided in R12-1-305(C) or equivalent

Radiation Regulatory Agency

regulations of the U.S. Nuclear Regulatory Commission or of an Agreement State. The records shall be maintained for a period of three years and show the date of each transfer, the quantity of depleted uranium in each product or device transferred, and compliance with the reporting requirements of this Section.

- K.** A licensee who manufactures nationally tracked sources, as defined in Article 4, shall:
1. Serialize the sources in accordance with 10 CFR 32.201, revised January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments; and
 2. Report manufacturing activities in accordance with R12-1-454.

Historical Note

Former Rule Section C.101. Former Section R12-1-311 repealed, new Section R12-1-311 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-311 renumbered to R12-1-312, new Section R12-1-311 renumbered from R12-1-310 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-311 renumbered to R12-1-310; new Section R12-1-311 renumbered from R12-1-312 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016; correction made to subsection R12-1-311(D)(2) removing (a) and (b) to reflect renumbering scheme as submitted in Supp. 09-2 (Supp. 16-1).

R12-1-312. Issuance of Specific Licenses

- A.** Upon determination that a license application meets the requirements of the Act and Agency rules, the Agency shall grant a specific license that may contain conditions or limitations if the Agency has determined that additional requirements regarding the proposed activity will protect health and safety.
- B.** The Agency may incorporate in any license at the time of issuance, or thereafter by rule or order, additional requirements and conditions with respect to the licensee's receipt, possession, use, and transfer of radioactive material in order to:
1. Minimize danger to public health and safety or property;
 2. Require reports and recordkeeping, and provide for inspections of activities under the license as may be necessary to protect health and safety; and
 3. Prevent loss or theft of material subject to this Article.
- C.** The Agency may verify information contained in an application and secure additional information necessary to make a determination on issuance of a license and whether any special conditions should be attached to the license. The Agency may inspect the facility or location where radioactive materials would be possessed or used, and discuss details of the proposed possession or use of the radioactive materials with the applicant or representatives designated by the applicant.

Historical Note

Former Rule Section C.102; Former Section R12-1-312 repealed, new Section R12-1-312 adopted effective June

30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-312 renumbered to R12-1-313, new Section R12-1-312 renumbered from R12-1-311 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-312 renumbered to R12-1-311; new Section R12-1-312 renumbered from R12-1-313 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-313. Specific Terms and Conditions

- A.** Each license issued under this Article is subject to all provisions of A.R.S. Title 30, Chapter 4 and to all rules, regulations, and orders of the Agency.
- B.** A licensee shall not transfer, assign, or in any manner dispose of a license issued or granted under this Article or a right to possess or utilize radioactive material granted by any license issued under this Article unless the Agency finds that the transfer is consistent with the Agency's statutes and rules, and gives its consent in writing. An application for transfer of license must include:
1. The identity, technical and financial qualifications of the proposed transferee; and
 2. Financial assurance for decommissioning information required by R12-1-323.
- C.** Each person licensed by the Agency under this Article shall confine the use and possession of the material licensed to the locations and purposes authorized in the license.
- D.** Each license issued pursuant to the rules in Articles 3, 5, 7, and 15 of this Chapter shall be deemed to contain the provisions set forth in the Act, whether or not these provisions are expressly set forth in the license.
- E.** The Agency may incorporate, in any license issued pursuant to the rules in this Chapter, at the time of issuance, or thereafter by appropriate rule, regulation or order, such additional requirements and conditions with respect to the licensee's receipt, possession, use and transfer of byproduct material as it deems appropriate or necessary in order to:
1. Promote the common defense and security;
 2. Protect health or to minimize danger to life or property;
 3. Protect restricted data; or
 4. Require such reports and the keeping of such records, and to provide for such inspections of activities under the license as may be necessary or appropriate to effectuate the purposes of the Act and rules thereunder.
- F.** Licensees required to submit emergency plans in accordance with R12-1-322 shall follow the emergency plan approved by the Agency. The licensee may change the approved plan without Agency approval only if the changes do not reduce the commitment of the plan. The licensee shall furnish the change to the Agency and to affected offsite response organizations within six months after the change is made. Proposed changes that reduce, or potentially reduce, the commitment of the approved emergency plan may not be implemented without prior application to and prior approval by the Agency.
- G.** Each person licensed under this Section and each general licensee that is required to register under R12-1-306(A)(4)(o) shall notify the Agency in writing if the licensee decides to permanently discontinue any or all activities involving materials authorized under the license. A specific licensee or general licensee shall notify the Agency, in writing:
1. Immediately following the filing of a petition for bankruptcy under any Chapter of Title 11 of the United States Code if the petition for bankruptcy is by or against:
 - a. The licensee;

Radiation Regulatory Agency

- b. An entity (as defined in the bankruptcy code) controlling the licensee or listing the license or licensee as property of the estate; or
 - c. An affiliate (as defined in the bankruptcy code) of the licensee.
2. Providing the following information:
- a. The bankruptcy court in which the petition for bankruptcy was filed, and
 - b. The bankruptcy case title and number, and
 - c. The date the petition was filed.

- H.** Each licensee preparing technetium-99m radiopharmaceuticals from molybdenum-99/technetium-99m generators or rubidium-82 from strontium-82/rubidium-82 generators shall test the generator eluates for molybdenum-99 breakthrough or strontium-82 and strontium-85 contamination, respectively, in accordance with R12-1-720. The licensee shall record the results of each test and retain each record for three years after the record is made.

Historical Note

Former Rule Section C.103; Former Section R12-1-313 repealed, new Section R12-1-313 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Amended effective June 20, 1990 (Supp. 90-2). Former Section R12-1-313 renumbered to R12-1-314, new Section R12-1-313 renumbered from R12-1-312 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-313 renumbered to R12-1-312; new Section R12-1-313 renumbered from R12-1-314 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-314. Expiration of License

Except as provided in R12-1-315(B), each specific license expires at the end of the day, in the month and year stated on the license.

Historical Note

Former Rule Section C.104; Former Section R12-1-314 repealed, new Section R12-1-314 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-314 renumbered to R12-1-315, new Section R12-1-314 renumbered from R12-1-313 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-314 renumbered to R12-1-313; new Section R12-1-314 renumbered from R12-1-315 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-315. Renewal of License

- A.** An applicant shall file an application for renewal of a specific license according to R12-1-308.
- B.** If a licensee files a renewal application not less than 30 days before the license expiration date and the existing license and associated renewal application is in proper form, the existing license does not expire until a final renewal determination is made by the Agency.

Historical Note

Former Rule Section C.105; Former Section R12-1-315 repealed, new Section R12-1-315 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-315 renumbered to R12-1-316, new Section R12-1-315 renumbered from R12-1-314 effective February 18, 1994 (Supp. 94-

1). Former Section R12-1-315 renumbered to R12-1-314; new Section R12-1-315 renumbered from R12-1-316 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-316. Amendment of Licenses at Request of Licensee

An applicant shall file an application for amendment of a specific license by complying with R12-1-308 and specifying the grounds for the amendment.

Historical Note

Former Rule Section C.106; Former Section R12-1-316 repealed, new Section R12-1-316 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-316 renumbered to R12-1-317, new Section R12-1-316 renumbered from R12-1-315 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-316 renumbered to R12-1-315; new Section R12-1-316 renumbered from R12-1-317 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-317. ARRA Action on Applications to Renew or Amend

In considering an application by a licensee to renew or amend a specific license, the Agency shall apply the criteria set forth in R12-1-309, R12-1-310, or R12-1-311 as applicable.

Historical Note

Former Rule Section C.107; Former Section R12-1-317 repealed, new Section R12-1-317 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-317 renumbered to R12-1-318, new Section R12-1-317 renumbered from R12-1-316 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-317 renumbered to R12-1-316; new Section R12-1-317 renumbered from R12-1-318 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-318. Transfer of Radioactive Material

- A.** A licensee shall not transfer radioactive material except as authorized under this Section.
- B.** Except as otherwise provided in the license and subject to the provisions of subsections (C) and (D), any licensee may transfer radioactive material:
 - 1. To the Agency; after receiving prior approval from the Agency;
 - 2. To the Department of Energy;
 - 3. To any person exempt from the rules in this Article to the extent permitted under the exemption;
 - 4. To any person authorized to receive radioactive material under terms of a general license or its equivalent, or a specific license or equivalent licensing document, issued by the Agency, the U.S. Nuclear Regulatory Commission, or any Agreement State or Licensing State, or to any person otherwise authorized to receive radioactive material by the Federal Government or any agency of the Federal Government, the Agency, any Agreement State or Licensing State; or
 - 5. As otherwise authorized by the Agency in writing.
- C.** Before transferring radioactive material to a specific licensee of the Agency, the U.S. Nuclear Regulatory Commission, or an Agreement State or Licensing State, or to a general licensee who is required to register with the Agency, the U.S. Nuclear Regulatory Commission, or an Agreement State or Licensing State prior to receipt of the radioactive material, the licensee

Radiation Regulatory Agency

transferring the material shall verify that the transferee's license authorizes the receipt of the type, form, and quantity of radioactive material to be transferred.

- D.** The transferor shall use one or more of the following methods for the verification required by subsection (C):
1. The transferor shall possess, and read, a current copy of the transferee's specific license or registration certificate;
 2. The transferor shall possess a written certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date;
 3. For emergency shipments the transferor shall accept oral certification by the transferee that the transferee is authorized by license or registration certificate to receive the type, form, and quantity of radioactive material to be transferred, specifying the license or registration certificate number, issuing agency, and expiration date; provided the oral certification is confirmed in writing within 10 days;
 4. The transferor shall obtain information equivalent to that in subsection (D)(1) to (3) compiled by a reporting service from official records of the Agency, the U.S. Nuclear Regulatory Commission, or the licensing agency of an Agreement State or Licensing State regarding the identity of any licensee and the scope and expiration date of any license, registration, or certificate; or
 5. When none of the methods of verification described in subsections (D)(1) to (4) are readily available or when a transferor desires to verify that information received by one of the above methods is correct or up-to-date, the transferor shall obtain and record confirmation from the Agency, the U.S. Nuclear Regulatory Commission, or the licensing agency of an Agreement State or Licensing State that the transferee is licensed to receive the radioactive material.
- E.** A transferor shall prepare and transport radioactive material as prescribed in the provisions of 12 A.A.C. 1, Article 15.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-318 renumbered to R12-1-319, new Section R12-1-318 renumbered from R12-1-317 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-318 renumbered to R12-1-317; new Section R12-1-318 renumbered from R12-1-319 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-319. Modification, Revocation, or Termination of a License

- A.** The terms and conditions of all licenses are subject to amendment, revision, or modification, and a license may be suspended or revoked by reason of amendments to the Agency's statutes or rules and orders issued by the Agency.
- B.** The Agency may revoke, suspend, or modify any license, in whole or in part, for any material false statement in the application; any omission or misstatement of fact required by statute, rule, or order, or because of conditions revealed by the application or any report, record, or inspection or other means that would cause the Agency to refuse to grant a license; or any violation of license terms and conditions, or the Agency's statutes, rules, or orders.
- C.** Except in cases of willfulness or those in which the public health, interest, or safety requires otherwise, the Agency shall

not modify, suspend, or revoke a license unless, before the institution of proceedings, facts or conduct that may warrant action have been called to the attention of the licensee in writing and the licensee has been accorded an opportunity to demonstrate or achieve compliance.

- D.** The Agency may terminate a specific license upon a written request by the licensee that provides evidence the licensee has met the termination criteria in R12-1-451, R12-1-452, and the decommissioning requirements in R12-1-323.
- E.** Specific licenses, including expired licenses, continue in effect until terminated by written notice to the licensee, when the Agency determines that the licensee has:
1. Properly disposed of all radioactive material;
 2. Made a reasonable effort to eliminate residual radioactive contamination, if present;
 3. Performed an accurate radiation survey that demonstrates the premises are suitable for release in accordance with the criteria for decommissioning in R12-1-323;
 4. Submitted other information that is sufficient to demonstrate that the premises are suitable for release in accordance with the criteria for decommissioning in R12-1-323.
 5. Provided records to the Agency that detail the disposal of all radioactive material in unsealed form with a half-life greater than 120 days, and copies of the records required by 10 CFR 30.35(g), January 1, 2004, which is incorporated by reference and on file with the Agency. This incorporation by reference contains no future editions or amendments.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-319 renumbered to R12-1-320, new Section R12-1-319 renumbered from R12-1-318 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-319 renumbered to R12-1-318; new Section R12-1-319 renumbered from R12-1-320 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-320. Reciprocal Recognition of Licenses

- A.** This subsection grants a general license to perform specific licensed activities in Arizona for a period not to exceed 180 days in any calendar year to any person who holds a specific license from an Agreement State, where the licensee maintains an office for directing the licensed activity and retaining radiation safety records, is granted a general license to conduct the same activity involving the use of radioactive material from the U.S. Nuclear Regulatory Commission, Licensing State, or any Agreement State, provided that:
1. The license does not limit the activity to specific installations or locations;
 2. Following the first notification, application, and payment of fees, the licensee shall notify the agency three days prior to entering the state and prior to each non-consecutive visit while reciprocity remains in effect.
 3. The out-of-state licensee complies with all applicable statutes, now or hereafter in effect, rules, and orders of the Agency and with all the terms and conditions of the license, except those terms and conditions inconsistent with applicable statutes, rules and orders of the Agency;

Radiation Regulatory Agency

4. The out-of-state licensee supplies any other information the Agency requests; and
5. The out-of-state licensee does not transfer or dispose of radioactive material possessed or used under the general license provided in this Section except by transfer to a person:
 - a. Specifically licensed by the Agency, or by the U.S. Nuclear Regulatory Commission to receive the radioactive material; or
 - b. Exempt under R12-1-303(A).
- B.** Notwithstanding the provisions of subsection (A)(1), this subsection grants a general license to manufacture, install, transfer, demonstrate, or service a device described in R12-1-306(A)(1) to any person who holds a specific license issued by the U.S. Nuclear Regulatory Commission, Licensing State, or an Agreement State authorizing the same activities within areas subject to the jurisdiction of the licensing body, provided that:
 1. The person files a report with the Agency within 30 days after the end of each calendar quarter in which any device is transferred to or installed in this State. Each report shall identify the general licensee to whom the device is transferred by name and address, the type of device transferred, and the quantity and type of radioactive material contained in the device;
 2. The device has been manufactured, labeled, installed, and serviced according to the applicable provisions of the specific license issued to the person by the U.S. Nuclear Regulatory Commission or an Agreement State;
 3. The person entering the state ensures that any labels required to be affixed to the device under rules of the authority which licensed manufacture of the device bear the following statement: "Removal of this label is prohibited"; and
 4. The holder of the specific license furnishes a copy of the general license contained in R12-1-306(A)(1), or equivalent rules of the agency having jurisdiction over the manufacture or distribution of the device, to each general licensee to whom the licensee transfers the device or on whose premises the device is installed.
- C.** The Agency may withdraw, limit, or qualify the acceptance of any specific license or equivalent licensing document issued by another agency, or any product distributed under a license, upon determining that an action is necessary to prevent undue hazard to public health and safety, or property.
- D.** Before radioactive material can be used at a temporary job site within the state at any federal facility, a specific licensee shall determine the jurisdictional status of the job site. If the jurisdictional status is unknown, the specific licensee shall contact the controlling federal agency to determine whether the job site is under exclusive federal jurisdiction.
- E.** Before using radioactive material at a job site under exclusive federal jurisdiction, a specific licensee shall:
 1. Obtain authorization from the NRC; and
 2. Use the radioactive material in accordance with applicable NRC regulations and orders, and be able to demonstrate to the Agency that the correct license fee was paid to the NRC.
- F.** Before radioactive material can be used at a temporary job site in another state, a specific licensee shall obtain authorization from the state, if it is an Agreement State, or from the NRC for any non-Agreement State, either by filing for reciprocity or applying for a specific license.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended

effective December 20, 1985 (Supp. 85-6). Former Section R12-1-320 renumbered to R12-1-321, new Section R12-1-320 renumbered from R12-1-319 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-320 renumbered to R12-1-319; new Section R12-1-320 renumbered from R12-1-321 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-321. Repealed**Historical Note**

Former Rule Section C.201; Former Section R12-1-321 repealed, new Section R12-1-321 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-321 renumbered to R12-1-322, new Section R12-1-321 renumbered from R12-1-320 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-321 renumbered to R12-1-320; new Section R12-1-321 renumbered from R12-1-322 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-322. The Need for an Emergency Plan for Response to a Release of Radioactive Material

- A.** For purposes of this rule, "Emergency Plan" means a procedure that will be followed when an accident occurs involving licensed radioactive materials for which an offsite response may be needed from organizations, such as police, fire, or medical organizations.
- B.** Each application to possess radioactive materials in unsealed form, on foils or plated sources, or sealed in glass in excess of the quantities in Exhibit D, "Radioactive Material Quantities Requiring Consideration for an Emergency Plan" shall contain either:
 1. An evaluation showing that the maximum dose to a person off-site due to a release of radioactive materials would not exceed 1 rem effective dose equivalent or 5 rems to the thyroid; or
 2. An emergency plan for responding to a release of radioactive material.
- C.** One or more of the following factors may be used to support an evaluation submitted under subsection (B)(1):
 1. The radioactive material is physically separated so that only a portion could be involved in an accident.
 2. All or part of the radioactive material is not subject to release during an accident because of the way it is stored or packaged;
 3. The release fraction in the respirable size range would be lower than the release fraction shown in Exhibit D due to the chemical or physical form of the material;
 4. The solubility of the radioactive material would reduce the dose received;
 5. Facility design or engineered safety features in the facility would cause the release fraction to be lower than shown in Exhibit D;
 6. Operating restrictions or procedures would prevent a release fraction as large as that shown in Exhibit D; or
 7. Other factors appropriate for the specific facility.

Radiation Regulatory Agency

- D. An emergency plan for responding to a release of radioactive material submitted under subsection (B)(2) shall include the following information:
1. A brief description of the licensee's facility and areas near the site that could expose a member of the public to a dose equal to or greater than the levels expressed in subsection (B)(1).
 2. An identification of each type of radioactive materials accident for which protective actions may be needed.
 3. A classification system for classifying accidents as alerts or site area emergencies.
 4. Identification of the means of detecting each type of accident in a timely manner.
 5. A brief description of the means and equipment for mitigating the consequences of each type of accident, including those provided to protect workers onsite, and a description of the program for maintaining the equipment.
 6. A brief description of the methods and equipment to assess releases of radioactive materials.
 7. A brief description of the responsibilities of licensee personnel responsible for promptly notifying offsite response organizations and the Agency; also responsibilities for developing, maintaining, and updating the plan.
 8. A commitment to and a brief description of the means to promptly notify offsite response organizations and request off-site assistance, including medical assistance for the treatment of contaminated and injured onsite workers when appropriate. A control point shall be established. The notification and coordination shall be planned so that unavailability of some personnel, parts of the facility, and some equipment will not prevent the notification and coordination. The licensee shall also commit to notify the Agency immediately after notification of the appropriate off-site response organizations and not later than one hour after the licensee declares an emergency.
 9. A brief description of the types of information on facility status, radioactive releases, and recommended protective actions, if necessary, to be given to off-site response organizations and to the Agency.
 10. A brief description of the frequency, performance objectives, and plans for the training that the licensee will provide workers on how to respond to an emergency including any special instructions and orientation tours the licensee would offer to fire, police, medical, and other emergency personnel. The training shall familiarize personnel with site-specific emergency procedures. Also, the training shall thoroughly prepare site personnel for their responsibilities in the event of accident scenarios postulated as most probable for the specific site, including the use of team training for such scenarios.
 11. A brief description of the means of restoring the facility to a safe condition after an accident.
 12. Provisions for conducting quarterly communications checks with off-site response organizations and biennial onsite exercises to test response to simulated emergencies. Quarterly communications checks with off-site response organizations shall include the verifying and updating of all necessary telephone numbers. The licensee shall invite off-site response organizations to participate in the biennial exercises. Their participation is not required. Exercises shall use accident scenarios postulated as most probable for the specific site and the scenarios shall not be known to most exercise participants. The licensee shall critique each exercise, using individuals without direct implementation responsibility for the plan. Critiques of exercises shall evaluate the appropriateness of the plan, emergency procedures, facilities, equipment, training of personnel, and overall effectiveness of the response. Deficiencies found by the critiques shall be corrected.
 13. A certification that the applicant has met its responsibilities in A.R.S. §§ 26-341 through 26-353 (emergency Planning and Community Right-to-Know Act of 1986), if applicable to the applicant's activities at the proposed place of use of the radioactive material.
- E. The licensee shall allow 60 days for the off-site response organizations, expected to respond in case of an accident, to comment on the licensee's emergency plan before submitting it to the Agency. The licensee shall provide any comments received within the 60 days to the Agency with the emergency plan.

Historical Note

Former Section R12-1-322 repealed effective June 30, 1977 (Supp. 77-3). New Section R12-1-322 renumbered from R12-1-321 effective February 18, 1994 (Supp. 94-1). Former Section R12-1-322 renumbered to R12-1-321; new Section R12-1-322 renumbered from R12-1-323 and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-323. Financial Assurance and Recordkeeping for Decommissioning

- A. For purposes of terminating specific licensed activities:
1. "Decommissioning" means to remove a radioactive material use facility safely from service and to reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the radioactive material use license.
 2. "Byproduct material" as used in 10 CFR 30, means "radioactive material" which is defined in A.R.S. § 30-651.
 3. "Facility" means the entire site of radioactive material use, or any separate building or outdoor area where it is used.
 4. "Appendix B to Part 30" as used in 10 CFR 30, means Appendix E in 12 A.A.C. 1, Article 4.
 5. "Financial security" means having a net worth of not less than \$10,000.
- B. When applying, each non-government applicant for a specific license that authorizes the possession and use of radioactive material, and each non-government holder of a license to possess and use radioactive material issued before the effective date of this Section, shall submit to the Agency a decommissioning funding plan or certification of financial security, as required in A.R.S. § 30-672(H). A licensee required to meet the requirements in subsection (C) is exempt from the requirements in this subsection.
- C. When applying, each applicant for a specific license that authorizes the possession and use of radioactive material, and each holder of a license to possess and use radioactive material issued before the effective date of this Section, shall submit to the Agency a decommissioning funding plan or certification of financial assurance that meets the requirements in 10 CFR 30.35, 40.36, and 70.25, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments. Each decommissioning funding plan shall be submitted to the Agency for review and approval and shall contain:
1. A detailed cost estimate for decommissioning, in an amount reflecting:
 - a. The cost of an independent contractor to perform all decommissioning activities;

Radiation Regulatory Agency

- b. The cost of meeting the R12-1-452(B) criteria for unrestricted use, provided that, if the applicant or licensee can demonstrate its ability to meet the provisions of R12-1-453(C), the cost estimate may be based on meeting the R12-1-453(C) criteria;
 - c. The volume of onsite subsurface material containing residual radioactivity that will require remediation to meet the criteria for license termination; and
 - d. An adequate contingency factor.
2. Identification of and justification for using the key assumptions contained in the DCE;
 3. A description of the method of assuring funds for decommissioning from subsection (F), including means for adjusting cost estimates and associated funding levels periodically over the life of the facility;
 4. A certification by the licensee that financial assurance for decommissioning has been provided in the amount of the cost estimate for decommissioning; and
 5. An original signed copy of the financial instrument obtained to satisfy the requirements of subsection (F) unless a previously submitted and accepted financial instrument continues to cover the cost estimate for decommissioning).
- D.** Each licensee required to provide financial assurance for decommissioning a radioactive material facility under this Section shall maintain records of information important to the safe and effective decommissioning of the facility in an identified location until the license is terminated by the Agency. The licensee shall maintain the following records during the decommissioning process:
1. Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, and site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. The licensee shall keep records identifying the involved radionuclides and associated quantities, forms, and concentrations.
 2. As-built drawings showing modifications of structures and equipment in restricted areas where radioactive materials are used and stored, and locations of possible inaccessible contamination. If drawings are not available, the licensee shall provide appropriate records describing each location of possible contamination.
 3. Records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.
- E.** Decommissioning procedures:
1. Upon expiration or termination of principal activities a licensee shall notify the Agency in writing whether the licensee is discontinuing licensed activities. The licensee shall begin decommissioning its facility within 60 days after the Agency receives notice of the decision to permanently terminate principal activities, or within 12 months after receipt of notice, submit to the Agency a decommissioning plan, as prescribed in 10 CFR 30.36(g)(1), 40.42(g)(1), and 70.38(g)(1), revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments. The licensee shall begin decommissioning upon approval of the plan if the license has expired or no licensed activities have been conducted at the licensee's facility for a period of 24 months.
2. In addition to the notification requirements in subsection (E)(1), the licensee shall maintain in effect all decommissioning financial assurances required by this Section. The financial assurances shall be increased or may be decreased as appropriate to cover the cost estimate established for decommissioning in subsection (E)(1). The licensee may reduce the amount of the financial assurance following approval of the decommissioning plan, provided the radiological hazard is decreasing and the licensee has the approval of the Agency.
 3. The Agency shall extend the time periods established in subsection (E)(1) if a new time period is in the best interest of public health and safety.
 - a. The licensee shall submit a request for an extension no later than 30 days after the Agency receives the notice required in subsection (E)(1).
 - b. If a licensee has requested an extension, the licensee is not required to commence decommissioning activities required in subsection (E)(1), until the Agency has made a determination on the request submitted to the Agency under subsection (E)(3)(a).
 4. Except as provided in subsection (E)(5), the licensee shall complete decommissioning of a facility as soon as practicable but no later than 24 months following the initiation of decommissioning; and except as provided in subsection (E)(5), when decommissioning involves the entire facility, the licensee shall request license termination as soon as practicable but no later than 24 months following initiation of decommissioning.
 5. The Agency shall approve a request for an alternate schedule for completion of decommissioning and license termination if the Agency determines that the alternative is warranted by consideration of the conditions specified in 10 CFR 30.36(i), 40.42(i), and 70.38(i), revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
 6. As a final step in decommissioning, the licensee shall meet the requirements specified in 10 CFR 30.36(j), 40.42(j), and 70.38(j), revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- F.** Each person licensed under this Article shall keep records of information important to the decommissioning of a facility in an identified location until the site is released for unrestricted use. Before licensed activities are transferred or assigned in accordance with R12-1-318, licensees shall transfer all records described in this paragraph to the new licensee. In this case, the new licensee will be responsible for maintaining these records until the license is terminated. If records important to the decommissioning of a facility are kept for other purposes, reference to these records and their locations may be used. Information the Agency considers important to decommissioning consists of:
1. Records of spills or other unusual occurrences involving the spread of contamination in and around the facility, equipment, or site. These records may be limited to instances when contamination remains after any cleanup procedures or when there is reasonable likelihood that contaminants may have spread to inaccessible areas as in the case of possible seepage into porous materials such as concrete. These records must include any known infor-

Radiation Regulatory Agency

- mation on identification of involved nuclides, quantities, forms, and concentrations.
2. As-built drawings and modifications of structures and equipment in restricted areas where radioactive materials are used and/or stored, and of locations of possible inaccessible contamination such as buried pipes which may be subject to contamination. If required drawings are referenced, each relevant document need not be indexed individually. If drawings are not available, the licensee shall substitute appropriate records of available information concerning these areas and locations.
 3. Except for areas containing depleted uranium used only for shielding or as penetrators in unused munitions, a list contained in a single document and updated every 2 years, of the following:
 - a. All areas designated and formerly designated as restricted areas as defined under R12-1-102;
 - b. All areas outside of restricted areas that require documentation under R12-1-323(F)(1);
 - c. All areas outside of restricted areas where current and previous wastes have been buried as documented under R12-1-441; and
 - d. All areas outside of restricted areas that contain material such that, if the license expired, the licensee would be required to either decontaminate the area to meet the criteria for decommissioning in R12-1-451, or R12-1-452; or apply for approval for disposal under R12-1-435.
 4. Records of the cost estimate performed for the decommissioning funding plan or of the amount certified for decommissioning, and records of the funding method used for assuring funds if either a funding plan or certification is used.
- G.** In providing financial assurance under this section, each licensee shall use the financial assurance funds only for decommissioning activities and each licensee shall monitor the balance of funds held to account for market variations. The licensee shall replenish the funds, and report such actions to the Agency, as follows:
1. If, at the end of a calendar quarter, the fund balance is below the amount necessary to cover the cost of decommissioning, but is not below 75 percent of the cost, the licensee shall increase the balance to cover the cost, and shall do so within 30 days after the end of the calendar quarter.
 2. If, at any time, the fund balance falls below 75 percent of the amount necessary to cover the cost of decommissioning, the licensee shall increase the balance to cover the cost, and shall do so within 30 days of the occurrence.
 3. Within 30 days of taking the actions required by subsection (G)(1) or (G)(2), the licensee shall provide a written report of such actions to the Director of the Agency, and state the new balance of the fund.
- H.** The financial instrument must include the licensee's name, license number, and docket number, and the name, address, and other contact information of the issuer, and, if a trust is used, the trustee. When any of the foregoing information changes, the licensee must, within 30 days, submit financial instruments to the Agency reflecting such changes. The financial instrument submitted must be a signed original or signed original duplicate, except where a copy of the signed original is specifically permitted. Financial assurance for decommissioning must be provided by one or more of the following methods:
1. Prepayment. Prepayment is the deposit before the start of operation into an account segregated from licensee assets and outside the licensee's administrative control of cash or liquid assets such that the amount of funds would be sufficient to pay decommissioning costs. Prepayment must be made into a trust account, and the trustee and the trust must be acceptable to the Agency.
 2. A surety method, insurance, or other guarantee method. These methods guarantee that decommissioning costs will be paid. A surety method may be in the form of a surety bond, or letter of credit. A parent company guarantee of funds for decommissioning costs based on a financial test may be used if the guarantee and test are approved by the Agency. For commercial corporations that issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs based on a financial test may be used if the guarantee and test are approved by the Agency. For commercial companies that do not issue bonds, a guarantee of funds by the applicant or licensee for decommissioning costs may be used if the guarantee and test are approved by the Agency. For nonprofit entities, such as colleges, universities, and nonprofit hospitals, a guarantee of funds by the applicant or licensee may be used if the guarantee and test are approved by the Agency. Except for an external sinking fund, a parent company guarantee or a guarantee by the applicant or licensee may not be used in combination with any other financial methods used to satisfy the requirements of this section. A guarantee by the applicant or licensee may not be used in any situation where the applicant or licensee has a parent company holding majority control of the voting stock of the company. Any surety method or insurance used to provide financial assurance for decommissioning must contain the following conditions:
 - a. The surety method or insurance must be open-ended or, if written for a specified term, such as five years, must be renewed automatically unless 90 days or more prior to the renewal date, the issuer notifies the Agency, the beneficiary, and the licensee of its intention not to renew. The surety method or insurance must also provide that the full face-value amount be paid to the beneficiary automatically prior to the expiration without proof of forfeiture if the licensee fails to provide a replacement acceptable to the Agency within 30 days after receipt of notification of cancellation.
 - b. The surety method or insurance must be payable to a trust established for decommissioning costs. The trustee and trust must be acceptable to the Agency. An acceptable trustee includes an appropriate State or Federal government agency or an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.
 - c. The surety method or insurance must remain in effect until the Agency has terminated the license.
 3. An external sinking fund in which deposits are made at least annually, coupled with a surety method, insurance, or other guarantee method, the value of which may reduce by the amount being accumulated in the sinking fund. An external sinking fund is a fund established and maintained by setting aside funds periodically in an account segregated from licensee assets and outside the licensee's administrative control in which the total amount of funds would be sufficient to pay decommissioning costs at the time termination of operation is expected. An external sinking fund must be in the form of a trust. If the other guarantee method is used, no surety or

Radiation Regulatory Agency

insurance may be combined with the external sinking fund. The surety, insurance, or other guarantee provisions must be as stated in subsection (H)(2).

4. In the case of Federal, State, or local government licensees, a statement of intent containing a cost estimate for decommissioning, and indicating that funds for decommissioning will be obtained when necessary.
5. When a governmental entity is assuming custody and ownership of a site, an arrangement that is deemed acceptable by such governmental entity.

Historical Note

Former Section R12-1-323 repealed effective June 30, 1977 (Supp. 77-3). New Section R12-1-323 adopted effective February 18, 1994 (Supp. 94-1). Former Section R12-1-323 renumbered to R12-1-322; new Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-324. Public Notification and Public Participation

Upon the receipt of a license termination plan (LTP) or decommissioning plan from a licensee, or a proposal by a licensee for decommissioning of a site in accordance with R12-1-452(C) and (D) or for other events when the Agency deems a notice to be in the public interest, the Agency shall:

1. Notify and solicit comments from:
 - a. State and local governments and any Indian Nation or other indigenous people who have legal rights that could be affected by the decommissioning, and
 - b. The Arizona Department of Environmental Quality for cases in which the licensee proposes to decommission a site in accordance with R12-1-452(D).
2. Publish the notice in the *Arizona Administrative Register* and use other methods of publication such as local newspapers, letters to local organizations, or any other method that is reasonably calculated to provide notice, and solicit comments from affected parties.

Historical Note

Repealed effective June 30, 1977 (Supp. 77-3). New Section made by final rulemaking at 10 A.A.R. 4588, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-325. Timeliness in Decommissioning Facilities

- A. "Principal activities," as used in this Section, means activities authorized by the license that are essential to achieving the purposes for which the license was issued or amended. Storage, during which licensed material is not accessed for use, or disposal and other activities incidental to decontamination or decommissioning are not principal activities.
- B. Each specific license revoked by the Agency expires at midnight on the date of the Agency's final determination to revoke the license, the expiration date stated in the determination, or as otherwise provided by Agency order.
- C. Each specific license continues in effect, beyond the expiration date if necessary, with respect to possession of radioactive material, until the Agency notifies the licensee in writing that the license is terminated. During this time, the licensee shall:
 1. Limit actions involving radioactive material to those related to decommissioning;

2. Continue to control entry to restricted areas until they are suitable for release in accordance with NRC requirements; and
3. Pay the applicable annual fee for the license category listed in R12-1-1306.

- D. Within 60 days of the occurrence of any of the following, each licensee shall notify the Agency in writing of the occurrence and either begin decommissioning its site, or any separate building or outdoor area that contains residual radioactivity, so that the building or outdoor area is suitable for release in accordance with Agency requirements, or submit within 12 months of notification a decommissioning plan, if required by R12-1-323, and begin decommissioning upon approval of that plan if:
 1. The license expires in accordance with subsection (B) or R12-1-314, unless the licensee submits a renewal application in accordance with R12-1-315;
 2. The licensee decides to permanently terminate principal activities at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements;
 3. No principal activities under the license have been conducted for a period of 24 months; or
 4. No principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements.

1. The license expires in accordance with subsection (B) or R12-1-314, unless the licensee submits a renewal application in accordance with R12-1-315;

2. The licensee decides to permanently terminate principal activities at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements;

3. No principal activities under the license have been conducted for a period of 24 months; or
4. No principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements.

2. The licensee decides to permanently terminate principal activities at the entire site or in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements;
3. No principal activities under the license have been conducted for a period of 24 months; or
4. No principal activities have been conducted for a period of 24 months in any separate building or outdoor area that contains residual radioactivity such that the building or outdoor area is unsuitable for release in accordance with Agency requirements.

Nickel (28)	Ni-65		1×10^{-3}
Niobium (Columbium) (41)	Nb-95		1×10^{-3}
	Nb-97		9×10^{-3}
Osmium (76)	Os-185		7×10^{-4}
	Os-191m		3×10^{-2}
	Os-191		2×10^{-3}
	Os-193		6×10^{-4}
Palladium (46)	Pd-103		3×10^{-3}
	Pd-109		9×10^{-4}
Phosphorus (15)	P-32		2×10^{-4}
Platinum (78)	Pt-191		1×10^{-3}
	Pt-193m		1×10^{-2}
	Pt-197m		1×10^{-2}
	Pt-197		1×10^{-3}
Potassium (19)	K-42		3×10^{-3}
Praseodymium (59)	Pr-142		3×10^{-4}
	Pr-143		5×10^{-4}
Promethium (61)	Pm-147		2×10^{-3}
	Pm-149		4×10^{-4}
Rhenium (75)	Re-183		6×10^{-3}
	Re-186		9×10^{-4}
	Re-188		6×10^{-4}
Rhodium (45)	Rh-103m		1×10^{-1}
	Rh-105		1×10^{-3}
Rubidium (37)	Rb-86		7×10^{-4}
Ruthenium (44)	Ru-97		4×10^{-3}
	Ru-103		8×10^{-4}
	Ru-105		1×10^{-3}
	Ru-106		1×10^{-4}
Samarium (62)	Sm-153		8×10^{-4}
Scandium (21)	Sc-46		4×10^{-4}
	Sc-47		9×10^{-4}
	Sc-48		3×10^{-4}
Selenium (34)	Se-75		3×10^{-3}
Silicon (14)	Si-31		9×10^{-3}
Silver (47)	Ag-105		1×10^{-3}
	Ag-110m		3×10^{-4}
	Ag-111		4×10^{-4}
Sodium (11)	Na-24		2×10^{-3}
Strontium (38)	Sr-85		1×10^{-3}
	Sr-89		1×10^{-4}
	Sr-91		7×10^{-4}
	Sr-92		7×10^{-4}
Sulfur (16)	S-35	9×10^{-8}	6×10^{-4}
Tantalum (73)	Ta-182		4×10^{-4}
Technetium (43)	Tc-96m		1×10^{-1}
	Tc-96		1×10^{-3}
Tellurium (52)	Te-125m		2×10^{-3}
	Te-127m		6×10^{-4}
	Te-127		3×10^{-3}
	Te-129m		3×10^{-4}
	Te-131m		6×10^{-4}
	Te-132		3×10^{-4}

Radiation Regulatory Agency

Terbium (65)	Tb-160		4X10 ⁻⁴
Thallium (81)	Tl-200		4X10 ⁻³
	Tl-201		3X10 ⁻³
	Tl-202		1X10 ⁻³
	Tl-204		1X10 ⁻³
Thulium (69)	Tm-170		5X10 ⁻⁴
	Tm-171		5X10 ⁻³
Tin (50)	Sn-113		9X10 ⁻⁴
	Sn-125		2X10 ⁻⁴
Tungsten (Wolfram) (74)	W-181		4X10 ⁻³
	W-187		7X10 ⁻⁴
Vanadium (23)	V-48		3X10 ⁻⁴
Xenon (54)	Xe-131m	4X10 ⁻⁶	
	Xe-133	3X10 ⁻⁶	
	Xe-135	1X10 ⁻⁶	
Ytterbium (70)	Yb-175		1X10 ⁻³
Yttrium (39)	Y-90		2X10 ⁻⁴
	Y-91m		3X10 ⁻²
	Y-91		3X10 ⁻⁴
	Y-92		6X10 ⁻⁴
	Y-93		3X10 ⁻⁴
Zinc (30)	Zn-65		1X10 ⁻³
	Zn-69m		7X10 ⁻⁴
	Zn-69		2X10 ⁻²
Zirconium (40)	Zr-95		6X10 ⁻⁴
	Zr-97		2X10 ⁻⁴

(See notes at end of appendix)

Beta and/or gamma emitting
radioactive material not
listed above with half-life
less than three years

1X10⁻¹⁰1X10⁻⁶

NOTE 1: Many radioisotopes disintegrate into isotopes which are also radioactive. In expressing the concentrations in Schedule A the activity stated is that of the parent isotope and takes into account the daughters.

^{1/} Values are given in Column I only for those materials normally used as gases

^{2/} $\mu\text{Ci/gm}$ are for solids

NOTE 2: For purposes of Section 303 where there is involved a combination of isotopes, the limit for the combination should be derived as follows: Determine for each isotope in the product the ratio between the concentration present in the product and the exempt concentration established in Schedule A for the specific isotope when not in combination. The sum of such ratios may not exceed "1" (i.e., unity).

EXAMPLE:

$$\frac{\text{Concentration of Isotope A in Product}}{\text{Exempt concentration of Isotope A}} + \frac{\text{Concentration of Isotope B in Product}}{\text{Exempt concentration of Isotope B}} \leq 1$$

Historical Note

Appendix A repealed, Schedule A adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

Exhibit B. Exempt Quantities

Material	Microcuries	Barium-133 (Ba-133)	10

Combinations of radioactive materials listed above:

For combinations of radioactive materials, consideration of the need for an emergency plan is required if the sum of the ratios of the quantity of each radioactive material authorized to the quantity listed for that material in Exhibit D exceeds 1.

NOTE: Waste packaged in Type B containers does not require an emergency plan.

Historical Note

Adopted effective December 20, 1985 (Supp. 85-6). Former Schedule D renumbered to Exhibit C; new Exhibit D renumbered from Schedule E and amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Exhibit D amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

Exhibit E. Application Information**1. Radioactive Material (RAM) Specific License Application Information**

An applicant shall provide the following information in a specific license application before a license is issued to the applicant. The Agency shall provide an application form to an applicant with a guide, when possible, to ensure that correct information is provided in the application:

Name and mailing address of applicant Use location

Radiation Regulatory Agency

Contact person	Telephone number
Users of RAM	Training of users
Radiation Safety Officer identity (RSO)	Duties of RSO
Description of RAM and uses	Description of radiation detection/measurement instruments and their calibration
Personnel monitoring	Bioassay program
Facility description	Survey program
Leak test program	Records management program
Instruction to personnel	Waste disposal program
Emergency procedures	Procedures for ordering, receiving, and opening packages
Description of animal use	Licensing fee provided with application
Copy of letter-of-intent to local governing body	Description of ALARA and quality management programs
Description of transportation procedures	Certifying signature
Legal structure of licensee's operation	
Other licensing requirements listed in: R12-1-310, R12-1-311, R12-1-312, R12-1-511, R12-1-703, and R12-1-1721	

2. Radioactive Material (RAM) General License Application Information

An applicant shall provide the following information on a registration certificate. The certificate will be validated and returned to the applicant if the information provided is complete.

Name and address	Telephone number
Where will the radioactive material be used	Address of use location
Description of radioactive material use	Date
Authorizing signature and printed name	Position of person signing the form

Historical Note

Adopted effective February 18, 1994 (Supp. 94-1). Former Schedule E renumbered to Exhibit D; new Exhibit adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

ARTICLE 4. STANDARDS FOR PROTECTION AGAINST IONIZING RADIATION

R12-1-401. Purpose

- A. Article 4 establishes standards for protection against ionizing radiation resulting from activities conducted according to licenses or registrations issued by the Agency. These rules are issued according to A.R.S. Title 30, Chapter 4, as amended.
- B. The requirements of Article 4 are designed to control the receipt, possession, use, transfer, and disposal of sources of radiation by any licensee or registrant so the total dose equivalent to an individual, including radiation exposure resulting from all sources of radiation other than radiation prescribed by a physician in the practice of medicine, radiation received while voluntarily participating in a medical research program, and background radiation, does not exceed the standards for protection against radiation prescribed in this Article. How-

ever, this Article does not limit actions that may be necessary to protect health and safety.

Historical Note

Former Rule Section D.1; Former Section R12-1-401 repealed, new Section R12-1-401 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-402. Scope

Except as specifically provided in other Articles of these rules, Article 4 applies to persons licensed or registered by the Agency to receive, possess, use, transfer, or dispose of sources of ionizing radiation.

Historical Note

Former Rule Section D.2; Former Section R12-1-402 repealed, new Section R12-1-402 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended subsection (A) effective June 26, 1987 (Supp. 87-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-403. Definitions

The following definitions apply in this Article, unless the context otherwise requires:

“Air-purifying respirator” means respiratory protective equipment with an air-purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air-purifying element.

“ALI” means annual limit on intake, the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the Reference Man that would result in a committed effective dose equivalent of 0.05 Sv (5 rem) or a committed dose equivalent of 0.5 Sv (50 rem) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in Appendix B, Table I, Columns 1 and 2.

“Assigned protection factor” or “APF” means the expected workplace level of respirator protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.

“Atmosphere-supplying respirator” means respiratory protective equipment that supplies the equipment user with breathing air from a source independent of the ambient atmosphere, and includes supplied-air respirators (SARs) and self-contained breathing apparatus (SCBA) units.

“Class” means a classification scheme for inhaled material according to the material’s rate of clearance from the lung. Materials are classified as D, W, or Y, which applies to a range of clearance half-times: for Class D, days, of less than 10 days, for Class W, weeks, from 10 to 100 days, and for Class Y, years, of greater than 100 days (see Introduction, Appendix B). For purposes of these rules, “lung class” and “inhalation class” are equivalent terms.

“Constraint” or “dose constraint” means a value above which specified licensee or registrant actions are required.

Radiation Regulatory Agency

“Critical group” means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.

“DAC” means derived air concentration, the concentration of a given radionuclide in air which, if breathed by Reference Man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of these rules, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in Appendix B, Table I, Column 3.

“DAC-hour” means derived air concentration-hour, the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee or registrant may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 0.05 Sv (5 rem).

“Declared pregnant woman” means a woman who has voluntarily informed the licensee or registrant in writing of her pregnancy and the estimated date of conception. The declaration remains in effect until the declared pregnant woman withdraws the declaration in writing or is no longer pregnant.

“Decommission” means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits release of the property for unrestricted use and termination of the license or release of the property under restricted conditions and the termination of the license.

“Demand respirator” means an atmosphere-supplying respiratory protective equipment that admits breathing air to the face piece only when a negative pressure is created inside the face piece by inhalation.

“Deterministic effect” (See “Nonstochastic effect”)

“Disposable respirator” means respiratory protective equipment for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent depletion, physical damage, or end-of-service-life renders it unsuitable for use. Examples of this type of device include a disposable half-mask respirator or a disposable, escape-only, self-contained breathing apparatus (SCBA).

“Distinguishable from background” means that the detectable concentration of a radionuclide is statistically greater than the background concentration of that radionuclide in the vicinity of a site or, in the case of structures, in similar materials using accepted measurement, survey, and statistical techniques.

“Dosimetry processor” means an individual or an organization that processes and evaluates individual monitoring devices in order to determine the radiation dose delivered to the monitoring devices.

“Filtering face piece (dust mask)” means a particulate respirator that operates under a negative pressure with a filter as an integral part of the face piece or with the entire face piece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

“Fit factor” means a quantitative estimate of the fit of a particular respirator to a specific individual, and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.

“Fit test” means the use of protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.

“Helmet” means a rigid respiratory inlet covering that also provides head protection against impact and penetration.

“Hood” means a respiratory inlet covering that completely covers the head, neck, and may also cover portions of the shoulders and torso.

“Inhalation class” (See “Class”)

“Loose-fitting face piece” means a respiratory inlet covering that is designed to form a partial seal with the face.

“Lung class” (See “Class”)

“Nationally tracked source” means a sealed source that contains a quantity equal to or greater than Category 1 or Category 2 levels of radioactive material listed in 10 CFR 20, Appendix E, revised January 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments. In this context sealed source does not mean material encapsulated solely for disposal, or nuclear material contained in any fuel assembly, sub-assembly, fuel rod, or fuel pellet.

“Negative pressure respirator (tight fitting)” means respiratory protective equipment in which the air pressure inside the face piece is negative during inhalation with respect to the ambient air pressure outside the respirator.

“Nonstochastic effect” means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of these rules, “deterministic effect” is an equivalent term and “threshold” means that which if not exceeded, poses no risk or likelihood of an effect to occur.

“Planned special exposure” means an infrequent exposure to radiation received while employed, but separate from and in addition to the annual occupational dose limits.

“Positive pressure respirator” means respiratory protective equipment in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.

“Powered air-purifying respirator” or “PAPR” means an air-purifying respirator that uses a blower to force the ambient air through air-purifying elements to the inlet covering.

“Pressure demand respirator” means a positive pressure, atmosphere-supplying respirator that admits breathing air to the face piece when the positive pressure is reduced inside the face piece by inhalation.

“Probabilistic effect” (See “Stochastic effect”)

“Qualitative fit test” or “QLFT” means a pass or fail fit test to assess the adequacy of respirator fit that relies on the individual’s response to the test agent.

“Quantitative fit test” or “QNFT” means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.

“Reference Man” means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health workers to standardize results of experiments and to relate biological insult to a common base. A description of Reference Man is contained in the International Commission on Radiological Protection report, ICRP

Radiation Regulatory Agency

Publication 23, "Report of the Task Group on Reference Man," published in 1975 by Pergamon Press, incorporated by reference and on file with the Agency and the Office of the Secretary of State. This incorporation by reference contains no future editions or amendments.

"Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, or other media at a site, resulting from activities under a licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials that remain at the site because of routine or accidental release of radioactive material at the site or a previous burial at the site, even if the licensee complied with reagent provisions of 12 A.A.C. 1.

"Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of air-borne radioactive materials.

"Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee or registrant.

"Self-contained breathing apparatus" or "SCBA" means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.

"Stochastic effect" means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without a threshold. Hereditary effects and cancer incidence are examples of stochastic effects. For purposes of these rules, "probabilistic effect" is an equivalent term.

"Supplied-air respirator" or "SAR" or "airline respirator" means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.

"Tight-fitting face piece" means a respiratory inlet covering that forms a complete seal with the face.

"User seal check" or "fit check" means an action conducted by the respirator user to determine if the respirator is properly seated to the face. Examples include negative pressure check, positive pressure check, irritant smoke check, or isoamyl acetate check.

"Very-high radiation area" means an area, accessible to individuals, in which radiation levels from radiation sources external to an individual's body could result in the individual receiving an absorbed dose in excess of 5 Gy (500 rad) in one hour at one meter from a radiation source or one meter from any surface that the radiation penetrates. (At very high doses received at high dose rates, units of absorbed dose, the gray and rad should be used, rather than units of dose equivalent, the sievert and rem).

"Weighting factor" w_T for an organ or tissue (T) means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of w_T are:

ORGAN DOSE WEIGHTING FACTORS	
Organ or Tissue	w_T
Gonads	0.25
Breast	0.15

Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30 ^a
Whole Body	1.00 ^b

^a 0.30 results from 0.06 for each of five "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

^b For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, $w_T = 1.0$, has been specified. The use of other weighting factors for external exposure will be approved by the Agency on a case-by-case basis.

Historical Note

Former Rule Section D.3, Former Section R12-1-403 repealed, new Section R12-1-403 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-404. Units and Quantities

- A. Each licensee or registrant shall use the Standard International (SI) units becquerel, gray, sievert, and coulomb per kilogram, or the special units curie, rad, rem, and roentgen, including multiples and subdivisions, and shall clearly indicate the units of all quantities on records required by this Article.
- B. The licensee or registrant shall make a clear distinction among the quantities entered on the records required by this Article, such as, total effective dose equivalent, total organ dose equivalent, shallow dose equivalent, lens dose equivalent, deep dose equivalent, or committed effective dose equivalent.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-405. Form of Records

- A. A licensee or registrant shall ensure that each record required by this Article is legible throughout the specified retention period. The record shall be the original, a reproduced copy, or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. As an alternative the record may be stored in electronic media capable of producing legible records during the required retention period. Records, such as letters, drawings, and specifications, shall include all pertinent information, such as stamps, initials, and signatures. A licensee or registrant shall maintain adequate safeguards against tampering with and loss of records.
- B. In the records required by this Article, a licensee or registrant may record quantities in SI units in parentheses following each of the required units, curie, rad, and rem, and include multiples and subdivisions.

Radiation Regulatory Agency

- C. Notwithstanding subsection (B), the licensee or registrant shall ensure that information is recorded in the International System of Units (SI) or in SI and the units specified in subsection (B) on each shipment manifest as required in R12-1-439(A).
- D. A licensee or registrant shall make a clear distinction among the quantities entered on the records required by this Section (e.g., total effective dose equivalent, shallow-dose equivalent, lens dose equivalent, deep-dose equivalent, committed effective dose equivalent).

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-406. Implementation

Any existing license or registration condition that is more restrictive than this Article remains in force until amendment or renewal of the license or registration.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-407. Radiation Protection Programs

- A. Each licensee or registrant shall develop, document, and implement a radiation protection program sufficient to ensure compliance with the provisions of Article 4.
- B. The licensee or registrant shall use, to the extent practical, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and public doses that are as low as is reasonably achievable (ALARA).
- C. The licensee or registrant shall, at intervals not to exceed 12 months, review the radiation protection program content and implementation.
- D. To implement the ALARA requirements in subsection (B), and notwithstanding the requirements in R12-1-416, each licensee or registrant governed by A.A.C. Title 12, Chapter 1, Article 3 shall limit air emissions of radioactive material to the environment so that individual members of the public likely to receive the highest dose will not receive a total effective dose equivalent in excess of 0.1mSv (10 mrem) per year from the emissions. If a licensee or registrant subject to this requirement exceeds this limit, the licensee or registrant shall report the incident to the Agency, in accordance with R12-1-444, and take prompt corrective action to prevent additional violations.
- E. Records.
1. Each licensee or registrant shall maintain records of the radiation protection program, including:
 - a. The provisions of the program; and
 - b. Audits and other reviews of program content and implementation.
 2. A licensee or registrant shall retain the records required by subsection (E)(1)(a) for three years after the termination of the license or registration. The licensee or registrant shall retain the records required by subsection (E)(1)(b) for three years after the record is made.
 3. The following licensees and registrants are exempt from the record requirements contained in this subsection:
 - B6-General Medical
 - C9-Gas Chromatograph

C10-General Industrial
 D15-Possession Only
 E2-X-ray Machine class B
 E3-X-ray Machine class C

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-408. Occupational Dose Limits for Adults

- A. Each licensee or registrant shall control the occupational dose to individual adults, except for planned special exposures required in R12-1-413, to the following dose limits:
1. An annual limit, which is the more limiting of:
 - a. The total effective dose equivalent being equal to 0.05 Sv (5 rem): or
 - b. The sum of the deep-dose equivalent and the committed dose equivalent to any individual organ or tissue other than the lens of the eye being equal to 0.5 Sv (50 rem).
 2. The annual limits to the lens of the eye, to the skin, and to the extremities which are:
 - a. A lens dose equivalent of 0.15 Sv (15 rem), and
 - b. A shallow dose equivalent of 0.5 Sv (50 rem) to the skin of the whole body or to the skin of any extremity.
- B. Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime. See R12-1-413.
- C. The assigned deep-dose equivalent and shallow-dose equivalent are, for the portion of the body receiving the highest exposure, determined as follows:
1. The deep-dose equivalent, lens dose equivalent, and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable.
 2. If a protective apron is worn and monitoring is conducted as specified in R12-1-419(B), the effective dose equivalent for external radiation shall be determined as follows:
 - a. If only one individual monitoring device is used and it is located at the neck outside the protective apron, and the reported dose exceeds 25% of the limit specified in R12-1-408(A), the reported deep-dose equivalent value multiplied by 0.3 is the effective dose equivalent for external radiation; or
 - b. When individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation is assigned the value of the sum of the deep-dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep-dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.

Radiation Regulatory Agency

3. When the external exposure is determined by measurement with an external personal monitoring device, the deep-dose equivalent must be used in place of the effective dose equivalent, unless the effective dose equivalent is determined by a dosimetry method approved by the Agency. The assigned deep-dose equivalent shall be determined for the part of the body that receives the highest exposure. The assigned shallow-dose equivalent is the dose averaged over the contiguous 10 square centimeters of skin that receives the highest exposure. The deep-dose equivalent, lens-dose equivalent, and shallow-dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable.
- D. Derived air concentration (DAC) and annual limit on intake (ALI) values are presented in Table I of Appendix B and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits.
- E. Notwithstanding the annual dose limits, the licensee shall limit the soluble Uranium intake by an individual to 10 milligrams in a week in consideration of chemical toxicity. See footnote 3 of Appendix B.
- F. The licensee or registrant shall reduce the dose that an individual may receive in the current year by the amount of occupational dose received while employed occupationally as a radiation worker by all previous employers. See R12-1-412.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-409. Summation of External and Internal Doses

- A. If a licensee or registrant is required to monitor according to both R12-1-419(B) and (C), the licensee or registrant shall add external and internal doses, and use the sum to demonstrate compliance with dose limits. If the licensee or registrant is required to monitor only according to R12-1-419(B) or only according to R12-1-419(C), summation is not required to demonstrate compliance with dose limits. The licensee or registrant may demonstrate compliance with the requirements for summation of external and internal doses according to subsections (B), (C), and (D). The dose equivalents for the lens of the eye, the skin, and the extremities are not included in the summation but are subject to separate limits (see R12-1-408(A)(2)).
- B. If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep-dose equivalent divided by the total effective dose equivalent limit, and one of the following, does not exceed unity (1):
 1. The sum of the fractions of the inhalation ALI for each radionuclide, or
 2. The total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000, or
 3. The sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues

(T) calculated from bioassay data using applicable biological models and expressed as a fraction of the annual limit. For purposes of this requirement, an organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, W_T , and the committed dose equivalent, $H_{T,50}$, per unit intake is greater than 10% of the maximum weighted value of $H_{T,50}$, that is, $w_T H_{T,50}$, per unit intake for any organ or tissue.

- C. If the occupationally exposed individual also receives an intake of radionuclides by oral ingestion greater than 10% of the applicable oral ALI, the licensee or registrant shall account for this intake and include it in demonstrating compliance with the limits.
- D. The licensee or registrant shall evaluate and, to the extent practical, account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for Hydrogen-3 and does not need to be evaluated or accounted for according to this subsection.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-410. Determination of External Dose from Airborne Radioactive Material

- A. Each licensee shall, when determining the dose from airborne radioactive material, include the contribution to the deep-dose equivalent, lens dose equivalent, and shallow dose equivalent from external exposure to the radioactive cloud. See Appendix B, footnotes 1 and 2.
- B. Airborne radioactivity measurements and DAC values shall not be used as the primary means to assess the deep-dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the cloud of airborne radioactive material is not relatively uniform. The determination of the deep-dose equivalent to an individual shall be based upon measurements using instruments or individual monitoring devices.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended effective June 20, 1990 (Supp. 90-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-411. Determination of Internal Exposure

- A. For purposes of assessing dose used to determine compliance with occupational dose equivalent limits, each licensee or registrant shall, when required according to R12-1-419, take suitable and timely measurements of:
 1. Concentrations of radioactive materials in air in work areas,
 2. Quantities of radionuclides in the body,
 3. Quantities of radionuclides excreted from the body, or
 4. Combinations of these measurements,
- B. Unless respiratory protective equipment is used, as provided in R12-1-425, or the assessment of intake is based on bioassays, the licensee or registrant shall assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.

Radiation Regulatory Agency

- C. When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior of the material in an individual is known, the licensee or registrant may:
1. Use that information to calculate the committed effective dose equivalent, and, if used, the licensee or registrant shall document that information in the individual's record;
 2. Upon prior approval of the Agency, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material, for example, aerosol size distribution or density; and
 3. Separately assess the contribution of fractional intakes of Class D, W, or Y compounds of a given radionuclide to the committed effective dose equivalent. See Appendix B.
- D. If the licensee or registrant chooses to assess intakes of Class Y material using the measurements given in subsection (A)(2) or (3), the licensee or registrant may delay the recording and reporting of the assessments for periods up to seven months, unless otherwise required by R12-1-444 or R12-1-445. This delay permits the licensee or registrant to make additional measurements basic to the assessments.
- E. If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours is either:
1. The sum of the ratios of the concentration to the appropriate DAC value, that is, D, W, or Y from Appendix B for each radionuclide in the mixture; or
 2. The ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.
- F. If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture is the most restrictive DAC of any radionuclide in the mixture.
- G. If a mixture of radionuclides in air exists, a licensee may disregard certain radionuclides in the mixture if:
1. The licensee uses the total activity of the mixture to demonstrate compliance with the dose limits in R12-1-408 and complies with the monitoring requirements in R12-1-419;
 2. The concentration of any radionuclide disregarded is less than 10% of its DAC; and
 3. The sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30%.
- H. When determining the committed effective dose equivalent, the following information may be considered:
1. In order to calculate the committed effective dose equivalent, the licensee may assume that the inhalation of 1 ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of 0.05 Sv (5 rem) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent.
 2. For an ALI and the associated DAC determined by the nonstochastic organ dose limit of 0.5 Sv (50 rem), the intake of radionuclides that would result in a committed effective dose equivalent of 0.05 Sv (5 rem), that is, the stochastic ALI, is listed in parentheses in Table I of Appendix B. The licensee may, as a simplifying assumption, use the stochastic ALI to determine committed effective dose equivalent. However, if the licensee or registrant uses the stochastic ALI, the licensee shall also demonstrate that the limit in R12-1-408(A)(1)(b) is met.
- repealed, new Section R12-1-411 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended subsection (F) effective June 26, 1987 (87-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).
- R12-1-412. Determination of Prior Occupational Dose**
- A. For each individual who is likely to receive in a year an occupational dose that requires monitoring according to R12-1-419 the licensee shall:
1. Determine the occupational radiation dose received during the current year, and
 2. Attempt to obtain the records of lifetime cumulative occupational radiation dose.
- B. Before permitting an individual to participate in a planned special exposure, the licensee or registrant shall determine:
1. The internal and external doses from all previous planned special exposures; and
 2. All doses in excess of the limits received during the lifetime of the individual, including doses received during accidents and emergencies; and
 3. All lifetime, cumulative, occupational radiation doses.
- C. In complying with the requirements of subsection (A), a licensee or registrant shall:
1. Accept, as a record of the occupational dose that the individual received during the current year, a written and signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual received during the current year; and
 2. Accept, as the record of lifetime cumulative radiation dose, an up-to-date Agency Form Y (available from the Agency) or equivalent, signed by the individual and countersigned by an appropriate official of the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant; and
 3. Obtain reports of the individual's dose equivalent from the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant, by telephone, telegram, facsimile, or letter. The licensee or registrant shall request a written verification of the dose data if the authenticity of the transmitted report cannot be established.
- D. Records.
1. The licensee or registrant shall record the exposure history, as required by subsection (A), on Agency Form Y (available from the Agency) or a similar clear and legible record of all the information required by this subsection. The form or record shall show each period in which the individual received occupational exposure to radiation or radioactive material and shall be signed by the individual who received the exposure. For each period for which the licensee or registrant obtains reports, the licensee or registrant shall use the dose shown in the report for preparing Agency Form Y or its equivalent. For any period in which the licensee or registrant does not obtain a report, the licensee or registrant shall place a notation on Agency Form Y or its equivalent indicating each period of time for which there is no data.
 2. The licensee or registrant is not required to reevaluate the separate external dose equivalents and internal committed

Historical Note

Former Rule Section D.101; Former Section R12-1-411

Radiation Regulatory Agency

dose equivalents or intakes of radionuclides assessed according to the rules in Article 4 in effect before January 1, 1994. Occupational exposure histories obtained and recorded on Agency Form Y or its equivalent before January 1, 1994, would not have included effective dose equivalent but may be used in the absence of specific information on the intake of radionuclides by the individual.

3. If the licensee or registrant is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee or registrant shall:
 - a. In establishing administrative controls under R12-1-408(F) for the current year, reduce the allowable dose limit for the individual by 12.5 mSv (1.25 rem) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and
 - b. Not subject the individual to planned special exposures.
4. The licensee or registrant shall retain current and prior records on Agency Form Y or its equivalent for three years after the Agency terminates each pertinent license or registration requiring this record. The licensee or registrant shall retain records used in preparing Agency Form Y or its equivalent for three years after the record is made.

Historical Note

Former Rule Section D.102; Former Section R12-1-412 repealed, new Section R12-1-412 adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-413. Planned Special Exposures

- A. A licensee or registrant may authorize an adult worker to receive doses in addition to and accounted for separately from the doses received under the limits specified in R12-1-408, provided that each of the following conditions is satisfied:
 1. The licensee or registrant authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the dose estimated from the planned special exposure are unavailable or impractical.
 2. The licensee or registrant, and employer if the employer is not the licensee or registrant, specifically authorizes the planned special exposure, in writing, before the exposure occurs.
 3. Before a planned special exposure, the licensee or registrant ensures that each individual involved is:
 - a. Informed in writing of the purpose of the planned special exposure;
 - b. Informed in writing of the estimated doses, associated potential risks, and specific radiation levels or other conditions that might be involved in performing the task; and
 - c. Instructed in the measures to be taken to keep the dose ALARA, considering other risks that may be present.
 4. Before permitting an individual to participate in a planned special exposure, the licensee or registrant shall ascertain prior doses as required by R12-1-412(B) for each individual involved.
 5. Subject to R12-1-408(B), the licensee or registrant shall not authorize a planned special exposure that would cause

an individual to receive a dose from all planned special exposures and all doses that exceed:

- a. The numerical value of any of the dose limits in R12-1-408(A) in any year, and
 - b. Five times the annual dose limits in R12-1-408(A) during the individual's lifetime.
6. The licensee or registrant shall maintain records of a planned special exposure in accordance with subsections (B) and (C) and submit a written report to the Agency within 30 days after the date of any planned special exposure conducted in accordance with this Section, informing the Agency that a planned special exposure was conducted and indicating the date the planned special exposure occurred and the information required by subsection (B).
 7. The licensee or registrant shall record the best estimate of the dose resulting from the planned special exposure in the individual's record and inform the individual, in writing, of the dose within 30 days after the date of the planned special exposure. The dose from a planned special exposure shall not be considered in controlling future occupational dose of the individual according to R12-1-408(A) but shall be included in evaluations required by subsections (A)(4) and (A)(5).

B. Records.

1. For each planned special exposure, the licensee or registrant shall maintain records that describe:
 - a. The exceptional circumstances requiring the use of a planned special exposure,
 - b. The name of the management official who authorized the planned special exposure and a copy of the signed authorization,
 - c. What actions were necessary,
 - d. Why the actions were necessary,
 - e. What precautions were taken to assure that doses were minimized in accordance with R12-1-407(B),
 - f. What individual and collective doses were expected,
 - g. The doses actually received in the planned special exposure, and
 - h. The process through which the employee involved in the planned special exposure has been informed in writing of the information contained in subsection (A)(3).
2. The licensee or registrant shall retain the records for three years after the Agency terminates each pertinent license or registration.

- C. A licensee shall submit a report to the Agency no later than 30 days after a planned special exposure conducted in accordance with subsection (A). The report shall contain the date of the planned exposure and the information required by subsection (B).

Historical Note

Former Rule Section D.103. Former Section R12-1-413 repealed, new Section R12-1-413 adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-414. Occupational Dose Limits for Minors

The annual occupational dose limits for minors are 10% of the annual occupational dose limits specified for adult workers in R12-1-408.

Historical Note

Former Rule Section D. 104; Former Section R12-1-414 repealed, new Section R12-1-414 adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3).

R12-1-415. Dose Equivalent to an Embryo or Fetus

- A.** A licensee or registrant shall ensure that the dose equivalent to an embryo or fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman, does not exceed 5 mSv (0.5 rem). Records shall be maintained according to R12-1-419(D)(4) and (5).
- B.** The licensee or registrant shall make efforts to avoid substantial variation above a uniform monthly exposure rate to a declared pregnant woman to satisfy the limit in subsection (A).
- C.** For purposes of this Section, the dose equivalent to the embryo or fetus is the sum of:
1. The deep-dose equivalent to the declared pregnant woman; and
 2. The dose equivalent to the embryo or fetus resulting from radionuclides in the embryo or fetus and radionuclides in the declared pregnant woman.
- D.** If the dose equivalent to the embryo or fetus is found to have exceeded 5 mSv (0.5 rem) or is within 0.5 mSv (0.05 rem) of this dose by the time the woman declares the pregnancy to the licensee or registrant, the licensee or registrant shall be deemed to be in compliance with subsection (A) if the additional dose equivalent to the embryo or fetus does not exceed 0.5 mSv (0.05 rem) during the remainder of the pregnancy.

Historical Note

Former Rule Section D. 105; Former Section R12-1-415 repealed, new Section R12-1-415 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-416. Dose Limits for Individual Members of the Public

- A.** Each licensee or registrant shall conduct operations so that:
1. The total effective dose equivalent to any individual member of the public from the licensed or registered operation does not exceed 1 mSv (0.1 rem) in a year, excluding the dose contribution from background radiation, medical administration of radiation, exposure to an individual who has been administered radioactive material and released in accordance with R12-1-719, voluntary participation in a medical research program, and the licensee's or registrant's disposal of radioactive material into sanitary sewerage in accordance with R12-1-436; and
 2. The dose in any unrestricted area from an external source excluding the dose contribution from an individual who has been administered radioactive material and released in accordance with R12-1-719, does not exceed 0.02 mSv (0.002 rem) in any one hour.
- B.** Registrants possessing radiation machines in operation before August 10, 1994, are exempt from the requirement in subsection (A)(1). Operation of these machines shall be conducted so that the total effective dose equivalent to any individual member of the public does not exceed 5 mSv (0.5 rem) in a year.
- C.** A licensee, registrant, or an applicant for a license or registration may apply for Agency authorization to operate with an

annual dose limit of 5 mSv (0.5 rem) for an individual member of the public. The application shall include the following information:

1. An explanation of the need for and the expected duration of operations in excess of the limit in subsection (A), and
 2. The licensee's or registrant's program to assess and control dose within the 5 mSv (0.5 rem) annual limit; and
 3. The procedures to be followed to maintain the dose in accordance with R12-1-407(B).
- D.** A licensee or registrant shall comply with the U.S. Environmental Protection Agency's applicable environmental radiation standards in 40 CFR 190, 2003 edition, published July 1, 2003, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, which are incorporated by reference, on file with the Agency and contain no future editions or amendments.
- E.** The Agency may impose additional restrictions on radiation levels in unrestricted areas and on the total quantity of radionuclides that a licensee or registrant may release in effluents in order to restrict the collective dose.
- F.** Each licensee or registrant shall make or cause to be made surveys of radiation levels in unrestricted areas and radioactive materials contained in effluents released to unrestricted areas.
- G.** Each licensee or registrant shall:
1. Demonstrate by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed or registered operation does not exceed the annual dose limit; or
 2. Demonstrate that:
 - a. The annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in Appendix B, Table II; and
 - b. If an individual were continually present in an unrestricted area, the dose from external sources would not exceed 0.02 mSv (0.002 rem) in an hour and 0.5 mSv (0.05 rem) in a year.
- H.** Upon approval from the Agency, the licensee or registrant may adjust the effluent concentration values in Appendix B, Table II for members of the public, to take into account the actual physical and chemical characteristics of the effluents, such as aerosol size distribution, solubility, density, radioactive decay equilibrium, and chemical form.
- I.** Each licensee or registrant shall maintain records sufficient to demonstrate compliance with the dose limit for individual members of the public and shall retain the records for three years after the Agency terminates each pertinent license or registration.

Historical Note

Former Rule Section D. 106; Former Section R12-1-416 repealed, new Section R12-1-416 adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-417. Testing for Leakage or Contamination of Sealed Sources

- A.** A licensee in possession of any sealed source shall ensure that:
1. Each sealed source, except as specified in subsection (B), is tested for leakage or contamination and the test results are received before the sealed source is put into use unless the licensee has a certificate from the transferor indicating that the sealed source was tested within six months before transfer to the licensee or registrant.

Radiation Regulatory Agency

2. Each sealed source that is not designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed six months or at alternative intervals approved by the Agency, after evaluation of information specified by R12-1-311(D)(2) and (D)(3), or equivalent information specified by an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission.
 3. Each sealed source that is designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed three months or at alternative intervals approved by the Agency, after evaluation of information specified by R12-1-311(D)(2) and (D)(3), or equivalent information specified by an Agreement State, a Licensing State, or the Nuclear Regulatory Commission.
 4. Each sealed source suspected of damage or leakage is tested for leakage or contamination before further use.
 5. Tests for leakage for all sealed sources, except brachytherapy sources manufactured to contain radium, are capable of detecting the presence of 185 Bq (0.005 μ Ci) of radioactive material on a test sample. The person conducting the test shall take test samples from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which contamination could accumulate. For a sealed source contained in a device, the person conducting the test shall obtain test samples when the source is in the "off" position.
 6. The test for leakage from brachytherapy sources containing radium is capable of detecting an absolute leakage rate of 37 Bq (0.001 μ Ci) of Radon-222 in a 24-hour period when the collection efficiency for Radon-222 and its daughters has been determined with respect to collection method, volume, and time.
 7. Tests for contamination from radium daughters are taken on the interior surface of brachytherapy source storage containers and are capable of detecting the presence of 185 Bq (0.005 μ Ci) of a radium daughter which has a half-life greater than four days.
- B.** A licensee need not perform tests for leakage or contamination on the following sealed sources:
1. Sealed sources containing only radioactive material with a half-life of less than 30 days;
 2. Sealed sources containing only radioactive material as a gas;
 3. Sealed sources containing 3.7 MBq (100 μ Ci) or less of beta or photon-emitting material or 370 kBq (10 μ Ci) or less of alpha-emitting material;
 4. Sealed sources containing only Hydrogen-3;
 5. Seeds of Iridium-192 encased in nylon ribbon; and
 6. Sealed sources, except teletherapy and brachytherapy sources, which are stored, not being used, and identified as in storage. The licensee shall test each sealed source for leakage or contamination and receive the test results before any use or transfer unless it has been tested for leakage or contamination within six months before the date of use or transfer.
- C.** Persons specifically authorized by the Agency, an Agreement State, a Licensing State, or the U.S. Nuclear Regulatory Commission shall perform tests for leakage or contamination from sealed sources.
- D.** A licensee shall maintain for Agency inspection test results in units of becquerel or microcurie.
- E.** The following is considered evidence that a sealed source is leaking:
1. The presence of 185 Bq (0.005 μ Ci) or more of removable contamination on any test sample.
 2. Leakage of 37 Bq (0.001 μ Ci) of Radon-222 per 24 hours for brachytherapy sources manufactured to contain radium.
 3. The presence of removable contamination resulting from the decay of 185 Bq (0.005 μ Ci) or more of radium.
- F.** A licensee shall immediately withdraw a leaking sealed source from use and shall take action to prevent the spread of contamination. The leaking sealed source shall be repaired or disposed of in accordance with this Article.
- G.** A licensee shall file a report with the Agency within five days if the test for leakage or contamination indicates a sealed source is leaking or contaminated. The report shall include the equipment involved, the test results, and the corrective action taken.
- H.** A licensee shall maintain records of the tests for leakage required in subsection (A) for three years after the records are made.

Historical Note

Former Rule Section D. 107; Former Section R12-1-417 repealed, new Section R12-1-417 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-418. Surveys and Monitoring

- A.** Each licensee or registrant shall make, or cause to be made, surveys if surveys are:
1. Necessary for the licensee or registrant to comply with Article 4, and
 2. Reasonable under the circumstances to evaluate:
 - a. The magnitude and extent of radiation levels, and
 - b. Concentrations or quantities of residual radioactivity, and
 - c. The potential radiological hazards of the radiation levels and residual radioactivity detected.
- B.** All personnel dosimeters, except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to any extremity, that require processing to determine the radiation dose and that are used by licensees and registrants to comply with R12-1-408, with other applicable provisions of these rules, or with conditions specified in a license or registration shall be processed and evaluated by a dosimetry processor:
1. Holding current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology, according to NVLAP procedures published March 1994 as NIST Handbook 150, and NIST Handbook 150-4, published August 1994, which is incorporated by reference, published by the U.S. Government Printing Office, Washington D.C. 20402-9325, and on file with the Agency. The material incorporated by reference contains no future editions or amendments; and
 2. Approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.
- C.** The licensee or registrant shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device and that personnel monitoring devices are issued to, and used by only the individual to whom the monitoring device has been first issued during any reporting period.

Radiation Regulatory Agency

- D.** A licensee shall ensure that survey instruments and personnel dosimeters that are used to make quantitative measurements are calibrated in accordance with R12-1-449.
- E.** Records.
1. Each licensee or registrant shall maintain records showing the results of surveys required by this Section and R12-1-433(B). The licensee or registrant shall retain these records for three years after the record is made.
 2. The licensee or registrant shall retain each of the following records for three years after the Agency terminates the license or registration:
 - a. Records of the survey results used to determine the dose from external sources of radiation, in the absence of or in combination with individual monitoring data, and provide an assessment of individual dose equivalents;
 - b. Records of the results of measurements and calculations used to determine individual intakes of radioactive material and to assess an internal dose;
 - c. Records showing the results of air sampling, surveys, and bioassays required according to R12-1-425(A)(3)(a) and (b); and
 - d. Records of the measurement and calculation results used to evaluate the release of radioactive effluents to the environment.

Historical Note

Former Rule Section D. 108; Former Section R12-1-418 repealed, new Section R12-1-418 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-419. Conditions Requiring Individual Monitoring of External and Internal Occupational Dose

- A.** Each licensee or registrant shall monitor exposures from sources of radiation at levels sufficient to demonstrate compliance with the occupational dose limits of this Article.
- B.** At minimum each licensee or registrant shall supply and require the use of individual monitoring devices by the following personnel:
1. Adults likely to receive, in one year, an intake in excess of 10% of the applicable ALI in Table I, Columns 1 and 2, of Appendix B;
 2. Minors and declared pregnant women likely to receive, in one year, a committed effective dose equivalent in excess of 0.5 mSv (0.05 rem);
 3. Adults likely to receive, in one year from radiation sources external to the body, a dose in excess of 10 percent of the limits in R12-1-408(A);
 4. Minors likely to receive, in one year, from radiation sources external to the body, a deep dose equivalent in excess of 1 mSv (0.1 rem), a lens dose equivalent in excess of 1.5 mSv (0.15 rem), or a shallow dose equivalent to the skin or to the extremities in excess of 5 mSv (0.5 rem);
 5. Declared pregnant women likely to receive during the entire pregnancy, from radiation sources external to the body, a deep dose equivalent in excess of 1 mSv (0.1 rem) (Note: All of the occupational doses in R12-1-408 continue to be applicable to the declared pregnant worker as long as the embryo/fetus dose limit is not exceeded.); and
6. Individuals entering a high or very high radiation area;
 7. Individuals operating mobile x-ray equipment, except dental intraoral systems, as described in R12-1-608;
 8. Individuals holding animals for diagnostic x-ray procedures, as described in R12-1-613;
 9. Individuals servicing enclosed beam x-ray systems with bypassed interlocks, as described in R12-1-803;
 10. Individuals operating open beam fluoroscopic systems and ancillary personnel working in the room when the fluoroscopic system is in use, except when relieved of this requirement by registration condition;
 11. Individuals performing well logging, as described in Article 17; and
 12. Individuals, wearing a finger or wrist individual monitoring device, during the operation of an open-beam or hand held analytical x-ray system or equipment with no safety devices as described in R12-1-806(C) and (F).
 13. Individuals, wearing a finger or wrist individual monitoring device, performing repairs that require the presence of a primary beam of the analytical x-ray system or equipment, as described in R12-1-806(C) and (F).
- C.** Each licensee shall monitor the occupational intake of radioactive material by and assess the committed effective dose equivalent to:
1. Adults likely to receive, in one year, an intake in excess of 10 percent of the applicable ALI in Table I, Columns 1 and 2, of Appendix B;
 2. Minors likely to receive, in one year, a committed effective dose equivalent in excess of 1 mSv (0.1 rem); and
 3. Declared pregnant women likely to receive, during the entire pregnancy, a committed effective dose equivalent in excess of 1 mSv (0.1 rem).
- D.** Each licensee or registrant shall require that all individual monitoring devices be located on individuals according to the following requirements:
1. An individual monitoring device, used to obtain the dose equivalent to an embryo or fetus of a declared pregnant woman according to R12-1-415, shall be located under the protective apron at the waist. A qualified expert shall be consulted to determine the dose equivalent to the embryo or fetus if this individual monitoring device has a monthly reported dose equivalent value that exceeds 0.5 millisieverts (50 millirem). For purposes of this subsection, the value for determining the dose equivalent to an embryo or fetus under R12-1-415(C), for occupational exposure to radiation from medical fluoroscopic equipment, is the value reported by the individual monitoring device worn at the waist underneath the protective apron, which has been corrected for the particular individual and the work environment by a qualified expert.
 2. An individual monitoring device used for lens dose equivalent shall be located at the neck or an unshielded location closer to the eye, outside the protective apron.
 3. If only one individual monitoring device is used to determine the effective dose equivalent for external radiation, according to R12-1-408(C)(2)(a), the device shall be located at the neck outside the protective apron. If a second individual monitoring device is used for the same purpose, it shall be located under the protective apron at the waist. A second individual monitoring device is required for a declared pregnant woman.

Radiation Regulatory Agency

4. An individual, wearing an extremity personnel monitoring device, during the operation of an open-beam or hand-held analytical x-ray system with no safety devices or an individual performing repairs in the presence of a primary beam of the analytical x-ray system or equipment, as described in R12-1-806(C) and (F), shall wear the device on the individual's finger or wrist.
- E. Records.**
1. Each licensee or registrant shall maintain records of doses received by all individuals for whom monitoring is required according to this Section, and records of doses received during planned special exposures, accidents, and emergency conditions. Assessments of dose equivalent and records made using units in effect before January 1, 1994, need not be changed. These records shall include, when applicable:
 - a. The deep-dose equivalent to the whole body, lens dose equivalent, shallow-dose equivalent to the skin, and shallow-dose equivalent to the extremities;
 - b. The estimated intake of radionuclides;
 - c. The committed effective dose equivalent assigned to the intake of radionuclides;
 - d. The specific information used to assess the committed effective dose equivalent according to R12-1-411(A) and (C), and when required R12-1-419.
 - e. The total effective dose equivalent when required by R12-1-409; and
 - f. The total of the deep-dose equivalent and the committed dose to the organ receiving the highest total dose;
 2. The licensee or registrant shall make entries of the records specified in subsection (D)(1), at intervals not to exceed one year;
 3. The licensee or registrant shall maintain at the inspection site the records specified in subsection (D)(1), on Agency Form Z (available from the Agency), in accordance with the instructions for Agency Form Z, or in clear and legible records containing all the information required by this subsection;
 4. The licensee or registrant shall maintain the records of dose to an embryo or fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file but may be maintained separately from the dose records;
 5. The licensee or registrant shall retain each required form or record for three years after the Agency terminates each pertinent license or registration requiring the record.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-420. Control of Access to High Radiation Areas

- A.** A licensee or registrant shall ensure that each entrance or access point to a high radiation area has one or more of the following features:
1. A control device that, upon entry into the area, causes the level of radiation to be reduced below the level at which an individual might receive a deep-dose equivalent of 1 mSv (0.1 rem) in one hour at 30 centimeters from the source from any surface that the radiation penetrates;
 2. A control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or
 3. Entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entity.
- B.** In place of the controls required by subsection (A) for a high radiation area, the licensee or registrant may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.
- C.** The licensee or registrant may apply to the Agency for approval of alternative methods for controlling access to high radiation areas.
- D.** The licensee or registrant shall establish the controls required by subsections (A) and (C) in a way that does not prevent individuals from leaving a high radiation area.
- E.** The licensee or registrant is not required to control each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation, provided that:
1. The packages do not remain in the area longer than three days, and
 2. The dose rate at 1 meter from the external surface of any package does not exceed 0.1 mSv (0.01 rem) per hour.
- F.** The licensee or registrant is not required to control entrance or access to rooms or other areas in hospitals solely because of the presence of patients containing radioactive material, provided that there are personnel in attendance who are taking the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the established limits in Article 4 and operate in accordance with R12-1-407(B) and the provisions of the licensee's or registrant's radiation protection program.
- G.** The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a high radiation area if the registrant has met all the specific requirements for access and control specified in other applicable Articles of these rules, such as Article 5 for industrial radiography, Article 6 for x-rays in the healing arts, and Article 9 for particle accelerators.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-421. Control of Access to Very-high Radiation Areas

- A.** In addition to the requirements in R12-1-420, a licensee or registrant shall institute measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at 5 Gy (500 rad) or more in one hour at 1 meter from a source or from any surface that the radiation penetrates. This requirement does not

Radiation Regulatory Agency

apply to rooms or areas in which diagnostic x-ray systems are the only source of radiation or non-self-shielded irradiators.

- B. The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a very high radiation area, described in subsection (A), if the registrant has met all requirements for access and control specified in other applicable Articles of these rules, such as Article 5 for industrial radiography, Article 6 for x-rays in the healing arts, and Article 9 for particle accelerators.
- C. Each licensee or registrant shall maintain records of tests made according to R12-1-422(B)(9) on entry control devices for very-high radiation areas. These records shall include the date, time, and results of each test of function.
- D. The licensee or registrant shall retain the records required by this Section for three years after the record is made.

Historical Note

Former Rule Section D.201; Former Section R12-1-421 repealed, new Section R12-1-421 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-422. Control of Access to Irradiators (Very-high Radiation Areas)

- A. This Section applies to licensees or registrants with sources of radiation in non-self-shielded irradiators. This Section does not apply to sources of radiation that are used in teletherapy, industrial radiography, or completely self-shielded irradiators in which the source of radiation is both stored and operated within the same shielding radiation barrier and, in the designed configuration of the irradiator, is always physically inaccessible to any individual and cannot create high levels of radiation in an area that is accessible to any individual.
 - B. A licensee or registrant shall ensure that each area in which radiation levels may exceed 5 Gy (500 rad) in one hour at 1 meter from a source that is used to irradiate materials meets the following requirements:
 - 1. Each entrance or access point shall be equipped with entry control devices that:
 - a. Function automatically to prevent any individual from inadvertently entering a very high radiation area;
 - b. Permit deliberate entry into the area only after a control device is actuated that causes the radiation level within the area, from the source of radiation, to be reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of 1 mSv (0.1 rem) in one hour; and
 - c. Prevent operation of the source of radiation if it would produce radiation levels in the area that could result in a deep-dose equivalent to an individual in excess of 1 mSv (0.1 rem) in one hour.
 - 2. If the control devices required in subsection (B)(1) fail to function, additional control devices shall be provided so that:
 - a. The radiation level within the area, from the source of radiation, is reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of 1 mSv (0.1 rem) in one hour; and
 - b. Conspicuous visible and audible alarm signals are generated so that an individual entering the area is aware of the hazard. The individual who enters the very-high radiation area after an alarm signals shall be familiar with the process and equipment. Before entering, the individual shall ensure that a second individual is present and aware of the first person's actions.
3. The licensee or registrant shall provide control devices so that, upon failure or removal of physical radiation barriers other than the sealed source's shielded storage container:
 - a. The radiation level from the source of radiation is reduced below that at which it would be possible for an individual to receive a deep-dose equivalent in excess of 1 mSv (0.1 rem) in one hour, and
 - b. Conspicuous visible and audible alarm signals are generated so that potentially affected individuals are aware of the hazard. Potentially affected individuals shall notify the licensee or registrant of the failure or removal of the physical barriers.
 4. When the shield for stored sealed sources is a liquid, the licensee or registrant shall provide means to monitor the integrity of the shield and to signal, automatically, loss of adequate shielding.
 5. Physical radiation barriers that comprise permanent structural components, such as walls, that have no credible probability of failure or removal in ordinary circumstances need not meet the requirements of subsections (B)(3) and (4).
 6. The licensee or registrant shall equip each area with devices that will automatically generate conspicuous visible and audible alarm signals to alert personnel in the area before the source of radiation can be put into operation and in time for any individual in the area to operate a clearly identified control device, installed in the area, and which can prevent the source of radiation from being put into operation.
 7. The licensee or registrant shall control each area by use of administrative procedures and devices necessary to ensure that the area is cleared of personnel before each use of the source of radiation.
 8. The licensee or registrant shall check each area by radiation measurement to ensure that, before the first individual's entry into the area after any use of the source of radiation, the radiation level from the source of radiation in the area will not expose an individual to a deep-dose equivalent in excess of 1 millisievert (0.1 rem) in one hour.
 9. The licensee or registrant shall test the entry control devices required in subsection (B)(1) for proper functioning and keep records according to R12-1-421.
 - a. Testing shall be conducted before initial operation with the source of radiation on any day, unless operations were continued uninterrupted from the previous day;
 - b. Testing shall be conducted before resumption of operation of the source of radiation after any unintentional interruption;
 - c. The licensee or registrant shall submit to the Agency a schedule of testing; and
 - d. The licensee or registrant shall include in the schedule a listing of the periodic testing that will be followed.
 10. The licensee or registrant shall not conduct operations, other than those necessary to place the source of radiation in a safe condition or effect repairs on controls, unless control devices are functioning properly.
 11. The licensee or registrant shall control entry and exit portals that are used in transporting materials to and from the

Radiation Regulatory Agency

irradiation area, and that are not intended for use by personnel, with devices and administrative procedures necessary to physically protect and warn against inadvertent entry by an individual through one of the portals. Exit portals for irradiated materials shall be equipped to detect and signal the presence of any uncontained radioactive material that is carried toward an exit and automatically prevent contained radioactive material from being carried out of the area.

- C. A licensee, registrant, or applicant seeking a license or registration for a source of radiation within the purview of subsection (B) that will be used in a variety of positions or in locations, such as open fields or forests, that make it impractical to comply with certain requirements of subsection (B) may apply to the Agency for approval of alternative safety measures. Alternative safety measures shall provide personnel protection at least equivalent to that specified in subsection (B). At least one of the alternative measures shall be an entry-preventing interlock control, based on a measurement of the radiation that ensures the absence of high radiation levels before an individual can gain access to the area where the sources of radiation are used.
- D. A licensee or registrant shall provide the entry control devices required by subsections (B) and (C) in such a way that no individual will be prevented from leaving the area.
- E. Records.
1. Each licensee or registrant shall maintain records of tests made according to subsection (B)(9) on entry control devices for very-high radiation areas. These records shall include the date and results of each test of function.
 2. The licensee or registrant shall retain the records for three years from the date the record is made.

Historical Note

Former Rule Section D.202; Former Section R12-1-422 repealed, new Section R12-1-422 adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-423. Use of Process or Other Engineering Controls

A licensee shall use, to the extent practicable, process or other engineering controls, such as containment, decontamination, or ventilation, to control the concentration of radioactive material in air.

Historical Note

Former Rule Section D.203. Former Section R12-1-423 repealed, new Section R12-1-423 adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-424. Use of Other Controls

- A. If it is not practical to apply process or other engineering controls to control concentrations of radioactive material in the air to values below those that define an airborne radioactivity area, the licensee shall, consistent with maintaining the total effective dose equivalent according to R12-1-407(B), increase monitoring and limit intakes by one or more of the following means:
1. Control access,
 2. Limit exposure times,
 3. Use respiratory protection equipment, or

4. Use other controls.

- B. If the licensee performs an ALARA analysis to determine whether or not respirators should be used, the licensee may consider safety factors other than radiological factors. The licensee shall also consider the impact of respirator use on workers' industrial health and safety.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4).

R12-1-425. Use of Individual Respiratory Protection Equipment

- A. If a licensee assigns or permits the use of respiratory protection equipment to limit the intake of radioactive material,
1. Except as provided in subsection (A)(2), the licensee shall use only respiratory protection equipment that is tested and certified by the National Institute for Occupational Safety and Health (NIOSH).
 2. If the licensee wishes to use equipment that has not been tested or certified by NIOSH, or for which there is no schedule for testing or certification, the licensee shall submit an application to the Agency and request authorization for use of this equipment, except as otherwise provided in this Section. The licensee shall provide evidence with the application that the material and performance characteristics of the equipment provide the asserted degree of protection under anticipated conditions of use. The licensee shall demonstrate the degree of protection by providing reliable test information.
 3. The licensee shall implement and maintain a respiratory protection program that includes:
 - a. Air sampling sufficient to identify the potential hazard, permit proper equipment selection, and estimate doses;
 - b. Surveys and bioassays, as necessary, to evaluate actual intakes;
 - c. Testing of respirators for operability (user seal check for face sealing devices and functional check for other devices) immediately before each use;
 - d. Written procedures regarding:
 - i. Monitoring, including air sampling and bioassays;
 - ii. Supervision and training of respirator users;
 - iii. Fit testing;
 - iv. Respirator selection;
 - v. Breathing air quality;
 - vi. Inventory and control;
 - vii. Storage, issuance, maintenance, repair, testing, and quality assurance of respiratory protection equipment;
 - viii. Recordkeeping; and
 - ix. Limitations on periods of respirator use and relief from respirator use;
 - e. Determination by a physician that each individual user is able to use respiratory protection equipment:
 - i. Before the initial fitting of a face-sealing respirator;
 - ii. Before the first field use of a non-face-sealing respirator, and
 - iii. Every 12 months after initial fitting or first use, or periodically at a frequency determined by a physician.

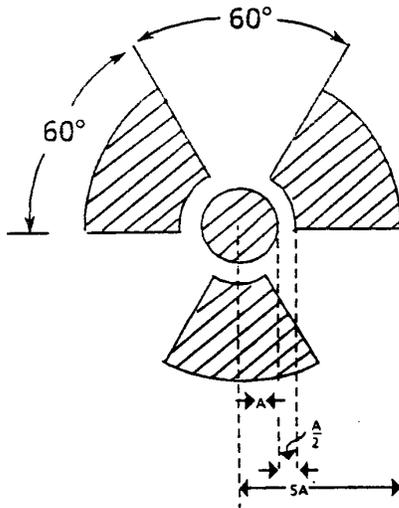

Radiation Regulatory Agency

- f. Fit testing, with a fit factor ≥ 10 times the APF for a negative pressure device and a fit factor ≥ 500 for any positive pressure, continuous flow, and pressure-demand device, before the first field use of tight-fitting, face-sealing respirators and periodically after first use at least yearly. The licensee shall perform fit testing with the face piece operating in the negative pressure mode.
4. The licensee shall advise each respirator user that the user may leave the area at any time for relief from respirator use, in the event of equipment malfunction, physical or psychological distress, procedural or communication failure, significant deterioration of operating conditions, or any other condition that might require relief.
 5. The licensee shall consider manufacturer limitations regarding respirator type and mode of use. When selecting a respiratory device, the licensee shall provide for vision correction, adequate communication, low temperature work environments, and the concurrent use of other safety or radiological protection equipment. The licensee shall use equipment in a manner that does not interfere with the proper operation of the respirator.
 6. The licensee shall provide standby rescue persons whenever one-piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty extricating himself or herself. The licensee shall equip standby rescue persons with respiratory protection devices or other apparatus designed for potential hazards and anticipated conditions of use. The standby rescue persons shall observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio, or other suitable means), and be immediately available to assist them in case of a failure of the air supply or for any other reason that requires relief from distress. The licensee shall provide at least one standby rescue person for every five workers, who is immediately available to assist any worker using this type of equipment and provide effective emergency rescue if needed.
 7. The licensee shall supply atmosphere-supplying respirators with respirable air of grade D quality or better as defined by the Compressed Gas Association in publication G-7.1, "Commodity Specification for Air," 1997 and included in the regulations of OSHA (29 CFR 1910.134(j)(1)(ii)(A) through (E), July 1, 2003, incorporated by reference and on file with the Agency, containing no future editions or amendments). Grade D quality air criteria include:
 - a. Oxygen content (v/v) of 19.5-23.5%;
 - b. Hydrocarbon (condensed) content of 5 milligrams per cubic meter of air or less;
 - c. Carbon monoxide (CO) content of 10 ppm or less;
 - d. Carbon dioxide content of 1,000 ppm or less; and
 - e. Lack of noticeable odor.
 8. The licensee shall ensure that no objects, materials, or substances, such as facial hair, or any conditions that interfere with the face-to-face piece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tight-fitting respirator face piece.
 9. In estimating the dose to individuals from intake of airborne radioactive materials, the licensee shall use the concentration of radioactive material in the air that is inhaled when respirators are worn, which is determined by dividing the ambient concentration in air without respiratory protection by the assigned protection factor. If the dose is later found to be greater than the estimated dose, the licensee shall modify the calculation using the corrected value. If the dose is later found to be less than the estimated dose, the licensee may modify the calculation using the corrected value.
- B. The licensee shall use Appendix A to select equipment and associated assigned protection factors.
 - C. A licensee shall apply to the Agency for authorization to use assigned protection factors in excess of those specified in Appendix A. To apply for authorization the licensee shall:
 1. State the reason for the higher protection factors; and
 2. Demonstrate that the requested respiratory protective equipment provides the higher protection factors under the proposed conditions of use.
 - D. The licensee shall notify the Agency in writing at least 30 days before the date that respiratory protective equipment is first used according to subsection (A) or (C).
- Historical Note**
Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4).
- R12-1-426. Security of Stored Sources of Radiation**
A licensee or registrant shall secure from unauthorized removal or access licensed or registered sources of radiation that are stored in unrestricted areas.
- Historical Note**
Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).
- R12-1-427. Control of Sources of Radiation Not in Storage**
- A. A licensee shall control and maintain constant surveillance of licensed radioactive material that is in an unrestricted area and is not in storage or in a patient.
 - B. A registrant shall maintain control of radiation machines that are in an unrestricted area and not in storage.
- Historical Note**
Adopted effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).
- R12-1-428. Caution Signs**
- A. Unless otherwise authorized by the Agency, a licensee or registrant shall use the symbol prescribed by this Section with the colors magenta, or purple, or black on yellow background as the standard radiation symbol. The symbol prescribed is the three-bladed design as follows:

RADIATION SYMBOL

 1. Cross-hatched area is to be magenta, purple, or black; and

2. The background is to be yellow.

- B. Notwithstanding the requirements of subsection (A), licensees or registrants are authorized to label sources of radiation, source holders, or device components containing sources of radiation that are subjected to high temperatures, with conspicuously etched or stamped radiation caution symbols that lack the color scheme required in subsection A.
- C. In addition to the contents of signs and labels prescribed in this Article, the licensee or registrant shall provide, on or near the required signs and labels, additional information to make individuals aware of potential radiation exposures and to minimize the exposures.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-428 repealed, new Section R12-1-428 adopted effective June 26, 1987 (Supp. 87-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-429. Posting

- A. A licensee or registrant shall post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIATION AREA."
- B. The licensee or registrant shall post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, HIGH RADIATION AREA" or "DANGER, HIGH RADIATION AREA."
- C. The licensee or registrant shall post each very-high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "GRAVE DANGER, VERY HIGH RADIATION AREA."
- D. The licensee shall post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, AIRBORNE RADIOACTIVITY AREA" or "DANGER, AIRBORNE RADIOACTIVITY AREA."
- E. The licensee shall post each area or room in which there is used or stored an amount of licensed material exceeding 10 times the quantity of licensed material specified in Appendix C with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL(S)" or "DANGER, RADIOACTIVE MATERIAL(S)."

Historical Note

Former Section R12-1-429 repealed effective June 30, 1977 (Supp. 77-3). New Section 12-1-429 adopted effective

June 26, 1987 (Supp. 87-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-430. Exceptions to Posting Requirements

- A. A licensee or registrant is not required to post caution signs in areas or rooms containing sources of radiation for periods of less than eight hours, if each of the following conditions is met:
1. The sources of radiation are constantly attended during these periods by an individual who takes precautions necessary to prevent exposure of individuals to sources of radiation in excess of limits established in this Article; and
 2. The area or room is subject to the licensee's or registrant's control.
- B. A licensee or registrant is not required to post a caution sign in a room or other area in a hospital that is occupied by an individual who has been administered radioactive material, if the individual meets the criteria for release in R12-1-719.
- C. A licensee or registrant is not required to post a caution sign in a room or area because of the presence of a sealed source, provided the radiation level at 30 centimeters from the surface of the sealed source container or housing does not exceed 0.05 mSv (0.005 rem) per hour.
- D. A hospital or clinic licensee is exempt from the posting requirements in R12-1-429 for a teletherapy room if:
1. Access to the room is controlled according to R12-1-731; and
 2. Personnel in attendance take necessary precautions to prevent the inadvertent exposure of workers, other patients, and members of the public to radiation that exceeds the limits established in this Chapter.
- E. A registrant is not required to post a caution sign in a room or area because of the presence of radiation machines used solely for diagnosis in the healing arts.

Historical Note

Former Section R12-1-430 repealed effective June 30, 1977 (Supp. 77-3). New Section R12-1-430 adopted effective June 26, 1987 (Supp. 87-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-431. Labeling Containers and Radiation Machines

- A. A licensee shall ensure that each container of licensed material is labeled with a durable, clearly visible radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL." The label shall also provide information, such as the radionuclides present, an estimate of the quantity of radioactivity, the date for which the radioactivity is estimated, radiation level, kind of material, and mass enrichment, to permit an individual handling or using a container, or working in the vicinity of a container, to take precautions to avoid or minimize exposure.
- B. Before removal or disposal of an empty, uncontaminated container to an unrestricted area, each licensee shall remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.
- C. Each registrant shall ensure that each radiation machine is labeled in a conspicuous manner to caution an individual that radiation is produced when it is energized.

Radiation Regulatory Agency

D. A licensee shall label each syringe and vial that contains a radiopharmaceutical used in the practice of medicine with the radiopharmaceutical content. Each syringe shield and vial shield shall be labeled, unless the label on the syringe or vial is visible when shielded. The label shall contain the radiopharmaceutical name or its abbreviation, the clinical procedure to be performed, or the name of the person being administered the radiopharmaceutical. Color-coding syringe shields and vial shields does not meet the labeling requirement.

Historical Note

Former Section R12-1-431 repealed effective June 30, 1977 (Supp. 77-3). New Section R12-1-431 adopted effective June 26, 1987 (Supp. 87-2). Amended effective November 5, 1993 (Supp. 93-4). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-432. Labeling Exemptions

A licensee is not required to label:

1. Containers holding licensed material in quantities less than the quantities listed in Appendix C;
2. Containers holding licensed material in concentrations less than those specified in Table III of Appendix B;
3. Containers attended by an individual who takes precautions necessary to prevent exposure of individuals to radiation in excess of the limits established in this Article;
4. Containers holding radioactive material that do not exceed the limits for excepted quantity or article as defined and limited in 49 CFR 173.403, and 173.421 through 173.424, and are transported, packaged, and labeled in accordance with 49 CFR 172.436 through 172.440 (Revised October 1, 2007, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.);
5. Containers that are accessible only to individuals authorized to handle, use, or work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record, retained as long as the container is in use for the purpose indicated on the record. (Examples of containers of this type are containers in locations such as water-filled canals, storage vaults, or hot cells.); or
6. Installed manufacturing or process equipment, such as piping and tanks.

Historical Note

Repealed effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-433. Procedures for Receiving and Opening Packages

A. Each licensee who expects to receive a package containing quantities of radioactive material in excess of a Type A quantity, as defined in 10 CFR 71.4, January 1, 2005, which is incorporated by reference, published by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, and on file with the Agency. The material incorporated by reference contains no future editions or amendments. The licensee shall make arrangements to receive:

1. The package when the carrier offers it for delivery; or

2. The notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.

B. Each licensee shall:

1. Monitor the external surfaces of a package, labeled with a Radioactive White I, Yellow II, or Yellow III as specified in 49 CFR 172.403 and 172.436 through 172.440, October 1, 2004, which are incorporated by reference, published by the Office of Federal Register, National Archives and Records Administration, Washington, D.C. 20408, and on file with the Agency. The material incorporated by reference contains no future editions or amendments. The licensee shall test the package for radioactive contamination, unless the package contains only radioactive material in the form of gas or in special form, as defined in R12-1-102; and
2. Monitor the external surfaces of a package, labeled with a Radioactive White I, Yellow II, or Yellow III as specified in subsection (B)(1), for radiation levels unless the package contains quantities of radioactive material that are less than or equal to the Type A quantity, defined in 10 CFR 71, and referenced in subsection (A); and
3. Monitor all packages known to contain radioactive material for radioactive contamination and radiation levels if there is evidence of degradation of package integrity, such as packages that are crushed, wet, or damaged.

C. The licensee shall perform the monitoring required by subsection (B) as soon as practical after receipt of the package, but not later than three hours after the package is received at the licensee's facility if it is received during the licensee's normal working hours, or not later than three hours from the beginning of the next working day if it is received after working hours.

D. The licensee shall immediately notify the final delivery carrier and the Agency by telephone when:

1. Removable radioactive surface contamination exceeds 22 dpm/cm² for beta-gamma emitting radionuclides or 2.2 dpm/cm² for alpha-emitting radionuclides, wiping a minimum surface area of 300 square centimeters (46 square inches), or the entire surface if less than 300 square centimeters (46 square inches); or
2. External radiation levels exceed the limits of 2 millisieverts (200 millirem) per hour.

E. Each licensee shall:

1. Establish, maintain, and retain written procedures for safely opening packages that contain radioactive material, and
2. Ensure that the procedures are followed and that due consideration is given to special instructions for the type of package being opened.

F. Licensees transferring special form sources in vehicles owned or operated by the licensee to and from a work site are exempt from the contamination monitoring requirements of subsection (B) but are not exempt from the monitoring requirement in subsection (B) for measuring radiation levels that ensures that the source of radiation is still properly lodged in its shield.

Historical Note

Repealed effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-434. General Requirements for Waste Disposal

A. A licensee shall dispose of licensed material only:

Radiation Regulatory Agency

1. By transfer to an authorized recipient as provided in R12-1-439 or in Article 3 of these rules, or to the U.S. Department of Energy;
 2. By decay in storage, according to R12-1-438(C)
 3. By release in effluents within the limits in R12-1-416; or
 4. As authorized according to R12-1-435, R12-1-436, R12-1-437, R12-1-438, or R12-1-438.01;
- B.** To receive waste that contains licensed material from other persons, a person shall be specifically licensed for:
1. Treatment prior to disposal,
 2. Treatment or disposal by incineration,
 3. Decay in storage,
 4. Disposal at a land disposal facility licensed according to Article 3 of these rules, or
 5. Storage until transferred to a storage or disposal facility authorized to receive the waste.

Historical Note

Repealed effective June 30, 1977 (Supp. 77-3). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-435. Method for Obtaining Approval of Proposed Disposal Procedures

For disposal of licensed material generated in the licensee's operations, a licensee or applicant for a license may apply to the Agency for approval of proposed disposal procedures, not otherwise authorized in this Chapter. Each application shall include:

1. A description of the waste containing licensed material to be disposed of, including the physical and chemical properties that have an impact on risk evaluation;
2. The proposed manner and conditions of waste disposal;
3. An analysis and evaluation of pertinent information on the nature of the environment;
4. The nature and location of other potentially affected facilities; and
5. An analysis and procedure to ensure that doses comply with R12-1-407(B), and are within the dose limits in this Article.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-436. Disposal by Release into Sanitary Sewerage System

- A.** A licensee may discharge licensed material into sanitary sewerage if each of the following conditions is satisfied:
1. The material is readily soluble or is readily dispersible biological material, in water;
 2. The quantity of licensed radioactive material that the licensee releases into the sewer in one month divided by the average monthly volume of water released into the sewer by the licensee or registrant does not exceed the concentration listed in Appendix B, Table III,
 3. If more than one radionuclide is released, the following conditions shall also be satisfied:
 - a. The licensee shall determine the fraction of the limit in Appendix B, Table III represented by discharges

into sanitary sewerage by dividing the actual monthly average concentration of each radionuclide released by the licensee or registrant into the sewer by the concentration of that radionuclide listed in Appendix B, Table III, and

- b. The sum of the fractions for each radionuclide required by subsection (A)(3)(a) does not exceed unity; and
 - c. The total quantity of licensed radioactive material that the licensee releases into the sanitary sewerage in a year does not exceed 185 GBq (5 Ci) of Hydrogen-3, 37 GBq (1 Ci) of Carbon-14, and 37 GBq (1 Ci) of all other radioactive materials combined.
- B.** Excreta from individuals undergoing medical diagnosis or therapy with radioactive material are not subject to the limitations contained in subsection (A).

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-437. Treatment or Disposal by Incineration

A licensee shall treat or dispose of licensed material by incineration only in the amounts and forms specified in R12-1-438 or as specifically approved by the Agency according to R12-1-435.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-438. Disposal of Specific Wastes

- A.** A licensee may dispose of the following licensed material as if it were not radioactive:
1. 1.85 kBq (0.05 μ Ci), or less, of Hydrogen-3 or Carbon-14 per gram of medium used for liquid scintillation counting; and
 2. 1.85 kBq (0.05 μ Ci), or less, of Hydrogen-3 or Carbon-14 per gram of animal tissue, averaged over the weight of the entire animal.
 3. 1.85 kBq (0.05 μ Ci), or less, of Iodine-125 per gram of medium used in analyzing in vitro laboratory samples and associated sample holders contaminated during the laboratory procedure.
- B.** A licensee shall not dispose of tissue, contaminated with radioactive material, according to subsection (A)(2) in a manner that would permit its use either as food for humans or as animal feed.
- C.** A licensee may hold radioactive material with a physical half-life of less than or equal to 120 days for decay in storage before disposal without regard to its radioactivity, and is exempt from the requirements of R12-1-434, provided:
1. The licensee monitors the radioactive material at the surface before disposal and determines that its radioactivity cannot be distinguished from the background radiation level with an appropriate radiation detection survey meter set on its most sensitive scale and with no interposed shielding; and
 2. The licensee removes or obliterates all radiation labels, except for radiation labels on materials that are within containers and that will be managed as biomedical waste after they have been released from the licensee.
- D.** The licensee shall maintain records in accordance with R12-1-441.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended

Radiation Regulatory Agency

by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-438.01 Disposal of Certain Radioactive Material

- A.** Licensed material as defined in the definition of radioactive material in R12-1-102 may be disposed of in accordance with this Article, even though it is not defined as low-level radioactive waste. Therefore, any licensed radioactive material being disposed of at a facility, or transferred for ultimate disposal at a facility licensed by the Agency, must meet the requirements of R12-1-439.
- B.** A licensee may dispose of radioactive material, as defined in the definition of radioactive material in R12-1-102, at a disposal facility authorized to dispose of such material in accordance with any federal or state solid or hazardous waste law, including the Solid Waste Disposal Act, as authorized under the Energy Policy Act of 2005.

Historical Note

Section R12-1-438.01 made by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-439. Transfer for Disposal and Manifests

- A.** Any licensee shipping radioactive waste intended for ultimate disposal at a licensed land disposal facility (for purposes of this rule "land disposal facility" means the land, buildings, structures, and equipment that are intended to be used for the disposal of radioactive waste. A geologic repository is not a land disposal facility) shall comply with 10 CFR 20.2006 and 10 CFR 20 Appendix G, published January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- B.** An authorized representative of the waste generator shall provide the certification required in 10 CFR 20, Appendix G, Section II, which is incorporated by reference under subsection (A).

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-440. Compliance with Environmental and Health Protection Regulations

Nothing in R12-1-434, R12-1-435, R12-1-436, R12-1-437, R12-1-438, or R12-1-439 relieves the licensee from complying with other applicable federal, state, and local rules or regulations governing any other toxic or hazardous properties of materials that may be disposed of according to the rules listed in Article 4 of this Chapter.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-441. Records of Waste Disposal

- A.** Each licensee shall maintain records of the disposal of licensed materials made in accordance with R12-1-435, R12-1-436, R12-1-437, R12-1-438, and disposal by burial in soil, including burials authorized before February 25, 1985.
- B.** The licensee shall retain the records required by subsection (A) until the Agency terminates each pertinent license requiring the record. The licensee shall provide for the disposition of these records prior to license termination.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-442. Agency Inspection of Shipments of Waste

Each shipment of waste to a disposal facility, licensed under R12-1-1302(D)(11), is subject to inspection by the Agency before shipment or transportation. The waste shipper shall notify the Agency not less than five working days before the scheduled shipment or transportation of waste to a licensed disposal facility.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 5 A.A.R. 1812, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-443. Reports of Stolen, Lost, or Missing Licensed or Registered Sources of Radiation

- A.** Each licensee or registrant shall report to the Agency by telephone as follows:
1. Immediately after it becomes known to the licensee that licensed radioactive material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in Appendix C is stolen, lost, or missing under circumstances that indicate to the licensee that an exposure could result to individuals in unrestricted areas;
 2. Within 30 days after it becomes known to the licensee that licensed radioactive material in an aggregate quantity greater than 10 times the quantity specified in Appendix C is stolen, lost, or missing, and is still missing.
 3. Immediately after it becomes known to the registrant that a radiation machine is stolen, lost, or missing.
- B.** Each licensee or registrant required to make a report according to subsection (A) shall, within 30 days after making the telephone report, make a written report to the Agency that contains the following information:
1. A description of the licensed or registered source of radiation involved, including, for radioactive material, the kind, quantity, and chemical and physical form; and, for radiation machines, the manufacturer, model, serial number, type, and maximum energy of radiation emitted;
 2. A description of the circumstances under which the loss or theft occurred;
 3. A statement of disposition, or probable disposition, of the licensed or registered source of radiation;
 4. Exposures of individuals to radiation, circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas;
 5. Actions that have been taken, or will be taken, to recover the source of radiation; and
 6. Procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed or registered sources of radiation.
- C.** After filing the written report, the licensee or registrant shall also report additional substantive information on the loss or theft within 30 days after the licensee or registrant learns of the information.
- D.** The licensee or registrant shall provide the Agency with the names of individuals who may have received an exposure to radiation as a result of an incident reported to the Agency under subsection (B).

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective

Radiation Regulatory Agency

June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-444. Reports of Exposures, Radiation Levels, and Concentrations of Radioactive Material Exceeding the Limits

- A.** In addition to the notification required by R12-1-445, each licensee or registrant shall submit a written report within 30 days after learning of any of the following:
1. Incidents for which notification is required by R12-1-445;
 2. Doses in excess of any of the following:
 - a. The occupational dose limits for adults in R12-1-408;
 - b. The occupational dose limits for a minor in R12-1-414;
 - c. The limits for an embryo or fetus of a declared pregnant woman in R12-1-415;
 - d. The limits for an individual member of the public in R12-1-416;
 - e. Any applicable limit in the license or registration; or
 - f. The ALARA limit on air emissions in R12-1-407;
 3. Levels of radiation or concentrations of radioactive material in:
 - a. A restricted area in excess of applicable limits in the license or registration, or
 - b. An unrestricted area in excess of 10 times the applicable limit in this Article or in the license or registration, whether or not this involves an exposure of any individual to a dose in excess of the limits in R12-1-416;
 4. Radiation levels or concentrations of radioactive material in excess of the standards in 40 CFR 190, 2003 edition, published July 1, 2003, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408 which is incorporated by reference and on file with the Agency, if the licensee is subject to these federal standards, or there is a license condition referencing the 40 CFR 190 standards. This incorporation by reference contains no future editions or amendments.
- B.** Contents of reports.
1. Each report shall contain a description of each individual's exposure to radiation and radioactive material, including as applicable:
 - a. Estimates of each individual's dose;
 - b. The levels of radiation and concentrations of radioactive material involved;
 - c. The cause of the elevated exposures, dose rates, or concentrations; and
 - d. Corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, generally applicable environmental standards, and associated license or registration conditions.
 2. Each report filed according to subsection (A) shall include for each occupationally overexposed individual: name, Social Security number, and date of birth. With respect to the limit for an embryo or fetus in R12-1-415, the identifiers in the report should be those of the declared pregnant woman. The report shall be prepared so that information regarding each overexposed individual is stated in a separate and detachable part of the report.
- C.** All licensees or registrants who make reports according to subsection (A) shall submit the report in writing to the Agency.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-445. Notification of Incidents

- A.** Immediate notification: Each licensee or registrant shall immediately report to the Agency any event involving a radiation source that may have caused or threatens to cause any of the following conditions:
1. An individual to receive:
 - a. A total effective dose equivalent of 0.25 Sv (25 rem) or more;
 - b. A lens dose equivalent of 0.75 Sv (75 rem) or more; or
 - c. A shallow-dose equivalent to the skin or extremities of 2.5 Gy (250 rads) or more; or
 2. The release of radioactive material, inside or outside of a restricted area, so if an individual had been present for 24 hours, the individual could have received five times the annual limit on intake (this subsection do not apply to a location where personnel are not normally stationed during routine operations, such as a hot-cell or process enclosure).
- B.** Twenty-four hour notification: Each licensee or registrant shall, within 24 hours of discovery of the event, report to the Agency any event involving loss of control of a radiation source possessed by the licensee or registrant that may have caused, or threatens to cause, any of the following conditions:
1. An individual to receive, in a period of 24 hours
 - a. A total effective dose equivalent exceeding 0.05 Sv (5 rem);
 - b. A lens dose equivalent exceeding 0.15 Sv (15 rem); or
 - c. A shallow-dose equivalent to the skin or extremities exceeding 0.5 Gy (50 rads); or
 2. The release of radioactive material, inside or outside of a restricted area, so, if an individual had been present for 24 hours, the individual could have received an intake in excess of one occupational annual limit of intake (this subsection does not apply to a location where personnel are not normally stationed during routine operations, such as a hot-cell or process enclosure).
- C.** A licensee or registrant shall prepare any report filed with the Agency according to this Section so that names of individuals who have received exposure to radiation or radioactive material are stated in a separate and detachable part of the report.
- D.** A licensee or registrant shall report to the Agency by telephone in response to the requirements of this Section.
- E.** If the Agency does not respond to the initial telephone call, the licensee or registrant shall report to the Department of Public Safety and continue with reasonable efforts to contact the Agency Duty Officer until contact is made.
- F.** The provisions of this Section do not apply to a dose that results from a planned special exposure, if the dose is within the limits for planned special exposures and reported according to R12-1-413(C).

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-446. Notifications and Reports to Individuals

- A.** Requirements for notification and reports to individuals of exposure to radiation or radioactive material are specified in R12-1-1004.
- B.** In addition to the reporting requirements in R12-1-444 and R12-1-445, each licensee or registrant shall notify the individual exposed to radiation or radioactive material. The notice to the exposed individual shall be provided no later than the date

Radiation Regulatory Agency

the report is submitted to the Agency and shall comply with R12-1-1004(A).

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3).
Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).
Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-447. Vacating Premises

- A. If a facility has been used for activities involving radioactive material a licensee shall notify the Agency in writing of the intent to vacate the facility no less than 45 days before relinquishing possession or control of the facility.
- B. If a facility is contaminated with radioactive material, a licensee vacating the facility shall decontaminate it using Agency-approved procedures.
- C. The Agency shall inspect a vacated facility to determine whether it is contaminated with radioactive material.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3).
Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-448. Additional Reporting

- A. Each licensee shall notify the Agency as soon as possible, but not later than four hours after the discovery of an event, and take immediate protective actions necessary to avoid exposures to radiation or radioactive materials that could exceed the limits specified in this Chapter or releases of licensed material that could exceed the limits specified in this Chapter. For purposes of this Section, event means a radiation accident involving a fire, explosion, gas release, or similar occurrence.
- B. Each licensee shall notify the Agency within 24 hours after discovering any of the following events involving licensed material:
 1. A contamination event that:
 - a. Requires that anyone having access to the contaminated area be restricted for more than 24 hours by the imposition of additional radiological controls to prohibit entry into the area; and
 - b. Involves a quantity of radioactive material greater than five times the lowest annual limit on intake specified in Appendix B of this Article; and
 - c. Results in access to the contaminated area being restricted for a reason other than to allow radionuclides with a half-life of less than 24 hours to decay prior to decontamination.
 2. An event in which equipment is disabled or fails to function as designed when:
 - a. The equipment is part of a system designed to prevent releases exceeding the limits specified in this Chapter, to prevent exposures to radiation and radioactive materials exceeding limits specified in this Chapter, or to mitigate the consequences of an accident; and
 - b. The equipment performs a safety function; and
 - c. No redundant equipment is available and operable to perform the required safety function.
 3. An event that requires urgent medical treatment of an individual with radioactive contamination on the individual's clothing or body.

4. A fire or explosion damaging any licensed material or any device, container, or equipment containing licensed material when:
 - a. The quantity of material involved is greater than five times the lowest annual limit on intake specified in Appendix B of this Article, and
 - b. The damage affects the integrity of the licensed material or its container.
- C. Each licensee shall make reports required by subsections (A) and (B) above by telephone to the Agency. To the extent that the information is available at the time of notification, the information provided in these reports shall include:
 1. The callers's name and call back telephone number;
 2. A description of the event, including date and time;
 3. The exact location of the event;
 4. The isotopes, quantities, and chemical and physical form of the licensed material involved; and
 5. Any personnel radiation exposure data available.
- D. Each licensee who makes a report required by subsection (A) or (B) shall submit to the Agency a written follow-up report within 30 days of the initial report. Written reports prepared as required by other rules may be submitted to fulfill this requirement if the reports contain all of the required information in this subsection. The report shall include the following:
 1. A description of the event, including the probable cause and the manufacturer and model number (if applicable) of any equipment that failed or malfunctioned;
 2. The exact location of the event;
 3. The isotopes, quantities, and chemical and physical form of the licensed material involved;
 4. Date and time of the event;
 5. Corrective actions taken or planned and the results of any evaluations or assessments; and
 6. The extent of personnel exposure to radiation or to radioactive materials without identification of each exposed individual by name.

Historical Note

Adopted effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-449. Survey Instruments and Pocket Dosimeters

- A. Each licensee or registrant shall ensure that survey instruments used to show compliance with this Article have been calibrated before first use, annually, and following repair, unless otherwise specified in this Chapter.
- B. To satisfy the requirements of subsection (A), the licensee or registrant shall:
 1. For each scale to be calibrated, calibrate two readings separated by at least 50 percent of scale rating; and
 2. Conspicuously note on the instrument the apparent radiation level, in appropriate units for the type of survey instrument being used and the date of calibration.
- C. Each licensee or registrant shall check each survey instrument for proper operation with the dedicated check source after calibration and before each use.
- D. The licensee or registrant shall retain a record of each calibration required in subsection (A) for three years. The record shall include:
 1. A description of the calibration procedure; and
 2. A description of the source used, the certified dose rates from the source, the rates indicated by the instrument being calibrated, the correction factors deduced from the calibration data, the signature of the individual who performed the calibration, and the date of calibration.

Radiation Regulatory Agency

- E. To meet the requirements of subsections (A), (B), and (C), the licensee or registrant may obtain the services of persons licensed or registered by the Agency, the NRC, an Agreement State, or a Licensing State to perform calibrations of survey instruments. Licensing records of the service person authorization shall be maintained for three years by the licensee or registrant obtaining the service.
- F. Each licensee or registrant shall ensure that pocket dosimeters used to show compliance with this Article:
1. Have been evaluated for proper operation annually and following repair, using a procedure acceptable to the Agency, unless a more frequent evaluation is required by license condition (Unless the dosimeter is electronic, the evaluation of the dosimeter shall include a drift test over a 24-hour period.); and
 2. Meet the performance criteria listed in R12-1-523(C) and R12-1-1130(C).
- G. Records of personnel dosimeter operational checks shall be maintained for three years.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-450. Sealed Sources

- A. A licensee shall only receive, possess, and use radioactive materials contained in a sealed source that has been manufactured, labeled, packaged, and distributed in accordance with a specific license for its manufacture and distribution. The license to manufacture and distribute a sealed source shall be issued by the Agency, U.S. Nuclear Regulatory Commission, a Licensing State, or another Agreement State.
- B. A licensee who possesses and uses a sealed source, or any device or equipment that contains a sealed source, shall follow the radiation safety and handling instructions approved by the Agency or follow the radiation safety and handling instructions furnished by the manufacturer on the label attached to the source, on the permanent container of the source, or in a leaflet or brochure that accompanies the source, and maintain the instructions in a legible and conveniently available form. If the handling instructions, leaflet, or brochure is no longer available and a copy cannot be obtained from the manufacturer, the licensee shall notify the Agency that the source handling information is no longer available.
- C. Inventories:
1. An inventory shall be conducted at intervals not to exceed six months, unless a shorter interval is specified by license condition.
 2. The records of the inventory shall be maintained for three years from the date of the inventory, and shall be available for inspection by the Agency.
 3. The information recorded shall include:
 - a. The kind and quantity of radioactive material,
 - b. The model and serial number of the source or the device in which it is mounted,
 - c. The location of the sealed source,
 - d. The date of the inventory, and
 - e. The signature of the person performing the inventory.
- D. Any licensee who possesses and uses sealed sources in the practice of medicine shall conduct a physical inventory according to the requirements in 12 A.A.C. 1, Article 7.
- E. Sealed sources, containing radioactive material, shall not be opened unless authorized by license condition.
- F. Sealed sources and machines, devices, or equipment containing sealed sources shall be used in accordance with procedures described in the manufacturer's instructions and the safety precautions described in the Nuclear Regulatory Commission Sealed Sources and Device Registry, unless the instructions or precautions conflict with these rules or license condition.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-451. Termination of a Radioactive Material License or a Licensed Activity

- A. As the final step before terminating a radioactive material use program licensed under R12-1-312, the licensee shall:
1. Certify to the Agency the disposition of all licensed material, including accumulated wastes, by submitting a complete description of a disposal plan with signed receipts from all licensed persons receiving the licensed material; and
 2. Conduct a radiation survey of the premises where the licensed activities were carried out to demonstrate that the premises are suitable for release in accordance with the criteria for decommissioning in R12-1-452 and submit to the Agency a report of the results of this survey, unless the licensee demonstrates in some other manner acceptable to the Agency that the premises are suitable for release in accordance with the criteria for decommissioning in R12-1-452.
- B. Before terminating a licensed program, each licensee authorized to possess radioactive material with a half-life greater than 120 days, in any unsealed form, shall forward the following records to the Agency:
1. Records of disposal of the licensed material required by R12-1-435, R12-1-436, R12-1-437, and R12-1-438; and
 2. Records required by R12-1-418(D)(2)(d).
- C. If a licensed activity is transferred or assigned in accordance with subsection (E), each licensee authorized to possess radioactive material with a half-life greater than 120 days, in any unsealed form, shall transfer the following records to the new licensee and the new licensee shall maintain these records until the license is terminated:
1. Records of disposal of licensed material required by R12-1-435, R12-1-436, R12-1-437, and R12-1-438; and
 2. Records required by R12-1-418(D)(2)(d).
- D. Before the Agency terminates a license, each licensee shall forward the records required by subsection (E) to the Agency.
- E. A person licensed under R12-1-312 shall maintain required records regarding decommissioning of a facility in a location identified on the license until the Agency releases the site for unrestricted use. Before transfer or assignment of licensed activities, a licensee shall transfer all records required by this Section to the transferee. If records relating to facility decommissioning are kept for other purposes, the transferee shall refer to these records and provide their location on the transferee's application for a license. The transferee shall maintain the records until the Agency terminates the transferee's new license. The new licensee shall maintain the following decommissioning records for Agency review:
1. Records of spills or other occurrences involving the spread of contamination in and around the facility, equipment, or site. The licensee shall maintain a record of any instance when contamination remains after cleanup procedures or there is a reasonable likelihood that a contami-

Radiation Regulatory Agency

nant has spread to an inaccessible area, as in the case of possible seepage into porous material such as concrete. These records shall include any known information that identifies any radionuclide involved and its quantity, form, and concentration.

2. As-built drawings showing modifications of structures and equipment in restricted areas where radioactive materials are used or stored, and locations of possible inaccessible contamination, such as buried pipes. If as-built drawings are referenced, the licensee need not index each relevant document individually. If drawings are not available, the licensee shall provide records with known information concerning these areas and locations, as prescribed in subsection (E)(1).
3. Except for areas that contain depleted uranium used only for shielding or as penetrators in unused munitions, a list, contained in a single document and updated every two years, of the following:
 - a. Any area designated or formerly designated as a restricted area as defined under R12-1-102;
 - b. Any area outside of a restricted area for which documentation is required under subsection (B)(1);
 - c. Any area outside of a restricted area where wastes have been buried;
 - d. Any area outside of a restricted area that contains regulated radioactive material that will require the licensee to either decontaminate the area for decommissioning under R12-1-452 or obtain disposal approval under R12-1-435; and
 - e. Any restricted area where wastes have been buried.
4. Records of the cost estimate performed for the decommissioning funding plan or the amount certified by the Agency for decommissioning and the method for assuring funding, if either a funding plan or certification is used.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-452. Radiological Criteria for License Termination**A. General provisions and scope:**

1. The criteria in this Section apply to the decommissioning of facilities licensed under Article 3 of this Chapter. The criteria do not apply to uranium and thorium recovery facilities already subject to 10 CFR 40, Appendix A, or to uranium solution extraction facilities.
2. The criteria in this Section do not apply to sites that:
 - a. Have been decommissioned before the effective date of this Section; or
 - b. Have previously submitted and received Agency approval of a license termination plan (LTP) or decommissioning plan.
3. If a site has been decommissioned and the license terminated in accordance with the criteria in this Section, the Agency shall not require additional cleanup unless, based on new information, the Agency determines that the criteria of this Section were not met and residual radioactivity at the site is a threat to public health and safety.
4. When calculating the TEDE for the average member of the critical group, a licensee shall use the peak annual dose expected within the first 1000 years after decommissioning.

B. Radiological criteria for unrestricted use. The Agency considers a site acceptable for unrestricted use if the licensee reduces residual radioactivity, distinguishable from background radiation, to a TEDE for an average member of the critical group

that does not exceed 0.15 mSv (15 mrem) per year, including radiation from groundwater sources of drinking water, and the residual radioactivity is as low as reasonably achievable (ALARA). To determine the level that is ALARA, the Agency and the licensee shall take into account any detriment, such as deaths from transportation accidents, that is likely to result from decontamination and waste disposal.

- C. Criteria for license termination under restrictive conditions.** The Agency considers a site acceptable for license termination if the licensee meets all of the following restrictive conditions:
1. The licensee demonstrates that a reduction in residual radioactivity, necessary to comply with subsection (B), will result in net public or environmental harm or is not being made because the residual level of radioactivity is ALARA. To determine the level that is ALARA, the Agency and the licensee shall take into account any detriment, such as deaths from transportation accidents, that is likely to result from decontamination and waste disposal;
 2. The licensee establishes one or more legally enforceable institutional controls that reduce residual radioactivity, distinguishable from background radiation, to a TEDE for the average member of the critical group that does not exceed (0.15 mSv) 15 mrem per year, including radiation from groundwater sources of drinking water;
 3. The licensee demonstrates financial assurance that complies with R12-1-323(C), which enables an independent third party, including a governmental custodian of the site, to assume and carry out responsibilities for control and maintenance of the site and funds placed into a trust segregated from the licensee's assets and outside the licensee's administrative control, and in which the adequacy of the trust funds is to be assessed based on an assumed annual 1 percent real rate of return on investment;
 4. The licensee submits a decommissioning plan or License Termination Plan (LTP) to the Agency, indicating the licensee's intent to decommission in accordance with R12-1-323 and specifying that the licensee intends to decommission by restricting use of the site. The licensee shall document in the LTP or decommissioning plan how comments from individuals and institutions in the community, who may be affected by the decommissioning, have been sought and addressed after analysis.
 - a. If a licensee is restricting use of the site, the licensee shall seek comments from the public concerning the proposed decommissioning, regarding all of the following matters:
 - i. Whether the institutional controls proposed by the licensee will reduce residual radioactivity, distinguishable from background radiation, to a TEDE for the average member of the critical group that does not exceed 0.15 mSv (15 mrem) per year; are enforceable; and do not impose an unreasonable burden on the local community or other affected parties; and
 - ii. Whether the licensee has provided financial assurance that complies with R12-1-323(C), which enables an independent third party, including a governmental custodian of the site, to assume and carry out responsibilities for control and maintenance of the site;
 - b. In seeking comments on the issues identified in subsection (C)(4)(a), the licensee shall provide for:
 - i. Participation by representatives of a broad cross section of community interests that may be affected by the decommissioning;

Radiation Regulatory Agency

- ii. An opportunity for a comprehensive discussion of the issues by all of the community representatives; and
 - iii. A publicly available document that contains or access to each oral and written comment that reflects the viewpoints of community representatives on each issue and the extent of agreement or disagreement among representatives on each issue; and
5. The licensee reduces residual radioactivity, distinguishable from background radiation, at the site so that if the institutional controls are no longer in effect, the TEDE for the average member of the critical group is as low as reasonably achievable and does not exceed 1 mSv (100 mrem) per year; unless the licensee:
- a. Demonstrates that a further reduction in residual radioactivity necessary to comply with subsection (C)(5) is not technically achievable or economically feasible, or will result in net public or environmental harm;
 - b. Provides for durable institutional controls; and
 - c. Provides financial assurance that complies with R12-1-323(C), which enables an independent third party, including a governmental custodian of the site, to carry out periodic rechecks of the site, no less frequently than every five years; assures that each institutional control remains in place according to subsection (C)(3); and assumes and carries out responsibilities for maintenance of the institutional control.
- D. Alternate criteria for license termination:**
- 1. Based on circumstances that relate to a specific license, the Agency may terminate the license using the following alternate criteria for subsections (B) or (C)(2), if the licensee demonstrates that the TEDE from residual radioactivity, distinguishable from background radiation, for an average member of the critical group does not exceed 0.15 mSv (15 mrem) per year, and if the licensee:
 - a. Ensures that public health and safety is protected by submitting an analysis of possible sources of exposure, prepared by an independent qualified expert, which indicates whether it is likely that the dose from all human-made sources combined, other than medical sources, is more than the 1 mSv/y (100 mrem/y) limit in R12-1-416;
 - b. Employs to the extent practicable, restrictions on site use, according to the provisions of subsection (C) to minimize exposures at the site;
 - c. Reduces doses to ALARA levels, taking into consideration any detriments such as traffic accidents expected to potentially result from decontamination and waste disposal; and
 - d. Submits a decommissioning plan or License Termination Plan (LTP) to the Agency that indicates the licensee's intent to decommission in accordance with R12-1-323, and specifies that the licensee proposes to decommission by use of alternate criteria. The licensee shall document in the decommissioning plan or LTP how comments from individuals and institutions in the community, who may be affected by the decommissioning, have been sought and addressed after analysis. In seeking comments, the licensee shall provide for:
 - i. Participation by representatives of a broad cross section of community interests that may be affected by the decommissioning;
 - ii. An opportunity for a comprehensive discussion of the issues by all of the community representatives; and
 - iii. A publicly available document that contains or access to each oral and written comment that reflects viewpoints of community representatives on each issue and the extent of agreement and disagreement among the representatives on each issue.
 - 2. The use of alternate criteria to terminate a license requires approval by the Agency after consideration of any comments provided by the U.S. Environmental Protection Agency and any public comments submitted under subsection (E).
- E. Public notification and public participation:**
- 1. Upon the receipt of an LTP or decommissioning plan from a licensee, or a proposal by a licensee for release of a site under subsection (C) or (D), or whenever the Agency determines that notice will serve the public interest, the Agency shall notify and solicit comments from:
 - a. Local and state governments in the vicinity of the site and any Indian Nation or other indigenous people that have treaty or statutory rights that could be affected by the decommissioning; and
 - b. The U.S. Environmental Protection Agency.
 - 2. To comply with subsection(E)(1) the Agency shall publish a notice in a local newspaper, send letters to state or local organizations on its mailing list, hold a public hearing that is readily accessible to individuals in the vicinity of the site, and solicit comments from the public.
- F. Minimization of contamination.** After the effective date of this Section, an applicant for a license, other than a renewal, shall describe in the application how facility design and procedures for operation will facilitate eventual decommissioning and minimize, to the extent practicable, the generation of radioactive waste and contamination of the facility and the environment.
- 1. Applicants for standard design certifications, standard design approvals, and manufacturing licenses shall describe in the application how facility design will minimize, to the extent practicable, contamination of the facility and the environment, facilitate eventual decommissioning, and minimize, to the extent practicable, the generation of radioactive waste.
 - 2. Licensees shall, to the extent practical, conduct operations to minimize the introduction of residual radioactivity into the site, including the subsurface, in accordance with the existing radiation protection requirements in this Article and radiological criteria for license termination in this Article.
- G. The Agency considers a site acceptable for unrestricted use if the residual radioactivity, distinguishable from background radiation, is equal to or less than the values in Table 1.**

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

Table 1. Acceptable Surface Contamination Levels

Radionuclide ¹	Average ^{2,3}	Maximum ^{2,4}	Removable ^{2,5}
U-nat, U-235, U-238, and associated decay products	5,000 dpm/100 cm ²	15,000 dpm/100cm ²	1,000 dpm/100 cm ²
Transuranics, Ra-226, Ra-228, Th-230, Pa-231, Ac-227, I-125, I-129	100dpm/100cm ²	300 dpm/100cm ²	20dpm/100cm ²
Th-nat, Th-232, Sr-90, Ra-223, Ra-224, U-232, I-126, I-131, I-133	1000 dpm/100cm ²	3000 dpm/100cm ²	200 dpm/100cm ²
Beta-gamma (Exceptions noted above)	5,000 dpm/100 cm ²	15,000 dpm/100cm ²	1,000 dpm/100 cm ²

¹ Where surface contamination by both alpha-and beta-gamma-emitting radionuclides exists, the limits established for alpha-and beta-gamma-emitting radionuclides apply independently.

² As used in this table, dpm (disintegrations per minute) means the rate of emission by radioactive material as determined by correcting the counts per minute observed on an instrument calibrated for background, efficiency, and geometric factors associated with the instrumentation, in accordance with R12-1-449.

³ Measurements of average contamination level shall not be averaged over more than one square meter. For objects of less surface area, the average shall be derived for each object.

⁴ The maximum contamination level applies to an area of not more than 100 cm².

⁵ The amount of removable radioactive material per 100 cm² of surface area shall be determined by wiping that area with dry filter or soft absorbent paper, applying moderate pressure, and assessing the amount of radioactive material on the wipe with an instrument calibrated in accordance with R12-1-449. When removable contamination on objects of surface area A (where A is less than 100 sq. cm) is determined, the entire surface shall be wiped and the contamination level multiplied by 100/A to convert to a "per 100 sq. cm" basis.

Historical Note

Table 1 made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-453. Reports to Individuals of Exceeding Dose Limits

Any licensee or registrant that reports a personnel exposure to the Agency in accordance with R12-1-413(A)(6), R12-1-444, or R12-1-452 shall:

1. Notify the exposed individual of the exposure addressed in the report; and

2. Transmit the report to the exposed individual at the same time the Agency is notified of the exposure.

Historical Note

New Section made by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-454. Nationally Tracked Sources

- A. A licensee who manufactures, receives, transfers, disassembles, or disposes of a nationally tracked source shall complete and submit to the Nuclear Regulatory Commission's National Source Tracking System and the Agency, a National Source Tracking Transaction Report that contains the information required in 10 CFR 20.2207(a) through (e), revised January 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments. The report shall be submitted by the close of the next business day after the transaction using a reporting method specified in 10 CFR 20.2207(f), revised January 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- B. The initial National Source Tracking Transaction Report shall contain the information required in subsection (A), be submitted using a method specified in 10 CFR 20.2207(f) and include the additional information required by 10 CFR 20.2207(h)(1) through (6), revised January 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- C. A licensee shall correct any error in previously filed National Source Tracking Transaction Reports or file a new report for any missed transaction within five business days of the discovery of the error or missed transaction in accordance with 10 CFR 20.2207(g), revised January 1, 2008, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- D. A licensee who receives a nationally tracked sealed source shall not disassemble the source unless specifically authorized to do so by the Agency.

Historical Note

New Section made by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-455. Security Requirements for Portable Gauges

- A. A licensee that uses a portable gauge shall use a minimum of two independent controls to maintain security while:
 1. Transporting a portable gauge; and
 2. Storing a portable gauge.
- B. Each control shall form a tangible barrier that will prevent unauthorized removal whenever a portable gauge is not under the control and constant surveillance of the licensee.
- C. A licensee shall employ controls approved by the Agency.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

Radiation Regulatory Agency

Appendix A. Assigned Protection Factors for Respirators^a

	Operating mode	Assigned Protection Factors
I. Air Purifying Respirators [Particulate ^b only] ^c :		
Filtering face piece disposable ^d	Negative	(^d)
Face piece, half ^e	Negative Pressure	10
Face piece, full	Negative Pressure	100
Face piece, half	Powered Air-purifying Respirators	50
Face piece, full	Powered Air-purifying Respirators	1000
Helmet/hood	Powered Air-purifying Respirators	1000
Face piece, loose-fitting	Powered Air-purifying Respirators	25
II. Atmosphere supplying respirators [particulate, gases and vapors ^f]:		
1. Air-line respirator:		
Face piece, half	Demand	10
Face piece, half	Continuous Flow	50
Face piece, half	Pressure Demand	50
Face piece, full	Demand	100
Face piece, full	Continuous Flow	1000
Face piece, full	Pressure Demand	1000
Helmet/hood	Continuous Flow	1000
Face piece, loose-fitting	Continuous Flow	25
Suit	Continuous Flow	(^g)
2. Self-contained breathing Apparatus (SCBA):		
Face piece, full	Demand	^h 100
Face piece, full	Pressure Demand	^h 10,000
Face piece, full	Demand, Recirculating	^h 100
Face piece, full	Positive Pressure Recirculating	^h 10,000
III. Combination Respirators:		
Any combination of air-purifying and atmosphere-supplying respirators	Assigned protection factor for type and mode of operation as listed above	

^a These assigned protection factors apply only in a respiratory protection program that meets the requirements of this Article. They are applicable only to airborne radiological hazards and may not be appropriate if chemical or other respiratory hazards exist instead of, or in addition to, radioactive hazards. A licensee shall comply with Department of Labor regulations, regarding selection and use of respirators for those circumstances.

Radioactive contaminants for which the concentration values in Table 1, Column 3 of Appendix B are based on internal dose due to inhalation may, in addition, present external exposure hazards at higher concentrations. Under these circumstances, limitations on occupancy may have to be governed by external dose limits.

^b A licensee shall equip air purifying respirators of APF<100 with particulate filters that are at least 95 percent efficient. The licensee shall equip air purifying respirators of APF=100 with particulate filters that are at least 99 percent efficient. The licensee shall equip air purifying respirators of APF>100 with particulate filters that are at least 99.97 percent efficient.

^c A licensee may apply to the Commission for the use of an APF greater than 1 for sorbent cartridges as protection against airborne radioactive gases and vapors, similar to radioiodine.

^d A Licensee may permit an individual to use this type of respirator if the individual has not been medically screened or fit tested on the device, provided that no credit is taken for use of these respirators in estimation of intake or dose. It is also recognized that it is difficult to perform an effective positive or negative pressure pre-use user seal check on this type of device. All other respiratory protection program requirements listed in 10 CFR 20.1703, January 2000 Edition, and published January 1, 2000, apply and are incorporated by reference and available for review at the Agency and Secretary of State. This incorporation by reference contains no future editions or amendments. There is no assigned protection factor for these devices. However, a licensee may use an APF equal to 10 if the licensee can demonstrate a fit factor of at least 100 by use of a validated or evaluated, qualitative or quantitative fit test.

^e Under-chin type only. No distinction is made in this appendix between elastomeric half-masks with replaceable cartridges and those designed with the filter medium as an integral part of the face piece (disposable or reusable disposable). Both types are acceptable as long as the seal area of the latter contains some substantial type of seal-enhancing material, such as rubber or plastic, two or more suspension straps are adjustable, the filter medium is at least 95 percent efficient, and all other requirements of this Article are met.

^f The assigned protection factors for gases and vapors are not applicable to radioactive contaminants that present an absorption or submersion hazard. For tritium oxide vapor, approximately one-third of the intake occurs by absorption through the skin so that an overall pro-

tection factor of 3 is appropriate when atmosphere-supplying respirators are used to protect against tritium oxide. Exposure to radioactive noble gases is not considered a significant respiratory hazard and protective actions for these contaminants should be based on external (submersion) dose considerations.

^g No NIOSH approval schedule is currently available for atmosphere supplying suits. This equipment may be used in an acceptable respiratory protection program as long as all the other minimum program requirements, with the exception of fit testing, are met. The minimum program requirements are provided in 10 CFR 20.1703.

^h The licensee shall implement institutional controls to assure that these devices are not used in areas immediately dangerous to life or health (IDLH).

ⁱ This type of respirator may be used as an emergency device in unknown concentrations for protection against inhalation hazards. External radiation hazards and other limitations to permitted exposure such as skin absorption shall be taken into account in these circumstances. This device may not be used by any individual who experiences perceptible outward leakage of breathing gas while wearing the device.

Historical Note

Former Appendix A repealed; new Appendix A adopted effective June 30, 1977 (Supp. 77-3). Section repealed; new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

Appendix B. Annual Limits on Intake (ALI) and Derived Air Concentrations (DAC) of Radionuclides for Occupational Exposure; Effluent Concentrations; Concentrations for Release to Sanitary Sewerage

Introduction

For each radionuclide, Table I indicates the chemical form which is to be used for selecting the appropriate ALI or DAC value. The ALIs and DACs for inhalation are given for an aerosol with an activity median aerodynamic diameter (AMAD) of 1 μm , micron, and for three classes (D,W,Y) of radioactive material, which refer to their retention (approximately days, weeks, or years) in the pulmonary region of the lung. This classification applies to a range of clearance half-times for D if less than 10 days, for W from 10 to 100 days, and for Y greater than 100 days. Table II provides concentration limits for airborne and liquid effluents released to the general environment. Table III provides concentration limits for discharges to sanitary sewerage.

Note:

The values in Tables I, II, and III are presented in the computer "E" notation. In this notation a value of 6E-02 represents a value of 6×10^{-2} or 0.06, 6E+2 represents 6×10^2 or 600, and 6E+0 represents 6×10^0 or 6.

Table I "Occupational Values"

Note that the columns in Table I of this Appendix captioned "Oral Ingestion ALI," "Inhalation ALI," and "DAC" are applicable to occupational exposure to radioactive material.

The ALIs in this Appendix are the annual intakes of given radionuclide by "Reference Man" which would result in either (1) a committed effective dose equivalent of 0.05 Sv (5 rem), stochastic ALI, or (2) a committed dose equivalent of 0.5 Sv (50 rem) to an organ or tissue, nonstochastic ALI. The stochastic ALIs were derived to result in a risk, due to irradiation of organs and tissues, comparable to the risk associated with deep-dose equivalent to the whole body of 0.05 Sv (5 rem). The derivation includes multiplying the committed dose equivalent to an organ or tissue by a weighting factor, W_T . This weighting factor is the proportion of the risk of stochastic effects resulting from irradiation of the organ or tissue, T, to the total risk of stochastic effects when the whole body is irradiated uniformly. The values of W_T are listed under the definition of weighting factor in R12-1-403. The nonstochastic ALIs were derived to avoid nonstochastic effects, such as prompt damage to tissue or reduction in organ function.

A value of $W_T = 0.06$ is applicable to each of the five organs or tissues in the "remainder" category receiving the highest dose equivalents, and the dose equivalents of all other remaining tissues may be disregarded. The following portions of the GI tract --

stomach, small intestine, upper large intestine, and lower large intestine -- are to be treated as four separate organs.

Note that the dose equivalents for an extremity, skin, and lens of the eye are not considered in computing the committed effective dose equivalent but are subject to limits that shall be met separately.

When an ALI is defined by the stochastic dose limit, this value alone is given. When an ALI is determined by the nonstochastic dose limit to an organ, the organ or tissue to which the limit applies is shown, and the ALI for the stochastic limit is shown in parentheses. Abbreviated organ or tissue designations are used:

LLI wall	=	lower large intestine wall,
St. wall	=	stomach wall,
Blad wall	=	bladder wall, and
Bone surf	=	Bone surface.

The use of the ALIs listed first, the more limiting of the stochastic and nonstochastic ALIs, will ensure that nonstochastic effects are avoided and that the risk of stochastic effects is limited to an acceptably low value. If, in a particular situation involving a radionuclide for which the nonstochastic ALI is limiting, use of that nonstochastic ALI is considered unduly conservative, the licensee may use the stochastic ALI to determine the committed effective dose equivalent. However, the licensee shall also ensure that the 0.5 Sv (50 rem) dose equivalent limit for any organ or tissue is not exceeded by the sum of the external deep-dose equivalent plus the internal committed dose equivalent to that organ, not the effective dose. For the case where there is no external dose contribution, this would be demonstrated if the sum of the fractions of the nonstochastic ALIs (ALI_{ns}) that contribute to the committed dose equivalent to the organ receiving the highest dose does not exceed unity, that is, $\sum (\text{intake (in } \mu\text{Ci) of each radionuclide} / ALI_{ns}) \leq 1.0$. If there is an external deep dose equivalent contribution of H_d , then this sum must be less than $1 - (H_d/50)$, instead of ≤ 1.0 .

Note that the dose equivalents for an extremity, skin, and lens of the eye are not considered in computing the committed effective dose equivalent but are subject to limits that must be met separately.

The derived air concentration (DAC) values are derived limits intended to control chronic occupational exposures. The relationship between the DAC and the ALI is given by:

$$DAC = ALI(\text{in } \mu\text{Ci}) / (2000 \text{ hours per working year} \times 60 \text{ minutes/hour} \times 2 \times 10^4 \text{ ml per minute}) = [ALI / 2.4 \times 10^9] \mu\text{Ci/ml},$$

where 2×10^4 ml is the volume of air breathed per minute at work by Reference Man under working conditions of light work.

Radiation Regulatory Agency

The DAC values relate to one of two modes of exposure: either external submersion or the internal committed dose equivalents resulting from inhalation of radioactive materials. DACs based upon submersion are for immersion in a semi-infinite cloud of uniform concentration and apply to each radionuclide separately.

The ALI and DAC values include contributions to exposure by the single radionuclide named and any in-growth of daughter radionuclides produced in the body by decay of the parent. However, intakes that include both the parent and daughter radionuclides shall be treated by the general method appropriate for mixtures.

The values of ALI and DAC do not apply directly when the individual both ingests and inhales a radionuclide, when the individual is exposed to a mixture of radionuclides by either inhalation or ingestion or both, or when the individual is exposed to both internal and external irradiation. See R12-1-407. When an individual is exposed to radioactive materials which fall under several of the translocation classifications of the same radionuclide, such as Class D, Class W, or Class Y, the exposure may be evaluated as if it were a mixture of different radionuclides.

It should be noted that the classification of a compound as Class D, W, or Y is based on the chemical form of the compound and does not take into account the radiological half-life of different radionuclides. For this reason, values are given for Class D, W, and Y compounds, even for very short-lived radionuclides.

Table II "Effluent Concentrations"

The columns in Table II of this Appendix captioned "Effluents," "Air," and "Water" are applicable to the assessment and control of dose to the public, particularly in the implementation of the provisions of R12-1-415. The concentration values given in Columns 1 and 2 of Table II are equivalent to the radionuclide concentrations which, if inhaled or ingested continuously over the course of a year, would produce a total effective dose equivalent of 0.5 mSv (0.05 rem).

Consideration of nonstochastic limits has not been included in deriving the air and water effluent concentration limits because nonstochastic effects are presumed not to occur at or below the dose levels established for individual members of the public. For radionuclides, where the nonstochastic limit was governing in deriving the occupational DAC, the stochastic ALI was used in deriving the corresponding airborne effluent limit in Table II. For this reason, the DAC and airborne effluent limits are not always proportional as they were in earlier versions of Appendix A of Article 4.

The air concentration values listed in Table II, Column 1 were derived by one of two methods. For those radionuclides for which the stochastic limit is governing, the occupational stochastic inhalation ALI was divided by 2.4×10^9 , relating the inhalation ALI to the DAC, as explained above, and then divided by a factor of 300. The factor of 300 includes the following components: a factor of 50 to relate the 0.05 Sv (5 rem) annual occupational dose limit to the 0.1 rem limit for members of the public, a factor of 3 to adjust for the difference in exposure time and the inhalation rate for a worker and that for members of the public; and a factor of 2 to adjust the occupational values, derived for adults, so that they are applicable to other age groups.

For those radionuclides for which submersion, that is external dose, is limiting, the occupational DAC in Table I, Column 3 was divided by 219. The factor of 219 is composed of a factor of 50, as described above, and a factor of 4.38 relating occupational exposure for 2,000 hours per year to full-time exposure (8,760 hours per year). Note that an additional factor of 2 for age considerations is not warranted in the submersion case.

The water concentrations were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^7 . The factor of 7.3×10^7 (ml) includes the following components: the factors of 50 and 2 described above and a factor of 7.3×10^5 (ml) which is the annual water intake of Reference Man.

Note 2 of this Appendix provides groupings of radionuclides which are applicable to unknown mixtures of radionuclides. These groupings, including occupational inhalation ALIs and DACs, air and water effluent concentrations, and releases to sewer, require demonstrating that the most limiting radionuclides in successive classes are absent. The limit for the unknown mixture is defined when the presence of one of the listed radionuclides cannot be definitely excluded as being present either from knowledge of the radionuclide composition of the source or from actual measurements.

Table III "Releases to Sewers"

The monthly average concentrations for release to sanitary sewerage are applicable to the provisions in R12-1-435. The concentration values were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^6 (ml). The factor of 7.3×10^6 (ml) is composed of a factor of 7.3×10^5 (ml), the annual water intake by Reference Man, and a factor of 10, such that the concentrations, if the sewage released by the licensee were the only source of water ingested by a Reference Man during a year, would result in a committed effective dose equivalent of 0.5 rem.

	Any single radionuclide not listed above that decays by alpha emission or spontaneous fission, or any mixture for which either the identity or the concentration of any radionuclide in the mixture is not known.	...	-	4E-4	2E-13	1E-15	2E-9	2E-8

FOOTNOTES:

- ¹ "Submersion" means that values given are for submersion in a hemispherical semi-infinite cloud of airborne material.
- ² These radionuclides have radiological half-lives of less than 2 hours. The total effective dose equivalent received during operations with these radionuclides might include a significant contribution from external exposure. The DAC values for all radionuclides, other than those designated Class "Submersion," are based upon the committed effective dose equivalent due to the intake of the radionuclide into the body and do NOT include potentially significant contributions to dose equivalent from external exposures. The licensee may substitute 1E-7 μCi/ml for the listed DAC to account for the submersion dose prospectively but shall use individual monitoring devices or other radiation-measuring instruments that measure external exposure to demonstrate compliance with the limits. (See R12-1-410)
- ³ For soluble mixtures of U-238, U-234, and U-235 in air, chemical toxicity may be the limiting factor (see R12-1-408(E)). If the percent by weight (enrichment) of U-235 is not greater than 5, the concentration value for a 40-hour work week is 0.2 milligrams uranium per cubic meter of air average. For any enrichment, the product of the average concentration and time of exposure during a 40-hour work week shall not exceed 8E-3 (SA) μCi-hr/ml, where SA is the specific activity of the uranium inhaled. The specific activity for natural uranium is 6.77E-7 curies per gram U. The specific activity for other mixtures of U-238, U-235, and U-234, if not known, shall be:

$$SA = 3.6E-7 \text{ curies/gram U-depleted}$$

$$SA = [0.4 + 0.38 (\text{enrichment}) + 0.0034 (\text{enrichment})^2] E-6, \text{ enrichment} > 0.72$$
 where enrichment is the percentage by weight of U-235, expressed as percent.

NOTE:

- 1. If the identity of each radionuclide in a mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.
- 2. If the identity of each radionuclide in the mixture is not known, but it is known that certain radionuclides specified in this Appendix are not present in the mixture, the inhalation ALI, DAC, and effluent and sewage concentrations for the mixture are the lowest values specified in this Appendix for any radionuclide that is not known to be absent from the mixture; or

Radiation Regulatory Agency

3. If a mixture of radionuclides consists of Uranium and its daughters in ore dust (10 μm AMAD particle distribution assumed) prior to chemical separation of the Uranium from the ore, the following values may be used for the DAC of the mixture: 6E-11 μCi of gross alpha activity from Uranium-238, Uranium-234, Thorium-230, and Radium-226 per milliliter of air; 3E-11 μCi of natural uranium per milliliter of air; or 45 micrograms of natural uranium per cubic meter of air.
4. If the identity and concentration of each radionuclide in a mixture are known, the limiting values should be derived as follows: determine, for each radionuclide in the mixture, the ratio between the concentration present in the mixture and the concentration otherwise established in Appendix B to Article 4 for the specific radionuclide when not in a mixture. The sum of such ratios for all of the radionuclides in the mixture may not exceed "1" (i.e., "unity").
Example: If radionuclides "A," "B," and "C" are present in concentrations C_A , C_B , and C_C , and if the applicable DACs are DAC_A , DAC_B , and DAC_C respectively then the concentrations shall be limited so that the following relationship exists:

$$\frac{C_A}{\text{DAC}_A} + \frac{C_B}{\text{DAC}_B} + \frac{C_C}{\text{DAC}_C} \leq 1$$

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Section repealed; new Section adopted effective August 10, 1994 (Supp. 94-3).

Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

* To convert μCi to kBq , multiply the μCi value by 37.

NOTE: For purposes of R12-1-428(E), R12-1-432(A), and R12-1-443(A) where there is involved a combination of radionuclides in known amounts, the limit for the combination shall be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed "1" -- that is, unity.

¹ The quantities listed above were derived by taking 1/10 of the most restrictive ALI listed in Table I, Columns 1 and 2, of Appendix B to Article 4, rounding to the nearest factor of 10, and constraining the values listed between 37 Bq and 37 MBq (0.001 and 1,000 μCi). Values of 3.7 MBq (100 μCi) have been assigned for radionuclides having a radioactive half-life in excess of E+9 years, except rhenium, 37 MBq (1,000 μCi), to take into account their low specific activity.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3).

APPENDIX D. CLASSIFICATION AND CHARACTERISTICS OF LOW-LEVEL RADIOACTIVE WASTE

I. Classification of Radioactive Waste for Land Disposal

- a) Considerations. Determination of the classification of radioactive waste involves two considerations. First, consideration must be given to the concentration of long-lived radionuclides (and their shorter-lived precursors) whose potential hazard will persist long after such precautions as institutional controls, improved waste form, and deeper disposal have ceased to be effective. These precautions delay the time when long-lived radio nuclides could cause exposures. In addition, the magnitude of the potential dose is limited by the concentration and availability of the radionuclide at the time of exposure. Second, consideration must be given to the concentration of shorter-lived radionuclides for which requirements on institutional controls, waste form, and disposal methods are effective.

- b) Classes of waste.

- 1) Class A waste is waste that is usually segregated from other waste classes at the disposal site. The physical form and characteristics of Class A waste must meet the minimum requirements set forth in Section II(a). If Class A waste also meets the stability requirements set forth in Section II(b), it is not necessary to segregate the waste for disposal.

- 2) Class B waste is waste that must meet more rigorous requirements on waste form to ensure stability after disposal. The physical form and characteristics of Class B waste must meet both the minimum and stability requirements set forth in Section II.
- 3) Class C waste is waste that not only must meet more rigorous requirements on waste form to ensure stability but also requires additional measures at the disposal facility to protect against inadvertent intrusion. The physical form and characteristics of Class C waste must meet both the minimum and stability requirements set forth in Section II.
- c) Classification determined by long-lived radionuclides. If the radioactive waste contains only radionuclides listed in Table I, classification shall be determined as follows:
 - 1) If the concentration does not exceed 0.1 times the value in Table I, the waste is Class A.
 - 2) If the concentration exceeds 0.1 times the value in Table I but does not exceed the value in Table I, the waste is Class C.
 - 3) If the concentration exceeds the value in Table I, the waste is not generally acceptable for land disposal.
 - 4) For wastes containing mixtures of radionuclides listed in Table I, the total concentration shall be determined by the sum of fractions rule described in Section I(g).

**TABLE I
Concentration**

Radionuclide	curie/cubic meter ^a	nanocuries/gram ^b
C-14	8	
C-14 in activated metal	80	
Ni-59 in activated metal	220	
Nb-94 in activated metal	0.2	
Tc-99	3	
I-129	0.08	
Alpha-emitting transuranic radionuclides with half-life greater than five years	100	
Pu-241		3,500
Cm-242		20,000
Ra-226		100

^aTo convert the Ci/m³ values to gigabecquerel (GBq) per cubic meter, multiply the Ci/m³ value by 37.

^bTo convert the nCi/g values to becquerel (Bq) per gram, multiply the nCi/g value by 37.

- d) Classification determined by short-lived radionuclides. If the waste does not contain any of the radionuclides listed in Table I, classification shall be determined based on the concentrations shown in Table II. However, as specified in Section I(f), if radioactive waste does not contain any nuclides listed in either Table I or II, it is Class A.
- 1) If the concentration does not exceed the value in Column 1, the waste is Class A.
 - 2) If the concentration exceeds the value in Column 1 but does not exceed the value in Column 2, the waste is Class B.
 - 3) If the concentration exceeds the value in Column 2 but does not exceed the value in Column 3, the waste is Class C.
 - 4) If the concentration exceeds the value in Column 3, the waste is not generally acceptable for near-surface disposal.
 - 5) For wastes containing mixtures of the radionuclides listed in Table II, the total concentration shall be determined by the sum of fractions rule described in Section I(g).

TABLE II

Radionuclide	Concentration, Column 1	curie/cubic meter*	
		Column 2	Column 3
Total of all radionuclides with less than 5-year half-life	700	*	*
H-3	40	*	*
Co-60	700	*	*
Ni-63	3.5	70	700
Ni-63 in activated metal	35	700	7000
Sr-90	0.04	150	7000
Cs-137	1	44	4600

*AGENCY NOTE: To convert the Ci/m³ value to gigabecquerel (GBq) per cubic meter, multiply the Ci/m³ value by 37. There are no limits established for these radionuclides in Class B or C wastes. Practical considerations such as the effects of external radiation and internal heat generation on transportation, handling, and disposal will limit the concentrations for these wastes. These wastes shall be Class B unless the concentrations of other radionuclides in Table II determine the waste to be Class C independent of these radionuclides.

- e) Classification determined by both long- and short-lived radionuclides. If the radioactive waste contains a mixture of radionuclides, some of which are listed in Table I and some of which are listed in Table II, classification shall be determined as follows:
- 1) If the concentration of a radionuclide listed in Table I is less than 0.1 times the value listed in Table I, the class shall be that determined by the concentration of radionuclides listed in Table II.
 - 2) If the concentration of a radionuclide listed in Table I exceeds 0.1 times the value listed in Table I, but does not exceed the value in Table II, the waste shall be Class C, provided the concentration of radionuclides listed in Table II does not exceed the value shown in Column 3 of Table II.
 - f) Classification of wastes with radionuclides other than those listed in Tables I and II. If the waste does not contain any radionuclides listed in either Table I or II, it is Class A.
 - g) The sum of the fractions rule for mixtures of radionuclides. For determining classification for waste that contains a mixture of radionuclides, it is necessary to determine the sum of fractions by dividing each radionuclide's concentration by the appropriate limit and adding the resulting values. The appropriate limits shall all be taken from the same column of the same table. The sum of the fractions for the column shall be less than 1.0 if the

Radiation Regulatory Agency

waste class is to be determined by that column. Example: A waste contains Sr-90 in a concentration of 1.85 TBq/m³ (50 Ci/m³) and Cs-137 in a concentration of 814 GBq/m³ (22 Ci/m³). Since the concentrations both exceed the values in Column 1, Table II, they shall be compared to Column 2 values. For Sr-90 fraction, 50/150 = 0.33, for Cs-137 fraction, 22/44 = 0.5; the sum of the fractions = 0.83. Since the sum is less than 1.0, the waste is Class B.

- h) Determination of concentrations in wastes. The concentration of a radionuclide may be determined by indirect methods such as use of scaling factors which relate the inferred concentration of one radionuclide to another that is measured, or radionuclide material accountability, if there is reasonable assurance that the indirect methods can be correlated with actual measurements. The concentration of a radionuclide may be averaged over the volume of the waste, or weight of the waste if the units are expressed as becquerel (nanocurie) per gram.

II. Radioactive Waste Characteristics

- a) The following are minimum requirements for all classes of waste and are intended to facilitate handling and provide protection of health and safety of personnel at the disposal site.
- 1) Wastes shall be packaged in conformance with the conditions of the license issued to the site operator to which the waste will be shipped. Where the conditions of the site license are more restrictive than the provisions of Article 4, the site license conditions shall govern.
 - 2) Wastes shall not be packaged for disposal in cardboard or fiberboard boxes.
 - 3) Liquid waste shall be packaged in sufficient absorbent material to absorb twice the volume of the liquid.
 - 4) Solid waste containing liquid shall contain as little free-standing and non-corrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1% of the volume.
 - 5) Waste shall not be readily capable of detonation or of explosive decomposition or reaction at normal pressures and temperatures, or of explosive reaction with water.
 - 6) Waste shall not contain, or be capable of generating, quantities of toxic gases, vapors, or fumes harmful to persons transporting, handling, or disposing of the waste. This does not apply to radioactive gaseous waste packaged in accordance with Section II(a)(8).

- 7) Waste shall not be pyrophoric. Pyrophoric materials contained in wastes shall be treated, prepared, and packaged to be nonflammable *****

- 8) Wastes in a gaseous form shall be packaged at an absolute pressure that does not exceed 1.5 atmospheres at 20° C. Total activity shall not exceed 3.7 TBq (100 Ci) per container.

- 9) Wastes containing hazardous, biological, pathogenic, or infectious material shall be treated to reduce to the maximum extent practicable the potential hazard from the non-radiological materials.

- b) The following requirements are intended to provide stability of the waste. Stability is intended to ensure that the waste does not degrade and affect overall stability of the site through slumping, collapse, or other failure of the disposal unit and thereby lead to water infiltration. Stability is also a factor in limiting exposure to an inadvertent intruder, since it provides a recognizable and nondispersible waste.

- 1) Waste shall have structural stability. A structurally stable waste form will generally maintain its physical dimensions and its form, under the expected disposal conditions such as weight of overburden and compaction equipment, the presence of moisture, and microbial activity, and internal factors such as radiation effects and chemical changes. Structural stability can be provided by the waste form itself, processing the waste to a stable form, or placing the waste in a disposal container or structure that provides stability after disposal.

- 2) Notwithstanding the provisions in Section II(a)(3) and (4), liquid wastes, or wastes containing liquid, shall be converted into a form that contains as little free-standing and noncorrosive liquid as is reasonably achievable, but in no case shall the liquid exceed 1% of the volume of the waste when the waste is in a disposal container designed to ensure stability, or 0.5% of the volume of the waste for waste processed to a stable form.

- 3) Void spaces within the waste and between the waste and its package shall be reduced to the extent practicable.

III. Labeling

Each package of waste shall be clearly labeled to identify whether it is Class A, Class B, or Class C waste, in accordance with Section I.

*****See (A)(4) of these regulations for definition of pyrophoric.

Historical Note

Adopted effective August 10, 1994 (Supp. 94-3).

Radiation Regulatory Agency

APPENDIX E. QUANTITIES FOR USE WITH DECOMMISSIONING

Material	Microcurie	Material	Microcurie
Americium-241	0.01	Iodine-134	10

** Based on alpha disintegration rate of Th-232, Th-230 and their daughter products.

*** Based on alpha disintegration rate of U-238, U-234, and U-235.

NOTE: Where there is involved a combination of isotopes in known amounts, the limit for the combination should be derived as follows: Determine, for each isotope in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific isotope when not in combination. The sum of such ratios for all the isotopes in the combination may not exceed "1" - that is, unity.

Historical Note

Adopted effective February 25, 1985 (Supp. 85-1). Repealed effective August 10, 1994 (Supp. 94-3).

ARRA-8. Repealed

Historical Note

Adopted effective February 25, 1985 (Supp. 85-1). Repealed effective August 10, 1994 (Supp. 94-3).

ARTICLE 5. SEALED SOURCE INDUSTRIAL RADIOGRAPHY

R12-1-501. Definitions

"Access panel" means any panel that is designed to be removed or opened for maintenance or service purposes, opened using tools, and used to provide access to the interior of the cabinet x-ray unit.

"Annual refresher safety training" means a review conducted or provided by the licensee for its employees on radiation safety aspects of industrial radiography. The review shall include, as applicable, the results of internal inspections, new procedures or equipment, new or revised state rules, accidents or errors that have occurred, and provide opportunities for employees to ask safety questions.

"Aperture" means any opening in the outside surface of the cabinet x-ray unit, other than a port, which remains open during generation of x-radiation.

Radiation Regulatory Agency

“Associated equipment” means equipment used in conjunction with a radiographic exposure device that drives, guides, or comes in contact with the source.

“Certifying entity” means an independent certifying organization that complies with the requirements in Appendix A of this Article, or requirements of the NRC or another Agreement State, that are equivalent to the requirements in parts II and III of Appendix A.

“Collimator” means a radiation shield that is placed on the end of the guide tube or directly onto a radiographic exposure device to restrict the size of the radiation beam when the sealed source is positioned to make a radiographic exposure.

“Control (drive) cable” means the cable that is connected to the source assembly and used to drive the source to and from the exposure location.

“Control (drive) mechanism” means a device that enables the source assembly to be moved to and from the exposure device.

“Control tube” means a protective sheath for guiding the control cable. The control tube connects the control drive mechanism to the radiographic exposure device.

“Door” means any barrier that is designed to be movable or opened for routine operation purposes, not opened using tools, and used to provide access to the interior of the cabinet x-ray unit.

“Exposure head” means a device that places the gamma radiography sealed source in a selected working position.

“Ground fault” means an accidental electrical grounding of an electrical conductor.

“Guide tube (projection sheath)” means a flexible or rigid tube (i.e., “J” tube) for guiding the source assembly and the attached control cable from the exposure device to the exposure head. The guide tube may also include the connections necessary for attachment to the exposure device and to the exposure head.

“Hands-on experience” means accumulation of knowledge or skill in any area relevant to radiography.

“Independent certifying organization” means an independent organization that meets all of the requirements in Appendix A.

“Lay-barge radiography” means industrial radiography performed on any water vessel used for laying pipe.

“Port” means any opening in the outside surface of the cabinet x-ray unit that is designed to remain open, during generation of x-rays, for conveying material being irradiated into and out of the cabinet, or for partial insertion of an object for irradiation whose dimensions do not permit complete insertion into the cabinet x-ray unit.

“Practical examination” means a demonstration, through practical application of safety rules and principles of industrial radiography, including use of all radiography equipment and knowledge of radiography procedures.

“Radiographer certification” means written approval received from a certifying entity stating that an individual has satisfactorily met certain established radiation safety, testing, and experience criteria.

“Radiographic exposure device” means any x-ray machine used for purposes of making an industrial radiographic exposure or a device that contains a sealed source, and the sealed source or its shielding may be moved or otherwise changed from a shielded to an unshielded position for purposes of making an industrial radiographic exposure.

“Radiographic operations” means all activities associated with the presence of radiation sources in a radiographic exposure device during use of the device or transport (except when the device is being transported by a common or contract carrier). This includes performing surveys to confirm the adequacy of boundaries, setting up equipment, and conducting any activity inside restricted area boundaries.

“S-tube” means a tube through which a radioactive source travels when the source is inside a radiographic exposure device.

“Source assembly” means an assembly that consists of a sealed source and a connector that attaches the source to a control cable. The source assembly may also include a stop ball used to secure the source in the shielded position.

“Underwater radiography” means industrial radiography performed when a radiographic exposure device is beneath the surface of water.

Historical Note

Former Rule Section E.1; Former Section R12-1-501 repealed, new Section R12-1-501 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-501 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed; new Section made by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-502. License Requirements

- A. The Agency shall review an application for a specific license for the use of radioactive material in industrial radiography and approve the license if an applicant meets all of the following requirements:
1. The applicant satisfies the general requirements in R12-1-309 and any special requirements contained in this Article; and
 2. The applicant submits a program for training radiographers and radiographers’ assistants that complies with R12-1-543, except that:
 - a. After the effective date of this Section, an applicant is not required to describe its initial training and examination program for radiographers;
 - b. An applicant shall affirm that an individual who is acting as an industrial radiographer is certified in radiation safety by a certifying organization, as required in R12-1-543, before permitting the individual to act as a radiographer. This affirmation substitutes for a description of the applicant’s initial training and examination program for radiographers in the subjects outlined in R12-1-543(G); and
 - c. An applicant shall submit procedures for verifying and documenting the certification status of each radiographer and for ensuring that the certification remains valid.
- B. The applicant shall submit written operating and emergency procedures as prescribed in R12-1-522.
- C. The applicant shall submit a description of a program for review of job performance of each radiographer and radiographers’ assistant at intervals that do not exceed six months as prescribed in R12-1-543(E).
- D. The applicant shall submit a description of the applicant’s overall organizational structure as it applies to radiation safety

Radiation Regulatory Agency

responsibilities in industrial radiography, including specified delegation of authority and responsibility.

- E. The applicant shall submit a list of the qualifications of each individual designated as an RSO under R12-1-512 and indicate which designee is responsible for ensuring that the licensee's radiation safety program is implemented in accordance with approved procedures.
- F. If an applicant intends to perform leak testing on any sealed source or exposure device that contains depleted uranium (DU) shielding, the applicant shall submit a description of the procedures for performing the leak testing and the qualifications of each person authorized to perform leak testing. If the applicant intends to analyze its own wipe samples, the application shall include a description of the procedures to be followed. The description shall include the:
 1. Instruments to be used,
 2. Methods of performing the analysis, and
 3. Relevant experience of the person who will analyze the wipe samples.
- G. If the applicant intends to perform "in-house" calibrations of survey instruments, the applicant shall describe each calibration method to be used and the relevant experience of each person who will perform a calibration. A licensee shall perform all calibrations according to the procedures prescribed in R12-1-504.
- H. The applicant shall identify and describe the location of all field stations and permanent radiographic installations.
- I. The applicant shall identify each location where records required by this Chapter will be maintained.

Historical Note

Former Rule Section E.2; Former Section R12-1-502 repealed, new Section R12-1-502 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-502 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Section repealed, new Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed; new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-503. Performance Requirements for Equipment

- A. A licensee shall ensure that equipment used in industrial radiographic operations meets the following minimum criteria:
 1. Each radiographic exposure device, source assembly or sealed source, and all associated equipment meet the requirements in American National Standards Institute, N432-1980 "Radiological Safety for the Design and Construction of Apparatus for Gamma Radiography" (published as NBS Handbook 136, issued January 1981) by the American National Standards Institute, which is incorporated by reference and on file with the Agency. This incorporation by reference contains no future editions or amendments. This publication may be purchased from the American National Standards Institute, Inc., 25 West 43rd Street, New York, New York 10036 Telephone (212) 642-4900. A copy of the document is also on file at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call (202) 741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html; or
 2. An engineering safety analysis demonstrates the applicability of previously performed testing on similar individual radiography equipment components. Based on a review of the analysis, the Agency may find that previ-

ously performed testing can be substituted for testing of the component under the standards in subsection (A)(1).

- B. In addition to the requirements in subsection (A), the following requirements apply to each radiographic exposure device, source changer, source assembly, and sealed source:
 1. A licensee shall ensure that each radiographic exposure device has attached to it a durable, legible, and clearly visible label bearing:
 - a. The chemical symbol and mass number of the radionuclide in the device;
 - b. The activity of the source and the date on which this activity was last measured;
 - c. The model (or product code) and serial number of the sealed source;
 - d. The manufacturer's description of the sealed source; and
 - e. The licensee's name, address, and telephone number.
 2. A licensee shall ensure that each radiographic exposure device intended for use as a Type B transport container meets the applicable requirements of 10 CFR 71, revised January 1, 2015, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
 3. A licensee shall not modify any radiographic exposure device, source changer, source assembly, or associated equipment, unless the design of the replacement component, including source holder, source assembly, controls, or guide tubes is consistent with and does not compromise the design safety features of the system.
- C. In addition to the requirements in subsections (A) and (B), the following requirements apply to each radiographic exposure device, source assembly, and associated equipment that allows the source to be moved out of the device for radiographic operations or to a source changer:
 1. The license shall ensure that the coupling between the source assembly and the control cable is designed so that the source assembly does not become disconnected if it is positioned outside of the guide tube and is constructed so that an unintentional disconnect will not occur under normal and reasonably foreseeable abnormal conditions;
 2. The device automatically secures the source assembly if it is retracted into the fully shielded position within the device and the securing system is released from the exposure device only by means of a deliberate operation;
 3. The outlet fittings, lock box, and drive cable fittings on each radiographic exposure device are equipped with safety plugs or covers installed for storage and transportation to protect the source assembly from water, mud, sand, or other foreign matter;
 4. Each sealed source or source assembly has attached to it or is engraved with a durable, legible, and visible label with the words: "DANGER--RADIOACTIVE." The licensee shall ensure that the label does not interfere with safe operation of the equipment;
 5. The guide tube is able to withstand a crushing test that closely approximates the crushing forces that are likely to be encountered during use, and a kinking resistance test that closely approximates the kinking forces that are likely to be encountered during use;
 6. A guide tube is used if a person moves the source out of the device;
 7. An exposure head or similar device, designed to prevent the source assembly from passing out of the end of the guide tube, is attached to the outermost end of the guide tube during industrial radiography operations;

Radiation Regulatory Agency

8. The guide tube exposure head connection is able to withstand the tensile test for control units specified in ANSI N432-1980, incorporated by reference in subsection (A); and
 9. Source changers provide a system for ensuring that the source is not accidentally withdrawn from the changer when a person is connecting or disconnecting the drive cable to or from the source assembly.
- D.** A licensee shall ensure that radiographic exposure devices and associated equipment in use after January 10, 1996 comply with the requirements of this Section.
- E.** Notwithstanding subsection (A), a licensee with equipment used in industrial radiographic operations need not comply with Sec. 8.92(C) of the Endurance Test in American National Standards Institute N432-1980 if the prototype equipment has been tested using a torque value representative of the torque that an individual using the radiography equipment can realistically exert on the lever or crankshaft of the drive mechanism.

Historical Note

Former Rule Section E.3; Former Section R12-1-503 repealed, new Section R12-1-503 adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Former Section R12-1-503 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Section repealed; new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-504. Radiation Survey Instruments

- A.** A licensee shall maintain at least two calibrated and operable radiation survey instruments at each location where sources of radiation are present to make radiation surveys required by this Article and Article 4 of this Chapter. Instrumentation required by this Section shall be capable of measuring a range from 0.02 millisieverts (2 millirems) per hour through 0.01 sievert (1 rem) per hour.
- B.** A licensee shall ensure that each radiation survey instrument required under subsection (A) is calibrated:
1. At intervals that do not exceed six months, and after instrument servicing, except for battery changes;
 2. For linear scale instruments, at two points located approximately one-third and two-thirds of full-scale on each scale; for logarithmic scale instruments, at mid-range of each decade, and at two points of at least one decade; and for digital instruments, at 3 points between 0.02 and 10 millisieverts (2 and 1000 millirems) per hour; and
 3. So that an accuracy within plus or minus 20% of the calibration source can be demonstrated at each point checked.
- C.** A licensee shall maintain calibration records for each radiation survey instrument, and maintain each record for three years after it is made.

Historical Note

Former Rule Section E.4; Former Section R12-1-504 repealed, new Section R12-1-504 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-504 repealed, new Section R12-1-504 adopted effective December 20, 1985 (Supp. 85-6). Former Section R12-1-504 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-505. Leak Testing and Replacement of Sealed Sources

- A.** A licensee shall ensure that replacement of any sealed source fastened to or contained in a radiographic exposure device and leak testing of any sealed source is performed by a person authorized to do so by the Agency, NRC, or another Agreement State.
- B.** A licensee shall ensure that opening, repairing, or modifying any sealed source is performed by a person specifically authorized to do so by the Agency, NRC, or another Agreement State.
- C.** A licensee that uses a sealed source shall have the source tested for leakage by a qualified person at intervals that do not exceed six months. The person who performs leak testing of the source shall use a method approved by the Agency, NRC, or by another Agreement State. A wipe sample shall be taken from the nearest accessible point to the sealed source where contamination might accumulate. The wipe sample shall be analyzed for radioactive contamination. The licensee shall ensure that the analysis is capable of detecting the presence of 185 Bq (0.005 microcurie) of radioactive material on the test sample and a person specifically authorized by the Agency, NRC, or another Agreement State performs the analysis. The licensee shall maintain records of the leak tests in accordance with this Section.
- D.** Unless a sealed source is accompanied by a certificate from the transferor that shows that the sealed source has been leak tested within six months before the transfer, a licensee shall not use the sealed source until it is tested for leakage. A licensee is not required to test a sealed source that is in storage, but shall test each sealed source before use or transfer to another person if the interval of storage exceeds six months.
- E.** A licensee shall immediately withdraw equipment containing a leaking source from use and have it decontaminated and repaired or dispose of the source in accordance with this Chapter. The licensee shall file a report with the Director of the Agency within five days of any test with results that exceed the threshold in this subsection, and describe the equipment involved, the test results, and corrective action taken. If a leak test conducted under this Section reveals the presence of 185 Bq (0.005 microcurie) or more of removable radioactive material the Agency classifies the sealed source as leaking.
- F.** A licensee shall test for DU contamination at intervals that do not to exceed 12 months a radiographic exposure device that uses depleted uranium (DU) shielding and an "S" tube configuration. The licensee shall ensure that the analysis is capable of detecting the presence of 185 Bq (0.005 microcuries) of radioactive material on the test sample and a person specifically authorized by the Agency, NRC, or another Agreement State performs the analysis. If the testing reveals the presence of 185 Bq (0.005 microcuries) or more of removable DU contamination, the licensee shall remove the exposure device from use until an evaluation of the wear on the S-tube is completed. If the evaluation reveals that the S-tube is worn through, the licensee shall ensure that the device is not used again. The licensee is not required to test for DU contamination if the radiographic exposure device is in storage. Before using or transferring the radiographic exposure device, the licensee shall test the device for DU contamination if the interval of storage exceeds 12 months. The licensee shall maintain records of the DU leak test in accordance with subsection (G).
- G.** A licensee shall maintain records of leak test results for each sealed source and for each device that contains DU. The licensee shall ensure results are in Becquerels (microcuries), and retain each record for three years after it is made or until the source is removed from storage and tested, whichever is longer.

Radiation Regulatory Agency

Historical Note

Former Rule Section E.5; Former Section R12-1-505 repealed, new Section R12-1-505 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-505 repealed, new Section R12-1-505 adopted effective December 20, 1985 (Supp. 85-6). Amended subsections (A), (F) and (G) effective May 2, 1988 (Supp. 88-2). Former Section R12-1-505 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed; new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-506. Quarterly Inventory

- A. A licensee shall conduct a quarterly physical inventory to account for all sealed sources and devices that contain depleted uranium.
- B. A licensee shall maintain a record of the quarterly inventory required under subsection (A) for three years after it is made.
- C. The record required in subsection (B) shall include the date of the inventory, name of the individual who conducted the inventory, radionuclide, number of becquerels (curies) or mass (for DU) in each device, location of sealed source and associated devices, and manufacturer, model, and serial number of each sealed source and device as applicable.

Historical Note

Former Rule Section E.6; Former Section R12-1-506 repealed, new Section R12-1-506 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-506 repealed, new Section R12-1-506 adopted effective December 20, 1985 (Supp. 85-6). Amended subsection (A) effective May 2, 1988 (Supp. 88-2). Former Section R12-1-506 repealed, new Section adopted effective April 2, 1990 (Supp. 90-2). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-507. Utilization Logs

- A. A licensee shall maintain for each sealed source a utilization log that provides all of the following information:
 1. A description, including the make, model, and serial number of each radiographic exposure device, and each sealed source transport and storage container that contains a sealed source;
 2. The identity and signature of the radiographer using the source; and
 3. The plant or site where the source is used and dates of use, including the date each source is removed from and returned to storage.
- B. A licensee shall retain the log required by subsection (A) for three years after the log is made.

Historical Note

Former Section R12-1-507 repealed effective December 20, 1985 (Supp. 85-6). New Section adopted effective April 2, 1990 (Supp. 90-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-508. Inspection and Maintenance of Radiographic Exposure Devices, Transport and Storage Containers, Source Changers, Survey Instruments, and Associated Equipment

- A. A licensee shall perform visual and operability checks on each survey instrument, radiographic exposure device, transport and storage container, source changer, and associated equip-

ment before use on each day the equipment is to be used to ensure that the equipment is in good working condition, the source is adequately shielded, and required labeling is present. A survey instrument operability check shall be performed using a check source or other authorized means. If an equipment problem is found, the licensee shall remove the equipment from service until it is repaired.

- B. A licensee shall have written inspection and maintenance procedures to ensure that:
 1. Radiographic exposure devices, source changers, transport and storage containers, survey instruments, and associated equipment that require inspection and maintenance at intervals that do not exceed three months or before first use of the equipment are functioning properly and safely. Replacement components shall meet design specifications. If an equipment problem is discovered, the licensee shall remove the equipment from service until it is repaired; and
 2. Type B packages are shipped and maintained in accordance with the certificate of compliance or other approval.
- C. A licensee shall maintain records of daily checks and quarterly inspections of radiographic exposure devices, transport and storage containers, source changers, survey instruments, and associated equipment, and retain each record for three years after it is made. The record shall include the date of the check or inspection, name of the inspector, equipment involved, any problems found, and any repair or needed maintenance performed.

Historical Note

Former Section R12-1-508 repealed effective December 20, 1985 (Supp. 85-6). New Section adopted effective April 2, 1990 (Supp. 90-2). Heading amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-509. Surveillance

During each radiographic operation, a radiographer or the radiographer's assistant, as permitted by R12-1-510, shall maintain continuous direct visual surveillance of the operation to protect against unauthorized entry into a high radiation area, except at permanent radiographic installations where all entrances are locked and the licensee is in compliance with R12-1-539.

Historical Note

Former Section R12-1-509 repealed effective December 20, 1985 (Supp. 85-6). New Section adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed; new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-510. Radiographic Operations

- A. If industrial radiography is performed at a location other than a permanent radiographic installation, a licensee shall ensure that the radiographer is accompanied by at least one other radiographer or radiographer's assistant, qualified under R12-1-543. The additional radiographer or radiographer's assistant shall observe the operations and be capable of providing immediate assistance to prevent unauthorized entry. Industrial radiography is prohibited if only one qualified individual is present.
- B. A licensee shall ensure that each industrial radiographic operation is conducted at a location of use authorized on the license

Radiation Regulatory Agency

in a permanent radiographic installation, unless another permanent location is specifically authorized by the Agency.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section adopted effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed;
new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-511. Repealed**Historical Note**

Repealed effective December 20, 1985 (Supp. 85-6).
New Section adopted effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-512. Radiation Safety Officer (RSO)

- A.** A licensee shall have a radiation safety officer (RSO) who is responsible for implementing procedures and regulatory requirements in the daily operation of the radiation safety program.
- B.** Except as provided in subsection (C), the licensee shall ensure that the RSO satisfies the following minimum requirements:
1. The training and testing requirements in R12-1-543,
 2. Two thousand hours of hands-on experience as a qualified radiographer for an industrial radiographic operation, and
 3. Formal training in the establishment and maintenance of a radiation safety program.
- C.** If the licensee uses an individual in the position of RSO who does not have the training and experience required in subsection (B), the licensee shall provide the Agency with a description of the individual's training and experience in the field of ionizing radiation and training with respect to the establishment and maintenance of a radiation safety protection program so the Agency can determine whether the individual is qualified to perform under subsection (D).
- D.** The specific duties and authorities of the RSO include, but are not limited to:
1. Establishing and overseeing operating, emergency, and ALARA procedures as required in Article 4 of this Chapter and reviewing them every year to ensure that the procedures in use conform to current Agency rules and license conditions;
 2. Overseeing and approving all phases of the training program for radiographic personnel, ensuring that appropriate and effective radiation protection practices are taught;
 3. Overseeing radiation surveys, leak tests, and associated documentation to ensure that the surveys and tests are performed in accordance with the rules and taking corrective measures if levels of radiation exceed established action limits;
 4. Overseeing the personnel monitoring program to ensure that devices are calibrated and used properly by occupationally exposed personnel and ensuring that records are kept of the monitoring results and timely notifications are made as required in R12-1-444; and
 5. Overseeing operations to ensure that they are conducted safely and instituting corrective actions, which may include ceasing operations if necessary.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).

New Section made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed;
new Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-513. Form of Records

A licensee shall maintain records in accordance with R12-1-405.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-514. Limits on External Radiation Levels from Storage Containers and Source Changers

The maximum rate limits for storage containers and source changers are 2 millisieverts (200 mRem/hr) at any exterior surface and 0.1 millisieverts (10 mRem/hr) at 1 meter from any exterior surface with the sealed source in the shielded position.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-515. Locking Radiographic Exposure Devices, Storage Containers, and Source Changers

- A.** Except at permanent radiographic installations governed by R12-1-539, a licensee shall ensure that each radiographic exposure device has a lock or an outer container with a lock designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. The licensee shall ensure that the exposure device or its container, if applicable, is locked (and if a keyed lock, with the key removed) if the device or container is not under the direct surveillance of a radiographer or a radiographer's assistant. During radiographic operations, the radiographer or radiographer's assistant shall secure the sealed source assembly in the shielded position each time the source is returned to the shielded position.
- B.** A licensee shall ensure that each sealed source storage container and source changer has a lock or an outer container with a lock designed to prevent unauthorized or accidental removal of the sealed source from its shielded position. The licensee shall ensure that each storage container and source changer is locked (and if a keyed lock, with the key removed) if the storage container or source changer contains a sealed source and is not under the direct surveillance of a radiographer or a radiographer's assistant.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-516. Records of Receipt and Transfer of Sealed Sources

- A.** A licensee shall maintain records that show each receipt and transfer of a sealed source or device that uses DU for shielding and retain each record for three years after it is made.
- B.** The records shall contain separate entries for each transaction, including the date, name of the individual making the record, radionuclide, number of Becquerels (curies) or mass (for DU), and manufacturer, model, and serial number of each sealed source or device, as applicable.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

Radiation Regulatory Agency

R12-1-517. Posting

A licensee shall post any area in which industrial radiography is performed as required by R12-1-429. Exceptions listed in R12-1-430 do not apply to industrial radiographic operations.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-518. Labeling, Storage, and Transportation

- A.** A licensee shall not use a source changer or a storage container to store licensed material unless the source changer or the storage container has securely attached to it a durable, legible, and clearly visible label that bears the standard trefoil radiation caution symbol and the standard colors for the symbol specifically: magenta, purple, or black on a yellow background, and the label has a minimum diameter of 25 mm and the wording "CAUTION (or DANGER), RADIOACTIVE MATERIAL NOTIFY CIVIL AUTHORITIES (or "NAME OF COMPANY")"
- B.** A licensee shall not transport licensed material unless the material is packaged and the package is labeled, marked, and accompanied with appropriate shipping papers in accordance with 10 CFR 71, January 1, 2004, published by the Office of the Federal Register, National Archives and Records Administration, incorporated by reference, and on file with the Agency. This incorporation by reference contains no future editions or amendments.
- C.** A licensee shall physically secure locked radiographic exposure devices and storage containers behind a locked door to prevent tampering or removal by unauthorized personnel. The licensee shall store licensed material in a manner that will minimize danger from explosion or fire.
- D.** A licensee shall lock each transport package that contains licensed material and physically secure the package behind the locked doors of the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal of the licensed material from the vehicle.

Historical Note

Repealed effective December 20, 1985 (Supp. 85-6).
New Section made by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4).

R12-1-519. Repealed**Historical Note**

Repealed effective December 20, 1985 (Supp. 85-6).

R12-1-520. Repealed**Historical Note**

Repealed effective December 20, 1985 (Supp. 85-6).

R12-1-521. Repealed**Historical Note**

Adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-522. Operating and Emergency Procedures

- A.** A licensee shall ensure that the operating and emergency procedures include, at a minimum, instructions in the following, as applicable:

1. Handling and use of sealed sources or radiographic exposure devices, so that persons are not exposed to radiation that exceeds the limits in Article 4 of this Chapter;
 2. Methods and occasions for conducting radiation surveys;
 3. Methods for controlling access to radiographic areas;
 4. Methods and occasions for locking and securing radiographic exposure devices, transport and storage containers, and sealed sources;
 5. Personnel monitoring and associated equipment;
 6. Transportation of sealed sources to field locations, including packing radiographic exposure devices and storage containers in vehicles, placarding vehicles, and maintaining control of the sealed sources during transportation, as required in 49 CFR 171-173, 2002 edition, published October 1, 2002, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, which is incorporated by reference and on file with the Agency. This incorporation contains no future editions or amendments;
 7. Inspection, maintenance, and operability checks of radiographic exposure devices, survey instruments, transport containers, and storage containers;
 8. Actions to be taken immediately by radiography personnel if a pocket dosimeter is found to be off-scale or an alarm rate meter sounds an alarm;
 9. Procedures for identifying and reporting defects and non-compliance, as required by R12-1-448 and R12-1-535;
 10. Procedures for notifying the RSO and the Agency in the event of an accident;
 11. Methods for minimizing exposure of persons in the event of an accident;
 12. Procedures for recovering a source if the licensee is responsible for source recovery; and
 13. Maintenance of records.
- B.** The licensee shall maintain copies of current operating and emergency procedures until the Agency terminates the license. Superseded procedures shall be maintained for three years after being superceded. Additionally, a copy of the procedures shall be maintained at field stations in accordance with R12-1-540.

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-523. Personnel Monitoring

- A.** A licensee shall not permit any individual to act as a radiographer or a radiographer's assistant unless, at all times during radiographic operations, each individual wears, on the trunk of the body, a direct reading dosimeter, an operating alarm rate meter, and a personnel dosimeter that is processed and evaluated by an accredited National Voluntary Laboratory Accreditation Program (NVLAP) processor. At permanent radiography installations where other appropriate alarming or warning devices are in routine use, the wearing of an alarm rate meter is not required. A licensee shall:
1. Use a pocket dosimeter with a range from zero to 2 millisieverts (200 millirem). The licensee shall ensure that each dosimeter is recharged at the start of each shift. Electronic personal dosimeters are permitted in place of ion-chamber pocket dosimeters.
 2. Assign a personnel dosimeter to each individual, who shall wear the assigned equipment.
 3. Replace film badges at least monthly and ensure that other personnel dosimeters are processed and evaluated

Radiation Regulatory Agency

by an accredited NVLAP processor and replaced at periods that do not exceed three months.

4. After replacement, ensure that each personnel dosimeter is processed as soon as possible.
- B.** A licensee shall record exposures noted from direct reading dosimeters, such as pocket dosimeters or electronic personal dosimeters, at the beginning and end of each shift. The licensee shall maintain the records for three years after the Agency terminates the license.
- C.** A licensee shall check pocket dosimeters and electronic personal dosimeters for correct response to radiation at periods that do not exceed 12 months. The licensee shall record the results of each check and maintain the records for three years after the dosimeter check is performed. The licensee shall discontinue use of a dosimeter if it is not accurate within plus or minus 20 percent of the true radiation exposure.
- D.** If an individual's pocket dosimeter has an off-scale reading, or the individual's electronic personal dosimeter reads greater than 2 millisieverts (200 millirems), and radiation exposure cannot be ruled out as the cause, a licensee shall process the individual's dosimeter within 24 hours of the suspect exposure. The licensee shall not allow the individual to resume work associated with sources of radiation until the individual's radiation exposure has been determined. Using information from the dosimeter, the licensee's RSO or the RSO's designee shall calculate the affected individual's cumulative radiation exposure as prescribed in Article 4 of this Chapter and include the results of this determination in the personnel monitoring records maintained in accordance with subsection (B).
- E.** If the personnel dosimeter that is required by subsection (A) is lost or damaged, the licensee shall ensure that the worker ceases work immediately until the licensee provides a replacement personnel dosimeter that meets the requirements in subsection (A) and the RSO or the RSO's designee calculates the exposure for the time period from issuance to discovery of the lost or damaged personnel dosimeter. The licensee shall maintain a record of the calculated exposure and the time period for which the personnel dosimeter was lost or damaged in accordance with subsection (B).
- F.** The licensee shall maintain dosimetry reports received from the accredited NVLAP personnel dosimeter processor in accordance with subsection (B).
- G.** For each alarm rate meter a licensee shall ensure that:
 1. At the start of each shift, the alarm functions (sounds) properly before an individual uses the device;
 2. Each device is set to give an alarm signal at a preset dose rate of 5 mSv/hr (500 mrem/hr); with an accuracy of plus or minus 20 percent of the true radiation dose rate;
 3. A special means is necessary to change the preset alarm function on the device; and
 4. Each device is calibrated at periods that do not exceed 12 months for correct response to radiation. The licensee shall maintain records of alarm rate meter calibrations in accordance with subsection (B).

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4).

R12-1-524. Supervision of a Radiographer's Assistant

If a radiographer's assistant uses a radiographic exposure device, associated equipment, or a sealed source or conducts a radiation

survey required by R12-1-533(B) to determine that the sealed source has returned to the shielded position after an exposure, the licensee shall ensure that the assistant is under the personal supervision of a radiographer. For purposes of this Section "personal supervision" means:

1. The radiographer is physically present at the site where the sealed source is being used,
2. The radiographer is available to give immediate assistance if required, and
3. The radiographer is able to observe the assistant's performance directly.

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-525. Notification of Field Work

Each day radioactive material is used for industrial radiography, a licensee shall notify the Agency of any planned field radiography. The notice shall be in writing and specify the location of the field work, the name of the supervising individual at the job site, and the expected duration of the work at the job site listed in the notice. A facsimile that provides the required information is sufficient notice.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-526. Reserved**R12-1-527. Reserved****R12-1-528. Reserved****R12-1-529. Reserved****R12-1-530. Reserved****R12-1-531. Security**

During each radiographic operation, the radiographer or radiographer's assistant shall maintain continuous direct visual surveillance of the operation to protect against unauthorized entry into a high radiation area, as defined in Article 1, unless:

1. The high radiation area is equipped with a control device or an alarm system as prescribed in R12-1-420(A), or
2. The high radiation area is locked to protect against unauthorized or accidental entry.

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-532. Posting

Notwithstanding any provisions in R12-1-430, areas in which radiography is being performed shall be conspicuously posted as required by R12-1-429(A) and (B).

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3).

R12-1-533. Radiation Surveys

- A.** A licensee shall conduct surveys with a calibrated and operable radiation survey instrument that meets the requirements of R12-1-504.
- B.** Using a survey instrument that complies with subsection (A), the licensee shall conduct a survey of the radiographic exposure device and the guide tube after each exposure before approaching the device or the guide tube. The survey shall be performed to determine that the sealed source is in the shielded

Radiation Regulatory Agency

position before the radiographer or radiographer's assistant exchanges films, repositions the exposure head, or dismantles the equipment.

- C. The licensee shall conduct a survey of the radiographic exposure device with a calibrated radiation survey instrument any time the source is exchanged or the device is placed in a storage area, as defined in R12-1-102, to ensure that the sealed source is in the shielded position.
- D. The licensee shall maintain a record of each exposure device survey conducted before the device is placed in storage under subsection (C), if that survey is the last one performed during the workday. Each record shall be maintained for three years after the record is made.

Historical Note

Adopted effective April 2, 1990 (Supp. 90-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-534. Repealed**Historical Note**

Adopted effective April 2, 1990 (Supp. 90-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-535. Notifications

- A. In addition to the reporting requirements specified in Article 4, each licensee shall provide a written report to the Agency if any of the following incidents involving radiography equipment occur:
 1. Unintentional disconnection of the source assembly from the control cable;
 2. Inability to retract the source assembly to the fully shielded position or secure it in this position; or
 3. Failure of any component (critical to safe operation of the device) to properly perform its intended function;
- B. A licensee shall include the following information in any report submitted under this Section, regarding radiography equipment, or Article 4, regarding an overexposure, if the report concerns the failure of safety components of radiography equipment:
 1. A description of the equipment problem;
 2. Cause of the incident, if known;
 3. Name of manufacturer and model number of the equipment involved in the incident;
 4. Place, date, and time of the incident;
 5. Actions taken to establish normal operations;
 6. Corrective actions taken or planned to prevent recurrence; and
 7. Qualifications of personnel involved in the incident.
- C. Any licensee that conducts radiographic operations, or stores radioactive material at a location not listed on the license or for a period longer than 180 days during a calendar year, shall notify the Agency of these activities before the 180 days has elapsed.

Historical Note

New Section made by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1).

R12-1-536. Reserved

R12-1-537. Reserved

R12-1-538. Reserved

R12-1-539. Permanent Radiographic Installations

- A. If a licensee maintains a permanent radiographic installation that does not fall within the definition of "enclosed radiography" in R12-1-102, the licensee shall ensure that each entrance, used for personnel access to the high radiation area, has either:
 1. An entrance control device of the type described in R12-1-420(A)(1) that reduces the radiation level upon entry into the area, or
 2. Both conspicuous visible and audible alarm signals to warn of the presence of radiation. The licensee shall ensure that the visible signal is actuated by radiation if a source is exposed and the audible signal is actuated if someone attempts to enter the installation while a source is exposed.
- B. A licensee with an alarm signal shall test the alarm signal for proper operation with a radiation source each day before the installation is used for radiographic operations. The test shall include a check of both the visible and audible signals. A licensee with an entrance control device shall test the device monthly. If an entrance control device or alarm signal is operating improperly, the licensee shall immediately label the device or signal as "defective" and repair the device or signal within seven calendar days. The licensee may continue to use the facility during this seven-day period, if the licensee implements continuous surveillance requirements of R12-1-509 and uses an alarming rate meter.
- C. A licensee shall maintain each record an alarm system or entrance control device test for three years after the record is made.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-540. Location of Documents and Records

- A. A licensee shall maintain a copy of each record required by this Article and other applicable Articles of this Chapter at a location specified under R12-1-502(I).
- B. A licensee shall maintain a copy of each record listed below at each field station and temporary job site:
 1. The license that authorizes use of radioactive material;
 2. A copy of Articles 4, 5, and 10 of this Chapter;
 3. Utilization logs for each radiographic exposure device dispatched from that location, as required by R12-1-507;
 4. Records of equipment problems identified in daily checks of equipment, as required by R12-1-508(A);
 5. Records of alarm system and entrance control checks as required by R12-1-539;
 6. Records of direct-reading dosimeters, such as pocket dosimeters and electronic personnel dosimeters as required by R12-1-523;
 7. Operating and emergency procedures as required by R12-1-522;
 8. A report on the most recent calibration of the radiation survey instruments in use at the site as required by R12-1-504;
 9. A report on the most recent calibration of each alarm rate meter, and operability check of each pocket dosimeter and electronic personnel dosimeter as required in R12-1-523;
 10. Most recent survey record as required by R12-1-533;

Radiation Regulatory Agency

11. The shipping papers for the transportation of radioactive material required by 10 CFR 71.5, 2003 edition, published January 1, 2003, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, which is incorporated by reference and on file with the Agency (this incorporation contains no future editions or amendments); and
12. If operating under reciprocity in accordance with R12-1-320, a copy of the NRC or Agreement State license authorizing the use of radioactive materials.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-541. Repealed**Historical Note**

Adopted effective April 2, 1990 (Supp. 90-2). Amended effective August 10, 1994 (Supp. 94-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Section repealed by final rulemaking at 11 A.A.R. 978, effective April 3, 2005 (05-1).

R12-1-542. Repealed**Historical Note**

Adopted effective April 2, 1990 (Supp. 90-2). Repealed effective August 10, 1994 (Supp. 94-3). New Section made by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Section repealed by final rulemaking at 11 A.A.R. 978, effective April 3, 2005 (05-1).

Appendix A. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective December 20, 1985 (Supp. 85-6). Repealed effective April 2, 1990 (Supp. 90-2).

R12-1-543. Training

- A. A licensee shall not allow an individual to act as a radiographer until the individual has received training in the subjects in subsection (G), has participated in a minimum of two months of on-the-job training, and is certified through a radiographer certification program by a independent certifying organization in accordance with the criteria specified in Appendix A.
 1. A licensee shall provide the Agency with proof of an individual's certification and a written request that the individual be added to a license as a certified radiographer.
 2. A licensee shall maintain proof of certification at the job site where a radiographer is performing field radiography.
 3. A licensee that employs certified radiographers in Arizona shall ensure that:
 - a. Each radiographer has obtained initial certification within the last five years, and
 - b. An uncertified radiographer works only as a radiographer's assistant until certified.
 4. A radiographer shall recertify every five years by:
 - a. Taking an approved radiography certification examination in accordance with this subsection; or
 - b. Providing written evidence that the radiographer is active in the practice of industrial radiography and has participated in continuing education during the previous five-year period.
5. If an individual cannot provide the written evidence required in subsection (4)(b), the individual shall retake the certification examination.
6. A radiographer shall provide the licensee with proof of certification in the form of a card issued by the certifying organization that contains:
 - a. A picture of the certified radiographer,
 - b. The radiographer's certification number,
 - c. The date the certification expires, and
 - d. The radiographer's signature.
- B. A licensee shall not allow an individual to act as a radiographer until the individual:
 1. Has received copies of and instruction in the requirements of this Article; applicable Sections of Articles 4 and 10 and R12-1-107; applicable DOT regulations in 10 CFR 71, January 1, 2003 edition, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, which is incorporated by reference, contains no future editions or amendments, and is on file with Agency; the Agency license or licenses under which the radiographer will perform industrial radiography; and the licensee's operating and emergency procedures;
 2. Has demonstrated an understanding of the licensee's license and operating and emergency procedures by successfully completing a written or oral examination that covers the relevant material;
 3. Has received training in:
 - a. Use of the licensee's radiographic exposure devices and sealed sources,
 - b. Daily inspection of devices and associated equipment, and
 - c. Use of radiation survey instruments; and
 4. Has demonstrated an understanding of the use of radiographic exposure devices, sources, survey instruments, and associated equipment described in subsection (B)(3) by successfully completing a practical examination covering this material.
- C. A licensee shall not allow an individual to act as a radiographer's assistant until the individual:
 1. Has received copies of and instruction in the requirements of this Article; applicable Sections of Articles 4 and 10 and R12-1-107; applicable DOT regulations in 10 CFR 71, January 1, 2003 edition, by the Office of the Federal Register, National Archives and Records Administration, Washington, D.C. 20408, which is incorporated by reference, contains no future editions or amendments, and is on file with Agency; the Agency license or licenses under which the radiographer's assistant will perform industrial radiography; and the licensee's operating and emergency procedures;
 2. Has developed competence to use, under the personal supervision of the radiographer, the licensee's radiographic exposure devices, sealed sources, associated equipment, and radiation survey instruments; and
 3. Has demonstrated understanding of the instructions provided under subsection (C)(1) by successfully completing a written test on the subjects covered and has demonstrated competence using the hardware described in subsection (C)(2) by successfully completing a practical examination.
- D. A licensee shall provide refresher safety training for each radiographer and radiographer's assistant at intervals not to exceed 12 months.

Radiation Regulatory Agency

E. Unless an individual serves as both a radiographer and an RSO, the RSO or the RSO's designee shall design and implement an inspection program to examine the job performance of each radiographer and radiographer's assistant and to ensure that the Agency's rules and license requirements, and the licensee's operating and emergency procedures are followed. The inspection program shall:

1. Include observation of the performance of each radiographer and radiographer's assistant during an actual industrial radiographic operation, at intervals that do not exceed six months; and
2. If a radiographer or a radiographer's assistant has not participated in an industrial radiographic operation for more than six months, the radiographer shall demonstrate knowledge of the training requirements in subsection (B)(3) and the radiographer's assistant shall demonstrate knowledge of the training requirements of subsection (C)(2) by a practical examination before participating in a radiographic operation.

F. A licensee shall maintain records of the training required in this Section including certification documents, written and practical examinations, refresher safety training documents, and inspection documents, in accordance with subsection (I).

G. A licensee shall include the following subjects in the training required under subsection (A):

1. Fundamentals of radiation safety, including:
 - a. Characteristics of gamma radiation,
 - b. Units of radiation dose and quantity of radioactivity,
 - c. Hazards of exposure to radiation,
 - d. Levels of radiation from licensed material, and
 - e. Methods of controlling radiation dose (time, distance, and shielding);
2. Radiation detection instruments, including:
 - a. Use, operation, calibration, and limitations of radiation survey instruments;
 - b. Survey techniques; and
 - c. Use of personnel monitoring equipment;
3. Equipment topics, including:
 - a. Operation and control of radiographic exposure equipment, use of remote handling equipment, and use of storage containers, using pictures or models of source assemblies (pigtailed);
 - b. Storage, control, and disposal of licensed material; and
 - c. Inspection and maintenance of equipment;
4. The requirements of pertinent Agency rules; and
5. Case histories of accidents in radiography.

H. A licensee shall maintain records of radiographer certification in accordance with subsection (I)(1) and provide proof of certification as required in subsection (A)(1).

I. A licensee shall maintain the following records for three years after each record is made:

1. Records of training for each radiographer and each radiographer's assistant. For radiographers, the records shall include radiographer certification documents and verification of certification status. All records shall include copies of written tests, dates of oral and practical examinations, and names of individuals who conducted and took the oral and practical examinations; and
2. Records of annual refresher safety training and semi-annual inspections of job performance for each radiographer and each radiographer's assistant. The records for the annual refresher safety training shall list topics discussed during training, the date of training, and names of each instructor and attendee. For inspections of job performance, the records shall include a list of the items

checked during the inspection and any non-compliance observed by the RSO.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

Appendix A. Standards for Organizations that Provide Radiography Certification

Note: For purposes of this Article an "independent certifying organization" means an organization that meets all of the criteria in this Appendix.

I. Requirements for an Organization that Provides Radiographer Certification

To qualify to provide radiographer certification an organization shall:

- A. Be a society or association, with members who participate in, or have an interest in, the field of industrial radiography;
- B. Not restrict membership because of race, color, religion, sex, age, national origin, or disability;
- C. Have a certification program that is open to nonmembers, as well as members;
- D. Be an incorporated, nationally recognized organization that is involved in setting national standards of practice within its fields of expertise;
- E. Have a staff comparable to other nationally recognized organizations, a viable system for financing its operations, and a policy-and decision-making review board;
- F. Have a set of written, organizational by-laws and policies that address conflicts of interest and provide a system for monitoring and enforcing the by-laws and policies;
- G. Have a committee, with members who can carry out their responsibilities impartially, review and approve the certification guidelines and procedures, and advise the organization's staff in implementing the certification program;
- H. Have a committee, with members who can carry out their responsibilities impartially, review complaints against certified individuals and determine sanctions;
- I. Have written procedures describing all aspects of the organization's certification program;
- J. Maintain records of the current status of each individual's certification and administration of the certification program;
- K. Have procedures to ensure that certified individuals are provided due process with respect to administration of the certification program, including a process for becoming certified and a process for imposing sanctions against certified individuals;
- L. Have procedures for proctoring examinations and qualifying proctors. The organization, through these procedures, shall ensure that an individual who proctors an examination is not employed by the same company or corporation (or a wholly-owned subsidiary of the company or corporation) that employs an examinee;
- M. Exchange information about certified individuals with the Agency, other independent certifying organizations, the NRC, or Agreement States and allow periodic review of its certification program and related records; and
- N. Provide a description to the Agency of its procedures for choosing examination sites and providing a favorable examination environment.

II. Requirements for a Certification Program

An independent certifying organization shall ensure that its certification program:

- A. Requires an applicant for certification to:
 1. Obtain training in the subjects listed in R12-1-543(G) or equivalent NRC or Agreement State regulations, and

Radiation Regulatory Agency

2. Satisfactorily complete a written examination that covers these subjects;
- B. Requires an applicant for certification to provide documentation demonstrating that the applicant has:
 1. Received training in the subjects listed in R12-1-543(G) or equivalent NRC or Agreement State regulations;
 2. Satisfactorily completed the on-the-job training required in R12-1-543(A); and
 3. Received verification by an Agreement State or a NRC licensee that the applicant has demonstrated the capability of independently working as a radiographer;
- C. Provides procedures that protect examination questions from disclosure;
- D. Provides procedures for denying certification to an applicant and revoking, suspending, and reinstating a certificate;
- E. Provides a certification period that is not less than three years or more than five years, procedures for renewing certifications and, if the procedures allow renewals without examination, a system for assessing evidence of recent full-time employment and annual refresher training; and
- F. Provides a timely response to inquiries, by telephone or letter, from members of the public, about an individual's certification status.

III. Requirements for a Written Examination

An independent certifying organization shall ensure that its examination:

- A. Is designed to test an individual's knowledge and understanding of the subjects listed in R12-1-543(G);
- B. Is written in a multiple-choice format; and
- C. Has psychometrically valid questions drawn from a question bank and based on the material in R12-1-543(G).

Historical Note

New Appendix made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

ARTICLE 6. USE OF X-RAYS IN THE HEALING ARTS**R12-1-601. Repealed****Historical Note**

Former Rule Section F.1; Former Section R12-1-601 repealed, new Section R12-1-601 adopted effective June 30, 1977 (Supp. 77-3). Repealed effective August 8, 1986 (Supp. 86-4).

R12-1-602. Definitions

The following definitions apply in this Article, unless the context otherwise requires:

"Accessible surface" means the external surface of the enclosure or housing provided by the manufacturer.

"Added filter" means the filter added to the inherent filtration.

"Aluminum equivalent" means the thickness of aluminum (type 1100 alloy) that affords equivalent attenuation, under specified conditions, as the material in question. (The nominal chemical composition of type 1100 aluminum alloy is 99.00 percent minimum aluminum, 0.12 percent copper).

"Annual" means annually within two months of the anniversary due date as determined by the original installation date, inspection date, survey date, or a reset date created by conducting a full survey before the anniversary date has arrived.

"Assembler" means any person engaged in the business of assembling, replacing, or installing one or more components into an x-ray system or subsystem.

"Attenuation block" means a block or stack, having dimensions 20 cm by 20 cm by 3.8 cm (7.9 inches by 7.9 inches by 1.5 inches) of type 1100 aluminum alloy or other materials that afford equivalent attenuation.

"Automatic exposure control" means a device that automatically controls one or more technique factors in order to obtain, at a preselected location or locations, a required quantity of radiation.

"Barrier" (See "Protective barrier")

"Beam axis" means a line from the source through the center of the x-ray field.

"Beam-limiting device" means a device that provides a means to restrict the dimensions of the x-ray field.

"C-arm x-ray system" means an x-ray system that has the image receptor and x-ray tube housing assembly connected by a common mechanical support system to maintain a desired spatial relationship. This system is designed to allow a change in the projection of the beam through the patient without a change in the position of the patient.

"Changeable filter" means any filter, exclusive of inherent filtration, which can be removed from the useful beam by an electronic, mechanical, or physical process.

"Cinefluorography" means fluorography that uses a movie camera to record fluorograph images on film for later playback.

"Coefficient of variation" means the ratio of the standard deviation to the mean value of a population of observations.

"Collimator" means an adjustable device, generally made of lead, that is fixed to an x-ray tube housing to intercept or collimate the useful beam and, if not made of lead, has a lead equivalency of not less than that of the tube housing assembly.

"Compression device" means a device used to bring object structures closer to the image plane of a radiograph and make a part of the human body a more uniform thickness so the optical density of the radiograph will be more uniform.

"Computed tomography" means the production of a tomogram by the acquisition and computer processing of x-ray transmission data. For purposes of these rules this term has the same meaning as "CT."

"Contact therapy system" means that the x-ray tube port is put in contact with or within 5 centimeters (2 inches) of the surface being treated.

"Control panel" means that part of the x-ray machine where switches, knobs, push-buttons, or other hardware necessary for manually setting the technique factors are located.

"Cooling curve" means the graphical relationship between heat units stored and cooling time.

"CT gantry" means the tube housing assemblies, beam-limiting devices, detectors, and the supporting structure, frame, and cover which hold or enclose these components.

"Dead-man switch" means a switch constructed so that a circuit-closing contact can be maintained only by continuous pressure on the switch by the operator.

"Diagnostic source assembly" means the tube housing assembly with a beam-limiting device attached.

Radiation Regulatory Agency

“Diagnostic x-ray system” means an x-ray system designed for irradiation of any part of a human or animal body for the purpose of diagnosis or visualization.

“Direct scattered radiation” means scattered radiation that has been deviated in direction only by materials irradiated by the useful beam (see “Scattered radiation”).

“Electronic brachytherapy” means a method of radiation therapy where an electrically generated source of ionizing radiation is placed in or near the tumor or target tissue to deliver therapeutic radiation dosage.

“Entrance exposure rate” means the roentgens per unit time at the point where the center of the useful beam enters the patient.

“Equipment” (See “X-ray equipment”)

“Filter” means material placed in the useful beam to absorb undesirable radiation.

“Fluoroscopic imaging assembly” means a subsystem in which x-ray photons produce a fluoroscopic image. It includes the image receptor or receptors such as the image intensifier and spot-film device, electrical interlocks, if any, and structural material that provides a linkage between the image receptor and diagnostic source assembly.

“Fluoroscopic system” means a radiographic x-ray system used to directly visualize internal structure, the motion of internal structures, and fluids in real time, or near real-time, to aid in the treatment or diagnosis of disease, or the performance of other medical procedures.

“Focal spot” means the region of the anode target in an x-ray tube where electrons from the cathode interact to produce x-rays.

“General purpose radiographic x-ray system” means any radiographic x-ray system that, by design, is not limited to radiographic examination of a specific anatomical region.

“Gonadal shield” means a protective barrier for the testes or ovaries.

“Grid” means a device used to improve the image detail in a radiograph by reducing the intensity of x-ray scatter radiation exiting the film side of the patient.

“Half-value layer” or “HVL” means the thickness of a specified material that attenuates the beam of radiation to an exposure rate that is one-half of its original value. In this definition, the contribution of any scattered radiation, other than that which is present initially in the beam, is excluded.

“Healing arts radiography” means the application of x-radiation to human patients for diagnostic or therapeutic purposes by a licensed practitioner or a person certified in accordance with R12-1-603(B)(1), at the direction of a licensed practitioner. Healing arts radiography includes:

- Positioning the x-ray beam with respect to the patient,
- Anatomical positioning of the patient,
- Selecting exposure factors, or
- Initiating the exposure.

“Healing arts screening” means the application of radiation from an x-ray machine to a human for the detection or evalua-

tion of health indications when the tests are not specifically and individually ordered by a licensed practitioner.

“Image intensifier” means an electronic device, installed in an x-ray system housing, which instantaneously converts an x-ray pattern into a corresponding light image of higher intensity.

“Image receptor” means any device, such as a fluorescent screen or radiographic film, which transforms incident x-ray photons either into a visible image or into another form which can be made into a visible image by further transformation.

“Inherent filtration” means the filtration of the useful beam by permanently installed components of the tube housing assembly.

“Kilovolts peak” or “kVp” (See “Peak tube potential”)

“Lateral fluoroscope” means the x-ray tube and image receptor combination in a biplane system dedicated to the lateral projection. It consists of the lateral x-ray tube housing assembly and the lateral image receptor that are fixed in position relative to the table with the x-ray beam axis parallel to the plane of the table.

“Lead equivalent” means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

“Leakage radiation” means all radiation emanating from the tube housing except the useful beam and radiation produced when the exposure switch or timer is not activated.

“Leakage technique factors” means the technique factors associated with the diagnostic source assembly that are used in measuring leakage radiation. Included are:

For capacitor energy storage equipment, the maximum-rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum-rated peak tube potential with the quantity of charge per exposure being 10 millicoulombs (mAs) or the minimum obtainable from the unit, whichever is larger;

For field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and maximum-rated number of x-ray pulses in an hour for operation at the maximum-rated peak tube potential; and

For all other source assemblies, the maximum-rated peak tube potential and maximum-rated continuous tube current for the maximum-rated peak tube potential.

“mA” means milliampere.

“Mammographic x-ray system” means an x-ray system that is specifically engineered to image human breasts.

“mAs” means milliampere second.

“Mobile equipment” (See “X-ray equipment”)

“Peak tube potential” means the maximum value of the potential difference across the x-ray tube during an exposure.

“Phantom” means a volume of material that behaves in a manner similar to tissue with respect to the attenuation and scattering of radiation. (i.e. “Breast phantom” means an artificial test object that simulates the average composition of, and various structures in the breast.)

“Phototimer” (See “Automatic exposure control”)

“Portable equipment” (See “X-ray equipment”)

Radiation Regulatory Agency

“Primary protective barrier” (See “Protective barrier”)

“Protective apron” means an apron made of radiation, absorbing material used to reduce radiation exposure.

“Protective barrier” means a barrier of radiation-absorbing material used to reduce radiation exposure.

“Primary protective barrier” means the material, excluding filters, placed in the useful beam.

“Secondary protective barrier” means the material which attenuates stray radiation.

“Protective glove” means a glove made of radiation- absorbing material used to reduce radiation exposure.

“Radiologic physicist” means an individual who:

Is certified by the American Board of Radiology, American Board of Medical Physics, or the American Board of Health Physics;

Possesses documentation of state approval;

Holds a master's degree or higher in a physical science; and

Meets the training and certification requirements in R12-1-615(A)(1)(c).

“Scattered radiation” means radiation that, during passage through matter, has been deviated in direction. (See “Direct scattered radiation”)

“Screen” or “intensifying screen” means a device that converts the energy of the x-ray beam into visible light that interacts with the radiographic film, forming a latent image, or contains photostimulable phosphor plates that upon exposure, emit visible or nonvisible light to create an image.

“Secondary protective barrier” (See “Protective barrier”)

“Shutter” (See “Collimator”)

“Source” means the focal spot of the x-ray tube.

“Source-to-image receptor distance” or “SID” means the distance from the source to the center of the input surface of the image receptor.

“Spot check” means an abbreviated calibration procedure which is performed to assure that a previous calibration continues to be valid. Also, a spot film may be taken to improve visualization by arresting motion and to document medical observations. Note that in some cases, a film may not be created.

“Stationary equipment” (See “X-ray equipment”)

“Stray radiation” means the sum of leakage and scattered radiation.

“System” (See “X-ray system”)

“Technique chart” means a tabulation of technique factors.

“Technique factors” means the following conditions of operation:

For capacitor energy storage equipment, peak tube potential in kV and quantity of charge in mAs;

For field emission equipment rated for pulsed operation, peak tube potential in kV, and number of x-ray pulses;

For CT x-ray systems designed for pulsed operation, peak tube potential in kV, scan time in seconds, and either tube current in mA, x-ray pulse width in seconds, and number of x-ray pulses per scan, or the product of tube current, x-ray pulse width, and number of x-ray pulses in mAs;

For CT x-ray systems not designed for pulsed operation, peak tube potential in kV, and either tube current in mA and scan time in seconds, or the product of tube current, exposure time in mAs, when the scan time and exposure time are equivalent; and

For all other equipment, peak tube potential in kV, and either tube current in mA and exposure time in seconds, or the product of tube current and exposure time in mAs.

“Treatment simulator” means a diagnostic x-ray system that duplicates a medical particle accelerator or other teletherapy in terms of its geometrical, mechanical, and optical qualities; the main function of which, is to display radiation treatment fields so that the target volume may be accurately included in the area of irradiation without delivering excess radiation to surrounding normal tissue.

“Tube” means x-ray tube unless otherwise specified.

“Tube housing assembly” means the tube housing with the tube installed. It includes high-voltage or filament transformers and other elements contained within the tube housing.

“Tube rating chart” means the set of curves that specify the rated limits of operation of the tube in terms of the technique factors.

“Useful beam” means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam-limiting device when the exposure controls are in a mode that causes the system to produce radiation.

“Visible area” means that portion of the input surface on the image receptor over which incident x-ray photons are producing a visible image.

“X-ray equipment” means an x-ray system, subsystem, or component described further by the following terms:

“Hand-held” means x-ray equipment designed to be held by an operator while being used.

“Mobile” means x-ray equipment mounted on a permanent base with wheels or casters for moving while completely assembled.

“Portable” means x-ray equipment designed to be hand-carried, but used with a cord or delayed timer system that allows the operator to be six feet or more away from the useful beam.

“Stationary” means x-ray equipment installed in a fixed location.

“Transportable mobile” means x-ray equipment installed in a vehicle or trailer.

“X-ray system” means an assemblage of components for the controlled production of x-rays. It includes, at minimum, an x-ray high-voltage generator, an x-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures. Additional components that function with the system are considered integral parts of the system.

“X-ray tube” means any electron tube that is designed for the conversion of electrical energy into x-ray energy. For purposes

Radiation Regulatory Agency

of the rules contained in 12 A.A.C. 1, this term is synonymous with "tube."

Historical Note

Former Rule Section F.2; Former Section R12-1-602 repealed, new Section R12-1-602 adopted effective June 30, 1977 (Supp. 77-3). Amended effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-603. Operational Standards, Shielding, and Darkroom Requirements

- A.** A person shall not make, sell, lease, transfer, lend, or install x-ray equipment or the supplies used in connection with the equipment unless the supplies and equipment, when properly placed in operation and properly used, meets the requirements of 12 A.A.C. 1.
- B.** A registrant shall direct the operation of x-ray machines under the registrant's control and assure that all of the following provisions are met in the operation of x-ray machines:
1. The registrant shall not permit any individual to engage in the practice of "Healing Arts Radiography" using equipment under the registrant's control, unless the individual possesses, and displays in the primary employer's facility, an official certificate issued by, or is exempt from, the Medical Radiologic Technology Board of Examiners that contains an original signature of its Director or designee. A copy of the certificate shall be posted at any secondary employment location with documentation that verifies that the employer has physically seen the official certificate and has annotated on the copy the location where the official certificate may be viewed by Agency staff.
 2. The registrant shall maintain records documenting compliance with subsection (B)(1) for each individual practicing "Healing Arts Radiography" using equipment under the registrant's control,
 3. The registrant shall provide safety rules to each individual operating x-ray equipment under the registrant's control, including any restrictions in operating procedures necessary for the safe use of the equipment and require that the operator demonstrate familiarity with 12 A.A.C. 1.
- C. Shielding**
1. Each registrant shall provide each installation with primary and secondary protective barriers that are necessary to assure compliance with 12 A.A.C. 1, Article 4.
 2. A registrant shall ensure that attenuation provided by a protective barrier meets or exceeds the level of protection established in Report No. 147 Structural Shielding Design for Medical X-ray Imaging Facilities, November 19, 2004, by the National Council on Radiation Protection and Measurements, (NCRP), NCRP Publications, 7910 Woodmount Ave., Suite 400, Bethesda, MD 20814-3095. This report is incorporated by reference and available under R12-1-101. The incorporated material contains no future editions or amendments. Copies of the report are available from NCRP Publications: online at <http://www.ncrppublications.org>; toll free at (800) 229-2652 (Ext. 25); or e-mail at NCRPpubs@NCRPonline.org. Each registrant shall use this incorporated material to provide sufficient shielding to prevent a public exposure that exceeds the limits in R12-1-416.

3. A registrant shall:
 - a. Mount each lead barrier so that the barrier will not sag or cold flow because of its own weight and protect the barrier from damage;
 - b. Use barriers designed so that joints between different ends of protective material do not impair the overall protection of the barriers;
 - c. Use barriers designed so that joints at the floor and ceiling do not impair the overall protection of the barriers;
 - d. Use windows, window frames, doors, and door frames that have the same lead equivalence required in the adjacent walls; and
 - e. Cover holes in protective barriers so that overall attenuation is not impaired.
 4. A registrant shall also meet the structural shielding requirements in R12-1-607(C), if the x-ray system in question is not a mobile fluoroscopic unit, dental panoramic, cephalometric, dental CT, or intraoral radiographic system.
- D. Film Processing and Darkroom Requirements.** A registrant shall:
1. Ensure that the darkroom is light-tight and use proper safe-lighting such that any film type in use exposed in a cassette to x-ray radiation sufficient to produce an optical density from 1 to 2 when processed shall not suffer an increase in density greater than 0.1 (0.05 for mammography) when exposed in the darkroom for two minutes with all safe-lights illuminated. (A processor with a daylight loader satisfies this requirement.);
 2. Ensure that film is stored in a cool, dry place and is protected from radiation exposure; and that film located in open packages is stored in a light-tight container;
 3. Ensure that film cassettes and intensifying screens are inspected annually, cleaned, and replaced as necessary;
 4. Ensure that film cassettes contain film and intensifying screens that have the same sensitivity;
 5. Ensure that automatic film processors develop film in accordance with time-temperature relationships recommended by the film manufacturer;
 6. Ensure that manually developed film is developed in accordance with the time-temperature relationships recommended by the manufacturer, and that a timer, thermometer, and a time-temperature chart are available and used in the darkroom;
 7. Ensure that film processing solutions are prepared and maintained in accordance with the directions of the manufacturer;
 8. Ensure that outdated film is not used for diagnostic radiographs.
 9. Follow manufacturer's recommendations for cleaning or inspection of computed radiography (CR) cassettes, but not less than annually;
 10. Follow manufacturer's recommendations for preventive maintenance on digital radiography panels or cassettes, but not less than annually; and
 11. Maintain documentation that demonstrates that requirements of this subsection are being met for three years for agency review from the date of inspection.

Historical Note

Former Rule Section F.3; Former Section R12-1-603 repealed, new Section R12-1-603 adopted effective June 30, 1977 (Supp. 77-3). Amended effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

Radiation Regulatory Agency

Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-604. General Procedures

A. Each registrant shall ensure the following procedural requirements are met in the operation of x-ray equipment:

1. An x-ray machine which does not meet the provisions of this Chapter shall not be operated for diagnostic or therapeutic purposes, unless specifically exempted by the Agency.
2. Except for patients who cannot be moved out of the room, only the individuals required for the radiological procedure or in training may be present in the room during radiographic exposure, and all the following requirements apply:
 - a. All individuals shall be positioned such that no part of the body, including the extremities not protected by 0.5 mm lead equivalent, will be struck by the useful beam.
 - b. Staff and ancillary personnel shall be protected from the direct scatter radiation by protective aprons or whole body protective barriers of not less than 0.25 mm lead equivalent.
 - c. Individuals, other than the patient to be examined, who cannot be removed from the room during mobile or portable radiography shall be protected from the direct scatter radiation by whole body protective barriers of 0.25 millimeters lead equivalent or shall be so positioned that the nearest portion of the body is at least 2 meters (6.5 feet) from both the tube head and the nearest edge of the image receptor.
 - d. If a portion of the body of any staff or ancillary personnel is potentially subjected to stray radiation that could result in that individual receiving 10 percent of the maximum permissible dose as defined in Article 4 of this Chapter, the registrant shall provide additional protective devices as specified by the Agency.
3. An individual shall not be exposed to the useful beam except for a healing arts purpose authorized by a licensed practitioner of the healing arts. The following acts are prohibited:
 - a. Exposure of an individual without meeting the required healing art requirements and without a valid directive from a licensed practitioner;
 - b. Exposure of an individual for training, demonstration, or other non-healing arts purpose;
 - c. Exposure of an individual for the purpose of healing arts screening, except as authorized by the Agency after submitting to the Agency the information listed in Appendix A of this Article. (If any information submitted to the Agency changes, the registrant shall immediately notify the Agency of the changes.);
 - d. Routinely holding film or a patient during an exposure to x-ray radiation; or
 - e. Exposure of an individual to fluoroscopy as a positioning method for general purpose radiological procedures.

4. All persons who are associated with the operation of an x-ray system are subject to the occupational exposure limits specified in Article 4. Exposure of a personnel monitoring device to deceptively indicate a dose delivered to an individual is prohibited.
 5. The registrant shall check radiation protective equipment for reliability and integrity defects on an annual basis, as follows:
 - a. Aprons, gloves, and shields shall be checked for holes, tears, and breaks.
 - b. If defects are found in the equipment, the registrant shall replace or remove it from service. Equipment removed from service shall not be put back into service until it is repaired.
 - c. A record of the annual reliability and integrity check and any equipment replacement shall be maintained for three years.
- B. The registrant shall maintain the following records for each x-ray machine:
1. Survey, calibration, maintenance, and modification records regarding the x-ray machine or room, which include the name of the person who performed the service; and
 2. Correspondence with the Agency regarding the x-ray machine facility.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-605. X-ray Machine Standards

- A. A registrant shall prevent leakage radiation from the diagnostic source assembly measured at a distance of 1 meter in any direction from the source assembly from exceeding 25.8 $\mu\text{C}/\text{kg}$ (100 milliroentgens) in one hour when the x-ray tube is operated at its leakage technique factors. The Agency shall determine compliance by obtaining measurements averaged over an area of 100 square centimeters (15.5 square inches) with no linear dimension greater than 20 centimeters (7.9 inches).
- B. The registrant shall prevent radiation emitted by a component other than the diagnostic source assembly from exceeding 516 nC/kg (2 milliroentgens) in one hour at 5 centimeters from any accessible surface of the component when it is operated in an assembled x-ray system under any conditions for which it was designed. The Agency shall determine compliance by obtaining measurements averaged over an area of 100 square centimeters (15.5 square inches) with no linear dimension greater than 20 centimeters (7.9 inches).
- C. Beam quality.
1. The registrant shall prevent the useful beam half-value layer (HVL) for diagnostic x-ray given x-ray tube potential from falling below the values shown in Table I. If it is necessary to determine the HVL at an x-ray tube potential that is not listed in Table I, the registrant shall use linear interpolation or extrapolation to make the determination.

Radiation Regulatory Agency

Design operating range (kilovolts peak)	Measured potential (kilovolts peak)	HVL (millimeters of aluminum) Dental Intraoral Units manufactured after December 1, 1980	Medical X-ray Units manufactured before June 10, 2006 and Dental Intraoral Units manufactured on or before December 1, 1980	Medical X-ray Units manufactured on or after June 10, 2006
Below 51	30	1.5	0.3	0.3
	40	1.5	0.4	0.4
	50	1.5	0.5	0.5
51 to 70	51	1.5	1.2	1.3
	60	1.5	1.3	1.5
	70	1.5	1.5	1.8
	Above 70	71	2.1	2.1
Above 70	80	2.3	2.3	2.9
	90	2.5	2.5	3.2
	100	2.7	2.7	3.6
	110	3.0	3.0	3.9
	120	3.2	3.2	4.3
	130	3.5	3.5	4.7
	140	3.8	3.8	5.0
	150	4.1	4.1	5.4

- 2. If the registrant demonstrates that the aluminum equivalent of the total filtration in the primary beam is not less than that shown in Table II, the registrant is considered to have met the criteria in subsection (C)(1).

Table II - Filtration Required vs. Operating Voltage

Operating Voltage (kVp)	Total Filtration (inherent plus added) (millimeters aluminum equivalent)
Below 51	0.5 millimeters
51 - 70	1.5 millimeters
Above 70	2.5 millimeters

- 3. The registrant shall use beryllium window tubes that have a minimum of 0.5 millimeters aluminum equivalent filtration permanently mounted in the useful beam.
- 4. For capacitor energy storage equipment, the Agency shall determine compliance with the maximum quantity of charge per exposure.
- 5. When determining the minimum aluminum equivalent filtration, the registrant shall include the filtration contributed by all materials that are always present between the focal spot of the tube and the patient (for example, a tabletop when the tube is mounted "under the table" and inherent filtration of the tube).
- D. Multiple tubes. If two or more radiographic tubes are controlled by one exposure switch, the operator shall clearly indicate which tube or tubes have been selected before initiation of the exposure, activating one light on the x-ray control panel and a second light at or near the tube housing assembly, each indicating the tube or tubes that have been selected.
- E. Mechanical support of tube head. The registrant shall adjust the tube housing assembly supports so that the tube housing assembly will remain stable during an exposure, unless the tube housing movement is a designed function of the x-ray system.

- F. Exposure reproducibility. The coefficient of variation shall not exceed 0.10 when all technique factors are held constant. This requirement is satisfied if the value of the average exposure (E) is greater than or equal to five times the difference between the maximum exposure (E_{max}) and minimum exposure (E_{min}) when four exposures are made at identical technique factors, [E ≥ 5(E_{max} - E_{min})].
- G. Accuracy deviation. A registrant shall not use an x-ray machine if the measured technique factors for kVp and time duration are not within the limits specified by the manufacturer. In the absence of the manufacturer's specifications, a registrant shall not use an x-ray machine if the measured kVp is not within 10 percent of the indicated kVp value and the measured time duration is not within 20 percent of the indicated time.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsections (A) and (B) effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-606. Fluoroscopic and Fluoroscopic Treatment Simulator Systems

- A. Useful beam limitation. A registrant shall:
 1. Provide beam-limiting devices that restrict the entire cross section of the useful beam to less than the area of the primary barrier at any Source-to-Image Receptor Distance (SID);
 2. Ensure that the x-ray field size produced by fluoroscopic systems without image intensification does not extend beyond the visible area of the image receptor at any SID;

Radiation Regulatory Agency

3. Ensure that the x-ray field size produced by fluoroscopic systems with image intensification and automatic shutter control does not exceed the diameter of the image receptor at any SID;
 4. Ensure that the x-ray field size produced by fluoroscopic systems with image intensification and manual shutter control does not exceed the diameter of the image receptor with the fluoroscopic imaging assembly positioned at the maximum usable distance above the table top; and
 5. Ensure that the x-ray field size produced by fluoroscopic systems with image intensification and manual shutter control, where the fluoroscopic tube is above the table top, does not exceed the diameter of the image receptor with the shutters open to the fullest extent, and at the maximum SID which the fluoroscopic tube is capable of producing radiation.
- B. Fluoroscopic primary protective barrier.** A registrant shall:
1. Provide the fluoroscopic imaging assembly with a primary protective barrier that always intercepts the entire cross section of the useful beam at any SID.
 2. Ensure that the fluoroscopic tube is not capable of producing radiation unless the primary protective barrier is in a position to intercept the entire cross section of the useful beam.
 3. Ensure that fluoroscopic radiation production automatically terminates if the primary protective barrier is removed from the useful beam.
 4. Ensure that the fluoroscopic primary protective barrier meets the following requirements for attenuation of the useful beam:
 - a. For equipment installed before November 15, 1967, the required lead equivalent of the barrier is not less than 1.5 millimeters for fluoroscopes that produce less than 100 kVp, 1.8 millimeters for fluoroscopes that produce at least 100 kVp but less than 125 kVp, and 2.0 millimeters for fluoroscopes that produce 125 or more kVp. (For conventional fluoroscopes, these requirements may be assumed to have been met if the exposure rate measured at the viewing surface of the fluorescent screen does not exceed 12.9 microcoulombs per kilogram (50 milliroentgens) per hour with the screen in the primary beam of the fluoroscope without a patient, under normal operating conditions.) For equipment installed or reinstalled, the required lead equivalent of the barrier is 2.0 millimeters for fluoroscopes that produce less than 125 kVp or 2.7 millimeters for fluoroscopes that produce 125 or more kVp.
 - b. For fluoroscopic systems that use image intensification, the exposure rate, due to transmission through the primary protective barrier, does not exceed 516 nC/kg (2 milliroentgens) per hour at 10 centimeters (4 inches) from any accessible surface of the fluoroscopic imaging assembly, beyond the plane of the image receptor for each 258 μ C/kg (1 roentgen) per minute of entrance exposure rate.
 - c. Compliance with subsections (B)(4)(a) and (b) is determined with the image receptor positioned 35.5 centimeters (14 inches) from the panel or table top, at normal operating technical factors and with the attenuation block in the useful beam for systems with image intensification.
- C. Entrance exposure rate limits.** A registrant shall ensure that:
1. The exposure rate, measured at the point where the center of the useful beam enters the patient does not exceed 2.6 mC/kg (10 roentgens) per minute at any combination of tube potential and current, except during recording of fluoroscopic images or if provided with optional high-level control.
2. If provided with optional high-level control, the equipment is not operable at any combination of tube potential and current that will result in an exposure rate in excess of 2.6 mC/kg (10 roentgens) per minute at the point where the center of the useful beam enters the patient, unless the high-level control is activated, in which case an exposure rate in excess of 5.2 mC/kg (20 roentgens) per minute is prohibited.
 - a. Special means of activation of high-level controls, such as additional pressure applied continuously by the operator, are required to avoid accidental use.
 - b. A continuous signal audible to the fluoroscopist is required to indicate that the high-level control is being employed.
 3. The Agency shall determine compliance with subsections (C)(1) and (2) as follows:
 - a. Remove grids and compression devices from the useful beam during the measurement;
 - b. If the source is below the table, measure the exposure rate 1 centimeter above the table top or cradle; and
 - c. If the source is above the table, measure the exposure rate 30 centimeters (11.8 inches) above the table top with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement;
 - d. For fluoroscopy involving a mobile C-arm x-ray system, measure the exposure rate 30 centimeters (11.8 inches) from the input surface of the fluoroscopic imaging assembly;
 - e. For fluoroscopy involving a C-arm x-ray system, measure the exposure rate 30 centimeters (11.8 inches) from the input surface of the fluoroscope imaging assembly, with the x-ray source positioned at any available SID, provided that the end of the beam-limiting device or spacer is not closer than 30 centimeters (11.8 inches) from the input surface of the fluoroscopic image assembly; and
 - f. For a lateral fluoroscope, measure the exposure rate 15 centimeters (5.9 inches) from the centerline of the x-ray table and in the direction of the x-ray source with the end of the beam-limiting device or spacer positioned as closely as possible to the point of measurement. If the tabletop is movable, it shall be positioned as closely as possible to the lateral x-ray source, with the end of the beam-limiting device or spacer no closer than 15 centimeters (5.9 inches) to the centerline of the x-ray table.
- D.** The registrant shall ensure that the source-to-skin distance is not less than:
1. 38 centimeters (15 inches) on stationary fluoroscopes installed after January 2, 1996;
 2. 35.5 centimeters (14 inches) on stationary fluoroscopes which are in operation before January 2, 1996;
 3. 30 centimeters (11.8 inches) on all mobile fluoroscopes; and
 4. 20 centimeters (8 inches) for image-intensified fluoroscopes used for a specific surgical application. The registrant shall follow any precautionary measures in the users operating manual.
- E.** Each fluoroscopic system installation is subject to all of the following requirements for the control of stray radiation. A registrant shall:

Radiation Regulatory Agency

1. Provide a shielding device of at least 0.25 millimeter lead equivalent for covering the Bucky-slot during fluoroscopy;
 2. Except for fluoroscopy performed using portable or mobile C-arm x-ray systems or during surgical procedures or cardiac catheterization, provide protective drapes, or hinged or sliding panels of at least 0.25 millimeters lead equivalent, between the patient and fluoroscopist to intercept scattered radiation that would otherwise reach the fluoroscopist and others near the machine, but not substitute drapes and panels for a protective apron; and
 3. Ensure that protective aprons of at least 0.25 millimeter lead equivalent are worn in the fluoroscopy room by each person, except the patient, whose body is likely to be exposed to 50 μ Sv/hr (5 mR/hr) or more.
- F. Exposure control.** A registrant shall:
1. Ensure that activation of the fluoroscopic tube is controlled by a "dead-man" switch;
 2. Provide a manual reset cumulative timing device, which is activated only during production of radiation in the fluoroscopic mode, to indicate elapsed time by an audible signal or terminate production of radiation;
 3. Provide a device for exposure control in the "spot film" mode that terminates exposure either automatically, or after a preset time interval, preset number of pulses, preset product of current and time, or preset exposure; and
 4. Ensure that the x-ray tube potential and current are continuously indicated.
- G.** A registrant shall provide systems used for mobile fluoroscopy with image intensification.
- H.** Fluoroscopic treatment simulators. Simulators are exempt from subsections (A) through (G). A registrant shall:
1. Use a beam limiting device that restricts the beam to the area of clinical interest.
 2. Include and label devices for settings or physical factors, such as kVp, mA, or exposure time on the control panel;
 3. Ensure that the fluoroscopic exposure switch or switches are of the "deadman" type;
 4. Ensure that each person whose presence is necessary is in the simulator room during exposure and protected with a lead apron of at least 0.5 millimeter lead equivalent or a portable shield. Any person who places their hands in the useful x-ray beam shall wear leaded gloves; and
 5. Ensure that the operator stands behind a barrier and is able to observe the patient during simulator exposures.
- Historical Note**
- Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-606 repealed, new Section R12-1-606 adopted effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).
- R12-1-607. Additional X-ray Machine Standards, Shielding Requirements, and Procedures, Except Mobile Fluoroscopic, Dental Panoramic, Cephalometric, Dental CT, or Dental Intra-oral Radiographic Systems**
- A.** Useful beam limitation. A registrant shall:
1. Provide a means to restrict the useful beam to the area of clinical interest for any combination of SID and image receptor size employed.
 2. Ensure that beam-limiting devices meet the following requirements:
 - a. Devices that project a circular radiation field restrict the diameter of the useful beam, not to exceed the diagonal dimension of the image receptor by greater than 2 percent of the SID;
 - b. Devices that project a rectangular or square radiation field restrict the useful beam to the longitudinal and transverse dimensions of the image receptor to within 2 percent of the SID;
 - c. Beam limiting devices that do not incorporate light beams to define the projected radiation field are clearly labeled, indicating the SID and image receptor size at which each device complies with the applicable requirements of subsection (A)(2)(a) or (b);
 - d. Adjustable beam-limiting devices installed after July 31, 1971, incorporate light beams to define the projected dimensions of the useful beam and provide an average illumination of not less than 100 lux (9 foot-candles) at 1 meter (3.3 feet) or at the maximum SID, whichever is less. The average illumination shall be based upon measurements made in the approximate center of each quadrant of the light field; and
 - e. All beam-limiting devices installed, on general purpose fixed and mobile radiographic systems, provide stepless means of continuous adjustment of the projected radiation field size.
 3. Provide a means to align the center of the radiation field to the center of the image receptor to within 2 percent of the SID.
- B.** Radiation exposure control. A registrant shall:
1. Provide a means to terminate the exposure at a preset time interval, preset product of current and time, preset number of pulses, or a preset exposure to the image receptor. The registrant shall ensure that it is not possible to make an exposure when the exposure control device is set to a "zero" or "off" position if either position is provided.
 2. Ensure that the exposure switch is a "dead-man" switch, and except for those used with "spot-film" devices in fluoroscopy, is arranged so that it cannot be conveniently operated outside a shielded area.
 3. Provide x-ray systems with automatic exposure control, which indicates at the control panel when this mode is selected, and a visual and audible signal, which indicates termination of the exposure.
 4. Use a control panel that includes:
 - a. A device (usually a milliamp meter) that will give a positive indication during radiation production; and
 - b. Control setting indicators or meters that indicate the appropriate technical factors: kVp, mAs, mA, or exposure time, and any special mode selected for the exposure.
- C.** Structural shielding. A registrant shall:
1. Ensure that all wall, floor and ceiling areas struck by the useful beam have primary protective barriers. Primary protective barriers in walls shall extend from the finished floor to a minimum height of 2.13 meters (7 feet);
 2. Ensure that secondary protective barriers are provided in all wall, floor, and ceiling areas that do not have primary protective barriers or where the primary protective barrier

Radiation Regulatory Agency

requirements are lower than the secondary barrier requirements;

3. Ensure that the operator's station is behind a protective barrier sufficient to ensure compliance with R12-1-408, R12-1-414, and R12-1-416, and the operator is able to communicate with the patient from the operator's station.
 4. Provide a window of transparent material equal in attenuation to that required by the adjacent barrier, or a mirror system, that is large enough and placed so that the operator can see the patient during exposure without having to leave the protected area.
- D. Operating procedures.** A registrant shall:
1. Use mechanical supporting or restraining devices, if a patient must be held in position for radiography. If the patient must be held by an individual, the registrant shall ensure that the individual is protected with appropriate shielding devices, such as protective gloves and apron, and is positioned so that no part of the body of the individual holding the patient is struck by the useful beam;
 2. Ensure that only individuals required for the radiographic procedure are in the radiographic room during exposure, and, except for the patient, all these individuals are equipped with protective devices;
 3. Restrict the useful beam to the clinical area of interest;
 4. Provide a chart in the vicinity of the diagnostic x-ray system's control panel that specifies, for all routine examinations performed with the system, the following information:
 - a. Patient's anatomical size and technique factors;
 - b. Type and size of the film or film screen combination;
 - c. Type and focal distance of the grid, if any;
 - d. X-ray source-to-image receptor distance; and
 - e. Type and location of gonad shielding.
 5. Provide documentation of the following items:
 - a. The patient's identity;
 - b. The x-ray examination, as recorded in a radiographic log;
 - c. The date the examination is performed;
 - d. The number of projections (if applicable), or on-time, or dose factors depending upon the unit; and
 - e. A method of identifying the individual who performed the examination.
 6. The registrant shall maintain in chronological order, the documentation required in subsection (D)(5) in written or readily available electronic form. The documentation shall be maintained for three years from the date the examination is performed.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-607 repealed, new Section R12-1-607 adopted effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-608. Mobile Diagnostic Radiographic and Mobile Fluoroscopic Systems, Except Dental Panoramic, Cephalometric, Dental CT, or Dental Intraoral Radiographic Systems**A. Equipment**

1. All requirements of R12-1-607(A) and (B) apply.
2. For mobile radiographic units the registrant shall provide a "dead-man" switch, together with an electrical cord of sufficient length so that the operator can stand out of the

useful beam and at least 1.82 meters (6 feet) from the patient during all x-ray exposures.

3. A registrant shall ensure that a cone, spacer frame, or inherent provision is made so that the equipment is not operated at source-skin distances of less than 20.3 centimeters (8 inches).
- B. Structural shielding.** If a mobile unit is used routinely in one location, it is considered a fixed installation subject to the shielding requirements in R12-1-603(C), and R12-1-607(C).
- C. Operating procedures**
1. All provisions of R12-1-607(D) apply.
 2. An individual who operates a mobile x-ray system shall comply with R12-1-419(B).

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsections (A) and (C) effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-609. Chest Photofluorographic Systems

Use of chest photofluorographic systems for diagnosis of human disease is prohibited.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsections (A) and (C) effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4).

R12-1-610. Dental Intraoral Radiographic Systems**A. Equipment.** A registrant shall:

1. Use a protective tube housing of diagnostic type;
2. Use diaphragms or cones for restricting the useful beam and to provide the same degree of protection as the housing. The diameter of the useful beam at the end of the cone or spacer frame shall not be more than 7.6 centimeters (3 inches) for intraoral radiography;
3. Ensure that a cone or spacer frame provides a source-to-skin distance of not less than 17.8 centimeters (7 inches) with apparatus operating above 50 kVp or 10 centimeters (4 inches) with apparatus operating at 50 kVp or below for intraoral radiography;
4. Provide a timer to terminate the exposure at a preset time interval, a preset product of current and time, a preset number of pulses, or a preset radiation exposure to the image receptor;
5. Ensure that it is not possible to make an exposure if the timer is set to the "zero" or "off" position;
6. Ensure that the tube head remains stationary if placed in the exposure position;
7. Ensure that the exposure initiating device is a "dead-man" switch; and
8. Use a control panel that includes:
 - a. A means to provide visual or audible indication, detectable at or from the operator's position, during x-ray production or exposure termination; and
 - b. Indication of technique factors for kVp, mA, exposure time, and any special mode that may be selected for the exposure.

Radiation Regulatory Agency

9. Use technique factors, where deviation of measured values from indicated values for kVp and exposure time do not exceed the limits specified by the manufacturer. In the absence of the manufacturer's specifications, the deviation shall not exceed plus or minus 10 percent of the indicated value for kVp and plus or minus 20 percent for exposure time duration.
 10. For a digital system that uses an electronic sensor, use digital radiography techniques that permit reducing x-ray beam on-time to 25 percent of the exposure time required for "D" speed film or lower, reducing radiation to the patient by the same rate.
 11. For a computed radiography (imaging plate (IP) made of photostimulable phosphor) system that uses an imaging plate, use radiography techniques that permit reducing x-ray beam on-time to 50 percent of the exposure time required for "D" speed film or lower, reducing radiation to the patient by the same rate.
- B. Structural shielding.** The registrant shall:
1. Provide dental installations with primary and secondary barriers to ensure compliance with the personnel exposure requirements in Article 4 of this Chapter; (Note: In many cases, structural materials of ordinary walls suffice as a protective barrier without addition of special shielding material.)
 2. Install primary protective barriers between rooms or areas if dental x-ray units are used in adjacent rooms or areas;
 3. Provide each installation with a protective barrier for the operator or arrange the installation so that the operator can stand at least 1.82 meters (6 feet) from the patient and well away from the useful beam;
 4. Arrange the operator's position to allow visual contact with the patient during exposure; and
 5. Comply with fixed installation requirements, if a mobile unit is used routinely in one location.
- C. Operating procedures**
1. A dentist or other persons shall not hold patients or films during exposure. Only persons required for the radiographic procedure are allowed in the radiographic room during exposures.
 2. An operator shall stand at least 1.82 meters (6 feet) from the patient or behind a protective barrier during each exposure.
 3. An operator shall ensure that only the patient is in the useful beam.
 4. The licensed practitioner or other person shall not hold the tube housing or the cone during the exposure.
 5. A registrant shall not perform dental fluoroscopy without an image intensifier.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective August 8, 1986 (Supp. 86-4). Amended January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-610.01. Hand-held Intraoral Dental Radiographic Unit Requirements For Use

- A.** Registrants are subject to the following requirements for Intraoral dental radiographic units designed to be operated as a hand-held unit:
1. For all uses:

- a. Operators of hand-held intraoral dental radiographic units shall be specifically trained to operate such equipment.
 - b. A hand-held intraoral dental radiographic unit shall be held without any motion during a patient examination. A tube stand may be utilized to immobilize a hand-held intraoral dental radiographic unit during patient examination.
 - c. The operator shall ensure there are no bystanders within a radius of at least six feet from the patient being examined with a hand-held intraoral radiographic unit.
- 2.** Additional requirements for operatories in permanent facilities:
- a. Hand-held intraoral dental radiographic units shall be used for patient examinations in dental operatories that meet the structural shielding requirements specified by the Agency or by a qualified health or medical physicist.
 - b. Hand-held intraoral dental radiographic units shall not be used for patient examinations in hallways and waiting rooms.
- B.** Hand-held units may only be used in a manner as specified on the registration issued by the Agency.

Historical Note

New Section R12-1-610.01 made by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-611. Therapeutic X-ray Systems of Less Than 1 MeV

- A.** Equipment requirements.
1. Leakage radiation. When the x-ray tube is operated at its maximum rated tube current for the maximum kVp, the leakage air kerma rate shall not exceed the value specified at the distance specified for that classification of therapeutic radiation machine. For each therapeutic radiation machine, the registrant shall determine, or obtain from the manufacturer, the leakage radiation existing at the positions specified:
 - a. 5-50 kVp Systems. The leakage air kerma rate measured at any position 5 centimeters from the tube housing assembly shall not exceed 1 mGy (100 mrad) in any one hour.
 - b. Greater than 50 kVp and less than 1MeV Systems. The leakage air kerma rate measured at a distance of 1 meter from the target in any direction shall not exceed 1 centigray (1 rad) in any 1 hour. This air kerma rate measurement may be averaged over areas no larger than 100 square centimeters (100 cm²). In addition, the air kerma rate at a distance of 5 centimeters from the surface of the tube housing assembly shall not exceed 30 centigray (30 rad) per hour.
 2. Permanent beam limiting devices. A registrant shall ensure that fixed diaphragms or cones used for limiting the useful beam provide the same or higher degree of attenuation as required for the tube housing assembly.
 3. Removable and adjustable beam-limiting devices. A registrant shall ensure that:
 - a. Removable and adjustable beam-limiting devices, for the portion of the useful beam to be blocked by these devices, transmit not more than 1 percent of the original x-ray beam at the maximum kilovoltage and maximum treatment filter; and
 - b. When adjustable beam limiting devices are used, the position and shape of the radiation field shall be indicated by a light beam.

Radiation Regulatory Agency

4. Filter system. A registrant shall ensure that the filter system is designed so that:
 - a. Filters cannot be accidentally displaced from the useful beam at any possible tube orientation;
 - b. For equipment installed after January 1, 2011, an interlock system prevents irradiation if the proper filter is not in place;
 - c. The air kerma rate escaping from the filter slot shall not exceed 1 centigray (1 rad) per hour at one (1) meter under any operating conditions; and
 - d. Each filter is marked regarding its material of construction and its thickness or wedge angle for wedge filters.
 5. X-ray tube immobilization. A registrant shall ensure that the tube housing assembly is capable of being immobilized during stationary treatments and the x-ray tube shall be so mounted that it cannot accidentally turn or slide with respect to the housing aperture.
 6. Focal spot marking. A registrant shall ensure that the tube housing assembly is marked so that it is possible to determine the location of the focal spot to within 5 millimeters, and the marking is readily accessible for use during calibration procedures.
 7. Therapy treatment timers. A registrant shall:
 - a. Provide a timer that has a display at the treatment control panel. The timer shall have a preset time selector and an elapsed time indicator;
 - b. Ensure that the timer is a cumulative timer that activates with the radiation, retains its reading after irradiation is interrupted or terminated, and requires the operator to reset the preset time selector after irradiation is terminated and before irradiation can be reinitiated;
 - c. Ensure that the timer terminates irradiation when a preselected time has elapsed;
 - d. Ensure that the timer permits accurate presetting and determination of exposure times as short as one second;
 - e. Ensure that the timer does not permit an exposure if set at zero; and
 - f. Ensure that the timer does not activate until the shutter is opened if irradiation is controlled by a shutter mechanism.
 8. Control panel functions. In addition to the displays required in other provisions of this Section, a registrant shall ensure that a control panel has:
 - a. An indication of whether electrical power is available at the control panel and if activation of the x-ray tube is possible;
 - b. An indication of whether x-rays are being produced;
 - c. A means for indicating kVp and x-ray tube current;
 - d. A means for terminating an exposure at any time;
 - e. A locking device that will prevent unauthorized use of the x-ray system; and
 - f. For x-ray equipment installed after January 2, 1996, a positive display of specific filters in the beam.
 9. Multiple tubes. If one control panel is used to energize more than one x-ray tube a registrant shall ensure that:
 - a. It is possible to activate only one x-ray tube during any time interval,
 - b. There is an indication at the control panel that identifies which x-ray tube is energized, and
 - c. There is an indication at the tube housing assembly when that tube is energized.
 10. Source-to-patient distance. A registrant shall ensure that there is a means of determining the source-to-patient distance to within 1 centimeter.
 11. Shutters. Unless it is possible to bring the x-ray output to the prescribed exposure parameters within five seconds, a registrant shall ensure that the entire useful beam is automatically attenuated by a shutter with a lead equivalency not less than that of the tube housing assembly. In addition the registrant shall ensure that:
 - a. After the unit is at operating parameters, the operator controls the shutter electrically from the control panel; and
 - b. An indication of shutter position appears at the control panel.
 12. Low filtration x-ray tubes. A registrant shall ensure that each x-ray system equipped with a beryllium or other low-filtration window is clearly labeled as low-filtration equipment on the tube housing assembly and at the control panel.
- B. Facility design requirements.** In addition to shielding necessary to meet the requirements of Article 4 of this Chapter, a registrant shall ensure that:
1. Warning lights. A treatment room to which access is possible through more than one entrance has a warning light, in a readily observable position near the outside of any access doors, which will indicate when the useful beam is "on."
 2. Voice communication. Two-way oral communication is possible between the patient and the operator at the control panel; or where excessive noise levels make oral communication impractical, another effective method of communication.
 3. Viewing systems. Windows, mirrors, closed-circuit television, or an equivalent system, permits continuous observation of the patient during irradiation and is located so that the operator can observe the patient from the control panel. If the primary viewing system is by electronic means (for example, television), the registrant shall have an alternate viewing system for use in the event of electronic failure.
 4. Systems above 150 kVp. For treatment rooms that contain an x-ray system capable of operating above 150 kVp a registrant shall ensure that:
 - a. All necessary shielding, except for any beam interceptor, is provided by fixed barriers;
 - b. The control panel is within a protective booth equipped with an interlocked door, or located outside the treatment rooms;
 - c. All doors of the treatment room are electrically connected to the control panel so that x-ray production cannot occur unless all doors are closed; and
 - d. Opening of any door to the treatment room during exposure results in automatic termination of x-ray production or reduction of radiation levels to an average of no more than 516 nC/kg (2 milliroentgens) per hour and a maximum of 2.6 μ C/kg (10 milliroentgens) per hour at a distance of 1 meter (3.3 feet) from the target in any direction, and restoration of the machine to full operation is possible only from the control panel after the termination or reduction.
- C. Surveys.** A registrant shall ensure that:
1. All facilities, both new and existing, or not previously surveyed, are surveyed before being put into service for the treatment of patients by, or under the direction of, a person trained and experienced in the principles of radia-

Radiation Regulatory Agency

- tion protection, and perform additional surveys of a facility after any change in the facility or a facility's equipment that might cause a significant increase in radiation hazard, before being put into service for the treatment of patients.
2. The person conducting the survey reports the survey findings in writing to the individual in charge of the facility and maintains a copy of the survey report for inspection by the Agency.
 3. The installation is operated in compliance with any limitations indicated by the protection survey required by subsection (C)(1).
- D. Calibrations.** A registrant shall ensure that:
1. The calibration of a therapeutic x-ray system includes, but is not limited to, the following determinations:
 - a. Verification that the x-ray system is operating in compliance with the design specifications;
 - b. The dose rate equivalent for each combination of field size, technique factors, filter, and treatment distance used;
 - c. The degree of congruence between the radiation field and the field indicated by the localizing device if a localizing device is used; and
 - d. An evaluation of the uniformity of the radiation field symmetry for the field sizes used and any dependence upon source housing assembly orientation;
 2. The calibration of an x-ray system is performed at intervals not to exceed annually and after any change or replacement of components that could cause a change in the radiation output;
 3. The calibration of the radiation output of the x-ray system is performed by, or under the direction of, a person trained and experienced in performing calibrations, who is physically present at the facility during calibration;
 4. Calibration of the radiation output of an x-ray system is performed with a calibrated instrument. The registrant shall ensure that calibration of the instrument is directly traceable to the National Institute of Standards and Technology (NIST) and that the instrument has been calibrated within the preceding 24 months;
 5. Records of calibration performed under subsection (D)(3) are maintained for at least three years after completion of the calibration and are made available for inspection by the Agency; and
 6. A copy of the most recent calibration is available for use by the operator at the control panel.
- E. Spot checks.** A registrant shall ensure that spot checks are performed on therapeutic x-ray systems capable of operation at greater than 150 kVp. The registrant shall ensure that spot checks meet the following requirements:
1. The spot-check procedures are in writing and have been developed by a qualified expert;
 2. The measurements taken during the spot checks demonstrate the degree of consistency of the operating characteristics that can affect the radiation output of the x-ray system;
 3. The written spot-check procedure specifies the frequency of the tests or measurements, made at intervals not to exceed monthly;
 4. The spot-check procedure identifies conditions that require recalibration of the system in accordance with subsection (D)(1); and
 5. Records of spot-check measurements performed as required by subsection (E)(3) are maintained, available for inspection by the Agency, for three years following the measurements.
- F. Operating procedures.** A registrant shall ensure that:
1. Therapeutic x-ray systems are not left unattended unless the system is secured according to subsection (A)(8)(e);
 2. If a patient must be held in position for radiation therapy, mechanical supporting or restraining devices are used;
 3. The tube housing assembly is not held by an individual during exposures; and
 4. At 150 kVp or more the patient is the only person in the treatment room during production of radiation. At less than 150 kVp an individual may be in the room with patient, provided the individual is protected by a barrier sufficient to meet the requirements of Article 4 of this Chapter.
- G. Electronic Brachytherapy units** are exempt from the requirements of this Section.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-611 repealed, new Section R12-1-611 adopted effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-611.01. Electronic Brachytherapy to Deliver Interstitial and Intracavity Therapeutic Radiation Dosage

- A.** Electronic brachytherapy devices used to deliver interstitial and intracavity therapeutic radiation dosage shall be subject to the requirements of this Section, and unless otherwise specified in this Section shall be exempt from the requirements of R12-1-611.
1. An electronic brachytherapy device that does not meet the requirements of this Section shall not be used for irradiation of patients; and
 2. An electronic brachytherapy device shall only be utilized for human use applications specifically approved by the U.S. Food and Drug Administration (FDA), unless participating in a research study approved by the registrant's Institutional Review Board (IRB).
- B.** Each facility location authorized to use an electronic brachytherapy device in accordance with this Section shall possess appropriately calibrated portable monitoring equipment. At a minimum, such equipment shall include a portable survey instrument capable of measuring dose rates over the range 10 μ Sv (1 mrem) per hour to 10 mSv (1000 mrem) per hour. The survey instrument shall be capable of measuring as low as 10 μ Sv (1 mrem) per hour in the energy range of the electronic brachytherapy unit for which the survey instrument is to be used. Published correction factors utilized in conjunction with the instrument's readings may be used to achieve sensitivity. The survey instrument or instruments shall be operable and calibrated before first use, at intervals not to exceed 12 months, and after survey instrument repairs.
- C.** Facility Design Requirements for Electronic Brachytherapy Devices. In addition to shielding adequate to meet requirements of R12-1-603(C), the treatment room shall meet the following design requirements:
1. If applicable, provision shall be made to prevent simultaneous operation of more than one therapeutic radiation machine in a treatment room.
 2. Access to the treatment room shall be controlled by a door at each entrance.
 3. Each treatment room shall have provisions to permit continuous oral communication and visual observation of the

Radiation Regulatory Agency

- patient from the treatment control panel during irradiation. The electronic brachytherapy device shall not be used for patient irradiation unless the patient can be observed.
4. For electronic brachytherapy devices capable of operating below 150 kVp, radiation shielding for the staff in the treatment room may be available, either as a portable shield or as localized shielded material around the treatment site or both, in lieu of the requirements for room shielding. The shielding shall meet the requirements of R12-1-603(C).
 5. For electronic brachytherapy devices capable of operating at or greater than 150 kVp, the facility must meet the requirements of R12-1-611(B)(4).
- D. Control Panel Functions.** The control panel, in addition to the displays required by other provisions in this Section, shall:
1. Provide an indication of whether electrical power is available at the control panel and if activation of the electronic brachytherapy source is possible;
 2. Provide an indication of whether x-rays are being produced;
 3. Provide a means for indicating electronic brachytherapy source potential and current;
 4. Provide the means for terminating an exposure at any time; and
 5. Include an access control (locking) device that will prevent unauthorized use of the electronic brachytherapy device.
- E. Timer.** A suitable irradiation control device (timer) shall be provided to terminate the irradiation after a pre-set time interval or integrated charge on a dosimeter-based monitor.
1. A timer shall be provided at the treatment control panel. The timer shall indicate the planned setting and the time elapsed or remaining;
 2. The timer shall not permit an exposure if set at zero;
 3. The timer shall be a cumulative device that activates with an indication of "BEAM-ON" that retains its reading after irradiation is interrupted or terminated. After irradiation is terminated and before irradiation can be reinitiated, it shall be necessary to reset the elapsed time indicator;
 4. The timer shall terminate irradiation when a pre-selected time has elapsed, if any dose monitoring system has not previously terminated irradiation.
 5. The timer shall permit setting of exposure times as short as 0.1 second; and
 6. The timer shall be accurate to within one percent of the selected value or 0.1 second, whichever is greater.
- F. Qualified Medical Physicist Support.**
1. The services of a Qualified Medical Physicist shall be required in facilities having electronic brachytherapy devices. The Qualified Medical Physicist shall be responsible for:
 - a. Evaluation of the output from the electronic brachytherapy source;
 - b. Generation of the necessary dosimetric information;
 - c. Supervision and review of treatment calculations prior to initial treatment of any treatment site;
 - d. Establishing the periodic and day-of-use quality assurance checks and reviewing the data from those checks as required in subsection (J);
 - e. Consultation with the authorized user in treatment planning, as needed; and
 - f. Performing calculations/assessments regarding patient treatments that may constitute a medical event.
2. If the Qualified Medical Physicist is not a full-time employee of the registrant, then the operating procedures required by subsection (G) shall also specifically address how the Qualified Medical Physicist is to be contacted for problems or emergencies, as well as the specific actions, if any, to be taken until the Qualified Medical Physicist can be contacted.
- G. Operating Procedures.**
1. Only individuals approved by the authorized user, Radiation Safety Officer, or Qualified Medical Physicist shall be present in the treatment room during treatment;
 2. Electronic brachytherapy devices shall not be made available for medical use unless the requirements of subsections (A), (H), and (I) have been met;
 3. The electronic brachytherapy device shall be inoperable, either by hardware or password, when unattended by qualified staff or service personnel;
 4. During operation, the electronic brachytherapy device operator shall monitor the position of all persons in the treatment room, and all persons entering the treatment room, to prevent entering persons from unshielded exposure from the treatment beam;
 5. If a patient must be held in position during treatment, mechanical supporting or restraining devices shall be used;
 6. Written procedures shall be developed, implemented, and maintained for responding to an abnormal situation. These procedures shall include:
 - a. Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions; and
 - b. The names and telephone numbers of the authorized users, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally.
 7. A copy of the current operating and emergency procedures shall be physically located at the electronic brachytherapy device control console;
 8. Instructions shall be maintained with the electronic brachytherapy device control console to inform the operator of the names and telephone numbers of the authorized users, the Qualified Medical Physicist, and the Radiation Safety Officer to be contacted if the device or console operates abnormally; and
 9. The Radiation Safety Officer, or the Radiation Safety Officer's designee, and an authorized user shall be notified immediately if the patient has a medical emergency, suffers injury or dies. The Radiation Safety Officer or the Qualified Medical Physicist shall inform the manufacturer of the event.
- H. Safety Precautions for Electronic Brachytherapy Devices.**
1. Any person in the treatment room, other than the person being treated, shall wear personnel monitoring devices;
 2. An authorized user and a Qualified Medical Physicist shall be physically present during the initiation of all new patient treatments involving the electronic brachytherapy device;
 3. After the first treatment one of the following individuals shall be physically present during continuation of all patient treatments involving the electronic brachytherapy device:
 - a. A Qualified Medical Physicist, or
 - b. An authorized user, or
 - c. A certified therapy technologist (CTT) certified by the Arizona Medical Radiologic Technology Board of Examiners, under the direct supervision of an

Radiation Regulatory Agency

authorized user, who has been trained in the operation and emergency response for the electronic brachytherapy device;

4. When shielding is required by subsection (C)(4), surveys shall be conducted to ensure that the requirements of R12-1-408, R12-1-414, and R12-1-416 are met. Alternatively, a Qualified Medical Physicist shall designate shield locations sufficient to meet the requirements of R12-1-603(C) and R12-1-607(C) for any individual, other than the patient, in the treatment room; and
 5. All personnel in the treatment room are required to remain behind shielding during treatment. A Qualified Medical Physicist shall approve any deviation from this requirement and shall designate alternative radiation safety protocols, compatible with patient safety, to provide an equivalent degree of protection.
- I. Electronic Brachytherapy Source Calibration Measurements.**
1. Calibration of the electronic brachytherapy source output shall be performed by, or under the direct supervision of, a Qualified Medical Physicist. If the control console is integral to the electronic brachytherapy device, the required procedures shall be kept where the operator is located during electronic brachytherapy device operation;
 2. Calibration of the electronic brachytherapy source output shall be made for each electronic brachytherapy source, or after any repair affecting the x-ray beam generation, or when indicated by the electronic brachytherapy source quality assurance checks;
 3. Calibration of the electronic brachytherapy source output shall utilize a dosimetry system appropriate for the energy output of the unit and calibrated by the National Institute for Standards and Technology (NIST) or by an American Association of Physicists in Medicine (AAPM) Accredited Dosimetry Calibration Laboratory (ADCL). The calibration shall have been performed within the previous 24 months and after any servicing that may have affected system calibration;
 4. Calibration of the electronic brachytherapy source output shall include, as applicable, determination of:
 - a. The output within two percent of the expected value, if applicable, or determination of the output if there is no expected value;
 - b. Timer accuracy and linearity over the typical range of use;
 - c. Proper operation of back-up exposure control devices;
 - d. Evaluation that the relative dose distribution about the source is within five percent of that expected; and
 - e. Source positioning accuracy to within one millimeter within the applicator;
 5. Calibration of the x-ray source output required shall be in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of a calibration protocol published by a national professional association, the manufacturer's calibration protocol shall be followed.
 6. The registrant shall maintain a record of each calibration in an auditable form for the duration of the registration. The record shall include: the date of the calibration; the manufacturer's name, model number and serial number for the electronic brachytherapy device and a unique identifier for its electronic instrument or instruments brachytherapy source; the model numbers and serial numbers of the instrument or instruments used to calibrate the electronic brachytherapy device; and the name and signature of the Qualified Medical Physicist responsible for performing the calibration.
- J. Periodic and Day-of-Use Quality Assurance Checks for Electronic Brachytherapy Devices.**
1. Quality assurance checks shall be performed on each electronic brachytherapy device:
 - a. At the beginning of each day of use;
 - b. Each time the device is moved to a new room or site; and
 - c. After each x-ray tube installation.
 2. The registrant shall perform periodic quality assurance checks required in accordance with procedures established by the Qualified Medical Physicist;
 3. To satisfy the requirements of this subsection, radiation output quality assurance checks shall include at a minimum:
 - a. Verification that output of the electronic brachytherapy source falls within three percent of expected values, as appropriate for the device, as determined by:
 - i. Output as a function of time, or
 - ii. Output as a function of setting on a monitor chamber.
 - b. Verification of the consistency of the dose distribution to within three percent (or the manufacturer's or Qualified Medical Physicist's documented recommendation not to exceed five percent), observed at the source calibration required by subsection (I); and
 - c. Validation of the operation of positioning methods to ensure that the treatment dose exposes the intended location within one millimeter; and
 4. The registrant shall use a dosimetry system that has been intercompared within the previous 12 months with the dosimetry system described in this Section to make the quality assurance checks required in subsection (J)(3);
 5. The registrant shall review the results of each radiation output quality assurance check to ensure that:
 - a. An authorized user and Qualified Medical Physicist is immediately notified if any parameter is not within its acceptable tolerance, and the electronic brachytherapy device is not used until the Qualified Medical Physicist has determined that all parameters are within their acceptable tolerances;
 - b. If all radiation output quality assurance check parameters appear to be within their acceptable range, the acceptable quality assurance checklist shall be reviewed and signed by either the authorized user or Qualified Medical Physicist prior to the next patient use of the unit. In addition, the Qualified Medical Physicist shall review and sign the results of each radiation output quality assurance check at intervals not to exceed 30 days.
 6. To satisfy the requirements of subsection (J)(1), safety device quality assurance checks shall, at a minimum, assure:
 - a. Proper operation of radiation exposure indicator lights on the electronic brachytherapy device and on the control console;
 - b. Proper operation of viewing and intercom systems in each electronic brachytherapy facility, if applicable;
 - c. Proper operation of radiation monitors, if applicable;
 - d. The integrity of all cables, catheters or parts of the device that carry high voltages; and
 - e. Connecting guide tubes, transfer tubes, transfer-tube-applicator interfaces, and treatment spacers are

Radiation Regulatory Agency

- free from any defects that interfere with proper operation.
7. If the results of the safety device quality assurance checks required in subsection (J)(6) indicate the malfunction of any system, a registrant shall secure the control console in the OFF position and not use the electronic brachytherapy device except as may be necessary to repair, replace, or check the malfunctioning system.
 8. The registrant shall maintain a record of each quality assurance check required by this Section in a legible form for three years.
 - a. The record shall include the date of the quality assurance check; the manufacturer's name, model number and serial number for the electronic brachytherapy device; the name and signature of the individual who performed the periodic quality assurance check and the name and signature of the Qualified Medical Physicist who reviewed the quality assurance check;
 - b. For radiation output quality assurance checks required by subsection (J)(3), the record shall also include the unique identifier for the electronic brachytherapy source and the manufacturer's name; model number and serial number for the instrument or instruments used to measure the radiation output of the electronic brachytherapy device.
- K. Therapy-related Computer Systems.** The registrant shall perform acceptance testing on the treatment planning system of electronic brachytherapy-related computer systems in accordance with current published recommendations from a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of an acceptance testing protocol published by a national professional association, the manufacturer's acceptance testing protocol shall be followed.
1. Acceptance testing shall be performed by, or under the direct supervision of a Qualified Medical Physicist. At a minimum, the acceptance testing shall include, as applicable, verification of:
 - a. The source-specific input parameters required by the dose calculation algorithm;
 - b. The accuracy of dose, dwell time, and treatment time calculations at representative points;
 - c. The accuracy of isodose plots and graphic displays;
 - d. The accuracy of the software used to determine radiation source positions from radiographic images; and
 - e. If the treatment planning system is different from the treatment delivery system, the accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.
 2. The position indicators in the applicator shall be compared to the actual position of the source or planned dwell positions, as appropriate, at the time of commissioning.
 3. Prior to each patient treatment regimen, the parameters for the treatment shall be evaluated for correctness and approved by the authorized user and the Qualified Medical Physicist through means independent of that used for the determination of the parameters.
- L. Training for e-brachytherapy Authorized Users.**
1. The registrant for any therapeutic radiation machine subject to this Section shall require the authorized user to be a physician who is certified in:
 - a. Radiation oncology or therapeutic radiology by the American Board of Radiology or radiology (combined diagnostic and therapeutic radiology program) by the American Board of Radiology prior to 1976; or
 - b. Radiation oncology by the American Osteopathic Board of Radiology; or
 - c. Radiology, with specialization in radiotherapy, as a British "Fellow of the Faculty of Radiology" or "Fellow of the Royal College of Radiology"; or
 - d. Therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; or
 2. Is in the active practice of therapeutic radiology, and has completed 200 hours of instruction in basic radiation techniques applicable to the use of an external beam radiation therapy unit, 500 hours of supervised work experience, and a minimum of three years of supervised clinical experience.
 - a. To satisfy the requirement for instruction, the classroom and laboratory training shall include:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of ionization radiation; and
 - iv. Radiation biology.
 - b. To satisfy the requirement for supervised work experience, training shall be under the supervision of an authorized user and shall include:
 - i. Review of the full calibration measurements and periodic quality assurance checks;
 - ii. Evaluation of prepared treatment plans and calculation of treatment times or patient treatment settings or both;
 - iii. Using administrative controls to prevent medical events as described in R12-1-444;
 - iv. Implementing emergency procedures to be followed in the event of the abnormal operation of an external beam radiation therapy unit or console; and
 - v. Checking and using radiation survey meters.
 - c. To satisfy the requirement for a period of supervised clinical experience, training shall include one year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user. The supervised clinical experience shall include:
 - i. Examining individuals and reviewing their case histories to determine their suitability for external beam radiation therapy treatment, and any limitations or contraindications or both;
 - ii. Selecting proper dose and how it is to be administered;
 - iii. Calculating the therapeutic radiation machine doses and collaborating with the authorized user in the review of patients' progress and consideration of the need to modify originally prescribed doses or treatment plans as warranted by patients' reaction to radiation or both; and
 - iv. Post-administration follow-up and review of case histories.
 3. Notwithstanding the requirements of this subsection, the registrant for any therapeutic radiation machine subject to this Section may also submit the training of the prospec-

Radiation Regulatory Agency

- tive authorized user physician for Agency review on a case-by-case basis if the training includes substantially equivalent training as that listed in subsection (L)(2) and the training includes dosimetry calculation training and experience.
4. A physician shall not act as an authorized user until such time as the physician's training has been reviewed and approved by the Agency.
- M.** Training for Qualified Medical Physicist. The registrant for any therapeutic radiation machine subject to this Section shall require the Qualified Medical Physicist to:
1. Be certified with the Agency, as a provider of radiation services in the area of calibration and compliance surveys of external beam radiation therapy units; and
 2. Be certified by the American Board of Radiology in:
 - a. Therapeutic radiological physics; or
 - b. Roentgen-ray and gamma-ray physics; or
 - c. X-ray and radium physics; or
 - d. Radiological physics; or
 3. Be certified by the American Board of Medical Physics in Radiation Oncology Physics; or
 4. Be certified by the Canadian College of Physicists in Medicine; or
 5. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university, and have completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of a Qualified Medical Physicist at a medical institution. This training and work experience shall be conducted in clinical radiation facilities that provide high-energy external beam radiation therapy (photons and electrons with energies greater than or equal to one MV/one MeV). To meet this requirement, the individual shall have performed the tasks listed in this subsection under the supervision of a Qualified Medical Physicist during the year of work experience.
- N.** Qualifications of Operators. Individuals who will be operating a therapeutic radiation machine for medical use shall be certified by the Agency as a CTT by the Arizona Medical Radiologic Technology Board of Examiners.
- O.** Additional training requirements.
1. A registrant shall provide instruction, initially and at least annually, to all individuals who operate the electronic brachytherapy device, as appropriate to the individual's assigned duties, in the operating procedures identified in subsection (G). If the interval between patients exceeds one year, retraining of the individuals shall be provided.
 2. In addition to the requirements of subsection (L) for therapeutic radiation machine authorized users and subsection (M) for Qualified Medical Physicists, these individuals shall also receive device-specific instruction initially from the manufacturer, and annually from either the manufacturer or other qualified trainer. The training shall be of a duration recommended by a recognized national professional association with expertise in electronic brachytherapy (when available). In the absence of any training protocol recommended by a national professional association, the manufacturer's training protocol shall be followed. The training shall include, but not be limited to:
 - a. Device-specific radiation safety requirements;
 - b. Device operation;
 - c. Clinical use for the types of use approved by the FDA;
 - d. Emergency procedures, including an emergency drill; and
 - e. The registrant's quality assurance program.
3. A registrant shall retain a record of individuals receiving manufacturers instruction for three years. The record shall include a list of the topics covered, the date of the instruction, the name or names of the attendee or attendees, and the name or names of the individual or individuals who provided the instruction.
- P.** Mobile Electronic Brachytherapy Service. A registrant providing mobile electronic brachytherapy service shall, at a minimum:
1. Check all survey instruments before medical use at each address of use or on each day of use, whichever is more restrictive;
 2. Account for the electronic brachytherapy x-ray tube in the electronic brachytherapy device before departure from the client's address; and
 3. Perform, at each location on each day of use, all of the required quality assurance checks specified in this Section to assure proper operation of the device.
- Q.** Medical events shall be reported to the Agency. For purposes of this Section "medical event" means a therapeutic radiation dose from a machine:
1. Delivered to the wrong patient;
 2. Delivered using the wrong mode of treatment;
 3. Delivered to the wrong treatment site; or
 4. Delivered in one week to the correct patient, using the correct mode, to the correct therapy site, but greater than 130 percent of the prescribed weekly dose; or
- R.** A therapeutic radiation dose from a machine with errors in the calibration, time of exposure, or treatment geometry that result in a calculated total treatment dose differing from the final, prescribed total treatment dose by more than 20 percent, except for treatments given in 1 to 3 fractions, in which case a difference of more than 10 percent constitutes a medical event.
- S.** Reports of therapy medical events:
1. Within 24 hours after discovery of a medical event, a registrant shall notify the Agency by telephone by speaking to an Agency staff member. The registrant shall also notify the referring physician of the affected patient and the patient or a responsible relative or guardian, unless the referring physician personally informs the registrant either that he or she will inform the patient, or that in his or her medical judgment, telling the patient or the patient's responsible relative or guardian would be harmful to one or the other, respectively. If the Agency staff member, referring physician, or the patient's responsible relative or guardian cannot be reached within 24 hours, the registrant shall notify them as soon as practicable. The registrant shall not delay medical care for the patient because of notification problems.
 2. Within 15 days following the verbal notification to the Agency, the registrant shall report, in writing, to the Agency and individuals notified under subsection (S)(1). The written report shall include the registrant's name, the referring physician's name, a brief description of the event, the effect on the patient, the action taken to prevent recurrence, whether the registrant informed the patient or the patient's responsible relative or guardian, and if not, why not. The report shall not include the patient's name or other information that could lead to identification of the patient.
 3. Each registrant shall maintain records of all medical events for Agency inspection. The records shall:

Radiation Regulatory Agency

- a. Contain the names of all individuals involved in the event, including:
 - i. The physician,
 - ii. The allied health personnel,
 - iii. The patient,
 - iv. The patient's referring physician,
 - v. The patient's identification number if one has been assigned,
 - vi. A brief description of the event,
 - vii. The effect on the patient, and
 - viii. The action taken to prevent recurrence.
- b. Be maintained for three years beyond the termination date of the affected registration.

Historical Note

New Section R12-1-611.01 made by final rulemaking at 20 A.A.R. 811, effective May 3, 2014 (Supp. 14-1).

R12-1-611.02. Other Use of Electronically-Produced Radiation to Deliver Superficial Therapeutic Radiation Dosage

A person shall not utilize any device which is designed to electrically generate a source of ionizing radiation to deliver superficial therapeutic radiation dosage, and which is not appropriately regulated under any existing category of therapeutic radiation machine, until:

1. The applicant or registrant has, at a minimum, provided the Agency with:
 - a. A detailed description of the device and its intended application or applications;
 - b. Facility design requirements, including shielding and access control;
 - c. Documentation of appropriate training for authorized user physician or physicians and qualified medical physicist or physicists;
 - d. Methodology for measurement of dosages to be administered to patients or human research subjects;
 - e. Documentation regarding calibration, maintenance, and repair of the device, as well as instruments and equipment necessary for radiation safety;
 - f. Radiation safety precautions and instructions; and
 - g. Other information requested by the Agency in its review of the application; and
2. The applicant or registrant has received written approval from the Agency to utilize the device in accordance with the regulations and specific conditions the Agency considers necessary for the medical use of the device; and
3. The applicant or registrant has submitted the application information and forms required by Article 2.
4. In addition to the requirements of this Section, a registrant using a device for x-ray radiation therapy shall meet the requirements of R12-1-611.01(Q), (R), and (S).

Historical Note

New Section R12-1-611.02 made by final rulemaking at 20 A.A.R. 811, effective May 3, 2014 (Supp. 14-1).

R12-1-612. Computed Tomography Systems**A. Definitions:**

1. "CT" means computed tomography.
2. "CT conditions of operation" means all selectable parameters governing the operation of a CT including nominal tomographic section thickness, and technique factors.
3. "CTDI" means computed tomography dose index, the integral of the dose profile along a line perpendicular to the tomographic plane divided by the product of the nominal tomographic thickness and the number of tomogram produced in a single scan.
4. "CTDI vol" means a value of a volume-weighted tomography dose index. The unit of the CTDI vol is Gray or

subunits of the Gray. The value of the CTDI vol for patient scan is used to trigger a notification when the value exceeds or will exceed a threshold value.

5. "CTN" means CT number, the number used to represent the x-ray attenuation associated with each elemental area of the CT image.
 6. "Dose profile" means the dose as a function of position along a line.
 7. "DLP" means the dose-length product. The DLP is the mathematical product of the CTDI vol and the length of the scan. The unit DLP is the Gray-cm of subunits of the Gray-cm. The DLP is used to trigger a notification when the value exceeds or will exceed a threshold value.
 8. "Elemental area" means the smallest area within a tomogram for which the x-ray attenuation properties of a body are depicted.
 9. "Multiple tomogram system" means a CT system that obtains x-ray transmissions data simultaneously during a single scan to produce more than one tomogram.
 10. "Nominal tomographic section thickness" means the full width at half-maximum of the sensitivity profile taken at the center of the cross section volume over which x-ray transmission data are collected.
 11. "Reference plane" means a plane that is displaced from and parallel to the tomographic plane.
 12. "Scan" means the complete process of collecting x-ray transmission data for the production of a tomogram. Data can be collected simultaneously during a single scan for the production of one or more tomograms.
- B. Facility:** A registrant shall ensure that a CT facility has:
1. An operable two-way communication system between the patient and the operator in each CT room.
 2. A viewing system that will allow the operator to continuously view the patient from the control panel during each examination. If the viewing system malfunctions the CT shall not be used until the viewing system is repaired.
- C. Equipment.** A registrant shall ensure that:
1. There is a means to terminate x-ray exposure automatically in the event of equipment failure by:
 - a. De-energizing the x-ray source, or
 - b. Shuttering the x-ray beam.
 2. The equipment shall provide the operator the ability to terminate the x-ray exposure at any time during the examination, provided the scan or series of scans is greater than one-half second duration.
 - a. If an operator terminates an x-ray exposure, the operator shall reset the CT conditions of operation before the initiation of another scan.
 - b. A visible signal shall indicate when an x-ray exposure has been terminated because of equipment failure.
 3. A means is provided to permit visual determination of the tomographic plane for a single tomogram system, or the location of a reference plane offset from a single tomogram or multiple tomogram system.
 - a. If a light source is used to satisfy this requirement, it shall provide illumination of the tomographic plane or reference plane under ambient light conditions.
 - b. The difference between the actual plane location and the indicated location of a tomographic plane or reference plane shall not exceed 5 millimeters.
 - c. The deviation of indicated scan increment versus actual increment shall not exceed plus or minus 1 millimeter with any mass from 0 to 100 kilograms resting on the patient support device.

Radiation Regulatory Agency

4. The control panel and gantry provides a visual indication, if x-rays are produced.
 5. Emergency buttons and switches are marked by function.
 6. Parameters of CT operation used during a patient examination are visible to the operator upon initiation of the scan. If an operational parameter is not adjustable by the operator, this subsection may be met by indicating on the control panel the parameter is not adjustable by the operator.
 7. Radiation exposure does not exceed 100 mR in one hour at one meter in any direction from the tube port of an operating CT.
 8. The angular position or positions where the maximum surface CTDI occurs is identified to allow for reproducible positioning of a CT dosimetry phantom, except in those cases where the x-ray tubes are designed to move, in which case, the maximum dose and associated tube position shall be evaluated according to manufacturer recommendations.
- D. Operating Procedures.** A registrant shall ensure that:
1. Operating procedures are available at the control panel, or by electronic means, regarding the operation of a CT and evaluation of a CT's operation.
 2. The operating procedures contain the following information:
 - a. A copy of the latest evaluation of the CT's operation, to include output for each CT procedure, performed by a qualified expert;
 - b. Instructions on the use of the CT performance phantom by the qualified expert, a schedule of quality control tests with the results of the most recent quality control test, and the allowable variations for the indicated parameters;
 - c. The distance in millimeters between the tomographic plane and the reference plane if a reference plane is used; and
 - d. A current technique chart that contains the information required in R12-1-607(D)(4)(a) for both adult and pediatric patients, as applicable, is available at the CT operating console, and a procedure for determining whether a CT has been performed according to instructions of a physician.
 - e. A written or electronic log that contains the information required in R12-1-607(D)(5) as well as an entry in the record of any displayed values for the exam from either a CTDI vol or DLP measurement for each patient exam completed on equipment manufactured on or after January 1, 2011.
 3. If the evaluation of the CT's operation or quality control test identifies a parameter exceeding the tolerance established by a qualified expert, the use of a CT for patient examination is limited to those uses established in written instructions from the qualified expert.
- E. Quality control tests.** A registrant shall have a written quality control test procedure, developed by a qualified expert, and ensure that the quality control test procedure:
1. Incorporates the use of a CT performance phantom that is compatible with an approved accreditation program approved by the Medicare Improvements for Patients and Providers Act (MIPPA) or supplied by or approved for use by the manufacturer of the unit.
 2. Is followed in the evaluation of the CT's operation, that the interval between tests does not exceed those set forth in the application for accreditation or quarterly if not accredited by an organization approved by (MIPPA), and that system conditions are specified by the registrant's qualified expert.
- F. Evaluation of a CT's operation.** A registrant shall ensure that:
1. The evaluation of a CT's operation is performed by, or under the direct supervision of, a qualified expert who is physically present at the facility during the evaluation of the CT's operation.
 2. The evaluation of a CT's operation:
 - a. Is performed before initial patient use and annually (within two months of the annual due date) and after any change or replacement of components that could, in the opinion of the qualified expert, cause a change in radiation output; and
 - b. Shall measure the CTDI in a dosimetry phantom along the two axes specified in subsection (F)(4)(b).
 - c. A complete evaluation of a CT unit, performed before the annual due date shall clearly list if the new survey changes the annual due date for the unit. It shall be clearly noted on all documentation for the next three years that the survey has established a new annual due date based upon the date of the new survey.
 3. The evaluation of a CT's x-ray system is performed with a calibrated dosimetry system that:
 - a. Has been calibrated using a method that is traceable to the National Institute of Standards and Technology (NIST), and
 - b. Has been calibrated within the preceding two years.
 4. CT dosimetry phantoms used in determining radiation output are compatible with an approved accreditation program approved by (MIPPA) or supplied by or approved for use by the manufacturer of the unit; and
 - a. Are constructed in a way that the parameters used to image the most commonly imaged parts of the human body are evaluated; and
 - b. At a minimum, provide means for placement of a dosimeter along the axis of rotation and along a line parallel to the axis of rotation 1.0 centimeter from the outer surface and within the phantom.
 5. Any effects on the measured dose due to the removal of phantom material to accommodate the dosimeter are accounted for in the reported data or included in the statement of maximum deviation for the measured values.
- G. CT units designated for simulator use, veterinary use, dental use, podiatry use, and non-diagnostic use on humans** are exempt from the annual requirements in subsections (E) and (F) provided an initial evaluation is conducted by a qualified expert and the output does not exceed the manufacturers specified limits. The initial evaluation shall be maintained for Agency review.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former

Radiation Regulatory Agency

Section R12-1-612 repealed, new Section R12-1-612 adopted effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 5 A.A.R.1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-613. Veterinary Medicine Radiographic Systems**A. Equipment.** A registrant shall ensure that:

1. Before January 2, 1996, the total filtration permanently in the useful beam is not less than 1.5 millimeters aluminum-equivalent for equipment operating at up to 70 kVp and 2.0 millimeters aluminum-equivalent for equipment operating in excess of 70 kVp;
2. A device is provided to terminate the exposure after a preset time or exposure;
3. Each radiographic system has a "dead-man" exposure switch with an electrical cord of sufficient length to allow the operator to stand at least 1.82 meters (six feet) away from the useful beam during x-ray exposures.

B. Procedures: A registrant shall ensure that:

1. Unless required to restrain an animal, the operator stands at least 1.82 meters (6 feet) away from the useful beam and the animal during a radiographic exposure;
2. An individual other than the operator is not in the x-ray room or area while an exposure is being made, unless the individual's assistance is required;
3. If possible, an animal is held in position during an x-ray exposure using mechanical supporting or restraining devices;
4. An individual holding an animal during an x-ray exposure is:
 - a. Wearing protective gloves and an apron of not less than 0.5 millimeter lead equivalent or positioned behind a whole-body protective barrier;
 - b. Wearing required personnel monitoring devices; and
 - c. Positioned so that no part of the person's body, except hands and arms, will be struck by the useful beam;
5. If an individual holds or supports an animal or a film during an x-ray exposure, the name of the individual is recorded in an x-ray log that contains the animal's name, the type of x-ray procedure, the number of exposures, and the date of the procedure; and
6. As a condition of employment an individual is not required to routinely hold or support animals, or hold film during radiation exposures.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsection (B) effective August 8, 1986 (Supp. 86-4). Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-614. Mammography Systems**A. Equipment.** A registrant shall ensure that:

1. Only radiation machines specifically designed for mammographic examinations are used;
2. The film processor used in the registrant's facility is maintained in accordance with the film processor's and film manufacturer's recommendations;

3. Each facility has an image development system onsite unless the Agency has approved an alternate system;
4. If used with screen-film image receptors, and the contribution to filtration made by the compression device is included, the useful beam has a half-value layer between the values of: "measured kVp/100 and measured kVp/100 + L millimeters" of aluminum equivalent, where L = 0.12 for Mo/Mo, L= 0.19 for Mo/Rh, L=0.22 for Rh/Rh, L=0.30 for W/Rh target filtration combinations and L= 0.33 for other target filtration combinations not otherwise specified.
5. The combination of focal spot size, source-to-image distance and magnification produces a radiograph with a resolution of at least 12 line pairs per millimeter at an object-to-image receptor distance of 4.5 centimeters; or the standards in Table 3-3 of the American Association of Physicists in Medicine (AAPM), Report No. 29, Equipment Requirements and Quality Control for Mammography, August 1990, published by the American Institute of Physics, Suite 1NO1, 2 Huntington Quadrangle, Melville, NY 11747 (This report is incorporated by reference and available under R12-1-101. The incorporated material contains no future editions or amendments. The report is available online at: <http://www.aapm.org/pubs/reports>; print copies may be purchased from Medical Physics Publishing, 4513 Vernon Blvd., Madison, WI 53705; toll free at (800) 442-5778.);
6. The compression device used with the mammographic unit, unless specifically manufactured otherwise, is parallel to the imaging plane, not varying at any spot by more than 1 centimeter;
7. The mammographic x-ray system with initial power drive:
 - a. Has compression paddles compatible with each size of image receptor;
 - b. Is capable of compressing the breast with a force of at least 25 pounds, but not more than 45 pounds, and maintaining the compression for at least three seconds; and
 - c. Is used in a manner so that the chest wall edge of the compression device is aligned just beyond the chest wall edge of the image receptor so that the chest wall edge of the compression device does not appear on the image receptor;
8. A mammographic x-ray system using screen-film image receptors has:
 - a. At least two different sizes of moving anti-scatter grids, including one for each size of image receptor utilized; and
 - b. Automatic exposure control;
9. All mammographic x-ray systems indicate or provide a means of determining, the mAs resulting from each exposure made with automatic exposure control;
10. The collimation provided limits the useful beam to the image receptor so that the beam does not extend beyond any edge of the image receptor at any designated source to image receptor distance by more than 2 percent of the source to image receptor distance;
11. The accuracy of the indicated kVp is within plus or minus 2kVp;
12. Mammographic x-ray systems operating with automatic exposure control are capable of maintaining a film density within plus or minus 0.15 optical density units over the clinical range of kVp used, for a breast having an equivalent phantom thickness from 2 to 6 centimeters. If a technique chart is used, the operator shall maintain the

Radiation Regulatory Agency

- film density within plus or minus 0.15 optical density units of the mean optical density.
13. At a kVp of 28, the mammographic x-ray system is capable of generating at least 2.0 $\mu\text{C}/\text{kg}/\text{mAs}$ (8mR/mAs) and at least 200 $\mu\text{C}/\text{kg}/\text{second}$ (800 mR/second), measured at a point 4.5 centimeters above the surface of the patient support device when the Source-image receptor distance is at its maximum;
 14. Screens are not used for mammography if one or more areas of greater than 1 centimeter squared of poor screen-film contact are seen when tested, using a 40 mesh screen test;
 15. Mammographic image quality meets the minimum mammography film standards for phantom performance in Mammography Quality Control Manual, 1999 edition, published by the American College of Radiology (ACR). (This manual is incorporated by reference and available under R12-1-101. The incorporated material contains no future editions or amendments. The manual is available from ACR Publication Sales, P.O. Box 533, Annapolis Junction, MD 20701; toll free at (800) 227-7762; e-mail at: acr@brightkey.net).
 16. The mean glandular dose for one cranio-caudal view of a 4.2 centimeter (1.8 inch) compressed breast, composed of 50 percent adipose and 50 percent glandular tissue, does not exceed 300 millirads (3 milligray); and
 17. A radiologic physicist who meets the requirements in R12-1-615(A)(1)(c) evaluates the operation of a mammographic x-ray system:
 - a. When first installed and annually thereafter,
 - b. Following any major change in equipment or replacement of parts, and
 - c. When quality assurance tests indicate calibration is necessary.
- B. Operating Procedures.** A registrant shall ensure that:
1. Each mammographic facility has a quality assurance program, and that the quality assurance program includes performance and documentation of the quality control tests in subsection (B)(2), conducted at the required time intervals. Test results shall fall within the specified limits in subsection (B)(2) or the registrant shall take corrective action and maintain documentation that the results are within specified limits before performing or processing any further examinations using the system that failed. A radiologic physicist, as defined in R12-1-615(A)(1)(c), shall review the program and make any recommendations necessary for the facility to comply with this Section;
 2. The quality assurance program meets federal requirements (Contained in 21 CFR 900.12(d)(1), and (e)(1) through (e)(10), revised April 1, 2013, incorporated by reference and available under R12-1-101. This incorporated material contains no future editions or amendments.); or the following requirements:
 - a. Daily sensitometric and densitometric evaluation of the image processing system demonstrates that Base + Fog < +0.03 optical density of operating level, Mid Density \pm 0.15 optical density of operating level, and Density Difference \pm 0.15 optical density of operating level;
 - b. Weekly phantom image quality evaluations demonstrate the visualization of at least four fibers, three speck groups, and three masses with a background of greater than 1.40 optical density, not varying by 0.20 optical density of operating level;
 - c. Monthly technique chart evaluations demonstrate updates for all equipment changes and that all examinations are being performed according to a physicist's density control recommendation;
 - d. Quarterly fixer retention evaluations demonstrate an acceptable limit of less than or equal to 5.0 micrograms per square centimeter;
 - e. Quarterly repeat analysis demonstrates an acceptable limit of less than 2 percent increase in repeats;
 - f. Semiannual darkroom fog evaluations meet the limit of less than or equal to 0.05 optical density of fog, using the two minute exposed film method;
 - g. Semiannual screen film contact evaluations meet the limit of less than one area of poor contact of 1 centimeter squared, using a 40 mesh screen on all clinically-used screens;
 - h. Semiannual automatic compression force evaluations meet the limit of greater than or equal to 25 pounds (111 Newtons) and less than 45 pounds (200 Newtons);
 - i. A survey shall be conducted annually and whenever indicated for installation, major repairs, parts replacement, or as deemed necessary by a qualified expert when quality control test results indicate a survey is necessary; the survey shall include all of the following tests:
 - i. Automatic exposure control performance and thickness response;
 - ii. Accuracy and reproducibility of kVp;
 - iii. System resolution;
 - iv. Breast entrance air kerma and automatic exposure control reproducibility;
 - v. Average glandular dose;
 - vi. X-ray field, light field, and image receptor alignment;
 - vii. Compression paddle alignment;
 - viii. Uniformity of screen speed;
 - ix. System artifacts;
 - x. Radiation output;
 - xi. Decompression;
 - xii. Beam quality and half value layer;
 - j. For systems with image receptor modalities other than screen film:
 - i. The quality assurance and quality control program for the acquisition system meets or exceeds the recommendations by the manufacturer; and
 - ii. The quality assurance and quality control program for the printer meets or exceeds the recommendations by the image receptor manufacturer. In the absence of recommendations by the image receptor manufacturer for the specified printer, the quality control and assurance program meets or exceeds the recommendations of the printer manufacturer; and
 - iii. The quality assurance and quality control program for the interpretation monitors meets or exceeds the recommendations by the image receptor manufacturer. In the absence of recommendations by the image receptor manufacturer for the specified monitor or monitors, the quality control and assurance program meets or exceeds the recommendations of the interpretation monitor or monitors manufacturer; and
 - k. The registrant maintains records documenting compliance with the provisions in this subsection for three years from the date each requirement is met.

Radiation Regulatory Agency

The records shall be made available for Agency inspection.

C. Mammographic films and reports.

1. A registrant shall maintain films and reports for a minimum of five years. In those cases where no subsequent mammographic procedures are performed, the registrant shall maintain films and associated reports for 10 years. If the mammographic facility is closed, the registrant shall make arrangements for storage of the films and associated reports for five years after the closure; and
2. A registrant shall make films and reports available for comparison upon request for temporary or permanent transfer to other mammographic facilities.

Historical Note

Adopted effective January 2, 1996 (Supp. 96-1). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2). Amended by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

R12-1-615. Mammography Personnel

A. Personnel.

1. Each registrant shall require personnel who perform mammography, which includes the production, processing, and interpretation of mammograms and related quality assurance activities, to meet the following requirements:
 - a. An interpreting physician shall meet federal requirements (Contained in 21 CFR 900.12(a)(1), revised April 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.); or
 - i. Be licensed under A.R.S. Title 32, Chapters 13 or 17;
 - ii. Have initially completed 40 hours of medical education credits in mammography;
 - iii. Be certified by the American Board of Radiology or the American Osteopathic Board of Radiology or meet the requirements of the mammography quality standards act regulations for quality standards of interpreting physicians;
 - iv. Have interpreted or reviewed an average of 300 mammograms per year during the preceding two years or have completed a radiology residency that included mammogram image interpretation in the preceding two years;
 - v. Have completed 15 hours of continuing medical education credits in mammography during the preceding three years; and
 - vi. Have received at least eight hours of training specific to each mammographic modality before engaging in independent interpretation.
 - b. A mammographic technologist shall meet federal requirements (Contained in 21 CFR 900.12(a)(2), revised April 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.); or
 - i. Possess a valid mammographic technologist certificate issued by the Medical Radiologic Technology Board of Examiners, as required in

- ii. Have performed at least 200 mammographic examinations in the preceding two years;
- iii. Have completed 15 hours of continuing medical education credits in mammography during the preceding three years; and
- iv. Have received at least eight hours of training specific to each mammographic modality to be used by the technologist in performing mammographic examinations.

- c. A radiologic physicist shall meet federal requirements (Contained in 21 CFR 900.12(a)(3), revised April 1, 2013, incorporated by reference and available under R12-1-101. This incorporated material contains no future editions or amendments.); or
 - i. Be certified by the American Board of Radiology, American Board of Medical Physics, or the American Board of Health Physics;
 - ii. Possess documentation of state approval;
 - iii. Hold a master's degree or higher in a physical science;
 - iv. Have, upon initial employment as a radiologic physicist, experience conducting, at least one mammographic facility survey and evaluating at least 10 mammographic units;
 - v. Have, after completing the experience requirements in subsection (A)(1)(c)(iv), continuing experience surveying two mammographic facilities and evaluating six mammographic units during the preceding two years;
 - vi. Have completed 15 hours of continuing medical education credits in mammography during the three preceding years;
 - vii. Have received at least eight hours of training specific to any modality surveyed; and
2. Each registrant shall maintain records documenting the requirements in subsection (A)(1) for three years from the date the requirement is met and make the records available for Agency inspection.

- B. Radiologic physicists shall apply for and renew their certification on agency approved forms. In addition to Agency supplied forms, applicants must also submit documentation showing education, mammography specific training, education, and board certification. Upon renewal, an applicant must submit documentation showing current continuing education requirements are met.**

Historical Note

Adopted effective January 2, 1996 (Supp. 96-1). Section repealed by final rulemaking at 9 A.A.C. 4302, effective November 14, 2003 (Supp. 03-3). New Section R12-1-615 made by final rulemaking at 19 A.A.R. 3882, effective January 4, 2014 (Supp. 13-4).

Appendix A. Information Submitted to the Agency According to R12-1-604(A)(3)(c)

- A.** Name and address of the applicant and, if applicable, the name and address of any person within this state that is authorized to act on behalf of the applicant;
- B.** Disease or conditions to be diagnosed using the proposed x-ray examination;
- C.** A detailed description of each x-ray examination that will be used in the diagnosis;

Radiation Regulatory Agency

- D. A description of the population to be examined in the screening program, using characteristics such as age, sex, physical condition, and other descriptive information;
- E. An evaluation of any known alternative diagnostic modalities not involving ionizing radiation that could achieve the same diagnosis as a screening program and why these modalities have not been chosen;
- F. An evaluation by a qualified expert of the x-ray equipment used in the screening program, which demonstrates that the x-ray equipment satisfies the requirements of this Article.
- G. A description of the quality control program;
- H. A copy of the technique chart for the planned x-ray examination;
- I. The qualifications of each individual who will be operating the x-ray equipment;
- J. The qualifications of the individual who will be supervising each operator of the x-ray equipment;
- K. The name and address of the individual who will interpret each radiographic image;
- L. A description of the planned procedures for advising a screened individual and the screened individual's physician of the screening procedure results, and the need for further medical care, and
- M. A description of the procedures for retention or disposition of the radiographic images and other records pertaining to the x-ray examination.

Historical Note

Adopted effective January 2, 1996 (Supp. 96-1).
Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

Appendix B. Repealed**Historical Note**

Adopted effective January 2, 1996 (Supp. 96-1). Section repealed by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

ARTICLE 7. MEDICAL USES OF RADIOACTIVE MATERIAL**R12-1-701. License Required**

- A. A person may manufacture, produce, acquire, receive, possess, prepare, use, or transfer radioactive material for medical use only in accordance with a specific license issued by the Agency, the NRC, or another Agreement State, or as allowed in subsection (B)(1) or (B)(2).
- B. A specific license is not needed for an individual who:
 1. Receives, possesses, uses, or transfers radioactive material in accordance with the rules in this Chapter under the supervision of an authorized user as provided in R12-1-706, unless prohibited by license condition; or
 2. Prepares unsealed radioactive material for medical use in accordance with the rules in this Chapter under the supervision of an authorized nuclear pharmacist or authorized user.

Historical Note

Former Rule Section G.1. Former Section R12-1-701 repealed, new Section R12-1-701 adopted effective June 30, 1977 (Supp. 77-3). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (07-1).

R12-1-702. Definitions

"Authorized medical physicist" means an individual who meets the requirements in R12-1-711. For purposes of ensuring that personnel

are adequately trained, an authorized medical physicist is a "qualified expert" as defined in Article 1.

"Authorized nuclear pharmacist" means a pharmacist who meets the requirements in R12-1-712.

"Authorized user" means a physician, dentist, or podiatrist who meets the requirements in R12-1-719, R12-1-721, R12-1-723, R12-1-727, R12-1-728, or R12-1-744.

"Brachytherapy" means a method of radiation therapy in which a sealed source or group of sealed sources is utilized to deliver beta or gamma radiation at a distance of up to a few centimeters, by surface, intracavitary, intraluminal, or interstitial application.

"CT" means computerized tomography.

"High dose rate afterloading brachytherapy" means the treating of human disease using the radiation from a radioactive sealed source containing more than 1 curie of radioactive material. The radioactive material is introduced into a patient's body using a device that allows the therapist to indirectly handle the radiation source during the treatment. For purposes of the requirements in this Article "pulse dose rate afterloading brachytherapy" is included in this definition.

"Human research subject" means an individual who is or becomes a participant in research overseen by an IRB, either as a recipient of the test article or as a control. A subject may be either a healthy human, in research overseen by the RDRC, or a patient.

"Institutional review board" (IRB) is defined in R12-1-704(B).

"Manual brachytherapy" means a type of brachytherapy in which the brachytherapy sources (e.g., seeds, ribbons) are manually placed topically on or inserted either into the body cavities that are in close proximity to a treatment site or directly into the tissue volume.

"Medical event" means an event that meets the criteria in R12-1-745.

"Medical institution" means an organization in which several medical disciplines are practiced.

"Medical use" means the intentional internal or external administration of radioactive material, or the radiation from it, to an individual under the supervision of an authorized user.

"Nuclear cardiology" means the diagnosis of cardiac disease using radiopharmaceuticals.

"PET" means positron emission tomography.

"Physically present" means that a supervising medical professional is in proximity to the patient during a radiation therapy procedure so that immediate emergency orders can be communicated to ancillary staff, should the occasion arise.

"Prescribed dosage" means the specified activity or range of activity of unsealed radioactive material as documented:

In a written directive; or

In accordance with the directions of the authorized user for procedures performed in accordance with the uses described in Exhibit A.

"Prescribed dose" means:

For gamma stereotactic radiosurgery, the total dose as documented in the written directive;

For teletherapy, the total dose and dose per fraction as documented in the written directive;

For manual brachytherapy, either the total source strength and exposure time or the total dose, as documented in the written directive; or

Radiation Regulatory Agency

For remote brachytherapy afterloaders, the total dose and dose per fraction as documented in the written directive.

“Radiation Safety Officer” (RSO) for purposes of this Article, and in addition to the definition in Article 1 means an individual who:

- Meets the requirements in R12-1-710, or
- Is identified as a radiation safety officer on:
 - A specific medical use license issued by the NRC or Agreement State; or
 - A medical use permit issued by a NRC master material license.

“Radioactive drug” is defined in 21 CFR 310.3(c) and includes a “radioactive biological product” as defined in 21 CFR 600.3, April 1, 2006, both of which are incorporated by reference, published by the Office of Federal Register, National Archives and Records Administration, Washington, DC 20408, and on file with the Agency. These incorporated materials contain no future editions or amendments.

“Radioactive Drug Research Committee” (RDRC) means the committee established by the licensee to review all basic research involving the administration of a radioactive drug to human research subjects, taken from 21 CFR 361.1, April 1, 2006, which is incorporated by reference, published by the Office of Federal Register, National Archives and Records Administration, Washington, DC 20408, and on file with the Agency. This incorporation by reference contains no future editions or amendments. Research is considered basic research if it is done for the purpose of advancing scientific knowledge, which includes basic information regarding the metabolism (including kinetics, distributions, dosimetry, and localization) of a radioactive drug or regarding human physiology, pathophysiology, or biochemistry. Basic research is not intended for immediate therapeutic or diagnostic purposes and is not intended to determine the safety and effectiveness of a radioactive drug in humans.

“Radiopharmaceutical” means any drug that exhibits spontaneous disintegration of unstable nuclei with the emission of nuclear particles or photons and includes any nonradioactive reagent kit or nuclide generator that is intended to be used in the preparation of any such substance. For purposes of this Article radiopharmaceutical is equivalent to radioactive drug.

“Remote afterloading brachytherapy device” means a device used in radiation therapy that allows the authorized user to insert, from a remote location, a radiation source into an applicator that has been previously inserted in an individual requiring treatment.

“Sealed Source and Device Registry” means the national registry that contains all the registration certificates, generated by both NRC and the Agreement States, that summarize the radiation safety information for the sealed sources and devices and describe the licensing and use conditions approved for the product.

“Stereotactic radiosurgery” means the use of external radiation in conjunction with a stereotactic guidance device to very precisely deliver a dose.

“Teletherapy” means therapeutic irradiation in which the sealed source of radiation is at a distance from the body.

“Therapeutic dosage” means a dosage of unsealed radioactive material that is intended to deliver a radiation dose to a patient or human research subject for palliative or curative treatment.

“Therapeutic dose” means a radiation dose delivered from a source containing radioactive material to a patient or human research subject for palliative or curative treatment.

“Treatment site” means the anatomical description of the tissue intended to receive a radiation dose, as described in a written directive.

“Unit dosage” means a dosage prepared for medical use for administration as a single dosage to a patient or human research subject without any further manipulation of the dosage after it is initially prepared.

“Written directive” means an authorized user’s written order for the administration of radioactive material or radiation from radioactive material to a specific patient or human research subject, as specified in R12-1-707.

Historical Note

Former Rule Section G.2; Former Section R12-1-702 repealed, new Section R12-1-702 adopted effective June 30, 1977 (Supp. 77-3). Former Section R121-702 renumbered and amended as Section R12-1-703, new Section R12-1-702 adopted effective December 20, 1985 (Supp. 85-6). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-703. License for Medical Use of Radioactive Material

- A.** In addition to the requirements set forth in R12-1-309, the Agency shall issue a specific license for medical use of radioactive material if:
1. The applicant has appointed a radiation safety committee, meeting the requirements in R12-1-705, that will oversee the use of licensed material throughout the licensee’s facility and associated radiation safety program;
 2. The applicant possesses facilities for the clinical care of patients or human research subjects; and
 3. The individual designated on the application as an authorized user has met the training and experience requirements in R12-1-719, R12-1-721, R12-1-723, R12-1-727, R12-1-728, or R12-1-744.
- B.** Specific licenses to individual authorized users for medical use of radioactive material:
1. The Agency shall approve an application by a prospective individual authorized user or prospective group of authorized users for a specific license governing the medical use of radioactive material if:
 - a. The applicant satisfies the general requirements in R12-1-309;
 - b. The application is for use in the applicant’s practice at an office outside of a medical institution;
 - c. The applicant meets the training and experience requirements in subsection (A)(3); and
 - d. The applicant has a radiation safety committee, if the criteria in R12-1-705 are applicable and a RDRC, if the use is basic research involving humans.
 2. The Agency shall not approve an application by a prospective authorized user or group of prospective authorized users for a specific license to receive, possess, or use radioactive material on the premises of a medical institution unless:
 - a. The use of radioactive material is limited to:
 - i. The administration of radiopharmaceuticals for diagnostic or therapeutic purposes;
 - ii. The performance of diagnostic studies on patients or human research subjects to whom a radiopharmaceutical has been administered;

Radiation Regulatory Agency

- iii. The performance of in vitro diagnostic studies; or
 - iv. The calibration and quality control checks of radioactive assay instrumentation, radiation safety instrumentation, or diagnostic instrumentation;
 - b. The authorized user brings the radioactive material and removes the radioactive material upon departure; and
 - c. The medical institution does not hold a radioactive materials license under subsection (A).
- C. Specific licenses for certain groups of medical uses of radioactive material:
1. The Agency shall approve an application for a specific license under subsections (A) or (B), for any medical use or uses of radioactive material specified in Groups 100 through 1,000, in Exhibit A of this Article, for all of the materials within each group requested in the application if:
 - a. The applicant satisfies the requirements of subsections (A) and (B);
 - b. Each person involved in the preparation and use of the radioactive material is an authorized user, an authorized nuclear pharmacist, or certified as a nuclear medicine technologist by the Medical Radiologic Technology Board of Examiners (MRTBE);
 - c. The applicant's radiation detection and measuring instrumentation is adequate for conducting the procedures involved in the authorized uses selected from Group 100 through Group 1,000; and
 - d. The applicant's radiation safety operating procedures are adequate for handling and disposal of the radioactive material involved in the authorized uses selected from Group 100 through Group 1,000.
 2. Any licensee who is authorized to use radioactive material:
 - a. In unsealed form under Groups 100, 200, 300 or 1,000 listed in Exhibit A of this Article, shall do so using radiopharmaceuticals prepared in accordance with R12-1-311(I); or
 - b. In sealed source form under Groups 400, 500, 600, or 1,000 listed in Exhibit A of this Article, shall do so using sealed sources that have been manufactured and distributed in accordance with R12-1-311(K);
 - c. In any form under group 1,000 listed in Exhibit A of this Article, shall do so using sealed and unsealed sources that have been manufactured and distributed in accordance with the specific license issued by the Agency.
 3. Any licensee who is licensed according to subsection (C)(1), for one or more of the medical use groups in Exhibit A also is authorized to use radioactive material under the general license in R12-1-306(E) for the specified in vitro uses without filing Form ARRA-9 as required by R12-1-306(E)(2); provided, that the licensee is subject to the other provisions of R12-1-306(E).
- D. In addition to the other license application requirements in this Section, each applicant shall include in the radiation safety program required under subsection (A)(1) a system for ensuring that each syringe and vial that contains unsealed radioactive material is labeled in accordance with R12-1-431(D).

Historical Note

Former Rule Section G.3; Former Section R12-1-703 repealed, new Section R12-1-703 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-703

renumbered and amended as Section R12-1-704, former Section R12-1-702 renumbered and amended as Section R12-1-703 effective December 20, 1985 (Supp. 85-6).

Section repealed and new Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 22 A.A.R. 603, effective February 2, 2016 (Supp. 16-1).

R12-1-704. Provisions for the Protection of Human Research Subjects

- A. A licensee may conduct basic research involving human research subjects and research involving patients receiving investigational new drugs or devices if the licensee only uses the radioactive material specified on the license for the uses authorized on the license.
- B. If research is conducted, funded, supported, or regulated by a federal agency that has implemented the federal Policy for Protection of Human Research Subjects (45 CFR 46, June 23, 2005, which is incorporated by reference, published by the Office of Federal Register, National Archives and Records Administration, Washington, DC 20408, on file with the Agency, and contains no future editions or amendments), the licensee shall:
1. Obtain review and approval of the research from an Institutional Review Board (IRB); and
 2. Obtain informed consent from the human research subject.
- C. If research will not be conducted, funded, supported, or regulated by a federal agency that has implemented the federal policy in subsection (B), a medical licensee shall, before conducting research, apply for and receive a specific amendment to its use license. The amendment request shall include a written commitment that the licensee will, before conducting research:
1. Obtain review and approval of the research from an IRB, as defined and described in the federal policy; and
 2. Obtain informed consent from the human research subject.
- D. Before conducting the research described in subsection (A) the licensee shall apply to the Agency for and receive a specific amendment to its medical use license. The amendment request shall include a written commitment that the licensee will, before conducting research:
1. Obtain any review and approval required by this Section, and
 2. Obtain informed consent from the human research subject if applicable.
- E. Nothing in this Section relieves a licensee from complying with the other requirements in this Article.

Historical Note

Repealed effective June 30, 1977 (Supp. 77-3). Former Section R12-1-703 renumbered and amended as Section R12-1-704 effective December 20, 1985 (Supp. 85-6).

Section repealed and new Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made

Radiation Regulatory Agency

by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-705. Authority and Responsibilities for the Radiation Protection Program

- A. A licensee's management shall appoint in writing a radiation safety officer, who agrees, in writing, to be responsible for implementing the radiation protection program. The licensee, through the RSO, shall ensure that radiation safety activities are being performed in accordance with licensee-approved procedures and regulatory requirements. Each time the RSO is changed, the licensee shall provide to the Agency within 30 days an amendment request and a copy of the correspondence between the licensee's management and the candidate, accepting the position of RSO.
- B. Licensees that are authorized for two or more different types of uses of radioactive material listed in Groups 300, 400, 600, and 1,000, or two or more types of units under group 600 or 1,000, shall establish a Radiation Safety Committee (RSC) to oversee all uses of radioactive material permitted by the license. At a minimum, the RSC shall include an authorized user of each type of use permitted by the license, the RSO, a representative of the nursing service, and a representative of management who is neither an authorized user nor a RSO.
- C. If a licensee or applicant is not a health care institution and is unable to meet the RSC membership requirements in subsection (B), the licensee or applicant may request an exemption in accordance with A.R.S. § 30-654(B)(13). The request for exemption shall be made to the Agency in writing and list the reasons why the health care institution is unable to meet the requirements.
- D. A licensee shall ensure that the RSC meets, at a minimum, on an annual basis and maintain the RSC meeting minutes for Agency review for three years after the date of the RSC meeting.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-706. Supervision

- A. For purposes of this rule, "supervision" means the exercise of control over or direction of the use of radioactive material in the practice of medicine by an authorized user named on a radioactive material license. Supervision does not require a supervising physician's constant physical presence if the supervising physician can be easily contacted by radio, telephone, or telecommunication.
- B. A physician may use radioactive material if the person is licensed by the Arizona Medical Board or Board of Osteopathic Examiners in Medicine and Surgery and is listed as an authorized user on the Arizona radioactive material license under which the radioactive material is obtained.
- C. A licensee that permits the receipt, possession, use, or transfer of radioactive material by an individual under the supervision of an authorized user, shall:
1. Instruct the supervised individual in the licensee's written radiation protection procedures, written directive procedures, rules, and license conditions with respect to the use of radioactive material; and
 2. Require the supervised individual to follow the instructions of the supervising authorized user for medical uses of radioactive material, written radiation protection procedures established by the licensee, written directive pro-

cedures, rules, and license conditions with respect to the medical use of radioactive material.

- D. A licensee that permits the preparation of radioactive material for medical use by an individual who is supervised by an authorized nuclear pharmacist or a physician, who is an authorized user, shall:
1. Instruct the supervised individual in the preparation of radioactive material for medical use, as appropriate to that individual's involvement with radioactive material; and
 2. Require the supervised individual to follow the instructions of the supervising authorized user or authorized nuclear pharmacist regarding the preparation of radioactive material for medical use, written radiation protection procedures established by the licensee, the rules, and license conditions.
- E. A licensee that permits supervised activities under subsections (C) and (D) is responsible for the acts and omissions of the supervised individual.
- F. A limited-service nuclear pharmacy licensee shall dispense radiopharmaceuticals only to a physician listed as an authorized user on a valid radioactive material license issued by the Agency, an Agreement State, or the NRC. For purposes of this rule "limited-service nuclear pharmacy" is defined in R4-23-110.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-707. Written Directives

- A. A licensee shall ensure that a written directive is dated and signed by an authorized user before the administration of I-131 sodium iodide greater than 1.11 MBq (30 microcuries (μCi)), any therapeutic dosage of unsealed radioactive material or any therapeutic dose of radiation from radioactive material. If, because of the emergent nature of the patient's condition, a delay in order to provide a written directive would jeopardize the patient's health, an oral directive is acceptable. The information contained in the oral directive shall be documented as soon as possible in writing in the patient's record. A written directive shall be prepared within 48 hours of the oral directive.
- B. A written directive shall contain the patient or human research subject's name and the following information:
1. For any administration of quantities greater than 1.11 MBq (30 μCi) of sodium iodide I-131: the dosage;
 2. For an administration of a therapeutic dosage of unsealed radioactive material other than sodium iodide I-131: the radiopharmaceutical, dosage, and route of administration;
 3. For gamma stereotactic radiosurgery: the total dose, treatment site, and values for the target coordinate settings per treatment for each anatomically distinct treatment site;
 4. For teletherapy: the total dose, dose per fraction, number of fractions, and treatment site;
 5. For high dose-rate remote afterloading brachytherapy: the radionuclide, treatment site, dose per fraction, number of fractions, and total dose; or
 6. For all other brachytherapy, including low, medium, and pulsed dose rate remote afterloaders:
 - a. Before implantation: treatment site, the radionuclide, and dose; and

Radiation Regulatory Agency

- b. After implantation but before completion of the procedure: the radionuclide, treatment site, number of sources, and total source strength and exposure time (or the total dose).
- C. The licensee shall retain a copy of the written directive for three years after creation of the record.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-708. Procedures for Administrations Requiring a Written Directive

For any administration requiring a written directive, the licensee shall develop, implement, and maintain written procedures to provide high confidence that:

1. The patient's or human research subject's identity is verified before each administration; and
2. Each administration is in accordance with the written directive.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-709. Sealed Sources or Devices for Medical Use

A licensee may only use:

1. Sealed sources, including teletherapy sources, or devices manufactured, labeled, packaged, and distributed in accordance with a license issued under Article 3 of this Chapter, equivalent regulations of the NRC or equivalent requirements of an Agreement State; or
2. Sealed sources or devices noncommercially transferred from another medical licensee; or
3. Teletherapy sources manufactured and distributed in accordance with a license issued by the Agency, the NRC, or another Agreement State.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-710. Radiation Safety Officer Training

A. A licensee shall require an individual fulfilling the responsibilities of the radiation safety officer, described in R12-1-705, to be an individual who:

1. Is certified by a specialty board whose certification process includes all of the requirements in subsection (A)(2) and whose certification has been recognized by the Agency, NRC, or an Agreement State. To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Meet the following minimum requirements:
 - i. Hold a bachelor's or graduate degree from an accredited college or university in physical science or engineering or biological science with a minimum of 20 college credits in physical science;
 - ii. Have five or more years of professional experience in health physics (graduate training may be substituted for no more than two years of the

- required experience) including at least three years in applied health physics; and
- iii. Pass an examination administered by diplomates of the specialty board, which evaluates knowledge and competence in radiation physics and instrumentation, radiation protection, mathematics pertaining to the use and measurement of radioactivity, radiation biology, and radiation dosimetry; or
- b. Meet the following minimum requirements:
 - i. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
 - ii. Have two years of full-time practical training and/or supervised experience in medical physics;
 - (1) Under the supervision of a medical physicist who is certified in medical physics by a specialty board recognized by the Commission or an Agreement State; or
 - (2) In clinical nuclear medicine facilities providing diagnostic and/or therapeutic services under the direction of physicians who meet the requirements for authorized users qualified under section R12-1-710(B), R12-1-721, or R12-1-723;
 - iii. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical diagnostic radiological or nuclear medicine physics and in radiation safety; or
2. Has completed a structured educational program consisting of both:
 - a. 200 hours of didactic and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Radiation biology; and
 - v. Radiation dosimetry; and
 - b. One year of full-time radiation safety experience under the supervision of the individual identified as the radiation safety officer on an Agency, NRC, or an Agreement State license or permit issued by a NRC master material licensee that authorizes similar type(s) of use(s) of radioactive material involving the following:
 - i. Shipping, receiving, and performing related radiation surveys;
 - ii. Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and instruments used to measure radionuclides;
 - iii. Securing and controlling radioactive material;
 - iv. Using administrative controls to avoid mistakes in the administration of radioactive material;
 - v. Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures;
 - vi. Using emergency procedures to control radioactive material; and
 - vii. Disposing of radioactive material; or
 - c. Has obtained written certification, signed by a precursor radiation safety officer, that the individual has

Radiation Regulatory Agency

satisfactorily completed the requirements in subsection (A)(2)(a) and (A)(2)(b) and has achieved a level of radiation safety knowledge sufficient to function independently as a radiation safety officer for a medical use licensee; or

3. Is an authorized user, authorized medical physicist, or authorized nuclear pharmacist identified on the licensee's license and has experience with the radiation safety aspects of similar types of use of radioactive material for which the individual has radiation safety officer responsibilities.

B. Exceptions.

1. An individual identified as a radiation safety officer on an Agency, a NRC, or an Agreement State license or a permit issued by the NRC or an Agreement State broad scope licensee or master material license permit or by a master material license permittee of broad scope before the effective date of these rules need not comply with the training requirements in subsections (A)(1) through (A)(3).
2. A physician, dentist, or podiatrist identified as an authorized user for the medical use of radioactive material on a license issued by the Agency, NRC, or Agreement State, a permit issued by a NRC master material licensee, a permit issued by an Agency, NRC, or Agreement State broad scope licensee, or a permit issued by a NRC master material license broad scope permittee before the effective date of these rules need not comply with the training requirements in this Article.

- C. The training and experience required in this Section shall be obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

- D. Individuals who, under subsection (B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Agency licenses for the same uses for which these individuals are authorized.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R.

1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13

A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

Amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3). Amended by final

rulemaking at 20 A.A.R. 324, effective March 8, 2014

(Supp. 14-1).

R12-1-711. Authorized Medical Physicist Training

- A. A licensee shall require an authorized medical physicist to be an individual who:

1. Is certified by a specialty board whose certification process includes all of the training and experience requirements in subsection (A)(3)(b) and (A)(3)(c) and whose certification has been recognized by the Agency, NRC or an Agreement State; or
2. Training requirements.
 - a. Hold a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university;
 - b. Have two years of full-time practical training and/or supervised experience in medical physics:
 - i. Under the supervision of a medical physicist who is certified in medical physics by a spe-

cialty board recognized by the NRC or an Agreement State; or

- ii. In clinical radiation facilities providing high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services under the direction of physicians who meet the requirements for authorized users in R12-1-710, R12-1-719, R12-1-721, R12-1-723, R12-1-727, R12-1-728, or R12-1-744; and

- c. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in clinical radiation therapy, radiation safety, calibration, quality assurance, and treatment planning for external beam therapy, brachytherapy, and stereotactic radiosurgery; or

3. Training requirements alternative.

- a. Holds a master's or doctor's degree in physics, medical physics, other physical science, engineering, or applied mathematics from an accredited college or university; and has completed one year of full-time training in medical physics and an additional year of full-time work experience under the supervision of an individual who meets the requirements for an authorized medical physicist for the type(s) of use for which the individual is seeking authorization. This training and work experience must be conducted in clinical radiation facilities that provide high-energy, external beam therapy (photons and electrons with energies greater than or equal to 1 million electron volts) and brachytherapy services and must include:

- i. Performing sealed source leak tests and inventories;
- ii. Performing decay corrections;
- iii. Performing full calibration and periodic spot checks of external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and
- iv. Conducting radiation surveys around external beam treatment units, stereotactic radiosurgery units, and remote afterloading units as applicable; and

- b. Has obtained written attestation that the individual has satisfactorily completed the requirements in subsection (A)(3)(c) and (A)(2)(a) and (A)(2)(b) and (A)(3)(c), or (A)(3)(a) and (A)(3)(c); and has achieved a level of competency sufficient to function independently as an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status. The written attestation must be signed by a preceptor authorized medical physicist who meets the requirements in section, or equivalent Agreement State requirements for an authorized medical physicist for each type of therapeutic medical unit for which the individual is requesting authorized medical physicist status; and

- c. Has training for the type(s) of use for which authorization is sought that includes hands-on device operation, safety procedures, clinical use, and the operation of a treatment planning system. This training requirement may be satisfied by satisfactorily completing either a training program provided by the vendor or by training supervised by an authorized medical physicist authorized for the type(s) of

Radiation Regulatory Agency

use for which the individual is seeking authorization.

- B. Exceptions. An individual identified as a teletherapy or medical physicist on an Agency, a NRC, or an Agreement State license or a permit issued by the NRC or an Agreement State broad scope licensee or master material license permit or by a master material license permittee of broad scope before the effective date of these rules need not comply with the training requirements in subsection (A).
 - C. The training and experience required in this Section shall be obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
 - D. Individuals who, under subsection (B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Agency licenses for the same uses for which these individuals are authorized.
- b. Supervised practical experience in a nuclear pharmacy involving:
 - i. Shipping, receiving, and performing related radiation surveys;
 - ii. Using and performing checks for proper operation of instruments used to determine the activity of dosages, survey meters, and, if appropriate, instruments used to measure alpha- or beta-emitting radionuclides;
 - iii. Calculating, assaying, and safely preparing dosages for patients or human research subjects;
 - iv. Using administrative controls to avoid medical events in the administration of radioactive material; and
 - v. Using procedures to prevent or minimize radioactive contamination and using proper decontamination procedures; and

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-712. Authorized Nuclear Pharmacist Training

- A. A licensee shall require the authorized nuclear pharmacist to be a pharmacist who:
 - 1. Is certified as a nuclear pharmacist by a specialty board whose certification process has been recognized by the Agency, NRC, or an Agreement State. To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Have graduated from a pharmacy program accredited by the American Council on Pharmaceutical Education (ACPE) or have passed the Foreign Pharmacy Graduate Examination Committee (FPGEC) examination;
 - b. Hold a current, active license to practice pharmacy in Arizona;
 - c. Provide evidence of having acquired at least 4000 hours of training/experience in nuclear pharmacy practice. Academic training may be substituted for no more than 2000 hours of the required training and experience; and
 - d. Pass an examination in nuclear pharmacy administered by diplomates of the specialty board, that assesses knowledge and competency in procurement, compounding, quality assurance, dispensing, distribution, health and safety, radiation safety, provision of information and consultation, monitoring patient outcomes, research and development; or
 - 2. Has completed 700 hours in a structured educational program consisting of both:
 - a. 200 hours of classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and

- 3. Has obtained written attestation, signed by a preceptor authorized nuclear pharmacist, that the individual has satisfactorily completed the requirements in subsection (A)(2) and has achieved a level of competency sufficient to function independently as an authorized nuclear pharmacist.
- B. Exceptions. An individual identified as a nuclear pharmacist on an Agency, a NRC or an Agreement State license or a permit issued by the NRC or an Agreement State broad scope licensee or master material license permit or by a master material license permittee of broad scope before the effective date of these rules need not comply with the training requirements in subsections (A)(1) through (A)(3).
- C. The training and experience required in this Section shall be obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
- D. Individuals who, under subsection (B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Agency licenses for the same uses for which these individuals are authorized.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-713. Determination of Prescribed Dosages, and Possession, Use, and Calibration of Instruments

- A. A licensee shall determine and record the activity of each dosage before medical use.
- B. For a unit dosage, this determination shall be made by:
 - 1. Direct measurement of radioactivity; or
 - 2. Decay correction, based on the activity or activity concentration determined by:
 - a. A manufacturer or preparer licensed under R12-1-311 or equivalent NRC or Agreement State requirements; or
 - b. An Agency, NRC, or Agreement State licensee for use in research in accordance with a Radioactive Drug Research Committee-approved protocol or an

Radiation Regulatory Agency

- Investigational New Drug (IND) protocol accepted by FDA or;
- c. A PET radioactive drug producer licensed under R12-1-311 or equivalent NRC or Agreement State requirements.
- C. For other than unit dosages, this determination shall be made by:
1. Direct measurement of radioactivity;
 2. Combination of measurement of radioactivity and mathematical calculations; or
 3. Combination of volumetric measurements and mathematical calculations based on the measurement made by a manufacturer or preparer licensed under R12-1-311, or equivalent NRC or Agreement State requirements.
- D. Unless otherwise directed by the authorized user, a licensee may not use a dosage if the dosage does not fall within the prescribed dosage range or if the dosage differs from the prescribed dosage by more than 20 percent.
- E. A licensee shall retain a record of the dosage determination required by this Section for Agency inspection for three years.
- F. For direct measurements performed in accordance with subsection (B)(1), a licensee shall possess and use instrumentation to measure the activity of the dosage before it is administered to each patient or human research subject.
- G. A licensee shall calibrate the instrumentation required in subsection (F) in accordance with nationally recognized standards, the manufacturer's instructions, or the following procedures.
1. The procedures that may be followed are:
 - a. Check each dose calibrator for constancy with a dedicated check source at the beginning of each day of use;
 - b. Test each dose calibrator for accuracy upon installation and at least annually thereafter by assaying at least two sealed sources containing different radionuclides whose activity the manufacturer has determined within 5 percent of its stated activity, whose activity is at least 10 microcuries for radium-226 and 50 microcuries for any other photon-emitting radionuclide, and at least one of which has a principal photon energy between 100 keV and 500 keV;
 - c. Test each dose calibrator for linearity upon installation and at least quarterly thereafter over a range from the highest dosage that will be administered to a patient or human research subject to 1.1 megabecquerels (30 microcuries);
 - d. Test each dose calibrator for geometry dependence upon installation over the range of volumes and volume configurations for which it will be used. The licensee shall keep a record of this test for the duration of the use of the dose calibrator.
 - e. Perform appropriate checks and tests required by this Section following adjustment or repair of the dose calibrator; and
 - f. Mathematically correct dosage readings for any geometry or linearity error that exceeds 10 percent if the dosage is greater than 10 microcuries and shall repair or replace the dose calibrator if the accuracy or constancy error exceeds 10 percent.
 2. A licensee shall maintain the dose calibrator in accordance with this subsection, even though the dose calibrator is only used to "verify" a dosage prepared by a supplier authorized in subsection (B)(2).
 3. A licensee shall maintain on file for Agency review nationally recognized standards or manufacturer's instructions used to maintain a dose calibrator and meet the requirements of subsection (G).
- H. A licensee shall calibrate the survey instruments before first use, annually, and following a repair that affects the calibration. A licensee shall:
1. Calibrate all scales with readings up to 10 mSv (1000 mrem) per hour with a radiation source;
 2. Calibrate two separated readings on each scale or decade that will be used to show compliance; and
 3. Conspicuously note on the instrument the date of calibration.
- I. A licensee may not use survey instruments if the difference between the indicated exposure rate and the calculated exposure rate is more than 20 percent.
- J. A licensee shall retain records of instrument calibration for three years following the calibration.
- Historical Note**
- New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).
- R12-1-714. Authorization for Calibration, Transmission, and Reference Sources**
- Any person authorized by R12-1-703 for medical use of radioactive material may receive, possess, and use any of the following radioactive material for check, calibration, transmission, and reference use.
1. Sealed sources, not exceeding 1.11 GBq (30 mCi) each, manufactured and distributed by a person licensed under Article 3 of this Chapter or equivalent NRC or Agreement State regulations.
 2. Sealed sources, not exceeding 1.11 GBq (30 mCi) each, redistributed by a licensee authorized to redistribute the sealed sources manufactured and distributed by a person licensed under Article 3 of this Chapter, providing the redistributed sealed sources are in the original packaging and shielding and are accompanied by the manufacturer's approved instructions.
 3. Any radioactive material with a half-life not longer than 120 days in individual amounts not to exceed 0.56 GBq (15 mCi).
 4. Any radioactive material with a half-life longer than 120 days in individual amounts not to exceed the smaller of 7.4 MBq (200 µCi) or 1000 times the quantities in Article 4, Appendix B of this Chapter.
 5. Technetium-99m in amounts as needed.
 6. A licensee is limited to five sources of radiation authorized under subsections (1) through (3), unless otherwise specified in the licensee's radioactive material license.
- Historical Note**
- New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-715. Requirements for Possession of Sealed Sources and Brachytherapy Sources

- A. A licensee in possession of any sealed source or brachytherapy source shall follow the radiation safety and handling instructions supplied by the manufacturer.
- B. A licensee in possession of a sealed source shall test the source for leakage in accordance with R12-1-417.
- C. A licensee in possession of sealed sources or brachytherapy sources, except for gamma stereotactic radiosurgery sources, shall conduct a physical inventory every six months of all sources in its possession. During the period of time between the inventories, the licensee shall add each acquired sealed source to the inventory record and remove from the inventory record each source that leaves the licensee's control.
- D. A licensee shall document the inventories conducted under subsection (C) and maintain inventory records in accordance with R12-1-450.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-716. Surveys of Ambient Radiation Exposure Rate, Surveys for Contamination, and PET Radiation Exposure Concerns

- A. In addition to the surveys required in Article 4 of this Chapter, a licensee shall survey with a radiation detection survey instrument at the end of each day of use all areas where unsealed radioactive material, requiring a written directive, is prepared for use or administered. In areas of routine use, that are to be released for unrestricted use, a licensee shall perform a survey of the area using an instrument appropriate for detecting contamination before releasing the area for unrestricted use.
- B. A licensee shall obtain the services of a person, experienced in the principles of radiation protection and installation design, to design a PET facility and perform a radiation survey when the facility is ready for patient imaging. The licensee shall provide a copy of the installation radiation survey to the Agency within 30 days of imaging the first patient.
- C. The licensee shall use engineering controls or shield each PET use area with protective barriers necessary to comply with the radiation exposure limits in R12-1-408 and R12-1-416.
 - 1. At the time of application for a new license or amendment to an existing license, and before imaging of the first patient, the licensee shall provide to the Agency a copy of the installation report signed by the contractor who installed the shielding material recommended by a person meeting the requirements in subsection (B) and a copy of the installation radiation survey required in subsection (B).
 - 2. The licensee shall perform shielding calculations in accordance with *AAPM Task Group 108: PET and PET/CT Shielding Requirements*, in Medical Physics, Vol. 33, No. 1, January 2006, which is incorporated by reference, published by the American Association of Physicists in Medicine, One Physics Ellipse, College Park, MD 20740, and on file with the Agency. This incorporation by reference contains no future editions or amendments. In lieu of these procedures, the licensee may use equivalent calculations approved by the Agency.
- D. As part of the annual ALARA review required in R12-1-407, the licensee shall document a review of the PET patient workload and associated change, if any, in public exposure resulting from the installed facility shielding and other public radiation exposure controls in use at the time of the review.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-717. Release of Individuals Containing Radioactive Material or Implants Containing Radioactive Material

- A. A licensee may authorize the release from its control of any individual who has been administered unsealed radioactive material or implants containing radioactive material, if the total effective dose equivalent to any other individual from exposure to the released individual is not likely to exceed 5 millisieverts (0.5 rem).
- B. A licensee shall provide the released individual, or the individual's parent or guardian, with instructions, including written instructions, on actions recommended to maintain doses to other individuals as low as is reasonably achievable if the total effective dose equivalent to any other individual is likely to exceed 1 millisievert (0.1 rem). If the total effective dose equivalent to a nursing infant or child could exceed 1 millisievert (0.1 rem) assuming there were no interruption of breast-feeding, the instructions shall also include:
 1. Guidance on the interruption or discontinuation of breast-feeding; and
 2. Information on the potential consequences, if any, of failure to follow the guidance.
- C. A licensee shall maintain a record of the basis for authorizing the release of an individual and instructions provided to a breast-feeding female for three years from the date of the administration performed under subsection (A). Nothing in this rule relieves the licensee from the personnel exposure requirements in Article 4.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-718. Mobile Medical Service

- A. A licensee providing mobile medical service shall:
 1. Obtain a letter signed by the management of each client for which services are rendered that permits the use of radioactive material at the client's address and clearly delineates the authority and responsibility of the licensee and the client;
 2. Check instruments used to measure the activity of unsealed radioactive material for proper function before medical use at each client's address or on each day of use, whichever is more frequent. At a minimum, the check for proper function required by this subsection shall include a constancy check;
 3. Check survey instruments for proper operation with a dedicated check source before use at each client's address; and
 4. Before leaving a client's address, survey all areas of use to ensure compliance with the requirements in Article 4 of this Chapter.
- B. A mobile medical service may not have radioactive material delivered from the manufacturer or the distributor to the client unless the client has a license allowing its possession. If appli-

Radiation Regulatory Agency

cable, radioactive material delivered to the client shall be received and handled in conformance with the client's license.

- C. A licensee providing mobile medical services shall retain the letter required in subsection (A)(1) and the record of each survey required in subsection (A)(4) for three years from the date of the survey.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 1126, effective May 9, 2003 (Supp. 03-1). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-719. Training for Uptake, Dilution, and Excretion Studies

- A. Except as provided in R12-1-710, the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Group 100 to be a physician who:

1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(3). To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Complete 60 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies as described in subsection (A)(3); and
 - b. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
2. Is an authorized user under R12-1-721, R12-1-723, NRC, or equivalent Agreement State requirements; or
3. Has completed 60 hours of training and experience, including a minimum of eight hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for uptake, dilution, and excretion studies. The training and experience must include:

- a. Classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
- b. Work experience, under the supervision of an authorized user who meets the requirements in this Article, NRC, or equivalent Agreement State requirements, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - ii. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - iii. Calculating, measuring, and safely preparing patient or human research subject dosages;

- iv. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - v. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
 - vi. Administering dosages of radioactive drugs to patients or human research subjects; and
- c. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements of R12-1-710, R12-1-719, R12-1-721, or R12-1-723, NRC, or equivalent Agreement State requirements; that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(3) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under Exhibit A of this Article.

- B. The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.
- C. Individuals who, under R12-1-710(B), need not comply with training requirements described in this Section may serve as preceptors for, and supervisors of, applicants seeking authorization on Agency licenses for the same uses for which these individuals are authorized.

Historical Note

New Section adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-720. Permissible Molybdenum-99, Strontium-82, and Strontium-85 Concentrations

- A. A licensee may not administer to humans a radiopharmaceutical that contains more than 0.15 kilobecquerel of molybdenum-99 per megabecquerel of technetium-99m (0.15 microcurie of molybdenum-99 per millicurie of technetium-99m) or, more than 0.02 kilobecquerel of strontium-82 per megabecquerel of rubidium-82 chloride injection (0.02 microcurie of strontium-82 per millicurie of rubidium-82 chloride); or more than 0.2 kilobecquerel of strontium-85 per megabecquerel of rubidium-82 chloride injection (0.2 microcurie of strontium-85 per millicurie of rubidium-82).
- B. A licensee that uses molybdenum-99/technetium-99m generators for preparing a technetium-99m radiopharmaceutical shall measure the molybdenum-99 concentration of the first eluate after receipt of a generator to demonstrate compliance with subsection (A).
- C. A licensee that uses a strontium-82/rubidium-82 generator for preparing a rubidium-82 radiopharmaceutical shall, before the first patient use of the day, measure the concentration of radionuclides strontium-82 and strontium-85 to demonstrate compliance with subsection (A).
- D. A licensee shall maintain a record of each molybdenum-99 concentration measurement or strontium-82 and strontium-85 concentrations measurements for three years following completion of the measurement.

Historical Note

New Section made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Section repealed; new Section made by final rulemaking at 13 A.A.R.

Radiation Regulatory Agency

1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-721. Training for Imaging and Localization Studies Not Requiring a Written Directive

- A. Except as provided in R12-1-710, the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Group 200 to be a physician who:
1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(3). To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Complete 700 hours of training and experience in basic radionuclide handling techniques and radiation safety applicable to the medical use of unsealed radioactive material for imaging and localization studies as described in subsection (3); and
 - b. Pass an examination, administered by diplomates of the specialty board, that assesses knowledge and competence in radiation safety, radionuclide handling, and quality control; or
 2. Is an authorized user under this Chapter and R12-1-723, NRC, or equivalent Agreement State requirements; or
 3. Has completed 700 hours of training and experience, including a minimum of 80 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material for imaging and localization studies. The training and experience must include:
 - a. Classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
 - b. Work experience, under the supervision of an authorized user who meets the requirements in R12-1-710, R12-1-721, or R12-1-723 and R12-1-721(A)(3)(b)(vii), NRC, or equivalent Agreement State requirements, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - ii. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - iii. Calculating, measuring, and safely preparing patient or human research subject dosages;
 - iv. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - v. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures; and
 - vi. Administering dosages of radioactive drugs to patients or human research subjects; and
 - vii. Eluting generator systems appropriate for preparation of radioactive drugs for imaging

and localization studies, measuring and testing the elate for radionuclide purity, and processing the elate with reagent kits to prepare labeled radioactive drugs; and,

- c. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements as an authorized user for Exhibit A group 200 nuclides, NRC, or equivalent Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(3) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under Exhibit A of this Article.

- B. The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-722. Safety Instruction and Precautions for Use of Unsealed Radioactive Material Requiring a Written Directive

- A. A licensee shall provide radiation safety instruction, initially and at least annually, for all personnel caring for the patient or human research subject receiving radiopharmaceutical therapy and hospitalized for compliance with R12-1-717. To satisfy this requirement, the instruction shall describe the licensee's procedures for:
1. Patient or human research subject control;
 2. Visitor control;
 3. Contamination control;
 4. Waste control; and
- B. For each patient or human research subject who cannot be released under R12-1-717, a licensee shall:
1. Quarter the patient or the human research subject in a private room with a private sanitary facility;
 2. Visibly post the patient's or the human research subject's room with a "Radioactive Materials" sign.
 3. Note on the door or in the patient's or human research subject's chart where and how long visitors may stay in the patient's or the human research subject's room; and
 4. Monitor material and items removed from the patient's or the human research subject's room to determine that their radioactivity cannot be distinguished from the natural background radiation level with a radiation detection survey instrument set on its most sensitive scale and with no interposed shielding, or handle the material and items as radioactive waste.
- C. A licensee shall notify the radiation safety officer, or his or her designee, and the authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.
- D. A licensee shall retain records of instruction and safety procedures performed under this rule for three years from the date of the activity.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-723. Training for Use of Unsealed Radioactive Material Requiring a Written Directive, Including Treatment of Hyperthyroidism, and Treatment of Thyroid Carcinoma

- A. Except as provided in R12-1-710, the licensee shall require an authorized user of unsealed radioactive material for the uses authorized under Group 300 to be a physician who:
1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(2). To have its certification process recognized, a specialty board shall require all candidates for certification to:
 - a. Successfully complete residency training in a radiation therapy or nuclear medicine training program or a program in a related medical specialty. These residency training programs must include 700 hours of training and experience as described in (A)(2). Eligible training programs must be approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education, the Royal College of Physicians and Surgeons of Canada, or the Committee on Post-Graduate Training of the American Osteopathic Association; and
 - b. Pass an examination, administered by diplomates of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, and quality assurance, and clinical use of unsealed radioactive material for which a written directive is required; or
 2. Has completed 700 hours of training and experience, including a minimum of 200 hours of classroom and laboratory training, in basic radionuclide handling techniques applicable to the medical use of unsealed radioactive material requiring a written directive. The training and experience must include:
 - a. Classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
 - b. Work experience, under the supervision of an authorized user who meets the requirements in this Article, NRC, or equivalent Agreement State requirements, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - ii. Performing quality control procedures on instruments used to determine the activity of dosages and performing checks for proper operation of survey meters;
 - iii. Calculating, measuring, and safely preparing patient or human research subject dosages;
 - iv. Using administrative controls to prevent a medical event involving the use of unsealed radioactive material;
 - v. Using procedures to contain spilled radioactive material safely and using proper decontamination procedures;
 - vi. Administering dosages of radioactive drugs to patients or human research subjects involving a minimum of three cases in each of the following categories for which the individual is requesting authorized user status:
 - (1) Oral administration of less than or equal to 1.22 gigabecquerels (33 millicuries) of sodium iodide I-131, for which a written directive is required (Experience with at least three cases in Category (A)(2)(b)(vi)(2) also satisfies this requirement);
 - (2) Oral administration of greater than 1.22 gigabecquerels (33 millicuries) of sodium iodide I-131;
 - (3) Parenteral administration of any beta emitter, or a photon-emitting radionuclide with a photon energy less than 150 keV, for which a written directive is required; and/or
 - (4) Parenteral administration of any other radionuclide, for which a written directive is required; and
 - c. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements as an authorized user for Exhibit A group 300 nuclides, NRC, or equivalent Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(2) and has achieved a level of competency sufficient to function independently as an authorized user for the medical uses authorized under Exhibit A of this Article. The written attestation must be signed by a preceptor authorized user who meets the requirements in this Section, NRC, or equivalent Agreement State requirements. The preceptor authorized user, who meets the requirements in subsection (B) must have experience in administering dosages in the same dosage category or categories as the individual requesting authorized user status.
- B.** Except as provided in R12-1-710, a licensee shall require an authorized user of iodine-131 for the oral administration of sodium iodide I-131 requiring a written directive in quantities less than or equal to 1.22 gigabecquerels (33 millicuries) to be a physician who has completed the training requirements in 10 CFR 35.392, January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- C.** Except as provided in R12-1-710, a licensee shall require an authorized user of iodine-131 for the oral administration of sodium iodide I-131 requiring a written directive in quantities greater than 1.22 gigabecquerels (33 millicuries) to be a physician who has completed the training requirements in 10 CFR 35.394, January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- D.** Except as provided in R12-1-710, a licensee shall require an authorized user for the parenteral administration of unsealed radioactive material requiring a written directive to be a physician who has completed the training requirements in 10 CFR 35.396, January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.
- E.** The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

Radiation Regulatory Agency

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-724. Surveys after Brachytherapy Source Implant and Removal; Accountability

- A. A licensee shall make a survey to locate and account for all sources that have not been implanted immediately after implanting sources in a patient or a human research subject.
- B. A licensee shall make a survey of the patient or the human research subject with a radiation detection survey instrument immediately after removing the last temporary implant source to confirm that all sources have been removed.
- C. A licensee shall maintain accountability at all times for all sources in storage or use.
- D. A licensee shall return brachytherapy sources to a secure storage area as soon as possible after removing sources from a patient or a human research subject.
- E. A licensee shall record the procedures performed in subsections (A) through (D) and retain the records for three years following completion of the record.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-725. Safety Instructions and Precautions for Brachytherapy Patients that Cannot be Released Under R12-1-717

- A. In addition to the training requirements in Article 10, a licensee shall provide radiation safety instruction, initially and at least annually, to personnel caring for patients or human research subjects who are receiving brachytherapy and cannot be released under R12-1-717. To satisfy this requirement, the instruction shall be commensurate with the duties of the personnel and include the:
 1. Size and appearance of the brachytherapy sources;
 2. Safe handling and shielding instructions;
 3. Patient or human research subject control;
 4. Visitor control, including both:
 - a. Routine visitation of hospitalized individuals in accordance with Article 4 of this Chapter,
 - b. Visitation authorized in accordance with Article 4 of this Chapter, and
 5. Notification of the radiation safety officer, or his or her designee, and an authorized user if the patient or the human research subject has a medical emergency or dies.
- B. For each patient or human research subject who is receiving brachytherapy and cannot be released under R12-1-717, a licensee shall:
 1. Not quarter the patient or the human research subject in the same room as an individual who is not receiving brachytherapy;
 2. Visibly post the patient's or human research subject's room with a "Radioactive Materials" sign; and
 3. Note on the door or in the patient's or human research subject's chart where and how long visitors may stay in the patient's or human research subject's room.
- C. A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source:
 1. Dislodged from the patient; and
 2. Lodged within the patient following removal of the source applicators.
- D. A licensee shall notify the radiation safety officer, or the RSO's designee, and an authorized user as soon as possible if

the patient or human research subject has a medical emergency or dies.

- E. A licensee shall record the instructions given under subsection (A) and retain the records for three years after recording the instructions.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-726. Calibration Measurements of Brachytherapy Sources, Decay of Sources Used for Ophthalmic Treatments, and Computerized Treatment Planning Systems

- A. Before the first medical use of a brachytherapy source after the effective date of this rule, a licensee shall have:
 1. Determined the source output or activity using a dosimetry system that meets the requirements of R12-1-733(A);
 2. Determined source positioning accuracy within applicators; and
 3. Used published protocols currently accepted by nationally recognized bodies to meet the requirements of subsections (A)(1) and (A)(2).
- B. A licensee may use measurements provided by the source manufacturer or by a calibration laboratory accredited by the American Association of Physicists in Medicine that are made in accordance with subsection (A).
- C. A licensee shall mathematically correct the outputs or activities determined in subsection (A) for physical decay at intervals consistent with one percent physical decay.
- D. Only an authorized medical physicist shall calculate the activity of each strontium-90 source that is used to determine the treatment times for ophthalmic treatments. The decay shall be based on the activity determined under subsection (A).
- E. A licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing shall include, as applicable, verification of:
 1. The source-specific input parameters required by the dose calculation algorithm;
 2. The accuracy of dose, dwell time, and treatment time calculations at representative points;
 3. The accuracy of isodose plots and graphic displays; and
 4. The accuracy of the software used to determine sealed source positions from radiographic images.
- F. A licensee shall retain records of each source activity determination and ophthalmic source decay correction, and documentation of the acceptance testing protocol required under subsection (E) for three years after the date of the procedure required in subsections (A) and (D), and for the records created in conjunction with subsection (E), the record shall be maintained for three years from the last date of the protocol's use.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-727. Training for Use of Manual Brachytherapy Sources and Training for the Use of Strontium-90 Sources for Treatment of Ophthalmic Disease

- A. Except as provided in R12-1-710, the licensee shall require an authorized user of a manual brachytherapy source for the uses authorized under this Article to be a physician who:
 1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(2). To have its certification process recog-

Radiation Regulatory Agency

nized, a specialty board shall require all candidates for certification to:

- a. Successfully complete a minimum of three years of residency training in a radiation oncology program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and
 - b. Pass an examination, administered by diplomates of the specialty board, that tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance, and clinical use of manual brachytherapy; or
2. Has completed a structured educational program in basic radionuclide handling techniques applicable to the use of manual brachytherapy sources that includes:
 - a. 200 hours of classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Radiation biology; and
 - b. 500 hours of work experience, under the supervision of an authorized user who meets the requirements in this Section, or equivalent NRC or Agreement State requirements at a medical institution, involving:
 - i. Ordering, receiving, and unpacking radioactive materials safely and performing the related radiation surveys;
 - ii. Checking survey meters for proper operation;
 - iii. Preparing, implanting, and removing brachytherapy sources;
 - iv. Maintaining running inventories of material on hand;
 - v. Using administrative controls to prevent a medical event involving the use of radioactive material;
 - vi. Using emergency procedures to control radioactive material; and
 - c. Has completed three years of supervised clinical experience in radiation oncology, under an authorized user who meets the requirements in this Section, or equivalent Agreement State requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-doctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required by subsection (A)(2)(b); and
 - d. Has obtained written attestation, signed by a preceptor authorized user who meets the requirements in this Section, NRC, or equivalent Agreement State requirements, that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(2) and has achieved a level of competency sufficient to function independently as an authorized user of manual brachytherapy sources for the medical uses authorized under Exhibit A of this Article.
- B. Except as provided in R12-1-710, a licensee shall require an authorized user of strontium-90 for ophthalmic radiotherapy to

be a physician who has completed the training requirements in 10 CFR 35.491, January 1, 2013, incorporated by reference, and available under R12-1-101. This incorporated material contains no future editions or amendments.

- C. The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-728. Training for Use of Sealed Sources for Diagnosis

- A. Except as provided in R12-1-710, the licensee shall require the authorized user of a diagnostic sealed source for use in a device authorized under Group 500 to be a physician, dentist, or podiatrist who is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsections (A)(1) and (2); or
 1. Has completed eight hours of classroom and laboratory training in basic radionuclide handling techniques specifically applicable to the use of the device. The training must include:
 - a. Radiation physics and instrumentation;
 - b. Radiation protection;
 - c. Mathematics pertaining to the use and measurement of radioactivity;
 - d. Radiation biology; and
 2. Has completed training in the use of the device for the uses requested.
- B. The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-729. Surveys of Patients and Human Research Subjects Treated with a Remote Afterloader Unit

- A. Before releasing a patient or a human research subject from licensee control, a licensee shall survey the patient or the human research subject and the remote afterloader unit with a portable radiation detection survey instrument to confirm that each source has been removed from the patient or human research subject and returned to the safe shielded position.
- B. A licensee shall make records of these surveys conducted under subsection (A) and retain them for three years from the date of each survey.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-730. Installation, Maintenance, Adjustment, and Repair of an Afterloader Unit, Teletherapy Unit, or Gamma Stereotactic Radiosurgery Unit

- A. Only a person specifically licensed by the Agency, NRC, or an Agreement State shall install, maintain, adjust, or repair a remote afterloader unit, teletherapy unit, or gamma stereotac-

Radiation Regulatory Agency

tic radiosurgery unit that involves work on any source shielding, the source's driving unit, or other electronic or mechanical component that could expose a source, reduce the shielding around a source, or compromise the radiation safety of a unit or a source.

- B. Except for low dose-rate remote afterloader units, only a person specifically licensed by the Agency, NRC, or an Agreement State shall install, replace, relocate, or remove a sealed source or source contained in other remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units.
- C. For a low dose-rate remote afterloader unit, only a person specifically licensed by the Agency, NRC, or an Agreement State or an authorized medical physicist shall install, replace, relocate, or remove a sealed source contained in the unit.
- D. A licensee shall retain a record of the installation, maintenance, adjustment, and repair of remote afterloader units, teletherapy units, and gamma stereotactic radiosurgery units for three years from the completion date of the activity listed in this Section.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-731. Safety Procedures and Instructions for Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

- A. A licensee shall:
 1. Secure the unit, the console, the console keys, and the treatment room when not in use or unattended;
 2. Permit only individuals approved by the authorized user, radiation safety officer, or authorized medical physicist to be present in the treatment room during treatment with a source;
 3. Prevent dual operation of more than one radiation producing device in a treatment room if applicable; and
 4. Develop, implement, and maintain written procedures for responding to an abnormal situation when the operator is unable to place a source in the shielded position, or remove the patient or human research subject from the radiation field with controls from outside the treatment room. These procedures shall include:
 - a. Instructions for responding to equipment failures and the names of the individuals responsible for implementing corrective actions;
 - b. The process for restricting access to and posting of the treatment area to minimize the risk of inadvertent exposure; and
 - c. The names and telephone numbers of the authorized users, the authorized medical physicist, and the radiation safety officer to be contacted if the unit or console operates abnormally.
- B. A licensee shall post instructions at the unit console to inform the operator of:
 1. The location of the procedures required by subsection (A)(4); and
 2. The names and telephone numbers of the authorized users, the authorized medical physicist, and the radiation safety officer to be contacted if the unit or console operates abnormally.
- C. A licensee shall provide instruction, initially and at least annually, to all individuals who operate the unit, as appropriate to the individual's assigned duties, in:
 1. The procedures identified in subsection (A)(4); and
 2. The operating procedures for the unit.

- D. A licensee shall ensure that operators, authorized medical physicists, and authorized users participate in drills of the emergency procedures, initially and at least annually.
- E. A licensee shall retain a record of individuals receiving instruction required by subsection (C) for three years from the date of the instruction.
- F. A licensee shall maintain a copy of the procedures required by subsections (A)(4) and (C)(2) for Agency review. The copy shall be maintained for three years beyond the termination date of the activities for which the procedures were written.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-732. Safety Precautions for Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

- A. A licensee shall control access at each entrance to a treatment room.
- B. A licensee shall equip each entrance to the treatment room with an electrical interlock system that will:
 1. Prevent the operator from initiating the treatment cycle unless each treatment room entrance door is closed;
 2. Cause each source to be shielded when an entrance door is opened; and
 3. Prevent any source from being exposed following an interlock interruption until all treatment room entrance doors are closed and the source's on-off control is reset at the console.
- C. A licensee shall require any individual entering the treatment room to assure, through the use of appropriate radiation monitors, that radiation levels have returned to ambient levels.
- D. Except for low-dose remote afterloader units, a licensee shall construct or equip each treatment room with viewing and intercom systems to permit continuous observation of the patient or the human research subject from the treatment console during irradiation.
- E. For licensed activities where sources are placed within the patient's or human research subject's body, a licensee shall only conduct treatments which allow for expeditious removal of a decoupled or jammed source.
- F. In addition to the requirements specified in subsections (A) through (E), a licensee shall:
 1. For medium dose-rate and pulsed dose-rate remote afterloader units, require:
 - a. An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit, to be physically present during the initiation of all patient treatments involving the unit; and
 - b. An authorized medical physicist and either an authorized user or an individual, under the supervision of an authorized user, who has been trained to remove each source applicator in the event of an emergency involving the unit, to be immediately available during continuation of all patient treatments involving the unit.
 2. For high dose-rate remote afterloader units, require:
 - a. An authorized user and an authorized medical physicist to be physically present during the initiation of all patient treatments involving the unit; and
 - b. An authorized medical physicist and either an authorized user or a physician, under the supervision of an authorized user, who has been trained in the operation and emergency response for the unit, to be

Radiation Regulatory Agency

physically present during continuation of all patient treatments involving the unit.

3. For gamma stereotactic radiosurgery units, require an authorized user and an authorized medical physicist to be physically present throughout all patient treatments involving the unit. As used in this provision, physically present means to be within hearing distance of normal voice, and does not include the use of portable communication devices, intercoms, or other devices that could be used to amplify the human voice.
 4. Notify the radiation safety officer, or radiation safety officer's designee, and an authorized user as soon as possible if the patient or human research subject has a medical emergency or dies.
- G.** A licensee shall have applicable emergency response equipment available near each treatment room to respond to a source:
1. Remaining in the unshielded position; or
 2. Lodged within the patient following completion of the treatment.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-733. Dosimetry Equipment

- A.** Except for low dose-rate remote afterloader sources where the source output or activity is determined by the manufacturer, a licensee shall have a calibrated dosimetry system available for use. To satisfy this requirement, one of the following two conditions shall be met.
1. The system shall have been calibrated using a system or source traceable to the National Institute of Science and Technology (NIST) and published protocols accepted by nationally recognized bodies; or by a calibration laboratory accredited by the American Association of Physicists in Medicine (AAPM). The calibration shall have been performed within the previous two years and after any servicing that may have affected system calibration; or
 2. The system shall have been calibrated within the previous four years. Eighteen to 30 months after that calibration, the system shall have been intercompared with another dosimetry system that was calibrated within the past 24 months by NIST or by a calibration laboratory accredited by the AAPM. The results of the intercomparison shall indicate that the calibration factor of the licensee's system had not changed by more than two percent. The licensee may not use the intercomparison result to change the calibration factor. When intercomparing dosimetry systems to be used for calibrating sealed sources for therapeutic units, the licensee shall use a comparable unit with beam attenuators or collimators, as applicable, and sources of the same radionuclide as the source used at the licensee's facility.
- B.** The licensee shall have a dosimetry system available for use for spot-check output measurements, if applicable. To satisfy this requirement, the system may be compared with a system that has been calibrated in accordance with subsection (A). This comparison shall have been performed within the previous year and after each servicing that may have affected system calibration. The spot-check system may be the same system used to meet the requirement in subsection (A).
- C.** The licensee shall retain, for three years from the date of the procedure, a record of each calibration, intercomparison, and comparison.

Historical Note

New Section made by final rulemaking at 13 A.A.R.

1217, effective May 5, 2007 (Supp. 07-1).

R12-1-734. Full Calibration Measurements on Teletherapy Units

- A.** A licensee authorized to use a teletherapy unit for medical use shall perform full calibration measurements on each teletherapy unit:
1. Before the first medical use of the unit; and
 2. Before medical use under the following conditions:
 - a. Whenever spot-check measurements indicate that the output differs by more than 5 percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;
 - b. Following replacement of the source or following reinstallation of the teletherapy unit in a new location;
 - c. Following any repair of the teletherapy unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and
 3. At intervals not exceeding one year.
- B.** To satisfy the requirement of subsection (A), full calibration measurements shall include determination of:
1. The output within ± 3 percent for the range of field sizes and for the distance or range of distances used for medical use;
 2. The coincidence of the radiation field and the field indicated by the light beam localizing device;
 3. The uniformity of the radiation field and its dependence on the orientation of the useful beam;
 4. Timer accuracy and linearity over the range of use;
 5. On-off error; and
 6. The accuracy of all distance measuring and localization devices in medical use.
- C.** A licensee shall use the dosimetry system described in R12-1-733(A) to measure the output for one set of exposure conditions. The remaining radiation measurements required in subsection (B)(1) may be made using a dosimetry system that indicates relative dose rates.
- D.** A licensee shall make full calibration measurements required by subsection (A) in accordance with published protocols accepted by nationally recognized bodies.
- E.** A licensee shall mathematically correct the outputs determined in subsection (B)(1) for physical decay for intervals not exceeding one month for cobalt-60, six months for cesium-137, or at intervals consistent with 1 percent decay for all other nuclides.
- F.** Full calibration measurements required by subsection (A) and physical decay corrections required by subsection (E) shall be performed by an authorized medical physicist.
- G.** A licensee shall retain a record of each calibration for three years from the date it was completed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-735. Full Calibration Measurements on Remote Afterloader Units

- A.** A licensee authorized to use a remote afterloader unit for medical use shall perform full calibration measurements on each unit:
1. Before the first medical use of the unit;
 2. Before medical use under the following conditions:
 - a. Following replacement of the source or following reinstallation of the unit in a new location outside the facility; and

Radiation Regulatory Agency

- b. Following any repair of the unit that includes removal of the source or major repair of the components associated with the source exposure assembly; and
 - 3. At intervals not exceeding one quarter for high dose-rate, medium dose-rate, and pulsed dose-rate remote afterloader units with sources whose half-life exceeds 75 days; and
 - 4. At intervals not exceeding one year for low dose-rate remote afterloader units.
- B.** To satisfy the requirement of subsection (A), full calibration measurements shall include, as applicable, determination of:
- 1. The output within ± 5 percent;
 - 2. Source positioning accuracy to within ± 1 millimeter;
 - 3. Source retraction with backup battery upon power failure;
 - 4. Length of the source transfer tubes;
 - 5. Timer accuracy and linearity over the typical range of use;
 - 6. Length of the applicators; and
 - 7. Function of the source transfer tubes, applicators, and transfer tube-applicator interfaces.
- C.** A licensee shall use the dosimetry system described in R12-1-733(A) to measure the output.
- D.** A licensee shall make full calibration measurements required by subsection (A) in accordance with published protocols accepted by nationally recognized bodies.
- E.** In addition to the requirements for full calibrations for low dose-rate remote afterloader units in subsection (B), a licensee shall perform an autoradiograph of the sources to verify inventory and source arrangement at intervals not exceeding one quarter.
- F.** For low dose-rate remote afterloader units, a licensee may use measurements provided by the source manufacturer that are made in accordance with subsections (A) through (E).
- G.** A licensee shall mathematically correct the outputs determined in subsection (B)(1) for physical decay at intervals consistent with 1 percent physical decay.
- H.** Full calibration measurements required by subsection (A) and physical decay corrections required by subsection (G) shall be performed by an authorized medical physicist.
- I.** A licensee shall retain a record of each calibration for three years from the date it was completed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-736. Full Calibration Measurements on Gamma Stereotactic Radiosurgery Units

- A.** A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform full calibration measurements on each unit:
- 1. Before the first medical use of the unit;
 - 2. Before medical use under the following conditions:
 - a. Whenever spot-check measurements indicate that the output differs by more than 5 percent from the output obtained at the last full calibration corrected mathematically for radioactive decay;
 - b. Following replacement of the sources or following reinstallation of the gamma stereotactic radiosurgery unit in a new location; and
 - c. Following any repair of the gamma stereotactic radiosurgery unit that includes removal of the sources or major repair of the components associated with the source assembly; and
 - 3. At intervals not exceeding one year, with the exception that relative helmet factors need only be determined before the first medical use of a helmet and following any damage to a helmet.
- B.** To satisfy the requirement of subsection (A), full calibration measurements shall include determination of:
- 1. The output within ± 3 percent;
 - 2. Relative helmet factors;
 - 3. Isocenter coincidence;
 - 4. Timer accuracy and linearity over the range of use;
 - 5. On-off error;
 - 6. Trunnion centricity;
 - 7. Treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;
 - 8. Helmet microswitches;
 - 9. Emergency timing circuits; and
 - 10. Stereotactic frames and localizing devices (trunnions).
- C.** A licensee shall use the dosimetry system described in R12-1-733(A) to measure the output for one set of exposure conditions. The remaining radiation measurements required in subsection (B)(1) may be made using a dosimetry system that indicates relative dose rates.
- D.** A licensee shall make full calibration measurements required by subsection (A) in accordance with published protocols accepted by nationally recognized bodies.
- E.** A licensee shall mathematically correct the outputs determined in subsection (B)(1) at intervals not exceeding one month for cobalt-60 and at intervals consistent with 1 percent physical decay for all other radionuclides.
- F.** Full calibration measurements required by subsection (A) and physical decay corrections required by subsection (E) shall be performed by an authorized medical physicist.
- G.** A licensee shall retain a record of each calibration for three years from the date of the procedure.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-737. Periodic Spot-checks for Teletherapy Units

- A.** A licensee authorized to use teletherapy units for medical use shall perform output spot-checks on each teletherapy unit once in each calendar month that include determination of:
- 1. Timer accuracy, and timer linearity over the range of use;
 - 2. On-off error;
 - 3. The coincidence of the radiation field and the field indicated by the light beam localizing device;
 - 4. The accuracy of all distance measuring and localization devices used for medical use;
 - 5. The output for one typical set of operating conditions measured with the dosimetry system described in R12-1-733(B); and
 - 6. The difference between the measurement made in subsection (A)(5) and the anticipated output, expressed as a percentage of the anticipated output.
- B.** A licensee shall perform measurements required by subsection (A) in accordance with written procedures established by an authorized medical physicist. That individual need not actually perform the spot-check measurements.
- C.** A licensee shall have an authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.
- D.** A licensee authorized to use a teletherapy unit for medical use shall perform safety spot-checks of each teletherapy facility once in each calendar month and after each source installation to assure proper operation of:
- 1. Electrical interlocks at each teletherapy room entrance;

Radiation Regulatory Agency

2. Electrical or mechanical stops installed for the purpose of limiting use of the primary beam of radiation (restriction of source housing angulation or elevation, carriage or stand travel and operation of the beam on-off mechanism);
 3. Source exposure indicator lights on the teletherapy unit, on the control console, and in the facility;
 4. Viewing and intercom systems;
 5. Treatment room doors from inside and outside the treatment room; and
 6. Electrically assisted treatment room doors with the teletherapy unit electrical power turned off.
- E. If the results of the checks required in subsection (D) indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.
- F. A licensee shall retain a record of each spot-check required by subsections (A) and (D) for three years from the date of the procedure, and a copy of the procedures required by subsection (B) until licensee terminates all medical activities involving the teletherapy unit.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-738. Periodic Spot-checks for Remote Afterloader Units

- A. A licensee authorized to use a remote afterloader unit for medical use shall perform spot-checks of each remote afterloader facility and on each unit:
1. Before the first use of a high dose-rate, medium dose-rate, or pulsed dose-rate remote afterloader unit on a given day;
 2. Before each patient treatment with a low dose-rate remote afterloader unit; and
 3. After each source installation.
- B. A licensee shall perform the measurements required by subsection (A) in accordance with written procedures established by an authorized medical physicist. That individual need not actually perform the spot-check measurements.
- C. A licensee shall have an authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.
- D. To satisfy the requirements of subsection (A), spot-checks shall, at a minimum, assure proper operation of:
1. Electrical interlocks at each remote afterloader unit room entrance;
 2. Source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;
 3. Viewing and intercom systems in each high dose-rate, medium dose-rate, and pulsed dose-rate remote afterloader facility;
 4. Emergency response equipment;
 5. Radiation monitors used to indicate the source position;
 6. Timer accuracy;
 7. Clock (date and time) in the unit's computer; and
 8. Decayed source activity in the unit's computer.
- E. If the results of the checks required in subsection (D) indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.
- F. A licensee shall retain a record of each spot-check required by subsections (A) and (D) for three years from the date of the

procedure, and a copy of the procedures required by subsection (B) until licensee terminates all medical activities involving the afterloader unit.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-739. Periodic Spot-checks for Gamma Stereotactic Radiosurgery Units

- A. A licensee authorized to use a gamma stereotactic radiosurgery unit for medical use shall perform spot-checks of each gamma stereotactic radiosurgery facility and on each unit:
1. Monthly;
 2. Before the first use of the unit on a given day; and
 3. After each source installation.
- B. A licensee shall:
1. Perform the measurements required by subsection (A) in accordance with written procedures established by an authorized medical physicist. That individual need not actually perform the spot-check measurements.
 2. Have the authorized medical physicist review the results of each spot-check within 15 days. The authorized medical physicist shall notify the licensee as soon as possible in writing of the results of each spot-check.
- C. To satisfy the requirements of subsection (A)(1), spot-checks shall, at a minimum:
1. Assure proper operation of:
 - a. Treatment table retraction mechanism, using backup battery power or hydraulic backups with the unit off;
 - b. Helmet microswitches;
 - c. Emergency timing circuits; and
 - d. Stereotactic frames and localizing devices (trunnions).
 2. Determine:
 - a. The output for one typical set of operating conditions measured with the dosimetry system described in R12-1-733(B);
 - b. The difference between the measurement made in subsection (C)(2)(a) and the anticipated output, expressed as a percentage of the anticipated output;
 - c. Source output against computer calculation;
 - d. Timer accuracy and linearity over the range of use;
 - e. On-off error; and
 - f. Trunnion centricity.
- D. To satisfy the requirements of subsections (A)(2) and (A)(3), spot-checks shall assure proper operation of:
1. Electrical interlocks at each gamma stereotactic radiosurgery room entrance;
 2. Source exposure indicator lights on the gamma stereotactic radiosurgery unit, on the control console, and in the facility;
 3. Viewing and intercom systems;
 4. Timer termination;
 5. Radiation monitors used to indicate room exposures; and
 6. Emergency off buttons.
- E. A licensee shall arrange for the repair of any system identified in subsection (C) that is not operating properly as soon as possible.
- F. If the results of the checks required in subsection (D) indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.
- G. A licensee shall retain a record of each check required by subsections (C) and (D) for three years from the date of the procedure, and a copy of the procedures required by subsection (B)

Radiation Regulatory Agency

until licensee terminates all medical activities involving the radiosurgery unit.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-740. Additional Requirements for Mobile Remote Afterloader Units

- A.** A licensee providing mobile remote afterloader service shall:
1. Check survey instruments before medical use at each address of use or on each day of use, whichever is more frequent; and
 2. Account for all sources before departure from a client's address of use.
- B.** In addition to the periodic spot-checks required by R12-1-738, a licensee authorized to use mobile afterloaders for medical use shall perform checks on each remote afterloader unit before use at each address of use. At a minimum, checks shall be made to verify the operation of:
1. Electrical interlocks on treatment area access points;
 2. Source exposure indicator lights on the remote afterloader unit, on the control console, and in the facility;
 3. Viewing and intercom systems;
 4. Applicators, source transfer tubes, and transfer tube-applicator interfaces;
 5. Radiation monitors used to indicate room exposures;
 6. Source positioning (accuracy); and
 7. Radiation monitors used to indicate whether the source has returned to a safe shielded position.
- C.** In addition to the requirements for checks in subsection (B), a licensee shall ensure overall proper operation of the remote afterloader unit by conducting a simulated cycle of treatment before use at each address of use.
- D.** If the results of the checks required in subsection (B) indicate the malfunction of any system, a licensee shall lock the control console in the off position and not use the unit except as may be necessary to repair, replace, or check the malfunctioning system.
- E.** A licensee shall retain a record of each check required by subsection (B) for three years from the date of the procedure.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-741. Additional Radiation Surveys of Sealed Sources used in Radiation Therapy

- A.** In addition to the survey requirement in Article 4 of this Chapter, a person licensed to use sealed sources in the practice of radiation therapy shall make surveys to ensure that the maximum radiation levels and average radiation levels from the surface of the main source safe with each source in the shielded position do not exceed the levels stated in the Sealed Source and Device Registry.
- B.** A licensee shall make the survey required by subsection (A) at installation of a new source and following repairs to any source shielding, a source's driving unit, or other electronic or mechanical component that could expose the source, reduce the shielding around a source, or compromise the radiation safety of the unit or the source.
- C.** A licensee shall retain a record of the radiation surveys required by subsection (A) for three years from the date of each survey.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-742. Five-year Inspection for Teletherapy and Gamma Stereotactic Radiosurgery Units

- A.** A licensee shall have each teletherapy unit and gamma stereotactic radiosurgery unit fully inspected and serviced during source replacement or at intervals not to exceed five years, whichever comes first, to assure proper functioning of the source exposure mechanism.
- B.** This inspection and servicing may only be performed by persons specifically licensed to do so by the Agency, NRC, or an Agreement State.
- C.** A licensee shall keep a record of each five-year inspection for three years from the date of the inspection, if the inspection determined that service was unnecessary, and three years from the date of the completed service if the inspection determined that service was needed.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-743. Therapy-related Computer Systems

The licensee shall perform acceptance testing on the treatment planning system of therapy-related computer systems in accordance with published protocols accepted by nationally recognized bodies. At a minimum, the acceptance testing shall include, as applicable, verification of:

1. The source-specific input parameters required by the dose calculation algorithm;
2. The accuracy of dose, dwell time, and treatment time calculations at representative points;
3. The accuracy of isodose plots and graphic displays;
4. The accuracy of the software used to determine sealed source positions from radiographic images; and
5. The accuracy of electronic transfer of the treatment delivery parameters to the treatment delivery unit from the treatment planning system.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-744. Training for Use of Remote Afterloader Units, Teletherapy Units, and Gamma Stereotactic Radiosurgery Units

- A.** Except as provided in R12-1-710, a licensee shall require an authorized user of a sealed source for a use authorized under Group 600 to be a physician who:
1. Is certified by a medical specialty board whose certification process has been recognized by the NRC or an Agreement State and who meets the requirements in subsection (A)(2). To have its certification process recognized, a specialty board shall require all candidates to:
 - a. Successfully complete a minimum of three years of residency training in a radiation therapy program approved by the Residency Review Committee of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-Graduate Training of the American Osteopathic Association; and
 - b. Pass an examination, administered by diplomates of the specialty board, which tests knowledge and competence in radiation safety, radionuclide handling, treatment planning, quality assurance, and clinical use of stereotactic radiosurgery, remote afterloaders and external beam therapy; or

Radiation Regulatory Agency

2. Has completed a structured educational program in basic radionuclide techniques applicable to the use of a sealed source in a therapeutic medical unit that includes:
 - a. 200 hours of classroom and laboratory training in the following areas:
 - i. Radiation physics and instrumentation;
 - ii. Radiation protection;
 - iii. Mathematics pertaining to the use and measurement of radioactivity;
 - iv. Chemistry of radioactive material for medical use; and
 - v. Radiation biology; and
 - b. 500 hours of work experience, under the supervision of an authorized user who meets the requirements in this Section, or equivalent Agreement State or NRC requirements at a medical institution, involving:
 - i. Reviewing full calibration measurements and periodic spot-checks;
 - ii. Preparing treatment plans and calculating treatment doses and times;
 - iii. Using administrative controls to prevent a medical event involving the use of radioactive material;
 - iv. Implementing emergency procedures to be followed in the event of the abnormal operation of the medical unit or console;
 - v. Checking and using survey meters; and
 - vi. Selecting the proper dose and how it is to be administered; and
 - c. Has completed three years of supervised clinical experience in radiation therapy, under an authorized user who meets the requirements in this Section, or equivalent Agreement State or NRC requirements, as part of a formal training program approved by the Residency Review Committee for Radiation Oncology of the Accreditation Council for Graduate Medical Education or the Royal College of Physicians and Surgeons of Canada or the Committee on Post-doctoral Training of the American Osteopathic Association. This experience may be obtained concurrently with the supervised work experience required by subsection (A)(2)(b); and
 - d. Has obtained written attestation that the individual has satisfactorily completed the requirements in subsection (A)(1) or (A)(2), and has achieved a level of competency sufficient to function independently as an authorized user of each type of therapeutic medical unit for which the individual is requesting authorized user status. The written attestation must be signed by a preceptor authorized user who meets the requirements in this Section, or equivalent Agreement State or NRC requirements for an authorized user for each type of therapeutic medical unit for which the individual is requesting authorized user status; and
 - e. Has received training in device operation, safety procedures, and clinical use for the type(s) of use for which authorization is sought. This training requirement may be satisfied by satisfactory completion of a training program provided by the vendor for new users or by receiving training supervised by an authorized user or authorized medical physicist, as appropriate, who is authorized for the type(s) of use for which the individual is seeking authorization.
- B. The training and experience shall have been obtained within the seven years preceding the date of application or the individual shall have had related continuing education and experience since the required training and experience was completed.

Historical Note
New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-745. Report and Notification of a Medical Event

 - A. A licensee shall report any "medical" event, except for an event that results from patient intervention, in which the administration of radioactive material or radiation from radioactive material results in:
 1. A dose that differs from the prescribed dose or dose that would have resulted from the prescribed dosage by more than 0.05 Sv (5 rem) effective dose equivalent, 0.5 Sv (50 rem) to an organ or tissue, or 0.5 Sv (50 rem) shallow dose equivalent to the skin; and
 - a. The total dose delivered differs from the prescribed dose by 20 percent or more;
 - b. The total dosage delivered differs from the prescribed dosage by 20 percent or more or falls outside the prescribed dosage range; or
 - c. The fractionated dose delivered differs from the prescribed dose, for a single fraction, by 50 percent or more.
 2. A dose that exceeds 0.05 Sv (5 rem) effective dose equivalent, 0.5 Sv (50 rem) to an organ or tissue, or 0.5 Sv (50 rem) shallow dose equivalent to the skin from any of the following:
 - a. An administration of a wrong radiopharmaceutical containing radioactive material;
 - b. An administration of a radiopharmaceutical containing radioactive material by the wrong route of administration;
 - c. An administration of a dose or dosage to the wrong individual or human research subject;
 - d. An administration of a dose or dosage delivered by the wrong mode of treatment; or
 - e. A leaking sealed source.
 3. A dose to the skin or an organ or tissue other than the treatment site that exceeds by 0.5 Sv (50 rem) to an organ or tissue and 50 percent or more of the dose expected from the administration defined in the written directive (excluding, for permanent implants, seeds that were implanted in the correct site but migrated outside the treatment site).
 - B. A licensee shall report any event resulting from intervention of a patient or human research subject in which the administration of radioactive material or radiation from radioactive material results or will result in unintended permanent functional damage to an organ or a physiological system, as determined by a physician.
 - C. The licensee shall notify by telephone the Agency no later than the next calendar day after discovery of the medical event.
 - D. The licensee shall submit a written report to the Agency within 15 days after discovery of the medical event.
 1. The written report shall include:
 - a. The licensee's name;
 - b. The name of the prescribing physician;
 - c. A brief description of the event;
 - d. Why the event occurred;

Radiation Regulatory Agency

- e. The effect, if any, on each individual who received the administration;
 - f. What actions, if any, have been taken or are planned to prevent recurrence; and
 - g. Certification that the licensee notified each individual (or the individual's responsible relative or guardian), and if not, why not.
2. The report may not contain an individual's name or any other information that could lead to identification of the individual.
- E.** The licensee shall provide notification of the event to the referring physician and also notify the individual who is the subject of the medical event no later than 24 hours after its discovery, unless the referring physician personally informs the licensee either that he or she will inform the individual or that, based on medical judgment, telling the individual would be harmful. The licensee is not required to notify the individual without first consulting the referring physician. If the referring physician or the affected individual cannot be reached within 24 hours, the licensee shall notify the individual as soon as possible thereafter. The licensee may not delay any appropriate medical care for the individual, including any necessary remedial care as a result of the medical event, because of any delay in notification. To meet the requirements of this subsection, the notification of the individual who is the subject of the medical event may be made instead to that individual's responsible relative or guardian. If a verbal notification is made, the licensee shall inform the individual, or appropriate responsible relative or guardian, that a written description of the event can be obtained from the licensee upon request. The licensee shall provide such a written description if requested.
- F.** Aside from the notification requirement, nothing in this Section affects any rights or duties of licensees and physicians in relation to each other, to individuals affected by the medical event, or to that individual's responsible relatives or guardians.
- G.** A licensee shall:
- 1. Annotate a copy of the report provided to the Agency with the:
 - a. Name of the individual who is the subject of the event; and
 - b. Social Security number or other identification number, if one has been assigned, of the individual who is the subject of the event; and
 - 2. Provide a copy of the annotated report to the referring physician, if other than the licensee, no later than 15 days after the discovery of the event.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-746. Report and Notification of a Dose to an Embryo, Fetus, or Nursing Child

- A.** A licensee shall report any dose to an embryo/fetus that is greater than 50 mSv (5 rem) dose equivalent that is a result of an administration of radioactive material or radiation from radioactive material to a pregnant individual unless the dose to the embryo/fetus was specifically approved, in advance, by the authorized user.
- B.** A licensee shall report any dose to a nursing child that is a result of an administration of radioactive material to a breast-feeding individual that:
- 1. Is greater than 50 mSv (5 rem) total effective dose equivalent; or

- 2. Has resulted in unintended permanent functional damage to an organ or a physiological system of the child, as determined by a physician.
- C.** The licensee shall notify the Agency by telephone no later than the next calendar day after discovery of a dose to the embryo, fetus, or nursing child that requires a report in subsections (A) or (B).
- D.** The licensee shall submit a written report to the Agency within 15 days after discovery of a dose to the embryo, fetus, or nursing child that requires a report in subsections (A) or (B). The written report shall include:
- 1. The licensee's name;
 - 2. The name of the prescribing physician;
 - 3. A brief description of the event;
 - 4. Why the event occurred;
 - 5. The effect, if any, on the embryo/fetus or the nursing child;
 - 6. What actions, if any, have been taken or are planned to prevent recurrence; and
 - 7. Certification that the licensee notified the pregnant individual or mother (or the mother's or child's responsible relative or guardian), and if not, why not.
- E.** The report, required in subsection (D), shall not contain the individual's or child's name or any other information that could lead to identification of the individual or child.
- F.** The licensee shall provide notification of the event to the referring physician and also notify the pregnant individual or mother, both hereafter referred to as the mother, no later than 24 hours after discovery of an event that would require reporting under subsections (A) or (B), unless the referring physician personally informs the licensee either that he or she will inform the mother or that, based on medical judgment, telling the mother would be harmful. The licensee is not required to notify the mother without first consulting with the referring physician. If the referring physician or mother cannot be reached within 24 hours, the licensee shall make the appropriate notifications as soon as possible thereafter. The licensee shall not delay any appropriate medical care for the embryo, fetus, or for the nursing child, including any necessary remedial care as a result of the event, because of any delay in notification. To meet the requirements of this subsection, the notification may be made to the mother's or child's responsible relative or guardian instead of the mother. If a verbal notification is made, the licensee shall inform the mother, or the mother's or child's responsible relative or guardian, that a written description of the event can be obtained from the licensee upon request. The licensee shall provide the written description upon request.

- G.** A licensee shall:
- 1. Make a copy of the report provided to the Agency and include with it the:
 - a. Name of the pregnant individual or the nursing child who is the subject of the event; and
 - b. Social Security number or other identification number, if one has been assigned, of the pregnant individual or the nursing child who is the subject of the event; and
 - 2. Provide the copy of the information required in subsection (G)(1) to the referring physician, if other than the licensee, no later than 15 days after the discovery of the event.

Historical Note

New Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

Exhibit A. Medical Use Groups**Group 100**

Included is the use of any unsealed radioactive material for use in uptake, dilution, or excretion studies and not requiring a written directive: The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R12-1-703(C)(2)(a), or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R12-1-703 or equivalent NRC or an Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R12-1-712, a physician who is an authorized user and who meets the requirements specified in R12-1-721, or R12-1-723 and R12-1-721(A)(3)(b)(vii), or an individual under the supervision of either as specified in R12-1-706; or
3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with a Radioactive Drug Research Committee-approved protocol or an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

Group 200

Included is the use of any unsealed radioactive material for use in imaging and localization not requiring a written directive. PET radiopharmaceuticals may be used if the licensee meets the requirements in R12-1-716. The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R12-1-703(C)(2)(a), or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R12-1-703 or equivalent NRC or an Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R12-1-712, a physician who is an authorized user and who meets the requirements specified in R12-1-721 or R12-1-723 and R12-1-721(A)(3)(b)(vii), or an individual under the supervision of either as specified in R12-1-706; or
3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with a Radioactive Drug Research Committee-approved application or an Investigational New Drug (IND) protocol accepted by FDA.

Group 300

Included is the use of any unsealed radioactive material for medical use (radiopharmaceutical) for which a written directive is required. The radioactive material in this group shall be:

1. Obtained from a manufacturer or preparer licensed under R12-1-703(C)(2)(a) or equivalent NRC or Agreement State requirements; or
2. Obtained from a PET radioactive drug producer licensed under R12-1-703 or equivalent NRC or an Agreement State license excluding production of PET radionuclides prepared by an authorized nuclear pharmacist who meets the requirements in R12-1-712, a physician who is an

authorized user and who meets the requirements specified in R12-1-721 or R12-1-723, or an individual under the supervision of either as specified in R12-1-706; or

3. If a research protocol:
 - a. Obtained from and prepared by an Agreement State or NRC licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA; or
 - b. Prepared by the licensee for use in research in accordance with an Investigational New Drug (IND) protocol accepted by FDA.

Group 400

Included is the use of any brachytherapy source for therapeutic medical use that is manufactured in accordance with R12-1-703(C)(2)(b) and:

1. Approved for therapeutic use in the Sealed Source and Device Registry; or
2. Part of a research protocol that is approved for therapeutic use under an active Investigational Device Exemption (IDE) application accepted by the FDA, and meets the requirements of R12-1-709.

Group 500

Included is the use of any sealed source that is manufactured in accordance with R12-1-703(C)(2)(b), and is approved for diagnostic use in the Sealed Source and Device Registry.

Group 600

Included is the use of sealed sources in photon emitting remote afterloader units, teletherapy units, or gamma stereotactic radiosurgery units that are manufactured in accordance with R12-1-703(C)(2)(b) and:

1. Approved for therapeutic use in the Sealed Source and Device Registry; or
2. Part of a research protocol that is approved for therapeutic use under an active Investigational Device Exemption (IDE) application accepted by the FDA and meets the requirements of R12-1-709.

Group 1000

A licensee may use radioactive material or a radiation source approved for medical use which is not specifically addressed in R12-1-309(A)(4) if:

1. The applicant or licensee has submitted the information required by this Article; and
2. The applicant or licensee has received written approval from the Agency in a license or license amendment and uses the material in accordance with the rules and specific conditions the Agency considers necessary for the medical use of the material.

Historical Note

New Exhibit adopted by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2). Section repealed; new Section made by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

ARTICLE 8. RADIATION SAFETY REQUIREMENTS FOR ANALYTICAL X-RAY OPERATIONS**R12-1-801. Scope**

The rules in this Article establish requirements for the use of analytical x-ray equipment by persons registered under R12-1-204. The provisions of this Article supplement other applicable provisions of this Chapter.

Historical Note

Former Rule Section H.1; Former Section R12-1-801

Radiation Regulatory Agency

repealed, new Section R12-1-801 adopted effective June 30, 1977 (Supp. 77-3). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-802. Definitions

“Analytical x-ray equipment” means devices or machines used for x-ray diffraction or x-ray induced fluorescence analysis.

“Analytical x-ray system” means a group of components utilizing x-rays to determine the elemental composition or to examine the microstructure of materials.

“Enclosed beam x-ray system” means an analytical x-ray system constructed in such a way that access to the interior of the enclosure housing the x-ray source is precluded during operation except through bypassing of interlocks or other safety devices to perform maintenance or servicing.

“Fail-safe characteristic” means a design feature which causes beam port shutters to close, or otherwise prevents emergence of the primary beam, upon the failure of a safety or warning device.

“Local component” means part of an analytical x-ray system and includes each area that is struck by x-rays, such as radiation source housings, port and shutter assemblies, collimators, sample holders, cameras, goniometers, detectors and shielding, but does not include power supplies, transformers, amplifiers, readout devices, and control panels.

“Normal operating procedures” means instructions or procedures including, but not limited to, sample insertion and manipulation, equipment alignment, routine maintenance by the registrant, and data recording procedures which are related to radiation safety.

“Open beam x-ray system” means an analytical x-ray system which permits an individual to place some body part in the primary beam path during normal operation.

“Primary beam” means radiation which passes through an aperture of the source housing on a direct path from the x-ray tube.

Historical Note

Former Rule Section H.2; Former Section R12-1-802 repealed, new Section R12-1-802 adopted effective June 30, 1977 (Supp. 77-3). Amended effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-803. Enclosed-beam X-ray Systems

- A. Enclosed beam x-ray systems are exempt from other equipment requirements contained in this Article provided the enclosed beam x-ray systems are designed and constructed so that radiation levels measured at 5 cm from any accessible surface of the enclosure housing the x-ray source do not exceed 5 μ Sv (0.5 mrem) in one hour.
- B. A registrant using enclosed beam x-ray systems shall comply with applicable provisions of R12-1-804(A), R12-1-805(B), and 12 A.A.C. 1, Article 4.
- C. A person who maintains or services analytical x-ray systems, shall:
 1. Obtain permission in advance from the radiation safety officer before bypassing interlocks or other safety devices,
 2. Label equipment as “out of service” until maintenance or service is completed,
 3. Wear extremity personnel monitoring devices, and
 4. Ensure that interlocks or other safety devices are operating upon completion of maintenance or service.

Historical Note

Former Rule Section H.3; Former Section R12-1-803 repealed, new Section R12-1-803 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-803 repealed, new Section R12-1-803 adopted effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-804. Open-beam X-ray Systems

- A. A registrant shall label open beam x-ray systems with a readily discernible sign or signs bearing the radiation symbol and the words:
 1. “CAUTION -- HIGH INTENSITY X-RAY BEAM,” or a similar warning, on the x-ray source housing; and
 2. “CAUTION RADIATION -- THIS EQUIPMENT PRODUCES RADIATION WHEN ENERGIZED” or a similar warning, near any switch that energizes an x-ray tube if the radiation source is an x-ray tube.
- B. A registrant shall ensure that an open beam x-ray system has all of the following warning devices:
 1. X-ray tube status (On-Off) indicator in systems where the primary beam is controlled in this fashion;
 2. Shutter status (Open-Closed) indicators near each port on the radiation housing for systems which control the primary beam; and
 3. A clearly visible warning light labeled with the words “X-RAY ON,” or a similar warning located near any switch that energizes an x-ray tube, illuminated only when the tube is energized; and
 4. The warning devices in subsections (B)(1) through (3) shall be labeled so that their purpose is easily identified.
- C. A registrant shall ensure that any apparatus utilized in beam alignment procedures is designed in such a way that excessive radiation will not strike the operator. Particular attention shall be given to viewing devices, in order to ascertain that lenses and other transparent components attenuate the beam to an acceptable level.
- D. A registrant shall provide an interlock device which prevents entry of any portion of an individual’s body into the primary beam or causes the primary beam to be shut off upon entry into its path on all open-beam x-ray systems. A registrant may apply to the Agency for an exemption from the requirements of a safety device. An application for exemption shall include:
 1. A description of the various safety devices that have been evaluated;
 2. The reason each device cannot be used; and
 3. A description of the alternative methods that will be used to minimize accidental exposure, including procedures to assure that operators and others in the area will be informed of the absence of safety devices.
- E. A registrant shall use only systems constructed so that:
 1. Each x-ray tube housing is equipped with an interlock that automatically shuts off the tube if the tube is removed from the radiation source housing or the housing is disassembled; and
 2. With all shutters closed, radiation measured at a distance of 5 centimeters from the surface of the system is not capable of producing a dose that exceeds 25 Sv (2.5 mRem) in one hour for the specified tube rating of the x-ray tube.
- F. A registrant shall supply each x-ray generating system with a protective cabinet that limits leakage radiation measured at a distance of 5 cm (2 in) from the cabinet surface, so that the system is not capable of producing a dose equivalent that exceeds 25 μ Sv (2.5 mrem) in one hour.

Radiation Regulatory Agency

- G.** A registrant shall ensure that the local components of an analytical x-ray system are located and arranged and have sufficient shielding or access control for the specified tube rating to prevent the radiation level in any area adjacent to the local component group from exceeding the dose limits in R12-1-416.
- H.** A registrant shall perform a radiation survey of the local component group of each analytical x-ray system to demonstrate compliance with subsection (G) upon:
1. Installation,
 2. Change in configuration, or
 3. Maintenance that affects the radiation level in any area adjacent to the local component group.
- I.** A registrant shall maintain a record of each survey for three years or until the analytical x-ray system is no longer used, whichever period is shorter.

Historical Note

Former Rule Section H.4; Former Section R12-1-804 repealed, new Section R12-1-804 adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-804 renumbered as Section R12-1-805 without change, new Section R12-1-804 adopted effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-805. Administrative Responsibilities

- A.** A registrant shall designate a radiation safety officer who shall:
1. Establish and maintain operational procedures so that the radiation exposure of each worker is kept ALARA;
 2. Instruct all personnel who work with or near radiation producing machines in safety practices;
 3. Maintain a system of personnel monitoring;
 4. Establish radiation control areas, including placement of appropriate radiation warning signs or devices;
 5. Provide a radiation safety inspection of radiation producing machines on a routine basis;
 6. Review modifications to x-ray systems, including x-ray tube housing, cameras, diffractometers, shielding, and safety interlocks;
 7. Investigate and report proper authorities any case of excessive exposure to personnel and take remedial action; and,
 8. Be familiar with all applicable rules for control of ionizing radiation.
- B.** An individual shall not be permitted to operate or maintain an open beam analytical x-ray system unless the individual has received instruction in and demonstrated competence in all of the following:
1. Identification of radiation hazards associated with the use of the equipment;
 2. Significance of all radiation warning and safety devices, interlocks incorporated into the equipment, or the reasons that devices or interlocks have not been installed on certain pieces of equipment and the extra precautions required in lieu of these precautions;
 3. Proper operating procedures for the equipment;
 4. Recognition of symptoms of acute localized radiation exposure; and
 5. Proper procedure for reporting an actual or suspected exposure.
- C.** A registrant shall maintain records of instruction and competence for Agency inspection for three years from the date of course completion or demonstration.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Former Section R12-1-805 renumbered as Section R12-1-806 without change. Former Section R12-1-804 renumbered as Section R12-1-805 without change effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-806. Operating Requirements

- A.** A radiation safety officer shall establish written emergency procedures and post the procedures in a conspicuous location. The procedures shall include the telephone number of the radiation safety officer.
- B.** A registrant shall ensure that written operating procedures are available for all analytical x-ray equipment workers. An individual shall not operate analytical x-ray equipment in any manner other than that specified in the procedures unless the individual obtains the radiation safety officer's written approval.
- C.** An individual shall not bypass a safety device or interlock unless the individual has obtained Radiation Safety Officer approval. The approval shall be for a specific period of time. When a safety device or interlock has been bypassed, the Radiation Safety Officer shall place a readily discernible sign on the radiation source housing, warning the reader of the unsafe condition. A registrant shall maintain the written record of the bypass approval for three years after the approval expires.
- D.** Except as authorized in subsection (C), an individual shall not perform an operation involving removal of covers, shielding materials, or tube housings or modification of shutters, collimators, or beam stops without ascertaining that the tube is off and that it will remain off until all protective devices have been restored to the normal operating condition. An individual repairing analytical x-ray equipment shall use the main switch, rather than interlocks, for routine shutdown in preparation for repairs.
- E.** A registrant shall ensure that unused ports on radiation source housings are closed and secured against unauthorized access to the radiation source.
- F.** Finger or wrist personnel monitoring devices shall be used by:
1. Operators of open beam analytical x-ray equipment not equipped with a safety device; and
 2. Personnel performing maintenance procedures that require the presence of a primary x-ray beam when any local component is disassembled or removed.
- G.** A registrant shall ensure that each safety and warning device is tested for proper operation at intervals that do not exceed one month and maintain a record of each test for three years from the date the test is completed.

Historical Note

Former Section R12-1-805 renumbered as Section R12-1-806 without change effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-807. Surveys

- A.** To ensure that personnel exposure does not result in a dose to an individual that exceeds the dose limits specified in Article 4, a registrant shall perform a radiation survey upon:
1. Installation of the equipment and at least once each year after installation;

Radiation Regulatory Agency

2. Change in the initial arrangement, number, or type of local components in the system;
 3. Maintenance that involves disassembly or removal of a local component in the system;
 4. Maintenance that involves alignment, if alignment requires the generation of the primary x-ray beam while any local component of the system is disassembled or removed;
 5. A visual inspection of the local components in the system that reveals an abnormal condition; or
 6. Determination that personnel are being exposed to radiation in excess of established levels recorded in monitoring records for personnel during previous monitoring periods or the occupational dose limits specified in Article 4.
- B.** The radiation surveys in subsection (A) are not required if the registrant demonstrates that the local components of an analytical x-ray system are located and arranged, and have sufficient shielding or access control, to limit personnel exposure to a level that is ALARA and below the occupational dose limits in Article 4. The Agency shall determine ALARA radiation levels based on the specified x-ray tube rating.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-808. Posting

A registrant shall conspicuously post each area or room that contains analytical x-ray equipment with a sign or signs that bear the radiation symbol and the words "CAUTION – X-RAY EQUIPMENT" or words with a similar meaning.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

R12-1-809. Training

A registrant shall not allow an individual to operate or maintain analytical x-ray equipment unless the individual has received training and demonstrated competence in:

1. Identifying radiation hazards associated with use of the equipment;
2. Recognizing and using radiation warning and safety devices, including interlocks that are incorporated into the equipment, and understanding why these devices are sometimes not installed;
3. Taking precautions associated with use of the equipment;
4. Recognizing symptoms of an acute localized exposure; and
5. Following proper procedure for reporting a suspected personnel exposure.

Historical Note

New Section made by final rulemaking at 10 A.A.R. 2122, effective July 3, 2004 (Supp. 04-2).

ARTICLE 9. PARTICLE ACCELERATORS**R12-1-901. Purpose and Scope**

- A.** This Article establishes procedures and requirements for the registration and the use of particle accelerators.
- B.** In addition to the requirements of this Article, all registrants are subject to the requirements of Articles 1, 2, 4 and 10. Registrants engaged in industrial radiographic operations are subject to the requirements of Article 11, and registrants engaged in the healing arts are subject to the requirements of Article 6 of this Chapter. Registrants using a particle accelerator for the production of radioactive material are subject to the require-

ments of Article 3, and if the radioactive material is used for medical purposes, Article 7.

Historical Note

Former Rule Section I.1; Former Section R12-1-901 repealed, new Section R12-1-901 adopted effective June 30, 1977 (Supp. 77-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1).

R12-1-902. Definitions

The following definitions apply in this Article, unless the context otherwise requires:

"Added filter" (See Article 6)

"Arc therapy" means radiation therapy that uses electrons to treat large, superficial volumes that follow curved surfaces, as in postmastectomy patients.

"Authorized medical physicist" means an individual who meets the requirements in R12-1-711. For purposes of ensuring that personnel are adequately trained, an authorized medical physicist is a "qualified expert" as defined in Article 1.

"Beam-limiting device" (See Article 6)

"Beam-monitoring system" means a system of devices that will monitor the useful beam during irradiation and terminate irradiation when a preselected number of monitor units has been accumulated.

"Control panel" (See Article 6)

"Full beam detector" means a radiation detector of such size that the total cross section of the maximum size useful beam is intercepted.

"Gantry" means that part of a linear accelerator that supports the radiation source so that it can rotate about a horizontal axis.

"Interlock" (See Article 1)

"Isocenter" means the point of intersection of the collimator axis and the axis of rotation of the gantry.

"Monitor unit" means a unit response from the beam monitoring system from which the absorbed dose can be calculated.

"Moving beam therapy" means radiation therapy in which there is displacement of the useful beam relative to the patient. Moving beam therapy includes arc therapy, skip therapy, and rotational beam therapy.

"Rotational beam therapy" means radiation therapy that is administered to a patient from a radiation source that rotates around the patient's body or the patient is rotated while the beam is held fixed.

"Skip therapy" means rotational beam therapy that is administered in a way that maximizes the dose to an area of interest and minimizes the dose to surrounding healthy tissue.

"Spot check" (See Article 6)

"Stationary beam therapy" means radiation therapy that involves a beam from a radiation source that is aimed at the patient from different directions. The distance of the source from the isocenter remains constant irrespective of the beam direction.

Radiation Regulatory Agency

“Virtual source” means a point from which radiation appears to originate.

Historical Note

Former Rule Section I.2; Former Section R12-1-902 repealed, new Section R12-1-902 adopted effective June 30, 1977 (Supp. 77-3). Amended effective June 13, 1997 (Supp. 97-2). Section repealed by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). New Section made by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-903. General Registration Requirements

- A.** The requirements in this Section supplement the registration requirements in 12 A.A.C. 1, Article 2.
- B.** The Agency shall approve a registration application for use of a particle accelerator only if the Agency determines that:
1. The applicant is qualified by training and experience to use the accelerator for the purpose in the application submitted to the Agency under Article 2;
 2. The applicant’s proposed equipment, facilities, and operating and emergency procedures are adequate to protect public health;
 3. The applicant satisfies any other applicable requirements in this Section; and 4. The applicant has appointed a radiation safety officer.

Historical Note

Former Rule Section I.3; Former Section R12-1-903 repealed, new Section R12-1-903 adopted effective June 30, 1977 (Supp. 77-3). Amended effective Aug. 8, 1986 (Supp. 86-4). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-904. Registration of Particle Accelerators Used in the Practice of Medicine

- A.** The requirements in this Section supplement the registration requirements in R12-1-903.
- B.** An applicant that is a “medical institution,” as defined in 12 A.A.C. 1, Article 7, and performing human research shall appoint a radiation safety committee that meets the following requirements:
1. The committee shall consist of at least four individuals and shall include:
 - a. An authorized user of each type of use permitted by the registration,
 - b. The Radiation Safety Officer,
 - c. A representative of the nursing service, and
 - d. A representative of management who is neither an authorized user nor a Radiation Safety Officer, and
 - e. Any other members the registrant selects;
 2. The committee shall meet at least once in each 12-month period, unless otherwise specified by registration condition;
 3. To conduct business at least 50 percent of the membership of the committee shall be present including the Radiation Safety Officer and the management representative;
 4. The minutes of each radiation safety committee meeting shall include a reference of any discussion or documents related to the review required in R12-1-407(C);
 5. Review the radiation safety program for all sources of radiation as required in R12-1-407(C);

6. Establish a table that contains investigational levels for occupational and public dose that, when exceeded, will initiate an investigation and consideration of actions by the Radiation Safety Officer; and
 7. Establish the safety objectives of the quality management program required by subsection (E).
- C.** The applicant shall ensure that an individual designated as an authorized user is an Arizona licensed physician; approved by the radiation safety committee, if applicable; and is:
1. Certified in:
 - a. Radiology, therapeutic radiology, or radiation oncology by the American Board of Radiology; or
 - b. Radiation oncology by the American Osteopathic Board of Radiology; or
 - c. Radiology, with specialization in radiotherapy, as a British “Fellow of the Faculty of Radiology” or “Fellow of the Royal College of Radiology”; or
 - d. Therapeutic radiology by the Canadian Royal College of Physicians and Surgeons; or
 2. Engaged in the active practice of therapeutic radiology, and has completed 200 hours of instruction in basic techniques applicable to the use of a particle accelerator, 500 hours of supervised work experience, and a minimum of three years of supervised clinical experience.
 - a. To satisfy the requirement for instruction, the classroom and laboratory training shall include all of the following subjects.
 - i. Radiation physics and instrumentation,
 - ii. Radiation protection,
 - iii. Mathematics pertaining to the use and measurement of radiotherapy, and
 - iv. Radiation biology.
 - b. To satisfy the requirement for supervised work experience, training shall occur under the supervision of an authorized user at a medical institution and shall include:
 - i. Reviewing full calibration measurements and periodic spot checks,
 - ii. Preparing treatment plans and calculating treatment times,
 - iii. Using administrative controls to prevent misadministration,
 - iv. Implementing emergency procedures to be followed in the event of the abnormal operation of a particle accelerator, and
 - v. Checking and using survey meters.
 - c. To satisfy the requirement for a period of supervised clinical experience, training shall include one year in a formal training program approved by the Residency Review Committee for Radiology of the Accreditation Council for Graduate Medical Education or the Committee on Postdoctoral Training of the American Osteopathic Association and an additional two years of clinical experience in therapeutic radiology under the supervision of an authorized user at a medical institution. The supervised clinical experience shall include:
 - i. Examining individuals and reviewing their case histories to determine their suitability for treatment, noting any limitations or contraindications;
 - ii. Selecting the proper dose and how it is to be administered;
 - iii. Calculating the therapy doses and collaborating with the authorized user in the review of patients’ or human research subjects’ progress

Radiation Regulatory Agency

and consideration of the need to modify originally prescribed doses, as warranted by patients' or human research subjects' reaction to radiation; and

- iv. Post-administration follow up and review of case histories.
 - D. With the application the applicant shall provide the name of each authorized user to the Agency so the names can be listed on the registration form, and so that the Agency can determine whether the authorized user's training and experience satisfies the requirements in subsection (C).
 - E. Each registrant shall establish and maintain a written quality management program to provide high confidence that the radiation produced by the particle accelerator will be administered as directed by an authorized user. The quality management program shall include, at minimum, the tests and checks listed in Appendix A.
 - F. Each registrant shall ensure that a particle accelerator is calibrated by an authorized medical physicist who meets the training and experience qualifications in R12-1-711.
 - G. At the time of application for registration or when a therapy program is expanded to multiple sites, each applicant or registrant shall provide the Agency with a description of the quality management program, a listing of the professional staff assigned to the facility, and the expected ratio of patient workload to staff member for programs involving multiple therapy sites. If the staffing ratio exceeds the recommended levels in Radiation Oncology in Integrated Cancer Management, Report of the Inter-Society Council for Radiation Oncology, December 1991, the applicant shall provide to the Agency for approval the justification for the larger ratio and the safety considerations that have been addressed in establishing the program. This report is incorporated by reference and available under R12-1-101. The incorporated material contains no future editions or amendments. The report is available from the American Association of Physicists in Medicine: online at <http://www.aapm.org/pubs/reports>; print copies may be purchased from Medical Physics Publishing, 4513 Vernon Blvd., Madison, WI 53705; toll free at (800) 442-5778.
- Historical Note**
- Former Rule Section I.4; Former Section R12-1-904 repealed, new Section R12-1-904 adopted effective June 30, 1977 (Supp. 77-3). Amended effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).
- R12-1-905. Medical Particle Accelerator Equipment, Facility and Shielding, and Spot Checks**
- A. Equipment
 - 1. Leakage radiation
 - a. X-ray leakage radiation from the source housing assembly shall not exceed 0.1 percent of the maximum dose equivalent rate of the unattenuated useful beam.
 - b. Neutron leakage radiation from the source housing assembly shall not exceed 0.5 percent of the maximum dose equivalent rate of the unattenuated useful beam.
 - c. Leakage radiation measurements made at any point 1 meter from the path of the charged particle between its point of origin and the target, window or scattering foil shall meet the requirements of subsection (A)(1)(a) and (b) when computed as a percentage of the dose rate equivalent of the unattenuated useful beam measured at 1 meter from the virtual source. Leakage radiation measurements at each point shall be averaged over an area up to but not exceeding 100 square centimeters (15.5 square inches).
 - d. The registrant shall maintain, for inspection by the Agency, records that show leakage radiation measurements for the life of the operation.
 - 2. Beam limiting devices (not to include blocks or wedges). Adjustable or interchangeable beam limiting devices shall be provided and shall transmit no more than 2 percent of the useful beam for the portion of the useful beam that is to be attenuated by the beam limiting device. The neutron component of the useful beam shall not be included in this requirement. Measurements shall be averaged over an area up to but not exceeding 100 square centimeters (15.5 square inches) at the normal treatment distance.
 - 3. Filters. The following requirements apply to systems that use a system of wedge filters, interchangeable field flattening filters, or interchangeable beam scattering filters:
 - a. Irradiation shall not be possible until a selection of a filter has been made at the treatment control panel;
 - b. An interlock system shall be provided to prevent irradiation if the filter selected is not in the correct position;
 - c. An indication of the wedge filter orientation with respect to the treatment field shall be provided at the control panel, by direct observation, or by electronic means, when wedge filters are used;
 - d. A display shall be provided at the treatment control panel showing the filter or filters in use;
 - e. Each filter that is removable from the system shall be clearly identified as to that filter's material of construction, thickness, and the nominal wedge angle for wedge filters, or a record tracing these factors for each filter shall be maintained at the system console; and
 - f. An interlock shall be provided to prevent irradiation if any filter selection operation carried out in the treatment room does not agree with the filter selection operation carried out at the treatment control panel.
 - 4. Beam monitor. Equipment installed after the effective date of this Section shall be provided with at least one radiation detector in the radiation head. This detector shall be incorporated into a primary system so that all of the following criteria are met:
 - a. Each primary system shall have a detector that is a transmission detector and a full beam detector and that is placed on the patient side of any fixed added filters other than a wedge filter;
 - b. The detectors shall be removable only with tools and shall be interlocked to prevent incorrect positioning;
 - c. Each detector shall be capable of independently monitoring and controlling the useful beam;
 - d. Each detector shall form part of a dose-monitoring system from which the absorbed dose can be calculated at a reference point in the treatment volume;
 - e. Each dose monitoring system shall have a legible display at the treatment control panel that:
 - i. Maintains a reading until intentionally reset to zero;

Radiation Regulatory Agency

- ii. Has only one scale and no scale multiplying factors in replacement equipment; and
- iii. Utilizes a design such that increasing dose is displayed by increasing numbers and is designed so that, in the event of an overdosage of radiation, the absorbed dose may be accurately determined under all nominal conditions of use or foreseeable failures;
- f. In the event of power failure, the dose monitoring information required in subsection (A)(4) displayed at the control panel at the time of failure shall be retrievable in at least one system; and
- g. Selection and display of dose monitor units;
 - i. Irradiation shall not be possible until a selection of dose monitor units has been made at the treatment control panel.
 - ii. Each primary system shall terminate irradiation when the preselected number of dose monitor units has been detected by the system.
 - iii. Each secondary system shall terminate irradiation when 110 percent of the preselected number of dose monitor units has been detected by the system.
 - iv. It shall be possible to interrupt irradiation and equipment movements at any time from the operator's position at the treatment control panel. Following an interruption, it shall be possible to restart irradiation by operator action without any reselection of operating conditions. If any change is made of a preselected value during an interruption the equipment shall go to termination condition.
 - v. It shall be possible to terminate irradiation and equipment movements, or go from an interruption condition to termination conditions at any time from the operator's position at the treatment control panel.
- 5. Beam monitoring system. All accelerator systems shall be provided with a beam monitoring system in the radiation head capable of monitoring and terminating irradiation.
 - a. Each beam monitoring system shall have a display at the treatment control panel that registers the accumulated monitor units.
 - b. The beam monitoring system shall terminate irradiation if the preselected number of monitor units has been detected by the system.
 - c. For units with a secondary beam monitoring system, the primary beam monitoring system shall terminate irradiation if the preselected number of monitor units has been detected. The secondary beam monitoring system shall terminate irradiation if the primary system fails.
 - d. In the event of a power failure, the display information required in subsection (A)(5)(a) shall be retained in at least one system following the power failure.
 - e. An interlock device shall prevent irradiation if any beam monitoring system is inoperable.
 - f. For purposes of this rule:
 - i. "Beam monitoring system" means a system of devices that will monitor the useful beam during irradiation and will terminate irradiation if a preselected number of monitor units is accumulated.
 - ii. "Monitor unit" means a unit response from the beam monitoring system from which the absorbed dose can be calculated.
- 6. Treatment beam mode selection. In equipment capable of both x-ray and electron therapy:
 - a. Irradiation shall not be possible until a selection of radiation type is made at the treatment control panel;
 - b. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations indicated at the treatment control panel;
 - c. An interlock system shall be available and in operating condition on a therapy machine, and shall be used to prevent unwanted x-ray or electron irradiation when preparing for, or performing radiation therapy procedures. The interlock system need not be available for use, if the therapy machine is only used to make an image of an inanimate object; and
 - d. The radiation type selected shall be displayed at the treatment control panel before and during irradiation.
- 7. Treatment beam energy selection. Equipment capable of generating radiation beams of different energies shall meet all of the following requirements:
 - a. Irradiation shall not be possible until a selection of energy is made at the treatment control panel;
 - b. An interlock system shall be provided to ensure that the equipment can emit only the energy of radiation that is selected;
 - c. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations indicated at the treatment control panel; and
 - d. The energy selected shall be displayed at the treatment control panel before and during irradiation.
- 8. Selection of stationary or moving beam therapy. Equipment capable of both stationary and moving beam therapy modes shall meet all of the following requirements:
 - a. Irradiation shall not be possible until a selection of stationary beam therapy or moving beam therapy is made at the treatment control panel;
 - b. An interlock system shall be provided to ensure that the equipment can operate only in the mode that is selected;
 - c. An interlock system shall be provided to prevent irradiation if any selected operations carried out in the treatment room do not agree with the selected operations indicated at the treatment control panel;
 - d. An interlock system shall be provided to terminate irradiation if the movement stops during moving beam therapy;
 - e. Moving beam therapy shall be so controlled that the required relationship between the number of dose monitor units and movement is obtained; and
 - f. The mode of operation shall be displayed at the treatment control panel.
- 9. Focal spot location and beam orientation. The registrant shall determine, or obtain from the manufacturer, the location in reference to an accessible point on the radiation head of all of the following:
 - a. The x-ray target or the virtual source of x-rays,
 - b. The electron window or the scattering foil, and
 - c. All possible orientations of the useful beam.
- 10. System checking facilities. Capabilities shall be provided for checking of all safety interlock systems.

Radiation Regulatory Agency

- B. Facility and shielding requirements.**
1. In addition to protective barriers sufficient to ensure compliance with R12-1-907, all of the following design requirements apply:
 - a. Except for entrance doors or beam interceptors, all the required barriers shall be fixed barriers;
 - b. The treatment control panel shall be located outside the treatment room;
 - c. Windows, mirrors, operable closed-circuit television, or other equivalent viewing systems shall be provided to permit continuous observation of the patient during irradiation and shall be so located that the operator may observe the patient from the treatment control panel;
 - d. Provision shall be made for two-way oral communication between the patient and the operator at the treatment control panel;
 - e. Each point of entry into the treatment room shall be provided with warning lights that will indicate when the useful beam is "on" in a readily observable position outside of the room; and
 - f. Interlocks shall be provided and shall result in all entrance doors being closed before treatment can be initiated or continued. If the radiation beam is interrupted by any door opening, it shall be possible to restore the machine to operation only by closing the door and reinitiating exposure by manual action at the control panel.
 2. An authorized medical physicist, trained and experienced in the principles of radiation protection, shall perform a radiation protection survey on all installations before human use and after any change in an installation that might produce a radiation hazard. The authorized medical physicist shall provide the survey results in writing to the individual in charge of the installation and transmit a copy of the survey results to the Agency.
 3. Calibrations.
 - a. Calibration of the therapy system, including radiation output calibration, shall be performed before placing new installations into operation for the purpose of irradiation of patients. Subsequent calibrations shall be made at intervals not to exceed 12 months, and after any change that may cause the calibration of the therapy system to change.
 - b. Calibration of the radiation output of the therapy beam shall be performed with an instrument that has been calibrated using a method that is traceable to the National Institute of Standards and Technology (NIST), within the preceding two years.
 - c. Calibration of a particle accelerator shall be performed by, or under the supervision of an authorized medical physicist who meets the qualification requirements specified in R12-1-711, and a copy of the calibration report shall be maintained by the registrant for inspection by the Agency.
 - d. Calibration of the therapy beam shall include, but not necessarily be limited to, all of the following determinations:
 - i. Verification that the equipment is operating within the design specifications concerning the light localizer, the side light and back pointer alignment with the isocenter, when applicable, variation in the axis of rotation for the table, gantry and jaw system, and beam flatness and symmetry at specific depths;
 - ii. The exposure rate or dose rate in air or at various depths of water for the range of field sizes used for each effective energy, and for each treatment distance used for radiation therapy;
 - iii. The congruence between the radiation field and the field defined by the localizing device;
 - iv. The uniformity of the radiation field and its dependency upon the direction of the useful beam; and
 - v. The calibration determinations above shall be provided in sufficient detail, to allow the absorbed dose to tissue in the useful beam to be calculated to within plus or minus 5 percent.
 - e. Records of calibrations shall be maintained for three years following the date the calibration was performed.
 - f. A copy of the current calibration report shall be available in the therapy facility for use by the operator, and the report shall contain the following information:
 - i. The action taken by the authorized medical physicist performing the calibration if it indicates a change has occurred since the last calibration,
 - ii. A listing of the persons informed of the change in calibration results, and
 - iii. A statement as to the effect the change in calibration has had on the therapy doses prior to the current calibration finding.
- C. Spot checks.**
1. The spot check procedures shall be in writing and shall have been developed by an authorized medical physicist trained and experienced in performing calibrations.
 2. The measurements taken during spot checks shall demonstrate the degree of consistency of the operating characteristics which can affect the radiation output of the system or the radiation dose delivered to a patient during a therapy procedure.
 3. The written spot check procedure shall indicate the frequency at which tests or measurements are to be performed, not to exceed monthly.
 4. The spot check procedure shall note conditions that require recalibration of the therapy system before further human irradiation.
 5. Records of spot checks shall be maintained and available for inspection by the Agency for three years following the spot check measurements. Records of spot checks not performed by an authorized medical physicist shall be signed by an authorized medical physicist within 15 days of the spot check.
- D. Operating procedures.**
1. Only the patient shall be in the treatment room during irradiation.
 2. If a patient must be held in position during treatment only, mechanical supporting or restraining devices shall be used for this purpose.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective August 8, 1986 (Supp. 86-4). New Section made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 10 A.A.R. 4458, effective December 4, 2004 (Supp. 04-4). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

Radiation Regulatory Agency

R12-1-906. Limitations

- A. A registrant shall not permit an individual to act as:
1. A particle accelerator operator of any type unless the individual:
 - a. Has received copies of and instruction in this Article and the registrant's operating and emergency procedures,
 - b. Demonstrates an understanding of the material, and
 - c. Has demonstrated competence in the use the particle accelerator, related equipment, and survey instruments that will be employed during the operation of the particle accelerator;
 2. A medical particle accelerator operator unless the individual is certified as required in A.R.S. § 32-2811 or the operator meets the requirements in R12-1-603(B); or
 3. An industrial particle accelerator operator unless the individual has been instructed in radiation safety.
- B. A registrant shall provide either the Radiation Safety Committee or the Radiation Safety Officer with the authority to terminate operations at a particle accelerator facility if this is necessary to protect health and safety or property.
- C. If equipment is capable of both stationary and moving beam therapy, the registrant shall ensure that:
1. Irradiation is not possible unless either stationary or moving beam therapy has been selected at the control panel,
 2. An interlock is provided to ensure that the machine will operate only in the mode that has been selected,
 3. An interlock is provided that terminates irradiation if the gantry fails to move properly during moving beam therapy,
 4. A means is provided to prevent movement during stationary therapy, and
 5. The mode of operation is displayed at the control panel.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-907. Shielding and Safety Design

- A. An authorized medical physicist experienced in the principles of radiation protection and installation design shall be consulted in the design of a particle accelerator installation and called upon to perform a radiation survey when the accelerator is first capable of producing radiation. The registrant shall provide a copy of the installation radiation survey to the Agency before an Agency inspection conducted according to R12-1-914.
- B. The registrant shall shield each particle accelerator installation with the primary and secondary protective barriers necessary to comply with R12-1-408 and R12-1-416.
- C. At the time of application for registration and before treatment of the first patient, the applicant shall provide to the Agency a copy of an installation report, signed by the contractor who installed required shielding material recommended by the authorized medical physicist who performed the shielding calculations for the particle accelerator facility.
- D. As part of the annual radiation protection program review required in R12-1-407(C), the registrant shall document installed facility shielding and other radiation exposure controls, review patient workload, and note associated changes, if any, in public exposure that are the result of installed facility shielding, increased workload, and other radiation exposure controls in use at the time of the review.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsection (A) effective Aug. 8, 1986 (Supp. 86-4).

Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-908. Particle Accelerator Controls and Interlock Systems

A registrant shall ensure that:

1. Instrumentation, readouts and controls on the particle accelerator control panel are clearly identified and easily discernible;
2. All entrances into the area that contains the particle accelerator room, target room, or other high radiation area, are provided with interlocks that shut down the machine if an entrance door is opened;
3. If an interlock system connected to an entrance door that provides access to the therapy suite has been tripped, it is not possible to resume operation of the particle accelerator by resetting the interlock switch at the entrance where it had been tripped;
4. Each safety interlock is on a circuit that allows it to operate independently of all other safety interlocks;
5. If possible, the interlock system is fail-safe in design, so that any defect or component failure in the interlock system prevents operation of the particle accelerator; and
6. A scram button or other emergency power cutoff switch is located and easily identifiable in the area that contains the particle accelerator. The registrant shall ensure that the scram button prevents persons from restarting the particle accelerator at the accelerator control panel without resetting the button or switch.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-909. Warning Systems

A registrant shall ensure that:

1. High radiation areas and entrances to the high radiation areas in medical facilities are equipped with a continuously-operating warning light system that operates when, and only when, radiation is produced;
2. High radiation areas and entrances to the high radiation areas in nonmedical facilities are equipped with an easily-observable flashing or rotating warning light system that operates when, and only when, radiation is produced;
3. High radiation areas associated with nonmedical particle accelerators have an audible warning device that is activated for 15 seconds before creation of the high radiation area; and the warning device is clearly discernible in all high radiation areas and all radiation areas; and
4. High radiation areas associated with any particle accelerator are posted according to R12-1-428 and R12-1-429.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective June 13, 1997 (Supp. 97-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3).

R12-1-910. Operating Procedures

- A. A registrant shall secure from use a particle accelerator when it is not being used to prevent unauthorized use.
- B. A particle accelerator operator shall use the switch on the control panel to turn the accelerator beam on and off during normal operations. The safety interlock system may be used to turn off the accelerator beam in emergencies.

Radiation Regulatory Agency

- C. A registrant shall ensure that all safety and warning systems, including interlocks, are tested for proper operation at intervals not to exceed three months, and maintain a record of each test for Agency inspection for at least three years from the date of the test.
- D. A registrant shall keep current electrical circuit diagrams of a particle accelerator and the associated interlock systems, and maintain the diagrams for inspection by the Agency.
- E. A registrant shall not bypass an interlock unless the by-pass is:
 1. Authorized in writing by the Radiation Safety Committee or Radiation Safety Office,
 2. Recorded in a permanent log with a notice of the by-pass posted at any affected interlock and at the control panel, and
 3. Terminated as soon as possible.
- F. A registrant shall maintain a copy of the current operating and emergency procedures at the particle accelerator control panel.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended subsection (D) effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-911. Radiation Surveys

- A. The registrant shall ensure that a portable survey instrument is available at all times in a particle accelerator facility.
- B. An authorized medical physicist shall:
 1. Check the operation of the portable survey instrument required in subsection (A), using a known radiation source, before each use;
 2. Perform and document a radiation protection survey when changes have been made in shielding, operation, equipment, or occupancy of adjacent areas;
 3. For particle accelerator facilities greater than 30 Mev, establish a program of radiation protection surveys that will evaluate the airborne radiation hazards, and ensure that the particulate radioactivity present in the accelerator facility will not result in personnel exposure that exceeds the limits in Article 4; and
 4. Perform radiation protection surveys, including smear surveys of the particle accelerator facility, as prescribed in the written procedures established by the Radiation Safety Officer of the particle accelerator facility and approved by the Agency at the time of application for registration.
- C. The registrant shall maintain the following records:
 1. Radiation protection surveys required in subsection (B)(2), and the associated facility description, required in R12-1-202, until the registration is terminated; and
 2. Records of the surveys required in subsections (B)(3) and (4) for three years following the measurement.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective Aug. 8, 1986 (Supp. 86-4). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-912. Repealed**Historical Note**

Adopted effective June 30, 1977 (Supp. 77-3). Amended

effective Aug. 8, 1986 (Supp. 86-4). Amended effective June 13, 1997 (Supp. 97-2). Section repealed by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

R12-1-913. Misadministration

- A. For purposes of this rule "misadministration" means:
 1. A therapeutic radiation dose from a machine:
 - a. Delivered to the wrong patient;
 - b. Delivered using the wrong mode of treatment;
 - c. Delivered to the wrong treatment site; or
 - d. Delivered in one week to the correct patient, using the correct mode, to the correct therapy site, but greater than 130 percent of the prescribed weekly dose; or
 2. A therapeutic radiation dose from a machine with errors in the calibration, time of exposure, or treatment geometry that result in a calculated total treatment dose differing from the final, prescribed total treatment dose by more than 20 percent, except for treatments given in 1 to 3 fractions, in which case a difference of more than 10 percent constitutes a misadministration.
- B. Reports of therapy misadministration
 1. Within 24 hours after discovery of a misadministration, a registrant shall notify the Agency by telephone. The registrant shall also notify the referring physician of the affected patient and the patient or a responsible relative or guardian, unless the referring physician personally informs the registrant either that he or she will inform the patient, or that in his or her medical judgment, telling the patient or the patient's responsible relative or guardian would be harmful to one or the other, respectively. If the referring physician or the patient's responsible relative or guardian cannot be reached within 24 hours, the registrant shall notify them as soon as practicable. The registrant shall not delay medical care for the patient because of notification problems.
 2. Within 15 days following the verbal notification to the Agency, the registrant shall report, in writing, to the Agency and individuals notified under subsection (B)(1). The written report shall include the registrant's name, the referring physician's name, a brief description of the event, the effect on the patient, the action taken to prevent recurrence, whether the registrant informed the patient or the patient's responsible relative or guardian, and if not, why not. The report shall not include the patient's name or other information that could lead to identification of the patient.
 3. Each registrant shall maintain records of all misadministrations for Agency inspection. The records shall:
 - a. Contain the names of all individuals involved in the event, including:
 - i. The physician,
 - ii. The allied health personnel,
 - iii. The patient,
 - iv. The patient's referring physician,
 - v. The patient's identification number if one has been assigned,
 - vi. A brief description of the event,
 - vii. The effect on the patient, and
 - viii. The action taken to prevent recurrence.
 - b. Be maintained for three years beyond the termination date of the affected registration.

Historical Note

New Section made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2). Amended by final

rulemaking at 13 A.A.R. 1217, effective May 5, 2007 (Supp. 07-1). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

R12-1-914. Initial Inspections of Particle Accelerators Used in the Practice of Medicine

The Agency shall inspect a particle accelerator, used in the practice of medicine, before its initial use to treat human disease.

Historical Note

New Section made by final rulemaking at 7 A.A.R. 2584, effective June 8, 2001 (Supp. 01-2).

Appendix A. Quality Control Program

- A. Mechanical Tests**
1. Patient support assembly motions
 2. Gantry angle indicators
 3. Optical distance indicators
 4. Alignment lights
 5. Congruence of radiation beam and light field
 6. Accuracy of field size indicators
 7. Mechanical isocenter- gantry and collimator
 8. Mechanical interlocks
- B. Radiation Beam Tests**
1. Machine operating parameters,
 2. Dose per monitor unit for x-ray and electron beams,
 3. Dose per degree for moving beam therapy,
 4. Radiation isocenter,
 5. Flatness and symmetry,
 6. Wedge transmission factors,
 7. Shadow tray transmission factors,
 8. Energy check on central axis,
 9. Radiation output versus field size.
- C. Control Panel Checks**
1. Radiation "ON" condition,
 2. Indicator lamp check,
 3. Computer control of accelerator,
 4. Interlock display,
 5. Digital display,
 6. Analog display,
 7. Status display,
 8. Reset display.
- D. Facility Checks**
1. Patient audio-visual communication,
 2. Entrance door interlock,
 3. Warning lights,
 4. Emergency off button.
- E. Dose Output Check**
1. Each registrant shall use the services of a third party authorized medical physicist or third party TLD system to verify the accelerator's radiation output every two years.
 2. If the output check is not within plus or minus 5 percent of the calibrated output, the accelerator shall be recalibrated and the discrepancy investigated.
 3. Records of output checks shall be maintained for three years.
- F. Patient Dosimetry Calculation Checks**
1. Calculation of patient treatment times
 2. Computer calculation of patient treatment times

Historical Note

New Appendix made by final rulemaking at 9 A.A.R. 4302, effective November 14, 2003 (Supp. 03-3). Amended by final rulemaking at 15 A.A.R. 1023, effective August 1, 2009 (Supp. 09-2).

ARTICLE 10. NOTICES, INSTRUCTIONS, AND REPORTS TO RADIATION WORKERS; INSPECTIONS

R12-1-1001. Purpose and Scope

This Article establishes requirements for notices, instructions, and reports by licensees or registrants to individuals working for a licensee or registrant. This Article explains the options available to these individuals in connection with ARRA inspections of licensees or registrants regarding radiological working conditions. The rules in this Article apply to all persons who receive, possess, use, own, or transfer sources of radiation licensed or registered by the ARRA.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-1002. Posting of Notices for Workers

- A.** Each licensee or registrant shall post current copies of the following documents:
1. The rules in this Chapter;
 2. The license, certificate of registration, conditions, or documents incorporated into the license or registration by reference, and any amendments to the license or registration;
 3. The operating procedures applicable to work under the license or registration;
 4. Any notice of violation involving radiological working conditions, proposed imposition of a civil penalty, or order issued under 12 A.A.C. 1, Article 12, and any response from the licensee or registrant.
- B.** If posting of a document specified in subsections (A)(1), (2) and (3) is not practicable, the licensee or registrant may post a notice which describes the document and states where it may be examined.
- C.** Form ARRA-6 (shown following R12-1-1008), "Notice to Employees" shall be posted by each licensee or registrant wherever individuals work in or frequent any portion of a restricted area.
- D.** Each licensee or registrant shall post documents, notices, or forms, as required by this Section, so that they are conspicuous and appear in a sufficient number of places to permit individuals engaged in work under the license or registration to observe them on the way to or from any particular work location to which the document applies and shall replace any document if it is defaced or altered.
- E.** Agency documents posted as required in subsection (A)(4) shall be posted within two working days after receipt of the documents from the Agency; the licensee's or registrant's response, if any, shall be posted within two working days after dispatch from the licensee or registrant. The documents shall remain posted for a minimum of five working days or until action correcting the violation has been completed, whichever is later.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-1003. Instructions for Workers

- A.** A licensee or registrant shall ensure that each individual who, in the course of employment, is likely to receive in a year an occupational dose in excess of 1 mSv (100 mrem), receives instruction in all of the following subjects:
1. Storage, transfer, or use of radiation and radioactive material;

Radiation Regulatory Agency

2. Health protection problems associated with exposure to radiation or radioactive material, precautions or procedures to minimize exposure, and purposes and functions of protective devices;
 3. Applicable provisions in Agency rules, licenses, and registrations that protect of personnel from exposure to radiation or radioactive material, with an emphasis on the duties of workers;
 4. The duty to promptly report to the licensee or registrant any condition that may lead to or cause a violation of a provision in an Agency rule, license, or registration or unnecessary exposure to radiation or radioactive material;
 5. Correct response to warnings in the event of any unusual occurrence or malfunction that may involve exposure to radiation or radioactive material; and
 6. Radiation exposure reports that a worker may request according to R12-1-1004.
- B.** In determining whether subsection (A) applies to an individual, a licensee or registrant shall take into consideration assigned activities during normal and abnormal situations that involve exposure to radiation or radioactive material and could reasonably be expected to occur during the life of a facility. The licensee or registrant shall provide instruction that is commensurate with potential radiological health protection problems present in the work place.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 12 A.A.R. 75, effective February 7, 2006 (Supp. 05-4).

R12-1-1004. Notifications and Reports to Individuals

- A.** A licensee or registrant shall report radiation exposure data for an individual and the results of any measurements, analyses, and calculations of radioactive material deposited or retained in the body to the individual as specified in this Section. The information reported shall include data and results obtained under Agency rules, orders, or license conditions, as shown in records maintained by the licensee or registrant. Each notification and report shall be in writing; include appropriate identifying data, such as the name of the licensee or registrant, the name of the individual, and the individual's Social Security number; include the individual's exposure information; and contain the following statement:
- "This report is furnished to you under the provisions of 12 A.A.C. 1. You should preserve this report for future reference."
- B.** Each licensee or registrant shall make dose information available to workers as shown in records maintained by the licensee or registrant under the provisions of Article 4. Each licensee or registrant shall provide annual notification of exposure to radiation or radioactive material for each worker, as shown in records maintained by the licensee or registrant under R12-1-419(E) if:
1. The individual's occupational dose exceeds 1 mSv (100 mrem) TEDE or 1 mSv (100 mrem) to any individual organ or tissue; or
 2. The individual requests his or her annual dose report.
- C.** At the request of a worker formerly engaged in work controlled by the licensee or the registrant, each licensee or registrant shall furnish to the worker a report of the worker's exposure to radiation or radioactive material. The report shall be furnished within 30 days from the time the request is made, or within 30 days after the exposure of the individual has been determined by the licensee or registrant, whichever is later; the

report shall cover, within the period of time specified in the request, each calendar quarter in which the worker's activities involved exposure to radiation from radioactive material licensed by, or radiation machines registered with, the Agency; and the report shall include the dates and locations of work under the license or registration in which the worker participated during this period.

- D.** Reports to individuals of their exposure to radiation shall be made according to R12-1-446.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3) Amended effective January 2, 1996 (Supp. 96-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). Amended by final rulemaking at 20 A.A.R. 324, effective March 8, 2014 (Supp. 14-1).

R12-1-1005. Licensee, Registrant, and Worker Representation During Agency Inspection

- A.** As a condition of licensure or registration, each licensee or registrant shall afford to the Agency, at all reasonable times and without undue delay, an opportunity to inspect materials, machines, activities, facilities, premises, and records.
- B.** During an inspection, the licensee or registrant shall permit Agency inspectors to consult privately with workers as specified in Section R12-1-1006. The licensee or registrant may accompany Agency inspectors during other phases of an inspection.
- C.** A worker authorized to consult with an Agency inspector under R12-1-1006 may authorize another individual to represent the worker's interests during the Agency inspection. The licensee or registrant shall notify the inspectors of the worker's authorization and give the worker's representative an opportunity to accompany the inspectors during the inspection of physical working conditions.
- D.** Each worker's representative shall be routinely engaged in work under control of the licensee or registrant or shall have received instructions under R12-1-1003.
- E.** Different representatives of licensees or registrants and workers may accompany the inspectors during different phases of an inspection if there is no resulting interference with the inspection. However, only one worker's representative at a time may accompany the inspectors.
- F.** With the approval of the licensee or registrant and the worker's representative an individual who is not routinely engaged in work under control of the licensee or registrant, for example, a consultant to the licensee or registrant or to the worker's representative, shall be afforded the opportunity to accompany Agency inspectors during the inspection of physical working conditions.
- G.** Notwithstanding the other provisions of this Section, Agency inspectors are authorized to refuse to permit accompaniment by any individual who deliberately interferes with a fair and orderly inspection. With regard to any area containing proprietary information the worker's representative for that area shall be an individual previously authorized by the licensee or registrant to enter that area. With regard to areas containing information classified by an agency of the U.S. Government in the interest of national security, any individual who accompanies an inspector may have access to such information only if authorized by the classifying agency.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

Radiation Regulatory Agency

R12-1-1006. Consultation with Workers During Inspections

- A. A licensee or registrant shall afford Agency inspectors talking to a licensee or registrant representative the opportunity to consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of Agency rules, licenses, and registrations to the extent the inspectors deem consultation necessary for conducting an effective and thorough inspection.
- B. During the course of an inspection, any worker may privately bring to the attention of the inspectors, either orally or in writing, any past or present condition which the worker has reason to believe may have contributed to or caused any violation of the Act, these rules, or a license or registration condition, or any unnecessary exposure of an individual to radiation from licensed radioactive material or a registered radiation machine under the licensee's or registrant's control. If this notification is in writing, the worker shall comply with the requirements of R12-1-1007(A).
- C. The provisions of R12-1-1006(B) shall not be interpreted as authorization to disregard instructions required by R12-1-1003.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-1007. Inspection Requests by Workers

- A. Any worker or representative of workers who believes that a violation of the Act, these rules, license, or registration conditions exists, or has occurred with regard to radiological working conditions in which the worker is engaged, may request an inspection of the facility by the Agency. Any request shall be in writing, addressed to the Director, set forth the specific grounds for the request, and be signed by the worker or representative of the workers. The Agency shall provide a copy to the licensee or registrant no later than at the time of inspection except that, upon the request of the worker, the Agency shall protect the worker's name and the name of individuals referred

to in the request to the extent authorized by law, except for good cause shown.

- B. If, upon receipt of a request for inspection, the Agency's Director determines that there are reasonable grounds to believe that the alleged violation exists or has occurred, the Director shall initiate an inspection as soon as practicable, to determine if the alleged violation exists or has occurred. Inspections performed under this subsection need not be limited to matters referred to in the complaint.
- C. A licensee or registrant shall not discharge or in any manner discriminate against any worker because the worker has filed any complaint or caused to be instituted any proceeding under these rules or has testified or is about to testify in the instituted proceeding or because the worker exercises on behalf of the worker or others, any option afforded by this Article.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2).

R12-1-1008. Inspection not Warranted; Review

If the Agency determines, with respect to a complaint under R12-1-1007, that an inspection is not warranted or there are no reasonable grounds to believe that a violation exists or has occurred, the Agency shall notify the complainant in writing of the determination. The complainant may obtain review of the determination by submitting a written request for hearing to the Agency. The Agency shall provide for a hearing before the Radiation Regulatory Hearing Board under 12 A.A.C. 1, Article 12 and A.R.S. Title 41, Chapter 6, Article 10.

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Amended effective February 25, 1985 (Supp. 85-1). Amended by final rulemaking at 5 A.A.R. 1817, effective May 12, 1999 (Supp. 99-2). R12-1-1008 updated to reflect a corrected Arizona Revised Statute article number (Supp. 07-1).

Exhibit A. Form ARRA-6 (2012) Notice to Employees
ARRA-6 (2012) ARIZONA RADIATION REGULATORY AGENCY

NOTICE TO EMPLOYEES

STANDARDS FOR PROTECTION AGAINST RADIATION; NOTICES, INSTRUCTIONS, AND REPORTS TO WORKERS; INSPECTIONS

In Article 4 of the Arizona Radiation Regulatory Agency (ARRA) rules for the Control of Radiation, the Arizona Radiation Regulatory Agency has established standards for your protection against radiation hazards. In Article 10 of the rules for the Control of Radiation, the Arizona Radiation Regulatory Agency has established certain provisions for the options of workers engaged in work under an ARRA license or registration.

YOUR EMPLOYER'S RESPONSIBILITY

Your employer is required to -

1. Apply these rules to work involving sources of radiation.
2. Post or otherwise make available to you a copy of the Arizona Radiation Regulatory Agency rules, licenses, and operating procedures which apply to work you are engaged in, and explain their provisions to you.
3. Post notice of violation involving radiological working conditions, proposed imposition of civil penalties, and orders.

YOUR RESPONSIBILITY AS A WORKER

You should familiarize yourself with those provisions of the Arizona Radiation Regulatory Agency rules and the operating procedures which apply to the work you are engaged in. You should observe their provisions for your own protection and protection of your co-workers.

WHAT IS COVERED BY THESE RULES

1. Limits on exposure to radiation and radioactive material in restricted and unrestricted areas;
2. Measures to be taken after accidental exposure;
3. Personnel monitoring, surveys, and equipment;
4. Caution signs, labels, and safety interlock equipment;
5. Exposure records and reports;
6. Options for workers regarding ARRA inspections; and
7. Related matters.

REPORTS ON YOUR RADIATION EXPOSURE HISTORY

1. The Arizona Radiation Regulatory Agency rules require that your employer give you a written report if you receive an exposure in excess of any applicable limit set forth in the rules or in the license. The basic limits for

exposure to employees are set forth in Article 4 of the rules. These Sections specify limits on exposure to radiation and exposure to concentrations of radioactive material in air and water.

2. If you work where personnel monitoring is required, and if you request information on your radiation exposures,
 - a. Your employer must give you a written report, upon termination of your employment, of your radiation exposures; and
 - b. Your employer must advise you annually of your exposure to radiation.

INSPECTIONS

All licensed or registered activities are subject to inspection by representatives of the Arizona Radiation Regulatory Agency. In addition, any worker or representative of workers who believes that there is a violation of the regulations issued thereunder, or the terms of the employer's license or rules with regard to radiological working conditions in which the worker is engaged, may request an inspection by sending a notice of the alleged violation to the Arizona Radiation Regulatory Agency. The request must set forth the specific grounds for the notice and must be signed by the worker on his own behalf or as a representative of the workers. During inspections, ARRA inspectors may confer privately with workers, and any worker may bring to the attention of the inspectors any past or present condition which he believes contributed to or caused any violation as described above.

INQUIRIES

Inquiries dealing with the matters outlined above can be sent to the:
ARIZONA RADIATION REGULATORY AGENCY

POSTING REQUIREMENT

IN ACCORDANCE WITH A.A.C. R12-1-1002, COPIES OF THIS NOTICE SHALL BE POSTED IN SUCH A MANNER TO PERMIT EMPLOYEES WORKING IN OR FREQUENTING ANY PORTION OF A RESTRICTED AREA, USED FOR ACTIVITIES LICENSED OR REGISTERED PURSUANT TO ARTICLE 2 OR ARTICLE 3 OF THE AGENCY'S RULES, TO OBSERVE A COPY OR COPIES ON THE WAY TO OR FROM THEIR WORK AREA.

Historical Note

Exhibit A amended by final rulemaking at 18 A.A.R. 1895, effective September 10, 2012 (Supp. 12-3).

ARTICLE 11. INDUSTRIAL USES OF X-RAYS, NOT INCLUDING ANALYTICAL X-RAY SYSTEMS

R12-1-1101. Repealed

Historical Note

Adopted effective June 30, 1977 (Supp. 77-3). Repealed effective June 13, 1997 (Supp. 97-2).

R12-1-1102. Definitions

"Access point" means any door or cover that is designed to be removed or opened for maintenance or service purposes, opened using tools, and used to provide access to the interior of a cabinet x-ray unit.

"Annual refresher safety training" means a review provided by the registrant for its employees on radiation safety aspects of industrial radiography. The review shall include, as applicable, the results of internal inspections, new procedures or equipment, new or revised statutes or rules, accidents, or errors that have occurred, and provide opportunities for employees to ask safety questions.

"Aperture" means any opening in the outside surface of a cabinet x-ray unit, other than a port, which remains open during generation of x-radiation.

"Door" means any barrier that is designed to be movable or opened for routine operation purposes, rather than opened

Radiation Regulatory Agency

using tools, and used to provide access to the interior of the cabinet x-ray unit.

“Ground fault” means an accidental electrical grounding of an electrical conductor.

“Hands-on experience” means the accumulation of knowledge or skill in any area relevant to radiography.

“Port” means any opening in the outside surface of a cabinet x-ray unit that is designed to remain open, during generation of x-rays, for conveying material that is being irradiated into and out of the cabinet, or for partial insertion of an object for irradiation if the dimensions of the object do not permit complete insertion into the cabinet x-ray unit.
